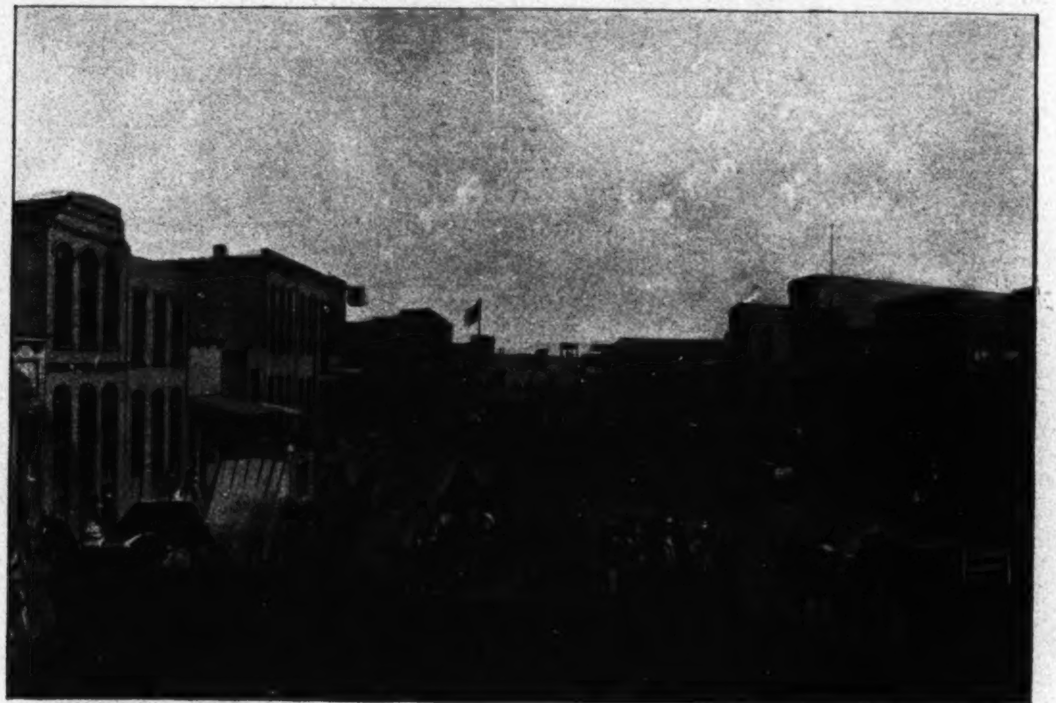
On April 27th these volunteer troops returned to Denver and were mustered out of service on April 30th. They were the last Colorado citizen-soldiers to engage in warfare with the Indians. Though they had no actual fighting, they constituted a fine fighting force, and would have given a good account of themselves had opportunity offered. The close of the war between the States enabled the government to station large forces of veterans along the frontier, but their presence did not intimidate the hostile tribes of desperate Indians who believed that their final struggle for existence confronted them.

Later in 1865 Colonel Moonlight had a somewhat ridiculous experience in Indian warfare. He had charge of a command of mounted troops in pursuit of a band of Indians far down the Platte, and was close upon them. One dark and favorable night while the Colonel and his men were in camp, the savages managed in some way to steal and run off every horse under his jurisdiction, leaving him and his men to foot it out of the enemy's country. Fortunately, the Indians were content with their brilliant achievement in horse-stealing, and did not attack the Colonel and his dismayed troopers.

Notwithstanding the dangers of the situation, emigration in large caravans set out to cross the plains in the spring of 1865. The route to Denver by way of the South Platte was lined with the mute but eloquent monuments of savage warfare. But new ranchmen occupied the devastated places, and new station men came upon the stage routes, rebuilding the destroyed station structures, and giving the ghastly remains of their dead predecessors decent burial. Federal troops, released by the collapse of the rebellion, were being hurried to frontier posts, but they could not be stationed everywhere, and in warfare with the plains Indians a hundred savages on their ponies could keep a couple of regiments of soldiers fruitlessly busy.

In May one of the coaches from Denver to Atchison was captured and the two passengers and driver killed. Usually at that time coaches that undertook to make a trip went with a full complement of passengers each of whom was heavily armed, aggregating an arsenal of rifles. Small bands of Indians became wary about attacking such coaches, and from costly experience called them "fire wagons." But only brave men were willing to become overland passengers that spring and summer, and it soon became necessary to accompany the coaches through the more perilous districts with mounted escort guards of soldiers.

Several trains of emigrants foolhardy enough to travel by the Smoky Hill route which passed through a section in full possession of the hostile Indians, were known to have been annihilated, and



View in Denver in 1865—Larimer street eastward from Fourteenth.
(One of Matthew's sketches.)

how many unknown instances of the same kind there were could only be conjectured. The entire Kansas frontier was swept by fire and death, for there were more than one thousand hostile Cheyennes and Sioux along the Republican Fork, divided into several raiding bands.

Up to the spring of 1865 the trouble had not extended west of the mountains, but with the advent of that season it broke out there, and it seemed that the whole western country was to be harried and devastated. The apparent dilatoriness of the government in providing protection for the white people and destruction for the red ones, was fiercely and bitterly criticised, notwithstanding that the government was doing all that it could, under the circumstances of the times, and against Indian methods of warfare.

When Schuyler Colfax, W. D. Bross, Samuel Bowles and Albert D. Richardson left Denver for Salt Lake City in June, the stage route from Denver to Utah had been practically closed for several weeks by the Indian hostilities. There were few white people on it except large companies of freighters who made fighting corrals of their wagons at night. Nevertheless, the Colfax party decided to make the trip, and a coach was provided for them. Of certain incidents connected with their dangerous undertaking, Richardson says:

"More than one Coloradoan, indignant at the failure of the authorities to guard settlements and roads, had remarked in our hearing: 'I wish the Indians might catch the Colfax party; for that would stimulate the government to protect us.' We were hardly public-spirited enough to echo the prayer. The Indians did not catch us."

So matters went through the summer and autumn of 1865, transportation continually harassed and the people of Denver disturbed, and made apprehensive for the safety of every one who undertook to come or go. In October a treaty of peace was made with the Cheyennes and southern Arapahoes, but when they came to a full understanding of its provisions, they repudiated it and took to the war-path again.

Through the winter of 1865-66 there was a lull in the storm, and through most of the last-named year comparative security for travel. All of the plains Indians were restive, some of them were marauding, but the majority appeared to be recuperating their energies and resources for another general attack. Almost to the close of 1866 the depredations, while persistent, were not so serious as they had been the previous year.

Then, on December 21st occurred the frightful massacre almost within gun-shot of Fort Phil. Kearney, up in Wyoming. A party of laborers protected by a detachment of troops had gone from the Fort to bring in wood and were attacked by a large force of Indians, the leaders of which were the Sioux chieftain, Red Cloud, and the big Cheyenne chief, Roman Nose. A company of troops numbering seventy-eight enlisted men, with several scouts, under the command of Colonel Fetterman and two other officers, put out to protect the wood train. They and the train-men were surrounded by the Indians and every man killed and scalped; but many Indians went down before the bloody work was finished. This was the most fearsome of all the tragedies of those times, and responsibility for it rested upon official incapacity or inability to comprehend the extent and purpose of the Indian uprising which was preparing or its later sweep from the mountains down the valley of the Platte nearly to the Missouri river, and in which it marked its broad trail with all the horrors of studied savagery, sparing neither age, sex nor condition it encountered on its way.

So, the spring of 1867 brought little improvement in the situation over that of 1865. The massacre at Fort Phil. Kearney indicated the implacable hostility of many of the Indians. The Ogalallas and Brules (Sioux) of the Platte, numbering about eight thousand all told, were now inclined to be friendly. The Cheyennes, some two thousand in number, the one thousand northern Arapahoes and as many of the southern ones, twelve hundred Lower Brules, thirteen hundred Blackfeet, eighteen hundred Uncopapas, and twenty-five hundred Ogalallas of the north, were still openly hostile. The twenty-two hundred Minneconjous, twenty-four hundred Yanktons, and sixteen hundred Sans Arcs were inclined to be hostile, but divided in their councils. The Two Kettles, Pawnees, Utes, and several smaller tribes were friendly. The Crows, about four thousand in number, were willing to become allies of the whites in order to have a better chance to fight their deadly enemies, the Sioux. A large band of them proposed to General Augur to join his forces against the Sioux on condition that the Yellowstone country from which the Sioux had long before driven them, be restored to them; exhibiting truly modern ideas with relation to the acquisition of territory.

Thus menaced by thousands of hostile savages, communications interrupted and no adequate means of protection within reach, the situation of the young city here at the base of the mountains was not reassuring. Peace treaties were in progress with some of the tribes, but there were still enough of them hostile to cause great trouble and loss of life. Red Cloud, the great Sioux leader, had refused to make peace, and he was a power among his people.

As spring advanced almost every incoming coach brought tales of attacks by Indians. In May the routes to the east were frequently raided, that down the Platte two or three times a week, employees killed, buildings burned, and stock captured. The line to Santa Fe had similar experiences, while the one to Salt Lake had again been blockaded to ordinary travel, by the murderous attacks. Every station on eighty miles of the line had been destroyed, the employees killed or driven off, and the stock taken. On May 6th a station midway between Denver and Julesburg was attacked, buildings burned and the horses stolen, though all the employees escaped. The Indians were in need of horses and the stage stations were the best places to get them. Farther east three stations were destroyed about the 10th of May, the employees killed and frightfully mutilated, the buildings burned and the horses taken away. From every direction, through that month, came accounts of similar depredations and massacres.

So the story runs on and on until its recital begins to sound like a repetition of narratives. Later in the year it became apparent that the conflict would be brought no nearer Denver, and apprehension for the safety of the city and its people lost much of its gravity in the increased activity in every channel of business affairs. The government had decided on more extensive military operations. Three expeditions were organized for a simultaneous and co-operative movement; one under General Hancock to proceed west across the plains south of the Platte river; another under General Augur, to move west north of the Platte; and the third, under General Terry, to the northwest by way of the Missouri river. But military movements against such foes in such a country were slow and beset by trouble at every step.

During these years of blood and fire about fifty men who were citizens of Denver, or had been and were well-known here, perished in the awful barbarities of Indian warfare. Fortunately, its horrors were kept out of the city, itself, but upon more than one occasion the people here saw the glare of buildings burning in the night that marked scenes of butchery.

The persistence of the Indians was inspired by something beyond the mere love of killing and plundering. In the spring of 1868 they still believed, in the face of the augmented military forces against them and regardless of the advancing railroads and the fast-increasing numbers of white people coming into the west, that by a determined, concerted effort they might drive the invaders from their country. Through the summer and autumn of that year the region between Denver and middle Kansas and Nebraska was repeatedly raided; coaches were captured and passengers and drivers killed, buildings burned, settlers massacred, and many women and children made captives. An aggregate of nearly two hundred white people were known to have been killed in western Kansas and Nebraska and eastern Colorado during that summer and autumn.

But the military operations went steadily, if slowly, on, with the grim relentlessness of fate.

Hostilities continued through 1868 and until the summer of 1869 when, after five years of almost continual warfare, the last of the hostile tribes were hunted down and forced to treat for peace.

During these years the Utes, as tribes, did not generally participate in the hostilities, though some bands of them were in the western depredations in 1865 and 1867. Kit Carson's last public service was rendered in connection with Ute affairs. In the winter of 1867-68 he, former Delegate Hiram P. Bennet, D. C. Oakes, and Lafayette Head escorted Ouray and several other Ute chieftains to Washington on a visit to the President. As related in an earlier chapter, Carson died a few weeks after his return. The adjacent illustration is a reduced copy of a photograph made in Washington in February, 1868, and which was the last taken of the famous frontiersman. Of this group of four of Colorado's conspicuous pioneers, Judge Bennet is the only survivor. Oakes, born at Carthage, Maine, April 3, 1825, successively removed with his parents to Ohio, Indiana and, in 1836, to Iowa. In 1849 he went to California and mined there a few years. Returning to Glenwood, Iowa, he remained there until 1858, when he came to the mouth of Cherry creek in October of that year. He was a prominent figure in our pioneer history, and in 1868 was Agent for one of the Ute tribes. He died in Denver March 9, 1887. Lafayette Head was a native of Howard county, Missouri, (April 19, 1825) and a soldier in the Mexican war. At the close of that conflict he located in Taos, later became identified with New Mexico politics, and served in the Legislature and in other public positions. In 1854 he organized, and as its leader established, a large colony of settlers in the Rio Grande valley in what is now our Conejos county, and where he made his home thereafter. From 1859 to 1868 he was agent for the Tabeguache Utes, and during our Territorial era was a man of much prominence in political and other affairs. He was a member of the Territorial Legislature for a term or two, and of the convention that framed our State constitution; and became the first Lieutenant Governor of the State of Colorado. He died in Denver March 8, 1897, while on a visit to the city.

The military operations in 1868 included an expedition to the Kansas-Colorado border that resulted in an engagement with the savages that has no counterpart in all the annals of Indian warfare, nor is it surpassed by anything celebrated in song or story. The disparity of numbers between the assailants and the assailed, the desperate situation and heroic courage, and the physical fortitude and endurance, of the latter, entitle this conflict, which occurred in the northeastern corner of our Arapahoe county, to a place among the world's historic struggles in which small companies of men successfully resisted, and brilliantly triumphed over, enemies who outnumbered them many times.

In the summer of 1868 Captain (and then Brevet Colonel) George A. Forsyth, familiarly known as "Sandy," was serving on the staff of General Sheridan in the operations against the Indians. He asked to be relieved from that duty and placed in active service in the field. Therefore, General Sheridan complied with his request, and on August 24th, at Fort Harker, Kansas, instructed him to employ fifty first-class frontiersmen for special service as scouts against the hostile Indians along the Kansas-Colorado frontier; and designated Lieutenant Frederick H. Beecher, a nephew of the late Reverend Henry Ward Beecher, as the officer to be second in command.

Colonel Forsyth had no difficulty in obtaining the requisite number of men and in a few days had employed the full quota. When organized, his force consisted of himself, First Lieutenant Frederick H. Beecher, of the Third Regiment United States Infantry, Acting Assistant Surgeon J. H. Mooers of the Medical Department United States army, and the following-named fifty hardy, experienced frontiersmen:

Alderice, Thomas,
Armstrong, W.,
Bennett, Wallace,
Burke, Martin,
Chalmers, G. W.,
Clarke, G. B.,
Davenport, Henry,
Davis, T. K.,
Day, Bernard,
Donovan, John,
Dupont, Alfred,
Entler, A. J.,
Farley, Hudson,
Farley, Lewis,

Violett, Fletcher,
Whitney, C. R.,
Wilson, John,
Wilson, William,
Ziegler, Eli.

Every one of these men proved himself to be of the kind General Sheridan directed Colonel Forsyth to employ—"first-class frontiersmen;" and their courage and daring were exhibited in one of the most extraordinary ordeals of which, as we have said, the annals of border warfare include any account. Thirty of them were enrolled at Fort Harker in two days, when Colonel Forsyth marched with them to Fort Hayes, sixty miles west, where he obtained the other twenty in two days more.

On August 29th, five days after he received General Sheridan's order, Colonel Forsyth's command, well armed, equipped and provisioned, with pack-mules carrying camp equipments, left Fort Hayes for its dangerous service on the plains. All of the men had served on one side or the other during the rebellion, and many of them had had long experience on the frontier prior to the war; so, they were not unused to being shot at and to shooting in return.

On the morning of his departure Forsyth had received a message from General Sheridan directing him to move across the headwaters of the Solomon river to Beaver creek, then to Fort Wallace, and to report from there to the General commanding. When Forsyth reached Beaver creek he discovered signs of a great sun-dance having recently been held there, but he arrived at Fort Wallace on September 5th, without having seen any Indians. At the fort he found a message from the Governor of Kansas urging him to go to the protection of some settlers in the Bison basin. As he was preparing to do this news came from the town of Sheridan, Kansas, thirteen miles east of Fort Wallace, and then the western terminus of the Kansas Pacific railway, that Indians had attacked a freighter's train near there and killed two men. Proceeding to Sheridan, Forsyth decided to follow the band, which appeared to have numbered some twenty or twenty-five warriors, and were believed to have been a detachment from a large body of hostile Indians.

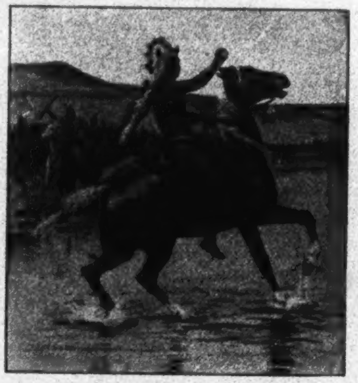
Forsyth proceeded northwest toward the Republican river, and on the fifth day came upon signs of Indian occupation. Later, a large trail was discovered and which crossed to the north side of the South Fork of the Republican, and within a few miles from the river it became still larger as various small trails from the north and south entered it. Finally, it developed into a broad, beaten road along which had been driven horses and cattle, and ponies dragging heavy loads of lodgepoles, the ends of which had worn ruts in the earth. These signs satisfied Forsyth that he was following a large body of Indians.

He kept on the trail until the afternoon of September 16th, when he came to a bend in a stream which Forsyth and his men thought was Delaware creek, but which was the Arickaree, or Middle Fork of the Republican, and the locality was near its junction with the North Fork, and in the northeastern part of Arapahoe county. Forsyth went into camp there in a little valley bounded by low hills or bluffs about forty feet high and which shut out the view of the plains on all sides.

At dawn next morning Indians were discovered on the bluffs, and in a few minutes they appeared by hundreds, galloping down upon the camp, yelling and screeching and using all their artifices to stampede Forsyth's stock. They got four pack-mules and two horses, but fell back when the scouts opened fire on them. Opposite the camp there was a small island in the Arickaree, some two hundred and fifty feet long, with a stream on each side about fifteen feet wide and six inches deep. To this island Forsyth and his men retreated, but before they could protect themselves in the sand the Indians were upon them in force. The fire of the scouts again drove them back, and in the brief interval the beleaguered men dug pits in the sand with their knives and tin plates. Just as Forsyth attempted to lie down in his he got a bullet in his right thigh, and a little later as he drew up his left leg another struck it below the knee and shattered the bones. Still later a third bullet struck him a glancing blow on the head knocking him senseless for several minutes and, as was afterward discovered, slightly fracturing the skull. Soon after Forsyth received his third wound, Surgeon Mooers was shot through the head. He lingered nearly three days before dying.

A furious fire was kept up by the Indians which was returned only when deadly shots could be made. Several of the scouts were struck—one killed and the others badly wounded, at the outset of the engagement; and many of their horses were shot down, their bodies being afterward used for protection. The deliberate, effective fire of Forsyth's men caused the Indians to draw back out of range within a half hour, thus giving the white men opportunity to strengthen their rude defenses. By this time the Indian leader had been recognized as Roman Nose, the gigantic Cheyenne chieftain; and Forsyth realized that his devoted men were contending against nearly one thousand Cheyennes, and Ogalalla and Brule Sioux.

It soon became apparent that the mounted Indians were preparing to charge the island in force, and the scouts prepared to receive them. The weapons of the dead and wounded were loaded and passed to those able to use them, and orders were given that firing should be by volley and only at the word of command from Forsyth as he lay disabled in his pit in the sand. Presently, on they came, led by Roman Nose, and supported by many of their dismounted and ambushed comrades who opened a deadly fire on the white men. Incredible as it may appear that handful of heroic men stopped and drove back in confusion that oncoming horde of yelling and howling savages. The first volley brought down an Indian for every gun, but did not check them; the second made them falter and the five succeeding ones stopped and turned them back pell-mell, leaving the ground strewn with their dead and wounded braves and horses. It was a most remarkable repulse, for only forty of the men on the island were able to handle a gun, and there were several hundred of the mounted Indians. Among the Indians' dead was their great and fearless chieftain, Roman Nose, who went down at the fifth volley from the island. Their medicine man, who also rode in front, was killed by the fourth volley.



The Defiance of Roman Nose.

Such an attack was a departure from the usual methods of Indian warfare, for their common practice was to fight individually; and with even large bodies of warriors, to avoid massing themselves. In the issue of Harper's Magazine for June, 1895, General Forsyth gave a full and most interesting account of this remarkable conflict, and from it we have derived information for much of the detail appearing here. Of this charge, and of the intrepid Indian leader, General Forsyth in his thrilling narrative says:

"We had not long to wait. A peal of the artillery bugle, and at a slow trot the mounted warriors came partially into view in an apparently solid mass at the foot of the valley, halting just by the mouth of the canon on the opposite side of the river from which we had emerged the preceding day. I had placed my back firmly against my little earthwork; my rifle lay across my chest, and my revolver on the sand beside me. I could not do much, wounded as I was, but I recognized the fact that even a chance shot or two might possibly do good service in the work that the savages were about to cut out for us. Closely watching the mounted warriors, I saw their chief facing his command, and by gestures, evidently addressing them in a few impassioned words. Then, waving his hand in our direction, he turned his horse's head toward us, and at the word of command they broke at once into full gallop, leading straight for the foot of the island. I was right in my surmise; we were to be annihilated by being shot down as they rode over us. As Roman Nose dashed gallantly forward, and swept into the open at the head of his superb command he was the very beau ideal of an Indian chief. Mounted on a large, clean-limbed chestnut horse he sat well forward on his bare-backed charger, his knees passing under a horse-hair lariat that twice loosely encircled the animal's body, his horse's bridle grasped in his left hand, which was also closely wound in its flowing mane, and at the same time clutched his rifle at the guard, the butt of which lay partially upon and across the animal's neck, while its barrel, crossing diagonally in front of his body, rested slightly against the hollow of his left arm, leaving his right free to direct the course of his men. He was a man over six feet and three inches in height, beautifully formed, and save for a crimson silk sash knotted around his waist, and his moccasins on his feet, perfectly naked. His face was hideously painted in alternate lines of red and black, and his head crowned with a magnificent war bonnet, from which, just above his temples and curving slightly forward, stood up two short black buffalo horns, while its ample length of eagles' feathers and herons' plumes trailed wildly on the wind behind him; and as he came swiftly on at the head of his charging warriors, in all his barbaric strength and grandeur, he proudly rode that day the most perfect type of a savage warrior it has been my lot to see. Turning his face for an instant toward the women and children of the united tribes, who literally by thousands were watching the fight from the crest of the low bluffs back from the river's bank, he raised his right arm and waved his hand with a royal gesture in answer to their wild cries of rage and encouragement as he and his men swept down upon us; and again, facing squarely toward where we lay, he drew his body to its full height and shook his clenched fist defiantly at us; then, throwing back his head and glancing skyward, he suddenly struck the palm of his hand across his mouth and gave tongue to a war-cry that I have never heard equalled in power and intensity. Scarcely had its echoes reached the river's bank when it was caught up by each and every one of the charging warriors with an energy that baffles description, and answered back with blood-curdling yells of exultation and prospective vengeance by the women and children on the river's bluffs, and by the Indians who lay in ambush around us. On they came at a swinging gallop, rending the air with their wild warwhoops, each individual warrior in all his bravery of warpaint and long braided scalp lock tipped with eagles' feathers, and all stark naked but for their cartridge belts and moccasins, keeping in line almost perfectly, with a front of about sixty men, all

> riding bare-back, with only a loose lariat about their horses' bodies, about a yard apart, and with a depth of six or seven ranks, forming together a compact body of massive fighting strength and of almost resistless weight. "Boldly they rode and well," with their horses' bridles in their left hands, while with their right they grasped their rifles at the guard and held them squarely in front of themselves, resting lightly upon their horses' necks."
>
> Riding about five paces in front of the center of the line, and twirling his heavy Springfield rifle around his head as if it were a wisp of straw (probably one of those he had captured at the Fort Fetterman [Fort Phil. Kearney] massacre), Roman Nose recklessly led the charge with a bravery that could only be equalled but not excelled, while their medicine man, an equally brave but older chief, rode slightly in advance of the left of the charging column. To say that I was surprised at this splendid exhibition of pluck and discipline is to put it mildly, and to say, further, that for an instant or two I was fairly lost in admiration of the glorious charge, is simply to state the truth, for it was far and away beyond anything I had heard of, read about, or even imagined regarding Indian warfare."

The island heroes suffered severely in the onslaught, chiefly from the ambushed Indians supporting the charge. Including those hit earlier in the day, the casualty list was as follows: dead or dying, Lieutenant Beecher, Surgeon Mooers and scouts Chalmers, Smith and Wilson; mortally wounded, scout Lewis Farley; severely wounded, scouts Day, O'Donnell, Davis, Tucker, Gantt, Clark, Armstrong, Morton, and Violett; slightly wounded, scouts Harrington, Davenport, Haley, McLaughlin, Hudson Farley, McCall, and two others; and Colonel Forsyth had a bullet in his right thigh, his left leg badly broken below the knee, and a severe wound on his head. The condition of the wounded was rendered more desperate by their being deprived of the services of their dying Surgeon. General Forsyth included scout Bernard Day among the mortally wounded, but Day recovered and in later years became a citizen and County Commissioner of Grand county, Colorado. He was one of the four county officers of that county assassinated at Grand Lake on July 4, 1893; the culminating tragedy of a feud growing out of the administration of Grand County's affairs in which Day had borne the part of an honest, straight-forward man. Of the death of Lieutenant Beecher, General Forsyth says:

> Lieutenant Beecher rose from his rifle pit, and, leaning on his rifle, half staggered, half dragged himself to where I lay, and calmly lying down by my side, with his face turned downward on his arm, said quietly and simply: "I have my death wound, general, I am shot in the side and dying."
>
> "Oh, no Beecher—no! It can't be as bad as that!"
>
> "Yes. Good night." And then he immediately sank into half unconsciousness. In a few moments I heard him murmur "My poor mother," and then he soon grew slightly delirious and at times I could hear him talking in a semi-unconscious manner about the fight; but he was never again fully conscious, and at sunset his life went out. And thus perished one of the best and bravest officers in the United States army."

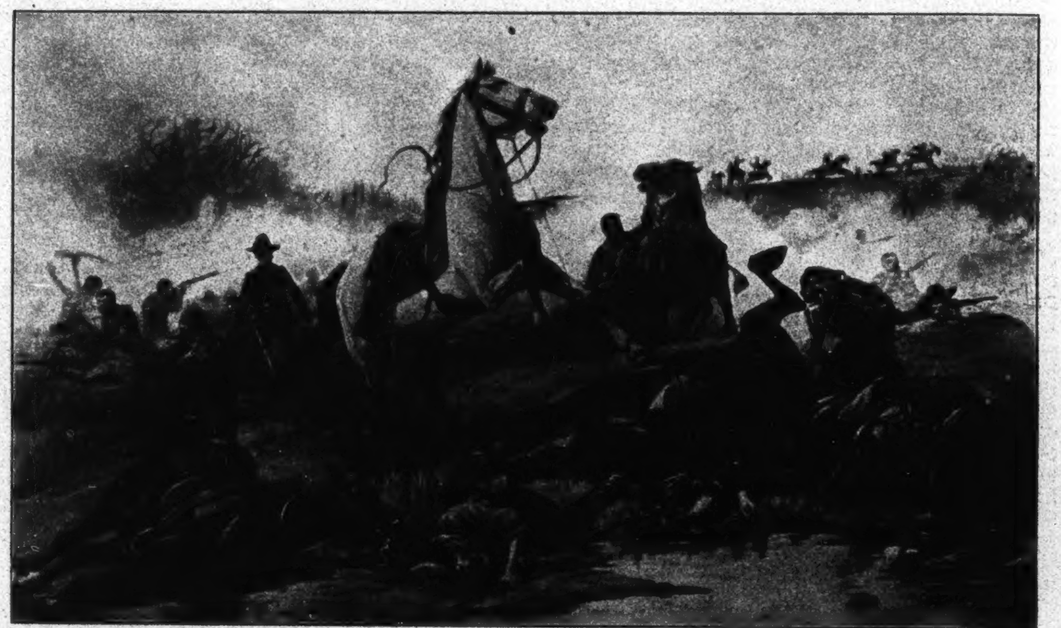
The Indians were astounded and distracted by their bloody and unaccountable repulse and the death of their leader. We quote again from General Forsyth:

> "In the meantime the valley was resonant with the shrieks of the women and children, who, from their coign of vantage on the hills, had safely but eagerly watched the result of Roman Nose's desperate charge; and now as their fathers, sons, brothers and lovers lay dead on the sands before them, their wild wails of passionate grief and agony fitfully rose and fell on the air in a prolonged and mournful cadence of rage and despair. And as for a short time many of the Indians rode circling around yelling and waving their arms over their heads, hither and yon, apparently half dazed at the death of the medicine man and their great war chief, as well as at the disastrous failure of their charge, the whole scene, combined with the steady crack of the rifles of the Indians in ambush, the reply of the scouts, the smoke of the powder and the view of the dead warriors and horses lying on the sand before us, seemed for a moment or two almost uncanny and weird in the extreme.

In the middle of the afternoon the Indians attempted another charge, but in open order. A volley from the island sent them back, leaving several dead and wounded behind them. Between five and six o'clock they tried it again, and were again repulsed by the scouts with a similar loss. That ended the fighting for that day. To resist these assaults there were only twenty-eight fairly sound men, almost exhausted by hunger and the long day's constant fighting in the blazing sun on a hot sand-bar. Their supplies had run low before the attack, but they now concluded that the carcasses of the dead horses would furnish food enough for a few days if some of the meat, by burial, could be kept from putrefying, and Forsyth believed he could get a man through to Fort Wallace in the meantime for relief. Early that night wells were dug in the sand for water, the wounded were made as comfortable as possible and the defenses strengthened as well as could be, against the dangers of the morrow.

Jack Stilwell and Pierre Trudeau volunteered to attempt the trip to Fort Wallace for relief, and set out that night, exhausted as they were from the day's awful work. They succeeded in eluding the besiegers and in reaching the fort as nearly worn out as human beings could be and live.

On the second day the Indians attempted a surprise but were discovered and driven off with more losses. This was their last effort by assault, and they settled down to starve out the men on the island. The condition of the men was a desperate



The Battle at Beecher's Island.

one, especially that of the wounded. When refuge was taken on the island, the medical supplies were lost in the haste of the movement, so the wounded were without the relief they would have given. On the second night two more men attempted to get through the Indian lines but being discovered by the savages, returned. On the third day there was some firing by both sides, but no injuries were received by the scouts.

About noon of the third day there were indications that the Indians were withdrawing, and in the evening two more men started on an errand similar to that of Trudeau and Stilwell, lest those men might have been prevented from reaching Fort Wallace, and succeeded in getting away. The fourth day was very hot and all the men suffered extremely, some of the wounded becoming delirious. Flesh which had been cut from the dead horses and buried to longer preserve it, became putrid, and the stench from the dead animals lying around was almost unbearable. On that day Colonel Forsyth, with a razor, cut out the bullet that had lodged in his right thigh during the first day's fight. A few Indians were in sight, and every time one of the men exposed himself they fired on him; but it was apparent that the larger part of the savage host had departed, leaving warriors enough behind to dispose of the suffering and starving white men when they could no longer maintain their deadly resistance.

But there were no more casualties on the island. The fifth and sixth days of the siege were passed much the same as the fourth. The seventh and eighth were quieter, and the Indians appeared to have withdrawn, or were quietly holding themselves ready for instant departure. It afterward transpired that the latter was the case, for their scouts had apprised them of the coming of relief for the white men, from Fort Wallace. On the morning of the ninth day the Indians made an attempt to attack the island, but suddenly withdrew and disappeared. A few hours later a troop of the Tenth Cavalry reached the beleaguered men, and succored them. The dead had been buried on the island; where all but one now sleep. The wounded, excepting Lewis Farley, recovered under careful attention, notwithstanding the fearful condition to which they were reduced before relief reached them.

At the time this thrilling and extraordinary affair occurred, that part of Colorado was wholly unsettled, and as the years went on memory of the desperate encounter and unequalled defense grew faint among those who later located in that part of the State, and had heard of Forsyth's siege as having taken place somewhere in that section. On September 17, 1898, three survivors of the battle visited the unnamed and little-known island, which is twenty-two miles south of the town of Wray, and placed a small stone monument on it, bearing the date of the encounter and a brief inscription reciting some of the circumstances. This awakened public interest, and since that time the Colorado Department of the Grand Army of the Republic has taken charge of Beecher Island—as it is now called in memory of the young officer who died and was buried there—marked the graves of the dead, and made proper provisions for preserving and commemorating the historic spot, which was the scene of an unexampled exhibition of the courage, endurance and valor of the Anglo-Saxon man.

In September, 1900, the remains of Lieutenant Beecher, by request of some of his relatives in the east, were exhumed and sent there for re-interment. They had become reduced to the larger bones.

Forsyth fully recovered from his dangerous wounds, became a General in the army, and is still living. Several years afterward, he fell in with a young Brule chief who had been in the fight, and who through an interpreter told the General there were nine hundred and seventy warriors engaged, of whom seventy-five were killed and many more than that number wounded. He asked Forsyth whether he had had enough of the fight before it ended, and the General frankly admitted that he had had quite enough. The chief was then asked how it had been with himself. He answered by silently opening the front of his buckskin shirt, revealing the scar on his breast made by a bullet that had passed through his body.

The hideous cruelty of the Indians of the west when at war has not been equalled by the practices of any other race of people on the earth, so far as history has recorded; and every form of it was visited upon their victims during those five years of turmoil.

In an official report made November 1, 1868, General Sherman related the circumstantial details of many of these atrocities and revolting deeds of the Indians, and in evident desire to confirm their almost unbelievable character, said: "I recite these facts with some precision, because they are proved beyond dispute." The reports of other officers also recount the details of many a sickening tragedy; while Sheridan's "Memoirs," and Custer's "Life on the Plains" throw much additional light on the frightful scenes presented in those memorable years of blood and fire over the region between Denver and the Missouri river border.

With the beginning of these prolonged troubles with the Indians there came a conviction in the minds of many white people all over the west, in Denver as well as in other places, that the only alternative was exterminating warfare; that peace could not and would not come until the last Indian tribe had been annihilated; and that the sooner all the Indians were killed off the better for everybody. The reservation system was then in its infancy, and had not been applied to the fierce, far-roving tribes of the great plains; the white people here believed that it never could be successfully applied to them. Therefore, in their judgment, the only practical remedy for the intolerable conditions was extermination; and this theory, as it was put into practice at Sand creek, had inflamed the tribes and goaded them to add dire revenge to their first great purpose to drive all the whites out of the central region of the west.

This common view of the "Indian question" among the white people of the far west at that time, was fairly reflected by Hollister, who, writing of these matters, in 1867, said:

> "Grant beat the rebellion with hard knocks, and perhaps gave man for man; having more men, he was able to wear it out. It is not a bad illustration of our conflict with the savages. Both were inevitable, and both must end in the same way. The government and the rebellion were incompatible on the same ground; so are our people and the Indians. That was a life and death struggle, ended by the death of the rebellion; this is a life and death struggle, to be ended by the death of the savage—and the sooner it can be finished the better."

While the great rebellion was in progress the Indians had grown confident in their own strength, and sanguine over the opportunity they believed it afforded them to disperse the white people and repossess the country for themselves. When the war closed and the western frontier was reoccupied by government troops, they were greatly exasperated; and the ensuing construction of railways directly through their hunting grounds drove them almost to frenzy.

The expense to the United States government entailed by these Indian campaigns was enormous, the great item having been the cost of transportation which had to be managed by slow and unwieldy wagon trains. All the provisions, supplies, equipage, and impedimenta for the troops had to be thus transported. Then, the difficulty of coming up with the Indians added to the troubles of the soldiers. The Indians were familiar with every part of the country, quick in their movements and traveled long distances by night. They were here to-day and a hundred miles away to-morrow, therefore they were hard to follow and harder to catch by troops encumbered by all the belongings of civilized warfare. The Indians had plenty of good field-glasses bought from the traders, and from distant concealment watched every movement of their enemies. Using pocket-mirrors as heliographs the spies and scouts would signal their tribes over long distances, conveying information of the movements of the soldiers, and directing counter-movements on the part of the warrior bands. Therefore, the old statement that every Indian killed by an United States soldier during these military operations on the plains in those years, cost the government one hundred and fifteen thousands dollars, does not seem incredible, for the army soldiers succeeded in killing comparatively few Indians. The citizen-soldiers, settlers and plainsmen did most of that work. Hollister, in recording his opinion of the Indian in peace and war, said:

"Of the game and wild beasts native to the Valley [the plains] the Indian is the most prominent, useless, pernicious, and costly to hunt."

Still, there were two sides to the story, and the Indian was not alone in asserting that he had suffered many wrongs. Army officers and honest Indian Agents did not hesitate to support him in his claims that he was systematically cheated, swindled, and otherwise imposed on by white men connected with the management of Indian Affairs by the Interior Department in those days. It is an old and well-worn story which need not be far followed here. The Interior Department did the managing, or mismanaging, and then the War Department had to turn out and do the campaigning. But the exasperated western people in those later times did not think well of the regular army soldiers as Indian fighters; they acted mechanically, were seemingly indifferent, and had no personal wrongs to avenge. The fierce methods of Chivington were in much higher favor with many of the people all along the frontier. Jim Baker declared that the Sand creek affair did more to command the fear and respect of the Indians of this region than all their other experiences put together; and others insisted that the government should continue a war of extermination of which that ghastly event was held to be a praiseworthy example.

In several instances costly conflicts that might have beeen avoided were precipitated with the Indians because of unimportant depredations by predatory bands. What was known as the "Harney Indian war" in Utah was one of these, and the cause for it was out of all proportion to the consequences it entailed. A party of Indians stole a cow from a Mormon emigrant who reported his loss to the commandant of the nearest military post. A small detail of soldiers was sent out to recover the cow. The Indian leader declared that he could not return the beast because she had been killed and eaten; that he could not surrender the guilty Indians because he did not know which members of his band had actually stolen her; but that he was willing to pay for the cow in horses. The rash officer in command of the detachment of troops demanded the restoration of the killed and eaten cow within fifteen minutes. Of course, this could not be complied with, and the soldiers opened fire on the Indians, killing the chief and several others. The enraged survivors then fell upon the soldiers and killed and scalped every man. This affair brought on the Harney campaign against the Indians which cost many lives and a million dollars in money--all over the loss of a cow probably not worth more than fifteen dollars.

The five years of warfare were most disastrous to the two tribes occupying this part of the country when the beginnings of Denver were made—the southern Arapahoes and Cheyennes. As we have stated, they surrendered their claims to their lands in this vicinity by the treaty made with them in 1860—an act which they immediately and sorely regretted. Afer that they beat about from pillar to post until hostilities began in 1864, when their Sand creek affliction befell them. A peace treaty of October, 1865, shut them out of the western part of the State of Kansas, contrary, as they claimed, to their understanding of the bargain. As they could not remain in the Territory of Colorado, and seemed to have no abiding place, and no rights left but one to resume fighting, they whooped out on the war-path again, and kept on it until, in the summer of 1867, General Hancock attacked and destroyed a village of three hundred lodges of the Cheyenne contingent, and drove both tribes into making the Medicine Lodge creek treaty of October, 1867. By the terms of this one they were definitely and specifically forbidden all their old hunting range between the South Platte and Arkansas rivers, and limited to a section of country in the Indian Territory. Again they rebelled and took to the open country. Many of them were soon driven to their new domain, but our old acquaintance, Black Kettle—who had managed to live through his many conflicts—with a considerable number of Cheyennes and Arapahoes, evaded his pursuers for a year. Then he was found by General Custer in the Antelope Hills on the Wichita river, and his band nearly exterminated in the battle that followed. The Indians fought like demons, the squaws as bravely and fiercely as the warriors, all of them preferring to die where they were, rather than go alive to the reservation set apart for them. Custer's negative victory was a costly one and his troops went down by scores. One company that had been sent around to take the Indians in the rear were suddenly confronted by a large body of Arapahoes, and every soldier in it was slain. After the battle was over they were found lying there in heaps, but the Indian survivors of the fray were not to be found. All of them had succeeded in making their escape, and Custer was in no condition to follow them. It was not until the spring of 1874 that General Miles succeeded in compelling the defiant remnants of those bands of Indians to surrender and go to their reservation; and he had a great deal of trouble in doing it.

After peace was made all around, an old Cheyenne was observed with a frightfully scarred face and one eye gone. Upon inquiry it was learned that he had been one of a band which captured a wagon carrying some fireworks, among which were some explosive pieces which he supposed to be intended for smoking, cigar fashion. Putting one in his mouth and lighting it, the thing exploded and wrecked his face, which had already been sufficiently hideous.

One of the conspicuously able and unrelenting of the Indian chieftains during that long period of devastation, was Red Cloud, the Sioux leader whose name will always be associated with our annals of Indian warfare. He was a man of much intelligence, and of both military and civil ability. He was the last of the chieftains to make peace. Spotted Tail, a noted Ogalalla chief, went fiercely on the war-path in the beginning, but after a couple of years of the trouble saw the folly of it, made peace and afterward remained friendly, or pretended to do so. Several years later Spotted Tail was shot and killed on the Sioux reservation in South Dakota, by Crow Dog, of the tribe of hereditary Sioux enemies, in a personal affray.

The power of the plains Indians was broken forever by the military operations of the later "Sixties," and all hope on their part of further confederated action was lost. The tribes were compelled to accept the reservation system, and these campaigns practically ended savage warfare throughout the central west. The outbreak of some of the Sioux tribes, and the northern Cheyennes, eight years later, which involved the destruction of General Custer and his command, on the Little Big Horn river in Montana, was the last effort of an overpowered people, but it did not extend to other tribes, and was speedily suppressed. The trouble with the Utes in Colorado in 1879, some account of which we will give in a later chapter, was, though serious, only local in its extent and consequences.

CHAPTER XLII.

DENVER CONDITIONS IN 1865—FIRST GRASSHOPPER INVASION—HIGH PRICES—DENVER ARCHITECTURE—LIMITS OF BUILT-UP AREA—ANTI-GAMBLING CRUSADE IN WINTER OF 1865-66—WORK OF MONTANA VIGILANTES IN AND AROUND DENVER—POPULATION IN 1866—EXTENT OF THE CITY IN 1867—WILD TALES OF SLAUGHTER—GENERAL CONDITIONS AT CLOSE OF 1867—ADVANCED PRICE OF LABOR—DEVELOPMENT OF AGRICULTURE—RAILWAY PROSPECTS—ANOTHER "INDIAN SCARE"—TERRITORIAL CAPITAL REMOVED TO DENVER—"CITY LOT QUESTION" ARISES—LAST APPEARANCE OF HOSTILE INDIANS NEAR DENVER—ENCOURAGING CONDITIONS AT CLOSE OF 1868.

The winter of 1864-65 was one of many hardships in Denver. It was an unusually cold one, and the Indians for several months had, as we have seen, been giving much trouble, raiding the routes of travel, with the result that communications were interrupted and made extremely hazardous. Indian aggressions had increased as that winter drew near and many wagon trains bound for Denver were captured and destroyed. Others were deterred from starting out, and in consequence of this blockade the necessaries of life rapidly advanced in price and became scarce. A large portion of everything used in Denver still had to be transported across the plains in wagons. The supply of salt ran low, and the price of that humble necessity rose to one hundred dollars per barrel.

Food prices continued high through 1865. Early in the summer of that year flour sold at from fifteen to twenty dollars for a hundred pounds; beef cost forty to forty-five cents per pound, and hams from forty-five to fifty cents; potatoes brought from twelve to fifteen dollars a bushel, and other vegetables proportionately high prices. In sympathy with this advanced cost of living, wages rose to lofty heights. Common labor was paid from four to five dollars a day, and mechanics received from seven to eight dollars; yet neither class could have as much clear money left at the end of the month as workingmen may now save from the present lower scales of wages, and have a much better time while they are doing it.

Difficult and often interrupted communications over the plains were not altogether the cause of the high prices of that year. The first grasshopper invasion since the settlement of the country came then, and nearly ruined those engaged in agriculture. The insects were in clouds and shoals, and cleaned the ground of vegetation. Growing crops in fields and gardens were eaten by the insects instead of by the people for whom they were intended, depriving the local markets of large and important food supplies. The visitation had a depressing effect, for it was a new disastrous experience in a new country, and no one knew but that it might become one of frequent occurrence. So, between the forebodings and what had actually happened, the cry of "hard times" was heard.

Travel to and from Denver became an expensive undertaking, to say nothing of the danger of encountering Indians on the war-path. The stagecoach fare between Denver and the Missouri river rose to $175, and the price of meals along the way advanced to two dollars while the quality and quantity retrograded. From the Missouri river to Salt Lake City the fare was $350; and to San Francisco $500. Along the routes of travel across the plains the price of hay ranged from seventy-five to one hundred dollars a ton; fire-wood seventy-five dollars a cord; corn from eight to ten dollars a bushel; and in Denver the latter did not often that year get below the higher figure, as all that was in the country had to be brought by wagons from eastern Kansas and Nebraska.

In 1865 the author of "Beyond the Mississippi" again visited Denver. He came in company with Schuyler Colfax, then Speaker of the United States House of Representatives; William Bross, of the Chicago Tribune and then Lieutenant-Governor of Illinois; and Samuel Bowles, of the Springfield, Massachusetts, Republican. The party came by stage from Atchison, Kansas, leaving that place on May 22nd, and making the journey without unusual mishap or adventure. We quote the following from Mr. Richardson's entertaining book:

"In four days and a half from Atchison we reached Denver. Scourged by war and fire and blood, the city has grown up through great tribulation. Repeatedly, Indians have cut off communication with the States for months at a time. * * * * * "

"In some departments of business high prices still prevailed. Six or seven daily newspapers were published. Subscription price of the dailies: twenty-five dollars per annum, or seventy-five cents per week by carrier; weeklies, eight dollars per annum. Single copies, twenty-five cents. Advertisements, two dollars per square of ten lines, for each insertion."

"At my last visit, five years before, Civilization had barely extended to these wilds the tips of her gracious fingers. Now, Denver boasted a population of five thousand, and many imposing buildings. The hotel bills-of-fare did not differ materially from those in New York or Chicago. Single building lots had commanded twelve thousand dollars. One firm had sold half a million dollars worth of goods in eight months.

"With fresh memories of the log-cabins, plank tables, tin cups and plates, and fatal whiskey of 1859, I did not readily recover from my surprise on seeing libraries and pictures, rich carpets and pianos, silver and wine—on meeting families with the habits, dress and surroundings of the older States. Keenly we enjoyed the pleasant hospitalities of society among the quickened intelligences and warmed hearts of the frontier. Western emigration makes men larger and riper, more liberal and more fraternal."

By way of illustrating the off-hand manners in the west in that period, this author relates the following incidents:

"As we reached one station our driver enjoined the waiting hostlers:

'Gents, we are four hours behind time and want to make up the time. We must change these teams in three minutes by the watch'

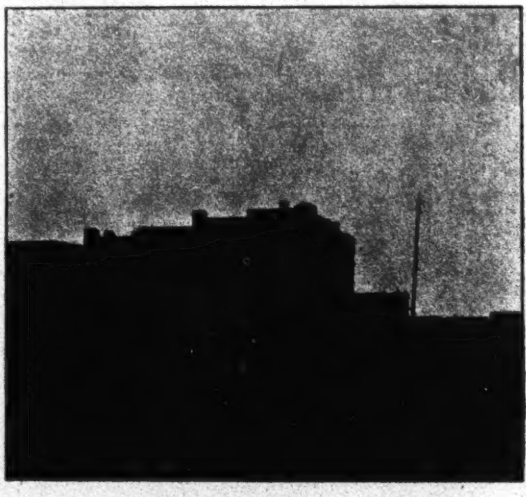
"At the last telegraph office before the end of our journey, the operator said to Mr. Colfax and his party:

'The Denver people are making preparations to give you fellows a grand reception'"

At this period in her career Denver was still far from being a handsomely built young city, notwithstanding the "imposing" buildings mentioned by Richardson. The rawness and uncouthness of frontier architecture were yet with her, though many of the more flagrant aspects had disappeared. The United States "Mint," the new Methodist church at the corner of Lawrence and Fourteenth streets, the new building at the corner of Fifteenth and Blake streets in which the First National Bank was located, and the seminary for young women at Arapahoe and Fourteenth streets, were regarded as the architectural ornaments of the city—the structures that were pointed to with pride. There were no three-story buildings, but a large number of the new ones were of brick. An important consequence of the fire of 1863 was the prohibition of new frame buildings in the business district. That fire brought the community to a realization of the danger such structures entailed in a locality subject to high winds and in a city with inadequate means of extinguishing a conflagration. The municipal policy then inaugurated establishing safeguards against fire has been since amplified to such an extent that the city has enjoyed a remarkable freedom from serious losses by that element.

The improvement in Denver architecture was in a considerable degree due to that original inhibition of wooden structures. However, scores of the old ones still survived, and had steadily grown uglier as they advanced in years. On the Auraria side they were in proportionately greater numbers, as there had been no sweeping fire over there.

Apprehension caused by the Indians, the depressed condition of mining, and the trouble entailed by grasshoppers, in 1865, prevented much advancement in Denver in that year and made it rather a period of preparation; though there was some progress. The effect of the civil war's termination had hardly begun to manifest itself by the western emigration that became so heavy soon afterward. Beyond the replacement of structures burned in 1863 or destroyed by the flood of 1864, many buildings better than any preceding ones had been erected by the close of 1865. But the building operations up to that time had not extended the city limits to any considerable distance. Its area was still small. On the Auraria side little new work had been done toward making that division larger in built-up territory; the Highland section had grown some, but it was still of relative unimportance; the east side had done better, but outside the area bounded by the two streams, and Champa and Twentieth streets, the prairie dogs were little disturbed. In the summer of 1865 Caleb B. Clements built a small brick house—the third structure east of Broadway—on the block now occupied by St. John's Cathedral, and which is still standing in the rear of that church. Later in that year Elias Gilbert put up a frame house near the inter-



North side of Larimer street between Fifteenth and Sixteenth in the later Sixties. (Photographed on Sunday.)

section of Twenty-first and Welton streets, which was the outpost in that direction.

Long before this, Denver had passed through the worst of its ordeal in dealing with the lawless, and had come out of the crucible of sad and violent experience, partly purified. It had gone by the days in which cut-throats, thieves and gamblers attempted to control the community through outrage and intimidation, and had held high carnival in their work of robbery and death.

But the cleansing was yet unfinished; there were still many offenses against reasonable public sentiment, and the worst of these was the flagrant conduct of the remaining horde of gamblers. These men, as a rule, were not murderers; not thieves in the common definition of the term; and had escaped the conclusive attentions of the People's Courts. But they were numerous, influential and brazen in 1865. Possessing much ready money backed by willingness to spend it freely in sustaining themselves and their sinister occupation, they had managed to exert political control of the municipality, and in a measure to dictate the choice of municipal officers. So powerful were they at one time that they induced or persuaded the Territorial Legislature to enact a law legalizing gambling.

These men were pursuing their shameless vocation in the open day, and in the most conspicuous locations. They had their dens in some of the best buildings in the best business quarters of the city, and were receiving the negative support of a certain class of citizens who held themselves above direct association with such men, but who indirectly profited by their operations. Step by step these offenses grew in magnitude, until they were conducted in full view of all the passing throng, just the same as the pursuits of merchants and other business men; and there was presented the extraordinary spectacle of bands of music playing in front of the open doors to attract the wayfarers' attention, and to lure them to bankruptcy amid the exciting scenes of plundering that were shading and shifting within. Men were stationed on the sidewalks to personally solicit and urge seemingly reluctant passers-by to enter and take part in the gaming, of which there was no pretense of concealment; on the other hand, all possible, flagrant publicity was given it. In other and more pretentious places elaborate luncheons were spread, wines freely served, cigars supplied, theoretically free to all comers, but paid for by the fleeced victims to whom they served as lures.

Influenced by and participating in the strong public sentiment that had arisen against gaming, the Legislature of 1866 struck at the great and shameless evil. It enacted a law prohibiting every form of gambling, no matter by what means, in the Territory of Colorado; and specifically forbade all municipalities sanctioning gambling by ordinance or license, or showing it any leniency. This legislation, unlike some of previous devising, greatly astonished the gamesters, but strengthened the determination of a large majority of the people that gambling should be suppressed. Public sentiment, patient and long-enduring as it had been, had also been stimulated by the steadily, quietly growing morality of the city, despite these excrescences, had crystallized into a grim and ominous resolution that the outrageous conduct would be ended, and a "Committee of Safety" had been organized. If the new law proved incapable to deal with the evil, there were ways and means, concerning the effectiveness of which there was no difference of opinion; the same by which the community had several years before been rid of characters more dangerous to society than the reckless gamblers. In some way a premonition seemed to float through the air that if the law were defied, tree-limbs and ropes were destined to figure in subsequent proceedings as they had in the pioneer purification of Denver.

The swarm of human parasites was quickly conscious of these mysterious atmospheric forebodings; and was not long in understanding them to be the distant faint mutterings of a coming storm that would sweep them off their feet and leave them suspended between heaven and earth, if it should break upon them in its fury. A shiver ran through Denver gamblerdom, for it knew full well the possibilities, if not probabilities, that were impending. There was haste in removing the more flagrant aspects of the occupation; there was a drawing-in of obtrusive bravado; and there were more gracious manners and much conciliatory talk. But these were not enough. The aroused sentiment drove the gamblers out of the public places and into a retirement which, if it did not mean extinction of their business, did mean their permanent withdrawal from public view.

In the winter of 1865-66 some more grim examples of vigilance committee methods occurred here, though they were not the work of Denver men nor were their provocations of Denver origin. For several years prior to that time the Montana mining country had been infested by even worse desperadoes and robbers than had afflicted Denver in 1860. Late in December, 1863, a Vigilance Committee was organized at Helena, and by February 3, 1864, had hanged thirty-one men, including the local Sheriff, Henry Plummer, who was the chief of a large organization of road agents, murderers and horse-thieves; and among those later executed was an Idaho former Sheriff. Through 1864 and 1865 the work of extermination went on, the desperadoes being hunted down far and near like wild beasts, or driven from the country; and altogether, it has been stated, about 140 men were summarily executed. Notwithstanding the vengeance that was being wreaked upon their kind in that country, some of the road agents continued at their work in the meanwhile.

On July 13, 1865, occurred the Portneuf canon massacre of the passengers in a stage-coach running between Helena and Salt Lake City. The driver, one Frank Williams, in collusion with the bandits, drove his stage into an ambush where all his passengers, among them having been several prominent men, were slaughtered; Williams alone being unhurt. The road agents obtained about $60,000 in gold-dust.

The escape of Williams caused him to be suspected, but he later managed to dispel suspicion, and continued driving a stage, his reputation having previously been good. Late in the year he asked and obtained leave of absence from the stage company, for December, for the purpose of visiting Salt Lake City. At that place he soon began prodigally spending gold-dust. News of this was sent to Helena, and a small party of Vigilantes at once set out to capture him. Becoming uneasy in consequence of having been asked where he got the gold-dust, Williams had slipped away from Salt Lake and come to Denver. The Vigilantes followed him here. Williams was at the old Planters' House when they came to that hotel, saw and recognized them, and at once left the house by the rear way. He boarded the first east-bound stage-coach next morning, but about noon the Montana men learned that Williams had thus fled. They followed on fleet horses and overtook the coach at Godfrey's ranche down the Platte, captured the man, returned with him to Denver and put him in the old jail on Larimer street near Fourteenth. They then informed members of the Denver "Committee of Safety" of the reasons they had for suspecting Williams of complicity in the Portneuf massacre. The prisoner was given a trial which was not concluded until the third day, when Williams broke down, confessed his guilt, and gave the names of all directly and indirectly connected with the dreadful affair. The Court by which he was tried met in the second story of Nye's store on Fifteenth street. He was turned over to the Montana men who put him in a carriage at night, drove a short distance up Cherry creek and hanged him to a cottonwood tree. In the Rocky Mountain News of January 30, 1866, the following appeared:

Old Planters' House, southeast corner of Sixteenth and Blake streets.

> "Considerable excitement was created in town last night by the discovery that some person or persons had been scattering coffin-shaped papers around and pinning them to the doors of nearly every house in Denver, and the report that a man was found hanging to a tree in Cherry Creek with an enlarged counterpart of the mysterious coffin and a red cross pinned to his breast."

Williams was buried under the tree that had served as his gallows, and years afterward a plow passed through his grave and turned his bones up to the light of day.

In the meantime Williams' confederates in Montana had in some way learned that the stage-driver was again under suspicion and that the party of Vigilantes had gone to capture him. This caused a stampede among them, and several had headed for Denver. The Montana men had remained in or near Denver after hanging Williams, and their additional work in that line is indicated in the following from the Rocky Mountain News of February 6, 1866:

> "John G. Stevens, of Walker Bros.' (Salt Lake) train, in a letter dated 'In Camp, near Ft. Lupton, C. T., January 31,' states that on the preceding day a wooding party discovered the bodies of three men hanging to a cottonwood tree. No papers were found on them by which they could be recognized. Two were dressed in dark citizens' clothing, the other had on military pants and a civilian's coat and vest. A man of the train declared that he had seen one of the men in Denver, but did not know him. On the breast of each was pinned a black coffin and a red cross. A large crowd of vigilantes had been there, and from the horse tracks it appeared that they had come from, and departed in the direction of, the city [Denver]."

No further particulars of the execution of these men were ever publicly known. The News, commenting on it, editorially said: "Those who have reason to fear the Vigilantes are trembling in their boots."

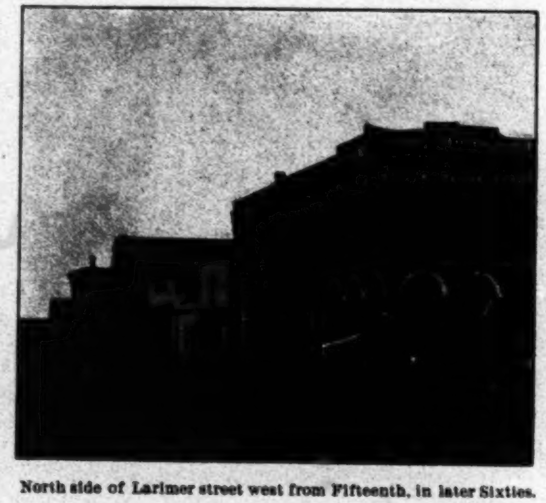
But there was still more of the operations of those Montana Vigilantes in the Denver region. A few days later the passengers on an east-bound stage from Denver had the monotony of their long ride across the plains broken, when several hours out, by seeing the bodies of two men hanging back to back on one telegraph pole. They had evidently been hanged the night before, and their bodies were adorned similarly to those that had been found near Fort Lupton. The matter was reported at the next stage station, and the station hands went to the place and buried the bodies.

During the spring and summer of 1866 several reports of one or more dead men having been elsewhere found hanging, with the same grim placards attached to their bodies, were current in Colorado newspapers, but many of them would seem to have been confused accounts of the executions mentioned in the foregoing.

According to the Territorial census of 1866, made by authority of an act of the Legislature, Denver in the summer of that year had about 3,500 resident people. In that year, and even to the close of 1867, there were still comparatively few improvements between Stout street and the brow of Capitol Hill; beyond that, toward the east, where there are now miles of stately homes, there was practically nothing. On the intervening land between the Hill and Stout street a few small houses were scattered here and there, but teams with wagons could have been driven over it in almost any direction—and often were. Fourteenth street below Stout, and its cross streets for a block each way, constituted the favorite locality for the more pretentious residences; and there are yet many fine homes in that part of the city, built during the next decade. Lawrence and Arapahoe streets in their extent of that time were residence streets; a considerable portion of Larimer on the east side was still occupied by dwellings, but the dominance as the great commercial thoroughfare which that street attaind in the decade of 1870-80 was already foreshadowed. Some good dwellings were on Curtis street and a less number on Champa, beyond which the few and mostly unimportant stragglers appeared on the city's outskirts to the eastward. Nothing more had been done in the Capitol Hill district until 1867 when John Wanless built a dwelling on Lincoln Avenue near Seventeenth, and this was followed by the Sargent house on the same street, between Eighteenth and Nineteenth Avenues. With Brown's, and Clements' two—the frame and the brick—the Sargent house made the fourth in that quarter. Through the close of that decade the open, unobstructed plains came down to the brow of the Hill. These hillside builders were regarded as rather singular men for choosing to go so far off in the country to build their houses; and the dwellings did look lonesome and forlorn standing away out there by themselves.

Blake was still the important business street it had been from the beginning, but the tide of travel had increased on Larimer. Fifteenth was also a busy avenue, but Sixteenth and Seventeenth were still "side streets." All the streets leading toward Capitol Hill were, beyond Stout, far more conspicuous on the plats of the real estate men than on the land set apart for them, and the Denver practice of "cutting across lots" was a much easier proposition than it is now. The lower blocks of Fifteenth street were important parts of the business center, but that thoroughfare soon lost its identity in the open country, and blended into a winding road-way which went up the Hill and off to the southeast on about the same line the street would follow if its course were now continued in that direction. This road-way was along the line of the old Santa Fe-Fort Laramie trail, and was a favorite path with the Arapahoes in their migrations to and from the town in its younger days.

Between 1865 and 1870 the old Auraria City district lost much of the prestige it had previously enjoyed, the tendency of the city's growth becoming distinctively and unmistakably toward that on the east side of Cherry creek. In 1867 a large area of "West Denver" that is now traversed by Colfax Avenue was little improved by dwellings or anything else; and farther to the south of Colfax in that district of the city all the land was undisturbed by the builder. Across the river where the pioneer town of Highland had been platted in 1859, and had waited so long for the development to which it was justly entitled, some beginnings had at last been made and a few hundred people had established their homes over there. But even as late as 1870 that quarter of the city gave little promise of the wonderful development which came to it in more recent years.



North side of Larimer street west from Fifteenth, in later Sixties.

The activity in the Far West in 1867 attracted many visitors who came to see the new and strange country and to witness the rapid development it was undergoing. One of these was the Reverend Hepworth Dixon who, after the fashion of many of his contemporary visitors, recorded his impressions and experiences in a volume entitled "New America." Mr. Dixon stopped in Denver and remained several days. "New America" contains some most extraordinary and fantastic accounts of life in Denver at that time and of the social aspects presented by the city. The good man was of a most receptive turn of mind, and was sadly imposed upon. He made the acquaintance of Robert Wilson, a young man then resident here and who possessed an imagination which in its fertility equalled that of Dixon's for guileless receptiveness. Robert told wild tales of rioting and slaughter going on in the city, and Mr. Dixon preserved them faithfully in his book, rewarding Robert in the same narrative, by installing him as a hero in the strife that made life here a daily affray. According to Mr. Dixon the streets of Denver early every morning were strewn with the bodies of the dead who had perished through the night, and presented something of the appearance of parts of a battlefield. Ordinarily from three to five men were gathered up as the morning's harvest, and sometimes that many were slain in open day, between the rising of the sun and the going down thereof. All differences of opinion, whether as to politics, the weather, the reconstruction policy, the honesty of a "deal" in a "social game," or the prowess of the disputants, were instantly settled with the revolver to the certain undoing of one, and frequently of both, of the disagreeing gentlemen. Curiously enough, Mr. Dixon did not appear to have himself witnessed any of these alleged contributions to the cemeteries, but he accepted the tales of his new friend, Robert, without questioning their fidelity to truth. Indeed, he implies that Robert, through motives inspired by pride in the town, withheld accounts of some of the more desperate affairs of slaughter, and that, therefore, "New America" did not recount the full story of the horrors of existence in this remote city situated in the midst of a vast region swarming with red savages who were but little more bloodthirsty than the white ones who swaggered around on the streets of Denver. At the time of Mr. Dixon's visit Denver was enjoying an era of quiet and peace within her gates, though the red men were on the war-path some distance outside, and his weird stories rested on the baseless fabric of "Bob" Wilson's exuberant imagination, strengthened so far as might be, by a willingness to impose on the credulity of a guileless stranger in what was to him an exceedingly strange land.

Another visitor here at that time was Colonel A. K. McClure, later editor of the Philadelphia Times, and a man of national reputation, from whose writings we have quoted. He told of his travels in a most readable book entitled "Three Thousand Miles in the Rocky Mountains." While Mr. McClure was in Denver the Indians were behaving badly. They were killing employes of the stage companies, and isolated settlers, raiding and burning the stage stations and running off the stock. Travel was seriously interrupted, and dangerous in many directions; and the stage line from Denver to Salt Lake had been forced to suspend operations. Mr. McClure and his party were anxious to go forward to Salt Lake, so he telegraphed General Augur, in command at Omaha, asking for a detachment of troops to escort a stage to that point. The General sent a negative reply by wire, and included so many military and other reasons in it, that the message cost the journalist eighteen dollars and six cents; whereupon, the correspondence instantly ceased.

Denver had met and overcome many of the usual difficulties and obstacles that beset young communities on the frontier of a generation ago, and a great many more that were not usual. Its location so far beyond civilization in the beginning, and its early deprivation of the restraints of organized government, had made it a refuge for scoundrels of all grades of villainy. The exigencies of the civil war and of the Indian outbreaks had emphasized its comparative isolation during those troublous years of strife; serving, however, to make its substantial people who held on to their faith in its future more self-reliant and determined than ever. The adverse circumstances of the ineffective ways and means of quartz mining, of which we have already told, had added to the perplexities of the situation vital problems peculiarly their own; the town's history had been stained and blotted by the deeds of desperadoes who had made the place their harbor; and, as if all these troubles were not enough, she had suffered much from the wrangles, and jealousies and selfishness of many of the Territorial politicians.

By the close of 1867 most of these unwelcome conditions had either passed away or the beginning of the end of those remaining was in sight; but the wars of the politicians still went on, to the detriment of the city, and of the Territory which, largely by reasons of their contentions, had to sit and patiently wait for the statehood justly due it. The railroad situation, however, and as related in detail in a subsequent chapter, had become acute, and the new town of Cheyenne menaced Denver's supremacy. The gamblers who recently had occupied choice and prominent places into which they had lured their victims with alleged music, or enticed them by force of persuasion and pretended affection of twining arms, had been driven into retirement; and so far as they continued their avocations did so with caution and secrecy. The sturdy, earnest, faithful majority of the people had so steadily and persistently battled against defiant wickedness that the latter had given up the contest and surrendered. It is to be said again that the newspapers of that time had been the foremost of the fearless and tireless warriors in the long and trying campaign against vice and crime. The measure of their influence for the higher standard of public sentiment that triumphed over iniquity, established new and better conditions, and made Denver a place of commendable order, can not be laid down by metes and bounds.

It is not to be understood that Denver had swung far to the other side of moral ethics, and had taken on what we are accustomed to hearing described as puritanical aspects. Far from it. Notwithstanding the troubles that continued to hang over it, the town was socially pleasant and rather animated and gay. While its material prosperity had been retarded, and was still depressed, the people just at that time were uplifted by the prospect of soon having a railroad, to build which a company of their own citizens had been formed. The streets of the town were thronged with people, and with traffic created by the struggling but reviving mining camps which drew nearly all their supplies from or through the still hopeful young metropolis. While Denver had some schools and churches, it also had its rather worldly places of alleged amusement and a race-course, all of which were supported in a more cheerful spirit than might have been expected under existing circumstances. The devotees of chance could still find welcome in quiet, reserved quarters, but the defiant flagrancy of the managers of such places was gone. The professional gamblers remained in considerable numbers, as they do to-day, but they had to conduct their business without ostentation. Considered all in all, and especially considering the unusual circumstances of Denver's then remote situation and the general character of a restless mining region, the affairs of the community were as well ordered in these times, publicly and privately, as those of any city of equal size anywhere in the western country.

The era of remarkable activity and prosperity in the United States that followed the civil war produced astonishing results in the west, but Denver did not receive her fair share until the opening of the next decade. It was an era of westward emigration and westward railroad building. The most conspicuous effect of it here in 1867-68 was in the greatly advanced price of labor. Instead of being a drug on the market, as it had been in the first year of that decade, it was, in consequence of many workingmen having gone into the railroad-building districts to the eastward, in rather active demand at relatively high prices. Miners were paid five dollars a day; mechanics five and six dollars a day; farm and ranche hands received from forty to sixty dollars a month and their board; common laborers earned daily from three to three and one-half dollars. Female servants were hard to get at any price, and still harder to keep. Comparatively few could afford to pay their way out from the States, and there were not a great number of them in the city. Ordinary house servants commanded from forty to sixty dollars a month and their keeping. Cooks were considered great prizes at wages ranging from seventy-five to one hundred dollars a month and their board. But these high wages were not all of the householder's burden and bother. Often the servant or cook would get married and leave before she had become acquainted with the family. All who wanted to marry had their choice of a dozen willing, anxious, worthy men; and most of them would quickly make a choice and go into houses of their own.

During the later years of that decade agriculture had received the attention of many of the people, not only in the general vicinity of Denver, but elsewhere in the Territory; and with the exception of corn, the home-grown crops abundantly supplied the people with all the products of the soil. In 1866 the Colorado Industrial Association had been organized, and in October of that year the first fair in Colorado was held here, at which a very creditable display of agricultural products and handicraft was made. Richard Sopris was the leader in the enterprise and President of the Association. A native of Bucks County, Pennsylvania, (July 26, 1813), he became a citizen of Indiana, where he engaged in canal and railroad building, and in steamboating. A "Pike's Peaker" of the spring of 1859, he was one of the pioneer miners on Clear creek, as the reader has been told. Late in 1859 he became a citizen of Denver, and during the remainder of his life was an active, prominent and useful man in city and county affairs. He died in Denver, April 7, 1893.

North side Blake street, west from Fifteenth street in later Sixties.

The fair of October, 1867, was a great advancement over the first one; and the third one, opened late in September, 1868, was equal to the preceding two combined. The annual exhibitions of this association were continued throughout the next decade, and were very popular with all the people.

The discovery—and one that appears to have been profoundly surprising—that wheat would grow and mature here resulted from the accident of a few grains having been dropped in a kitchen-garden in 1859, where they produced results which became the talk of the town. Those few stalks which were the pioneers of the fields of wheat along the South Platte river, were observed by W. P. McClure in October of that year standing in W. H. Parkinson's house-lot. In 1867-68 the general prices of grain ruled high. Wheat ranged from $4.50 to $6.00 per bushel; corn, from $3.00 to $5.00; oats, $2.50 to $3.00; rye, $4.00 to $5.00; barley, $2.50 to $3.50. In 1869 the prices were lower, but continued relatively high until the completion of railroads to Denver made available grain from the Missouri river States at freight rates quite different from those of the "prairie schooners." Preparations for building Denver's pioneer road to Cheyenne, were put under way near the close of 1867 and work was nominally begun in May, 1868; but two years elapsed before it was completed. Its history appears elsewhere with that of other railway undertakings.

The rapid westward progress of the Union Pacific and the Kansas Pacific railways in 1867 had promised improvement in Denver's prospects, stimulated hope, and sustained the courage of those who had shared the fortunes and misfortunes of the town from its beginning. While these roads were not routed to Denver, and the general railway details for the immediate future were still somewhat uncertain, it was expected that somewhere in the operations, both actual and potential, Denver's opportunity would arise. It was evident that the city could not and would not enter upon a career of active growth and prosperity until the coming of railroads. In April, 1867, after a spirited local campaign resulting in the re-election of Mayor DeLano, a total of only 1,524 votes had been cast at the election. At that time the ratio of voters to population was far larger than in older communities, and this result indicated what should have been expected of the census of 1870 unless some extraordinary increase had intervened.

In the summer of 1867 there was another "Indian scare," though of far less magnitude than that of 1864. Raiding Indians appeared along the Colorado-Kansas, border, killing some of the settlers, running off stock, destroying property, and interrupting communications. Our people were much excited over the situation, and in June volunteers were called for, and several companies promptly enrolled. But they did not go into service, as the immediate danger to the city passed away, and there had been delay in equipping them for active operations through some neglect of the United States military authorities or a misunderstanding with them. The causes of the alarm had been exaggerated so far as they directly menaced Denver, but as one consequence that summer was a rather dull one in business and in improvements.

Denver had suffered the chagrin and humiliation of seeing Golden priding and pluming herself as the capital of the Territory; and next to the Indian outbreaks and the uncertainties of the railroad situation, this was her sore grievance. Great, therefore, was her elation when the Territorial Legislature, on December 9, 1867, the eighth day of the session, by an act passed after a vigorous fight against it, made Denver the capital and moved over here to finish its legislative labors. Beyond the sessions of the Legislature Golden had been rather the nominal capital than the actual one; for, excepting a brief period under Governor Cummings, the Executive offices and general business of the Territory were in Denver. But the moral effect of Golden and not Denver being even the nominal capital was felt to be a bad one; it lessened the city's importance and influence; and made an unfavorable impression abroad at that somewhat critical period, from a local standpoint, in the then opening era of railroad construction in Colorado. This event was one of conspicuous importance in the history of the city, and its advantageous influences were far-reaching. Henry C. Brown promptly clinched the proposition by stepping forward with a donation of ten acres of land for a capitol site; and a more appropriate one could not have been found in the Territory. The Denver Pacific Railroad Company had been organized, the Territorial capital had been secured and made secure, and that year closed with a brightening future for Denver.

The April election in 1868, at which William M. Clayton was chosen Mayor, ended a local campaign in which the old bone of contention, "the city lot question," was the principal issue. It was fiercely, and so far as some men were concerned, compromisingly, discussed; and was the cause of what was the angriest public controversy in the annals of the city. Even to this day are heard echoes of the rancor and personal hostilities engendered by that memorable contention. The correspondence arising in the preparation of this work included letters from a considerable number of men here and elsewhere, survivors of our pioneer times, who allege their one-time ownership of many city lots to which they derivied title of right from the "Auraria City" and "Denver City" Town Companies, or from persons whose titles came from those pioneer organizations; and that in the processes of carrying out the purposes of the Act of Congress of May 28, 1864, and of certain other arrangements made at that time, intended to confirm all rightful real estate titles coming down from the old town companies, deeds for their lots were given to persons who had neither just claim nor right to them, to the great distress and loss of the rightful owners. Many of these stories are exaggerations based on misunderstandings of the cause and extent of the trouble, and others indicate ignorance of legislation that adversely affected indifferent or negligent non-resident property-owners. Nevertheless, there was enough of wrong in the proceedings to cause a very dark blot on the city's history. While no definite, categorical statements can be made, for the reason that no direct evidence of the wrongs alleged to have been committed exists in tangible form, all record proof of the facts having long since disappeared, we present in a succeeding chapter dealing with the changes in the city's original boundaries, and collateral subjects, an outline of the origin and progress of the trouble indicated by "the city lot question."

As we have said, the controversy over the matter in that spring of 1868 was an angry and bitter one. Men were publicly accused of having been "lot-thieves" and other types of rascals. The outbreak had been brewing and threatening for two or three years, and when it came it caused a storm. The passing of the election did not quell it, for the contentions were continued in the city newspapers through to the summer of that year, and came to the surface frequently in subsequent years.

The uproar would probably have continued longer in 1868 had not the Indians interrupted it by another of their characteristic outbreaks that threatened the city seriously, and ravaged a large part of eastern Colorado. In July of that year Governor Hunt was over in the Ute country pacifying those people and persuading them to make Ouray their chieftain as successor to the one who had recently died; which they finally did. But, in sympathy with their race elsewhere, and under the bad influence of Captain Jack and old Colorow, who insisted on hostilities against the whites, some of them had been very restive after the death of their head chieftain, and in the earlier part of his visit Governor Hunt was in great personal danger. While he was absent, the Arapahoes and Cheyennes, having repudiated their last treaty, as we have related in the general account of the Indian wars, had returned to the Colorado plains between the South Platte and Arkansas rivers. At first they made little trouble, but about the close of August they began killing, burning and destroying. Accounts of Indian depredations are near enough alike for one to answer for all, and we have already had many of them. On August 28th the bodies of Mrs. Henrietta Dieterman and her young son, frightfully mutilated, were brought into the city. They had been killed, after the mother had been subjected to the usual horrors inflicted upon white women by the Indians, on Comanche creek. This spectacle caused profound alarm and aroused a feeling of most revengeful excitement. Territorial Secretary Frank Hall was Acting Governor in Hunt's absence, and promptly organized forces to protect the city and drive out the Indians. The regular army troops should have done this, but they did not. A volunteer company of cavalry under Major Downing took to the plains; and another, the "Platte Rangers," organized farther down the river, under D. R. Bailey, and including such men as Holon Godfrey, Elbridge Gerry, and Jared L. Brush, now of Greeley and recent Lieutenant Governor of Colorado, did likewise. A brother of Brush, who had been a ranchman down the Platte, had been one of the early victims in this Indian foray, and several others also had been killed in that part of the country; while many more had been massacred to the east and southeast of Denver. The rangers came up with the Indians before Major Downing could reach them, and killed eight or ten of them in a long chase that drove them back to the southward. When the repudiated treaty with these Indians had been made, many of them asked and received a kind of

View about Denver in 1867, showing old "Denver Theater" on Northeast corner of Sixteenth and Lawrence Streets.

certificate of good character setting forth that they had become "good Indians," and presumably were entitled to consideration as such. Many of the Indians engaged in this bloody raid carried these certificates and treacherously used them wherever they could do so to their advantage.

As some account of the Indian depredations in 1868 has already been given, it is not necessary to add here more than a few local details. None of the bands came close to the city, but a large party of Arapahoes surrounded Colorado City but did not attack it. This band later moved into the South Park, where they encountered some Utes, their hereditary enemies, and killed several of them. Denver was practically without arms, and destitute of ammunition and other military supplies. The Indian troubles so far as they might affect this immediate part of the country were supposed to have ended, and our people were engaged in building a railroad.

View northward from Fourteenth and Lawrence streets, 1867.

Acting Governor Hall was placed in a trying situation. The Territorial treasury was empty, no regular troops within reach, and the small, unprepared and unfitted militia organization utterly inadequate for any such service as the emergency demanded. So, his only recourse was to call for volunteers for mounted service under Major Downing, and to also call upon the citizens for horses and equipments for them, and commissary supplies, which were promptly furnished. About enough old carbines to arm Downing's men were in the armory, a supply of ammunition was gathered up, and the Major left the city with his men before day-break on the morning of August 29th. Telegraphic communications remained open, and in the meantime Governor Hall had advised General Sheridan of the perilous situation in Colorado, and asked him for assistance. Sheridan had his hands full, and told the Governor to call on either Fort Hayes, Wallace or Reynolds; but no aid could be had from either quarter. So, the Governor had to fall back on the old proposition of calling upon the people to protect and defend themselves. A large quantity of arms and ammunition was finally dispatched to Denver for the use of the citizens, but did not arrive until October 29th. By that time the military operations of the regular army had broken the power of the Indians and prepared the way for peace. This invasion in 1868 was the last of the Indian troubles that brought danger near to Denver.

Aside from the perils attending that invasion, the autumn of 1868 was a season of better times here. After the immediate danger had passed business activity set in, for it was becoming evident that the warfare of the plains Indians, so far as it could menace the city, was nearing its end. The mining interests had been relieved of the worst of the depression that had so long hung over them, as ways and means had at last been developed for extracting the gold from the refractory ores and were in successful operation. The Denver Pacific railroad was under construction to Cheyenne, the fall business was heavy, and an unusual amount of building was in progress. But the prospects for early and direct rail communications with the outside world had a more beneficial influence than all other encouraging conditions put together.

CHAPTER XLIII.

DENVER VIGILANCE COMMITTEE WORK—CITY INFESTED BY DESPERADOES OF THE RAILROAD BUILDING ERA—FIRST OF STRICTLY LOCAL LYNCHING—DENVER PACIFIC RAILWAY—GROWING IMPORTANCE OF CHEYENNE—GOVERNOR GILPIN'S MEMORABLE ADDRESS—CITY'S IMPROVED APPEARANCE—REVIVAL OF MINING—REAL ESTATE VALUES—CENSUS OF 1870—COMPLETION OF DENVER PACIFIC AND KANSAS PACIFIC RAILROADS.

As we have previously stated, the first deliberate, actual lynchings in Denver's history, excepting the Montana cases, did not occur until late in this decade; and then not directly for murder, but for robbery; though the victims had records as murderers, and were "all around bad men." On November 20, 1868, late in the evening, Judge Orson Brooks, an old and good citizen of Denver, and at that time the city Police Magistrate, while on his homeward way, was stopped at the corner of Sixteenth and Lawrence streets by two men, one of whom seized and held him while the other rifled his pockets of upward of one hundred dollars in money. Such a robbery in itself was bad enough, but to "hold up" and "go through" the city Police Magistrate seemed to involve a special defiance of law and of the law's executives. It is not probable that the footpads selected their victim intentionally, though men of their kind usually know Police Magistrates by sight, anyway. Judge Brooks did not recognize his assailants, but D. J. Cook, who was City Marshal at that time, soon identified the work as that of Sam Dougan and Ed Franklin, two well-known criminals then in Denver. They had been in and around Denver, a few years before and then transferred themselves to the successive terminal points of the advancing Union Pacific railway where they had developed as typical "bad men" of the more or less temporary railroad towns. They had left Laramie while preparations for their lynching were in progress by some of the exasperated people of that town, and had come to Denver to better their depressed fortunes. Several robberies and brawls had occurred here just prior to the Brooks case and in which this pair were believed to have had their hands. Cook and United States Deputy Marshal Haskell found that Dougan and Franklin had left town suddenly after Judge Brooks reported his experience, and traced them over to Golden. They learned that the men were there and had been spending money freely in successfully getting drunk. They found Dougan in a saloon, and as soon as he saw the officers a fusilade of revolver shots began which resulted only in wounding the barkeeper and in enabling Dougan to escape through a back door and get away in the night. Cook then located Franklin in the Overland Hotel and went thither to capture him. He was found in one of the rooms in a half-drunken sleep, and when aroused instantly drew his revolver; but Cook, knowing the man's desperate character, was too quick for him and fired first, Franklin falling dead where he had stood. Cook had the dead man brought to Denver and buried here. Dougan had fled northward and was pursued and captured about half way between the mouth of the Cache-a-la-Poudre and Cheyenne. His captors brought him to Denver and put him in the old Larimer street prison. When it became known that Dougan was here a Vigilance Committee was organized to hang him. Learning of this, Marshal Cook, after nightfall on December 1st, started with the prisoner to a place of safety on the West Side, intending to lodge him in a stronger building and capable of better resistance to a mob. The committeemen soon learned of this movement and intercepted Cook and Dougan at the Larimer street bridge, taking the prisoner from the officer and marching him to a tree standing by the side of Twelfth street, between Larimer and Market, from a limb of which they hung him. A wagon was drawn under the tree, Dougan made to stand up in it while the rope was being adjusted, and it was then pulled away leaving the man to die of strangulation. He had begged for his life in his incoherent promises to leave the country and never come back; he acknowledged having killed a teamster named Curtis, at Black Hawk, four years before, for which he lay in jail over there several weeks awaiting trial, but managed to break out and get away; he at first denied any part in robbing Judge Brooks, but in the next breath admitted that he and Franklin had done that work; he denied to the last several other murders and lesser crimes charged upon him by his executioners, and in the midst of his denials and abject appeals for mercy the moving wagon left him hanging in the air. The body remained there until ten o'clock the next day when it was taken away and buried. Later, the convenient tree was cut down by the citizens living in the vicinity to prevent its further use for such a purpose. Dougan was only twenty-three years old, and before entering upon his career as an outlaw had been a teamster at Central City.

During the brief period covering the events narrated in the foregoing there was confined in the Larimer street prison a man named Musgrove, who was held on a charge of cattle-stealing, but who had a long and bloody record as a frontier desperado. He was of middle age and had been successively driven from California, Nevada, and Utah as an outlaw; coming into Colorado in 1863, he signalized his arrival by killing a man at Fort Halleck, was brought to Denver for trial and discharged by the United States Commissioner for alleged lack of jurisdiction. Musgrove then became the leader of a gang of thieves operating in Jefferson, Clear Creek and Gilpin counties, from which he fled to escape the fate which later befell him here, and went to the Poudre valley where he became a daring and pestiferous stock-thief. In 1868 he joined the Cheyenne and Arapahoe Indians in their foray into Colorado late in the summer and in the autumn of that year, and as the leader of one of the bands had left a trail of blood and destruction behind him. He had not long been out of this inhuman work when he was captured and brought to Denver. Nominally he was a prisoner here as a cattle-thief, but his career with the Indians constituted in the minds of the people his great and unpardonable crime.

Southwest corner Fifteenth and Blake streets in later Sixties.

At three o'clock in the afternoon of December 2nd, five hours after Dougan's body had been cut down, the Vigilance Committee, largely augmented in numbers this time, went to the Larimer street prison, took Musgrove out, put him in a wagon, marched with him to the Larimer street bridge, drove the wagon down into the bed of Cherry creek, fixed one end of a rope to the bridge and the other around the outlaw's neck, and ended his career without trial or further ceremony. Musgrove was defiant and courageous to the last. When the Committee's leaders entered the prison he made fight with a stick of wood, and they had some difficulty in overpowering him. Two or three shots were fired at him but none took effect. He appeared cool and collected while on the way to the bridge, and said that he supposed he was to be hung because he had been an Indian chief. At the bridge he asked time to write two messages, one to his wife and the other to one of his former comrades. He wrote without any sign of fear or nervousness, and handed them to R. W. Woodbury for delivery. His arms and feet were then bound, yet he managed to get some tobacco from his vest pocket and made a cigarette which some one lighted for him, and which he began smoking. As the wagon moved away he bent his knees and leaped upward into the air, the sudden jerking of the rope as he descended to the limit of its length dislocating his neck; a result he evidently intended to accomplish by his last movement in life. Soon afterward his body was taken down and buried.

There was no concealment of identity on the part of those who participated in these executions. Musgrove was hung in the middle of the afternoon—in broad day-light. The execution of Dougan, though at night, was the work of well-known men who also assisted in the disposition of Musgrove; and a few of them are still living in Denver. No such thought as prosecuting any of them for their acts occurred to any one. The community, while it deplored the necessity for such proceedings, approved and upheld the course adopted to rid the town of some of the most desperate and dangerous men who ever trod the earth. While Musgrove's body was still swaying from the bridge the commander of the Vigilantes, a well-known and most excellent citizen whose name is a familiar one in the annals of Denver, addressed the large crowd, reciting the causes for what had been done and announcing that there were still a dozen or more men like the two that had just been put out of the way, whom the Committee would hang if they were found in the city after twenty-four hours, or if they ever came back here again. This, following what had already been done with ropes, was sufficient warning, and before the next afternoon some forty or fifty individuals, each of whom was conscious that his record entitled him to a place in the speaker's list of a dozen, were putting stretches of the plains between themselves and Denver as fast as they could. They did not dare seek refuge in the mountain mining camps, because they knew that ropes could and would soon be made ready for use over there.

It is to be remembered that the construction of the Union Pacific railroad across the plains was attended by the presence in the various temporary terminal points of the most extraordinary collection of desperadoes, outlaws, thieves, gamblers, swindlers and other types of scoundrels, ever known in any country. When the road reached the mountains, as it had at this period, many of these men left its camps and sought new fields. A considerable portion of them, seeing that Denver had become the focus of railway construction with its attendant large disbursements of money, had put in here for harvesting what they regarded as their share of it. Their presence, character, and intentions were known, and the beginning of their work had been made; and, it was rather for the purpose of checking it somewhere near the outset, than on account of many flagrant deeds of violence already committed, that the Vigilance Committee of December, 1868, was organized and did its work; although, as we have stated, there had been in the autumn of that year a significant activity in the growing circle of men known to be capable of any form of crime. Then, the enforcement of Territorial law was far from being efficient and satisfactory, and none better knew its weaknesses and how to take advantage of them than the man who made robbery, violence and other crimes his profession.

Northwest corner Fifteenth and Blake streets in later Sixties.

With the coming of 1869 all the energies and all the interest of the resolute but still rather forlorn-looking little city were centered on the fortunes and fate of the Denver Pacific Railway Company, the local organization of Denver men exclusively, that had been wrestling with the grave and vital problem of building a railroad northward to a connection with the Union Pacific road at Cheyenne. That great undertaking had then crossed the mountains, and its construction was nearing a connection with the Central Pacific railroad builders from the Pacific coast. Denver's future was involved in the immediate building of a road that would link it with the trans-continental lines, but the company that had undertaken the task was beset by many difficulties. Furthermore, the Colorado Central railroad was then projected on lines ignoring Denver as a place of importance, and contemplating for it nothing more than a branch or spur.

To add to the perplexities of the situation and to the uncertainties of the future, it had suddenly appeared in 1868, as heretofore mentioned, that the Rocky Mountain metropolis might not arise here on the South Platte, but that it seemed destined to develop from the railway town of Cheyenne. Many people had already left Denver and located in Cheyenne in anticipation of that probability becoming a certainty. Greatly at variance with railway practices of our times, the Denver Pacific Company took the local public into its full and unreserved confidence. Public meetings had been frequently held and were characterized by the most unreserved discussion of the railroad situation. Former Territorial Governor Gilpin was an enthusiast on the subject of railway building, and at a public meeting of the Denver Board of Trade held in February, 1869, to accelerate the construction of the road, delivered a heartening address to his fellow-citizens, that became the talk of the town for weeks afterward, and is still recalled with feelings of satisfaction by many of the old-timers who heard it. Governor Gilpin was a brilliant, as well as an enthusiastic, man; yet his oratory was of a style and fashion now almost, if not quite, extinct. It was fervid, extravagant, and flowery, and is a fair example of that which was much in vogue between thirty and fifty years ago. With something like prophetic vision, in view of all that has been accomplished since that time, and especially so now that the United States is established as one of the great powers of the world with territories, peoples and dominion in the distant Orient, Governor Gilpin, seeming to have looked far across into the future and seeing what was destined to come in the closing years of the century, said:

"As for the site upon which the city of Denver is founded, it is pre-eminently cosmopolitan. It pre-occupies the auspicious focus into which Nature groups all her colossal elements. We are at the base of the Eastern Cordillera, whose summit is nowhere penetrated by navigation for a distance of two thousand miles from the principal meridian which parts and unites the two hemispheres of the globe."

"Here the vast arena of the Pacific fits itself to the basin of the Atlantic edge. The goal is reached where the zodiac of nations closes its circle. The gap between the hemispheres is bridged over forever. We are upon the isothermal axis, which is the trunk line (the thalwez) of intense and intelligent energy, where civilization has its largest field, its highest development, its inspired form."

"There is an intoxicating grandeur in the panorama which unveils itself to the spectator, looking out from the crest of the neighboring Cordillera. In front, in rear and upon either hand, Nature ascends to her highest standard of excellence."

"Behold, to the right, the Mississippi basin; to the left the plateau of table-lands; beneath, the family of parks; around, the radiating backs of primeval mountains; the primary rivers starting to the seas; a uniform altitude of 8,000 feet; a translucent atmosphere a thousand miles removed from the ocean and its influences; a checkered landscape, from which no element of sublimity is left out—fertility and food upon the surface, metals beneath, uninterrupted facility of transit."

"Behold here the panorama which crowns the middle region of our Union, fans the fire of patriotism, and beckons on the energetic host of our people."

"Here, through the heart of our Territory, our population, our mines, our farms and habitations, will traverse the condensed commerce of mankind, where passengers or cargoes may, at any time or place, embark upon or leave the vehicles of transportation."

"Down with the parricidal policy which will banish it from the land, from the broadest dwelling of the people, to force it on to the sterile ocean, outside of society, through foreign nations, into torrid heats, along circuitous routes, imprisoned for months and dwarfed in great ships."

"Railways, multiplied and spanning the continent, are essential domestic institutions, more powerful and more permanent than law, or popular consent, or political constitutions, to thoroughly complete the grand system of fluvial arteries which fraternize us into one people—to bind the two seaboards to this one continental union, like ears to the human head—to radiate the rural foundations of the Union so broad and deep, and establish its structure so solid, that no possible force or stratagem can shake its permanence—to secure such scope and space to progress, that equality and prosperity shall never be impaired, or chafe for want of room."

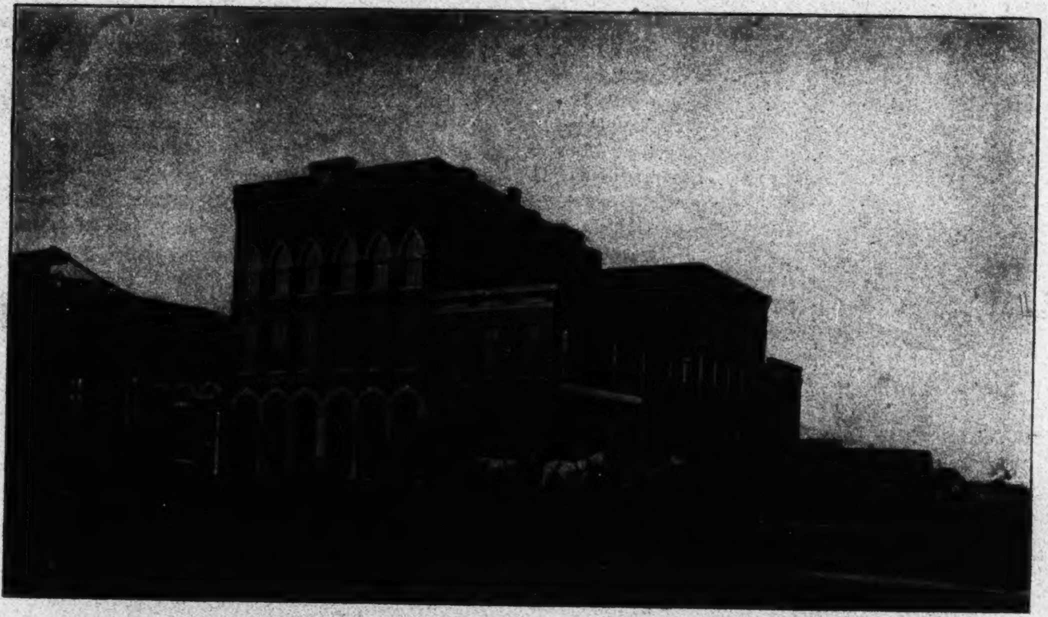
"To Denver is secured a career into which all those favorable facts of position and circumferent area are now united. The North American people number 50,000,000 in strength; 2,000,000 annually shift their homes. This force is par excellence the pioneer army of the North American people. This movement causes an uninterrupted pressure of the people from East to West, resembling the drift of the ocean which accompanies the great tidal wave. Diurnally is the surface of the sea lifted up in silence and poured upon the coasts of the continent. Exactly similar to this is the movement, annually gathering force, and seen to impel our people through and through from the Eastern to the Western limit of the land. The inscrutable force of gravity which, with minute accuracy, holds the planets in their orbits, or causes each drop of rain to fall, sways the instincts of society. The gravitation presses to all directions upon the axis and to the focus of intensity. This regular instinct of movement has been transiently interfered with by the artificial passions and demoralization of civil strife."

"It rapidly assumes again its temper and its regularity. Our neighbors from California work up to us with miraculous energy and celerity. They bring with them the open avenue to us from Asia."

"The Mexican column reaches us from the south. On the north the activity is great and in close contact. These several columns simultaneously converge upon us. They increase every moment in numbers, weight and celerity of motion. We no longer march into the blind wilderness dependent upon and chained exclusively to Europe in the rear. We open up in front the gorgeous arena of the Asiatic Ocean. At present the huge city of London monopolizes the imports from the Oriental world. These are stored there and retailed to the people residing in the basin of the Atlantic."

"Upon the labor of the American people so far as they participate in the consumption of Oriental wares is harnessed the frightful burden to support the British people and the British Empire, and to be devoured by their voracious despotism of trade. The work of emancipation is accomplished by the intrepid energies and conquests of the pioneer army of North America. It only remains to be appreciated by the people. We are about to supply by direct export, the food and precious and base metals to 850,000,000 of neighboring Asiatics! To Japan! To China! to India. To the Philippines! the Celebes. To the Archipelagoes of the Sooloo Sea and Polynesia! These are larger in aggregate area, and more populous, than Europe; and are nearer to us."

"Included with the equatorial zone, but approached by us through the temperate zone, they overflow with merchandise desirable to our people in multitudinous affluence. To us will belong the prodigious carrying trade upon the seas for these infinite multitudes. The equatorial heats are outflanked and avoided. The conflict for dominion over the multiplied commerce of the world, is fought, and conclusive victory is won for our country. A large majority of the American people now reside within the Mississippi basin, and in this Asiatic front of our continent, which is born from us, nascent powers, Herculean from the hour of their birth, unveil their forms and demand their rights. States for the pioneers; self-government for the pioneers; untrammelled way for the imperial energies of the forces of the Rocky Mountains and the Pacific Sea, may not long be withheld by covetous, arbitrary and arrogant jealousy and injustice! In the conflict for freedom, it is not numbers or cunning that conquers; but rather daring, discipline and judgment, combined and tempered by the condensed fire of faith and intrepid valor. As it is my hope in these notes to contribute what may be valuable, I adhere strictly to severe facts, and reject absolutely all theory and speculation. These facts are as indestructibly established as is the alphabet, and are as worthy of unquestioning faith and credence. That we may further look into the gathering achievements of the near future, without obscurity, and with an accurate prophetic vision, I may, without censure, submit what is within my own personal experience. It fell to my lot during the years from 1840 to 1845, alone and in extreme youth, to seek and chalk out in the immense solitudes filling the space from Missouri to China, the lines of this dazzling empire of which we now hold the oracular crown—to have stood by its cradle—to be the witness of its miraculous growth. It is not for me in this season of gathering splendor, to speak tamely upon a subject of such intense and engrossing novelty and interest. I may properly here quote the concluding sentences of a report which I was required to make on the 2nd of March, 1846, to the United States Senate at that time brimful of illus-



View in Denver at close of decade 1860-70—southwest corner of Fifteenth and Market streets.

trious statesmen. What I said there and then in the first dawning twilight of our glory, I will now repeat:"

"'The calm, wise man sets himself to study aright and understand clearly the deep designs of Providence, to scan the great volume of nature, to fathom, if possible, the will of the Creator, and to receive with respect what may be revealed to him. Two centuries have rolled over our race upon this continent. From nothing we have become 50,000,000. From nothing we are grown to be in agriculture, in commerce, in civilization, and in natural strength, the first among the nations existing or in history. So much is our destiny—so far up to this time—transacted, accomplished, certain and not to be disputed. From this threshold we read the future.'"

"'The untransacted destiny of the American people is to subdue the continent, to rush over this vast field to the Pacific Ocean, to animate the many hundred millions of its people, and to cheer them upward; to set the principle of self-government at work, to agitate these herculean masses, to establish a new order in human affairs; to set free the enslaved, to regenerate superannuated nations, to change darkness into light, to stir up the sleep of a hundred centuries; to teach old nations a new civilization, to confirm the destiny of the human race, to carry the career of mankind to its culminating point; to cause stagnant people to be reborn, to perfect science, to emblazon history with the conquest of peace; to shed a new and resplendent glory upon mankind, to unite the world in one social family; to absolve the curse that weighs down humanity, and to shed blessings round the world.'"

The latter part of Governor Gilpin's address, with its references to setting "the principles of self-government at work," to "establish a new order in human affairs," to "teach old nations a new civilization," to the Philippines, and to the many other now familiar propositions, reads more like an optimistic response to a toast to the country's "manifest destiny," at some great banquet in the Nation's capital in our own times, than like the utterances of a Denver citizen who was merely talking to an assemblage of his fellow-townsmen in a little, far-isolated frontier town in the distant west thirty-two years ago.

By 1869 the general appearance of Denver had been materially improved in what may be called its landscape aspects. The winding ditch from far up the Platte that had for several years brought water to the Capitol Hill elevation, had been of invaluable service. Water flowed at the sides of the streets, giving life and vigor to many trees that had been planted, and enabling door-yards to be made green with turf and more heartsome by the presence of verdure and flowers. Nothing growing out of any of the improvements that had been made was so welcome in the relief and satisfaction afforded as the results that had followed watering the town by the old ditch.

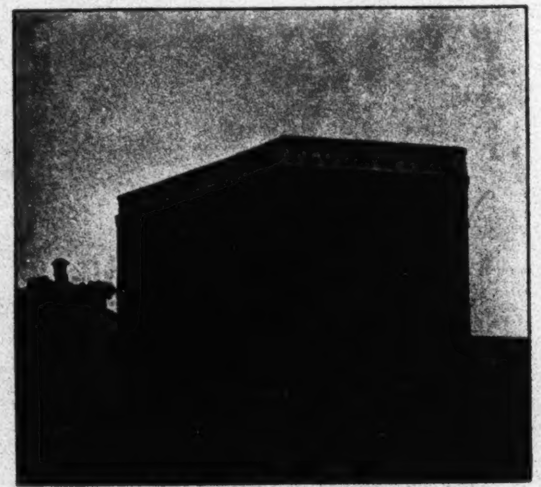
The spring and summer of 1869 passed without notable incidents outside of those associated with the prospective completion of the Denver Pacific railway and its alliance with the Kansas Pacific. Business was improving in every department of trade. The greater stimulation came from the fast-increasing prosperity of the mining camps. Good results were coming from the gold mines, now that the metal could be profitably extracted from the ores, and silver mining had become promising in some of the mining districts. The Georgetown district was being developed, and its new sources of mineral wealth that yielded so much in subsequent years, were opening the eyes of the miners who, in earlier years, had regarded the silver that was ingrained with most of the gold as only a troublesome vagrant whose absence would have been gratifying. The mining towns, proper, all along the ranges, were reviving, and all these improved conditions were reflected in the increasing activity in Denver. Agriculture had also made great advances, and at that time there were near two hundred thousand acres of land under cultivation along the streams flowing eastward from the mountains.

During the autumn of 1869 and under the influence of the more active construction on the Denver Pacific to Cheyenne, and on the Kansas Pacific, the route of which had been changed toward Denver, the assumed values of real estate had been greatly advanced, and were represented by figures larger than ever thought of before. It was apparent that the city's future was now fairly assured, yet transactions were not numerous enough to constitute a "boom." Many additions were platted, but there was no great crowding up of buyers. Rents had also reached high figures and tenants appeared to be carrying heavier burdens than the immediate conditions justified. While the long-standing faith of some of the citizens that Denver must and would become a great city still held fast, property-owners were over-estimating the immediate benefits of railway communications, great as they proved to be, in the increased valuations they placed upon real estate in the autumn of that year. But there was a firmness in their views that indicated a belief that if necessary they could well afford to wait a little while for the full realization of their expectations; and they did have to wait.

In what we have said in the foregoing concerning the higher valuations of real estate, the reader will understand that they were higher only in comparison with the previous depressed conditions, but trivially low when set over against prices twenty years later, or against the present values of the same properties. Even in much later times real estate prices were absurdly low as compared with those of the great speculative era that ended in 1893, or with those of the present time.

The approach of the railways also had a decidedly stimulating effect on improvements in 1869, and a considerable number of good buildings were erected that year, among them being several large and substantial dwellings, and a score or more of new business structures to replace old ones that were regarded as being unfit to survive the coming of the iron horse.

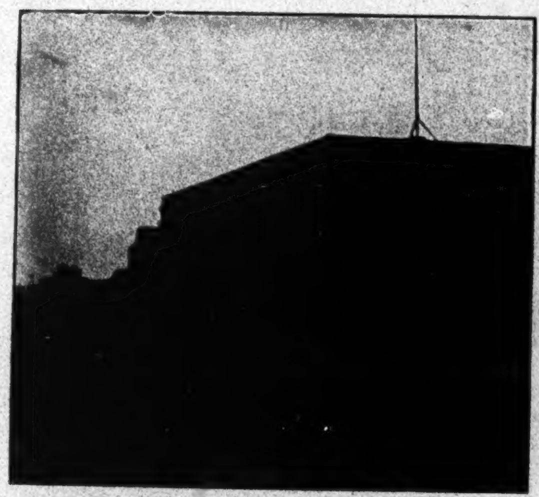
In the spring of 1870 as railway connection was approaching completion, great interest was also centered upon the result of the United States census of that year. It had appeared that the city's population through the busy months that had passed, had very greatly increased; but there were so many transient people coming and going—a sort of floating population—that these appearances proved sadly misleading. In 1866, as we have stated, a census of the Territory was taken pursuant to an act of the Legislature, and as it had a bearing on one of the several movements for Statehood, it was not probable that very many people were overlooked. That enumeration returned a population of 27,931 in the Territory and but a few over 3,500 in the city. The encouraging revival of operations in the mining districts that had afterward set in and brought with it a large increase of business to Denver, was also attended by an incoming of many new people. In 1867-68 the usual estimate had given Denver from six thousand to eight thousand inhabitants, though two or three thousand more were added by the more enthusiastic statisticians. 1869 was thought to have added at least a thousand more. Great, therefore, was the amazement and incredulity when the census-taker of 1870 reported that he had found only four thousand, seven hundred and fifty-nine proper residents who were entitled to figure in his lists—a net gain of only ten over the enumeration of 1860.



Northeast corner of Sixteenth and Market streets in later Sixties.

It was hard to realize that this could be true—that the established population was still of only village proportions, when Denver was so much unlike any village that ever was seen, with its crowded streets, bustling activity, and the best business establishments between St. Louis and the Continental Divide owned and conducted by men unsurpassed in enterprise and integrity. The work of the census-taker, though it was probably approximately correct, did not harmonize with the apparent conditions nor with previous anticipations. An understanding of these matters and situations assists us in our efforts to realize the almost unbelievable fact that the Denver which is spread out before us now in the dawn of the new century has been almost wholly created within thirty years. The sudden gain or loss of a population equal to that officially enumerated in 1870 would not now make any noticeable difference.

But, the event in 1870 that overshadowed everything else, that marked an epoch in the city's history, was the coming of the locomotive in June, just about eleven years after the great discoveries of gold here in the mountains were fairly developed and the actual settlement of the Pike's Peak country may be said to have had its general beginning. The Union Pacific and Central Pacific had met beyond Ogden, Utah, in May, of the previous year, and track-laying on the Denver Pacific had advanced toward Denver from Cheyenne until, on June 15th, the rails had been laid into the city. The company had purchased for construction purposes from the Union Pacific an engine that had been similarly used on that road, and had led the way across the plains. It was the first locomotive that crossed the Rocky Mountains and the first to enter the Utah basin. When the Denver Pacific got it it was given the name "D. H. Moffat" in honor of a man who was with others instrumental in enabling it to finally get to Denver. Among the crowd that greeted it were some men who had not seen a locomotive since they had crossed the Missouri river on their long journey over the plains in 1858 or 1859, and who had concluded that they might never see one again.



Northeast corner Fifteenth and Blake streets in later Sixties.

But the arrival of the "D. H. Moffat" did not mark the formal opening of the road. This eventful ceremony, or ceremonious event, occurred on June 24th, which was a day of days in Denver. After the long waiting, the many tribulations of the railway company—of which some account is elsewhere given, the tremendous efforts and great sacrifices that had been made to overcome them, the "last spike" was driven on that day and Denver made a railway center. This spike was of silver contributed by the miners in the Georgetown district. The entire population of the town, and many people from the mining camps, were present to see that "last spike" driven home, to hear the speeches, and to enthusiastically congratulate each other over the completion of the long iron trail that stretched away to both oceans. The first railway train, outside of construction operations, had come in from Cheyenne, and the blasts of the engine's whistle made the sweetest music the pioneers of Denver had ever heard.

Two days later, on the 26th, the cornerstone of a brick building for a passenger station was laid at the foot of Twenty-second street, then on the city's outskirts, by the Masonic order, and with much ceremony. Bishop Randall, a pioneer here for the welfare of his fellowmen, delivered an address there that day which, for eloquence, feeling and appropriateness, has not been surpassed in Denver between that time and this. Upon the completion of the Kansas Pacific road on the 15th of August, following, it, also, used that building, which thus became the city's first union passenger station.

So, the pioneer era in Denver was ended.

CHAPTER XLIV.

EARLY CHANGES IN CITY BOUNDARIES—TERRITORIAL ACT OF MARCH, 1864—"CONGRESSIONAL GRANT"—CONDITION OF REAL ESTATE TITLES—JUDGE HALL'S LAND ENTRY—ENTRIES OF ADJACENT LANDS—OLD PLATTINGS AND STREET NAMES—MEANING OF OLD STREET NAMES IN BUSINESS DISTRICT—CHANGE OF NAMES BY CITY COUNCIL—SOME PARTICULARS OF THE "LOT QUESTION"—CONFUSION OF CONTROVERSY AND WRANGLING GROWING OUT OF IT—EXAGGERATED LOSSES—POPULAR MYTH OF "LOST REAL ESTATE RECORDS."

Important changes were made in the plats of the three Cherry creek towns within a few years after the original surveys were completed; and beginning in 1860, many changes in street names ensued. All the street names or designations bestowed by the Aurarians and Highlanders in their towns have disappeared, and a majority of those originally given the streets of "Denver City" have also vanished. The consolidation of the three towns under the "act" of the "Jefferson Legislature" in December, 1859, and practically effected in the spring of 1860, and which was made a regular and legal fact by the First Legislature of the Territory of Colorado by the act of November 8, 1861, necessitated changes because of the previous duplication of names of some of the more important streets. That consolidation included and was limited to all the territory covered by the original plats of the towns, which, with respect to area, were laid down on an ambitious scale.

By an act approved March 1, 1864, the Territorial Legislature re-defined the corporate limits of Denver, materially extending their area, nearly the whole of the added districts having been open, unoccupied prairie. Under that act the territory of the City of Denver was defined to be as follows: the northwest quarter of section 3 in township 4, range 68 west; the north half of section 4 in township 4, range 68 west; the southwest quarter of section 27 in township 3, range 68 west; the south half of section 28 in township 3, range 68 west; and all of sections 33 and 34; making a total of three and one half sections, or 2,240 acres. Of this land 960 acres included in section 33 and the west half of section 34, constituted what soon after became known as the "Congressional Grant" by the act of Congress approved May 28, 1864. The act of the Territorial Legislature merely enlarged the area of the city, and had no bearing whatever upon the question of title to any of the land. Within the 2,240 acres as defined by the act was the land which was later platted and became lot-additions to the city, as stated in the following: part of H. C. Brown's, Casement's, Clement's, Elmwood, Evans', Gaston's, Hunt's, Kasserman's, Smith's, Steck's, Stiles', Union, Whitsitt's, and Witter's First.

In May of 1864, Congress passed the "Grant" bill, the law being entitled "An Act for the Relief of the People of Denver, Colorado Territory." As we have already related, the Indian title existed over the land when the pioneer towns were located here, and was not extinguished until the autumn of 1860 when, by the treaty with the Arapahoes and Cheyennes, at Bent's Fort, the title passed to the United States. Up to that time the citizens of Denver had been merely squatters on Indian land to which they could acquire no title by any existing process, nor could the town companies give valid title to lots sold or given away in the towns. Neither could the Territorial Legislature afford any relief. After the Fort Bent treaty the land remained unavailable for entry under the general land laws until it had been surveyed. However, when the land became subject to entry the "Denver City," "Auraria City," and "Highland" Town Companies, expecting to have their respective town sites recognized by the government, applied for town site grants. Theoretically, the land on which the town was built, or any part of it, was open to entry by an individual; but, under the peculiar circumstances it is not at all probable that he could have obtained any of it from the government. The life of any one who attempted such a thing, in defiance of the title of right vested in the owners of property in Denver, would have been worth very little at that time.

Notwithstanding that efforts were early instituted to have a proper and adequate remedy provided by law for these unusual conditions, they were not successful until 1864, owing chiefly to the difficulty of getting Congressional attention to a matter relatively so unimportant in that period of civil war. The Congressional "Relief" act was intended to correct all defects of title growing out of the extraordinary circumstances under which Denver was founded, and provided for giving valid titles to all who had title of right descending from the operations of the Denver Town Companies. Under the general land laws only one and one-half sections of land could be granted for a town-site. Each of the three pioneer Town Companies had at the outset expected to be separately recognized and to receive separate grants. But, as the towns had been consolidated into one, the "Relief" act did not go beyond the limits established by the general laws. It set apart all of Section 33, and the west half of Section 34 as the Denver town-site; created the Probate Judge of Arapahoe county a Trustee, or Commissioner, to make entry of the town-site, at the established price of $1.25 per acre, and to receive filings on all lots and parts of lots within the 960 acres, from rightful owners of such lots, as appeared by the records of the Town Companies and by those of Arapahoe county. Ninety days time was allowed such owners in which to apply to the Probate Judge for their deeds, or certificates of ownership, after that officer had acquired title for the whole tract through the general land office.

The records of the Denver Land Office show that Probate Judge James Hall made filings on Section 33 and the west half of Section 34 on May 6, 1865, on which date the "Congressional Grant" became of record and legal effect in the Land Office here—a year after the enactment of the "Relief" law. The records show that he paid in $1,196.60 for the 960 acres and the office fees. As the land alone at $1.25 per acre would have cost $1,200, this indicates that the specified sections were found by accurate re-survey to have been a few acres short. Those 960 acres now include the heart of the city and represent values of many millions.

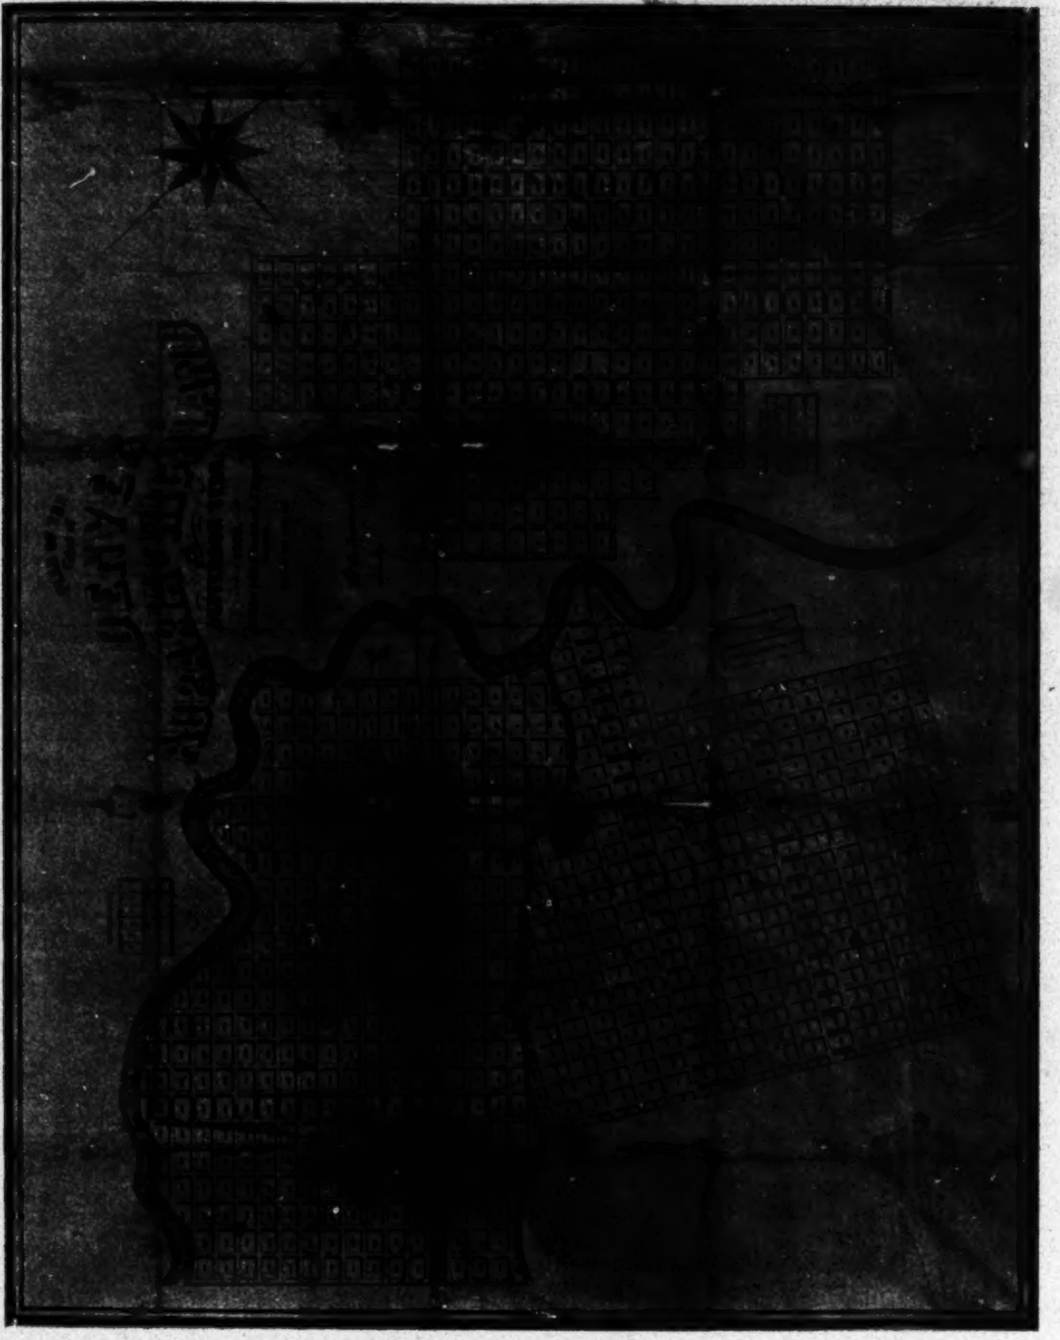
The Probate Judge, acting as Trustee, or Commissioner, was authorized by the law to be reimbursed for his original outlay, and for his services in giving titles, by fees to be paid him by property-owners who received valid titles from him. The boundaries of the "Grant" are familiar to many, but it may be worth while to indicate them here. Colfax Avenue west from Broadway is on the south line of sections 34 and 33; the course of Broadway north from Colfax is very nearly on the north-and-south half-section line of section 34 —near enough for our purposes. Therefore, the boundaries of the "Grant" may be stated as beginning at the intersection of Colfax Avenue and Broadway and running north one mile; thence due west one and one-half miles, cutting across the Platte river near the foot of Fifteenth street; thence due south one mile, and re-crossing the river, to Colfax Avenue; and thence due east one and one-half miles, along Colfax to Broadway.

As our copy of the old map of 1859 will indicate, the "Grant" cut off a large portion of the original plat of "Auraria City," about the same area from that of "Denver City," and left almost the entire plat of Highland out in the cold; that is to say, the Auraria plat lost all south of the line of Colfax Avenue; the Denver plat all south of the Colfax line, and all east of Broadway; and that of Highland all but a small angle, one leg of which was the river line. The land clear around the "Grant," including parts of Sections 3, 4, 27, 28, and 34 designated by the Territorial act of March 1st, thus became subject to entry under the pre-emption and the homestead laws; and it appears that the passage of the "Relief" act limiting the town-site to one and one-half sections was anticipated. The land office records show that several such filings were made prior to its passage. F. J. Ebert's was of date November 9, 1863; James McNassar's, February 24, 1864; Henry C. Brown's, Aprjl 15, 1864; and L. B. France's, May 24, 1864. Many others followed in 1864 and 1865, and it was not long until filings had been made on all the land within hopeful distance of the town.

When these bordering lands were platted and made additions to the town, the streets in all of them, excepting over a moderate area to the northeast of the "Grant," were laid down east and west, north and south. The two great thoroughfares, Colfax Avenue and Broadway were established as what may be called base-line streets for the eastern and southern new districts, and additions in the western new district conformed to them in street arrangements. On the northeast of the "Grant" several of the additions continued the awkward, diagonal courses of the streets within the "Grant" as platted in pioneer times. These details account for what is to new-comers and visitors the rather curious circumstance of the streets in the central and northern parts of the city being in their courses so completely out of harmony with the general street arrangement elsewhere.

Cutting off areas from the pioneer city plats, re-dividing the detached land into lots, and re-locating the streets through it, necessarily entailed no great hardships on any one; for the land on which the changes were made was almost entirely unoccupied and unimproved, and the streets were visible only on the town plats. Liberties much greater were taken with the plat of Highland, than with those of "Auraria City" and "Denver City," and but little of that pioneer town's original street arrangements now exists.

These extensive modifications of the old map of Auraria, Denver and Highland caused, as we have said, the disappearance of many of the original streets in what had been the far outlying sections of the pioneer towns; and with them their names went into oblivion. While some minor changes in street names were made later, it was not until 1873 that a general overturning of street nomenclature occurred. By an ordinance approved February 20th, a general change was made in the names of the streets and a new system of street numbers



First Map of Denver, Auraria, and Highland.

provided for. At that time the platted additions to the city, to the eastward of Cherry creek, had been sufficient to exhaust the letters of the alphabet as street designations. So, that ordinance abolished the alphabetical series and substituted the present numerical method which is applied to Sixteenth and all its parallels on both sides of Cherry creek in what is left of the old area of "Auraria" and "Denver City." In 1886 two ordinances were passed which made a somewhat general change in street names in the new parts of the city which had in the meantime been built up, and which established the present decimal system of street numbering. Since then street nomenclature in the growth of the city has conformed to the general plan suggested by the ordinances of 1886.

The accompanying map of the three towns is a reproduction of the first one made. It bears the indorsement "H. M. Fosdick, Engineer, Dec. 1st, 1859," and was published at the close of that year by Fosdick and L. N. Tappan, the scale being eight hundred feet to an inch; which, of course, does not apply to our reduced copy of it. It is impractical to bring within the limits of a page of this size a satisfactory map of so large an area as that embraced by the original, and a folded "insert" quickly parts company with a volume which receives much handling. Therefore, our reproduction is not recommended for greater utility than that of giving a general outline of the three towns; though a reading glass will be of some assistance in bringing out details. Fosdick and Tappan's maps are not abundant, and those extant are, like the one from which we copied, much the worse for the wear and tear of years.

We have deemed it important to give some attention to the details of the original platting, and particularly to the names or designations which the pioneers attached to their streets in the beginning; also to the earlier structures which occupied the sites of buildings that have succeeded them in the central part of the city—the latter appearing in a subsequent chapter.

The diagonal courses of the streets in the central part of the city—which is the "old" part—are somewhat confusing to the stranger. Geographically they lie nearly to the forty-five degree points of the geographical circle. In speaking of their sides, even the citizen is not quite sure whether they should be called "east" and "west," or "north" and "south;" and the terms are not infrequently used conflictingly. For convenience in designating locations of buildings and for other purposes of that sort we have assumed that Sixteenth street and its parallels are north and south streets; and that Larimer street and its parallels run east and west.

The course of Cherry creek apparently suggested this street arrangement to the pioneer surveyors of Auraria and Denver; Auraria setting the example, and Denver following it. However, their successors in town platting adopted a better system with the result that nearly all of the streets elsewhere within the city's limits range with the main points of the compass; Colfax being the great east and west Avenue clear across the city, through its general geographical center; with Broadway from the intersection of Nineteenth and Welton streets, south, as the north and south thoroughfare. On the northward side of the Platte river, in a little more than what is left of the old town plat of Highland, the streets are diagonal; but elsewhere in that section of the city their courses are north and south, east and west.

The founders of Auraria City did not perpetuate their names in their street nomenclature. Their streets running at right angles to Cherry creek were numbered; beginning with 1st street, near the Platte river, their numbers continued consecutively up to and including 23d street. Under this arrangement, what is now Larimer street on that side of the creek, was 5th street according to their plat. Their streets running at right angles to these numbered streets and parallel with the course of the creek, received proper names, mostly those of the Presidents. Crossing the creek at Larimer street the first cross street encountered was Front street (the present Thirteenth), a short one; the next was Cherry, another short one; then, in order, came Ferry, St. Louis, Cheyenne, Arapahoe, Washington, Adams, Jefferson, Madison, Monroe, Quincy (John Quincy Adams), Jackson, Van Buren, Harrison, Polk, and Taylor streets, Platte Avenue, Pierce and Buchanan streets. Why they refused to honor Tyler and Fillmore is not known. On their plat their 5th street (our Larimer) reached the Platte river before the last four cross streets, as named above, could intersect it; a bend in the river farther upstream making room for Taylor street, Platte Avenue, Pierce and Buchanan streets. The reader will, of course, bear in mind that most of these Auraria streets would have been hard to find unguided by the surveyors' stakes, and that some of them never had any existence except on the town plat.

Across in Highland—which late in 1859 and for several years after was a town only on the map—the streets were laid out to the same compass-points as those of Auraria, and some of them were given the same names. Cherry, Ferry, St. Louis, Cheyenne, Arapahoe—each of the three towns had "Cheyenne" and "Arapahoe" streets—Washington and Adams streets on the Highland plat would have been continuations of Auraria's streets of the same names, had they been connected by bridges across the Platte. Easterly from Cherry street in Highland came, in order, Marion, Foster, Byers, Pollock, Ming, Wooton, Carson, Slaughter, Douglas, Jackson, Wood, Allen, Sopris, Wyatt, Hughes, Wallingford, and Murphy streets. Most of these names are those of Cherry creek pioneers, and have figured in varying degree in our narrative. The Highland streets at right angles to these were numbered, beginning with 1st street next to the Platte and continuing consecutively to 18th street, inclusive. New surveys wrought great havoc in the map of Highland, and subsequent changes of street names left little or nothing of the town's original street nomenclature. On the map of the three Cherry creek towns Highland covered a larger area than either of the others.

The founders of Denver City were determined to perpetuate their names in those of a portion of their streets, and some of them succeeded in doing so. They designated their streets which we now know by numbers—Sixteenth and its parallels—by letters of the alphabet; our Sixteenth having been their G street. A street lay far up Cherry creek and near by and parallel with it, showing on the map a length of seven and one-half blocks. Then came, in order, B, C, D, E (Fourteenth Street), F (Fifteenth street), and so on, consecutively, out to Q street, inclusive. The streets at right angles to these were given proper names, most of which are retained. Beginning at the Platte river, the map of 1859 shows them, in order, as follows:

Bassett,
Williams,
Delgany,
Wewatta,
Wynkoop,
Wazee,
Blake,
McGaa,
Larimer,
Lawrence,
Arapahoe,
Curtis,
Champa,
Stout,
California,
Welton,
Clenam,
Clancy,
Wapoola,
Parkinson,
Cheyenne,
Smith,
Platte,
Dudley,
St. Charles.

At the present time, following Fifteenth street—the only one intersecting all of them—from the Platte river to Broadway, the cross streets, reduced in numbers to twenty-one, bear names as follows:

Bassett,
Chestnut,
Delgany,
Wewatta,
Wynkoop,
Wazee,
Blake,
Market,
Larimer,
Lawrence,
Arapahoe,
Curtis,
Champa,
Stout,
California,
Welton,
Glenarm,
Tremont,
Court Place,
Cleveland Place,
Cheyenne.

We have endeavored to place on record the derivation and meaning of the names of these streets as they appear on the Fosdick and Tappan map, together with some account of the changes made in names, and of other matters pertaining to them. The results of our researches and inquiries appear in that which follows.

The last-named four on the old map—Smith street, named for H. P. A. Smith of the Denver Town Company; Platte, named for the river; Dudley, for Judson H. Dudley who was prominent in the pioneer affairs of both "Auraria" and "Denver City;" and St. Charles, which was all that was left of the town the site of which was so unceremoniously "jumped," were cut off when, by the law of 1864, the nominal area of the Denver town-site was reduced by the "Congressional Grant," and which left Cheyenne street with its present length of about a half block. These four abolished streets would have angled up the slope of Capitol Hill, with St. Charles intersecting the line of the present Logan Avenue and extending beyond it.

The derivation of Arapahoe and Cheyenne, names of local tribes of Indians, needs no further explanation; nor does that of the name of California street, which was appropriately transplanted from the older to the new land of gold.

S. S. Curtis, who was one of the managing members of the Denver Town Company, in response to our request for information concerning the derivation of the names of some of these old streets, said:

"The intention of the Directors of the Denver Town Company in naming the streets was to give those running in a northeasterly and southwesterly direction, alternately names of members of the Town Company and Indian names. The pressure from members of the Town Company to have the principal streets named for themselves was so great, however, that two Indian names were stricken out and McGaa and Lawrence substituted. The Indian names were furnished to the Directors by old John Smith and William McGaa (the latter known as "Jack Jones"), both "squaw men" of no force of character whatever; but from having been first on the ground and because of favors shown Charles Nichols and other members of the Lawrence ["St. Charles"] Company, were made members of the [Denver] Town Company.

The names were given to me to put on the plat of the town by the Directors, and changes were made several times. I believe I knew the meaning of most of the Indian names in those days, but they are mostly gone from me now; but I will tell you what I can. I think "Wewatta" was the name of Jones' squaw; the first syllable being Arapahoe for short and fat. "Champa," I think is Arapahoe for some common animal, deer, antelope, horse, steer, buffalo, wolf or dog. "Welton," I am confident was the name of a member of the Town Company from Leavenworth. I do not know where "Glenarm" came from, it is not Indian. The meaning of "Delgany" and "Wazee" has gone from me entirely; "Wazee" is Indian, but "Delgany" is doubtful."

We will now consider these street names, in order, beginning at the river, if our reader will consent to follow us.

Bassett street, always a short and unimportant one, was named for the unfortunate Captain P. T. Bassett, Recorder of the Denver Town Company.

Williams street, the present Chestnut, and also short and unimportant, was named for A. J. Williams, of the pioneer mercantile firm of Blake & Williams, and for many years a prominent citizen of Denver. By a dispensation of the City Council the street's name was changed to the hackneyed one it now bears, but in the eastern part of the city another was later given the name of Williams.

Delgany street bears a name of unknown origin. Mr. E. P. Stout wrote us that he thought it was not one of the original names, but was given later. Mr. Curtis says the name is "doubtful." None of the old-timers now in Denver know anything about it. The name is on the first map, but is not found in the record of the Denver Town Company.

Wewatta street, according to the recollection of Mr. Curtis, bears the name of Trader Smith's "short and fat" squaw. In this we have learned he is mistaken; "Wapoola" having that distinction. Mr. E. P. Stout says "the name was selected by Wm. McGaa. I presume it was the name of one of the squaws who were camped on the town-site at the time." Colonel T. C. Dickson, of Cheyenne, says it is a qualifying Indian term for water; the first syllable being an Indian term signifying "clear," or "pure," or "cold;" and the remainder an Indian application of the English word "water."

Wynkoop street was named for E. W. Wynkoop, Governor Denver's pioneer "Sheriff" of this region, who was one of the organizers of the Denver Town Company, and a prominent and active man in the early affairs of the city and Territory.

Wazee street carries an Indian name, as Mr. Curtis states, but his inability to definitely explain the meaning of the word extends to all others to whom we referred it. Mr. Stout says "It was a name given by Wm. McGaa, but I don't know its meaning, though he pretended to give it at the time."

Blake street bears the name of Charles H. Blake, of the old pioneer business firm of Blake & Williams, both members of which became actively identified with the Denver Town Company, though in the beginning they located in Auraria.

McGaa street, the present Market street, had the name of the irrepressible William McGaa, assistant founder of "St. Charles," Auraria and Denver City. In 1866 its name was changed to Holladay street, in honor of Ben Holladay, of overland stage-coach fame, and some years later its present name was given it.

Larimer street was named for General William Larimer, one of the leading spirits in the organization of the Denver Town Company, and a man of much ability and great force of character.

Lawrence street has the name of Charles A. Lawrence, one of the originators of the Denver Town Company and who was active in the affairs of the community in 1858-59-60.

Curtis street was named for S. S. Curtis, who came here in the autumn of 1858 and became identified with the Denver Town Company immediately after his arrival.

Champa street has an Indian name, concerning the meaning of which the reader has already seen what Mr. Curtis has said. We have been unable to find any one who can positively say which of the native animals was known to the Arapahoes by that name. Mr. Stout says the word was supplied by William McGaa, who gave its meaning at the time, but that it is now forgotten. Boyd's (Stephen G.) "Indian Local Names with Their Interpretations" (1885), gives "Cha-pa" as the (presumably Sioux) name of the beaver. It is also the Indian name of a small river in Minnesota. Another word, somewhat similar in sound and meaning, is the Ute Indian name for the bear—"Yampai," pronounced "Yampa." It is almost certain that our Champa is McGaa's version of one of these two words.

Stout street has the sturdy name of E. P. Stout, the first President of the Denver Town Company, and who was one of the promoters of that enterprising organization. He did not long remain a citizen, as he returned east in 1861, like many others in that year.

Welton street was named for N. W. Welton, one of the pioneers of the fall of 1858, and a shareholder in the Denver Town Company. In the record of that company his name is written "Welden" and "Welton," the latter being the correct form.

Glenarm street appears on the Fosdick & Tappan map as Clenam street, which evidently resulted from a passing error. Mr. Stout informs us that it was named by William McGaa after "Glen Arm," which he claimed was a noted estate in Scotland and which he admired exceedingly. McGaa appears to have had much to do with the detail affairs of the Denver Town Company.

Clancey street, our present Tremont, was named for William Clancey, of the Denver Town Company, and now living at Butte, Montana. Mr. W. N. Byers says the pronunciation of the word became Glancy, and then Glency. Finally the City Council thought to remedy things by changing the name to Tremont, as the street's namesake had forsaken Denver. But for a long time many people took Tremont to mean Fremont, and it is only within recent years that the name of the "Pathfinder" has been dropped as a commonly used name for the street.

Wapoola street, the present Court Place, was one of those given an Indian name in the beginning. The word is, in the Sioux tongue, "Wa-po-la," and was the name of trader John S. Smith's squaw. This information came from William Denver McGaa, who says he obtained it from his full-blooded Sioux grandmother, Mrs. Larocque, now at Pine Ridge, South Dakota. The City Council was responsible for the present colorless name of the street.

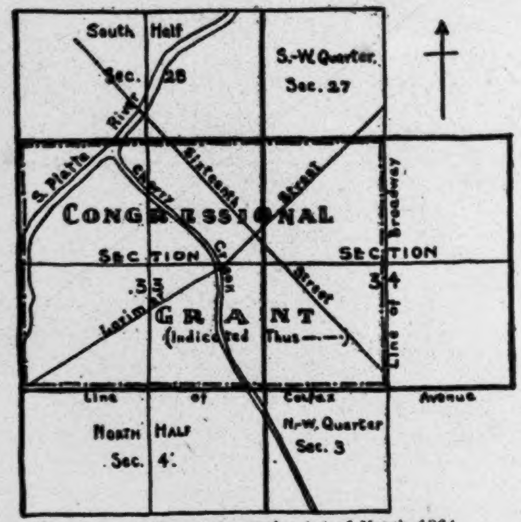
Parkinson street, the present Cleveland Place, was named for Captain J. T. Parkinson who was identified with both the Auraria and Denver Town enterprises when they were set on foot, and who arrived at the mouth of Cherry Creek in October, 1858. The City Council changed the name when it was doing other work of that kind, but good reasons for the change are not apparent; for the old name had the merit of local historic association, while the present one has no such significance.

In an earlier chapter we have mentioned what is known in our local annals as the "City Lot Question," and while, as we have said, it will serve no public good to now overhaul the old and no longer vital question, it is proper, from a historical standpoint, to outline as definitely as can be done, the causes of the trouble. Many and long and loud have been the complaints of fraud, injustice and wrong claimed to have been committed in giving effect to the "Congressional Grant" act of 1864, and in transactions related thereto. It is alleged to this day that many lots in some way passed into the possession of other than the rightful owners, and that many persons who had temporarily become non-residents, though still claiming title to property in Denver, lost their property in the processes here that followed that Congressional enactment. This is the substance of the plaintiffs' grievances; and it can not be fairly denied that they recall a rather dark page in Denver's history.

Much the greater number of the alleged wrongful acts were associated with property in the old "Denver City" district. In the pioneer proceedings town lots were disposed of by dividing a large number among the respective shareholders, donating others to persons who would build on them and for various special purposes, and reserving still others to be sold at public sales to provide for the expenses and debts of the Town Companies. Each company kept a lot-record called the "Block-book," in which was registered every lot, together with the name of the owner of each one that had been disposed of by the company, attached thereto. Here, the rightful title to property really began. Certificates of lot-ownership were issued by the officers of the companies to lot-owners, and which were transferable by merely indorsing them on the back. When conveyed in this manner, or by a deed, the new owner filed the document with the Recorder of the Town Company in the domain of which the property was situated, for record in a book kept for that purpose by each company. In this way the recording of real estate transfers was started. After "Auraria City" and "Denver City" united in the spring of 1860, the recording was done by one officer, who systematized all that had previously been done. Although Arapahoe county was then alleged to be in existence, he continued to record transfers of real estate, and a few years later his records by purchase and legal enactment became Arapahoe County Records.

As we have stated on a preceding page of this chapter, the "Congressional Grant" act made the Probate Judge of Arapahoe county a Trustee, or Commissioner, to carry its provisions into effect; and gave city property-owners ninety days within which to file with him their claims and proof of ownership and receive valid titles for their property. At the expiration of that time there was a large number of lots upon which no filings had been made, and which apparently remained unclaimed; the owners thereof being either negligent or absent, or had abandoned them; or, as was the case in many alleged instances, totally ignorant of the Congressional enactment and of its provisions governing the manner in which their rights could be protected.

The City of Denver then placed its filing upon all such unclaimed lots, in the interest of the public welfare and with the view of securing from the proceeds of later sales of all for which no rightful owner could be found, a fund for school purposes; an action that received the hearty approval of the great body of the citizens. The large number of unclaimed lots, that were rising in value as the city revived after the close of the civil war, naturally attracted covetous eyes, and a jealous watchfulness was necessary to safe-guard them for the ultimate purposes had in view. As time passed on the community rested in the confident belief that the property from which a school fund would ultimately be assured was under safe protection. Then came disquieting rumors to the effect that the public interests were menaced by transactions alleged to have been made with reference to some of the lots. These were followed by public charges that startled the community, and were to the effect that transfers of the abandoned lots were being made without regard to the public interest in them, or to the rights of those who had failed to file their claims within the stipulated ninety days.



Denver's Boundaries, under Act of March, 1864.

Then followed a tempest of accusation, and denial and recrimination, out of which arose much bitterness of feeling, angry personal animosities, and great public excitement. The community and the press became divided on the "Lot Question," and the consequences of the turmoil endured for years, with lingering echoes of them existing to this day. Yet, from a historical standpoint, it resulted in nothing tangible upon which any categorical statement of the extent of the alleged wrongful acts can be made; and we have no desire to place on record charges unproved in any established tribunal, against the men then alleged to have been the more responsible for the alleged wrongs and whose lips are now forever sealed; but who passed away with the adverse conviction of a majority of their fellow-citizens still standing against them. Such a statement, with the details that accompanied the accusations, would require several of these pages for its presentation. But, it would right no wrongs and restore no rights; nor would it serve to efface the memory of a most unpleasant episode in the city's history, the particulars of which were now perhaps as well left in obscurity.

There was another, but in public estimation, far less important feature of the general "Lot Question," and differing in character from what has been outlined in the foregoing. It related to transactions between individuals and grew out of these circumstances: after the "Congressional Grant" bill became a law, all the land adjoining the 960 acres became, as we have stated, subject to entry as public land, though prior thereto, extended tracts of some of it had been included in the old town-surveys, and lots in it had been sold and taxed. When the entries of these lands were made, owners of such lots declared their intention to contest the filings of the pre-emptions, in the Land Office, unless they were given the lots and fractions of lots that stood in their respective names when these pre-emptors secured the patents for their lands from the government. It has always been asserted, and believed by many, that the City of Denver sustained these lot-owners in their demands, and obtained from all pre-emptors whose lands included such lots, bonds obligating them to transfer such lots to the rightful owners; that the city was custodian of the bonds, for which the little safe in the little old "City Hall" was the depository; and that the bonds were in the safe when it and the "Hall" were swept away by the Cherry creek flood in May, 1864.

The requirements of the bonds were complied with by all the pre-emptors but two who, after the flood, refused deeds for the lots. Therefore, after the safe was lost its recovery became a matter of supposed great importance, and much searching for it was made in subsequent years with the hope that its contents might still be in preservation. This hope has not yet entirely vanished. Some six or seven years after the flood, the bond of one of the pre-emptors, who had fulfilled his obligations, rather mysteriously appeared and was placed on record; but explanation for its separation from the other bonds assumed to have gone off with the safe was never made. It was of no particular value, as all its obligations had been cancelled, and this perhaps was the reason it was permitted to again see the light of day and was finally returned to the man whose signature it bore. Owners of lots in the lands pre-empted by the two alleged derelict bond-givers, never received titles to them, notwithstanding that they had bought and paid for them, and had paid taxes on them for several years. These transactions were naturally the cause of much bitter personal feeling and angry hostility which, also, endured for many years.

Of the controversies we have here been considering, the merits and demerits involved could not be—or, at least, were not—definitely determined when the circumstances were fresh many years ago; and certainly it would now be quite impossible to do so. It remains to be said, however, that losses of Denver town-lots in the early times by alleged dishonesty and by other causes for which the owners were not directly responsible, never aggregated, either in value or extent, anywhere near the dimensions attributed to them by many published reminiscences. As to values, it is to be remembered that in the pioneer times town lots were about the cheapest things in the Denver market, and not infrequently their sometime owners regarded them as having no value. They often constituted the stakes in games at cards when cash was scarce, and a survivor of those days still living in the city claims to have had at one time an accumulation of nearly a hundred town lots to which he had acquired title by holding better "hands" than his friends could show. In the very early days the two lots on which still stands the old Cole's Hall building on the south side of Larimer street between Fifteenth and Sixteenth streets, sold for eighty cents; one for thirty-five and other for forty-five. Many men who left the country upon the outbreak of the civil war sold their lots for anything they could get; and if they could get nothing, went off and abandoned them for good. In 1862 when many others left here for the new gold-fields in Montana the same thing was repeated. It was only within a limited area of the city limits, in the fairly built-up parts, that real estate had value of consequence as late as 1863; and even then the improvements represented the principal part of it.

So, it is not improbable that many stories of alleged losses entailed by alleged wrongful acts, and others inspired by the belief that the Cherry creek flood carried away records, grew out of afterthoughts; out of circumstances entailed by neglect and abandonment by claimants; and, retroactively, out of the later prospects for the town's development and future prosperity when railroads began to appear as probabilities. Yet, the allegations of men who said and still say they knew nothing of the proceedings by which their property passed to the hands of others, until afterward, and in some instances until several years afterward, are not provided for in the explanations we have here set forth.

The flood in Cherry creek has been made to account for many alleged losses of property. It became mixed up in subsequent versions of the "Lot Question" in which the accused are represented as having claimed that the confusion was due to losses of records; and that the accusers asserted the records had not been lost in the flood, but were purposely destroyed, and that the flood was an opportune circumstance by which to account for their disappearance; and that their disappearance was a part of the programme then in view. The flood cut no figure whatever in the main controversy, but the belief that it did, and that it was responsible for large losses of property titles still retains its hold upon popular reminiscences. The usual form of these is to the effect that the "City Hall" and the city safe contained all the real estate records of Denver up to May, 1864, and that the loss of the "Hall" and safe entailed all the trouble incident to the "Lot Question," and to other alleged property-losses, by reason of the records having been destroyed by the waters. Real estate records were not kept in the "City Hall," and neither the "Hall" nor the safe contained any records other than pertained to city business; unless they may have been possessed of the alleged bonds of the two derelict pre-emptors we have above mentioned; as those documents would, if they ever existed, have belonged to the city archives.

Out of the belief that the real estate records went down the river with the "City Hall," and that even the records of the county Probate Court went with them, arose the many fanciful narratives, often related by the assumed-to-have-been victim, of heavy losses of town-lots by reason of Cherry creek carrying away all record evidence of title. Such reminiscences are still in circulation and command interest and sympathy, while they do no particular harm. Yet, it might be well to consider that Cherry creek has sins enough charged against it for cause, without having others for which it was never responsible added to its burdens.

CHAPTER XLV.

COLORADO'S PIONEER CAPTAINS—ADDITIONAL PERSONAL HISTORY OF THE RUSSELL BROTHERS—FAVORABLE INFLUENCE OF RAILWAYS—EFFECT ON REAL ESTATE AND GENERAL BUSINESS—ARRIVAL OF CHINESE—CONSTRUCTION OF GAS WORKS—FIRST WATER WORKS SYSTEM—NEW COLONIES IN COLORADO; GREELEY, LONGMONT, COLORADO SPRINGS, AND FORT COLLINS—DENVER'S SUBSTANTIAL DEVELOPMENT—BROADER MUNICIPAL POLICY—GEOLOGICAL SURVEYS—PROMINENT VISITORS—MR. GREELEY'S LAST COMING—FAMOUS "DIAMOND SWINDLE"—"DENVER CITY" BECOMES DENVER—ITS POPULATION—PANIC OF 1873—HAYDEN'S SURVEYS—WRANGLES OF POLITICIANS—THREATENED REMOVAL OF TERRITORIAL CAPITAL TO PUEBLO.

Denver's pioneer era had not been a long one in years, but the years it included covered an epoch-making period; not only for the Great West, but for the Nation. The events of those years often made the months seem many and long to those who constituted civilization's working force here in isolated Colorado. Aside from all that, the conditions that had been encountered here and so triumphantly overcome, were extraordinary conditions; and in the eagerness to accomplish results the few years in which so much had really been done seemed long to men so impatient of any delay.

The conditions in Denver throughout that pioneer era could only have been met and mastered by extraordinary men; and they who did so were an unusually able, energetic, resourceful community of young men; nearly all of them were young. There were few in "middle life" among the founders and builders in the city's pioneer era.

As it was in Denver, so it was elsewhere in Colorado—the general pioneer movements were led by intrepid young men; those who came after the work had been begun none the less so than those who led the way in 1858. In each advancing stage of the progress, here in the town and abroad on the plains and in the mountains, were found ready men who seemed to have been especially fitted by Nature to deal with the arising necessities and emergencies of the recurring situations. It is a distinction to have been one of Colorado's pioneer Captains.

Before passing to consideration of events in what it may be convenient to call the new era in Denver, we will give some further attention to the personal history of the three Russell brothers, W. G., J. O., and the Doctor, who, as we have seen, organized the first company of Colorado gold-seekers, directed the building of the first habitation for white men on the site of Denver, and are entitled to take rank as the foremost of Colorado's pioneers. They did not permanently remain here. In the autumn of 1859 they went back to Georgia for a winter's visit at their old homes. They returned early in the following spring, bringing with them still another party of Georgia men. W. Green and the Doctor came to Denver from the Missouri river by way of the Smoky Hill route, surveying and measuring that route for and under contract with the City of Leavenworth and finding the distance to be 610 miles. The Doctor became interested in mining in the Gregory districts with his brothers but continued the practice of his profession; and the three were thus engaged during the ensuing two years.

In the summer of 1862 the three brothers, who were frankly in sympathy with the cause of their section, in company with a few others originally from northern Georgia started for their old homes by way of New Mexico and Texas—through the back door of the Confederacy. The entire party was captured an the Canadian river just inside the Texas line by Lieutenant Shoup, of the First Colorado Volunteers; the men being accused of Confederate sympathies and intentions. They were taken back to Fort Union, New Mexico, turned over to Captain Plympton, Commander of that Post, and detained there as prisoners several months. Early in 1863 United States Marshal A. C. Hunt, afterward Governor of Colorado Territory, supported by the intercession and influence of the Russell brothers' Denver friends, who were certainly not of Confederate sympathies, went to Fort Union, secured the release of the prisoners and had their property restored to them. Whereupon the entire party returned to Denver; Dr. Russell remaining in the city, while his brothers resumed mining. Of the subsequent movements of his brothers, and of the family of W. G. Russell, Dr. Russell says:

"Early in May, 1863, W. G. and J. O. Russell left Denver to make their way back to their old homes in northern Georgia, by way of Louisville, Kentucky. After reaching Louisville they struck out afoot for the south, traveling mostly by night. They crossed the Cumberland mountains and finally succeeded in reaching their homes.

"W. G. Russell's wife whose maiden name was Willis, was of Cherokee descent, her grandfather whose name was Daugherty, having been a half-blood Cherokee. They had six children, three sons and three daughters. The widow died in 1893; the eldest son, John, was killed near Leadville some years ago, by the caving in of a mine; the youngest son was accidentally killed in the Cherokee Nation; the surviving son and three daughters now live in the Nation. J. O. Russell is now living in Menardville, Texas."

Dr. Russell also included an account of W. Green Russell's later movements and of his death; but that of the latter's daughter, Mrs. Martha Marshall, of Briartown, Cherokee Nation, Indian Territory, who was with her father in his later years, being rather more circumstantial, is presented here instead. We are also indebted to Mrs. Marshall for the use of the portrait, the only one in existence, from which our portrait engraving of her father was made:

"Upon my father's return from Colorado in 1863 he at once raised a company of soldiers and in command of them entered the Confederate army and served until the close of the war. After the war he remained at his old home in Georgia until 1872, when he sold part of his property there, and on May 2nd we—he and his family—started for Colorado. We were all summer on the way, occasionally stopping for hunting and fishing. Two other families went through with us and they still live in Colorado. We traveled by ox-team about ten miles a day, my father going back there more for my mother's health and pleasure than anything else."

"We arrived at the head of Apache creek, Huerfano county, October 20th. There my father took up some land on a small stream, and after we were settled, occasionally went away on hunting and prospecting trips. In the summer of 1874 my father sold that place and moved into the Sangre de Christo mountains near Fort Garland. There he worked two summers in placer mining, making very little. In October, 1876, he sold his claims and we all started back to Georgia, arriving at my uncle's—John R. Russell, of Indian Territory—near the town of Cincinnati, Arkansas, on December 10th. On learning from his brother of the great fertility of this part of the Indian Territory where I live, my father decided to visit it, and did so. He liked it so well that the return to Georgia was abandoned and we remained at my uncle's until March 5, 1877, when we moved here to Briartown with the intention of locating; my mother being part Cherokee, entitled us to take up or buy a place."

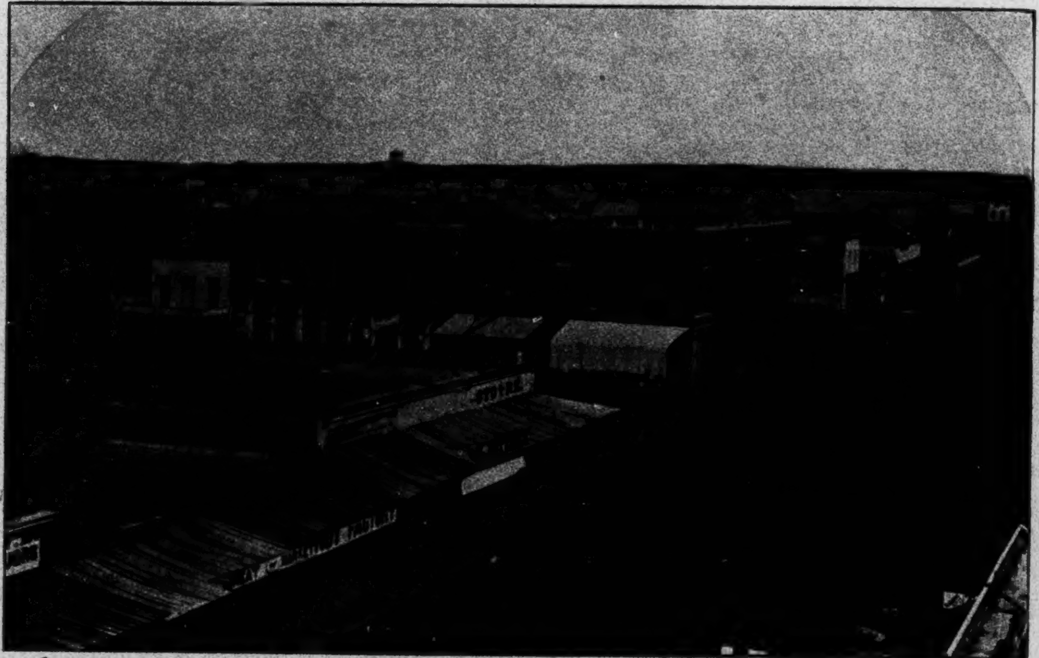
"My father began farming and sent his children to school. Everything, corn, cotton and all, grew finely and my father said he was permanently settled at last and was satisfied. But he was near his end. The last of June my mother was taken with malarial fever, and before she got better we were all down with it—chills and fever—and on some days not one of the family would be able to even hand another a cup of water; and the good neighbors took care of us. While we were thus situated father became much disheartened and decided to get back to Georgia, intending to start as soon as the summer heat passed and the weather got cool, if we were able to travel. On the 14th of August he was able to be up, and while out in the yard fell in a convulsion. We got help and brought him in, but he was never out of the house any more. He died on August 24th—ten days later. He did not seem very ill at times and would not have a Doctor until two days before his death. Good Doctors were then not known in this country and the one he had did no good, as he did not know what to do for what turned into a very bad case of congestive fever."

"My father was buried by friends and neighbors, not one of his family being able to attend his funeral. He was a Mason but there were no other Masons then here, nor were there any ministers. So he was buried without any kind of service, here at Briartown School House, on the South Canadian river, in Canadian District, Cherokee Nation, Indian Territory."

"My father was born in South Carolina in 1818, being nearly sixty years old when he died. When we came here he was as healthy and strong as most men of forty. His hair was dark, his beard just a little gray, and he did not look much older than he does in his picture I send you; but in his last year or two he wore his beard unbraided. His last visit to Denver was in the summer of 1875 when he went there to look after the big ditch he had sold long before. In the winter of 1877-78 my mother took us back to our home in northern Georgia where she died in 1893. Then we sold our old home there and came back to this country."

When W. G. and J. O. Russell left Denver in May, 1863, Dr. L. J. Russell with a party of miners set out for the then newly-discovered gold-fields in Montana, which were causing much excitement and which drew hundreds, if not thousands, of men from Colorado. This terminated Dr. Russell's residence in and connection with Denver. He remained in Montana several years, and then, after a return to Georgia, finally located, as we have stated, in Bell county, Texas, where he is still a physician in active practice. His place in our city's history is that of having been, more than any other man, its founder. He bore a conspicuous part in the pioneer attempt to establish civil government in this region in the form of the "Territory of Jefferson," participating as a leader in every step toward the final organization of that historic and most interesting example of the love for and devotion to self-government inherent in the character of the American people.

J. O. Russell, who was known here as Oliver, also entered the Confederate army upon his return to Georgia in 1863, and served through the war. Later he located in Texas and is now living at Menardville, in that State. In clothing, equipping



View in Denver, looking eastward from Fifteenth and Larimer streets, at the close of the pioneer era. (From a photograph.)

and otherwise providing for his company of soldiers, W. Green Russell expended nearly all the net proceeds of his mining operation in Colorado. The three brothers were natives of South Carolina, but early in life removed to northern Georgia.

In speaking of Dr. Russell to the writer, Andrew Sagendorf, who knew him well in that autumn of 1858 and until the Doctor left Denver, said:

"Dr. Russell was, and is now I have no doubt, for the natural character of a man doesn't change much, a peculiarly winning kind of man. He was one of these gentle, humane, considerate men; kindly in disposition and quiet in his ways, but who could be positive and determined enough when necessary. All of us liked him, and he was always giving us reasons for liking him better. I am sure that every one who knew him here has none but pleasant recollections of him."

While the completion of the two railroads to Denver did not immediately precipitate a great "boom" in the young city—a circumstance that caused a little disappointment in some quarters—it was followed by a remarkable change in the feelings of the people and the fortunes of the town. All doubt of the future vanished and a confidence bordering on enthusiasm pervaded the community. The stability of Denver's position as the metropolis of the region was assured by the relations that had been established between the Denver Pacific and the Kansas Pacific roads. While the city was the terminus of each, the two were so allied that their operations would not contribute to the upbuilding of a rival city, to Denver's detriment.

Until these relations had been accomplished, which occurred before the roads were completed to the city, the conditions were quite different. It had seemed, as we have related, that Golden might, and possibly would, forge ahead under the influences of her prospective railroad facilities and become the nucleus of the chief city of Colorado. The projectors and builders of the Colorado Central Railway, of which some account is given in a succeeding chapter, openly declared that Denver would go to decay and be abandoned by her people, who would transfer themselves over to the base of the mountains and become citizens of the new metropolis. But the predictions and promises made by Denver's Captains while the community was struggling to find ways and means by which to construct the pioneer Denver Pacific road, were more than fulfilled. In 1870 Golden's hopeful ambitions fell away and this city's future had at last been made broad and certain.

Though, as we have said, there was no decided "boom" in real estate in 1870, of the speculative variety, there was a great advance over former values and much activity in that and other lines of business. In that year sales of real estate aggregated nearly one million dollars, and the value of improvements more than one-half million. The commercial trade was estimated to have been between eight and nine millions, and the business of the manufacturers nearly one million. A relatively large influx of people came that year, and estimates, made conservative by experience with the official census of the early summer, accorded to the city late in the autumn a population of 5,000; which was probably not enough by several hundred.

The hotels were crowded with strangers and the then new American House was the center of interest in the newly-arrived. The Denver Theater, which had for some time been closed for want of patronage, had been re-opened with new splendors and was nightly filled to its limits of capacity. The streets were thronged, and the atmosphere heavy with rumors and discussions of new enterprises of almost every kind and quality, but of which railroad building and mining were the most important. Among the strangers who came that year, within a month after the opening of the Denver Pacific, were a few Chinese, the scouts of the larger body that soon followed. These pioneer Celestials came quietly and unobtrusively, but their reports must have been favorable, for it was not long before their brethren came trooping in. Some opened laundries, others became good house-servants, and still others went to the mining districts and patiently toiled in the previously worked-over bars and gulches.

One of the conspicuous improvements made in 1870 was the construction of gas-works. On November 1, 1869, Colonel James Archer, who was identified with building the Kansas Pacific railway, and who became and remained until his death, one of Denver's forceful and valued citizens, had proposed to the city the construction of gas-works. The people heartily approved his proposition and Colonel Archer organized his company on November 13 of that year. He appears to have proceeded under an ordinance passed on January 10, 1868, for a preceding but ineffective enterprise, as we more fully relate in a later chapter. The city entered into a contract with Colonel Archer's company for lighting the streets, and he agreed to have his plant in operation by January 1, 1871. Construction work had to await completion of the railroads, and pipe-laying was begun on September 20, 1870; about two miles of mains being required. The buildings with their appliances were erected at Eighteenth and Wewatta streets on part of the premises now occupied by the Pintsch-gas plant of the present Denver Gas & Electric Company, and were completed before the close of that year. Owing to trouble with the coal first provided, the gas service was not satisfactorily ready until January 22, 1871, and then it made a most welcome change in methods of illumination, for previously the artificial lights were chiefly those of tallow candles. The maximum price of gas to private consumers was five dollars per one thousand feet, and for several years the maximum was charged.

The construction of gas-works was not the only great public utility, and still greater satisfaction and convenience, for which the people of Denver were at that time indebted to the enterprise, energy and foresight of James Archer and several other Denver men of action. Simultaneously with the inception of the gas-works, Colonel Archer proposed to construct a general system of water works by a company which he would organize. The people received this proposition with some incredulity but with much more delight, and almost unanimous approval. Colonel Archer completed his arrangements in the autumn of 1870, and organized the Denver City Water Company, composed of Denver men, to construct and operate waterworks on the Holly direct-pressure system, using steam power and distributing through between three and four miles of street mains. A contract was made with the city for fire protection by fire-hose hydrants on the streets, on a very fair basis under the circumstances and conditions of those times. Construction work began before midsummer of 1871 and was hastened to completion. The pumping house was a small brick structure at the northeast corner of Bassett and Fifteenth streets, the water having been taken from a large well in the river bank near that point, and by a Holly steam pump maintained at required pressure for service in buildings and, upon occasion, at far higher pressure for fire purposes. The system was not quite completed that year, but on January 10, 1872, it was ready for service and began supplying water. Further details of the organization of this first waterworks company appear in our account of the development of Denver's great waterworks system in a succeeding chapter.

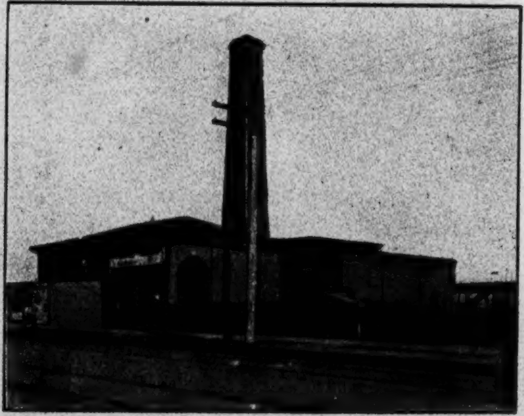
Old Gas Works at Eighteenth and Wewatta streets—now the Pintsch Gas plant of the Denver Gas & Electric Company.

Until that time the people of Denver had depended for their domestic water supply on ordinary wells in their door-yards and here and there along the streets. Through the great bed of sand underlying the lower levels of the city from twelve to twenty feet below the surface, there is a constant flow of pure, cold, sparkling water which abundantly supplied all the wells; but that understrata that affords ready circulation for the underflow also affords contamination the same facilities. At that time the population was not, relatively, so widely distributed as it is now, and the city was without sewers. Therefore, the new waterworks had much to commend them to the people.

Another important and significant event of 1870 was the coming of the advance guard of the Union Colony and the founding of the city of Greeley. While it was not of direct concern to Denver, it was in every other way, because it was what may be termed the first duly organized effort to occupy the land of the plains and to further advance agriculture. The movement that resulted in this, had been instituted in the east in the autumn of 1869 by Nathan C. Meeker, then agricultural editor of the New York Tribune, and as heartily seconded and encouraged by Horace Greeley, who used the Tribune to advance the undertaking. On December 23, 1869, those who had become interested in the movement met at Cooper Union, New York city, and organized the Union Colony; electing Meeker, President; General R. A. Cameron, Vice President; and Mr. Greeley, Treasurer. It is inexpedient for us to take up the matter much in detail. About sixty persons organized the association, but later there were many additions, and ultimately the membership aggregated near five hundred; not of the often resourceless class of immigrants, but substantial people—farmers, professional men, merchants, mechanics and the like. They were principally New England, New York, Ohio and Indiana people. In April, 1870, the delta formed by the South Platte and the Cache-a-la-Poudre,rolling, treeless but fertile prairie, was selected as the Colony's location. The streams were fringed by cottonwoods and afforded facilities for irrigation. Meeker had previously visited Colorado and then conceived the undertaking which he later consummated. His plan was to locate the contemplated colony in the South Park, but was dissuaded from that by Mr. W. N. Byers, who visited New York, attended the organization meetings and gave the people the benefit of his large and varied knowledge of this part of the country. The Colony bought from the Denver Pacific Railway Company and from individuals about 12,000 acres of land around the mouth of the Poudre, and acquired by entry and otherwise 60,000 acres more of public land. Early in May, 1870, the first party, consisting of about fifty families, arrived by rail by way of Cheyenne, and began the pioneer work in founding the city of Greeley.

In 1870 another Colorado colony to locate within tributary distance of Denver, was organized at Chicago, and to which the founding of Longmont was due. A tract of 55,000 acres of land was bought from the National Land Company of which W. N. Byers was resident agent here. The Colony located on it in March, 1871, and by adding the French word for mountain to the name of the great peak towering above the ranges near there, made a name for their settlement.

Colorado Springs, the offspring of the Denver & Rio Grande railroad, though not a colonial enterprise of the same character that the others were, was a development of that same general period. It was founded in the summer of 1871 by an organization called the Fountain Colony, of Colorado, and of which General R. A. Cameron was Vice President and General Manager of affairs. The association acquired 10,000 acres of land along Monument creek, and on July 31st the first stake on the site of what is now a large and flourishing city, was driven. Colorado City, dating from pioneer times, had then all but given up the ghost, and was a mere hamlet. At the close of 1871, Colorado Springs consisted of more than one thousand and fifty buildings, and a newspaper had been established there.



Denver's first Waterworks Pumping House—now dismantled. (From a recent photograph.)

Fort Collins, a decayed military post that had been built during the Indian troubles in the "Sixties" and named for an Ohio army officer, became a town in 1873 under the direction and management of General R. A. Cameron, who was a colonizer by instinct and who, as proved by results, was provided with judgment to match his energetic ability.

These substantial evidences of the attractiveness of our country here, together with the progress of the older towns, were as gratifying to the more thoughtful citizens of Denver as if all the newcomers had been added to the city's population; and even more so.

The years 1871 and 1872 were very prosperous ones, and the city here was fairly started upon its new career, if such a distinction may be made between the times we are considering and those of the ante-railroad pioneer era. The country was filling with new people, enough of whom had located in Denver by midsummer of 1872 to increase its population to between eight and nine thousand, at least; though from twelve to fifteen thousand were "claimed." The mines were doing excellently, and many new and opulent districts, especially for silver, were developing. These prosperous conditions were reflected in the property valuations for taxation; or, rather, in the increase of property for assessment. The figures for 1872 were, for the city, upward of seven million dollars; and with the county's added, upward of twelve millions; values which may be said to have been created here in a dozen years or so—though it is quite probable that the true values from a trading standpoint were two or three times the amounts stated.

With the new era and its consequences came the need for a broader administration of municipal affairs. The term of Mayor Joseph E. Bates was the first in which the city's chief executive undertook to deal with the new conditions that had arisen. He was a man of much ability and who saw the necessity for many changes; most of which he officially and urgently recommended, and a considerable number of which he saw accomplished. The police department was reorganized on an efficient basis, the volunteer fire department strengthened, and a board of health created. The street grades had been practically those of the natural conditions, and their correction was inaugurated. In the business sections the sidewalks, so far as there were any, were of planks that made rough traveling; in the residence parts there were none. In these matters a new order of things was also instituted. The pioneer founders and platters of the city had practically made no provision for parks. They hardly realized that their towns, even when united, could or would possibly grow to a size requiring parks for the citizens. In their time the difficulty was to get the ground occupied; not to keep it open. It is quite probable that if any one had suggested to them the actual need for city parks on their plats, they would have concluded that a far greater and an immediate one existed for a small asylum for insane advisers. Mayor Bates saw the need for such provisions, and in his recommendations on the subject may be found the germ of the city's present park system which, if it is not all that could be desired, is an excellent beginning toward that end.

"Billy" Wise's "National Park" on Champa street near Twenty-seventh—a locally famous "road house" in the earlier Seventies.

In 1867 the United States government had ordered a geological survey of the Rocky Mountain country, along the fortieth parallel, and the explorations were placed under the charge and direction of Clarence King, a man of many high attainments. His work, which continued several years, with headquarters at Denver the larger part of the time, was chiefly devoted to the mineralogical resources of the country to be surveyed—their distribution and relative situations. In 1873 another expedition was thrown into the field, by the War Department, under the general charge of Lieutenant George M. Wheeler, the primary objects being to discover the most available routes for the movement of troops and wagons between interior posts; and incidentally to conduct researches in geology, zoology, botany, archæology, and other special branches of science. This expedition was in the field three years, and a part of it in Colorado most of the time. In the reports of this work are many maps in detail, illustrations, and other matter of great geographical and scientific value.

In the earlier days the "prominent visitor" to Denver was and had been a far more prominent personage than he is in our times, and received quite a different kind of attention. Now he comes and goes so frequently and so numerously that special ceremonies on his account are hardly expedient in a large and busy city. The first one was Horace Greeley, who came in June, 1859, and of whose experience here we have already given some account. Through the next few years, including the war time, "prominent visitors" were rather conspicuous by their absence. On May 27, 1865, Schuyler Colfax, Lieutenant-Governor Bross, of Illinois, and Albert D. Richardson arrived in Denver, and the entire party was warmly welcomed. Mr. Colfax had near relatives among Denver's pioneers, and our great cross-town avenue was named for him. Upon this first visit a ball was given in his honor, tickets to which were eagerly bought by Denver citizens at sixteen dollars each. On June 29, 1866, Bayard Taylor came to Denver in company with the noted American artist, William H. Beard, who died in New York in February, 1900, and the two delightfully spent several weeks in Colorado. In those years Taylor was connected with the New York Tribune. He re-visited Colorado and Denver in June, 1869, and the charming letters he wrote to that paper during his two visits were afterward published in book form, and even to this time there is nothing in Colorado literature that gives greater pleasure to the reader than those old-time letters. On September 10, 1866, General Sherman and his staff reached Denver, and on the evening of the 11th were banqueted at the Pacific (Broadwell) House. General Sherman came again on September 6, 1868, and with him were Generals W. B. Hazen and W. J. Palmer, Professor Louis Agassiz and others, escorted by a detachment of troops. The distinguished visitors were guests at the old Planters' House, where a banquet and other festivities were given in their honor. Albert Bierstadt, the famous painter of landscape pictures, was also a visitor in that period. In company with and under the guidance of Mr. Byers, the famous artist received, while ascending to the summit of Mount Evans, the inspiration of his noted and magnificent painting, "Storm in the Rocky Mountains;" though the locality pictured is near Colorado Springs. Learning that Mount Evans was then nameless, he modestly asked upon his return to Denver permission to name it Mount Rosa, after an Alpine peak it much resembles. That name adhered until the Colorado Legislature formally sanctioned the bestowal of that of Governor Evans upon it; a change which some of our people even yet think should not have been made. General Hancock with an escort of soldiers came on June 24, 1867, and made a brief stay. With him was Henry M. Stanley, then correspondent of the St. Louis Democrat, with Hancock's expedition against the warring Indians. Stanley returned east in a little row-boat, going down the Platte to the Missouri and thence to St. Louis. He had an adventurous journey, and was several times fired on by Indians; but lived to brave greater dangers in Africa. On June 17, 1868, William H. Seward with a large party of friends, arrived in Denver, and a "reception" was given the visitors that evening. On July 15th General Schofield and his staff came in from the plains; and in that month Professor F. V. Hayden of the United States Geological Survey, with several of his associates in scientific work arrived here. General Grant, in company with several other distinguished men, made his first visit to Denver on July 23, 1868, and was received with enthusiasm. He was given the freedom of all there was of the city at that time, and almost prodigal hospitality was bestowed upon him. A public reception was given him in the old Masonic Hall in the third story of the Tappan building on Fifteenth street. The visitors went from Denver to the Clear creek mining districts where they saw the practical side of mining. General Grant came here again in April, 1873; still again in October, 1875; and two or three times in later years, receiving upon each occasion the attention of the whole city. On August 8, 1868, Mr. Colfax came again, and Samuel Bowles, the noted editor of the Springfield, Massachusetts, Republican, was with him; both receiving a hearty welcome. The third visit of Mr. Colfax was in September, 1873, when he delivered an address to a multitude of people at the Denver fair. Cyrus W. Field, then in the zenith of his Atlantic cable fame, was a visitor in October, 1869; and, of course, received many attentions. But none of these we have mentioned was given a heartier, more whole-souled welcome than that extended Horace Greeley when he came upon his second visit, October 11, 1871, after an absence of a little more than eleven years. He was astounded and delighted by the developments and progress that had been made, for they seemed to have fulfilled the predictions he uttered in his speeches here in 1859, and those embodied in his letters of that time to his Tribune. As a measure of hospitable impulses toward a guest, it is often said that "nothing is too good for him;" but in Denver at that time the people thought there was nothing good enough for Mr. Greeley. He made many impromptu addresses, and one evening lectured on "Self-Made Men," in the Methodist church at Fourteenth and Lawrence streets to an audience that literally packed the building. At that time Mr. Greeley presented the personal appearance by which he is remembered by all who knew him, and as which his figure was made familiar in pictures to millions of his fellow-countrymen; a round, full face, fringed with "whiskers" under his jaw from ear to ear; wearing large "spectacles," a big, soft, whitish felt hat, a long frock coat, and rather "baggy" trousers. Men, women and children greeted him without ceremony, and in his characteristic hearty way he was responsive to all of them. He went from Denver to Greeley, founded earlier in that year, which has developed into the beautiful little Colorado city that is a fitting monument to his memory; and thence returned to New York. That was his last visit to Colorado; one year later came his memorable and disastrous Presidential campaign, and within a month or so after its close—in December, 1872, his pathetic and lamented death occurred. On January 17, 1872, the Russian Grand Duke Alexis arrived in Denver, after having engaged several days in a great buffalo hunt on the plains that had been arranged for him by several prominent army officers including

General Sheridan and his staff, and under the practical direction of William F. Cody—"Buffalo Bill." More buffalo than a dozen Grand Dukes could have eaten in a lifetime were slaughtered. Governor McCook, former Governor Evans, Mayor Bates and several other prominent Denver citizens went to Cheyenne to meet the party, which included several Russian officers and notables beside the Grand Duke, and escort the visitors to the city. The Grand Duke received every social attention, and expressed himself as delighted with the character, manners and customs of the people. The conspicuous event of the Grand Duke's sojourn here was an equally grand ball—that would have been greater had the American House been larger—given there in his honor. More than one Denver dame now fat, fair, and upward of forty, cherishes among the brilliant and delightful episodes of her social career the remembrance of her dances with the Russian Grand Duke at that locally famous ball at the American House. But the railroads had come before the Grand Duke got here, and from their advent the "prominent visitor" came so frequently that buffalo hunts, balls, meetings and other more or less public festivities could not be provided in honor of all of them, and their entertainment soon passed into the less conspicuous, and probably more satisfactory, domain of private social intercouse in the homes and clubs of Denver.

The American House, Sixteenth and Blake streets.
(From an old photograph.)

In 1872 a wave of excitement passed over Denver and Colorado in consequence of the alleged discovery of diamonds in northeastern Arizona, and the character of the cause of it was not fully revealed until the next year. Two swindlers, named Arnold, and Slack, conceived the plan of "salting" certain districts in Arizona with imported rough diamonds, and then exploiting their pretended "discovery" of a new diamond field. They were in Denver while their scheme was in course of preparation, but the affair never really reached any great proportions here; nor became of local significance, further than to inspire some belief that if diamonds existed in Arizona they probably could and would be found in Colorado, also. The two swindlers carried their scheme so far as to enlist the active interest of many men of national reputation in New York, San Francisco, and elsewhere; but the fraud was exposed by experts and the shrewdly-laid scheme collapsed before any great harm had been done.

As Denver's business increased and improvements continued to be made with much activity through the period between 1870 and 1875, and it was seen that the town was destined to become a city, in fact, the last word of the name "Denver City" began to gradually pass out of use. It would be difficult to state just when the abandonment of the superfluous word commenced, and when it ended; for it hung on here and there pretty well through the decade of 1870-80. When the Denver Times was established in the spring of 1872 its proprietors discarded the needless word, "City," from the title and head-line legends of the paper. This appears to have been one of the early instances of the change, if not the first, and the good example was followed in subsequent years by several Colorado towns. Towards the close of 1873 the superficial appearance of the busy, hustling, crowded town indicated a population of something like twenty thousand, but again were the appearances misleading. A census was made in January, 1874, by city authority, and the count aggregated 14,197. But these figures demonstrated a remarkable growth in less than four years.

The panic of 1873 was felt to some extent in Colorado and Denver, but not very gravely. There were a few sympathetic failures here, but none of any special importance. Business was in good condition, the mines were doing well, and affairs generally were progressing very favorably. That panic in the eastern part of the country was largely due to over-building of railroads, and to a disordered currency system; but Colorado was and always had been on a gold basis; and, therefore, the currency problem was not present here. The Denver banks never felt any strain in 1873, and went about their business as usual. As we have elsewhere mentioned, some large enterprises, especially of railroad construction, in Colorado, for which outside capital was essential, were checked in that year; and otherwise, the most noticeable effect of the trouble was in a shrinkage of real estate values in Denver. But, taken altogether, 1873 gave Denver no decided backset. The town increased in population and in business that year, and the general development of the Territory had made and was making great advances. The assessed valuations in the Territory for taxation in 1873 were $35,582,438; and for 1874 they had increased to $44,392,806. In 1874-75 many men who had suffered great losses in the east in 1873 came to Colorado to start anew, and most of them again got on their feet. Denver received a full share of them and they soon became prosperous and most progressive citizens.

In 1872, Professor F. V. Hayden, long connected with the United States Geological Survey, with his photographer, W. H. Jackson, whose name is familiar to Denver people, had made a tour through part of Colorado, and in his report for 1872 gave a brief general sketch, of great interest, of the magnificent scenery and the geological features of the regions visited, with analyses of the mineral springs. In 1873 and 1874 his survey of Colorado was prosecuted most zealously. Denver was made the headquarters of the work which was separated into seven divisions to prosecute specifically the topographical, geological, botanical, zoological, archaeological, paleontological, and photographical branches of the service, which in all respects was of great value to science and to the country at large. The report for 1874 contains, beside the strictly scientific history of the country, many interesting observations on its condition and development at that time. In 1880 Professor Hayden published a volume of scientific information concerning the mountain States and Territories, entitled "The Great West," containing over five hundred pages, made up of selected matter from other sources, with some fine descriptive matter of his own, in which seventy-five pages are devoted to Colorado.

There were but few events in Denver between 1870 and 1875, aside from those of a political character, that stand out in bold relief against the historical horizon. It was a period of industrial and business activity of steady and comparatively rapid city growth, of railroad building, of mineral and agricultural development. It was a period in which Peace was winning her victories here and was busy with all her arts. She could not, however, control the Territorial politicians; there was no peace among them, and their wrangles and tumults became a greater public affliction than ever; for all of which Denver was the center of their stormings. The intrigues, machinations, and recriminations reached a climax in 1874, and brought on the fiercest of their conflicts. The Legislature proposed making Pueblo the seat of Territorial government, and came dangerously near doing so; the bill passing the lower house by a decided majority. This caused profound excitement and alarm among the people of Denver, and it was only by their untiring efforts that the bill was defeated by a close vote in the upper house which then had but thirteen members. Next came the arbitrary removal of Governor Elbert and others of the Territorial officers, with the re-appointment of McCook as successor Governor; acts that incensed the people more than anything else that had occurred under the Territorial form of government. McCook could not withstand the adverse public sentiment. He was confirmed in June, of that year, and in February, 1875, gave way to John L. Routt. The appointment of Routt was accompanied by an understanding here and at Washington that it was to be the beginning of the end, in Colorado, of the abominable system of Territorial government and misgovernment; and that it was the first step in an immediate and final movement for Colorado's admission as a State. To the intense satisfaction and relief of the truly long-suffering people, it proved to be so.

CHAPTER XLVI.

CLOSE OF THE TERRITORIAL ERA—"HARD" WINTERS—CITY'S PURCHASE OF CAPITOL HILL DITCH—GRASSHOPPER VISITATION—LAST TERRITORIAL LEGISLATURE—CELEBRATING STATEHOOD—ADVANCEMENT OF CITY AND STATE—"MURPHY MOVEMENT"—FLOODS IN CHERRY CREEK—PROPOSITIONS TO DIVERT CREEK—EFFECT OF LEADVILLE "BOOM"—ACTIVITY IN BUILDING—FREE MAIL DELIVERY—CITY'S EXTENT—OUTBREAK OF UTE INDIANS—PROFOUND EXCITEMENT IN DENVER—PARTICULARS OF THAT TRAGEDY.

The plan of this volume provides for presenting historical accounts, in some detail, of the development of our school system, of the growth of religious denominations and building of churches, of railway building, the city government, newspapers, and financial institutions, and of various other elements in the upbuilding of the city and State in chapters special to each, wherein continuity of narrative may more conveniently appear. Therefore, the review running through this part of the volume does not cover all the events of the periods under consideration.

Governor Routt's administration of Territorial affairs in 1875, in its efficiency was accompanied by a feeling of satisfaction among the people combined with confidence that the Territorial era was approaching its end. They saw and knew that the movement for Statehood was sincerely and earnestly under way unvexed by the jealousies and strifes and antagonisms to which previous failures were chiefly due. This conviction that their political affairs were soon to be re-adjusted upon the basis of self-government had a most beneficial influence upon every avenue of activity and progress. The election of members of a State constitutional convention in October, 1875, was the work of enthusiasm born of confidence in great benefits to come, and resulted in the choice of an able body of men; and when the convention met in Denver on December 20th the people foresaw their sooncoming deliverance from Territorial thralldom. With this passing reference to the improved and improving political conditions we will return to consideration of other affairs.

While the fact does not necessarily imply any change of climate, the most severe winters in Denver's history were those of the decade 1870-80, and the most trying and disagreeable of them was that of 1874-75. It was a season of snow and sleet storms with a temperature plenty low enough. Railroads experienced great and prolonged difficulty in moving their trains, and at times could not move them, at all. The high winds packed the cuttings with a hard combination of snow, sleet and sand against which a snow plow was as impotent as if it had been driven against the mountains. Upon several occasions trains were caught helpless between such barriers, could move neither way, and were held for a couple of weeks, the passengers being taken away in road vehicles. A train on the Kansas Pacific, with eighty-five passengers aboard, had an especially hard time getting across the plains to Denver, and was eleven days on the way—far worse than the slowest stage-coach time. The passengers ate everything in sight at all the stations, and finally fell upon the edible things among the large quantity of express matter the train carried, and consumed all of them. At last, the belated train, to which a relief expedition had been sent, was dragged into Denver on the eleventh day of its journey by four locomotives; and its worn-out, ravenous people turned loose on the city's flesh-pots.

Early in 1875, A. J. Williams, then an Alderman, concluded that the city ought to own the old ditch from Littleton down to Capitol Hill, and on March 2nd introduced in the Council a resolution providing for a vote of the people at that spring's municipal election on a proposition to issue $60,000 worth of bonds to buy it. The bonds were to run twenty years and to bear ten per cent interest. The ditch, water rights and franchises of the company owning them were thought by some to be well worth the money, but a majority of the voters thought otherwise and the proposition was rejected. It was again submitted at a special election held May 19, 1875, and that time it carried by a majority of fourteen. The property was transferred to the city on May 25th. While the ditch is still maintained, its most important present service within the city is that of supplying water to the lakes in the City Park; the flow being through underground conduits across the Capitol Hill plateau.

In 1874 there had been an ominous visitation of grasshoppers, or a variety of that kind of insect, over Colorado, but not serious enough to cause embarrassing damage, though heavy losses had ensued. In the spring of 1875 they appeared again and in myriads. We have hitherto mentioned the first experience with them, that of 1865. They appeared again in 1867, but not in such vast numbers, though in both years they constituted a plague. But the afflictions of those times were not so serious as those of these later years, especially in 1875, when the creatures appeared in great clouds and took the country. The streets and sidewalks of the city were alive with them; they invaded every building and swarmed everywhere. Vegetation vanished under their ravages and the country was stripped of everything they could devour; their presence was a serious calamity, so great were the agricultural losses they caused. Farmers and gardeners were in despair, and many were reduced to bankruptcy. Railroad trains were frequently impeded by them and occasionally stopped; myriads of their crushed bodies making the rails so slippery that locomotives could only and vainly whirl their driving wheels around. They disappeared in 1876 and have not since returned in numbers sufficient to cause serious damage.

Larimer street in 1875. From a wood engraving in which the width of the street was exaggerated and general effects somewhat idealized.

The losses of the agricultural interests in 1875 were so severe that many farmers needed assistance. A public meeting was held in Denver on May 17th, at which a large sum of money was contributed. This fund was applied to the purchase of seeds for replanting in that season and for relieving cases of actual distress. These troubles entailed a depression of business in Denver, and checked operations in real estate to such an extent that those more directly interested declared that times were very dull. But there was by no means a halt in progress, and with the year most of the grumbling about hard times passed away. The extent to which the city had improved in 1875 is indicated by an accompanying view of Larimer street in the autumn of that year.

The State constitutional convention completed its well-done work on March 15, 1876. The last Territorial Legislature—as events proved it to have been—had met on January 2nd, of that year, but in consequence of what was under way for its displacement did little business, and took almost as little interest in the little that was done, as the people manifested. Its chief distinction appears to have arisen from the decision of the lower branch to get along without a Chaplain, and which won for it the name and fame of "the Prayerless House." The proposed constitution for the State was voted on July 1, 1876, and adopted by an overwhelming majority. The deep interest taken in its welfare by the people of Denver was demonstrated by the vote in the city—5,591 for it and only thirty-seven in disapproval. The general vote throughout the Territory was almost as heavily one-sided, except in El Paso county which at that time was almost wholly, so far as population went, another name for Colorado Springs. The Springs sulked over the matter and the vote of El Paso county was relatively heavy against the whole State proposition.

The election returns came quickly in, or enough of them to show that Statehood had triumphantly won. Then followed a season of rejoicings and celebrations in Denver, the like of which for earnest expressions of relief, happiness and public joy had not been witnessed before nor have been equalled since. The Fourth of July was made the great day of celebration. The city put on her holiday attire, invited all the people from near and far, and sent forth a street pageant that is memorable to this day. All the Territorial and city officials, the city departments, the Pioneer association, all the secret and industrial associations, the military, and hundreds of citizens on foot and in vehicles paraded forth in a procession that finally brought up in "Denver Grove" where the speeches were made to thousands; and they were good speeches, too; for the birth of a State under such circumstances as those by which Colorado had been brought into existence was a theme sufficient to convert even a sluggish man into an orator. The celebration was continued until far into the night with fireworks and music and additional oratory. On August 1st came President Grant's proclamation declaring Colorado a State of the Union, followed by nominations for State and legislative positions by both parties, an exciting campaign, the election in which the Republicans won by a narrow margin, the assembling in Denver of the first State Legislature on November 1st, the inauguration of State officers; and the long travail of Statehood was a thing of the past.

While the political events and triumphs of 1876 overshadowed all other things in that year, the material progress in the city was not neglected. Business of every kind was fast recovering from the depression of 1875 and, notwithstanding another invasion of the country by grasshoppers, though of a less serious character than the previous ones, the year of Statehood was one of fairly renewed prosperity for the city. The moral effect of passing under and living under a home government to be controlled, directed and corrected by the people themselves, with all responsibility here at home, was quickly manifest in 1876 and 1877 throughout Colorado. The last-named year was one of steady advancement here and all over the State. Railway building was resumed, and there was a large accession of new people who came to stay, while thousands of "tourists" came to see and marvel. Real estate in Denver moved up again, and there were renewed vigor and confidence among all the builders of the city.

In the summer of 1877 the memorable temperance reform, known as the "Murphy movement," swept over the country from the Atlantic to the Pacific, and Denver had a full share of it. The first of the public meetings here was held on August 3rd, and for about three months thereafter great interest in them was maintained. A very large number of people signified their participation in and approval of the reform by conspicuously wearing the bit of blue ribbon that was the emblem of the movement; and among them not a few men to whom sobriety had long been a hazy memory. But, as time went on the blue ribbons passed from view; and now that rather extraordinary campaign against intemperate habits is an almost forgotten incident of the past.

The Wentworth House in the later "Seventies." Now part of the St. James Hotel building.

Cherry creek cutting through that part of the city on the eastward side of the River Platte is a nuisance, a blight and an abomination; but it is not now probable that any remedy will be soon applied. It is a standing menace to life and property in a large portion of the city, and should another flood come like the resistless torrent of 1864, it would cause the loss of many lives, and enormous destruction of property. Though thirty-six years have elapsed since the more appalling demonstration of the creek's power for michief occurred, it would be well to seriously consider whether that performance was the most destructive of which it, in conjunction with the Platte river, is capable. There are no sound reasons for assuming that the two streams will not again cause a catastrophe. The great destruction wrought in 1864 was not the only serious trouble made by the creek. During the middle days of July, 1875, there had been an exceedingly heavy rainfall which reached its climax in torrents on the night of the 20th, and made another great flood in the creek. The night was very dark and the terrified people expected a repetition of the experiences of 1864. The situation was exceedingly threatening, but the damage was confined to some lost bridges and an inundation of that part of the city between Market street and the Platte river, on both sides of the creek; for the Platte was also at flood tide. There was no loss of life, but the property damage was probably fifty thousand dollars. The railroads and most of the mountain towns also suffered serious damages, for the heavy rainfall was an extended one. On May 2, 1878, the creek again asserted its destructive power by carrying out most of the bridges in its way and flooding the districts in the lower part of the city. Like the previous ones, this flood came down, as a thief, in the night, and carried with it an immense amount of drift and debris which, accumulating against the bridges, first converted them into dams which threw the water to each side in great rivers before they gave way. Many old citizens thought the amount of water almost equal to that of the flood of 1864. Within two hours each bridge in the city was made a flooding dam and then successively carried away. They were cheap wooden affairs with their supports in the creek bed, and were later replaced by properly constructed iron ones. That night a man named John Taylor had taken up his bed in an empty box-car on the "West Denver" side near the Wewatta street crossing of the creek. The flood overturned the car and Taylor was drowned like a rat in a trap. A boy was also swept off by the waters, but was rescued. This time the property loss was between thirty and forty thousand dollars. Still again, in the night of July 26, 1885—always in the night—the creek repeated the general performance, though with less damage and no loss of life; but it seriously threatened the foundations of the then new City Hall.

After the flood of 1875 a movement to divert the creek from its course through the city was inaugurated, for which there was considerable public demand. The city authorities concluded to build an embankment across the creek valley, about a mile above the Broadway crossing, and then cut a new channel, only twenty-five feet wide, over to the South Platte river to a point near Lake Archer. Surveys were made, no serious difficulties being encountered, and on November 24th the City Councilmen adopted the plan. But in the meantime violent opposition to the project had arisen and divided the citizens into two somewhat overheated factions between which the discussions became rather acrimonious. Two Chicago men submitted a proposition to do the work upon the city's plans, for $100,000, of which $42,000 were to be paid them in cash and the remainder in city lots rescued from the creek bed, at appraised valuations. The Council accepted the offer, and immediately there was a still greater manifestation of indignant hostility from the opposition. Mayor W. J. Barker held the contract under advisement for a day or two and then concluded not to sign it, as he believed the proposed twenty-five-foot channel totally inadequate for the purpose, and also that the scheme was a corrupt one. To clinch matters, the opposition to the whole project obtained an order from Court enjoining the Mayor from ratifying the contract, and that ended the conflict. The general proposition was taken up again in 1876, and on June 22nd of that year the question of issuing $75,000 worth of bonds to pay for diverting the creek was submitted to a vote, and defeated. In 1878 the diversion proposition came up again and met a like fate. One of the later proposed remedies was to cut the new channel across to Sand creek, but nothing further was done. Some engineers thought diversion would only be effective at ordinary stages, and that in flood times the creek would tear its way through any artificial barrier, and reoccupy its old bed. In recent times the creek has been accused of being a disease-breeder, but its ordinary appearance does not suggest any serious results in that direction.

Lindell Hotel, "West Denver," in the "Seventies."

The land-title to the bed of Cherry creek and to some of the ground bordering the bed is vested in the city. When various city lots that had previously been abandoned by their one-time owners, or had remained unclaimed under the old Congressional grant, were sold under the Territorial law enacted in 1871 and directing the sale of all such property for the benefit of the school funds, the city bought the lots that had been platted in, and partly in, the creek's bed as far up as Broadway, at a cost aggregating between $5,000 and $6,000. The number and extent of these lots with relation to the creek-bed were never subsequently definitely ascertained and platted, and these holdings of the city are not accurately known. This ownership would prove an important factor should diversion of the creek around the city ever be undertaken.

The years 1878 and 1879 were times of the liveliest activity in the city that had yet been known. The inpouring of people on their way to Leadville began in 1878, but the great wave of fortune-seekers bound for the new and wonderful camp came in 1879. The movement had a profoundly stimulating effect on Denver. The city's commercial business had previously reached very large proportions, and manufacturing had made great strides; but in the years mentioned all kinds of traffic increased by leaps and bounds. The railroads had all they could manage, and at most exorbitant rates. Railroad exactions and extortions became shameful, and would have paralyzed business in a less resourceful community. In the building trades no one was idle, and newcomers found employment before they could find lodgings. The demand for business rooms and for dwellings was far greater than the supply and rents soared aloft under the combined influences of the development at Leadville, and the city's own forward movement independent of any particular locality. Building operations included many dwellings, and the winter of 1878-79 was not permitted to seriously interrupt the work. Yet, a large number of these dwellings built in "East Denver" between 1875 and 1880 between Broadway, the river, Fifteenth and Eighteenth streets, were torn down by 1890 and their sites occupied by great business structures.

The two very conspicuous improvements in the way of new buildings in 1879, the objects of especial pride and comment, were the Tabor building at Sixteenth and Larimer streets, to make way for which the historic old Broadwell House had been torn down; and the Windsor Hotel, which, upon its completion, had no compeer west of the Missouri river. At that time Larimer street was fronted by many rather imposing business structures, and was in its supremacy as the great commercial thoroughfare; but the Tabor building surpassed all others in size, character and expense of construction, and its builder was then locally referred to as "the Leadville ten-millionaire." Beside the Windsor Hotel, another one, now in decadence, was in construction on what was regarded as the rather remote location for a hotel on the northeast corner of Fifteenth and Glenarm streets. To that time the American, the Wentworth—now part of the St. James, and the Alvord hotels had been the more prominent and popular of Denver's hostelries. On Blake, Market, Lawrence, and Fifteenth streets many business buildings were erected in 1879, but with the exception of Fifteenth, the numbered streets were still the by-streets and not business thoroughfares.

The Alvord House, southeast corner Eighteenth and Larimer streets, in the later "Seventies."

A noteworthy addition to Denver's metropolitan conveniences came in the summer of 1879. The city was already supplied with railroads, waterworks, gas-works, telegraphs, telephones, street cars and fire-alarm telegraph service, but everybody still had to go to the Post Office for mail. The "tourist" travel through the city had already attained large proportions, and for most of the visitors Denver was the central point at which to receive their mail while sojourning in Colorado. At times the crowds at the post office became unwieldy, and the lines of people extended from the delivery windows out into the street, after the pioneer fashion of getting up in turn to the stage-coach post office. William N. Byers was appointed Postmaster in the spring of 1879, to succeed E. C. Sumner, and he at once instituted measures to secure free delivery of mail by carriers in Denver. In the summer of that year he inaugurated the service with six men. But the force soon had to be increased. Since 1870 the business of the Denver Post Office has always been abnormally large in proportion to city population; which, to a considerable extent, is due to the presence of the many visitors who annually come to Colorado.

At the close of 1879 there was still little of "North Denver" as compared with its present extent and population. At that time they had only two school-houses, and not large ones, over there. "West Denver" was expanding toward Broadway at a fair rate, but there was a great plenty of vacant land and town lots in the general area bounded by Cherry creek, the River Platte and say West Eighth Avenue. In "East Denver" Broadway was still outside the built-up district to the eastward, and Twenty-third street marked its limits in the northward direction. The Capitol Hill district remained open prairie. There were no improved streets in that quarter—nothing but some roadways; no street-cars; no indications of the remarkable changes that came a few years later. The only conspicuous building east of Broadway anywhere was the dwelling built in 1875-76 by Henry C. Brown on the block bounded by Broadway, and Seventeenth, Lincoln and Eighteenth Avenues. In those years it was the finest residence in the city. It still stands there, on the south part of the block, and is yet a handsome dwelling, even by comparison. In January, 1879, Brown sold the entire block, containing forty lots, to H. A. W. Tabor for $40,000, at that time considered an extravagant price. The dwelling was the only building on the block, and all its furniture and furnishings were included in the sale. That block of land, aside from the improvements now upon it, is worth at a reasonable valuation, nearly a half million dollars at the present time. Fifteen years before, Mr. Brown had in vain offered to sell all or part of that block at the rate of one hundred and fifty dollars each for the lots it made.

This investment by Tabor of a bit of his then abundant wealth greatly stimulated interest and values in property out that way soon afterward. But, up to the middle of 1879 only a few houses, less than a half-dozen, had been added to the pioneer structures on the slope and brow of Capitol Hill, north of Colfax Avenue; and south of that thoroughfare and east of Broadway, there were but two or three in the entire area. Indeed, even so late as that year everything east of Broadway was regarded as being "out in the country." Nevertheless, considering all the conditions and circumstances of the preceding twenty years, Denver's growth had been truly remarkable; and with what had been accomplished, what was then in hand, and what it had before it in the immediate future, it may have warranted the declaration of one of its enthusiastic newspaper men that it was then, in its twenty-first year, "the most active, enterprising, and flourishing city on the continent." So thronged were the streets and so great the bustle, activity, and volume of business that it was assumed and asserted that the population of the city had reached the 40,000 mark. But the census of the ensuing year slightly modified these views and estimates.

The outbreak of the Ute Indians and the massacre at the White river Agency, and defeat of Major Thornburg's command, in September, 1879, caused a profound excitement in Denver, as elsewhere in Colorado. News of the tragedy reached the city on October 1st, and, while it occasioned no alarm here, it produced a public sentiment that demanded severe measures against the Utes. Early in 1878, N. C. Meeker who, as we have previously related, had been chiefly instrumental in founding the town of Greeley, moved by a spirit of philanthropy and a sincere desire to better the condition of the Indians, had secured the appointment as Agent for the White river Utes and had taken charge of affairs at the White river Agency.

View eastward from the southeast corner of Larimer and Sixteenth streets, 1878-79. From a photograph.

For two or three years previous the White River Utes had been very restive and on the verge of a general outbreak. Several white men had been killed by them in the North Park, and later one named Williams was killed by them in the Middle Park. To these acts had been added many depredations, such as burning the buildings of settlers, killing cattle and stealing horses.

Soon after Meeker took charge, a band of his Utes under a sub-chief named "George Washington," and a small band of Southern Utes under a leader named Piah, made a sneaking raid out on the plains. They went as far as one of the forks of the Republican river, where they fell in with a settler named McLean whom they killed. Information of McLean's death did not reach Denver until several days afterward, and the circumstances attending it were not ascertained until some time later. The Utes hurried homeward, stopping in Denver on the way and supplying themselves with whiskey. They passed over into the Middle Park where, in an altercation with a white man, one of their number was killed. Proceeding toward their reservation they stole several horses, and coming to the cabin of a settler named Elliott, they killed him in his door-yard in revenge for the recent death of their comrade.

When news of these acts reached Hot Sulphur Springs a party of twenty-six men, of whom William N. Byers was one, was organized to pursue the Utes. The individual identity of the Indians was then unknown, and news of their depredations on the plains had not reached the mountains. It was not until after the Ute troubles were over that it was definitely known that Washington and Piah had been the leaders. After a day's journey sixteen of the pursuing white men weakened and turned back; but the others under the leadership of Mr. Byers followed the Utes to the White River Agency, where they were met by some seventy or eighty mounted warriors drawn up in battle array.

When the Indians recognized the leader of the white party they made no further hostile demonstration, as he was well and favorably known by many of them. When they learned the object of the visit they demanded that a council be held. They denied all knowledge of those who had stolen the horses and killed Elliott. Piah and his band had gone on southward; but Washington was there and was suspected because he was carrying a lame arm. An examination showed that his arm had been hurt by a fall and not by a gun-shot in the attack on Elliott. Despite his name, Washington was one of the meanest of his tribe. Not being able to identify the Indians who had killed Elliott, and not desiring to attempt an arbitrary reprisal, Mr. Byers had to content himself with a demand for the return of the stolen horses which he had seen as he approached the Agency. Next morning early the Indians had all the horses hitched to a rack at the Agency, and Mr. Byers and his men left with them without molestation. On his way back to Hot Sulphur Springs he camped on the spot where, the next year, Thornburg and his men were ambushed.

Affairs at the Agency were in a threatening condition at that time, and Meeker's authority was weak. An incident in the council revealed that. Meeker arose to say something, whereupon old Colorow jumped up and angrily ordered him to sit down and keep quiet, declaring that the Indians did not want to hear from him, and that only "Byers can make talk." Meeker had to comply with this insolent order.

The management of Indian affairs in those years was corrupt or inefficient nearly everywhere in the west. Supplies for the Utes were long delayed; the game was fast disappearing, and the Indians had upon more than one occasion been reduced to destitution. Agent Meeker had not only determined to remedy these conditions, but he had theories of his own for the moral and physical advancement of the Indians, which he believed would make civilized men and women of them. He was an honest, conscientious man, and an enthusiast in the purpose he had in view.

Through the remainder of 1878 Meeker partly quieted the restiveness of his charges and it seemed that perhaps his methods of a firm but fatherly discipline would result in a permanent change for the better. But, in the spring of 1879 it became apparent that his theories would not serve in practice. Some of the White river Utes again left the reservation, started forest fires that burned over large areas, stole property from the settlers, and burned two dwellings on Bear river. Meeker then called on Washington for some troops to control his depredating charges. Governor Pitkin more fully realized the danger, and advised the Washington authorities that prompt measures were necessary to prevent a serious uprising. A single company of the Ninth cavalry (colored), under Captain Dodge, was all that was ordered to the Agency, but it marched slowly, and was in the Middle Park when the outbreak occurred. The Ute Indians had an intense and special hatred of colored soldiers, and news of the approach of this little command inflamed them to a high pitch. The White river Utes had been clamoring for Meeker's removal. Captain Jack, the Chief of the Yampai band, and a party of lesser chieftains visited Denver and demanded of Governor Pitkin that he secure the Agent's immediate removal, declaring that they wanted many things, but above all others they wanted the White river Agent with his notions of civilizing their people taken away at once.

N. C. Meeker.
Ute Indian Agent.

When the Utes had learned that their Agent who had told them he would have no soldiers around him, would send for some, a stronger spirit of hostility to him was aroused. But the underlying reason for it was that he was in earnest in his attempts to civilize them; several chieftains declaring that they did not want and would not have the white man's civilization. So, this resulted in a fast-widening breach between the Agent and his turbulent charges who persisted in leaving the reservation and making trouble for the settlers around it.

In August, 1879, it was determined that if Agent Meeker could not control his Indians and if the government would not send troops to do so, civil processes would be applied to the marauders. About the middle of that month Major J. B. Thompson, whose house on Bear river had been burned by some of the Utes, obtained warrants from Judge Beck, of the District Court of the First Judicial District, for the arrest of two Ute ringleaders named "Bennett" and "Chinaman." Marshall Bessey, Sheriff of Grand county, left Hot Sulphur Springs on August 22nd, with a posse of four men to capture Bennett and Chinaman. When the Sheriff reached the White river Agency the two Indians could not be found. Douglass, the head chief of all the White river Utes, refused to tell Agent Meeker where they were, and refused to produce them for the Sheriff. Others of the tribes joined in concealing the whereabouts of the culprits, and so the Sheriff and his posse had to return without any Ute prisoners.

This new movement to arrest Utes and try them in the white men's Courts, greatly excited and angered the Indians, and the Sheriff was accosted and halted by many of them in a plainly hostile, if not a threatening, manner after leaving the Agency on his homeward way.

A few days later Agent Meeker was assaulted by the medicine man of the White river Utes, named "Johnson," and severely injured. Johnson would have killed him but for the interference of some white laborers employed at the Agency. This was followed within a day or two by these laborers being shot at but not hit, while plowing in a field near by. The Utes were fast working themselves up to the outbreaking point, and by the first week in September were very near it; so near that any man of experience with Indians and thorough knowledge of their character, would have at once left the Agency, especially when he had a wife and daughter and several others there who were dependent on his judgment and decision. He was urged to do this by John W. Steele, the mail contractor, on September 10th. Steele was the last white visitor at the Agency prior to the outbreak. Meeker said he would not do so, but would again send for troops, and asked Steele to urge their quick dispatch as soon as he reached Rawlins, Wyoming. Meeker then remarked:

"I came to this Agency in the full belief that I could civilize these Utes; that I could teach them to work and become self-supporting. I thought I could establish schools, and interest both Indians and their children in learning. I have given my best efforts to this end, always treating them kindly, but firmly. They have eaten at my table, and received continued kindness from my wife and daughter, and all the employees about the Agency. They are an unreliable and treacherous race."

That night the Utes had a war dance in front of one of the Agency buildings, and gave little heed to the Agent's orders to stop it and disperse. This should have been sufficient warning to him to remove himself and all the other white people from the Agency next morning when Steele departed. But he did not appear to realize the danger. When Steele reached Rawlins he telegraphed General Sheridan the dangerous state of affairs at the White river Agency, and Sheridan replied stating that more troops would be started at once.

The Indians had been preparing for an outbreak all that summer, trading anything and everything tradable on which they could lay their hands, for Winchester rifles and ammunition; one trader selling them three cases of rifles and a large quantity of fixed ammunition. Early in September Agent Meeker sent to Governor Pitkin here at Denver for assistance, but as the Governor had no jurisdiction over the Ute reservation, all he could do was to pass the appeal on to Washington with his urgent advice that troops be stationed at White river at once. But, for some reason this was not promptly done.

Ute Chief Douglass.

Finally, after Governor Pitkin had received and transmitted to Washington the news that Agent Meeker had been assaulted and that Agency employes had been fired upon, Major T. T. Thornburg, commanding Fort Fred. Steele, on the Union Pacific railroad, in Wyoming, was ordered to proceed with three companies of Cavalry and one of Infantry to the relief of the White river Agency. Thornburg's command consisted of Companies D and F of the Fifth Cavalry, E of the Third, and Company E of the Fourth Infantry; his officers consisting of Captains Payne and Lawson, and Lieutenant Cherry of the Fifth Cavalry, Lieutenant Paddock of the Third Cavalry, and Lieutenants Price and Woolley of the Fourth Infantry; with Dr. Grimes as Surgeon. Thornburg left Rawlins on September 14th with a train of thirty-three wagons, for his long and rough march to the Agency, under orders to proceed as quickly as possible. At Old Fortification Camp he left the Infantry Company, under Lieutenant Price, to protect passing supply trains and to act as a reserve force in an emergency. Thornburg and his three companies of Cavalry then pushed on southward. Near Bear river they met ten Utes who professed the greatest friendship, and were allowed to continue on what they declared was a little hunting expedition. Later these same Indians were again encountered. They offered to act as guides to Thornburg and an escort of five soldiers to the Agency if the commander desired to go on ahead of his troops. On the advice of Joseph Rankin, the expedition's guide, this offer was declined. Rankin appears to have been the only man who regarded these Indians as spies.

Thornburg proceeded to the point where his route crossed Milk creek, a tributary of Bear river, within the reservation, and in Summit county. There in Milk creek canon the command was ambushed by a body of Utes numbering between two hundred and fifty and three hundred.

Thornburg was under orders not to attack any Indians he might meet. He was almost surrounded by the Utes, who opened fire upon his command from concealment. In the fighting that followed Major Thornburg and every one of his officers except Captain Payne and Lieutenant Cherry were shot down, together with about one-third of their men, within an hour. After the attack on them opened the troops retreated to their wagon train, made a fortification of the wagons and the animals that had already been killed, and were there besieged. A fearful fire was poured in upon them, yet not an Indian could be seen. During the first night of the siege Scout Rankin got away on a fleet horse and started to Rawlins, one hundred and sixty miles away, for assistance, which he reached in twenty-eight hours. Two other men were sent the next night to find Captain Dodge's company of Cavalry then in the Middle Park on its way to the White river Agency, also. Dodge reached the besieged men on the third day after the attack. General Wesley M. Merritt with a relief column left Rawlins in the morning of October 2nd and reached the beleaguered men early in the morning of the 5th. The Indians had kept up the siege even after Dodge and his men arrived, but when General Merritt and his command appeared they withdrew, after six days of continuous fighting.

The condition of the besieged men was pitiable. No adequate attention to the wounded could be given, the stench in and around their camp was frightful, and a shortage of water had added its distressing consequences. Reinforcements had quickly followed General Merritt, and after their arrival, and after caring for the dead and sending the wounded back to Rawlins, the command moved on to the White river Agency.

In the meantime nothing had been heard of the fate of those at the Agency until October 9th, when news reached Denver from Chief Ouray and by way of the Uncompahgre Agency, that, on September 29th, the day of the attack on Thornburg, Agent Meeker and all the white male employees at the White river Agency had been killed, and the women and children carried off as prisoners. When General Merritt arrived there on October 11th he found a place of desolation, as most of the buildings had been burned. The Agent and all the employees, but one, who had been absent for a day or two, were dead and their mutilated, naked bodies strewn around. We need not describe their condition that presented the usual evidence of the horrors of Indian warfare. The dead at the Agency were Agent N. C. Meeker; W. H. Post, his assistant; Henry Dresser, E. Price, Fred Sheppard, George Eaton, W. H. Thompson and E. L. Mansfield. On the road near the Agency were found the bodies of Carl Goldstien, Julius Moore, Frank Dresser and E. W. Eskridge. All those found at the Agency had comefrom Greeley with Agent Meeker, and all their bodies with that of their chief were later taken there for burial.

Piah.

The attack had been suddenly made early in the afternoon of September 29th, and in a few minutes the frightful work was finished. The body of Eskridge was found about two miles from the Agency. In a pocket of his coat lying near him was a letter reading as follows:

> "White River, September 29, 1 o'clock p. m."
>
> "Major Thornburg:—I will come with Chief Douglass and another chief and meet you to-morrow. Everything is quiet here, and Douglass is flying the United States flag. We have been on guard three nights, and will be to-night—not that we expect any trouble, but because there might be. Did you have any trouble coming through the canon?
>
> N. C. Meeker, United States Indian Agent."

This was written only an hour or so before the attack, and Eskridge had gone only two miles on his way to meet Thornburg, when he was killed. He was accompanied by two Utes, one of whom was Chief Antelope, and both professing to be friendly. They were probably his slayers.

The women and the few children at the Agency hid themselves in one of the buildings when the attack began, but witnessed the death of Agent Meeker and one or two others from their hiding place. When the buildings were fired they had to flee from their shelter, were captured and carried away. We will not dwell on the circumstances of their captivity. Through the influence and peremptory intervention of Chief Ouray, head chief of all the Utes, and after a troublesome negotiation, Chief Douglass surrendered them, and they reached Denver early in November.

The massacre at the Agency was the work of Chief Douglass and twenty of his braves. Up to the moment of the attack Douglass had treacherously professed friendship and kept the United States flag flying at his quarters. The Indians who ambushed Major Thornburg and his men were commanded by Captain Jack, who had for several months been outspoken in his hostility to the whites and to all the methods of the white men.

We can not here enter much further into the details of this last and saddest Indian tragedy in Colorado. It is another of the several subjects, more properly belonging to the history of the State than to that of Colorado's chief city, that would require a volume of its own for full treatment. As we have stated, the excitement over it in Denver was intense. Enough men to form a regiment instantly offered their services to Governor Pitkin and appealed to him to be organized and ordered out on a campaign of vengeance. The Governor, not knowing how far the outbreak might extend, took active and urgent measures for the protection of settlers in what was then the Colorado frontier. Simultaneously, about three thousand Federal soldiers were hurried into the State, and further danger prevented.

The whole country was aroused by the tragedy at the Agency and that in Milk creek canon. A long discussion of the management of Indian affairs was precipitated in Congress, followed by the customary and practically fruitless investigation. Then came the Peace Commission which made peace with the Utes, and a new treaty under which the White river tribes were later transferred to the Uintah reservation in Utah. Neither Douglass nor Captain Jack, the leaders in the outbreak, nor any other, was punished. In an early chapter of this volume the later fate of this pair of Ute chieftains is mentioned.

The outbreak would have gone further and peacemaking would have been far more difficult had it not been for the courage, sagacity and great influence of that Indian statesman, Ouray, the commanding chieftain of the whole Ute nation from the later sixties until his death. The uprising had occurred without his knowledge, and was far removed from anything like his approval. When he heard of it at the Southern Ute agency he declared that the white settlers should protect themselves by every means, and instantly threw himself between the whites and those of his tribes under Douglass and Captain Jack. He had long before realized the uselessness and hopelessness of the Indians resisting the advance of the dominating race. To each successive reduction of the Ute reservations, he assented because he knew it to be wisdom to accept the inevitable in peace; and none of the changes could have been peaceably made without the co-operation he extended. When he heard of the attack on Thornburg, he sent runners with orders to Captain Jack to instantly stop fighting. It was only because of his orders that Douglass surrendered the women and children captives without a resistance that in any event would probably have meant death for them. It was his wife, Chepita, who first received, sheltered and comforted them after their release, and who wept over them because of their misfortunes and condition. The memory of no man who figures in Colorado history is held in higher respect or more profound regard by the people of our State who knew his character and worth, than that of Ouray, the Chief of the Ute nation.

Ute Chief Captain Jack.

The broad ground for the complaints and discontent of the Utes, and the causes leading to their bloody attempt to free themselves, were the persistent and sincere efforts of Agent Meeker to make them adopt the white man's methods of living and of supporting themselves. Calling upon the adults to plow the land and work at tilling the soil, and requiring the children to attend school, greatly incensed them. Just before the massacres Captain Jack, who fairly spoke English, excitedly declared:

> "Utes say Agent plow no more. Utes say Meeker must go way. Meeker say Utes must work! Work! Work! Utes no like work. Utes no work. Utes no like school. Utes no have school."

N. C. Meeker, by nature, training and experience in life, was wholly unfitted for the position that brought death to him; he had not the first qualification for dealing with and managing those mountain Indians. He was a theorist, a dreamer, a transcendentalist. Born in the town of Euclid, Cuyahoga county, Ohio, he had in middle life been associated with the Brook Farm experiment, and with other communities after the notions of Fourrier. After he founded the town of Greeley he built there a large dwelling, still a conspicuous building in the town. At the time of his death he was sixty-four years old. His widow, aged eighty-four, survives, and with a daughter lives in their old home at Greeley. Josephine Meeker, the daughter who witnessed the fearful scenes at the Agency, and endured with her mother a captivity of nearly a month with the Indians, is dead.

Captain Francis S. Dodge, for his gallent services in relieving Thornburg's command was advanced by President Hayes to be Paymaster in the regular army with the rank of Major. He served in the Department of the Colorado with headquarters in Denver until 1899, and at the close of our record was chief Paymaster in Cuba.

CHAPTER XLVII.

THE "CHINESE RIOT"—CAUSES LEADING THERETO—ACTION OF AUTHORITIES—RIOT SUPPRESSED—CITIZENS' MEETINGS—INTRODUCTION OF ELECTRIC LIGHTS—FUTILE PIONEER GAS COMPANIES—INCORPORATION OF ELECTRIC LIGHT COMPANIES AND THEIR CONSOLIDATION—DEVELOPMENT OF ELECTRIC LIGHTING—NATIONAL MINING AND INDUSTRIAL EXPOSITION—NATIONAL ENCAMPMENT GRAND ARMY OF THE REPUBLIC—DEVELOPMENT OF SIXTEENTH STREET—RIVAL METROPOLES IN THE EARLIER TIMES—CONCEPTIONS OF EASTERN VISITORS—BEGINNING OF DENVER'S GREAT DEVELOPMENT.

Denver has enjoyed remarkable immunity from public disorder and demonstrations of public disregard for the supremacy of law; few cities of its size in this country have a more creditable record with respect to this. The chief event of a riotous character in the city's history occurred in the autumn of 1880. Previous to that year an intense feeling of hostility against the presence in the western country of the large and fast increasing numbers of Chinese, had been aroused in San Francisco and other coast cities, and to give effect to the demand that "the Chinese must go" became a political issue in that section of the country. The Presidential campaign of 1880 had been stained by the political forgery known as "the Morey Letter," a pro-Chinese document attributed to James A. Garfield, and much angry political feeling existed everywhere, and of which Denver had a fair share.

We have already mentioned the first coming of Chinese to Denver in 1870 soon after the completion of the Denver Pacific railroad. During the intervening ten years they had flocked into the city in considerable numbers, the census of 1880 revealing the presence here of 238, generally congregated in the district between Sixteenth, Eighteenth, Blake, and Wazee streets; the larger portion of them engaged in their favorite occupation of laundrying.

As the campaign drew near its close political feeling ran high. On the night of Saturday, October 30th, there was a large political demonstration which included a torch-light procession and in which were carried many "transparencies" supposed everywhere and by nearly everybody to be essential parts of our President-making machinery. Among these appliances were some bearing legends expressing great hostility to the Chinese, and declaring in various exclamatory forms, that they "must go." But the political procession and its "transparency" legends were not the direct causes of the trouble that befell the Denver Chinese the next day; although the demonstration intensified an already excited public feeling, and further influenced hostility and aversion to the slant-eyed sons of the Flowery Kingdom.

The immediate cause of the trouble that broke out early Sunday afternoon, October 31st, was, as is so often the case, a trivial one. Several versions of it were given at the time, but the probabilities seemed to have pointed to one of two accounts which differed more in detail than in the culminating provocation. One was that a white man had gone to a Chinaman's laundry for his "done-up" linen, and either refused to pay the bill, or could not pay it, and walked out with his laundered garments under his arm. The angry and protesting Chinaman followed him into a neighboring saloon where the two got into an altercation, in the course of which the laundryman took an ineffective shot at his defaulting customer with a revolver, and then ran away. The other story, and more generally accepted as the correct one, was to the effect

Dispersing Mob at Sixteenth and Wazee streets.

that several railroad laborers came into town that day with their last-received pay in their pockets and with a notion to have "good time" in their heads; that they were already under fair steam-pressure when they entered a little saloon on Wazee street near Sixteenth, frequented by Chinamen, and where they found two Celestials playing "pool;" that the tipsy visitors interfered with the game, which brought on a rumpus in which one of the Chinamen was hit over the head with a billiard cue, and the other drew a revolver and shot at one of their assailants, but missed him. The Chinese then fled from the saloon and away to their private quarters.

In a few minutes a report sped on the wings of the wind over the lower part of the city that a Chinaman had shot and killed a white man. Crowds gathered and, as usually happens under such circumstances, clamored for vengeance without first ascertaining whether the report had any foundation in fact. The Chinese were to be exterminated or driven out of the city, and a move was made on the Chinese quarter.

In the meantime the wildest terror had seized the wretched objects of the mob's wrath, and they had hidden themselves away like rats, in the cellars and nooks and crannies of their miserable habitations. The mob searched for them, broke in doors and ransacked the laundries. Occasionally a Chinaman was uncovered and broke away at the top of his speed with a howling pack after him. Strange as it may seem, the Chinese so successfully secreted themselves, and those who were discovered were so fleet of foot and so fortunate in finding new hiding places or in reaching other refuges, that only one suffered death at the hands of the mob. In many instances the hunted creatures were received and sheltered by citizens who assumed no small risk in doing so. In one instance, James Veatch then keeper of the old Red Lion Inn at the southwest corner of Sixteenth and Wazee streets, jerked one inside the Inn, barred the doors against his furious pursuers and defied them. The man-hunt continued throughout the afternoon, and the scarcity of Chinamen made the mob still more furious. About six o'clock the only victim of its blind wrath was caught on Seventeenth street and was hanged opposite the Markham hotel. He was an inoffensive old man incapable of harming anyone; but mobs are heartless, soulless, pitiless aggregations of the most cruel and dangerous of all enraged living creatures.

The city and county authorities acted with great promptness, but they had a difficult task before them. Richard Sopris was Mayor; and M. Spangler, Sheriff. The Mayor receiving no response to his call for citizens to aid him in dispersing the mob, ordered a hose company to Sixteenth and Wazee streets and directed that a stream of water be turned on the crowd. This was done, but the experiment instead of cooling the anger of the mob appeared to make it warmer, and caused such a howl of rage and so many threats to slash the hose with knives and even to attack the firemen, that the cold water cure was soon abandoned. Then the entire police force was rallied to the scene of disorder, but as it consisted of only twenty-five or thirty men who were divided into small squads, it was unable to disperse the rioters. The policemen were without a leader, as Chief of Police Hickey happened to be at that time under suspension and awaiting investigation of charges that had been preferred against him.

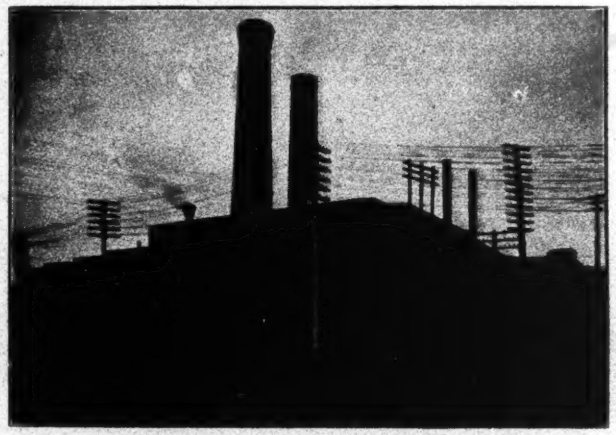
Toward evening and just before the old Chinaman was hanged, David J. Cook, one of Denver's pioneers and who is still a citizen here, volunteered his services to restore order. He was a resolute man, had been Sheriff of the county, a soldier, scout, and detective, and was then chief of the Rocky Mountain Detective Association. Mayor Sopris appointed and the City Council confirmed him as temporary Chief of Police at a meeting hurriedly called about six o'clock. To the police force Cook added fifteen men from his own force, all as courageous and determined as he. In the meantime the liquor saloons in the city had been ordered to close immediately, and Sheriff M. Spangler had assembled a large force of Deputies. The Chaffee Light Artillery under Captain A. H. Jones, and the Governor's Guard under Captain Paddock, had been ordered to be in readiness for immediate action in a greater emergency; but as events turned out such an emergency did not arise. Cook and Spangler and the special men under them were known by hundreds in the mob to be resolute and absolutely fearless, and who would fight to restore order, at any cost to themselves or their opponents. When they appeared in Wazee street the mob began to melt away, the work of destruction there was stopped, and several Chinamen who had just had their shanties pulled down upon their heads were rescued from death. Cook and Spangler went from place to place dispersing the crowds, some of which had surged over into "West Denver," arresting the leaders, and gathering up the terror-stricken Chinese. By ten o'clock in the evening the worst of the trouble was over, about fifty of the mob leaders were in the city prison and more than one hundred Chinese were herded at police headquarters for safe-keeping. Later that night all the congregated Chinese were taken to the county jail for their greater safety, and by morning the streets were clear, and peace and quiet had settled down upon the city.

On Monday business was generally suspended, and in the forenoon a meeting of citizens was held at the Sheriff's office to decide upon further measures for the maintenance of order, and which appointed a large Committee of Control. Later in the day the City Council in a special meeting authorized

D. J. Cook to organize a special patrol of one hundred men to preserve the peace, and at the same time Sheriff Spangler increased his force of Deputies to five hundred men. These precautions were taken more especially for the purpose of preventing disorder at the polls, or a renewal of the outbreak elsewhere, the next day—election day. On Monday evening a public meeting of citizens of all parties, and which was probably the largest ever assembled in the city, expressed the public sentiment in speeches and resolutions most vigorously and unqualifiedly denouncing the violence and outrages that had been perpetrated upon the inoffensive and helpless Chinese. Contrary to public apprehension, election-day was a quiet one, and the Chinamen were not further molested. The arrested leaders of the mob had been released on Monday upon giving bonds to keep the peace, and no further proceedings were had against them, as it was not possible to prove any of them guilty of a specific act of violence, and perhaps not expedient to undertake to do so; nor was the identity of those directly responsible for the death of the old Chinaman on Seventeenth street ever ascertained.

So ended Denver's first and only riot. Cook and Sheriff Spangler demonstrated the power of a few brave men under discreet leadership over even a passion-crazed mob. The excitement throughout the city was intense and thousands of people were on the streets without thought of participating in any form of violence. Hundreds of these crowded into the Chinese district, and by augmenting the numbers there made the situation appear still more threatening by their surging movements to gratify curiosity. Nevertheless, there were enough inflamed by passion and bent on destroying the poor objects of their wrath to make the task of dispersing them one calling for the highest courage and presenting the gravest dangers; for when a mob once tastes blood it is not particular as to whom its next victim shall be.

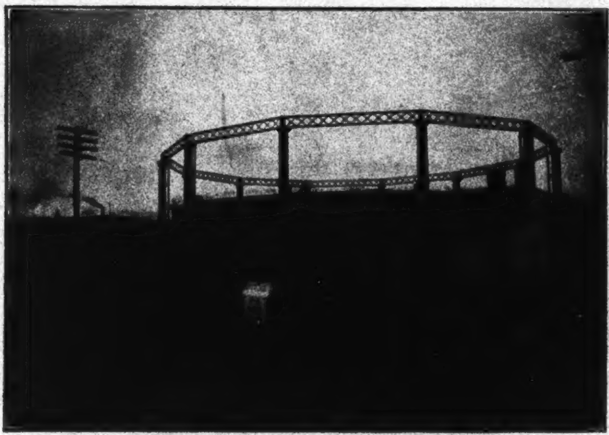
Since that memorable time the Chinese have dwelt in peace in Denver, and their numbers here have increased, but not largely. The avenues of occupation for them have been broadened, though the majority cling to the wash-tub. Upon one occasion in our Festivals of Mountain and Plain they participated very creditably in the imposing street pageant with a conception of their own which was not obscure in the great array of fantastic creations that appear in our autumn seasons of holiday festivities. Recently—in March, 1900—one of their number, Yung Doo, attained the distinction of being the first Chinaman to commit suicide in Denver by hanging himself in an opium den on Market street; an event exceedingly rare among those people, notwithstanding the hard, toilsome, unattractive lives the great majority are compelled to lead.



Eastside Electric Station, Twenty-first and Wewatta streets—Denver Gas & Electric Company.

Denver was one of the pioneers among the cities of the world in adopting the electric light, and did so early in 1880. During the preceding ten years the city had been fairly well lighted by the gas company organized by Colonel James Archer in November, 1869, and which began supplying gas in January, 1871, as mentioned in a preceding chapter. As we have there stated, Colonel Archer, after incorporating his company, appears to have proceeded in his relations with the city under an ordinance passed January 10, 1868, for an earlier but ineffective gas enterprise, several gas companies having been previously projected; but the city ordinances of that period are somewhat confused and we are not certain about Archer having utilized a preceding "franchise." The records in the office of the Secretary of State contain entries of incorporation of several abortive gas companies before Colonel Archer incorporated his "Denver Gas Company" on November 13, 1869. A "Denver Gas Company" was incorporated May 18, 1866, and another of the same name on December 27, 1867. In the last-named year, also, the "Colorado Land and Mineral Association," a Territorial corporation of which little is now known, proposed among its other projected enterprises, to supply the city and citizens with illuminating gas. The city records show that by an ordinance approved September 16, 1867, the Association was authorized to lay its gas mains in the streets of the city. But the Association laid no mains, nor did it ever reach the gas-making stage of its proceedings. It now seems odd, by the way, that so remote a town by no means out of danger from Indian warfare should have been arranging to establish gas works in its "midst." By a city ordinance adopted January 10, 1868, the "Denver Gas Company" was authorized to lay its gas pipes in the streets under a provision that it should be ready to supply gas on or before August 1, 1869, at a price not exceeding five dollars per thousand cubic feet. We could not determine to which of the two companies of that name, previously incorporated as above mentioned, this ordinance was intended to apply; but this is the ordinance under which Colonel Archer's company, by some arrangement, appears to have operated.

Early in the summer of 1868 Colonel L. Heine came to Denver in company with J. P. Whitney, of Boston. Whitney was interested in Colorado mines and had been the Territory's Commissioner at the then recent Paris Exposition where a fine exhibit of our minerals had been made, chiefly by his personal efforts. There he had met Heine, who was one of the French Commissioners of the Exposition, and who had become interested in what he had learned of Colorado. He accompanied Whitney to America and came to Denver with him. Heine proposed when he got here to invest about $100,000 of French capital in gas works and coal mines, and to lay about five miles of gas mains in the city. On July 3, 1868, he and his Denver associates incorporated the "Denver Coal & Gas Light Company," and on the 13th of that month the City Council passed an ordinance giving the company a "franchise" to lay its mains in the streets. On September 4, 1868, the Council passed another ordinance of similar tenor for the "Colorado Coal and Gas Light Company;" Heine having in the meantime amended the original name of his company by substituting "Colorado" for "Denver." To give the enterprise a good "send-off," a citizens' meeting was held on October 19th at which Heine's enterprises and the actions of the City Council were very heartily approved. Heine negotiated for coal lands at Erie, planned to build a tramway to them, arranged for ground on which to erect his buildings, and appeared very much in earnest in his proposed undertakings. In later explanation of their collapse, which soon happened, he stated that the expected capital had been invested elsewhere in America; and that was the last Denver knew of him.



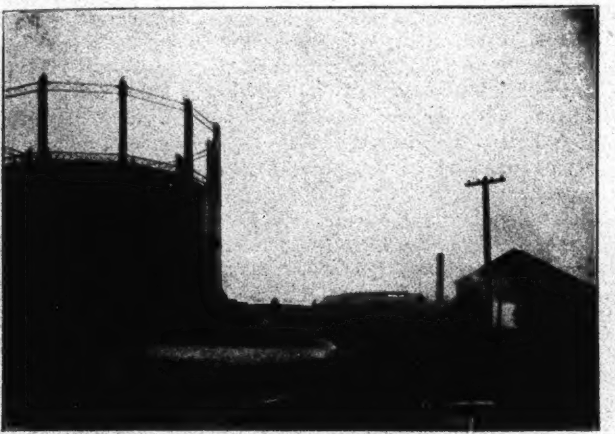
Gas Holder and Pumping Station, Twentieth street District—Denver Gas & Electric Company.

The foregoing reference to Mr. J. P. Whitney recalls the fact that the exhibit of Colorado minerals at the Paris Exposition of 1867 was awarded a fine gold medal—about four inches in diameter. As the exhibit had been collected and taken to Paris largely at Mr. Whitney's personal efforts and expense, the Territorial Legislature subsequently, by resolution, presented the medal to him.

Still another gas company was projected before Colonel Archer took the business in hand. On October 14, 1869, the "Denver Gas & Water Company, of Colorado" was incorporated. This concern appears to have meditated supplying the city with both gas and water, but we found no record of the City Council having granted it a "franchise," and it was the last of the ineffective projects that preceded Colonel Archer, who was the prime mover in building Denver's first gas works, as well as her first water works system.

Soon after Thomas A. Edison perfected his incandescent electric lamps his invention in its practical form made its appearance in Denver; that is to say, in the spring of 1880. In March of that year the Colorado-Edison Electric Light Company was incorporated and organized here, and it introduced and exhibited the first electric lights in Denver. An exhibition plant was installed at Number 390 Curtis street, and on Saturday evening, April 21st, the lights were put in operation here for the first time. The new method of illumination was introduced in dwellings and business houses that year but was not brought into use for public service on the streets until several years afterward, because the gas company's current contract for street lighting did not terminate until 1885.

Nevertheless, Denver was probably the third—certainly the fourth—city in the world to adopt electric lights for street illumination. Following the Edison incandescent lamps came the arc system for high-power illumination, perfected by Charles F. Brush, of Cleveland, Ohio; the preliminary organization having been the "Denver Electric Light Company," incorporated May 30, 1881. However, arc lighting was introduced in service by the "Denver Consolidated Electric Company," in which had been merged the Colorado-Edison company and the company just mentioned; the new company having a capital of $1,000,000. In 1883 the consolidated company secured from the city a contract to light the suburban districts by the "tower" system. Seven iron towers, one hundred and fifty feet high were erected at once, and later



Gas Works at Seventh and Wewatta streets—Denver Gas & Electric Company.

the eighth was added. Each of these towers carried six 3,000-candle-power Brush arc-lights. These towers were conspicuous objects in the day-time, and their lamps were equally so at night, as they shed their mellow light over large areas around them. The towers remained in use until about ten years ago, when they were removed.

The company started with a capacity of about two hundred arc-lights. In 1885, upon the expiration of the gas company's contract for street lighting, it secured a contract for replacing gas by electricity. For this work the Edison municipal system was employed, each of the old gas-lights upheld by the once familiar iron lamp-post being succeeded by twenty-candle-power incandescent lights, which, also, were supported by posts at the street corners. We think a few of these old electric light posts, long disused, still remain on some of the back streets. The lamps were in circuits and it was the practice to light them on the approach of lowering storms and on an occasional dark afternoon; rather more for the novelty of the thing than for any practical utility.

The Fourth of July, 1885, was uncommonly well celebrated in Denver, the festivities having lasted three days. The electric light company made that time the occasion for an elaborate exhibition of its resources. Thousands of colored lamps were suspended at the intersections of the principal streets, producing the striking effects resulting from the similar practice during our Festivals of the Mountain and Plain. The exhibition very naturally made the electric light company extremely popular with Denver's citizens.

The old street gas-lamp passed out of use when the electric street light came in in 1885. The electric company's contract was renewed for another five years, and in the second term 1,100 of the incandescent lamps were in use for street-lighting, some of them being far on the outskirts. But, at the expiration of the second term they were superseded by the arc lights. The company, of which Charles H. Smith was President and General Manager, built its light station at Wewatta and Twenty-first streets, and in 1885 the establishment had the reputation of being the largest single lighting plant in the United States.

Since that time, and also since the original gas company began business, a multitude of lighting companies entered the field. The city ordinances contain privilege records to six or eight of the gas companies under various names, and of eight or ten electric companies. Of these, several of these were in the independent towns that have been annexed to the city. The electric light development is indicated by the present use of about 2,500 arc lights and about 125,000 incandescent, including those operated by private plants.

In 1899 the various lighting companies—both gas and electric—then doing business in the city, were consolidated in one organization; thus placing this business under control of one management. On April 26th of that year this "Denver Gas & Electric Company" was incorporated by Elroy N. Clark, Herman H. Dunham, and Charles W. Waterman, all of Denver, with a capital of $3,500,000. The certificate named as the first Board of Directors William S. Van Soun, T. B. Liverman, S. W. Cantrell, Frank H. DuPuy, Guy Young, Robert C. Young, Angus M. Ward, William A. Burke, Elroy N. Clark, Herman H. Dunham, William W. Field, Charles W. Waterman, and George T. Thompson. These elected G. T. Thompson, President; J. H. Poole, Vice President and General Manager; and F. W. Trueouff, Secretary. Thompson died in the summer of 1900 and was

West side Electric Station, Sixth and Lawrence streets—Denver Gas & Electric Company.

succeeded by Henry L. Doherty as acting President; the other officers remaining the same at the close of our record.

The business of this company is one of the important industries of the city, as it employs about 150 men and carries a pay-roll of about $100,000 per annum. Electricity having to a great extent superseded gas for illuminating, a very large proportion of the gas now made is used for fuel, heating purposes, and for power. Several of the larger buildings in the city have their own electric plants; but in 1900 this company was supplying practically all gas and electricity otherwise used in the city for illuminating, and for the other purposes above mentioned. But early in 1900 the "LaCombe Electric Company" was organized as a general competing concern, obtained from the city a contract for street lighting, and at the close of our record had its construction work under way.

Dynamo Room, West side Electric Station, Sixth and Lawrence streets—Denver Gas & Electric Company.

In 1881 a movement was set on foot in Denver to prepare for holding here the next year an industrial and mineral exposition. The proposition had been well received by the Denver people, and heartily advocated and supported by the Denver newspapers and those elsewhere in the State. Early in 1882 a corporation to carry the proposition into effect was organized, its Board of Directors consisting of S. T. Armstrong, J. T. Cornforth, O. L. Haskell, A. C. Hunt, John W. Knox, W. A. H. Loveland, H. D. Perry, Herman Silver, H. A. W. Tabor, and H. S. Wicks. From these, Tabor was chosen President; Silver, Vice President; Loveland, Treasurer; Armstrong, Secretary; and Perry, General Manager.

Plans for the general scope of the Exposition were speedily perfected and arrangements for constructing a suitable building were soon made. It was at that time anticipated and intended that the Exposition should become permanently an annual event, and preparations were based upon that anticipation. It was scheduled to open on August 1st and to close on September 30th.

In their "Programme for the First Annual Exhibition of the National Mining and Industrial Exposition at Denver," the Directors stated:

> "The principal cause which gave birth to the idea of holding a National Mining and Industrial Exposition in the Great West, was the prevailing ignorance everywhere concerning the wonderful natural resources of that portion of this nation lying West of the 100th meridian."
>
> "It was felt that the necessity existed for removing the many erroneous impressions prevalent, and showing that this part of the United States, instead of being in one portion a barren desert, and in another a mass of snow-clad mountains, really contains a soil encouraging to the agriculturalist, and a marvelous diversity of native minerals, only awaiting the introduction of manufacturing facilities to find an active market."

Construction work on the Exposition building was pushed with great energy, and by the middle of July it was ready for the reception of exhibits. As our illustration of it shows, it was a well-designed and handsome structure of its kind. It was erected in the South Denver district, just east of Broadway, on the land between Virginia and Exposition Avenues. Its dimensions were 500 in length by 316 feet in width; the area being nearly 150,000 square feet. The only surviving relic of it on the site is the fountain at the intersection of Sherman and Center Avenues, and which stands where it was erected in front of the central entrance to the building.

Although everything was not completed and in order on the first of August, the Exposition was opened on that day with all the exhibition space taken. The exhibits were classified in Departments of Mineralogy; Geology; Iron Manufactures; Metallurgical Machinery; Agricultural and Horticultural Products; Steam Machinery and Machine Tools; Agricultural and Horticultural Implements; Vehicles and so forth; Textile Fabrics and Leather Goods; Household Furniture, Manufactures of Precious Metals and so forth; Liberal Arts, Natural Science and Education; Food Preparations, Miscellaneous Articles used in Domestic Economy, and Miners' Supplies; Chemical and Medicinal preparations, and Oil Products; and a Department for Miscellaneous Unclassified Exhibits.

In each of these departments very creditable exhibits were made. Colorado did not get all her agricultural products on display until September, but at that time astonished all visitors not familiar with her progress. The machinery and general miscellaneous exhibits came from all over the country. But the finest and most interesting departments were those of minerals, mining machinery and other exhibits pertaining to mining. It is questionable if such a collection of mineral specimens was ever before brought together, or has been assembled since that time. All of the mining States and Territories elaborately contributed their best, and the value of the exhibits reached into many thousands of dollars. That of the "Argo" smelter had an intrinsic value of more than $150,000, and included thirty-seven silver bricks of more than ordinary brick-size, worth $75,000; and a large gold one carrying a value of $55,000. The mineral and general mining exhibits so overshadowed all others, that the whole enterprise soon became the "Mining Exposition" in the common speech of the visitors.

So extraordinary and elaborate was the collection of minerals that it was hoped toward the close of the Exposition that some plan could be devised under which the bulk of it could be retained and made a permanent one in Denver to be increased from time to time and finally to become a great museum of mineral deposits, not only of those of Colorado, but of so many other western mining States that it would take on a National character and importance. Unfortunately there was no way opened to that most desirable end, and the great collection was scattered after the Exposition closed. Portions of it remained in Denver, other parts were bought to add to collections in the east, and the remainder was taken away by exhibitors.

It was at that time that Indians were first brought into Denver for exhibition purposes. In September Savaro and thirty-three other Utes put up their tepees on the Exposition grounds and became rivals of the "Argo's" bullion bricks in popular curiosity and attention.

Nearly the whole population of Colorado visited the Exposition and there were many others from all over the country; the western tourist having been a numerous and conspicuous figure in consequence of the very moderate rates made by the railways. While the Exposition of 1882 was not financially profitable to the extent that had been anticipated, the results encouraged the corporation to hold another in the autumn of 1883. This second undertaking fell short of the first in variety and extent of exhibits, and also in financial returns; there having been a serious deficiency in the latter. In consequence of this outcome the Exposition corporation announced early in 1884 that it would not undertake a third one.

When this decision was made public, the Denver Chamber of Commerce took under consideration the expediency of holding, under its auspices, an exposition in the autumn of that year, and in April decided to do so. The Chamber appointed from its members a Board of Exposition Managers consisting of W. A. H. Loveland, President; R. W. Woodbury, Vice President; A. E. Pierce, Treasurer; Irwin Mahon, Secretary; B. P. Brasher, E. P. Light, R. G. Webster, and B. F. Woodward. Arrangements were made with the Exposition corporation for the use of its premises, and on September 1, 1884, the third exhibition was opened. It presented the same general features of the preceding two, having been better than the second, but not equal to the first. It closed on October 4th without serious deficiency in its finances, but without results sufficiently encouraging to warrant its continuance in succeeding years. Therefore the exhibit of 1884 was the last one held in the Exposition building, which was soon afterward sold and torn down. In subsequent years prior to the panic of 1893 several smaller exhibitions by Denver's manufacturers and others were held in the city, but none of them were of great magnitude or of more than local interest.

Upon the whole this series of expositions constituted a rather ambitious undertaking for that time. While as expositions they were not strictly local in character, the burden of their financial support fell upon citizens of this city. They were the first attempts of their kind made west of the Missouri river, and their great work was to direct attention to the resources of Colorado, and to the Rocky Mountain Territories generally, the development of which was then in its infancy. In this they were fairly successful, and there can be no doubt but that their influence had much to do with stimulating the activity that made the ensuing ten years memorable in the history of the city and State.

Considering that the first of these expositions was held only twenty-four years after the beginnings of settlements had been made in this Colorado country, and that some of its managers had come here as pioneers, it was a most remarkable object-lesson of the indomitable energy, the tireless activity, and of the consummate ability of the American to subdue the wilderness and subordinate its resources to his own advantage and well-being.

The first great assemblage, of National importance and representing a National extent, to meet in Denver, was the National Encampment of the Grand Army of the Republic held here in July, 1883. The railways made exceptionally favorable rates which were open to the public, and which resulted in bringing an unusually large number of visitors to Denver and Colorado at that time; though the attendance of Grand Army men at that Encampment was not, owing to the distance to be travelled and the consequent expense, so large as at others in that period held nearer the center of population. For the occasion and in honor of her guests the city put on her holiday attire, threw open her doors, and acquitted herself so well as a hostess that that Encampment is still most pleasantly remembered by the surviving veterans who were her guests at that time. The great parade was made on July 24th with about 5,000 Grand Army men in line, and it was the most impressive if not the largest, demonstration that has ever been witnessed in Denver. The Grand Army at its Encampment of 1900, held in Chicago, voted to again come to Denver for the Encampment of 1901; but later the organization's Executive Committee substituted Cleveland for Denver.

The development of Sixteenth and Seventeenth streets as great business thoroughfares began in this era in Denver's affairs. In the first half of the decade under consideration at this juncture, the Tabor Opera House, the Court House, and many business structures had been erected on Sixteenth, and work on the Federal building had been started. Previous to 1880 the people had not been reconciled to the site purchased on which to build a Court House, and the erection of the building at so remote a place had been earnestly opposed. The late H. A. W. Tabor was chiefly instrumental in changing the course of commercial improvements and the trend of retail business. Until he began his building operations, Sixteenth was still a mere side street, and Larimer and several of its parallels, with lower Fifteenth street, monopolized the business of the city. Tabor's improvements, and the selection of the site of the Federal building, gave Sixteenth street its first great forward impulse. This was quickened by the long-delayed beginning of work on the State Capitol, on the land given the Territory many years before by Henry C. Brown. In one and a rather large sense the Sixteenth street of our times may be regarded as the outgrowth of the foresight and enterprise of H. A. W. Tabor and Henry C. Brown. The location and construction of the Union Passenger Station, and the building of the Albany Hotel, both of which improvements date prior to 1885, gave Seventeenth street its first great forward movement out of the condition of being another mere side street.

Exposition Building.

In the first twenty-five years of Denver's career there were, as we have seen, several towns and "cities" in this region that imagined themselves to be her rivals, and it would be about as hard to tell why they failed to win supremacy as it would be to give explicit reasons for her success in outstripping all of them. There were really no greater and better causes for the growth of a city here around the mouth of Cherry creek than could have been pointed out to the advantage of any one of a half-dozen other pioneer settlements in the Pike's Peak country.

Passing by "Montana," which never had much vitality, Colonel Curtis' "Arapahoe," dating from about Christmas time in 1858, was Denver's first rival. It was finely located on Clear Creek where that stream escapes from the foot-hills, and within sight of the Golden City of the subsequent spring. It became quite a settlement in the first six months of its existence, but was soon thereafter wholly abandoned and left to become a historical memory.

Both Golden City and Boulder City were ambitious rivals of Denver in the early days, and possessed some decided advantages from the standpoint of those times. Boulder's beautiful location, and the immediate proximity of rich "gold diggings," promised to make her the foremost of the pioneer towns, in the judgment of her founders. Golden was planned and "boomed" by some of the shrewdest and most energetic of Colorado's pioneers, and its situation at the gateway to the richest and best-known of all the "diggings" in 1859 would seem to have given the town advantages superior to Denver's.

Windsor Hotel in 1882.

But from the beginning Denver managed to keep herself the metropolis of the region; so distinctly the metropolis that she had no difficulty in anchoring here the western terminus of the first stage line into the new gold country—the Leavenworth & Pike's Peak Express. Colonel Curtis regards that as having been the conclusive factor in making Denver the Pike's Peak metropolis in 1859.

In November, 1859, after the rich gold-placers were discovered in the South Park, "Colorado City" was planned and platted on metropolitan dimensions and proclaimed as the future great city of the region. Notwithstanding that it afterward became, like Golden, the nominal political capital of Colorado for a short time, prairie dogs were occupants of the vast majority of its town lots for a long while after the "city" was laid out.

These early rivals included "City" as a part of their names, a practice that might appear to have been beset by some fatality. Denver also attached the boastful word to her title, but dropped it before she really became a city; an example later followed by Golden and Boulder.

In 1860 when California Gulch had fully revealed its riches of placer gold, and after the South Park placer mines had become well developed, Canon City was founded as the Colorado metropolis of the future, but failed in the least to disturb Denver's supremacy. In that year Pueblo was laid out at the mouth of the Fontaine-qui-Bouille, primarily as a rival to Fontaine City, also at the mouth of the same stream, but on the opposite bank. In later years Pueblo set up as the Colorado metropolis, and for a while claimed to be menacing Denver's position. In common with several other Colorado towns, Pueblo aspired to become the State capital, and when that question was settled in 1881 managed to poll 6,047 favorable votes. Colorado Springs, though non-existent prior to 1871, soon took on airs of importance and asserted metropolitan claims. In the contest for the capital location it was a candidate, and with 4,790 favorable votes stood third in the list of aspirants. Then came Leadville in the late "Seventies," but without undue boasting. Within five or six years her people, including the great horde of transient fortune-hunters that swarmed in and around the town equalled, if it did not out-number, the contemporary population of Denver. But at no time was there serious impairment of this city's position by the ambitions of any of these aspiring rivals, nor was there any grave danger of Denver ceasing to be the metropolis of the Rocky Mountain country and of the central west.

The people of the eastern parts of the United States had been slow to learn that Denver had become a growing young city of orderly life and advanced ideals. The old-time "wildness" and "wooliness" and "general cussedness" attributed to everything west of the Missouri river persistently clung to their conceptions of Denver and of all her affairs. As late as 1880 some of these notions still lingered. To many visitors the absence of careering Indians on the plains and sullen "loafing" ones in the town; the needlessness of carrying arms for protection against "bad men;" the extreme scarcity of ruffianly affrays on the streets; the orderly, matter-of-fact but very busy progress of daily business and social life; the thoroughly organized and efficient city government; the courtesy and attentions of the citizens; the numerous churches and schools; the well-provided facilities and conveniences of the young city; the character of its buildings and mercantile establishments which then were modest enough in comparison with their present successors; all these things combined to produce surprise, which in frequent instances had a coloring of disappointment.

CHAPTER XLVIII.

Great Speculative Era—Conditions Preceding It—Awakening in 1880—Census of 1880—Phenomenal Ratio of Population Increase—Slight Reaction 1884-85—Beginning of the Great "Boom"—Rapid Rise in Property Values—Period of Amazing Activity—Enormous Aggregates of Real Estate Transactions—Sky Rocket Land Prices—Vast Operations in Building—Speculative Fever a Mania—Square Miles of Town Lots—Collapse in 1893—Disastrous Consequences.

The reader will have observed that transactions in real estate had a charm for white men on Denver ground, from the beginning; the first, but impotent, town organization, that of "St. Charles," having been a real estate enterprise of speculative tendencies. Enough has been said in preceding chapters of the hopes and fears of town-lot owners in the early times, and of the fluctuations in values; never reaching lofty altitudes, but sometimes going down, as it seemed, below the bottom. No definite, substantial standard was reached until after the coming of the railroads in 1870, and then only for property in the older and built-up parts of the town. There was so much land around it everywhere that outskirt lots and out-lying tracts could not be made to appear of much value. Unless he had determined to buy, the man who was "just looking around," hesitated to make an offer lest the owner would instantly accept. As late as 1870 lots between California street and Capitol Hill could have been bought for $150 or $200 each, because that district was expected to remain on the outskirts, and it was not expected that the town would encroach upon Capitol Hill within the lifetime of any one then here, if it ever did. It would require less exercise of the "foresight" faculty for a present citizen to anticipate and prepare for the foothills around Golden being covered with Denver residences in 1925, with all the intervening country solidly built up, than it did even in 1870 to see with the eyes of faith and prophecy that the Capitol Hill area would be "in the city," and very much in, before twenty years had passed.

In 1871, the year after the advent of the railroads, Denver had made most encouraging progress, city property values advancing very materially, but without any flagrant symptoms of a "boom." The place was still a relatively small town which the census of the previous year had given an established population of only 4,759. The reader may have concluded that we are unduly dwelling upon the slow development of the city in the first ten or twelve years of its history, but we are endeavoring to faithfully present the facts. It is almost impossible for the observer of the present day, unless he be a pioneer, to realize all that has been done here within the last twenty years, and to gain a full comprehension of the condition of the city thirty years ago. For, in the ten years between 1860 and 1870, the ups and downs of this region had been such that Denver gained but ten in her assumably permanent population; and the vast area constituting the Territory of Colorado but 5,587; it having had, according to the census of 1870, 39,864 inhabitants.

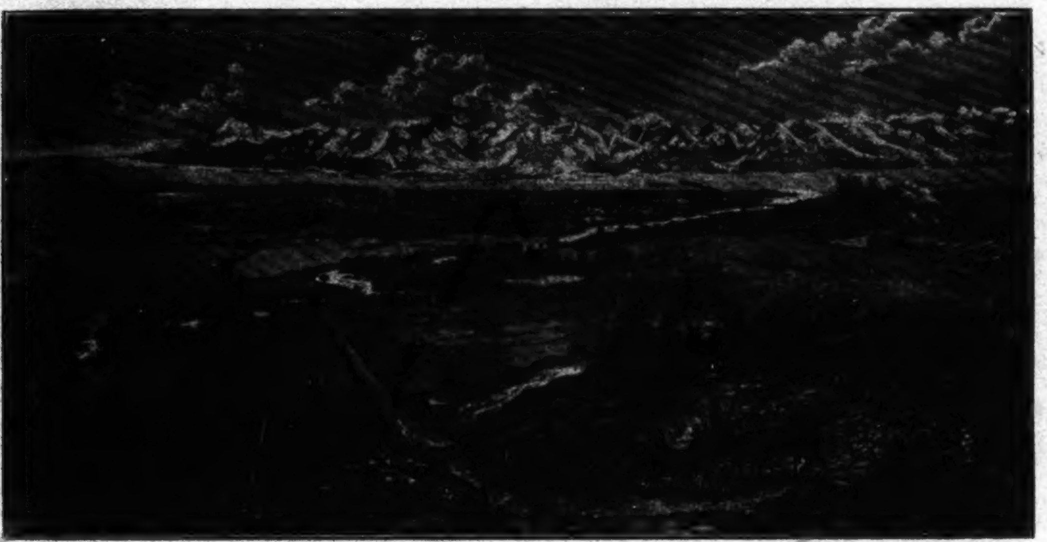
At that time the old Auraria City section of Denver, westward of Cherry creek, was still small, and had not been developing much for several years, as it had not recovered from the moral effect of the flood of 1864. It really did not start toward becoming what it is now until the next decade. "North Denver" was a sparsely settled district with unlimited room for expansion. "East Denver" considered itself the city, and in common thought was generally regarded so. But, it was not much of a town, nor did all three divisions combined make much of a town. Cherry creek, and Curtis, Eighteenth, and Wazee streets bounded pretty much all there was of "East Denver" even at that time; so, it had no call to put on many airs. Most of the pioneer banking establishments had passed out, and Warren Hussey & Co.'s private bank, the First National, and the Colorado National, had the field practically to themselves.

By midsummer of 1871 the entire city contained but 1,128 buildings of all kinds, one-half of them less than two stories high, and but few of them three. Generally, those more recently built were of brick, but a large proportion of the dwellings were frame, and there were still many log structures surviving from the pioneer era. The town as a whole consisted of buildings of a very inferior character if measured by present standards.

But the general character of the many improvements made in the last half of 1871 was far above that of previous buildings.

In 1872 there were four railroads operating to and from Denver; the Denver Pacific to a connection with the Union Pacific at Cheyenne; the Kansas Pacific; the Boulder Valley, now incorporated in the Colorado & Southern system, out to the coal mines at Erie; and the Denver & Rio Grande to Colorado Springs. All of them charged ten cents a mile local passenger fare, and but little less for through passengers. The fare to St. Louis was $55, to Kansas City $44, to Cheyenne $10, and to Colorado Springs $7. The only sources of coal supply were the mines at Erie and Golden, all of them mining lignite which sold here through 1871 at $5.75 per ton, and gave the railroads about 20,000 tons of freight hauling. The total amount of other freight receipts at and for Denver by rail in that year was less than 20,000 tons, or, about four old-fashioned car-loads per day; but it was fast increasing. There was no outgoing freight of much consequence and the railroads had to haul their freight cars back empty. It was in that year that Denver first felt the full effects of railroad advantages; as near two and one-half million dollars were spent for improvements in the city, the appearance of which was conspicuously changed for the better, by them. About eight hundred new structures, averaging much better than any that preceded, were built that year; which, including the large number erected in the last half of 1871, brought the total in the city up to 2,752, indicating, presumably, a doubling of the census population of 1870.

There had been a steady and healthy increase of business, and a general advance to good values in real estate, that really made an era of active prosperity which continued until the close of 1873. The panic of that year throughout the east did not directly make its effect seriously felt in Denver, but indirectly it did to some extent. Several large railroad and other enterprises depending upon capital from the east were arrested, and in that way, as already told, the panic entailed a period of relative dullness here that continued two or three years. Therefore, in 1875 Denver's population probably did not exceed 16,000. Later in that decade affairs changed much for the better, but it can not be said that there was any definite speculative era in Denver real estate prior to 1880. What was commonly called "the Leadville excitement" caused considerable activity in real estate transactions here, but it did not develop into anything like a speculative craze. People trooped through Denver by thousands on their way to Leadville, and business of every kind here was tremendously quickened. But no one comprehended what it all meant, nor what its full consequences here soon would be. Who could have done so? As late as the summer of 1879 some lots at the corner of Lincoln and Seventeenth Avenues were sold at fifty dollars apiece to a man who built a dwelling on them; and some around the intersection of Broadway and Nineteenth street sold for one hundred dollars.



View of Denver from beyond Argo. From a picture made in 1879.

The more potent awakening did not come until a year or two after Horace A. W. Tabor came from Leadville with a vast fortune in his pockets, part of which he invested in down-town business ground and in the construction of his first large, modern building. The year 1880 found Denver firmly established as the metropolis of the Rocky Mountain region, notwithstanding that for a short season in that general period Leadville claimed to surpass her in population. The census of 1880 gave Denver a record of 35,629 fairly permanent inhabitants. This advance over the enumeration of 1870 indicated a phenomenal growth; but it was destined to be later exceeded, if not in ratio, in the relative progress made in building a great city. While the mining developments on the headwaters of the Arkansas had created Leadville, within a few years they were doing quite as much for Denver. Previous to their beginning Denver still had much more of the frontier town characteristics than those of a city. Beginning with 1880 values advanced substantially, if not swiftly, for a couple of years during which much property changed hands more than once in every part of the city at increasing prices; and a great deal of building was done, both for business and residence purposes. The completion of the Burlington railroad in 1882 gave great acceleration to the forward movement. But there was still nothing like a wild, speculative "boom" about it. With the close of 1883 there was a sensible, distinct reaction which everybody felt but for which nobody could give a satisfactory reason. Many men engaged in the building trades and many laborers who were helping them found a greatly reduced demand for their services, and began leaving the city; and the former activity in real estate very materially subsided. These conditions prevailed until the summer of 1885. They did not bring a cessation of development, by any means, but rather a consciousness that circumstances did not just then warrant further investments in either land or buildings to any great extent.

The real estate traders and agents were the worst sufferers, and in casting about for a reason for the depression, found none so much to their liking and that seemed to so well fit the circumstances of the situation as the extortions of the prairie railroads which, it may be taken for granted, were vigorously and perhaps appropriately denounced with true western emphasis. But those were years of general stagnation throughout the country, and no city was doing very well. Indeed, Denver was really prosperous and growing fast, but her people forgot that conditions which to them appeared as seriously reactionary and discouraging would, in any other city of the same size, have been satisfactory if not congratulatory; and probably would have been considered as constituting a "boom." The population had increased nearly sixty per cent. in five years, notwithstanding that there had been a relative slackening of the pace for a while. The census made by the State in 1885 gave Denver a population of 54,308, and Colorado one of 199,327; so, the city, in numbers, was more than one-fourth of the State.

It was between 1880 and 1885 that the building of the modern city was fairly inaugurated, and vastly improved architecture introduced, though the structures of that period suffered by comparison with those of later years. The Tabor Building, the Tabor Opera House, County Court House, Union Passenger Station, the Windsor and Albany hotels, the Colorado National Bank Building and many handsome and substantial mercantile buildings appeared in that period. Beside these there were scores of fine residences, several costly churches, and as many modern school buildings to mark the great difference between the old and the new, and to emphasize the fact that Denver had become a substantial and prosperous city on broad foundations. The old wooden bridges that made Cherry creek still more unsightly had been replaced by iron ones; the sewerage system was serving a large portion of the city; there was an abundance of pure water; and a large area was lighted by electricity. So, despite the slackening began in 1884, a great, a remarkable, advance had been made in those five years.

In the autumn of 1885 a marked revival set in, not exactly with a bound, not in consequence of any one conspicuous cause, but as a general forward movement carrying with it many important enterprises. The mines were doing well, the State was prosperously developing, and conditions all over the country were improved. It is difficult to assign reasons for general economic alternations of exaltation and depression, but at that time in Denver the construction of new and far extended systems of improved street-railways had practically been decided on. Active construction work on the long delayed Capitol, and on the Federal building was to begin in earnest, and plans for many new private buildings were under consideration.

The movement did not fairly attain momentum until 1886. Through that year there was great activity in unimproved real estate around on the borders of the city, and but little less in central property on which to rebuild. It was rather a year of preparation for a great campaign, and the transfers of real estate involved considerations aggregating $11,000,000.

Then came the great era of wonderful activity in Denver real estate; great in the magnitude of transactions and in the multiplication of values; and covering the period between the spring of 1887 and that of 1893; a time of much wild speculation and of quick accumulations of real estate fortunes. In the previous years the advances in values and extent of transactions had been large, and in almost any other city of the same size would have been considered remarkable; but in the period we have just mentioned they were unexampled by events in any other city in the United States. It can not truly be said that these conditions in Denver were wholly speculative, for they were to a very great extent warranted by the astonishing development of Colorado then going forward at such a rapid pace; by the city's growth in business and population; and by the existing prospects for an indefinite continuance of the exceedingly favorable circumstances. The construction of the Missouri Pacific and the Rock Island to Colorado, and the Santa Fe extension to Denver, in that general period had a tremendous influence; and rail connection with tidewater by way of the Denver, Texas & Fort Worth road, completed in 1888, was regarded as of towering importance. The Colorado Midland and the Denver & Rio Grande were pushing into and across the mountains, and the country along all the prairie lines was rapidly being occupied by hosts of new people, in Colorado as well as farther east. The whole country was then on a tidal wave of prosperity, with Denver on the highest crest. Silver mining was in the height of its success; agriculture was expanding, the government had located a great military post near Denver, and money by millions was pouring into the city from all directions for investment. In the summer of 1887 the city was thought to have had about 95,000 population, and the value of buildings erected in that year exceeded $4,000,000.

The greater activity was in suburban real estate, which was stimulated to an amazing degree by the construction of the new system of street railways—a great, conspicuous public improvement of those times. Clear around the city the work of building went on as if by miracle, and hundreds, thousands of acres of weed-grown land, were covered with buildings having high average both in cost and architectural character. Additions by the score were platted, and lots sold at fabulous prices; nearly everybody had the real estate fever, and was loaded up to his limit of resources. In the central part of the city building operations were no less active during that eventful period. Building-trades workmen and their laborer assistants literally swarmed everywhere. In 1890 the population had risen to 106,713, not counting the suburbs; and all channels of circulation had been surfeited with money. Denver was the Mecca of thousands of bright, energetic young men from all over the country, and life here presented most extraordinary aspects from every point of view.

True, a large proportion of this prosperity could be directly traced to the mouths of the opulent silver mines from which was pouring a vast stream of white metal; but no one in those years could have foreknown the disasters that were to befall silver, nor could have foreseen the calamities those disasters entailed upon Colorado, and laid so heavy a hand on Denver.

In that era real estate appeared to have an enduring and certainly increasing value even at the high prices then prevailing, which were held and believed to be in every way warranted by events; it seemed to be the best possible representative of invested capital, and money by millions from sources east of the Mississippi river, and in vast sums from nearly every other direction, had continued to flow into Denver for investment in land and buildings. While statistics of real estate transactions in any year are, to some extent, misleading, because a single piece of property may, in an active year, change hands several times and the consideration at each sale be used to swell the total for the year, some of these totals, even with their possible instances of duplication of transactions, are of historic interest now. The first great impulse, as we have said, came in 1887, when sales of real estate aggregated $29,200,000; in 1888 they were $41,240,000; in 1889, $60,400,000; in 1890, the year of high-water mark, $65,830,000; in 1891, $47,500,000; in 1892, $40,300,000; a grand total for the period 1887-1892, inclusive, of $284,470,000. It is true that these figures cover the whole of Arapahoe county, but 95 per cent of the transactions were in Denver. Some of the property was improved, but in the majority of instances it was not. While these statistics of real estate transactions afford no definite clue to the amount of money that went into new buildings in that era, the sum so invested in structures of all kinds in 1890 exceeded $16,500,000; and to this could be added the large amounts expended in street railway construction, street improvements and so forth.

View from site of Broadway Theater, in 1880. The triangular tract in left foreground is the site of the Brown Palace Hotel. From a photograph.

Prior to 1887 transactions were on what was regarded as a fair basis, but their aggregates were small as compared with those of these later dealings. In 1880 the total was $5,600,000, and the increase therefrom was not very rapid. In the thirteen years, 1880 to 1892, inclusive, the total of considerations in real estate transfers in Arapahoe county was $334,334,000, of which, as we have seen, $284,470,000 were for transactions in the six years, 1887-1892, inclusive. 1893 brought, of course, a sudden halt, and 1894 what it is no exaggeration to term a collapse.

The real estate mortgages of the general period under consideration aggregated a vast sum. In the six years—1887-1892, inclusive—they amounted to about $165,000,000. This, of course, represents many duplications by successive mortgages on the same property, and is, also, to a very great extent a duplication of sums involved in the aggregate investments in real estate that we have already mentioned. In frequent instances these loans represented part of the purchase price of real estate, though in far more frequent cases they were for improvements on theretofore unincumbered property. It is to be remembered that many real estate sales at that time were on a basis of a comparatively small cash payment, the balance being secured by mortgage on the property. Ordinarily the rate of interest was eight per cent.; sometimes and in favorable cases a little less; but in 1892 it was not uncommon for twelve per cent. to be bargained for, and paid as long as the borrower kept his head above water.

As for the warrant for these extraordinary transactions—extraordinary in detail and in aggregate—it may be well to introduce and put on record a few instances of progressive and cumulative values paid in money for ten different pieces of real estate during the twenty years ended with the close of 1892. Each piece consisted of two lots, or 50 by 125 feet in area, and their advance in price is indicated by the figures in the subjoined three columns, showing the cash price for which they were successively sold in 1872, 1889 and 1892:

1872.	1889.	1892.
$ 3,000	$25,000	$30,000
12,000	65,000	75,000
8,000	75,000	90,000
1,000	16,000	30,000
3,600	80,000	85,000
600	14,000	32,000
1,800	30,000	40,000
2,000	60,000	75,000
1,600	90,000	95,000
800	35,000	45,000

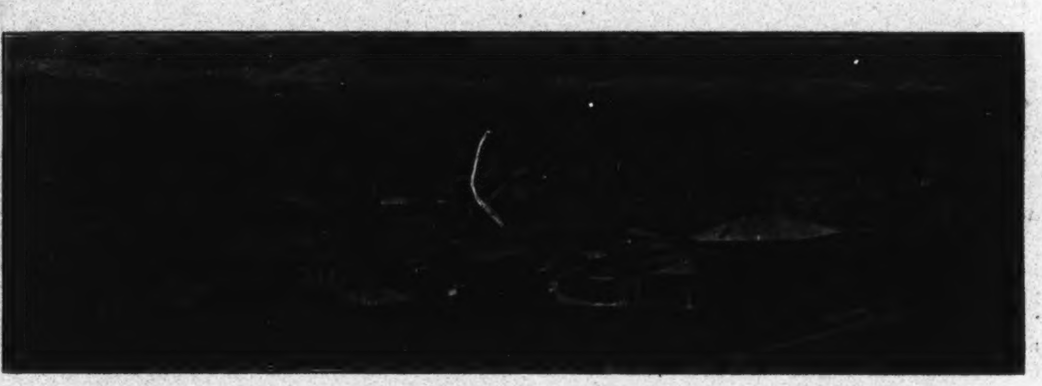
These were not especially exceptional cases, but they were, probably, somewhat above the average. In 1864 a tract of forty acres in what is now the heart of the Capitol Hill residence district, was pre-empted at a merely nominal cost; in 1872 some lots were sold from it for $75 each, and the seller thought he was doing uncommonly well; in 1892 that forty acres without improvements were valued at one and one-half million dollars. In 1871 an "outside" tract sufficient for 700 lots was bought for $9,100; in 1892 its market value was $385,000. In 1886 a large and farther "outside" body of land containing 100 acres was bought for $32,000; in 1892, its market value was $500,000. Examples similar in a general way to these might be continued over several of these pages if it were necessary or desirable to do so; but the foregoing will be sufficient to convey an intelligent understanding of the conditions existing in Denver during those years.

It was in that remarkable era of six years that nearly all of the great commercial structures that adorn the city were undertaken and, with a few exceptions, completed. It is to be remembered that that era was one of high prices in Denver for all other things as well as for real estate, and the cost of building shared in the prevailing elevation. The magnificent Brown Palace Hotel came into existence then at a cost of $1,500,000; and the great and stately Equitable Building required about $1,500,000 to put it there. Other prominent structures that had either been completed prior to 1893 or were in progress in that year, and the stated total cost of each, were as follows:

Ernest & Cranmer Building	$400,000
Masonic Temple Building	250,000
Kittredge Building	300,000
California Building	150,000
People's Bank Building	265,000
Mining Exchange Building	200,000
Cooper Building	225,000
Boston Building	300,000
Post Office Building	570,000

In addition to these, work on the Capitol building, that has cost about $3,000,000, had then been put under way. It will be remembered that the foregoing figures represent the cost of the buildings, only; and do not include the value of their sites. Money was poured out like water on these structures. Everything in them is of the best—granite, terra-cotta, pressed brick, marble, onyx, bronze, black-iron work, silver, nickel, and all the other materials modern architects, when granted a free hand, introduce to give solidity, durability, elegance, and charm of detail ornamentation, to their elaborate creations. There were many others, but of lower cost, in progress at the same time—fine business blocks, churches, schools, warehouses, factories and the like; not to mention hundreds, thousands, of dwellings ranging all the way from the modest cottages to the most palatial of homes. There were literally miles of these dwellings erected during that extraordinary period.

In the presence of all this activity, of all this investment of millions in placing buildings on the ground, why should there not have been almost unbounded faith and belief in the permanent value of real estate on a basis relative to the value of the structures and proportioned to the then unclouded prospects of the city for an uninterrupted career of the prosperity she was then enjoying? The human mind is not equipped with any faculty that would have enabled any man to have foreseen the misfortunes that came upon so many of these builders, and land-owners, in 1893 and 1894.



View from site of Trinity M. E. Church, in 1880. Windsor Hotel appears in middle distance on the left. From a photograph.

General Frank Hall, writing in 1894, said: "Before the crash came in 1893, Denver boasted the largest army of landed millionaires to be found west of the Missouri river. At this writing it has been reduced to a mere corporal's guard."

The fate of many of them was most pitiable. Their fortunes, though proved fictitious by the stern logic of events, had seemed very real up to the verge of the collapse; and many of those landed millionaires walked off the precipice before they knew they were on dangerous ground. While in practical consequences a fall to the earth from an elevation of a hundred feet or so is as calamitous to the individual as it could have been had he fallen farther, most of us have a habit of thinking that he who tumbles from much loftier heights certainly must experience greater suffering. However that may be, there were hundreds who were

View southwest from electric light tower near Eighteenth and Grant Avenues in autumn of 1882. Unfinished Court House in middle distance on the right.

not landed millionaires but whose fate was equally pitiable. The man "of moderate means," the man "in easy circumstances," and many who had just made a beginning, figured numerously in the host of speculators in real estate, and went to the bottom with their more conspicuous associates.

By 1890 the speculative fever had become a mania. The open prairie for miles had been platted in city lots and thrown upon the market. There were square miles of them, and much of them now remain great areas that are still open prairie. The city-lot plattings in that period, added to still unoccupied ground in earlier additions to the city, afford room for doubling, even trebling, the present population of Denver. Thousands wanted to acquire title to more or less real estate, and the small holders were as sanguine and extravagant, proportionately, if not more so, in their expectations as were those who had more. The statistics of real estate transactions that we have quoted show a shrinkage in transfers of property in 1891 and 1892 that should have been regarded as ominous by those whose fortunes, or prospective fortunes, were represented by landed possessions; but outside a very small circle they were not so regarded. Things were soon going to swing the other way again, and swing far higher!

In a chapter toward the end of this volume some consideration is given to details of conditions that were so suddenly precipitated in the summer of 1893, and that not only ruined and dispersed our army of speculators in real estate, but brought disasters to thousands who stood in other ranks.

These disasters are now of the past—they belong to the city's history and, practically, have passed out of the present life of Denver. Here and there some evidences of the wreck are still visible; just as in a burned-over district of extended area in a city, a few marks of the fire may be seen long after rebuilding has been regarded as finished. The re-adjustment of these affairs is also now of the past, save for the occasional vestiges that drift into public notice, and is another part of the city's history. In her activities here in the dawn of the new century all these misfortunes have been put far behind her and no longer have any bearing or influence on the calculations, enterprises and progress of her citizens. She has recovered nearly all she lost, and otherwise has moved distinctively and definitely beyond her position in 1893-94. While former values have not been restored in every direction, they have been in many quarters; but the more important part of the forward movement is that which has brought a greater degree of proper conservatism, a stronger inclination to stand longer on solid ground, rather than to be led away by any element of chance, or by the illusions with which hope and ambition for sudden wealth so often betray their half-blind followers.

There is evidence of restoration of real estate values, in the business section at least, in several recent transactions. In November, 1899, the property at the northwest corner of Seventeenth and

Stout streets, 100 by 175 feet in area, was sold for $265,000, cash. About the same time the property at the northeast corner of Seventeenth and Welton streets, 125 by 125 feet in area, was sold to the same investor for $165,000, cash. The buildings on these properties are comparatively inferior, add little to the value of the ground and, in the plans of the new owner are doomed to early removal to make way for edifices more in harmony, from the standpoint of sightliness and financial returns, with the value of the land they occupy. Other recent sales of business property were for values proportionate with these; but residence, and outlying unimproved property, have not to the same extent recovered former values.

But the memory of the times of 1893-94, of that season of ruin and misery to hundreds and thousands, will long linger in the minds of Denver men; persistently in the minds of those who passed through the ordeal yet saved more or less of their possessions—for few were unscathed; and as long as life lasts, in the thoughts and reflections of those who were suddenly stripped of everything they owned. Men who had every reason to believe, as they did believe, that their equities in property encumbered by loans representing the cost of buildings on it, or less, were abundantly sufficient for a competence, saw them vanish without, in many instances, satisfying the just demands of creditors. Others, owners of unincumbered property, but with obligations created on the basis of preceding conditions, submitted to crushing sacrifices; yet others, owners of ground of intrinsic value, but for which there was no sale at any price, were brought to a literal realization of what it means to be "land-poor" in the presence of daily physical needs and of the tax-gatherer.

The storm-center of that almost world-wide "silver panic" was in Colorado and, as we have indicated, made Denver the scene of its extremely violent manifestations of destructive power. While its consequences at the time appeared to be ruinous to State and city, the experience and results of succeeding years prove its effects to have been not wholly evil. It was followed by a conviction of the need for more fully developing the other resources of the State and by a well-impressed realization of the dangers hanging over any people who make one single line of production their nearly sole dependence. Before the storm swept through, the thoughts and efforts of Colorado men were huddled around the silver mines. So far as they did not directly or indirectly contribute to silver production, other avenues of actually productive activity were subordinated or entirely neglected. Not the least of the undesirable influences of those conditions was the narrowing of public opinion, the undue exaltation of self-interest, and the contraction of the economic and political horizons.

Under those conditions agriculture, horticulture, manufacturing, commercial enterprises, the development of the great resources of iron and coal, and all the other general industrial interests received relatively scant attention, except in so far as they were necessarily connected with the one object of general attention. Even gold-mining, the original industry of the region, had fallen into comparative decadence.

After the rude awakening a remarkable change set in, and there was soon visible a definite reflection of the uses of adversity, the sweetness of which is always questionable when given a personal application, but of the sometimes general benefits there may be less doubt. At any rate, if the awakening of a new and broader spirit; the determination to have diversity instead of unity of occupation for the people; the realization that Colorado need not and should not depend solely on the mines in her pursuit of wealth and happiness, be desirable changes, they certainly to a great degree grew out of what once seemed overwhelming misfortune. While mining is and probably will be for many years a conspicuous industry in Colorado, the awakening of the new spirit that is leading our people to consider with equal zeal and earnestness the opportunities for rewarding activity in other directions, was one of the most fortuitous happenings in the history of the city and State.

As we have heretofore mentioned, the plan of our History of Denver, provides for presenting separate accounts in more or less detail of important political, economic, educational, religious, social and other elements identified with the upbuilding of the city and state, and of various matters collateral or subordinate to them. In preceding chapters passing allusions to most of these have been made in the approach to chronological order in which our accounts have thus far been presented. To have strictly followed their chronology in incorporating these various subjects in preceding chapters, would have rather widely scattered through the volume the many interesting historical facts with which they are associated. Therefore it seemed desirable, and more convenient to the reader, to consider them separately and in continuity of narrative relating to each that is continued with respect to each to the close of the year 1900; notwithstanding some unavoidable repetition of statements this method involves.

Therefore, at this juncture in our Story of Denver, we will depart from the approximate chronological order of chapter arrangement heretofore followed, and turn to consideration of the various elements we have above mentioned, following them in turn to the close of 1900, and leaving return to approximate chronological order to apply, so far as may be, to the last few chapters of the volume. Much of the more important part of Denver's history is included in these various separate-subject chapters that follow here.

CHAPTER XLIX.

TERRITORY OF COLORADO—VARIOUS PROCEEDINGS IN CONGRESS PRIOR TO FINAL PASSAGE OF ORGANIC ACT—STATE AND TERRITORIAL HOME CONVENTIONS IN 1860—PASSAGE OF THE COLORADO BILL IN FEBRUARY, 1861—NAMES PROPOSED FOR THE TERRITORY—APPOINTMENT OF OFFICERS—INSTITUTION OF LAWFUL CIVIL GOVERNMENT—TERRITORIAL EXECUTIVE OFFICERS AND DELEGATES IN CONGRESS—TERRITORIAL CAPITALS AND ADMINISTRATIONS—SEVERAL MOVEMENTS FOR STATEHOOD AND THEIR FAILURE—NEGRO SUFFRAGE—PASSAGE OF FINAL ENABLING ACT—CONSTITUTION FRAMED AND ADOPTED—COLORADO ADMITTED TO THE UNION—ORGANIZATION OF STATE GOVERNMENT—SOME CAUSES OF STATEHOOD'S DELAY.

When the Thirty-sixth Congress met for its short, and last, session, in December, 1860, our home-made "Territory of Jefferson" was still tottering around, but politically and vitally on the verge of total collapse. The potency of its "laws" and the vigor of "Governor" Steele's authority had with extreme difficulty and very feebly survived the previous summer, and through the autumn had become still more emaciated. Beverly D. Williams was again at Washington in the capacity of "Delegate from Jefferson," or as much so as they would let him be, and it had been decided that a supreme effort should be made that winter to have Congress create a new and properly constituted Territory here in the west; for the Kansas jurisdiction was then still far more a theory than an actual, effective fact.

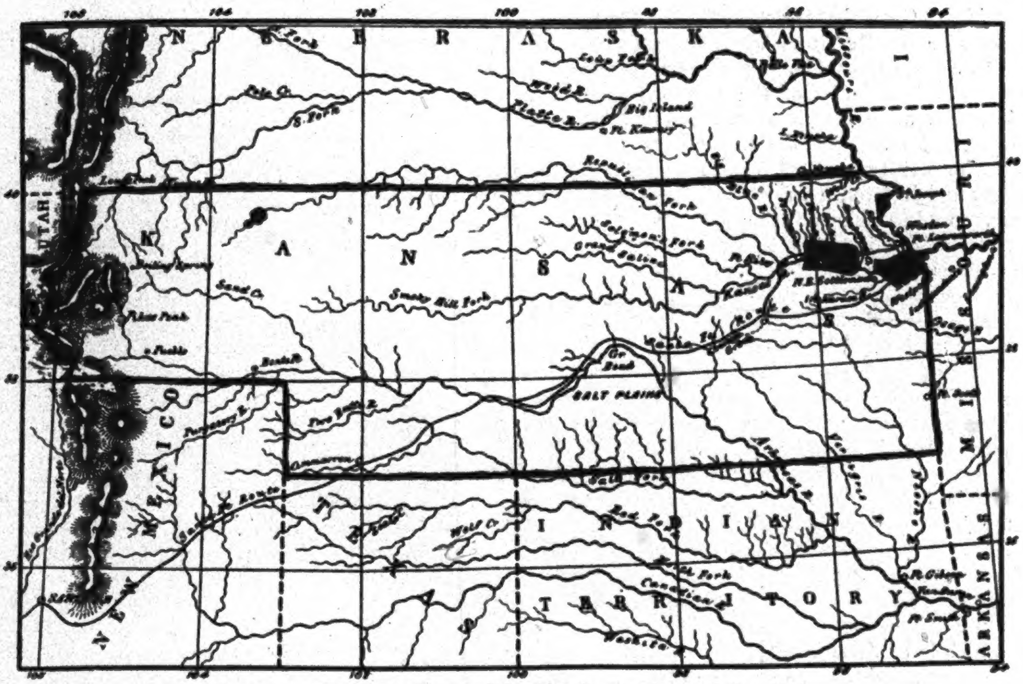
In January, 1860, through the previous efforts of "Delegate" Williams, a movement had been inaugurated in Congress to create a new Territory here; and separate bills for that purpose were introduced in each house. The Senate bill named the proposed new Territory "Idaho;" the House bill carried the name "Tahosa." In preparation for the proposed new sub-division a resolution was adopted by the Senate providing for a treaty with the Cheyenne and Arapahoe Indians for a cession of their lands in the Pike's Peak country. The purpose of this resolution was, as already related, carried into effect at Bent's Fort in the autumn of 1860. Another preliminary proposition was a bill reported to the House providing for overland transportation of mails to the Pacific coast by way of the central route, with a weekly mail to Denver; but this failed to receive favorable consideration. Williams was much hampered by the peculiarities of his position, as he was merely recognized as the agent of the people in the Pike's Peak country, and not recognized as a Delegate entitled to a seat on the floor of the House and to be heard there.

In the course of events at that session of Congress these two Territorial bills were amended by adding the old temporizing clause concerning slavery—

> "Whereas, Slavery has no legal existence in said Territory, nothing herein shall be construed to authorize or prohibit its existence therein."

At that time Territorial bills for Arizona, Dakota, Idaho and Nevada had also been introduced and were either under consideration or awaiting attention. The controversy over the admission of Kansas and Nebraska as States was at its height, and in its turmoil, in May, 1860, all the Territorial bills, ours among the rest, were tabled in consequence of a violent outbreak between the northern and southern representatives in Congress; and that ended all hope of further action upon them at that session. The southern members had vigorously fought all of them, in the belief that they nearly or remotely threatened the institution of slavery, and finally had succeeded in laying them away in the Congressional limbo where they were destined to remain until the next winter; as Congress soon afterward adjourned without having given any further attention to them.

On July 30, 1860, a convention was held at Mountain City (Central City), and which was attended by delegates from all the mining districts, for the purpose of taking some kind of action looking to the establishment of some stable form of government. Resolutions in the clear-cut language of the mining camps were adopted, vigorously denouncing Congress for its indifference to and neglect of the people in this part of the country, and for its failure to pass a Territorial bill. The mining districts theretofore had rather generally refused to recognize the authority of "Jefferson Terri-



Map showing Kansas Territory as defined by the organic act of May, 1854.

tory;" but that Mountain City convention before it adjourned decided to recognize and support the "Jefferson" government as being better than no government, and until a State or Territory could be legally established.

While preparations for the Mountain City Convention were in progress a counter-movement was inaugurated at Golden City which resulted in a convention being held there on August 7, 1860, to institute proceedings for the immediate organization of a State. The Golden convention was not a very large one, but what it lacked in numbers was compensated for in vigor, for it proposed to go ahead and organize a State government independent of Congressional action, and to thenceforth wholly ignore the "Jefferson" government. Resolutions to that effect, and others reciting the woes and troubles of the people here, were adopted.

The result of these outbreaks in the mountains and foothills was a call for a general convention to meet in Denver on September 22nd, to frame a State constitution and have everything ready for another appeal to Congress when it met in the following December. The call declared that efforts should not cease until the people here were admitted to Statehood. The convention met in Denver at the old Apollo Hall on the appointed day and drafted a constitution; but that was about all that was done. Before Congress met the bottom had almost fallen out of the undertaking and it was deemed inexpedient to press it at Washington. So, this movement, or series of movements, for a new government had ended in naught, except that "Jefferson Territory" was left weaker than ever.

On September 18th "Governor" Steele had issued, as we have told, a proclamation for an election for general officers, and members of the "Legislature," for "Jefferson Territory," to be held on October 22nd. The election was held, and the "Governor" and some of his associate executive officers were re-elected, and a "Legislature" chosen. But the vote was light and the people indifferent, as by that time they had had enough of "Jefferson" and wanted something more substantial. A large majority of the people of Denver who, in the beginning, had been "Jefferson's" chief supporters, had then become opposed to any further continuation of it; so, the election was mere form almost without life.

Before the coming of the winter the people of "Jefferson" had concluded to cease striving for Statehood and to concentrate all efforts to securing the passage of one of the two tabled Territorial bills that had been introduced in Congress nearly a year before. The plan was to move quietly and let the bill take its course rather than to make any conspicuous attempt to press its passage. But, by that time the secession movement was over-shadowing everything else, and such minor matters as creating new free-soil Territories attracted less attention than in the previous session of Congress.

"Delegate" Williams and several citizens of Denver were promptly in Washington when Congress assembled. On February 2, 1861, the Senate bill to organize the Territory of "Idaho" (ours) was called up from the table. On the 4th some slight changes in boundaries of the proposed Territory, and several unimportant amendments to the bill, were agreed to. Then Senator Henry Wilson of Massachusetts (afterward Vice President) at the request and insistence of "Delegate" B. D. Williams, moved to strike out the word "Idaho" and insert "Colorado" instead. This was agreed to and the bill then passed the Senate. On the next day an attempt was made to reconsider it, during the debate on which Senator Douglass brought up the slavery question, and some general objections, as the bill was silent as to the recognition or rejection of slavery, aside from the meaningless clause we have quoted. After a long debate of the character common in that period, the motion to reconsider was lost. On February 9th the House passed the Senate bill with an amendment relative to the judiciary and its proceedings with regard to slave property belonging to citizens of the States. This was a concession to the southern members still on duty in Congress. The amendment precipitated another long debate in the Senate, which is of little interest now, and the Senate finally concurred on February 26th. President Buchanan signed the bill on February 28, 1861, and the organic act creating Colorado Territory became a law, silent on the direct question as to whether slavery should or should not exist here in the Rocky Mountain country.

The boundaries of the Territory as defined by the organic act were the same as those of the present State, Congress having reduced the area of New Mexico by making the thirty-seventh parallel its northern boundary, instead of the thirty-eighth as in the times of Kansas Territory. The language of the act is as follows:

"Commencing on the thirty-seventh parallel of north latitude, where the twenty-fifth meridian of longitude west from Washington [102nd west from Greenwich] crosses the same; thence north on said meridian to the forty-first parallel of north latitude; thence along said parallel west to the thirty-second meridian of longitude west from Washington [109th west from Greenwich]; thence south on said meridian to the northern line of New Mexico; thence along the thirty-seventh parallel of north latitude to the place of beginning."

To anyone who has witnessed Congressional scenes in the closing days of an ordinary session the wonder is that any measure not of absolutely commanding importance can receive attention; and the fact that this bill to create a government for a new and not very large aggregation of people so remotely far off in the western country, became a law in the closing days of that stormy session, proves the sincerity, earnestness, skill and alertness of its sponsors; chief among whom was Beverly D. Williams. Therefore it was with feelings of relief and rejoicing that the people of Denver and those elsewhere in the domain of the Territory received on March 4th, news that was six days in transmission to this city, of this action of Congress and the President.

In the political era then at its close every proposition to create a new Territory or State had been violently opposed; by the anti-slavery men if the division were likely to become slave-holding,

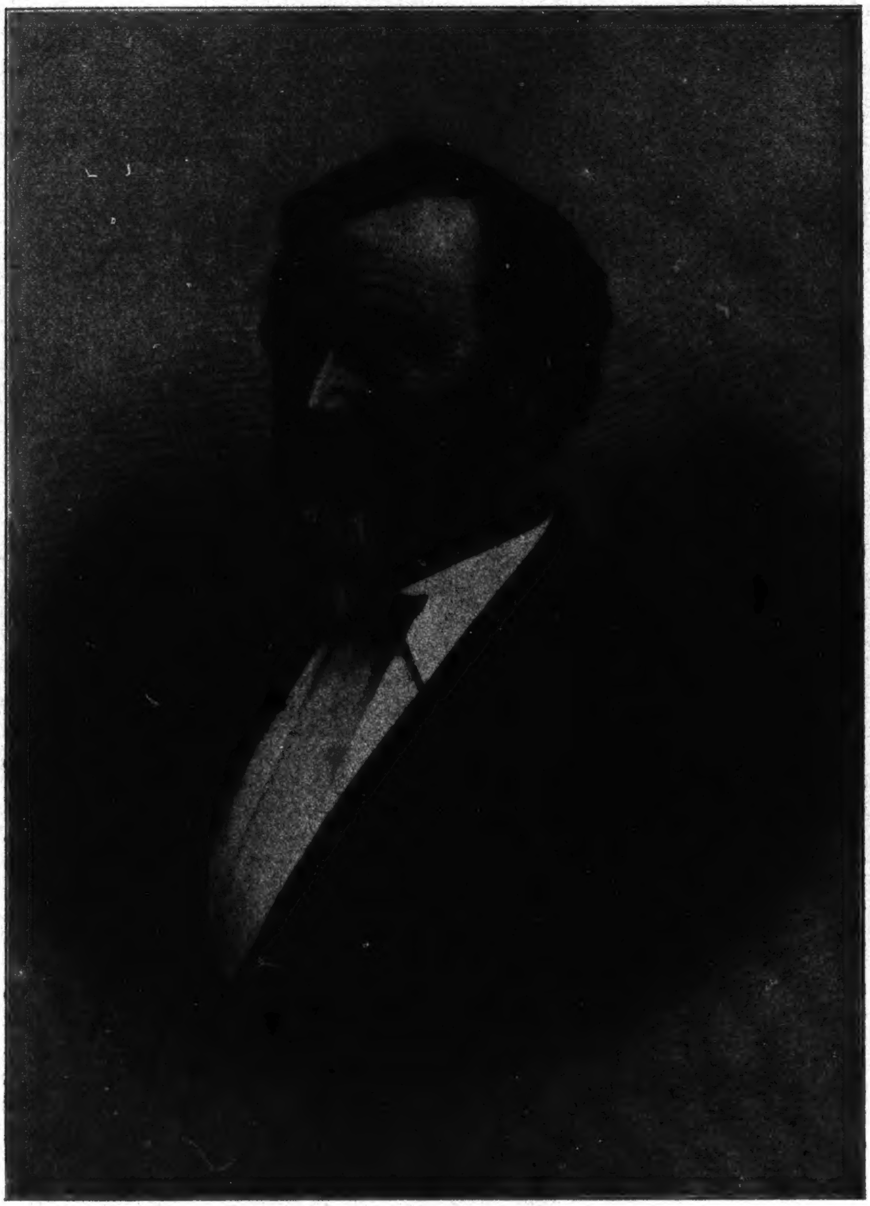
---

William Gilpin was born October 4, 1813, on the Brandywine battlefield in southeastern Pennsylvania. When he was ten years of age he was placed in a private school in England where he remained about two years. Returning to the United States he entered the University of Pennsylvania, and after his graduation there was appointed a Cadet at West Point where he was graduated in 1836.

Assigned to the Second Regiment United States Dragoons, as a Lieutenant, he served in the Seminole war. At the close of that war he resigned from the army and located at St. Louis, but in 1841 removed to Independence, Mo., and became Secretary of the lower branch of the State Legislature. His studies at West Point having included a law course, he prepared to engage in law practice at Independence, but in 1843 joined Fremont's expedition to the Oregon country, as elsewhere mentioned. He went to the mouth of the Columbia river with Fremont and there participated in an attempt to organize a new Territory in that region; having drafted the memorial to Congress, which he submitted to and advocated before that body after his return in 1844. He claimed to have been the founder of Portland, Ore.

Returning to Independence, he resided there until the outbreak of the Mexican war when he was commissioned a Major of the First Missouri (Doniphan's) Cavalry, and served with distinction in the southwest in operations against Mexico, and later against hostile Indians. With a force of 1,200 men sent to pacify certain western tribes and of which he was in command as Colonel, he wintered near Pike's Peak in 1847-48. At the termination of this service later in 1848 he returned to Independence where he resided until his appointment as Governor of Colorado Territory in 1861. The later events in his public career are outlined in the course of this history.

After retiring from the office of Chief Executive of the Territory, Governor Gilpin remained an honored and beloved citizen of Denver until his death, which occurred during the night of January 19, 1894, at his residence 321 South Fourteenth street. Up to that time his health had been fair for a man of his years, and there had been no warning that his end was so near. He was found dead in his bed in the morning of January 20th. He was a man of no ordinary type, brave, generous, enthusiastic, impracticable in some things, and of winning ways in his intercourse with his fellow-men. The deaths of few men have caused deeper, more sincere regret than that of Governor Gilpin brought to the people of Denver and of Colorado.—J. C. S.



William Gilpin.

and by the slavery men if the contrary condition promised to ensue. But, in that tragic winter the matter of organizing a new Territory far out in the Indian country had become a very unimportant thing to the southern people who were precipitating and consummating tremendous events. Any number of new Territories might have been organized for all they at that time especially cared, or for all the difference they then believed it would make to them. By the time the winter was two-thirds gone several southern States had seceded, and many of the southern members had left their seats in Congress to actively participate at home in the preparations for organizing a new nation.

A variety of names, including most of those that had been proposed here for "Jefferson Territory" in 1859, had been suggested for the new Territorial organization, but it would seem that through happy circumstances the more appropriate of all of them was the one bestowed by the organic law. The Spanish word, in its dignity, beauty, and meaning is peculiarly applicable to our Commonwealth. "Jefferson" was objected to at Washington because it was the name of a man, and it was held that, aside from that of the first President, the name of no man should be given to any sub-division of the Nation; and, furthermore, it was pointed out that if a beginning of that kind were made it would lead to dissatisfaction, as there would not be anywhere near enough new Territories to go around and honor all the equally deserving great men. Among the other names proposed for our Territory were "Arapahoe," "Idaho," "Lula," "Montana," "Nemara," "San Juan," "Tampa," "Wapola," "Tahosa," "Lafayette," "Colona," "Columbus," and "Franklin." As we have seen, the Senate bill that finally became a law, originally carried the name "Idaho," while the contemporary and later abandoned House bill had "Tahosa;" though the framers of both bills had considered most of the other names we have above mentioned. Governor Gilpin had been one of those who insisted upon "Colorado." But, notwithstanding the inherent weakness and recognized impotency of "Jefferson Territory," its name had taken a deep hold on the people here, was in common use, and was preferred by nearly every one. However, as they were at last to have a duly constituted lawful government, the people were not disposed to quibble over the name given it.

Notwithstanding that the Territory was created during the closing days of Buchanan's administration, and that he might have appointed the first officers for the new organization, he did not do so. On March 22, 1861, President Lincoln nominated them to the Senate which immediately confirmed his selections, which were—For Governor, William Gilpin, of Missouri; for Secretary, Lewis L. Weld, of Colorado; for Attorney-General, William L. Stoughton, of Illinois; for Surveyor-General, Francis M. Case, of Ohio; for Marshal, Copeland Townsend, of Colorado; for Judges of the Supreme court, B. F. Hall, of New York; S. N. Pettis, of Pennsylvania; and Charles L. Armour, of Ohio. Subsequently (November 7, 1861,) Governor Gilpin completed the executive machinery by appointing James P. Benson, Treasurer; William W. DeLano, Auditor; and William J. Curtice, Superintendent of Schools.

It will be observed that but two of the President's appointees were citizens of Colorado—a number equalled by the Ohio men in the list. There was a strong local sentiment, which was reinforced by several men prominent at Washington, in favor of having the Denver City pioneer, General William Larimer, Jr., appointed Governor; but it was unable to overcome the influences that favored the appointment of Gilpin.

Although Colorado Territory nominally became a political sub-division of the Nation by the proceedings at Washington in February and March, 1861, its government did not become an actuality here until early in the following summer. Governor Gilpin did not arrive in Denver until May 29th, but he received a warm welcome when he came; and the other non-resident officials reached Denver soon afterward. The Governor made a proclamation to the people and assumed his duties on June 6th; and on that date, actual, legally constituted government in this region may be considered to have begun. The first of Governor Gilpin's more important official acts was to direct that a census of the inhabitants of the new Territory be made, the result of which has heretofore been given.

The frequent changes in the Territorial Executive is an indication of the unsatisfactory character of Territorial government, and also of the political conditions that existed. During the fifteen years of Colorado Territory's somewhat tempestuous career, there were eight different administrations, two of which were Governor McCook's with an interval of fifteen months between them. The list of Governors is as follows:

William Gilpin, March, 1861, to May, 1862.
John Evans, May, 1862, to October, 1865.
Alexander Cummings, October, 1865, to May, 1867.
A. C. Hunt, May, 1867, to June, 1869.
Edward M. McCook, June, 1869, to April, 1873.
Samuel H. Elbert, April, 1873, to July, 1874.
Edward M. McCook, July, 1874, to March, 1875.
John L. Routt, March, 1875, to admission of State.

During the Territorial era there were five Territorial Secretaries, the term of General Frank Hall having covered more than half the period. Their names and terms were—

Lewis L. Weld, July 1, 1861, to April, 1862.
Samuel H. Elbert, April, 1862, to May, 1866.
Frank Hall, May, 1866, to March, 1874.
John W. Jenkins, March, 1874, to March, 1875.
John Taffe, from March, 1875, to November, 1876.

Territories are represented in Congress—in the lower house, only—by Delegates, who are merely the Washington agents of their constituencies and have no vote on legislation. Five men so represented Colorado during the Territorial period. All of them were elected twice, the second election of the last one, Mr. T. M. Patterson, being for the regular term as a member of Congress after the State was admitted. This list is as follows:

Hiram P. Bennet, elected December 2, 1861; re-elected October 7, 1862.
Allen A. Bradford, elected July 11, 1864.
George M. Chilcott, elected November 14, 1865; re-elected August 7, 1866.
Allen A. Bradford, re-elected September 8, 1868.
Jerome B. Chaffee, elected September 13, 1870; re-elected September 10, 1872.
Thomas M. Patterson, elected September 8, 1874.

The first Territorial Legislature, consisting of nine members in the Council or upper house, and thirteen in the lower, was elected at a special election called by Governor Gilpin in July and held on August 19, 1861.

In the earlier years the Territorial Legislature was decidedly migratory in its habits, and for a time the location of the capital was an uncertainty. Golden, and Colorado City, each, aspired to permanently become the seat of government, and at one time Golden's prospects seemed fair and promising. Governor Gilpin called the first Legislature to Denver but, by an act passed November 5, 1861, Colorado City was designated the capital. A single trial lasting four days was enough of Colorado City. On August 4, 1862, the Legislature by law removed the capital to Golden City where it nominally remained until December 9, 1867, when another law moved it to Denver; and here it continued throughout Territorial times as it has during our Statehood period. The provisions of the organic act with respect to the Territorial capital were (Section 12) as follows:

> "The legislative assembly of the Territory of Colorado shall hold its first session at such time and place in said Territory as the governor thereof shall appoint and direct; and at said first session, or as soon thereafter as they shall deem expedient, the governor and legislative assembly shall proceed to locate and establish the seat of government for said Territory at such place as they may deem eligible; which place, however, shall thereafter be subject to be changed by the said governor and legislative assembly."

During the various changes in location of the capital in early Territorial times the executive offices remained in Denver, except for a short period in Governor Cummings' administration. The Legislature did not always stay at the capital as the following summary of its movements shows:

First Legislative Assembly was held at Denver, beginning September 9, 1861. William Gilpin, Governor; H. P. Parker, President of the Council; Charles F. Holly, Speaker of the House.

Second Legislative Assembly convened at Colorado City, July 7, 1862, and adjourned to Denver, July 11, 1862, where it remained in session until adjourned sine die. William Gilpin, Governor.

Third Legislative Assembly convened at Golden City, February 1, 1864, and adjourned to Denver on February 4, 1864, where the remainder of the session was held. John Evans, Governor.

Fourth Legislative Assembly was begun and held at Golden City, commencing January 2, 1865. John Evans, Governor.

Fifth Legislative Assembly began at Golden City, January 1, 1866, adjourned to Denver, January 2, 1866. Alexander Cummings, Governor.

Sixth Legislative Assembly convened at Golden City, on December 3, 1866, and held the session there. Alexander Cummings, Governor.

Seventh Legislative Assembly convened at Golden City, December 2, 1867, adjourned to Denver, December 9, 1867. Frank Hall, Secretary and acting Governor. At this session an act was passed and approved December 9, 1867, locating seat of government at Denver.

Eighth Legislative Assembly convened at Denver, January 3, 1870. Edward M. McCook, Governor.

Ninth Legislative Assembly convened at Denver, January 1, 1872. Edward M. McCook, Governor.

Tenth Legislative Assembly convened at Denver, January 5, 1874. S. H. Elbert, Governor.

The Eleventh and last Territorial Assembly convened at Denver, January 3, 1876. John L. Routt, Governor.

Of the several Territorial administrations little need be said here. Governor Gilpin was an honest, brilliant man, but his tastes, inclinations and life-training unfitted him to deal with the political and other conditions he found here; and the kind of executive ability he possessed was that of a military commander and not that of the successful head of a civil organization. His personal character was far beyond reproach. Governor Evans was a different type of man—one of the great Captains in civil life, a projector, an organizer, a man with the ability to conceive and execute great undertakings among the people. But his administration was subordinated to political ends. His ambitions were divided between two great purposes; one was to quickly develop Colorado resources by railroads, wagon roads, irrigation and other internal improvements; the other was to enter the United States Senate from the new State he had in view when he came here. Therefore, his administration was bent, swayed and influenced by his political aims. In fulfilling his other purpose, the efforts of no other man produced results comparable with those growing out of his energy, far-sightedness and remarkable ability for organizing and carrying forward great enterprises. Of the Cummings administration there are few pleasant memories among the survivors of his time. It was a thorough, if not a beneficial, exposition of "Territorial politics." General Frank Hall, in his History of Colorado, says Cummings left "no good deeds behind him worthy of even a paragraph in the annals of that period." Hunt's administration would have turned out better than it did if all the men attached to it had been as well-meaning as he; but most of them were not, and it was beset by many of the evils of "Territorial politics." His successor, McCook, saw nothing in his position but what might advantage him in "practical politics;" and probably the most conspicuous exemplification of that kind of politics during his first term, grew out of his administration's identification with scandals associated with the matter of Indian supplies. Governor Elbert entered upon his duties with the intention of giving the people a worthy administration and one devoted exclusively to their interests. But he was soon set upon by political harpies, and within fifteen months was thrust aside in consequence of their machinations, to make way for the second term of McCook. This second term was in its methods and consequences no better than the first. That such a man as Elbert was arbitrarily displaced to make way for a renewal of the McCook administration was one of many peculiar acts of the National administration in those times, and is well calculated to give the later generation a clearer conception of the evils of the old-time Territorial government system. No one thing in the political events of those years did more to arouse the people to a determination to free themselves from such a system, than the second appointment of McCook. His successor, Governor Routt, enjoyed the advantage of serving in the transition period, when earnest preparations for Statehood were put under way and in which the consummation was reached. He served well and merited the honor the climax brought to him.

View of Colorado City in 1865. From one of the Matthews drawings.

The terms of a majority of the Territorial Governors were terminated by the will of the President. Gilpin, as already told, was removed; Evans resigned; Cummings, Hunt, McCook in his first term, and Elbert were removed; McCook was allowed to resign his second term, and Routt succeeded himself, as first Governor of the State.

Colorado had a hard and trying time in her efforts to become a State of the Union, and it was not until her fourth attempt that she was successful; and this does not include the "Jefferson" and other pioneer performances. After the Territorial government was instituted by Governor Gilpin, the exigencies of the war time and the rather discouraging conditions here that accompanied them, the matter of Statehood was held in abeyance for a while. But, in the winter of 1863-64 it was taken up with more zeal on the part of the politicians than by the masses of the people. A bill for an enabling act was introduced in Congress and was made a law at that session without attracting much attention and with little or no opposition. Colorado was a loyal Territory and would be a Union State; and in those dark days at Washington the votes of two more Union Senators and one Representative in Congress were desirable in strengthening and upholding the National administration in the great work it had to do. Arrangements were then made here for holding a constitutional convention preparatory to organizing a State government. The convention assembled in Denver on July 11, 1864, and in a session lasting but ten days delivered itself of a constitution for the proposed new commonwealth.

But, much to the surprise of the friends of the movement, the people rejected the constitution by a vote of 5,006 to 4,219, at the election held in October. This was not so much because Statehood itself was undesired, as it was that many of the people at that time believed their population and available resources were not sufficient to bear the burden the change would impose; for, as the total vote of 9,225 indicated, the population was not a large one. But, beyond this there were factional differences that made themselves felt in the contest. So, the people contented themselves with electing Bradford as Delegate in Congress, and continuing under Governor Evans' administration.

In 1865 the second attempt was made. The war had closed and conditions here had somewhat improved. Considering the enabling act of 1864 still in full force and effect, a constitutional convention assembled at Denver on August 8th, and after a session of but four days, adjourned on the 12th, having in that brief time framed a constitution. The work was really only that of making a few changes in and additions to the constitution of the previous year. It was submitted to the people on the first Tuesday of September, 1865, and adopted by a vote of 3,025 to 2,870—a majority of but 155. Of the lightness of the vote—a total of 5,895—no explanation is at hand; for the population of the Territory was certainly larger than in 1864. Negro suffrage was also proposed, but overwhelmingly defeated by a vote of 4,192 to 476.

Lewis Ledyard Wells, first Territorial Secretary of Colorado.

Everybody thought that Colorado was or soon would be, a State, under these proceedings. On November 14, 1865, a Legislature and an equipment of State officers were elected. The latter were former Territorial Governor Gilpin, Republican, Governor; George A. Hinsdale, Democrat, Lieutenant Governor; J. H. Gest, Republican, Secretary of State; and W. R. Gorsline, Allen A. Bradford, and J. Bright Smith, Justices of the Supreme court. To make the work complete, George M. Chilcott, Republican, was elected Representative in Congress, and the two men for the Senate only awaited the assembling of the "Legislature" for the formality of their election to be observed. The "Legislature" lost no time in getting together. Under the programme for 1864, it was understood that Governor Evans and Henry M. Teller should be the Senators. But the "Legislature" of 1865 elected Evans and Jerome B. Chaffee; the Governor, in anticipation of his election to the Senate, having resigned, and having been succeeded by Alexander Cummings. The two Senators and the Representative went to Washington with their credentials, while the new State government anxiously and nervously awaited the delayed proclamation of the President heralding the advent of a new star in the American political firmament.

It never came. Congress refused to recognize any product of the proceedings. It held the enabling act of 1864 to have been inapplicable to what was done in 1865, and declined to admit the Colorado Senators and Representative, although they lingered there through the winter of 1865-66 recounting the justness of their titles to seats, and the regularity and care with which everything here had been done in the organization of the State. Thus ended Colorado's second effort at Statehood.

When Congress met in December, 1866, the third attempt was made, and this time it was deemed best to be sure about the enabling act. A bill for such an act was introduced early in the session. That Congress was then engaged in the historic conflict with President Johnson and was in a predicament in which it would welcome votes that would be cast against the willful and stubborn Chief Executive. On January 10, 1867, the bill passed the Senate with a proviso for negro suffrage expressed in terms that might be ambiguously construed. A bill to admit Nebraska on the same terms was passed by the Senate at the same time. Opposition to both bills arose in the House because it was held by some members that the suffrage clause was not sufficiently definite. On January 11, 1867, a general act was passed amending the organic acts of all Territories, and providing that suffrage in any and all of them should not be denied or abridged on account of race, color and so forth. This appeared to have definitely indicated the views of Congress on the suffrage question in the Territories. On February 18, 1867, the Colorado and Nebraska bills passed the House, both amended as to require the Legislatures of the contemplated new States, within thirty days after the first meeting of each, to enact a confirmation of the fundamental suffrage provision, which enactment should then become a part of the organic act of each State. This done, the admission of the new States to the Union was to be considered as accomplished.

The Senate concurred in the amendment to the two bills, and they went to President Johnson for approval. He promptly vetoed both of them. The Nebraska bill was then passed over his veto, but that of Colorado failed to become a law by that process, and the hopes of our people were again cast down. The Colorado constitutions of 1864 and 1865 had limited the suffrage to white persons; the suffrage clause in the constitution of 1865 having been specifically voted on, and suffrage denied negroes by the almost unanimous vote of 4,192 to 476. President Johnson's alleged chief objection to the Colorado and Nebraska bills was that they did not unqualifiedly provide for negro suffrage, but left its confirmation, in some degree, to the Legislatures of the proposed new States. Colorado's vote in 1865 indicated lack of sympathy with negro suffrage, but the probable real reason for Johnson's vetoes was that he did not desire to see the forces in Congress that were hostile to him and his "policy" reinforced by probably hostile new members.

Senators-elect Evans and Chaffee, not dismayed by the failure of the Colorado bill, tried it again within a week after the futile attempt to override Johnson's veto. A Senate-bill was introduced by Senator Harlan of Iowa. Its provisions were about the same as those of the defeated bill, but with an additional clause reserving to the United States the right and power to enforce in the proposed new State the general suffrage law enacted by Congress in the previous January, which was then in force in all the Territories; and to enforce the Civil Rights law, by its own processes, in the proposed new State, if it should become necessary to do so. On March 20, 1867, the House Committee on Territories reported, and recommended the passage of, a bill for the admission of Colorado. Before definite action on the proposition could be reached, unfavorable reports which created a very bad impression were received at Washington relative to Governor Cummings' management of affairs in Colorado, and these to a great extent, were responsible for the failure of Congress to take any further action that session on Colorado's admission.

But the Colorado men did not abandon hope. When Congress met in the following December their efforts to attain Statehood were renewed. On February 12, 1868, a Senate bill for the admission of Colorado was introduced by Senator Yates, of Illinois. It provided for suffrage as established by the results of the civil war. This bill was not pressed, or for some reason it made no substantial progress beyond its introductory stage.

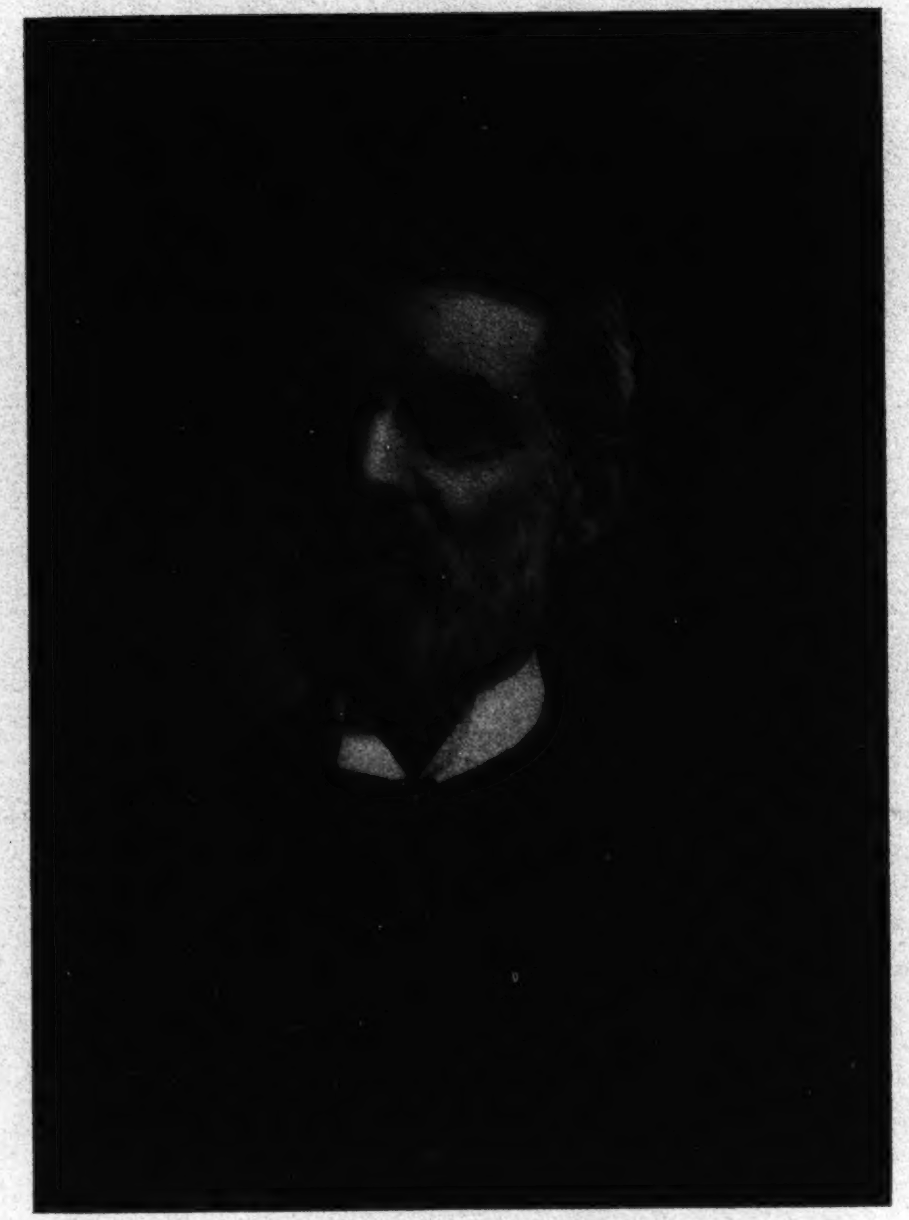
In June of that year still another effort was made by a new bill which provided for a new submission of the whole State question to the people of Colorado within ninety days after its passage, and for the election of a Legislature which must as a condition precedent ratify the Fifteenth Amendment to the Constitution of the United States. Senators-elect Evans and Chaffee, chosen in the proceedings of 1865, approving this bill, proposed that all officers elected in that year —and all of them were nominally still holding their positions—should resign so as to prepare the way for an entirely new expression of the will of the Colorado people. The bill received no conclusive action at that session of Congress, and laid over; but, on September 25, 1868, Evans and Chaffee resigned as Senators in order to remove all personal elements from a united support of the bill

---

Hiram P. Bennet was born in Carthage, Maine, September 2, 1826. His parents removed to Richland county, Ohio, in 1831, and to northwestern Missouri in 1839. In 1844 he returned to Ohio and attended private schools and the Ohio Wesleyan University until 1850. Having thus qualified himself to do so, young Bennet immediately became a country school teacher in northwestern Missouri, and at the same time a determined student of law. Admitted to the Bar in 1851, he practiced in western Iowa until 1854, when he located at Glenwood, Iowa, and in 1856 at Nebraska City, Nebraska, where he was elected in that year to the upper branch of the Nebraska Territorial Legislature, presided at the organization of that body, and served in one of the stormy periods of that Territory's struggle against slavery. In 1855 he was the "Free Soil" candidate for Delegate in Congress from Nebraska, was elected by a small majority, but the seat was given his Democratic opponent after a contest in the House of Representatives. In 1858 he was again elected to the Nebraska Legislature and became Speaker of the House for two sessions.

Mr. Bennet came to Colorado in the autumn of 1859, located in Denver, and began practicing law; forming in 1860 a partnership with Moses Hallett. In July, 1861, he was nominated by the Republicans as their candidate for Delegate in Congress from the new Territory of Colorado, and was elected that year; defeating Beverly D. Williams who had been "Delegate" from "Jefferson Territory," by a vote of 6,703 to 2,892. He was reelected for a second term, his competitors having been former Governor Gilpin and J. M. Francisco. Upon the expiration of his Congressional service he resumed law practice in Denver. In 1869 he was appointed Postmaster here and held that position five years. In 1876 he was elected a Senator, from Arapahoe county, in the First General Assembly of the State of Colorado. After his term in the Senate he resumed his practice which he continued until a few years ago when he retired for a season from active professional work, on account of poor health, but is now again engaged in the practice of law.

The foregoing is the merest outline of Mr. Bennet's career as a citizen of Denver. In other parts of this volume more is told of it. There is nothing in the present life of this quiet, pleasant, gentle-mannered man to suggest the part he bore in the turbulent pioneer times when this region was practically without government. Upon him fell the dangerous duty in most instances to be the prosecutor of desperadoes, murderers and thieves in their trials by "People's Courts." As an open, outspoken, relentless opponent of those foes of the community, he was a leader in the movements for their destruction; and his undauntable moral and physical courage in everything he undertook to do made him conspicuous among brave men. He was also a participant and a leader in all the more or less successful attempts to organize and maintain provisional or emergency governments here in 1859-60-61. Though a Territorial Delegate has no vote in Congress, Mr. Bennet while serving there was not a figurehead, but procured Executive orders and the enactment of laws of great importance to his constituents in the then new and undeveloped west. As a member of our first State Senate, his experience and ability were of great value in shaping the beginnings of legislation under State organization. In the history of our city and State, especially in that part of it covering the pioneer era, the student will encounter few more interesting figures, few personalities of greater influence and usefulness in the community or that filled a larger place in the affairs and esteem of the people, than that of Hiram P. Bennet.—J. C. S.



Hiram P. Bennet.

at the next December session, pledging themselves to heartily support that or any other measure for Colorado Statehood. But, to curtail a rather long story of failure, that movement, and the bill too, came to naught. It is to be said, furthermore, that each of the failures was accelerated to some extent and welcomed to some greater extent by home politicians eager to pull down any political structure that did not afford themselves a comfortable, sheltering refuge.

While the apparent temporizing with the suffrage question in these proceedings for Colorado Statehood would seem to indicate that as late as 1868 the people here were out of harmony with the results of the civil war with respect to manhood suffrage, the facts show that a liberal change in public sentiment had come. Notwithstanding that in 1865 the sentiment of Colorado voters was overwhelmingly against negro suffrage, men of that race voted at the Denver city election held April 1, 1867—the first time they exercised the right in the Territory. This came about quietly, and without Territorial legislation or any other specific local arrangements having been made for it. At that election negroes offered their ballots and they were received. Nobody objected, or tried to prevent them voting, or in any way interfered with them. The negroes were circumspect, went to the polls and voted, and then quietly went away. There was some prejudice against the innovation, but it was kept in reserve, and no unusual election incidents occurred. The negroes were much pleased by their treatment, and on the next day held a meeting at which two sons of Frederick Douglass made congratulatory speeches which included much good advice and prudent counsel. Resolutions expressing grateful appreciation of the admission of colored men to full citizenship, and thanking the community for the consideration shown colored voters, were passed. That Denver city election at once wiped away the color line from in front of all Colorado ballot-boxes. Unlike the practices of their race in nearly every other State, the colored voters in Colorado are divided in their party affiliations, to their distinct and increasing advantage.

After the failure of 1868 to gain admission for Colorado, it was several years before another effort was made to secure Statehood, but in the meantime and with the construction of railroads the Territory was moving rapidly forward in its development; and escape from the thralldom of a Territorial government had become an absolute necessity. In the Forty-third Congress (1873-75), Jerome B. Chaffee, then Delegate from Colorado, again pressed for Colorado's recognition. He procured the introduction of a bill "to Enable the People of Colorado to Form a Constitution and State Government, and for the Admission of the Said State into the Union on an Equal Footing with the Original States." It encountered some opposition but was finally passed on February 25th, and approved March 3, 1875. The boundaries of the new State were specified to be the same as those of the Territory of Colorado; that is to say, east and west between the 102nd and 109th meridians, and north and south between the thirty-seventh and forty-first parallels.

Pursuant to this enabling act thirty-seven members of a constitutional convention were chosen at a special election held October 25, 1875. They were:

H. P. H. Bromwell,
Casimiro Barela,
Wm. E. Beck,
George Boyles,
Byron L. Carr,
Wm. H. Cushman,
William M. Clark,
A. D. Cooper,
Henry R. Crosby,
Robert Douglas,
Frederick J. Ebert,
Lewis C. Ellsworth,
Clarence P. Elder,
Williard B. Felton,
Jesus Ma. Garcia,
Daniel Hurd,
Lafayette Head,
Wm. H. James,
William R. Kennedy,
William Lee,
Alvin Marsh,
S. J. Plumb,
Geo. E. Pease,
Robert A. Quillian,
Lewis C. Rockwell,
Wilbur F. Stone,
William C. Stover,
Henry C. Thatcher,
Agapito Vigil,
W. W. Webster,
George G. White,
Ebenezer T. Wells,
P. P. Wilcox,
J. C. Wilson,
John S. Wheeler,
J. W. Widderfield,
Abram Knox Yount.

The convention met in Denver, December 20, 1875, elected Joseph C. Wilson, President, and after first adopting the constitution of the United States, proceeded to its task. It remained in session all that winter, and on March 14, 1876, completed and certified to its well-done work; its sessions having been held in the building still standing on the northeast corner of Fifteenth and Blake streets.

The constitution provided for its submission to approval or rejection by the people at a special election to be held on July 1, 1876. On that day it was adopted by a vote of 15,430 for, to 4,053 against it, a total of 19,483. Arapahoe county cast 5,591 votes, of which all but thirty-seven were affirmative.

All the proceedings having been in compliance with the enabling act, President Grant, on August 1st, issued his proclamation announcing the admission of Colorado as a State of the Union. That year having brought the 100th anniversary of the founding of the National government, Colorado received her familiar nickname, "Centennial State;" it having been first suggested by General R. W. Woodbury in an editorial article in the Denver Times, February 27, 1875.

The constitution provided that in the interval between the State's admission and the inauguration of duly elected State officers, the Territorial officers should continue in their respective positions and in discharge of the duties thereof. The first election for State officers and members of the Legislature was held as designated by the constitution, on October 3, 1876. Two tickets, Republican and Democratic, had been nominated, and the contest was a spirited one; Governor John L. Routt leading the Republicans, and General Bela M. Hughes the Democrats. Routt's majority was 837 in a vote of 27,471; his associates on the ticket having slightly larger majorities. At noon on Wednesday, November 1, 1876, the first State Legislature convened in the Whitsitt building on the north side of Blake street (present numbers 1641-47) between Sixteenth and Seventeenth streets, and the House elected Webster D. Anthony, Speaker; all subsequent regular sessions beginning, under the constitution, in January. The State executive officers elected were inaugurated November 3rd. On November 7th Herman Beckurts, Otto Mears, and William L. Hadley were chosen Presidential Electors, and the vote cast by Colorado in the Electoral College determined the election of Rutherford B. Hayes as President, in 1876. On November 9th Jerome B. Chaffee and Henry M. Teller were elected United States Senators, and on January 9, 1877, Moses Hallett was appointed United States District Judge, and Westbrook S. Decker United States District Attorney, by President Grant. So, after all the trials and tribulations, the years of waiting and hoping, Colorado had entered upon her brilliant career as one of the States of the Union.

The change was a welcome one to the people. They had grown weary enough of the Territorial vassalage, of being governed by men in whose selection they had no voice, and whom, if need be, they could not call to account. Prior to the constitutional convention's adjournment a committee of ten of its members was appointed to prepare an address to the people, reviewing the convention's work, and pointing out the advantages of Statehood. The following is from the closing appeal of that address:

> Who is there among you that would not rather be a citizen of an independent sovereign State than a mere settler upon the public lands of the Territory, governed by satraps appointed and removed at pleasure, as best serves the whims and purposes of political rings and cliques; beggars, asking pittance at the gate of the nation; poor wards dependent upon the charity of Congress, living in a sort of penal colony, the Botany Bay of political servitude? Now that the golden opportunity is afforded, shall this state of things longer exist?

While a variety of causes, some of them of an economic character, were, as we have stated, more or less influential in delaying Colorado's admission as a State, the most unworthy obstructions among all of them arose from the jealousies and contentions of her politicians. She was for years made the football for rival cliques of selfish, and in some instances corrupt, men who did not hesitate to sacrifice her interests to forward their own or to defeat the plans of their opponents. She was repeatedly wounded by those who pretended to be her friends.

Bad as the Territorial governments usually were in the west, it would seem that the ceaseless machinations of many of our politicians of a generation ago at times made Colorado one of the greatest sufferers under the Territorial system. Her patient people were repeatedly played upon and bedeviled by ambitious tricksters, her future rendered uncertain, her policy unsettled; with doubt, disappointment, and humiliation as the chief results of the acrimonious warfare long waged by the brawling factions.

A complete history of the discordant political affairs of Colorado during the ten years preceding her admission as a State would cover the pages of several such volumes as this, and be of little important use to any one, either in this life or the one to come. It is a subject to which it would not now be worth while to give consideration, even if it were fitting that a work of this character should attempt to deal with political history of that kind.

CHAPTER L.

COLORADO BILL OF RIGHTS—GOVERNORS—ELECTION STATISTICS—UNITED STATES SENATORS—CONGRESSIONAL DISTRICTS AND REPRESENTATIVES—LEGISLATURE—JUDICIARY—EXECUTIVES—SALARIES—SUFFRAGE—DELAY IN PROVIDING A CAPITOL—HENRY C. BROWN'S GIFT—FUTILE EFFORTS TO UTILIZE IT—LITIGATION OVER THE DONATED SITE—DENVER CHOSEN THE STATE CAPITAL—CAPITOL BUILDING AUTHORIZED—HISTORY OF ITS CONSTRUCTION—TOTAL COST—NOBLE EDIFICE—CHARACTER OF OUR LEGISLATURES.

The Constitution of Colorado is, in its general provisions, similar to the organic laws of the other States admitted to the Union since the civil war, but in some directions it is grounded in more liberal views and quickened by a more catholic spirit. Several amendments have been made to it, but they were rather in the line of making more specific certain details than in important changes. The preamble to the constitution reads:

"We, the people of Colorado, with profound reverence for the Supreme Ruler of the Universe, in order to form a more independent and perfect government; establish justice; insure tranquillity; provide for the common defense; promote the general welfare and secure the blessings of liberty to ourselves and posterity, do ordain and establish this Constitution for the 'State of Colorado.'"

The Bill of Rights is a broad, comprehensive, noble declaration of the principles of justice and liberty, and of the natural rights of man:

BILL OF RIGHTS.

In order to assert our rights, acknowledge our duties, and proclaim the principles upon which our government is founded, we declare:

Section 1. That all political power is vested in and derived from the people; that all government, of right, originates from the people, is founded upon their will only, and is instituted solely for the good of the whole.

Sec. 2. That the people of the State have the sole and exclusive right of governing themselves, as a free, sovereign and independent State; and to alter and abolish their Constitution and form of government whenever they may deem it necessary to their safety and happiness, provided such change be not repugnant to the Constitution of the United States.

Sec. 3. That all persons have certain natural, essential and inalienable rights, among which may be reckoned the right of enjoying and defending their lives and liberties; that of acquiring, possessing and protecting property; and of seeking and obtaining their safety and happiness.

Sec. 4. That the free exercise and enjoyment of religious profession and worship, without discrimination, shall forever hereafter be guaranteed; and no person shall be denied any civil or political right, privilege or capacity, on account of his opinions concerning religion; but the liberty of conscience hereby secured shall not be construed to dispense with oaths or affirmations, excuse acts of licentiousness, or justify practices inconsistent with the good order, peace, or safety of the State. No person shall be required to attend or support any ministry or place of worship, religious sect, or denomination against his consent. Nor shall any preference be given by law to any religious denomination or mode of worship.

Sec. 5. That all elections shall be free and open; and no power, civil or military, shall at any time interfere to prevent the free exercise of the right of suffrage.

Sec. 6. That courts of justice shall be open to every person, and a speedy remedy afforded for every injury to person, property, or character; and that right and justice should be administered without sale, denial, or delay.

Sec. 7. That the people shall be secure in their persons, papers, homes and effects from unreasonable searches and seizures; and no warrant to search any place or seize any person or thing shall issue without describing the place to be searched, or the person or thing to be seized, as near as may be, nor without probable cause, supported by oath or affirmation, reduced to writing.

Sec. 8. That, until otherwise provided by law, no person shall, for a felony, be proceeded against criminally, otherwise than by indictment, except in cases arising in the land or naval forces, or in the militia when in actual service in time of war or public danger. In all other cases offenses shall be prosecuted criminally by indictment or information.

Sec. 9. That treason against the State can consist only in levying war against it, or in adhering to its enemies, giving them aid and comfort; that no person can be convicted of treason unless on the testimony of two witnesses to the same overt act, or on his confession in open court; that no person can be attainted of treason or felony by the General Assembly; that no conviction can work corruption of blood or forfeiture of estate; that the estates of such persons as may destroy their own lives shall descend or vest as in cases of natural death.

Sec. 10. That no law shall be passed impairing the freedom of speech; that every person shall be free to speak, write or publish whatever he will on any subject, being responsible for all abuse of that liberty; and that in all suits and prosecutions for libel, the truth thereof may be given in evidence, and the jury, under the direction of the court, shall determine the law and the fact.

Sec. 11. That no ex post facto law, nor law impairing the obligation of contracts, or retrospective in its operation, or making any irrevocable grant of special privileges, franchises or immunities, shall be passed by the General Assembly.

Sec. 12. That no person shall be imprisoned for debt, unless upon refusal to deliver up his estate for the benefit of his creditors, in such manner as shall be prescribed by law, or in cases of tort or where there is a strong presumption of fraud.

Sec. 13. That the right of no person to keep and bear arms in defense of his home, person and property, or in aid of the civil power when thereto legally summoned, shall be called in question; but nothing herein contained shall be construed to justify the practice of carrying concealed weapons.

Sec. 14. That private property shall not be taken for private use unless by consent of the owner, except for private ways of necessity, and except for reservoirs, drains, flumes or ditches on or across the lands of others, for agricultural, mining, milling, domestic or sanitary purposes.

Sec. 15. That private property shall not be taken or damaged, for public or private use, without just compensation. Such compensation shall be ascertained by a board of commissioners, of not less than three freeholders, or by a jury, when required by the owner of the property, in such manner as may be prescribed by law, and until the same shall be paid to the owner, or into court for the owner, the property shall not be needlessly disturbed, or the proprietary rights of the owner therein divested; and whenever an attempt is made to take private property for a use alleged to be public, the question whether the contemplated use be really public, shall be a judicial question, and determined as such without regard to any legislative assertion that the use is public.

Sec. 16. That in criminal prosecutions the accused shall have the right to appear and defend in person and by counsel; to demand the nature and cause of the accusation; to meet the witnesses against him face to face; to have process to compel the attendance of witnesses in his behalf, and a speedy public trial by an impartial jury of the county or district in which the offense is alleged to have been committed.

Sec. 17. That no person shall be imprisoned for the purpose of securing his testimony in any case longer than may be necessary in order to take his deposition. If he can give security he shall be discharged; if he can not give security, his deposition shall be taken by some Judge of the Supreme, District, or County Court, at the earliest time he can attend, at some convenient place by him appointed for that purpose, of which time and place the accused and the attorney prosecuting for the people, shall have reasonable notice. The accused shall have the right to appear in person and by counsel. If he have no counsel, the Judge shall assign him one in that behalf only. On the completion of such examination the witness shall be discharged on his own recognizance, entered into before said Judge, but such deposition shall not be used if, in the opinion of the Court, the personal attendance of the witness might be procured by the prosecution, or is procured by the accused. No exception shall be taken to such deposition as to matters of form.

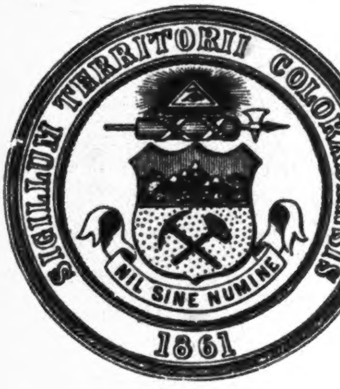
Sec. 18. That no person shall be compelled to testify against himself in a criminal case, nor shall any person be twice put in jeopardy for the same offense. If the jury disagree, or if the judgment be arrested after verdict, or if the judgment be reversed for error in law, the accused shall not be deemed to have been in jeopardy.

Sec. 19. That all persons shall be bailable by sufficient sureties, except for capital offenses, when the proof is evident or the presumption great.

Sec. 20. That excessive bail shall not be required, nor excessive fines imposed, nor cruel and unusual punishments inflicted.

Sec. 21. That the privilege of the writ of habeas corpus shall never be suspended, unless when, in case of rebellion or invasion, the public safety may require it.

Sec. 22. That the military shall always be in strict subordination to the civil power; that no soldier shall in time of peace, be quartered in any house without the consent of the owner, nor in time of war except in the manner prescribed by law.



Colorado Seal.
The State retained the Territorial seal, increasing its diameter to two and one-half inches, and substituting "State of Colorado, 1876," for the Territorial legend.

Sec. 23. The right of trial by jury shall remain inviolate in criminal cases; but a jury in civil cases in all courts, or in criminal cases in courts not of record, may consist of less than twelve men, as may be prescribed by law. Hereafter a grand jury shall consist of twelve men, any nine of whom concurring may find an indictment; Provided, The General Assembly may change, regulate, or abolish the grand jury system.

Sec. 24. That the people have the right peaceably to assemble for the common good, and to apply to those invested with the powers of government for redress of grievances, by petition or remonstrance.

Sec. 25. That no person shall be deprived of life, liberty, or property, without due process of law.

Sec. 26. That there shall never be in this State either slavery or involuntary servitude, except as a punishment for crime, whereof the party shall have been duly convicted.

Sec. 27. Aliens, who are or who may hereafter become bona fide residents of this State, may acquire, inherit, possess, enjoy and dispose of property, real and personal, as native born citizens.

Sec. 28. The enumeration in this Constitution of certain rights shall not be construed to deny, impair, or disparage others retained by the people.

Governor Thomas, whose term crossed from the Nineteenth into the Twentieth Century, was the ninth man who served as Colorado's Chief Executive. John L. Routt, the last Territorial Governor, was chosen as the first State Governor. The terms of service of all are stated in the following:

John L. Routt, November, 1876, to January, 1879.
Fred. W. Pitkin, January, 1879, to January, 1883.
James B. Grant, January, 1883, to January, 1885.
Benj. H. Eaton, January, 1885, to January, 1887.
Alva Adams, January, 1887, to January, 1889.
Job A. Cooper, January, 1889, to January, 1891.
John L. Routt, January, 1891, to January, 1893.
Davis H. Waite, January, 1893, to January, 1895.
Albert W. McIntire, January, 1895, to January, 1897.
Alva Adams, January, 1897, to January, 1899.
Charles S. Thomas, January, 1899, to January, 1901.
James B. Orman, January, 1901, —

The total vote for Governor at the several elections was as follows:

1876	27,471	1890	86,443
1878	28,626	1892	93,756
1880	53,492	1894	180,983
1882	61,195	1896	187,180
1884	66,622	1898	149,430
1886	58,160	1900	218,634
1888	91,870		

To some extent the vote indicates the increase of population, which was abnormal in some periods. Between 1878 and 1880 the vote almost doubled, for which Leadville was in a measure responsible. Between 1892 and 1894, notwithstanding that thousands of people left the State in those years, the vote was again almost doubled. This was due to woman suffrage which first had effect in the State in 1894, and which swells the totals of subsequent years. Of the woman suffrage movement some account appears elsewhere. Usually the vote is much larger at Presidential than at State elections, a fact that accounts for the decrease of nearly 40,000 votes from 1896 to 1898, and partly accounts for the great vote in 1900.

Seven men have represented the State in the United States Senate; one of them, Henry M. Teller, having been in service from the beginning, except the interval following his resignation to become a member of President Arthur's cabinet. The terms of each Senator are stated here:

Jerome B. Chaffee, elected November 14, 1876, for the term expiring in March, 1879.

Henry M. Teller, elected November 14, 1876, for the term expiring in March, 1877; re-elected December 9, 1876, for the full term of six years (succeeding himself); resigned in April, 1882, to become Secretary of the Interior; re-elected January 21, 1889, for full term; to succeed Hill; re-elected January 21, 1891, for full term; re-elected January 20, 1897, for full term.

Nathaniel P. Hill, elected January 9, 1879, for full term of six years, to succeed Chaffee.

George M. Chilcott, appointed by Governor Pitkin, April 11, 1882, for unexpired term of Secretary of the Interior Teller, (until meeting of the Legislature).

Horace A. W. Tabor, elected January 26, 1883, for the then unexpired part of Secretary Teller's term, (consisting of thirty-seven days), to succeed Chilcott.

Thomas M. Bowen, elected January 26, 1883, for full term, to succeed the Teller-Chilcott-Tabor term.

Edward O. Wolcott, elected January 16, 1889, for full term, to succeed Bowen; re-elected January 16, 1895, for full term.

The Thirteenth General Assembly, in January, 1901, elected Thomas M. Patterson, of Denver, to succeed Edward O. Wolcott for the term of six years beginning March 4, 1901.

When Colorado was admitted the population entitled the State to but one Representative in the lower house of Congress, a condition that continued until after the census of 1890; the Congressional district being, of course, co-extensive with the State. The census of 1890 enumerated a Colorado population, excluding Indians, of 412,198, whereupon the State was divided into two Congressional districts, as at present.

The First District was comprised of the counties of Arapahoe, Boulder, Jefferson, Lake, Larimer, Logan, Morgan, Park, Phillips, Sedgwick, Washington, Weld, and Yuma counties, thirteen in all, having an aggregate population of 204,659.

The Second District was comprised of the counties of Archuleta, Baca, Bent, Chaffee, Cheyenne, Clear Creek, Conejos, Costillo, Custer, Delta, Dolores, Douglas, Eagle, Elbert, El Paso, Fremont, Garfield, Gilpin, Grand, Gunnison, Hinsdale, Huerfano, Kiowa, Kit Carson, La Plata, Las Animas, Lincoln, Mesa, Mineral, Montezuma, Montrose, Otero, Ouray, Pitkin, Prowers, Pueblo, Rio Blanco, Rio Grande, Routt, Saguache, San Juan, San Miguel, and Summit counties, forty-three in all, with an aggregate population of 207,539. The new Teller county, created in 1899, is included in the Second District.

Seven men have represented the State of Colorado in the lower branch of Congress. Belford served four terms; Bell is now in his fourth and is elected for another; Shafroth, representing the Denver district, is in his third and has been re-elected for the fourth. The roll is as follows:

James B. Belford, elected October 3, 1876, for unexpired term of Forty-fourth Congress; re-elected October 1, 1878; re-elected November 2, 1880; re-elected November 7, 1882.

Thomas M. Patterson, former Delegate in Congress, re elected November 7, 1876, as a member of the Forty-fifth Congress.

George C. Symes, elected November 4, 1884; re-elected November 2, 1886.

Hosea Townsend, elected November 6, 1888; re-elected November 4, 1890.

Lafe Pence, First District, elected November 8, 1892.

John C. Bell, Second District, elected November 8, 1892; re-elected November 6, 1894; re-elected November 3, 1896; re-elected November 8, 1898; re-elected November 6, 1900.

John F. Shafroth, First District, elected November 6, 1894; re-elected November 3, 1896; re-elected November 8, 1898; re-elected November 6, 1900.

The legislative branch of the State Government consists of the usual upper and lower houses, with a total membership of one hundred. The Senate has thirty-five members representing twenty-eight districts. The Denver end of the Arapahoe county—the First—District has six senators; but about half the districts include two or more counties, the Twenty-fifth embracing six. Senators are elected for terms of four years; one half the members being chosen every two years. The House of Representatives consists of sixty-five members representing forty-three constituencies. Arapahoe county has thirteen of them—one-fifth; but, as in the case of the Senate, a doubling up of some counties is necessary to the election of a member. In three instances three counties have to be united. The term of a Representative is two years. The constitution prescribes biennial sessions beginning on the first Wednesday in January of each year ending with an uneven figure, and limits the session to ninety days; but special sessions may be called by the Governor. Members of both houses receive pay at the rate of seven dollars a day, including Sundays, and fifteen cents per mile for one round trip from their homes. The Lieutenant Governor is ex-officio President of the Senate, and a President pro tempore is chosen from the members. The House elects one of its members Speaker.

The Judicial system of the State provides for a Supreme Court, Court of Appeals, District Courts, Criminal Courts, County Courts, Courts of Justices of the Peace, and Police Courts as may be established by the General Assembly for such cities and towns in which they are deemed necessary or expedient.

Our Judicial system is considered at greater length in another chapter in which some other matters, concerning our Bench and Bar, are also related.

In addition to the Governor and Lieutenant-Governor, the other elective executive officers of the State—the terms of all being for two years—are a Secretary of State, a Treasurer of State, an Auditor of State, an Attorney General, and a Superintendent of Public Instruction. In addition to these there are a number of appointive officers as indicated by the subjoined statement of annual salaries paid by the State. In the earlier years of Statehood every effort was made to keep down the expenses of the new government, as the cost of the independent organization had been the chief objection advanced by the minority opposed to the change. Therefore, official salaries were, for several years, of extremely modest proportions. The salaries now paid, and which are not extravagant compensations, though fair and reasonable, are as follows:

Governor	$5,000
Governor's Private Secretary	1,500
Lieutenant Governor	1,000
Secretary of State	3,000
Deputy Secretary of State	2,500
Printing Clerk	1,500
Brand Clerk	1,000
Auditor of State	2,500
Bailiff of Supreme Court	1,200
Stenographers Supreme Court (3) each	1,000
Judges of Court of Appeals (3) each	5,000
Clerk of Court of Appeals	3,000
Bailiff of Court of Appeals	1,200
Stenographers Court of Appeals (3) each	1,000
Deputy Auditor	2,500
Insurance Commissioner	3,000
State Treasurer	6,000
Deputy Treasurer	2,500
Superintendent of Public Instruction	3,000
State Librarian	1,000
Attorney General	3,000
Justices of Supreme Court (3) each	5,000
Clerk of Supreme Court	3,500
Deputy Clerk of Supreme Court	1,500
Reporter Supreme Court and Court of Appeals	3,000
State Engineer	3,000
State Engineer's Assistants	2,700
Commissioner of Mines	2,500
Inspector of Mines (2) each	1,500
Inspector of Coal Mines	2,000
Inspector of Coal Mines' Assistant	1,500
State Veterinary Surgeon	1,500
Register State Board of Land Commissioners	2,000
Deputy Register	1,500
Appraiser State Board of Land Commissioners	1,500
Deputy Commissioner of Labor	1,800
Boiler Inspector	2,000
Boiler Inspector's Assistant	1,500

The constitutional provisions specified that a voter must be a male citizen over twenty-one years of age; a citizen of the United States, or if not, must have declared his intention to become one not less than four months previously; and must have resided in the State six months preceding the election at which he offers to vote. From the beginning women could vote for school officers, but in 1893 they were admitted to full suffrage.

The constitution provides that the Legislature may prescribe an educational qualification, but stipulated that no such law should take effect prior to 1890. However, this qualification has never been incorporated in our election laws.

Very soon after Governor Gilpin established his first Territorial government the matter of housing the executive officers and of preparing quarters for the first Territorial Legislature received attention. Denver did not at that time possess many buildings that afforded room for even so modestly proportioned a legislative, executive and judicial establishment as that which constituted Colorado Territory's first government, and the Governor had to distribute his departments around to the best advantage. The executive offices were established in the second-story of the brick building, still standing, at the southeast corner of Fifteenth and Larimer streets. In preparation for the first meeting of the Territorial Legislature which the Governor called to assemble on September 9, 1861, places of meeting had to be provided. After much difficulty, Territorial Secretary Weld, on whom the burden of these arrangements fell, rented a small frame building that stood on part of the site of the present McClintock Building on the northeast corner of Sixteenth and Larimer streets, for the accommodation of the House of Representatives; and arranged for the use of the first floor of a building on the north side of Larimer street, between Fourteenth and Fifteenth streets and then adjoining the old People's Theater, for the use of the Council (or Senate). In these places the first laws of Colorado Territory were enacted.

Presumably discontented with Denver's accommodations for legislators, although other reasons would seem to have been more potent, the Legislature at that session, by an act approved November 5th, made Colorado City the capital, as we have heretofore mentioned. We have, also, shown to what extent the Territorial capital was kept on wheels for several years thereafter.

By the act of December 9, 1867, removing the capital from Golden back to Denver, it was also provided that the Governor of the Territory should appoint three commissioners to select on behalf of the Territory a site for a capitol building in Denver, within sixty days after their appointment. It was modestly stipulated that the site should be a gift to the Territory and contain at least ten acres of land. The three Commissioners were appointed and made themselves ready to receive offers of ground on which to build the Territorial Capitol.

At that time Henry C. Brown owned a large area of land on what later became known as "Capitol Hill," and he promptly came forward with an offer to donate two entire blocks, those bounded by Colfax, Grant, Fourteenth and Lincoln Avenues, containing ten acres—the best site in the city for the Territorial buildings, and the one now occupied by the State Capitol. Few transactions have been more persistently misrepresented than this donation by Henry C. Brown. To this day it is not uncommon to hear the statement that "Brown gave

---

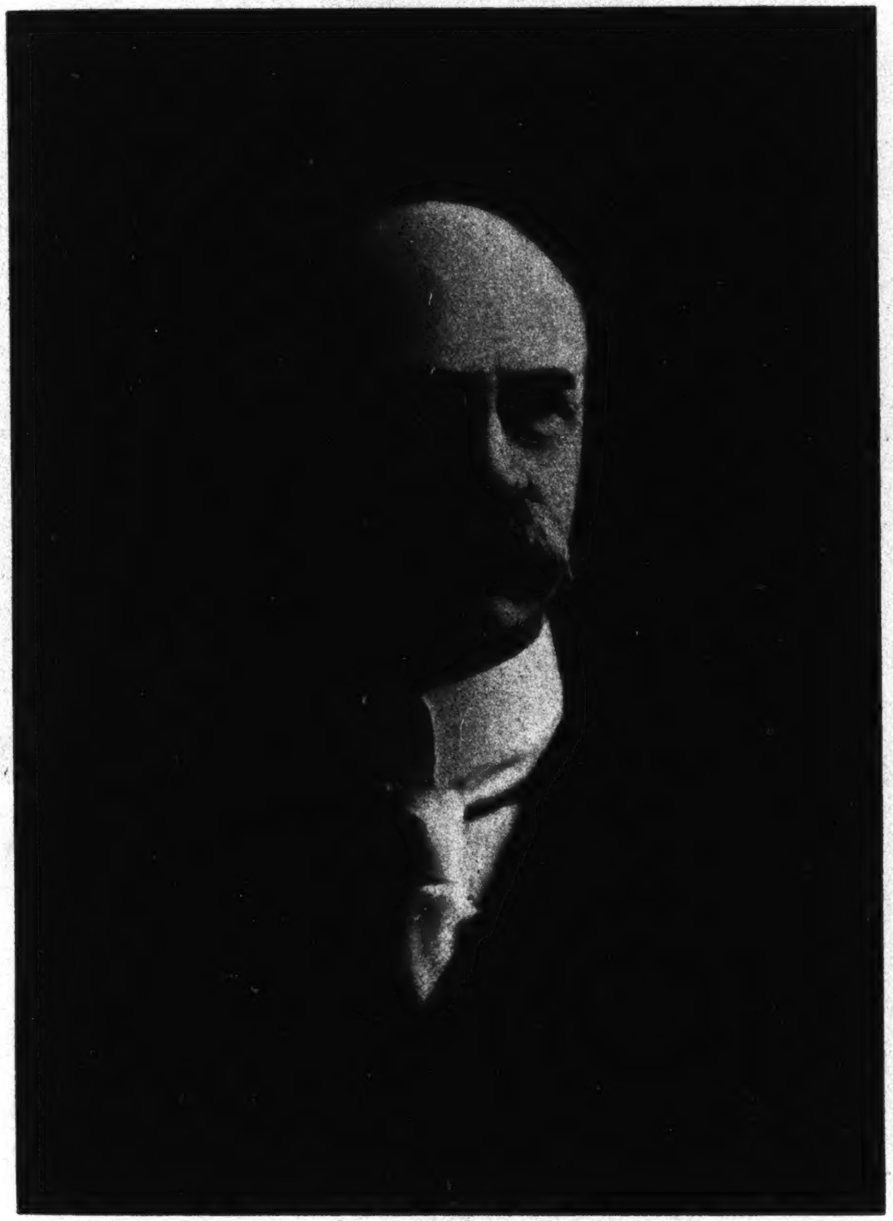
Charles S. Thomas, ninth Governor of the State of Colorado, (in the twelfth term) is a native of Georgia. He was born in Darien, McIntosh county, that State, December 6, 1849; which place remained his home until after the close of the civil war.

In 1869 Governor Thomas entered the University of Michigan at Ann Arbor where he was graduated in the law course in April, 1871. Having determined upon a career in the west, in the autumn of that year he came to Colorado, located in this city and began the practice of law. In 1873 he and Thomas M. Patterson formed a partnership, and the new firm soon became known as one of the strong legal alliances in the Territory. Mr. Patterson having been elected Territorial Delegate in Congress in 1874, this partnership was terminated in that year; but in 1879 it was resumed, Governor Thomas then being a resident of Leadville, where an important part of the firm's legal business originated from the mining complications in that crowded and busy camp. He remained in Leadville until January, 1885, when he returned and permanently established his home in Denver. Mr. Patterson's association with Governor Thomas continued until 1890, when the partnership was dissolved and the Governor afterward became the senior member of the present law firm of Thomas, Bryant & Lee.

It is hardly necessary to state that Governor Thomas is an earnest, consistent, conservative Democrat in politics, and conspicuously an able leader of his party in the State of Colorado. He has served it long and well; in every political canvass for more than twenty years his time and abilities have been freely and tirelessly devoted to its welfare in both State and National campaigns. No man in Colorado excels him as a speaker of masterful power, and logical, convincing argument expressed in clear-cut, vigorous English.

In 1875 Governor Thomas was elected and in 1876 was re-elected City Attorney of Denver, a position he filled with credit to himself and to the satisfaction of the people. In 1880 he was chosen as one of the delegates from Colorado to the National Democratic convention at Cincinnati which nominated General Winfield S. Hancock for the Presidency. In 1884 he became a member of the Democratic National Committee, and was nominated by the Democratic State convention as a candidate for Congress, Colorado at that time having been entitled to but one Representative. Governor Thomas added strength to his ticket, but shared the common defeat which befell it that year. In 1889 and in 1895 he was the Democratic choice for United States Senator, and in 1896 was offered but declined the Democratic nomination for Governor of Colorado.

In September, 1898, Governor Thomas was nominated for Governor by the State convention of his party in session at Colorado Springs. He had



Charles S. Thomas.

the land and then turned around and tried to get it back again."

Henry C. Brown proposed to donate the land, for purely business reasons; and expected that it would be put to the uses contemplated by the law that invited such gifts, within a reasonable time after its acceptance by the Territorial Commissioners. He did so because he expected that the location of the Capitol there would largely enhance the value of the remaining land he owned around the site, and frankly and publicly said so at the time, and has never said otherwise.

But it was about twenty-five years before the land was actually put to the uses for which it was intended, and about seventeen years before a beginning was made to prepare it for such uses.

At the time Mr. Brown made the donation the Territory's income and resources were so limited that no funds could be had with which to erect buildings on the site. To aid toward that end several citizens gave lands or lots to be sold for the benefit of the building fund. Samuel E. Browne and Mary E. Browne gave an acre in their addition; Governor John Evans and Simeon Whitely gave a half block in Whitely's addition; Caleb B. Clements gave sixteen lots in his addition; Daniel Witter gave ten lots in his addition; Henry M. Porter gave an entire block in the Brown, Smith and Porter addition; and John W. Smith gave another block in the same addition. But, with the gift of the magnificently located site of ten acres, and of all these donations to the building fund, the Territorial Capitol Commissioners did nothing whatever toward erecting buildings, nor did the Legislature do anything; the entire enterprise being left hanging in the air for five or six years.

One reason for this delay was that the location of the capital here was not regarded as a permanent arrangement, and it was hoped and expected by citizens elsewhere that it would be removed from Denver. Neither of the three Commissioners appointed by Governor Hunt was a Denver man. Allen A. Bradford, was from Pueblo; Joseph M. Marshal, from Boulder; and William M. Roworth, from Gilpin county. Pueblo, Boulder and Central City each had hopes at that time that there would be a reconsideration of the Territorial capital question.

But, by an act of the Legislature passed February 13, 1874, the Governor was authorized and directed to appoint a new Board of Commissioners, who were to take up the matter in earnest, perfect titles if need be, receive additional gifts, sell the lots and lands already donated for a building fund and, with the proceeds, together with such appropriations as the Legislature could make, and such as Arapahoe county and the City of Denver might give, erect a Territorial Capitol on Henry C. Brown's donated blocks, and have it finished by January 1, 1876. The Governor appointed M. Benedict, of Denver; J. H. Blume, of Trinidad; and J. H. Pinkerton, of Evans, as this Board of Commissioners.

The Territorial government departments were still scattered over town wherever they could find rented refuges, and not one branch had a suitable place in which to transact its business. A building was sadly needed, but, as matters turned out it is fortunate that circumstances prevented the erection of even a temporary structure; otherwise, in all probability, we should not have had the

---

not been a candidate in the sense of having sought the nomination, and the politicial circumstances of that year impelled his party to do its best in selecting a standard-bearer. In his speech to the convention, accepting the nomination, Governor Thomas said:

"Conditions which I had not foreseen compelled me to allow my name to be used, only three days ago, as a candidate. You have seen fit to place in my hands your banner for this campaign. I accept the responsibility and the occasion. I do so, not in spirit of ambition, but in consequence of sense of a duty that should inspire all good citizens to serve in the cause of humanity. I accept the nomination without any pledge to any party or set of men. If I am elected I shall endeavor to serve the people and have an eye single only to their welfare, serving rich and poor alike, with respect only to my conscience and the constitution."

In Colorado Springs at the same time the conventions of the Populists and the Teller Silver Republicans were in session. Each of these indorsed the nomination of Governor Thomas and joined the Democrats in completing the State ticket which the three parties should support. At the November election this so called "fusion" ticket, led by Governor Thomas, was elected, the vote for the head of the ticket having been 94,274 for Thomas, to 50,880 for Henry R. Wolcott, his regular Republican opponent, making the Governor's majority 43,394. He was not a candidate for re-nomination or re-election, but became one for election to the United States Senate; the "fusion" of the same parties that carried the State in 1898 having been again successful in the State election of November, 1900. Though he was the choice of a large number of members of the Legislature, the caucus nomination fell upon his former law partner, Thomas M. Patterson.

Brushing aside the apparently inevitable petty contentions and unworthy fault-finding that beset the paths of our Chief Executives of the State, it will be seen that Governor Thomas faithfully and conscientiously endeavored to give, in his administration, practical effect to the declarations he made in his speech of acceptance to the convention that nominated him. Owing to the State's inadequate and inefficient revenue system, he encountered the many difficulties that follow appropriations made with little regard to the volume of revenues. But he met them with honesty and ability, and with fidelity to the people and to his own high personal character.—J. C. S.

magnificent State edifice now standing on Capitol Hill.

However, the new Commissioners went to work to do something. They tried to get more donations of real estate for the building fund; they circulated a subscription paper for cash subscriptions; they appealed to the city and county to spend a little money in improving the two Brown blocks by grading and fencing them, and planting trees; but in all these efforts little or nothing was accomplished, and the Capitol enterprise again came to a standstill.

Then followed the successful movement to make Colorado Territory a State, pending which and upon the urgent advice of former Governor Evans—and wise advice it was, under all the circumstances—the Commissioners decided to abandon all attempts to provide a building, and to let the prospective new State undertake it untrammelled by any previous arrangements.

But, as there was no assurance that Denver would be the State capital under the provisions of the State constitution, Henry C. Brown, out of patience with the treatment his donation had received through all those years, it not having been put to the uses for which it was specifically given, nor to any other, served notice on the Commissioners that he would revoke his gift unless at least $50,000 were expended in improvements on it within a reasonable time; and that if the State capital should be located elsewhere, one-half of his donation should be transferred to the city, and the other half revert to him. But, the Commissioners had no adequate resources, the State organization was a certainty, and they concluded to let events take their course.

The State government succeeded in 1876, yet nothing was done toward building on the site. Therefore, on May 9, 1879, nearly twelve years after he had conditionally donated the land, Henry C. Brown revoked his gift. The State contested and won in the first Court. Upon a new trial Brown was given judgment. The State then obtained another hearing and the last decision was reversed. Brown then appealed to the State Supreme Court which affirmed the decision of the lower Court. Then the case went to the United States Supreme Court on a writ of error where the State again won. Next, the case was brought before Judge Hallett of the United States Circuit Court for the Colorado district, who decided in the State's favor. Again it went back to the Supreme Court at Washington where, on January 4, 1886, a decision was rendered finally confirming the title of the State to the land, and ending the contention. But for several years theretofore, Denver having been made the capital of the State by a vote of the people in November, 1881, and the State having really made the beginnings of provisions for building on the site, Brown had been indifferent to recovery of the land and the litigation had been of a rather perfunctory character.

In the meantime nothing further had been done in the earlier years of the litigation, but after the higher Courts rendered decisions favorable to the State it was deemed proper to make a beginning. The State constitution denied to the Legislature the power to locate or change the seat of government, but required that the law-making body should at its first session after the year 1880 provide by law for submitting to a vote of the people the question of locating the capital, a majority to decide it; and that Denver should in the meantime be the temporary seat of government. The constitution further provided that the Legislature should make no appropriation or expenditure for Capitol buildings or grounds until the seat of government had thus been permanently located by the people. It also stipulates that once located the capital can not be changed or removed without an affirmative vote of two-thirds of the electors.

Therefore, and pursuant to an act passed at the session of 1881, the people voted on the question at the general election held November 8, 1881. Several towns were aspiring candidates, but the vote was overwhelmingly in favor of Denver, as the following figures show: Denver, 30,248; Pueblo, 6,047; Colorado Springs, 4,790; Canon City, 2,788; Salida, 695; the "scattering" vote aggregating 929. So, Denver received almost two-thirds of all the votes.

The General Assembly of 1881 also provided an appropriation of $5,000 for grading, enclosing and otherwise improving the Brown site, but conditioned upon a favorable outcome of the litigation over the ground, and on result of the vote to locate the capital. The act for this purpose was approved on February 11, 1881. On February 18, 1881, another act was approved levying a tax of one-half mill on all the property in the State for a Capitol building fund, and creating such fund as a permanent one. This law is still in operation. With these acts, that Legislature rested from labor on the capital and Capitol question.

The Congressional enabling act had granted the State sixty sections of land for public buildings; fifty for a penitentiary; and seventy-two for general purposes, the proceeds of which were to constitute an internal improvement fund; while those from the public building lands were to constitute a public building fund. By 1883 there was a considerable accumulation of money in the improvement fund from the sale and lease of lands. By an act approved February 11, 1883, provisions were made to go ahead and build something, still further anticipating a favorable result to the State from the litigation with Henry C. Brown. A "Board of Direction and Supervision," of seven members, was created, and of which the Governor was to be, ex officio, a member and Chairman; the others, named in the act, were Allfred Butters, George W. Kassler, E. S. Nettleton, John L. Routt, Dennis Sullivan, and W. W. Webster; and $150,000 were appropriated, ostensibly contemplated as a "loan" from the internal improvement fund, with which to start. The Board was clothed with large discretionary powers and was expected to begin doing something at once. Its first meeting was held on February 24, 1883, at which the organization was completed by electing George T. Clark, who had been one of the pioneer bankers, Secretary.

This act of February 11, 1883, contemplated the construction of nothing more than one wing, to be fire-proof, and built of stone, or of brick and stone; to be completed by December 1, 1884, and "to be so constructed as to form a part of what may finally be a symmetrical Capitol building for the State of Colorado;" limited the cost of the wing to $200,000 and intended that the remainder of the building should be erected at some future time. The act also provided that the Board should at once generally advertise for plans and specifications for the entire building and prepare for work on the wing, which was, in the language of the law, "to be immediately constructed." Another act of that Legislature, also approved on February 11, 1883, provided for an issue of $300,000 worth of fifteen year, six per cent. Capitol building bonds, subject to a vote of the people. The issue was approved at the November election in that year. This act also provided for a levy to meet the bond interest, and for another one to take effect nine years after the bond issue, for a sinking fund, the annual levy for which was to be equal to twenty per cent. of the bonds, and was to continue for five years. Owing to circumstances that will presently be recounted, and as the Board had in hand funds sufficient for preliminary expenses, these bonds were not issued until 1890, when the entire amount was taken by the State Treasurer at par as an investment for school and other public funds in his custody. Therefore, the sinking fund provision did not become effective until the year 1900.

The Board went to work at once, and in March spread broadcast their advertisements for plans, and for specimens of building stone and other materials. Later in the spring the Board visited and inspected the Capitols of several other States, and came home rather discouraged. Nine sets of plans were received, the makers of which concealed their identity behind such assumptions as "Nil Sine Numine," "Common Sense," "Vox," and the like. But none of them were satisfactory; and furthermore, before the summer of that year the Board came to the unanimous conclusion that the "wing" scheme would prove an expensive and probably abortive way to begin the erection of the kind of building Colorado ought to have. Therefore, on June 9th, a resolution was adopted declaring in the judgment of the Board that a "State House for Colorado can not be properly built under the provisions of existing law." It was proposed to call an extra session of the Legislature to at once take appropriate action, but Governor Grant persuaded his associates to leave the whole matter to the next Legislature, which would be elected in November, 1884, and would meet in January, 1885; and to do so was the final decision of the Board.

But the Board did not remain idle in the meantime. Through 1883 and in 1884 many tests and analyses of building stone were made. Titles to the various lots and lands that had been donated to the building fund, were overhauled and, after a great deal of bother and vexation, perfected, and most of the tracts sold, the receipts from them being $93,233. The block of land bounded by Broadway, and Colfax, Lincoln, and Fourteenth Avenues, fronting the Brown site on the west, was purchased from W. S. Cheesman and George W. Kassler for $100,000. This purchase gave the Capitol grounds their present area and also indicated the value of Henry C. Brown's gift of twice as much ground. The thus enlarged Capitol site was surveyed and platted, and the $5,000 appropriated by the act of February 11, 1881, for grading, enclosing and otherwise improving it was expended for those purposes. Something like twenty sets of plans and preliminary specifications had by that time been received and the Board had decided in favor of those prepared by E. E. Myers, of Detroit, Michigan, who was architect of the county Court House. It was from his plans, which were a second time somewhat changed to suit new and better conclusions, that the present edifice was built. The Board had also decided to recommend to and urge upon the Legislature the immediate erection of an entire building, complete, the cost of which should not exceed one million dollars. At the close of 1884, the Board reported the following estimate of resources, "in round numbers," for building the Capitol, the expenditures up to that time having been unimportant:

Cash in Treasury, December 1, 1884	$134,000.00
Internal Improvement Fund, sale and lease of lands, cash	139,000.00
Public Building Fund, sale and lease of lands, cash	20,000.00
From sale of lands donated by citizens of Denver	100,000.00
From bonds authorized	300,000.00
From ½ mill tax for years 1884, 1885, 1886, 1887, 1888, 1889, 1890	407,000.00
	$1,100,000.00

In this estimate the Board, as will be noticed, had in view the transfer of the public building funds that was finally provided for by the Legislature in the spring of 1889.

When the Legislature met in January, 1885, the most important matter with which it had to deal was the Capitol question. There was at that time little doubt of the result of the litigation with Henry C. Brown, and the people wanted a beginning made on the building without further delay. After much discussion through the session, the act approved April 1, 1885, was passed. It provided for a fire-proof building of stone to cost not exceeding one million of dollars, that amount to be expended at a rate not exceeding $200,000 a year, beginning with 1885; and that the edifice be completed and ready for use by January 1, 1890. The law also continued the old members as a "Board of Supervision and Direction," with Governor Eaton, who had succeeded Grant, as Chairman.

But there was still more delay in getting started. Architect Myers was given three months to prepare his plans and specifications, which required some modifications, for construction work; but he fell ill, and they were not ready until January, 1886. Bids for erecting the building were opened February 20, 1886, but all of them exceeded the one million cost limit. Finally, after a minor revision of plans and some whittling on the most favorable bid, the Board concluded, on April 1, 1886, a contract with W. D. Richardson, of Illinois, for erecting the building, complete, for $930,485. After much running to and fro over Colorado, the Board had decided that the Capitol should be built of a white sandstone found in Gunnison county. The contractor was delayed in his preparations and did not begin work on the foundations until midsummer. The work progressed very slowly, and in the spring of 1887 it was discovered that more elaborate foundations would be required than had been planned. An amended contract was made, and soon afterward there were complications with the contractor, who had overdrawn on his work and had become seriously involved, work was suspended and most vexatious litigation ensued. The circumstances of these troubles are not of interest now, but they resulted in the cancellation of Richardson's contract, and the loss of another year's time.

With all these troubles and delays with their accompanying expense, the Board saw that the million dollar limit was bound to be considerably exceeded before the building would be finished and made ready for occupancy. But, on March 27, 1888, a contract was made with Geddes & Seerie, of Denver, to complete the foundations for $59,750. On May 7th a contract for the stone and brick work of the superstructure was made with the same firm, for $700,000.

It seemed that things were now to go forward, but in a very short time there appeared another cause for interruption. The Gunnison sandstone quarry had not been developed, and now upon a working examination both the quality and quantity of available stone fell far short of expectations. When this became known a clamor arose against using sandstone and in favor of granite. The Board willingly responded to this manifestation of public opinion and quickly and fortunately decided that granite it should be, even though it would double the cost of the Capitol. Therefore an arrangement was made with Geddes & Seerie under which they proceeded with their foundation work, and were to let the superstructure contract await the meeting of the Legislature in January, 1889, when authority to incur the increased expense of granite would be asked.

The proposition caused much discussion in the Legislature but it was finally successful. By an act approved April 1, 1889, the Board was reduced to five members, to constitute the "Board of Capitol Managers," and reorganized. The act did not name them except to make the Governor a member and Chairman, ex officio, but it authorized him to appoint his four associates. Governor Cooper who had succeeded Eaton, selected Benjamin F. Crowell, Charles J. Hughes, Jr.; Otto Mears, and John L. Routt. There had previously been a change in the old Board, W. W. Webster having resigned on December 4, 1887, and was succeeded by M. Spangler. There had also been a change in the Secretary in consequence of the death of George T. Clark, November 6, 1888, and he had been succeeded by D. W. Campbell. We may as well add here that Campbell resigned September 1, 1889, and was succeeded by Mr. Herman Lueders, who has continuously and most capably served since that time, and to whom we are indebted for much assistance in the preparation of this Capitol sketch.

This same act acquiesced in the granite proposition, indorsed the change and authorized an increase of expense from the original million to two million dollars; the structure to be built of granite, brick, and iron; these materials and all incidental others to be, so far as practicable, of Colorado production; and the edifice to be finished and made ready for use by January 1, 1893.

Other legislation for the Capitol in the closing days of that session appropriated $20,000 for appropriate landscape improvements and adornments on the fine site; provided for submitting to the people at the election in the following November a proposition to issue $250,000 worth of fifteen-year, six per cent. additional Capitol building bonds; and transferred to the building fund all the accumulations from the land grants then in the public building permanent fund and the public building income fund, and all accretions they might receive during 1889 and 1890. All these provisions turned out well except the bond proposition; that was disapproved by the people at the ensuing November election.

The way having been opened at last for the erection of a magnificent building, new contracts

---

Job Adams Cooper, sixth Governor of the State of Colorado (in the seventh term), was born in Greenville, Bond county, Ills., November 6, 1843, of English and Dutch descent. His father, Charles Cooper, an English manufacturer, came to the United States in 1820, settling first in New Jersey, later in Ohio, and still later removing to Bond county, Ills., where he became a farmer.

In his boyhood, Gov. Cooper attended school at Knoxville, Ills., and afterward entered Knox College at Galesburg, Ills. While at that institution he enlisted in the One Hundred and Thirty-seventh Regiment Illinois Volunteers, under one of the later calls for troops by President Lincoln, and became Second Sergeant of Company C. With his regiment he was serving at Memphis, Tenn., when that city was attacked by the Confederate General Forrest in 1864, and remained in service until the regiment was mustered out.

Resuming his course at Knox College, he was graduated there and then began studying law. After his admission to the Illinois bar, he returned to Greenville, and in 1868 was elected Clerk of the Circuit Court and Recorder of Bond county, serving four years.

Gov. Cooper removed to Colorado in May, 1872, located in Denver, and resumed practice of law, which he continued until the autumn of that year when he engaged in the fire insurance and real estate business in partnership with Peter Winne. In this business partnership, which continued until the autumn of 1876, he acquired important interests in the city and laid the foundations of his fortune. In the spring of 1877 when the German Bank was reorganized as the German National Bank, as related elsewhere in this volume, he became its first Vice President, but before the close of that year was elected Cashier of that Bank. Except during a brief interval he continued as Cashier of the German National until after his election as Governor of Colorado in November, 1888.

Gov. Cooper, an earnest, consistent Republican, had been nominated for Governor by his party, and his election by a majority of about 10,000 occurred on the forty-fifth anniversary of his birth. As Chief Executive of the State, his administration of public affairs was able, faithful and conservative, and when he closed his term in January, 1891, he had the approval and good-will of the people of Colorado.

Gov. Cooper was one of the organizers of the National Bank of Commerce in the summer of 1890, became a member of its first Board of Directors, and was elected its first President. He continued as President of that bank until January, 1897, when he retired from his more active participation in business affairs. He was one of the builders of Denver, and his interests in the city were large and many. The great "Cooper Building" at Seventeenth and Curtis streets, erected in 1892-93, an architectural ornament of the city, was one of his works. He was also interested in various undertakings elsewhere in Colorado and for several years before his death was identified with several important mines in the Cripple Creek district.

Governor Cooper's death at his home in Denver on January 20, 1899, after a very brief illness, caused deep sorrow in the city and State, for he had been a man of much public spirit and had exerted great influence in the development of both. On September 17, 1867, he married Miss Jane O., daughter of Rev. R. E. Barnes, of Galesburg, Ills., and who survives him. Four children, a son and three daughters, were born to them.—J. C. S.

Job A. Cooper.

The Colorado Capitol.

were accordingly made; with Geddes & Seerie for the brick and granite work at $1,171,396.75; with W. J. Godfrey & Co., of Denver, for cast iron columns, at $13,450; and with a Chicago concern for steel beams at $32,875. It was decided that the interior finish should be of hard wood for all woodwork, and of marble for wainscoting and main floors, which part of the work was to be separately and later provided for. The corner-stone was laid on July 4, 1890, by the M. W. Grand Lodge F. & A. M. of Colorado, and upon the basis of the contracts mentioned work was pushed steadily forward by the superstructure contractors without any more changes and without friction between them and the Board of Capitol Managers.

*After the final disposition, in January, 1886, of the litigation with Henry C. Brown, suits had to be brought against some of those who donated lots to the building fund away back in the Territorial days, and they terminated in the State's favor; the subsequent sale of the belated properties adding considerably to the building fund.

In 1890, when it became evident that the finished and furnished cost of the building would greatly exceed even the two millions, there was no way to do but to appeal to the Legislature at its next meeting for authority and financial provision for the unavoidable increase, if the work was to be made complete, harmonious and appropriate in all its details. The Legislature was responsive and by an act approved March 26, 1891, provided for submitting to the people at the ensuing November election a proposition for issuing $300,000 of fifteen-year four per cent. additional Capitol-building bonds. The same act also provided for a special levy to create a sinking fund for their redemption. The issue was approved by the people at the election in November, 1891, and the bonds brought a premium of $3,750.

The men on whom fell the unceasing care, responsibility, and vexatious difficulties involved in all these long-drawn-out proceedings in the earlier periods of the construction of that building, practically gave their services to the State. They were not under salary; the only compensation was that of a per diem allowance, and for actual expenses incurred. The old Board received four dollars a day for time actually employed, until April, 1885, when the pay was advanced to five dollars; and that continued to be the modest allowance until, by the act of April 1, 1889, the old "Board of Direction and Supervision" was succeeded by the Board of Capitol Managers. For the members of the latter, salaries of $2,500 a year were provided, with allowance for travelling expenses; but no expense bill has ever been presented by any member. This arrangement continued until the spring of 1897, when, in consequence of some criticism of the policy of paying such salaries on account of a work that had so long been in progress, the Board recommended to the Legislature the discontinuance of all compensation to its members. Therefore, by an act approved April 12, 1897, the formality of creating a new Board of Capitol Managers to serve without compensation was gone through, repealing the act of April 1, 1889. So, the present members receive nothing for their time and services. The act of 1897 named the members: the Governor, ex officio, (to be Chairman, also); former Governor Job A. Cooper, Charles J. Hughes, Jr.; Otto Mears, and former Governor John L. Routt. They organized April 30, 1897, by re-electing Herman Lueders, Secretary, whose duties go on every day, the salary being $2,000 per annum.

There had been no change in the Board of 1889 until November 13, 1895, when Benjamin F. Crowell resigned. Governor McIntyre appointed former Governor Cooper to succeed him. John L. Routt resigned June 1, 1897, after the abrogation of salaries, and George Tritch succeeded him. Job A. Cooper died January 20, 1899, and was succeeded by George W. Baxter, former Governor of Wyoming. Upon the death of George Tritch, October 8, 1899, Joseph A. Thatcher became a member. The Board now consists of the Governor, Baxter, Hughes, Mears and Thatcher.

Mr. Herman Lueders, who, for so many years has been the Secretary of the Board, prepared for this work the following summarized statement of the financial transactions in connection with the Capitol building from the beginning of construction work upon it to December 1, 1900:

Expenditures on building	$2,553,737.60
On grounds	60,000.00
Furniture	101,624.55
	$2,715,362.15
Maintenance, six years	195,637.42
Total expenditures	$2,910,999.57

Cash receipts to December 1, 1900—

Collections, ½ mill tax	$1,512,222.11
Sale of donated lands	125,233.00
Sale of bonds	600,000.00
Premiums on bonds	5,717.00
Transfer public building income fund	20,066.74
Transfer public building permanent fund	63,618.67
Loan from internal improvement fund	150,000.00
Total	$2,476,857.52

Disbursements to December 1, 1900—

Warrants redeemed	$2,325,259.50
Interest on redeemed warrants	85,689.08
Interest on bonds	53,060.00
Cash on hand	12,848.94
Total	$2,476,857.52

Warrant Account—

Total of warrants issued to December 1, 1900	$2,910,999.57
Warrants redeemed	2,325,259.50
Warrants outstanding	$585,740.07

In ground-plan dimensions, including structural approaches, the building is 383 feet long and 313 feet wide. It has cost more than the later estimates contemplated; a result not unusual. Though it was last specified to be completed by January 1, 1893, it was not quite finished at the close of 1900; there having been many unavoidable delays on the interior work. However, the last of the finishing touches will soon have been given, and then the structure will represent a total outlay, including maintenance, of about $3,000,000. It was far enough advanced toward completion for the State executive officers to occupy quarters in it in the autumn of 1894 and for the Legislature to meet in the fine chambers provided for the two houses, in January, 1895. We have entered somewhat at length into the details of its history, but perhaps the prominence and importance of the building in and to Denver, and the rather extraordinary circumstances associated with its inception and construction, are sufficient warrant for having done so.

Our Capitol with its great, lofty dome; massive walls, columns and portals, is an exceptionally handsome, dignified and well-proportioned edifice; few structures in this country are more pleasing in their aspects than it as it stands there on its commanding site in a splendid park that each passing year will make more beautiful. The granite of which it is built was quarried on Beaver creek, in Gunnison county, and is of remarkably even color; a soft shade of gray. The stone is also of unusually uniform texture and free from discoloring substances that so often stain and disfigure under the action of the elements. Furthermore, it is an honestly built structure, the State having received full value for every dollar expended on it. An unique matter of detail is its system of white and colored incandescent electric lights—from its own electric plant—by which the dome and roof-lines may be illuminated outside at night. Upon gala occasions when the building is so illuminated the effect produced is brilliantly beautiful. It would seem that a structure so stately, so dignified, so harmonious in all its lines and effects, should inspire higher, nobler and better things than some of the legislative performances that have been enacted within its walls.

While the Legislatures of Colorado have, no doubt and in the main, averaged well with those of other States, there has been in recent times a tendency, which late events indicate will soon have proved a mere transient ebullition, to incorporate various idiosyncrasies into State laws—alleged and so-called "freak legislation." The Ninth General Assembly, "Governor Waite's Legislature," is painfully memorable for that kind of work. As to which, thus far, proved the best Legislature in the State's history, opinions are at variance; but as to which made a record, entirely outside the evils of "freak legislation," as having been the worst, there is a remarkable unanimity of public sentiment and memory in favor of the Seventh, which succeeded in attaining the distinctive title of "the Robber Seventh."

CHAPTER LI.

STATE INSTITUTIONS—UNIVERSITY—AGRICULTURAL COLLEGE—SCHOOL OF MINES—NORMAL SCHOOL—SOLDIERS' AND SAILORS' HOME—INSTITUTE FOR BLIND AND MUTE—ASYLUM FOR INSANE—HOME FOR DEPENDENT AND NEGLECTED CHILDREN—INDUSTRIAL SCHOOL FOR BOYS—INDUSTRIAL SCHOOL FOR GIRLS—STATE REFORMATORY—PENITENTIARY—COLORADO'S VAST DOMAIN—CONSPICUOUS FEATURES, CLIMATE AND RESOURCES—AGGREGATE VALUES OF PRODUCTS—POPULATION—FINANCES—THE FUTURE.

The public institutions of Colorado, considering that the State is but a quarter of a century old, are, in the highest and widest sense creditable to the liberality and broad-mindedness of her people. They take rank with those of many older States and are entitled to be reckoned among the best, if not the largest, of their kind.

The Colorado State University at Boulder is truly all that its name implies—an university of learning. It was founded under the Territorial government but its development was not put well under way until the Territory became a State. Its control and direction are vested in an elective Board of Regents consisting of six members whose terms are six years, two being elected biennially. The University buildings are of modern types and every department is completely equipped for its purpose. The faculty includes some of the ablest educators in the country, and the University is one of the great and successful educational institutions of the west. The enabling act under which Colorado was admitted as a State contained very liberal provisions for schools. It provided that two sections of land in every township be reserved to the State for school purposes. Of this large grant the State still holds unsold 3,345,953 acres, of which 1,100,058 acres are now under lease, the income therefrom in 1900 having exceeded $70,000. These holdings embrace much valuable mineral and fine agricultural land. The proceeds of sale of school lands by law constitute a permanent school fund, the interest from which, only, to be expended for the support of public schools. To the interest is added the income from the leased school lands. In addition to this general school grant, Congress set apart seventy-two sections for the support of a State University. Tuition at the University, as at the State's other educational institutions, is free.

The University was incorporated by an act of the Territorial Legislature of 1861, and the location fixed at Boulder. In 1871, three public-spirited citizens of Boulder gave the University fifty-two acres of land adjoining the city, valued at $5,000. In 1874, the Territorial Legislature appropriated $15,000, and the citizens of Boulder contributed a like sum in cash. In 1876, the Constitution of Colorado provided that upon its adoption the University at Boulder should become an institution of the State, thus entitling it to the lands appropriated by Congress, and further made provisions for its management and control. The First General Assembly of the State made provision for its permanent support by the levy of a tax of one-fifth of a mill upon all property in the State; also, for a fund to be obtained by the sale of lands granted by the United States. The institution was opened in September, 1877. In 1878, the General Assembly appropriated $7,000 for apparatus, furniture, and so forth. In 1883, the General Assembly provided a special fund by a tax levy of one-fifth of a mill, for the years 1883 and 1884, yielding about $40,000. This fund was expended for apparatus, furniture, additional buildings, and for the improvement of the grounds. The University is maintained by the tax-levy of one-fifth of a mill on the assessed valuation of the property of the State. In 1891, a special appropriation of $30,000 was made. This was expended for the erection of the Hale Scientific Building. In 1893, the General Assembly appropriated $34,000 for buildings and grounds, and granted an additional one-tenth of a mill to the income of the University for one year. In 1895, the General Assembly, in addition to the regular one-fifth mill, voted a special appropriation of $40,000. In 1897, the special appropriation was $40,000, and in 1899, a special appropriation of $110,000 was voted.

The University of Colorado is the culmination of the public school system of the State and is maintained by the State to provide, at a minimum cost, higher and professional education for those graduated in the High Schools. It enables them to pursue their studies to any extent and in any direction they may choose. The departments of instruction in the University are comprehended under the following-named divisions: College of Liberal Arts, embracing classical, philosophical, scientific, and literary courses; the Graduate School; School of Applied Science; School of Medicine; School of Law; School of Music; and the Preparatory School. In high standards and in all that pertains to true University dignity the University of Colorado ranks with such State Universities as those of Michigan, Wisconsin, and California.

The State Agricultural College, which had its beginning in Territorial times, also, is at Fort Collins, in one of the finest of Colorado's agricultural districts. Three citizens of that place donated to the Territory two hundred and forty acres of land adjoining the little city, and on it commodious and handsome buildings were later erected, fully equipped for the work of the institution. Their surroundings have been made exceedingly attractive by shade trees, lawns and gardens. The first State Legislature, made liberal provisions for the support of the college and the erection of new buildings, and it was placed on a substantial basis by 1879. Under an act of Congress of August 30, 1890, the College receives from the United States government an income of $15,000 annually, to be increased by $1,000 a year until it reaches $25,000, when it is to remain permanent at that sum. The design of the institution is to afford thorough instruction in agriculture and the natural sciences connected with that pursuit, which is imparted in its several departments: agriculture, horticulture, botany, chemistry, geology, zoölogy, and entomology; mechanical, civil and irrigating engineering; and in addition to these there is a thorough scholastic course. Inasmuch as agriculture in Colorado depends on irrigation, especial attention is given to the theory and practice of the best methods of applying water to different soils, as it is not a hap-hazard undertaking to be properly done without knowledge, training and experience. The college also maintains four experiment stations which are in useful operation. It was more especially for these that Congress endowed the College with the income above-mentioned.

The State School of Mines at Golden, founded by the Territory, though not a large institution, is one of the most efficient in the country and of great usefulness to the various and varied mining industries of Colorado. It is a thorough technical school and prepares its students for intelligent theoretical and practical prosecution of mining in all its branches; for Colorado mining includes nearly every kind of operations involved in the development of mineral resources.

The State Normal School is located at Greeley where it was opened in 1890. Its career as a college for properly preparing teachers for the duties of their calling has been as uniformly successful as its work has been thorough.

The public school system of Colorado is as nearly perfect as that of any other State of the Union. In proportion to population it outranks that of many older States. In 1900 the expenditures for public schools approximated $2,900,000, of which sum nearly $1,600,000 represented salaries paid, the total having been about $385,000 greater than the expenditures in 1899. According to the school census of 1900 there were then 158,142 children of school age in the State, an increase of 10,756 over 1899. The school enrollment in 1900 was 120,846; an increase of 9,252 over that of 1899. During the biennial period, 1899-1900, 126 new school buildings were erected in the State, including several fine structures for High School purposes.

The Soldiers' and Sailors' Home, three miles east of Monte Vista, was established by an act of the Legislature approved March 15, 1889, and subsequently amended. Its 120 acres of land was donated by the citizens of Monte Vista and the State made the improvements which include a half-dozen buildings all constructed of stone. The law admits to the Home all honorably discharged soldiers and sailors, and even those dependent on them, who have been residents of the State for one year preceding the time of application for admission. The Home's population varies between summer and winter, but with so decided a tendency toward future increase that additional accommodations are to be provided. At the close of 1899 there were about 150 persons being cared for there; and on December 1, 1900, the number was 139—a temporary slight reduction.

The Institute for the Blind and Mute, which is chiefly educational in its purpose, was a heritage from the Territory, and is located at Colorado Springs. Its beginning was authorized by an act of the Territorial Legislature in 1874. By an act approved March 15, 1877, the State made more ample provisions for it. Since then the State has been very generous in its maintenance of this school which has resulted in a most efficient institution, provided with a strong corps of instructors, good buildings and a fairly liberal amount of equipment. At the close of 1899 the institution had nearly 100 pupils, the number varying somewhat with the seasons; and on December 1, 1900, they numbered 187. The school and its inmates are especially the objects of the considerate regard and attention of the people of Colorado Springs.

The State Asylum for Insane is at Pueblo. The buildings are of modern construction and provided with everything that would contribute to the comfort and well-being of the unfortunates the institution shelters and cares for; and it is conducted on an enlightened basis of humanity and helpfulness. At the close of 1899 there were 316 male and 177 female patients in the institution, and on December 1, 1900, the inmates numbered 507. The Asylum was established by an act of

13. Woodbury Hall.

the Legislature approved February 8, 1879, and one large building was built for it. The Legislature of 1893 directed that all additional buildings erected for the Asylum's purpose should be of moderate size and upon the "cottage plan," and that separate quarters be provided for the criminal insane. The record of the institution for good management is, with one exception, an excellent one. In 1899 a brief departure from that basis raised a storm of public indignation that quickly resulted in a change of administration of its affairs.

The State Home for Dependent and Neglected Children is of comparatively recent origin, having been established by an act of the Legislature approved April 10, 1895. It is located in Denver—on Bert street, "North Denver"—in rented quarters, but preparations are under way for providing two adequate and modern buildings, one for each sex, on a tract of land near the city. At the close of 1899 this institution sheltered forty-seven boys and twenty-seven girls; and on December 1, 1900, it had ninety-three inmates. The home is intended only as a temporary refuge for these waifs, permanent homes being found for them among the people whenever opportunity offers for that disposition of them.

The State Industrial School for Boys, at Golden, was established by an act of the Legislature approved February 12, 1881, and opened in June, 1882, on the old Jarvis Hall premises bought by the State. Good buildings have been added from time to time until the school is now well-equipped for its purposes, and there are about sixty-five acres of land belonging to it. This Industrial School is intended for the reclamation, education and manual training of wayward boys too young to be regarded and treated as criminals. It demonstrates every year its great usefulness to society and to those who receive the benefits that it freely imparts. At the close of 1899 there were about 125 boys at the School, but the number is varied as terms expire and new ones are begun. On December 1, 1900, its inmates numbered 182.

The State Industrial School for Girls is at Denver, and was established by an act of the Legislature approved April 4, 1887. Until recently it occupied rented quarters in the town of Aurora east of the city, being intended for the reception and reformation of girls convicted of offenses against the law, who were formerly sent to the Golden reform school; and has been one of the most troublesome of all the minor institutions to manage. On December 31, 1899, it had forty inmates, and on December 1, 1900, the number had increased to fifty-four. In April, 1900, a farm of forty acres three miles west of Fort Logan was purchased as a permanent home for the School, and it is anticipated that the institution will hereafter be more readily kept to a higher standard.

The State Reformatory at Buena Vista was established by an act of the Legislature approved April 19, 1889. It is for the reception of men and boys convicted of their first criminal offenses and to them a very liberal parole system is open. The institution has a large tract of land and is provided with good buildings. The inmates are kept busy every work day at farming, gardening and shop work, and the Reformatory is justifying its right to that title. At the close of 1899 it had 85 inmates, and on December 1, 1900, 115.

The State Penitentiary is at Canon City, where it was established by an act of the Territorial Legislature approved January 7, 1868. Some of the buildings still in use were erected during Territorial times, but most of them, on the now much enlarged tract of land, were built by the State as increased demands made larger accommodations necessary. The rules of management and discipline are laid down on humane lines, and are intended to better the moral and physical condition of those whose offenses against society have placed them under the ban of the law and within the prison's gates. At the close of 1899 the institution contained 536 men, and five women, prisoners; and on December 1, 1900, the prisoners numbered 590. Unfortunately, under existing law limiting prison competition with "free labor," a very large proportion of the prisoners are kept in idleness. Some stone is quarried, and brick and lime made, but aside from the limited amount of that kind of work available, the other employment for the prisoners is gardening and farming on the prison land, and routine duty in and around the institution.

The State's military establishment is, in proportion to population, abreast of that of other States. As related in a succeeding chapter, it became somewhat disorganized in consequence of a large part of it having been merged in Colorado's quota of volunteers for the Spanish war. Its re-organization immediately followed, and it now consists of two regiments of infantry of 476 and 421 men, respectively; with a total enlistment of 897. In addition thereto there are three troops of cavalry numbering 155 men, a battery of artillery with sixty-one men, a medical department with twenty-six men, and a signal corps of eleven men. This force, of which the artillery, two troops of cavalry, and four companies of infantry are in Denver, is well disciplined, armed and equipped, and is maintained at a high standard of efficiency. For purposes rather more ornamental than warlike, the Governor has a military staff of thirty-four officers —mostly "Colonels;" and the brigade and Quartermaster's staffs number, respectively, five and four officers.

In preceding chapters we have made some account of the historical geology of Colorado; of its pre-historic peoples; Indian tribes; native animals; the assumed desert-like conditions of its plains and the forbidding aspect of its mountain regions; early explorations by Spanish adventurers; derivation of its territory; explorations by authority of the United States; occupation by white hunters and trappers; discoveries of gold and ensuing settlement of the country; and of various collateral events; therefore, it is not essential that we further refer here to these subjects.

Geographically Colorado lies between the 102nd meridian of west longitude on the east and the 109th meridian on the west; and the 37th parallel of north latitude on the south and the 41st parallel on the north; these boundaries outlining a parallelogram. The difference in solar time between the east and west lines of the State is twenty-eight minutes, and the geographical center of the area is at a point three miles north-northeast of Spinney station on the Colorado Midland Railway, in Park County.

Politically the State is bounded on the north by Nebraska and Wyoming, on the west by Utah, on the south by New Mexico, and Oklahoma Territory, and on the east by Kansas and Nebraska. It embraces 103,645 square miles, or 66,332,800 acres —a great empire within itself. The State's area is equal to fifty-four States like Delaware, twenty-two and one-half like Connecticut, thirteen and one-fourth like Massachusetts, two and three-tenths like Pennsylvania, and about two and one-half like Ohio. About two-fifths of its area is of the great plains to the eastward of the Rocky Mountain foothills; the remaining three-fifths being mountainous and of wonderful grandeur and beauty.

The vast, rolling plains, once the ranges of countless hosts of buffalo, antelope, and other native animals, are destitute of natural-growth timber, except fringes of cottonwood trees along the banks of the streams. But the natural treelessness of the landscape is fast being relieved by the growths planted and cared for by the new people who came in and occupied the land. The persistent natural verdure of the plains consists of the bunch-grass which sustained the buffalo, of many flower-bearing annuals commonly called "weeds," and a variety of cactus growths in which there is no known value. By midsummer, usually, the vegetation has matured and turned to a grayish-brown which gives to the great reaches of land an aspect of desolation. Nevertheless, the dry bunch-grass is nutritious and fattens the herds of domestic beasts that have succeeded their aboriginal kindred. Any part of this plains region can be made to yield bountiful crops by irrigation. Indeed, the extent to which these vast areas of land can be tilled is limited only by the supply of water that may be conveyed to them by artificial means. Large sections along the eastern border of the State, where rainfall is more frequent than in the belt intermediate to them and the mountains, are under successful cultivation without artificially conveying water to them.

About four-fifths of Colorado has an elevation ranging between 4,000 and 10,000 feet above sea level. The lowest point to the eastward of its limits is 3,703 feet above the sea; and in the west the lowest point is 4,435 feet above. The summit of the main, or dividing, range averages about 11,000 feet. There are seventy-two peaks in the State which rise to heights ranging between 13,500 and 14,500 feet; the loftiest being found in the Sierra Blanca, part of the ramparts of the San Luis Park, with an elevation of 14,483 feet. On these towering summits snow lies throughout the year and is always visible except when wrapped in the mists of clouds that sometimes enfold the monarch eminences of the ranges.

The main, or dividing, range of the Rocky Mountains traverses the State from north to south approximately through the middle, but in the general vicinity of Denver it bows to the east until the "divide" approaches to within fifty to sixty miles of the city, Long's Peak being one of its conspicuous local features. The central belt of mountain region extending from north to south presents aspects that give it rank with the most magnificent mountain scenery in the world.

The so-called "parks" in the mountains constitute a feature of Colorado topography that is unique. These "parks" are level areas walled in by great mountain ranges with here and there a water-worn pass or canon opening a way through to them. When in ancient geological times the mountain ranges were uplifted, these park areas appear to have been elevated without the disruption going on around them, and became the beds of isolated lakes or seas. As surplus water found its way over the rim of the surrounding barriers, it gradually scoured out deeper canon channels until the seas, or lakes, were drained and their beds left to become, as vegetation advanced, places of great beauty and fertility. There are four of these "parks"—the North, Middle, South and San Luis, all lying in the area of the great ranges, and in the order as named, the North Park being the first south of the Wyoming line. Their elevations range between 7,500 and 8,500 feet, but some of the rocky ramparts enclosing them are a mile higher. The soil is extremely fertile and produces abundant crops of cereals, fruits and vegetables. In their native conditions these distinctive, picturesque and beautiful features of the mountain sys-

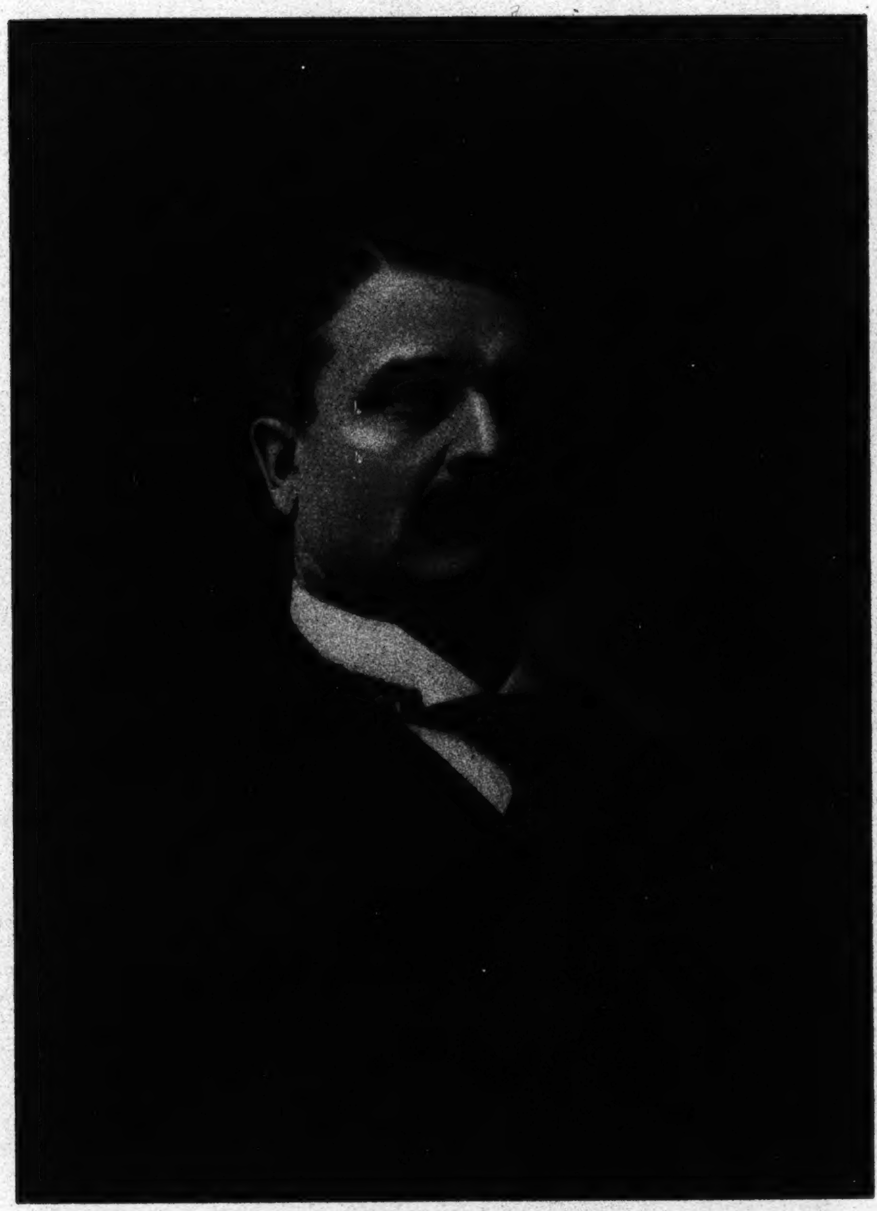
---

James B. Orman, tenth Governor of the State of Colorado (in the thirteenth term), was born in Muscatine, Iowa, November 4, 1849; his parents removing thence to near Winterset, that State, in 1858. After four years spent in the schools of Chicago, he returned to his father's farm, and until 1866 was there engaged in farming and stock-raising.

Governor Orman crossed the plains by stagecoach and became a citizen of Colorado in 1866, first locating in Denver. Here he engaged in dealing in draft animals, and during the ensuing two or three years transacted a large business. In 1869, when the era of railroad construction in Colorado opened, he, in partnership with his brother, W. A. Orman, took the contract to build the Kansas Pacific road from Sheridan, Kan., to Denver; and it was by them that the famous and extraordinary feat in rapid construction of a railroad, mentioned in our history of that road, was accomplished. The successful results of that contract decided Governor Orman's future business career, and since that time, in various partnerships of which he has been in most instances the directing member, he has uninterruptedly been identified with the construction of many railroads in the western States and Territories, built part of the Canadian Pacific, and has had much to do with the physical creation of nearly every system of roads in Colorado.

Early in the Seventies, Governor Orman acquired large real estate interests in Pueblo, and then made that city, as it has ever since been, his home. Increasing his real estate holdings there in later years, he became a leader in the development of that city, which, with the results of his railway building, enriched him. On his own account, and in some instances in association with others, he erected many buildings in Pueblo, including the large opera house and several fine business blocks; in 1879 projected and began building the city's present extended system of street-railways; participated in the organization and is a director of several of Pueblo's financial institutions; an organizer and directing spirit of large ditch and irrigation companies in the southern part of the State and owner of extensive ranche properties there devoted to stock-raising; a stockholder in and director of several important manufacturing establishments; and interested in various other public and private enterprises in that city. For a long series of terms he was a member of the Pueblo City Council, and more recently Mayor of the city. These various activities, in most of which he still retains his interests, and his broad public spirit, have made Governor Orman a conspicuous figure in the upbuilding of Pueblo and the development of the southern part of the State.

In politics a life-long Democrat, Governor Orman was, in 1880, elected Representative from Pueblo county in the Third General Assembly, and in 1883 a member of the Senate of the Fourth General Assembly. In the session of 1883 when a United States Senator was to be elected he became the unanimous choice of the Democratic minority in that Legislature for that position. In 1900 he was nominated by his party as its candidate for Governor of the State; his candidacy was indorsed by the Silver Republican and the People's parties, and in November of that year he was elected by a majority of 24,594 over Frank C. Goudy, the Republican candidate. He was inaugurated Governor of Colorado in January, 1901, for the term ending in January, 1903.—J. C. S.



James B. Orman.

tem were covered with verdure, watered by many small, winding streams, and were the favorite haunts of thousands of elk, deer and other wild creatures. Under the changes wrought by agriculture the aspects presented in these "parks" are even more charming than those of their original, undisturbed natural condition. The North Park embraces about 850 square miles, the Middle about 750, the South about 400, and the San Luis about 5,000. The drainage of the North Park is to the east by way of the North Platte; that of the Middle to the Pacific by way of the Grand and Colorado rivers; that of the South to the east by way of the South Platte; that of San Luis to the south by way of the Rio Grande.

The altitudes (in feet) above sea level of the cities and more important towns of Colorado are as follows:

Alamosa	7,516	Greeley	4,779
Aspen	7,910	Gunnison	7,680
Black Hawk	7,975	Idaho Springs	7,515
Boulder	5,184	Lake City	8,604
Breckenridge	9,497	Leadville	10,200
Buena Vista	7,970	Littleton	5,354
Canon City	5,344	Longmont	5,004
Caribou	9,905	Loveland	5,030
Central	8,516	Manitou	6,383
Colorado Springs	6,000	Meeker	6,491
Creede	9,200	Montrose	5,847
Cripple Creek	9,396	Morrison	7,963
Del Norte	7,880	Nederland	8,263
Delta	4,963	Ouray	7,705
Denver	5,197	Pueblo	4,713
Durango	6,520	Red Cliff	8,871
Fairplay	9,965	Rosita	8,500
Fort Collins	4,966	Saguache	7,620
Fort Garland	7,936	Silver Plume	9,219
Georgetown	8,419	Silverton	9,300
Glenwood	5,770	Telluride	8,800
Golden	5,668	Trinidad	6,005
Grand Junction	4,594		

The elevations of the more prominent mountain passes, and those of the mountain parks, lakes and medicinal springs are as follows:

Argentine Pass	13,281	North Park	8,500
Berthoud Pass	11,350	Pagosa Springs	7,100
Boulder Pass	11,670	Palmer Lake	7,650
Chicago Lakes	11,500	Poncha Pass	9,061
Estes Park	6,810	San Luis Park	7,620
Fremont Pass	11,329	Steamboat Sp'gs	6,781
Grand Lake	8,153	South Park	8,842
Green Lake	10,400	Tennessee Pass	10,143
Hot Sulphur Sp'gs	7,715	Twin Lakes	9,333
Loveland Pass	11,876	Veta Pass	9,399
Marshall Pass	10,858	Wagon Wheel Gap	8,449
Middle Park	7,750		

A well-made topographical map of Colorado entering much into details, shows a net work of rivers and their branches. So many of these are revealed by such a map that the observer guided by it alone would conclude that no part of the State can be arid. Unfortunately a large majority of these minor streams which are made to appear traversing the plains, are dry beds through that part of the year in which water in them would be of the greater benefit. From the eastern slopes of the great ranges flow the South Platte and the Arkansas rivers, each having many tributaries but few of which maintain fair standing throughout the year. Following occasional torrential rains most of them fill and overflow their banks and then as quickly subside, causing alternating feasts and famines of water. The small streams putting out from the mountains are more consistent, being maintained the year round by melting snow, and carrying sparkling water of remarkable purity. On the western slope the Grand and Gunnison rivers drain that side of the State with the assistance of innumerable tributaries fed by melting snow, and which, therefore, unlike their kind on the plains, do not become dry beds in the summer season of the year. The Green river enters the northwest corner of the State and then, after receiving the waters of the attenuated Yampai, abruptly changes course and returns to Utah. The central-southern area of the State is drained by the uncertain Rio Grande which in no part of Colorado becomes a stream befitting the name it bears. Here and there through the mountain districts are many beautiful locked-in lakes and lakelets of water as clear as crystal and as cold as the snowy sources from which it came. These gems in their settings of towering granite peaks, their shores green with verdure, and their waters gleaming in the sunlight or slumbering in the mellowed radiance of the moon, form pictures of inspiring grandeur and exquisite beauty.

Mineral springs, the waters of which are found highly beneficial to all who drink them, abound in the mountains of Colorado. The waters exist in almost every variety of composition and temperature—some as low as forty degrees Fahrenheit, while others run up nearly to the boiling point. Chemically they carry a great variety of minerals, from the gentlest soda to the most pungent salts and powerfully odorous sulphates. While much has been done to develop them and to provide means for their utilization, the coming years will doubtless bring a greatly enlarged development. The Manitou springs at the base of Pike's Peak are the oldest to our people. Others that have later come into prominence for their medicinal values, are those of Idaho Springs, Glenwood on the west slope, Poncha at the foot of Marshall Pass, the Hot Sulphur Springs in the Middle Park, the Mount Princeton hot springs near Buena Vista, and the Liberty Springs at Wagon Wheel Gap. There are many others of lesser renown, but probably of equal virtue. The natural provisions and opportunities for "health resorts" and "summer watering places" in Colorado, are to be numbered by hundreds, and are surrounded by Nature's grandest handiwork.

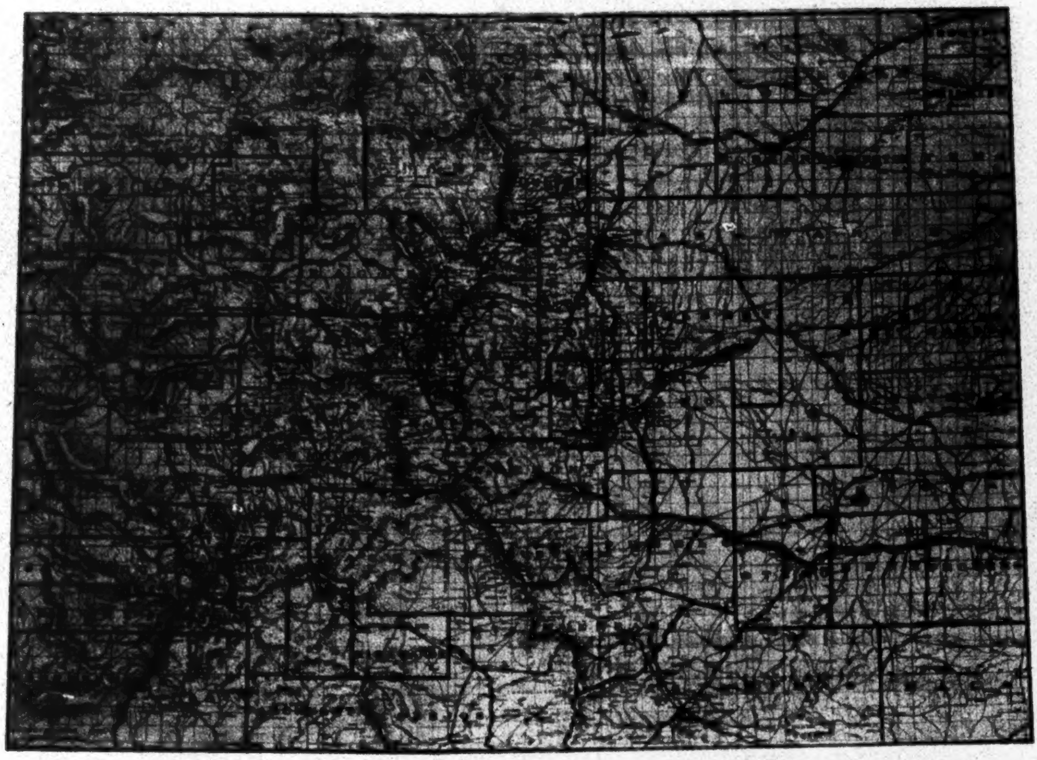
The climate of Colorado is justly entitled to most favorable consideration. It is remarkable for its salubrity and healthfulness, being dry, mild and genial. Fogs are rare visitors, and the heavy, damp, chilling days so often experienced in lower lands, are unknown. The recorded extremes of summer heat and winter cold do not vary much from those known in the States of the same latitude bordering the Mississippi river, but there are few of the personal discomforts here that attend them there. Midsummer heat of 96 degrees is not rare in Denver, and winter cold indicated by temperature lower than twenty degrees below Fahrenheit zero is of record in numerous instances. However, the summer heat is not oppressive, and in the shade the air is always refreshingly cooler. The sun's direct rays streaming down from a cloudless summer sky seem and are hotter than in lower levels, because the thinner air, destitute of moisture, does not intercept and absorb them; the air does not become heated. The summer nights are never sultry, no matter what the temperature of the day may have been, and restful slumber is never prevented by what is known as "closeness" in lower altitudes. The absence of humidity largely reduces the ordinary discomforts arising from summer heat, and prevents its dangers. Sunstroke is unknown in Colorado. The winters have their disagreeable periods—these usually in February and March. Extreme cold is not attended by great discomfort—it does not chill, nor induce sluggish circulation. The pure, dry, invigorating atmosphere is the preventive. Excessive cold is of short duration, and even in winter the sun is seldom obscured throughout the day. There is an unofficial record of an entire year late in the "Sixties" without one sunless day. About three hundred days in every year dawn with bright sunshine, and most of these continue cloudless to their close. The winters are marked by heavy snows in the mountains, but ordinarily these do not prevail over the plains. High winds bring the most disagreeable conditions of the Colorado climate, because they so frequently become "dust-storms." The dryness and peculiar character of the soil cause the air to be laden with dust in times of high wind, with exceedingly disagreeable consequences. But these "dust-storms" do not often occur. The tornado and cyclone are strangers in Colorado, and the "blizzard" and "norther" almost so. Winter rains rarely come and as a rule snow on the plains soon disappears. Much the greater part of the annual rainfall occurs in May and June, with May receiving the larger share. Many exaggerated views of Colorado's climate have been reduced to print and sent forth over the world, describing it to be as perfect all the time as some ideal day in Italy. We have many ideal days, a far greater proportion than will be encountered in any other State of the Union; but we have some that are not ideal. However, those falling below the standard do not depart far from it and, as the standard is a high one, their departure from it does not seriously affect the extraordinary climatic salubrity and gentleness that prevail in Colorado.

It would be a waste of time ending in useless results for any one to attempt to express in figures the values of all of Colorado's natural resources. The chief obstacle would be found in the fact that some of them are undeveloped and known only by surface indications; while of others a beginning, only, of their development has been made. Mining of gold and silver has progressed further, relatively, than any other industry. Large areas of territory are still in a state of nature. A region in the northwestern corner of the State, nearly as large as the State of Indiana, remains practically undeveloped. No one can say what various sources of wealth exist there; only time and toil and the application of capital will reveal its secrets.

In the beginning and for years afterward, mining the precious metals received the attention of Colorado people almost to the exclusion of everything else. While it still retains its commanding position and will probably continue to do so, some other industries of the State have attained a conspicuous development. Mentioning the latter in order of their present importance they would stand about as follows: agriculture, general manufacturing, stock-raising, coal mining, iron and steel production, horticulture, timber and lumber production, quarry products, and petroleum products.

In the present fifty-seven organized counties into which the State is sub-divided, gold and silver are found in varying quantities in forty of them; iron, copper, lead, and zinc in thirty-seven; aluminum in five; what may be termed the chemical minerals, in thirty-one; what may be termed commercial minerals, in every one of them; what may be termed structural minerals, in twenty-eight; precious stones of the second and inferior grades, in thirty-three; with agriculture successfully conducted in fifty-four.

The pioneers of Colorado did not anticipate that agriculture, the noblest of all human occupations, would ever attain any importance. Indeed, few of them believed that anything beyond buffalo grass, wild flowering plants, and the several native varieties of cactus and their kindred, would grow from the soil. They were astonished by the appearance of a few fine stalks of wheat that had sprung from vagrant seeds in a Denver garden, and later heard reports of home-grown fruit with incredulity. To this day the stranger entering Denver by way of the railroads traversing the country directly between the city and the Kansas line, has little faith in the agricultural resources of the State. He naturally forms his conclusions from the evidence afforded by the treeless, comparatively barren, and little watered region through which he

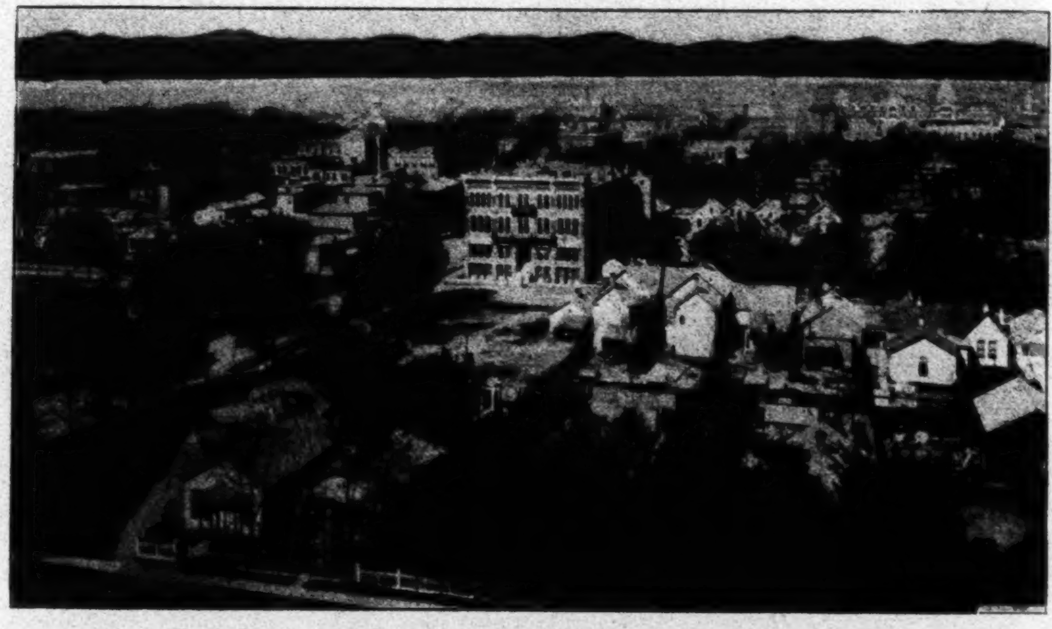


Punnett Bros'. Map of Colorado, 1900.

has passed. Lying directly east of Denver for a distance of nearly a hundred miles, is a zone of territory that has had little agricultural development, and awaits irrigation. The impression produced by it in the traveler's mind is one of dreariness, desolation and hopelessness. Fine farms, comfortable country homes, and the thrift of rewarded husbandry disappeared when he entered that zone, and when he reaches and views Denver he is at a loss to understand how so large and busy a city grew and is sustained by so poor a country as that through which he passed in getting here. The railways directly to the east from Denver do not traverse sections yet developed for agricultural purposes, and their ways are not through inviting places. The farms of Colorado are along the larger streams, the South Platte, the Arkansas, the Cache-le Poudre and their tributaries; and in the mountain parks and valleys. Nearly all of a broad belt along the base of the foot-hills is under cultivation; the valley of the Arkansas river and the valley of the Rio Grande are busy and fruitful farming regions; on the headwaters of the San Juan, along the Uncompahgre and the Gunnison, and in the valley of the Grand are more. Wherever there are soil and water or wherever water can be taken in ditches, fine harvests reward the planter and sower; and there are now 2,600,000 acres of irrigated land. The land, even that on the plains, is of remarkable fertility under irrigation and may be tilled with less than the usual amount of labor bestowed on growing crops elsewhere. The cereals yielded are of superior quality; fruit and vegetables are produced in surprising quantities. Fifty bushels of wheat to the acre are not unusual; one hundred bushels of potatoes make the average crop, while from five to six hundred have been known; the harvest of fruit is usually limited only by the ability of the trees and vines to bear their burdens. Alfalfa, the principal hay crop, permits two and frequently three cuttings a year, and produces in that time from four to six tons to the acre. The growing of fruit and the fruit-vegetables has reached fairly large proportions; there being now about 40,000 acres planted to various fruits, the crop value of which in 1900 was conservatively estimated at $3,000,000. All the berries yield profusely, while apples, peaches, plums, nectarines, apricots, pears, and cherries bend down the trees on which they grow. The melon crop has become an annual event and its fame has gone abroad over all the country. Hundreds of carloads are annually marketed east of the Mississippi river. We shall not burden these pages with statistics which will be displaced by the increase of the following year, but it may be worth while to state that the annual value of Colorado's general agricultural products, exclusive of live-stock, has reached a point approximating $35,000,000. The great factor in this result has been irrigation, and its work may be said to be only fairly begun. There are upward of 15,000 miles of irrigating ditches in the State, and these are being added to every year. The later ones are projected on larger plans and serve larger areas, so that each succeeding year will bring under cultivation many thousand acres of the wonderfully fertile soil of Colorado. As these water ways are carried farther and farther the increase in verdure may be expected to prevent much of the evaporation now occurring, and incidentally to induce more frequent showers on the drier portions of the plains. Every irrigated section will quickly become like a blooming garden, and every acre of newly watered soil will return its owner a rich harvest. In 1898 the cultivation of the sugar beet was introduced in the State and the experimental crops yielded under analysis an unusual proportion of sugar. This resulted in a determination to establish the sugar industry in Colorado, and it has had a remarkably quick development. Of this, a few figures are permissible. Three large refineries have already been erected and two others are planned for 1901. Upward of $1,500,000 have been invested in the business, and in 1900 about 7,000 acres of land were planted to beets producing more than 60,000 tons that yielded about $350,000 to the growers. Something like 12,000,000 pounds of sugar were produced. The new town of Sugar City in the sugar beet district of Otero county has a population exceeding 1,000, though it is not yet two years old. It is now too early to record large practical results from this addition to the agricultural resources of the State, but it may be said that the industry promises to be a very important one. When it is considered that Colorado is but forty years old, and that first convictions were so much adverse to agricultural possibilities, the developments have been remarkable. The pioneers came here to mine the precious metals, and for years mining was regarded as the only available source of wealth. Therefore, much time was lost before experience and good judgment proved that the fertile soil could be made to produce returns exceeding in value those dug out of the bowels of the mountains or recovered from the gulches, bars and streams.

Stock-raising in Colorado is steadily advancing as a permanent business pursuit; though under existing conditions it may be said to be in its infancy. The days of the picturesque and untamed "cowboy," and of unobstructed and practically unlimited ranges for his long-horned Texas steer, are over, and the business of rearing and fattening stock for market is conducted on lines quite different from those followed in the west twenty years ago. In Colorado stock is kept on land no longer open from horizon to horizon, but enclosed and generally of private ownership. Some of the enclosures embrace vast tracts, but the large majority of stock-raisers occupy ranches of moderate acreage, on which their stock is protected from storms, and is given more considerate attention than was bestowed in former years. There has been an enormous increase of stock in proportion to area of grazing lands, in recent years; and this feature of the business will continue, and will afford profitable occupation for a steadily increasing number of men and amount of capital. The glory of the "cow-boy" has departed, and he is now a common-place, every-day stockman far more interested in seeing his steers round out, or his sheep flourish, under the influence of intelligent care and good feeding, than he ever was in "shooting up" an occasionally visited frontier town. In 1900 there were about 1,000,000 head of cattle, and near 2,000,000 sheep in the State, which figures will give the reader an idea of the market value of Colorado's annual live-stock crop. The business of fattening lambs for market has grown to very large proportions within a few years, and the yearly value of marketed dairy products has risen to about $4,000,000. The total value of all live-stock in the State in 1900—cattle, sheep, horses and swine—was probably somewhere near $40,000,000. Denver has become a distributing point for a large part of the business attending this industry, and of the extent to which she has become so, some account is given elsewhere in this volume in connection with what is said of the commercial and manufacturing interests of the city.

The coal measures of Colorado are enormous, and it is not extravagant to say that they are inexhaustible so far as many succeeding generations of men will need to be concerned. In the twenty-nine counties of the State underlying the surface of which coal exists, the aggregate area of the measures is 18,100 square miles. The coal includes all grades and varieties; from the hard, bright anthracites, through the bituminous albertites to the semi-bituminous, clean lignites or Cretaceous coals. The bituminous yields superior illuminating gas and produces an excellent quality of coke. Estimates of geologists and mining engineers make the available supply 45,197,100,000 tons, though we are not sure that they know within a few billions of tons one way or the other. Colorado coal has not yet been given the general distribution its good qualities, its abundance and its location with respect to the great central-west territory of fuel consumption, would seem to entitle it, although its market is steadily expanding and the output of the mines for distant shipment likewise increasing every year. The railways have been charged with neglect of Colorado coal, and with discrimination against it in their rates; but it does not appear clear that this addition to their burden of sins is one that fairly belongs to them. The monop-



View in Denver, westward from roof of Court House, 1884. Fifteenth street on the left.

olistic character of control which has practically dominated the operation of Colorado coal mines in recent years, would seem to include sounder reasons for the alleged inadequate development of this enormous natural resource of the State, than are found in the complaints against the railroads which are always hungry for freight. Notwithstanding these alleged drawbacks, Colorado now stands third in the list of coal-producing States, the output in 1900 having aggregated nearly 5,500,000 tons, with a value on board cars at mines of about $8,000,000.

The business of converting the varied and abundant raw materials in Colorado into finished and marketable products is in its infancy. Manufacturing in the State at large may be said to date from the year 1880; yet its beginnings then were small, and its growth for several years afterward was but moderate. It has been within the last ten or twelve years that its expansion reached conspicuous proportions. The larger value of annual products and the larger variety of them are to be credited to the city of Denver, and are considered in detail elsewhere in this volume. The city of Pueblo with its large blast furnaces, steel plants, and rolling mills takes second rank. The iron and steel industry would seem to promise the greater development in manufacturing. Enormous deposits of iron ore of many varieties exist in the State, easily accessible and of good quality for conversion into castings, and structural steel. Thus far the reduction of ore to pig metal is chiefly in the hands of one corporation, operating the great establishments at Pueblo. With the abundant measures of fine furnace and coking coal adjacent to the vast deposits of iron ore, the growth of manufacturing in iron bids fair to be rapid and varied. The mines of Colorado call for a great variety of machinery; much the larger part of it is now made in the State, and its manufacturers also supply mining districts in other States and countries. Curing and packing meat is another industry that has made a robust beginning and appears to have a most promising future. The expansion of the live-stock industry in the central west will call for the establishment of great packing houses in the Colorado cities and towns at the base of the mountains. For manufacturing enterprises of lesser magnitude the enormous, and now to a great extent neglected, potential energy of the mountain streams will probably soon be electrically utilized. A recent computation of the theoretical power value of the streams of Colorado makes it exceed five million horse power by electrical methods. Of course, but a relatively moderate proportion of this energy could be utilized practically, but the presence of such an enormous store of theoretical energy invites greater attention and utilization than it has yet received.

The conversion of standing timber into marketable products is a business that has attained considerable importance, but one that may not be expected to have a great expansion. In the vicinity of Denver and around all the mining centers the timber growth has yielded to demands made upon it, and is nearing exhaustion. While large areas of the State are well-timbered, circumstances of location, difficulties of access and consequent expense, will probably lead to increased consumption of timber products from other States, rather than to a great expansion of the lumbering interests in Colorado. The forest areas, almost wholly in the mountain districts, embrace about 16,000 square miles, the mill timber being chiefly white and yellow pine, and spruce. None of the hard-wood trees are among the indigenous growths, though many have been introduced in the cities and towns as shade trees, and have flourished under irrigation. There are a few native "scrub-oaks" but they are of no value for commercial purposes.

The building material available in Colorado is of exceptionally fine qualities. The granites, sandstones and lavas used in the larger buildings in Denver indicate the character of the inexhaustible stores the State possesses. The granites willingly receive a fine finish, and when polished present surfaces equal to any produced on the best granites in the world. The stately Capitol building exhibits in its massive elevations the superb quality, evenness of color and texture of Colorado's gray granite. The red sandstones which enter into the construction of many of our buildings, including hundreds of beautiful homes, is unequalled by any found elsewhere in the United States. Much of it when built into walls has the glint of coral. The deposits of marble in the State are of vast dimensions and of endless variety of colors and shadings; and with them are great stores of onyx that stands well in comparison with the fine products of Mexico. The clays work into brick of unusual accuracy and smoothness of finish, and the wide distribution of iron oxide results in giving building brick a warm and pleasant color that harmonizes well with the native stone. The unusual general excellence of the building material, and its reasonable cost, have made the standard of architecture prevailing in Denver a higher one than exists in any other city in the country.

The petroleum resources of the State are not, so far as developed at this time, of conspicuous importance as compared with others, and present few features of general interest. The producing wells are confined to a limited area at and near Florence, Fremont county, in the mountain-valley of the Arkansas river. The district has never produced anything sensational; no phenomenal wells have been drilled; old wells give out and new ones take their places, and so the industry goes quietly on from year to year. About five hundred have been drilled, and about one-fourth of them proved ineffective. They are usually sunk to about 1,500 feet; ordinarily the oil rises in them to within 400 feet of the surface and is then pumped out. There have been no spouting nor flowing wells. The most productive well up to this time has yielded during the six years of its life about one-fifth of the total annual product; or 100,000 barrels each year. The field's development dates from 1887, in which year the product was 76,295 barrels. The output rapidly increased until its maximum of 842,000 barrels was attained in 1892, since when it has declined and is now rather more than 500,000 barrels annually. The refined products of the field constitute only about ten per cent. of Colorado's consumption of the various petroleum products. The oil is refined at Florence, though considerable quantities are sold in the crude form for fuel to be used under boilers in adjacent mining towns and at Pueblo. The district affords some natural gas which is used domestically in Florence.

The State of Colorado is great in many things and, while we are not intending to present a mass of dry statistics, we may properly and briefly mention here, in addition to what has been said, some other features in which she has proved herself great. In 1898 the State produced upward of $23,500,000 worth of gold; in 1899, more than $26,000,000 worth; and in 1900, about $29,000,000 worth. Since 1858 her resources have added to the world's stock of gold an amount to the value of $251,000,000, in round numbers; and she now leads as a producer of that metal. Her total contributions of silver have been still greater—exceeding $541,000,000—with a large proportion of her silver mines closed in recent years. For the years 1898, 1899, and 1900 the silver production averaged nearly $29,000,000; these silver values being expressed here in the "coinage value" of the metal. Exact figures of precious metals production are given in a succeeding chapter dealing with mining and smelting affairs. The actual value of all products from Colorado's natural resources alone, approximated $200,000,000 in 1900; or about $365 for each man, woman and child in the State; the market value of gold and silver production alone having been about $115,000 for every day in the year. Values of other products have been conservatively approximated. The State owns, aside from school-lands, not far from a million acres of internal improvement, University, Agricultural College, saline and other lands, the rental income from which now constitutes an important part of public revenue. The values of her mining products aside from the precious metals—coal, iron, lead, copper, manganese and other minerals—aggregate in the millions; and the annual values of her manufactured goods aggregate many other millions, her millers alone making the equivalent of a million barrels of flour. Yet, the conviction that the varied resources of our State have, outside of mining for the precious metals, made but the beginning of their development, is unquestionably well founded. No intelligent observer believes otherwise, nor is there any reason for believing otherwise.

The increase of population in the State since 1890 (when the number was 412,198), has been steady and rather above the average of the other States. By the census of 1900 the population, exclusive of 597 Indians, was 539,700; an increase of 30.9 per cent. Fifteen counties—Baca, Kiowa, Kit Carson, Ouray, Park, Phillips, Pitkin, Sedgwick, Washington, Cheyenne, Clear Creek, Custer, Dolores, Eagle and Yuma—had reduced populations, ranging from 1 per cent. in Custer to 50 per cent. in Sedgwick. The gains in the other counties ranged from 3.8 per cent. in Douglas, to 174.8 in Otero. The figures of that census revealed a decided tendency to great increase of population in agricultural counties in whch irrigation is available. This increase of population entitled Colorado to another Congressman, and the re-apportionment bill pending in Congress at the time our record closed provided for the State having three Representatives in that body. The total vote in the State at the election in November, 1900, for Presidential electors, was 215,703, of which 122,733 were Democratic, and 93,039 Republican.

The tax duplicate of the State as assessed in 1900 was $216,776,356, an increase of about $13,000,000 since 1899, when it was $203,486,692. The figures for 1900 do not represent the highest valuation in the State's history. The maximum was reached in 1892 with $236,000,000, from which there was a steady recession until 1898, when the sum was $192,243,080. It is probable that assessments do not stand for much more than one-third the real value of all the taxable property in the State. The tax levy fixed in 1900 for general State purposes was the constitutional limit—four mills; to which was added a special levy of one-tenth of a mill for interest on insurrection bonds, and a poll-tax of $1.00 on each male inhabitant of lawful age. Outside the bonded Capitol-building debt the State now (close of 1900) has a floating debt of outstanding warrants of $2,073,000. But when the value of lands and other property owned by the State is set over against the amount she owes, her balance of assets is tremendously in excess of liabilities. Taking the whole State under consideration, the years 1899 and 1900 were the most prosperous in general development in her history, not excepting any in the palmy days of silver mining; and 1901 bids fair to excel either of them.

If, in the presence of all that has been done in these few years that cover but little more than half the period allotted to man as the bounds of his existence in this world, it seems evident that it represents but the preparatory work, who will undertake to outline the development of Colorado in a like period reaching into the future? Who would consent to predict the measures of her growth in population and wealth as they will be fifty years hence? Who would dream of attempting to define her position among the commonwealths of the earth in the closing year of the next century?

CHAPTER LII.

Arapahoe County—Its History Prior to Founding of Denver—Origin in 1855—Election in 1856—County Establishments in Our Pioneer Times—Multiplicity of Elections and Officers—Organization Under Colorado Territory—Transition from Territory to State—Pioneer Court Houses—Investments in Railways—County Buildings—County Domain—Valuations and Tax Levies—Population—County Towns—Topography, and Character of Land.

Much of the pioneer history of Arapahoe county has been interwoven in our accounts of the founding of Denver and of the pioneer era in the city. Yet, there remain some additional details of the early times to be narrated; and these, although involving a few repetitions, have been reserved for consideration in connection with the subsequent development of the county establishment. As the reader will have seen, the principal scenes and incidents associated with the first actual settlement of Colorado were enacted upon the soil of Arapahoe county, the attempts at providing an organization for which, in 1858-59, confused and irregular as they were, were the first endeavors to actually establish civil government on its soil; for the organizations of the pioneer town companies included no provisions for such government, nor for any government; nor had the founders of the pioneer settlements any authority to make such provisions.

The history of Arapahoe county, as indicated in a preceding chapter, ante-dates that of the city of Denver by several years. This fact appears to have been hitherto overlooked, and was brought to light in a substantiated form by a search through the records of Kansas Territory instituted at Topeka for this work. Arapahoe county, as a legislative creation, dates from August 25, 1855; and did not arise here in a kind of spontaneous form, after the founders of the Cherry creek towns located on the site of Denver. The Territory of Kansas was created by Congress in 1854, and among the acts of the Territory's first Legislature was the following:

Be it Enacted by the Governor and Legislative Assembly of the Territory of Kansas, as follows:

Section 1. All that part of the Territory of Kansas, described within the following limits, to-wit: Beginning at the northeast corner of New Mexico, running thence north to the south line of Nebraska and north line of Kansas; thence along said line to the east line of Utah territory; thence along said line between Utah and Kansas territories, to where said line strikes New Mexico; thence along said line between said New Mexico and the territory of Kansas, to the place of beginning, shall be, and is hereby declared to constitute a county, to be known as Arapahoe county.

Sec. 2. Allen P. Tibbitts is hereby appointed judge of the probate court of Arapahoe county. Said court to be held at such place in said county as the said judge shall deem best for the interest of the citizens of said county. Provided, always, that the place designated as the county seat shall be one place of holding said court, at which place shall be kept the records of said court, where all official business shall be transacted in vacation.

Sec. 3. All county officers shall hold their offices at said county seat.

Sec. 4. The said judge of probate shall have power to appoint such officers of the county as are specified in this act, but not appointed, and justify the same; all such appointments made by judge of probate shall be entered of record.

Sec. 5. The judge of probate shall not be ineligible to fill any other office in the county, not conflicting with the duties of probate judge.

Sec. 6. Allen P. Tibbitts, Levi Mitchell, and Jonathan Atwood, are hereby appointed commissioners to locate the county seat; said county seat to be known by the name of Mountain City; said commissioners, so appointed, to be and constitute the board of county commissioners to transact county business.

Sec. 7. James Stringfellow is hereby appointed clerk of the county or probate court who, by virtue of his office, shall be ex-officio recorder.

Sec. 8. The said judge of probate shall have full power to appoint a justice or justices of the peace, within and for said county, who shall hold his or their offices at the place designated by said judge.

Sec. 9. There shall be appointed by said judge, one sheriff, one treasurer (who shall be ex-officio assessor), and one surveyor.

Sec. 10. All persons appointed under the provisions of this act shall hold their offices until the first general election thereafter, at which time said offices shall be filled by elections.

This act to take effect and be in force from and after its passage.

John H. Stringfellow,
Speaker of the House of Representatives.
Thos. Johnson, President of the Senate.
Approved August 25, 1855.
Dan. Woodson, Acting Governor.

It is hardly necessary to state that this act was not followed by the institution of a county government in this then remote region; that is to say, the county officers appointed and provided for by that law never entered the county's domain to establish themselves in authority. So far as could be learned, Probate Judge Allen P. Tibbitts, Clerk Stringfellow, and Commissioners Mitchell and Atwood never started in the direction of Pike's Peak, and never saw the land over which they were given dominion by that act of 1855. Still, there were other patriots in Kansas in those days, and a few of these who were either on the borderland of Arapahoe, or went there especially for the purpose, held an election in, or for, the county in 1856.

The Arapahoe county organic act constitutes Chapter 37 of the "Laws of 1855," Kansas Territory. The Territorial general election laws of 1855 provided that elections for Representatives in the Legislature, and for all other elective officers, should be held on the first Monday in October, 1856, and on the first Monday in October in every year thereafter. Section 1, of Chapter 38 of the laws of 1855, provided that "the County of Arapahoe shall, at the general election every year thereafter, elect one Representative to the Legislative Assembly of the Territory of Kansas."

The first general election in the Territory after the enactment of these laws, was held in October, 1856. On the 6th of that October an election was held in Arapahoe county—the first one in all this Pike's Peak region. The following return by the Judges and Clerks of that election is a copy of the original on file in the office of the Secretary of State, of the State of Kansas, at Topeka—"Arapahoe District" referring to the Council (or Senate) district of which Arapahoe county was nominally a part:

"Arapahoe District,
Kansas Territory."

"The following is the Poll Book of an election held for Arapahoe County at the house of James Lenard at a place called Syracuse Creek in that district of Kansas Territory lying between Marshall County and Arapahoe County on the Sixth day of October 1856 for a Member of the House of Representatives of the next Legislative Assembly of Kansas Territory, for Arapahoe County; for a Member of the Council of the district in which Arapahoe is included; for one delegate in the next term of the present session of Congress, and for a convention or no convention to frame a State constitution, which was held in pursuance of law and the proclamation of the Governor, etc.

The following vote was cast for said officers for Arapahoe County, Kansas Territory:

1. H. W. Wright,
2. J. T. Price,
3. J. W. Harris,
4. H. E. Hardy,
5. John Welch,
6. E. Gleason,
7. David Lenard,
8. James Lenard,
9. Patrick Welch,
10. B. F. Simmons,
11. Coote Lombard,
12. John Reynolds,
13. James Reynolds.

And the undersigned as Judges of election in Arapahoe Election precinct certify that thirteen votes were cast at said house by ballot, of which Benjamin F. Simmons received ten votes for representative in the next Legislative Assembly of Kansas Territory from Arapahoe County; one for B. F. Fleming for said representative, and one vote for James Harris for the same. John W. Whitfield received seven for delegate in the next session of the present Congress, and seven for F. J. Marshall for Council in the next Legislative Assembly of Kansas Territory.

This Sixth of October, 1856.

J. W. Harris,
P. Z. Taylor,
Clerks.

H. E. Hardy,
H. W. Wright,
J. T. Price,
Judges.

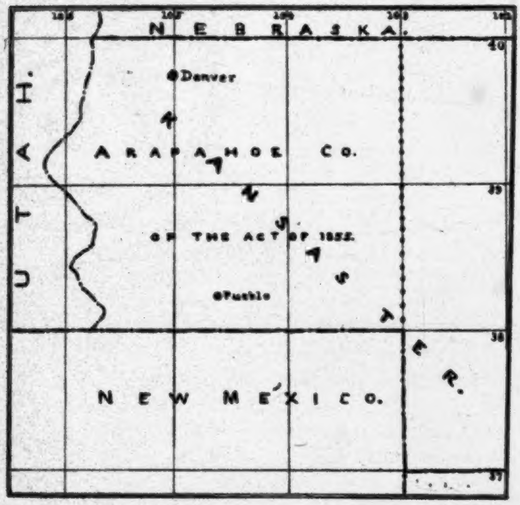
This election, at which only thirteen votes were cast, was held under the provisions of Section 1 of Chapter 38, above cited, and there was no attention given to electing county officers; if each voter had been a candidate for one of the offices there were not men enough to fill all of them, including those mentioned in this "election return." Clerk Taylor does not appear to have voted, and the "return" does not fully account for all the thirteen votes, nor does it give the result on the constitutional convention question. This "election" evidently was one of the many merely nominal ones held in Kansas in those times—a form with but little of the substance.

That Simmons took his seat and served in the Kansas Legislature as the member from Arapahoe county on the basis of that "election" is clearly shown by the old Territorial records. The "House Journal, Second Session, 1857," now in the office of the Secretary of State at Topeka, records Simmons as having been present and taking part in the proceedings as "the Representative from Arapahoe County." That session was called to order January 12, 1857, and the journal states that "Mr. Lyle former Clerk of the last House called the names of the members holding certificates of election, when the following gentlemen presented certificates and were duly sworn in by Judge S. G. Cato." Then follows a list of the counties and of the member or members representing them. In this list appears "Arapahoe—B. F. Simmons." Further along the journal records Simmons as participating in a viva voce vote for Speaker and other officers. It further appears in the journal that the Speaker appointed as the "Committee on Rules: Simmons, Watterson, and Kuykendall." Making Simmons Chairman of so important a committee establishes him as having been a man of influence, a leader, among his associates.

The records of Kansas Territory at Topeka reveal no evidence of any other election, for either members of the Legislative Assembly, or for county officers, having been held in Arapahoe county until November 8, 1859. Excepting for the one we have mentioned in the foregoing, there are no election returns from the county on file at Topeka prior to those of November 8, 1859, and no trace of any of the intervening "elections" that were held here. These facts are essential to an understanding of the status of some "county officers" elected here in 1859.

As defined by the act of 1855, and as indicated by the accompanying map, the Arapahoe county of Kansas Territory embraced about one-fifth of the present area of Colorado, with its east line about fifty-three miles west of the present east line of the State. At that time the thirty-eighth parallel was the north line of New Mexico, and the 103rd meridian the east line—as now.

During nearly the whole of the existence of the Territory of Kansas its embroilments and strife absorbed the attention of its people, and commanded that they remain in its eastern sections bordering on the Missouri river. If the lack of people, and the conditions here in its far western limits, had not forbidden any attempt to actually organize Arapahoe county under that law of 1855, the state of affairs in the eastern were probably sufficient to dissuade such an attempt. After that election by a baker's dozen of "voters" in 1856, Arapahoe county of the act of 1855 appears to have been almost forgotten; so nearly forgotten that these foregoing facts of its primitive history have not hitherto had their place in our local annals. Nevertheless, that county division of Kansas Territory remained, at least nominally, in force and effect until February, 1859; and when our pioneers came hither in 1858, they came into Arapahoe county, Kansas Territory, and may be regarded as having been the county's first permanent citizens.



Map showing Arapahoe County, Kansas Territory, as defined by the act of 1855.

The law creating Arapahoe county, and the one providing for its representation in the Legislative Assembly of Kansas, would seem to have been at variance with the then established practice in dealing with territory, title to which the Indians had not surrendered by some form of treaty. The mere nominal setting off of the western end of Kansas Territory as an unorganized county would not have been so; but to provide a county government, establish a county seat, authorize and hold an election, and so forth, were unusual proceedings under then existing practices in dealing with the Indians. However, as matters turned out, it did not make much difference.

Aside from that election in 1856 and the continued nominal existence of the county, the only specific detail of the organic act of 1855 that ever had survival in the county's great area, was the name designated for the anticipated county seat. As the reader has seen in a preceding chapter, a "Mountain City" became a reality, but not a county seat, in 1859, and remained so until it was absorbed by Central City soon afterward.

None of the foregoing facts changed the practical conditions by which our pioneers found themselves surrounded late in 1858. Communities were established here in a region over which the jurisdiction of Kansas prevailed only in a nominal sense. The area of the Territory as defined by the creative act of Congress extended through here south of the fortieth parallel, and up into the mountains to the summit of the range, where it joined the nominal eastern boundary of Utah. But this Pike's Peak country having then been "Indian lands" reserved to the Indian inhabitants, and also having been far remote from the Kansas government, the Territory's jurisdiction was practically excluded from and altogether impotent in it. The only effective way at that time by which such jurisdiction could have been extended here was by the slow and uncertain process of the United States making treaties with the Indians under which, after the government's established customs in dealing with the red men, certain reservations would have been set apart for them and the remainder of the region opened, by their consent, to occupation by white men. This is what had to be done two years later to legally clear the decks for the white man's action; for, up to the autumn of 1860, no treaties of any kind existed between the United States and the Indian tribes of these immediate parts of the country. However, the white man did not wait for treaties, nor did he delay action in the meantime.

Therefore, the coming hither of Colorado pioneers in 1858 precipitated an unusual condition of political affairs; and one in which the initial movements toward bringing some form of civil government into existence were, from the necessities of the situation, irregular and in disregard of the adverse technicalities that theoretically stood in the way. When Governor Denver commissioned H. P. A. Smith, Hickory Rogers, and E. W. Wynkoop to go forth to the Pike's Peak region and institute a county government, it appears that he intended that their authority should rest upon the old and practically obsolete laws of 1855, by which Arapahoe county was created and officers authorized to be elected in it. But, as the reader will have observed, the laws contain no provision for the Governor of Kansas Territory appointing such officers; the organic act named or otherwise provided for the first ones, who were to "hold their offices until the first general election thereafter," when their successors were to have been chosen by election. If the officers named in the act, in the absence of actual discharge of their duties, could have constructively been regarded as holding their offices, they could only have held them until the next general election; and in the interval between the enactment of the laws and the founding of the Cherry creek towns there had been several general elections in Kansas Territory, at none of which, it is certain, were there elections for county officers in Arapahoe county.

As we have stated in a preceding chapter, a "county" election was held on November 6, 1858, though but one "county" officer was voted for—A. J. Smith, who was elected "Representative" in the Kansas Territorial Legislature. It does not appear that this election was claimed to have been a regular Arapahoe county affair, but rather an expression of the will of the few people "now in the Pike's Peak country." Therefore, it is to be considered as having been a spontaneous outgrowth of the soil and circumstances, and without anybody pretending to have had any definite authority for holding it. Still, some of our pioneers knew that the western end of Kansas Territory had at some time previous been set apart as Arapahoe county, and when they sent A. J. Smith forth as their Representative they provided him with credentials as the member from Arapahoe. The first local record of the county's existence is found in the original agreement of the organizers of the "St. Charles Town Company." But, in the autumn of 1858, nobody here attempted to even approximately define the boundaries and extent of the county; they were generalized by merely declaring they included "all around here," excepting that they did not encroach on Nebraska land, between which and Kansas parallel forty was the dividing line as it is now the northern line of the present county. We were unable to find any local record, of that period, that suggested any definite boundary for the county or that recalled its definitions as specified in the act of 1855. So, things were in such shape here that if it were desirable to consider any locality in this part of the country as lying within Arapahoe, there were no obstacles to doing so; and if it proved otherwise, the place could be left out.

In the matter of authority for having started the one wheel of Arapahoe county's official machinery that was put in motion early in November, 1858, the pioneers who did it were not much worse off than Governor Denver's "county officials," who arrived here on the 16th of that month and found to their surprise that an "election" had been held ten days before. These men came with some color of authority by virtue of the commissions they held from Governor Denver, but it may be said here that neither Smith as "Probate Judge," Rogers as "Supervisor," nor Wynkoop as "Sheriff" ever exercised to any noteworthy extent the functions of the offices to which they had been appointed. One very practical reason was that there was no business for them to do; but, if there had been they were not in a position to read their title to authority very clear in the rather muddled condition of Arapahoe county's primitive affairs.

Representative Smith proceeded to the Territorial capital and secured from the Legislature recognition as the member from Arapahoe; though, if technicalities had been applied to his case he would not have done so. But, notwithstanding that he had been "elected" at a time other than that appointed by Kansas law for the election of Representatives and other elective officers in the Territory, technicalities were set aside and Smith became the first of the enormous yield of statesmen our county has afforded since the permanent settlements were made within its borders; though whatever of definite record he may have made as a legislator appears to have been long ago buried in oblivion. No return or other report of his "election" could be found at Topeka.

The members of that Legislature had learned of the gold discoveries in the Pike's Peak country in 1858, and of the beginnings of settlements that had been made in it late in that year. They also knew that thousands of people along the Missouri river border were preparing in that winter to move upon the new land of gold in the west as soon as spring opened. What part, if any, "Representative" Smith had in disseminating this knowledge or in the legislation to which we are about to refer and which nominally abolished the Arapahoe county of the act of 1855, could not be determined. As the bill to incorporate the "St. Charles Town Company" was then pending, it is more than likely that the enterprising pioneers back of that historic organization were active in procuring the passage of the new county-making law; as the names of two of them—T. C. Dickson and Charles Nichols—figure in it.

Governed by the belief that the western end of Kansas would be over-run by people—as proved true—in the spring and summer of 1859, the Legislature, by an act approved February 7th of that year, divided the western end of the Territory—practically the Arapahoe county area—into five new counties, named Montana, El Paso, Oro, Broderick, and Fremont. This act, in full, was as follows:

AN ACT establishing and organizing the Counties of Montana, El Paso, Oro, Broderick and Fremont, and to define the boundaries thereof.

Be it enacted by the Governor and Legislative Assembly of the Territory of Kansas:

Section 1. That all that territory comprised within the following limits, to-wit: Commencing at a point on the fortieth parallel of latitude twenty miles east of the one hundred and fifth longitude, and running from thence west to the western boundary of the Territory of Kansas, thence following the boundary of the Territory of Kansas, on the summit of the Rocky mountains, to a point twenty miles north of the thirty-ninth parallel of latitude, thence due east to a point twenty miles east of the one hundred and fifth longitude, thence due north to the place of beginning, shall constitute the county of Montana.

Sec. 2. That all that territory comprised within the following limits, to-wit: Commencing at the north-east corner of Montana county, thence running due east to the one hundred and fourth longitude, thence due south to a point twenty miles south of the thirty-ninth parallel of latitude, thence due west to a point twenty miles east of the one hundred and fifth longitude, thence due north to the place of beginning, shall constitute the county of Oro.

Sec. 3. That all territory comprised within the limits, to-wit: Commencing at the point where the one hundred and fourth longitude crosses the thirty-eighth parallel of latitude, and running from thence due west to a point twenty miles west of the one hundred and fifth longitude, thence due north to a point twenty south of the thirty-ninth parallel of latitude, thence due east to the one hundred and fourth longitude, thence due south to the place of beginning, shall constitute the county of Broderick.

Sec. 4. That all that territory comprised within the following limits, to-wit: Commencing at the south-west corner of Broderick county and running thence due west to the western boundary of the territory of Kansas, thence north-easterly to the summit of the Rocky Mountains, to the south-west corner of Montana county, thence due east to a point twenty miles west of the one hundred and fifth longitude, thence due south to the place of beginning, shall constitute the county of Fremont.

Sec. 5. That all that territory comprised within the following limits, to-wit: Commencing at the north east corner of Fremont county and running thence due east to the south east corner of Montana county, thence due south to a point twenty miles south of the thirty-ninth parallel of latitude, thence due west to a point twenty miles west of the one hundred and fifth longitude, thence due north to the place of beginning, shall constitute the county of El Paso.

Sec. 6. That Wm. H. Green, G. W. Allison and William O. Donnall be and are hereby constituted a board of commissioners to select and locate the temporary seat of justice for the county of El Paso, whose duty it shall be in making said location, to fix the same as near the geographical center of said county as they conveniently can, having due regard to the convenience and interests of the present and probable future population of said county.

Sec. 7. That J. H. Turney, Wm. H. Prentice and A. D. Richardson, be and are hereby constituted a board of commissioners to select and locate the temporary seat of justice for the county of Montana, whose duty it shall be, in making said location, to fix the same as near the geographical centre of said county as they conveniently can, having due regard to the convenience and interests of the present and probable future population of said county.

Sec. 8. That Simon C. Gephart, W. Walters and Charles Nichols be and are hereby constituted a board of commissioners to select and locate the temporary seat of justice for the county of Broderick, whose duty it shall be in making said location to fix the same as near the geographical center of said county as they conveniently can, having due regard to the convenience and interests of the present and probable future population of said county.

Sec. 9. That T. C. Dixon [Dickson], A. G. Patrick and T. L. Whitney be and are hereby constituted a board of commissioners to select and locate the temporary seat of justice for the county of Fremont, whose duty it shall be in making said location, to fix the same as near the geographical center of said county as they conveniently can, having due regard to the convenience and interest of the present and probable future population of said county.

Sec. 10. That D. Newcomb, Wm. J. King and George Mcgee be and are hereby constituted a board of commissioners to select and locate a temporary seat of justice for the county of Oro, whose duty it shall be in making the said location, to fix the same as near the geographical center of said county as they conveniently can, having due regard to the convenience and interest of the present and probable future population of said county.

Sec. 11. Said commissioners shall, after the said county seats are located and the proper surveys made, advertise a sale of two-hundred lots of each of said county seats, in some newspaper in each county at least one month previous to the day of sale; if no such newspaper exists in the county therein, a paper of the adjoining county, and if no newspapers are convenient, then it shall be lawful for said commissioners to give notice by posting hand bills at four of the most public places in each county, one month previous to the sale of said lots. The proceeds of said sale of lots shall be applied to liquidating the expenses of the commission and location of said county seats; should an excess occur after the above expenses are cancelled, it is made the duty of the commissioners to pay such balance into the county treasury of the county where such balance appears to have occurred.

Sec. 12. Said commissioners shall call an election for all county officers in each county at as early a day as they may deem advisable; and where said officers are elected, they shall take the usual oath of office as administered in this Territory and shall be commissioned in the same manner, but may assist in the organization of said counties after being qualified, prior to being commissioned.

Sec. 13. Said commissioners shall receive for their services, five dollars per day and expenses; this per diem to be computed from the date they set out for the county, where they are to locate the county seats, and continue until the expiration of their respective offices which shall be in nine months from the date of passage of this act.

Sec. 14. Such commissioners shall receive their pay out of the proceeds of the sale of the first lots of each county seats, in accordance with section 11, of this act.

Sec. 15. All acts and parts of acts in conflict with this act be and the same are hereby repealed.

Sec. 16. This act to take effect and be in force from and after the first day of March, 1859.

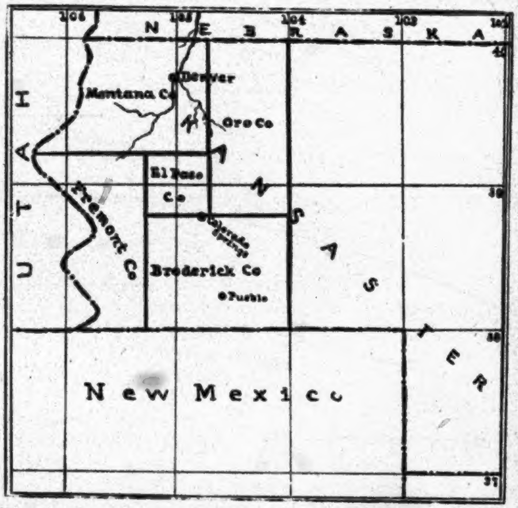
A. Larzalere,
Speaker of House of Representatives.
C. W. Babcock,
President of the Council.
Approved February 7, 1859.
S. Medary,
Governor.

It appears by the records at Topeka that a law making these new county divisions had been enacted late in the next preceding month, and that it had been re-enacted, as approved on February 7th, for the purpose of changing some minor details, one of which was to throw the expense of locating the county seats upon the proceeds of lot sales in the proposed towns, instead of making them a charge against the treasury of Kansas Territory. The reader will observe that these new counties did not, by one degree of longitude—103 to 104—cover all the area of the Arapahoe county of the act of 1855, and that this act of February 7, 1859, made no provision for what was left of the old county area. As in the instance of the primitive history of Arapahoe county, accounts of these projected counties of the act of February, 1859, have hitherto had no proper place in our local annals.

As will be seen in this act of February 7, 1859, Montana county, in which Denver was situated, was bounded on the north by the Fortieth parallel, on the east by a north-and-south line twenty miles east of the 105th meridian (Denver's longitude), on the south by an east-and-west line twenty miles north of the Thirty-ninth parallel, and on the west by the Utah line on the summit of the range. El Paso county lay south of the east part of Montana, and Oro eastward from both in a north-and-south oblong form. Broderick was south of El Paso and Oro, and extended to the southern line of the Territory, while Fremont covered the South Park country and all the southwest part of the Territory west of El Paso and Broderick to the Utah line and south of the western part of Montana. The accompanying map more definitely shows the outlines of these counties.

After the election of Smith in November, 1858, primitive political affairs here rested until the following spring when, on March 28th, was held the first election for a complement of "county officers." Those chosen were S. W. Wagoner, Probate Judge; D. D. Cook, Sheriff; John L. Hiffner, Treasurer; J. S. Lowrie, Register of Deeds; L. J. Winchester, Hickory Rogers, and R. L. Wooton, Road Supervisors; Levi Ferguson, Clerk of Board of Supervisors; Marshall Cook, Prosecuting Attorney; W. W. Hooper, Auditor; Roswell Hutchins, Assessor; and C. M. Steinberger, Coroner. In Denver City, B. Hieatt and H. Sweigert were elected Justices of the Peace; and William Wilson and G. S. Abbie, Constables. In Auraria, John Graves and F. F. Brune, Justices; and S. M. Rooker and W. G. Taylor, Constables.

The absence of all official and other adequate record of this election, both here and at Topeka, made it impossible for us to account for it in an entirely satisfactory manner. At the time it was held the Cherry creek towns were, under the act of preceding February 7th, at least nominally in Montana county; but, as we have said, there are no returns or other trace at Topeka of any election held in the west end of Kansas Territory in 1859 prior to November 8th, and the reminiscences of the few Denver survivors who participated in this one have not cleared away the uncertainties. While this election appears to have been at least nominally held as a Kansas affair, we were unable to determine whether it were the intention to elect, and organize Arapahoe county, under the act of 1855 (which had become practically obsolete prior to the act of February 7, 1859,) and in ignorance of the creation of Montana county, or a proceeding to organize Montana county under the new law.



Map showing Montana county and other counties as defined by the act of February, 1859.

Some circumstances suggest that it was an election for officers of Montana county, while others rather plainly point to it as having been one for the old Arapahoe county—a spontaneous movement of the people toward putting official life into that ancient bailiwick. In our history of the "Territory of Jefferson," in which much has been said of the pioneer county elections here, appears a resolution proposed (but rejected) in the meeting of citizens on April 11, 1859, and at which the movement for an independent State government here was inaugurated, authorizing "the late county officers-elect to enter at once upon the discharge of their respective duties without waiting for their commissions from the Governor, after having received their certificates of election from the Commissioners and having given the proper bonds." This reference to "the Commissioners" and to the "county officers-elect" would seem to apply to Montana county. As will have been seen in the provisions of Section 12 of the act of February 7, 1859, the Commissioners appointed by that act were authorized and directed to call elections in the several new counties "at as early a day as they may deem advisable," and the reference in the resolution to commissions from the Governor would seem to make it plain that these county officers were understood to have been elected under Kansas law. Yet, the other language of the resolution implies lack of knowledge of the provisions of the act of February 7th which, in Section 12, authorized the county officers to be elected in the new counties created by that act, to assist in the organization of the counties "after being qualified, prior to being commissioned" by the Governor. Furthermore, if that election were an Arapahoe county affair it was held without authority of law. In such matters as creating new counties, the Kansas Territory practice was to provide in the special creative acts for electing the first outfit of county officers at a special election to be called by the appointed Commissioners; such officers to hold until the next regular election day which, under the general election laws of the Territory, was the first Monday in October—the 3rd of that month in 1859. But the act of February 7, 1859, unlike the Arapahoe county creative act of August 25, 1855, is silent as to the terms for which officers were to be elected in Montana and the four other new counties, and leaves us to presume that their successors were to be chosen at the next regular election; for at no time in the Kansas Territorial period did a general statute authorize county elections in March. Nothing more definite than this could be found bearing upon the terms of the officers elected in March, 1859.

The act of February 7, 1859, appointed J. H. Turney, William H. Prentice, and A. D. Richardson the Commissioners to look after Montana county. Richardson's name is already familiar to our reader. Turney was certainly the J. H. Tierney who was a member of the "Lawrence party" of Pike's Peak gold hunters in the summer of 1858; his name having been usually pronounced as if spelled "Turney." Among the names of those participating in the "Jefferson" conventions in the spring of 1859, as printed in the Rocky Mountain News, was that of "J. H. Turner," which was probably another version of the Montana county Commissioner's name. Commissioner Prentice appears to have been a new figure. Commissioner Richardson, as the reader has seen, did not reach Denver until early in June, 1859. J. H. Tierney had gone back to eastern Kansas in the autumn of 1858, but of his return—if he were Commissioner Turney—and of the coming of Commissioner Prentice, very early in the spring of 1859, if they came at that time, we could find no certain record. It may have been that Commissioners Turney and Prentice hastened here after enactment of the law of February 7, 1859, in advance of Commissioner Richardson and, finding Denver a ready-made county seat for Montana county the boundaries of which had been defined by the act, at once ordered the election of March 28th; but we could find no definite record or reminiscence of their presence here at that time.

On the other hand, it would seem that Montana county was practically unknown at the mouth of Cherry creek in 1859, as it has been ever since. Mr. W. N. Byers remarked to the writer that it was his impression that the March election was intended for Arapahoe county, but that at the time of his coming here, about a month later, little was said of it and little attention paid to the officers elected. In March of that year, as before and after, the transactions of the Town Companies invariably referred to "Arapahoe" when a county name was mentioned, and Montana county is unknown in their records. The pioneer records of real estate instituted by R. E. Whitsitt and by him continued until the Arapahoe county of Colorado Territory came into existence, do not recognize Montana county. While the first issue of the Rocky Mountain News, in the latter part of April, 1859, mentions various local events of that spring and prior to the paper's first appearance, it does not refer to the county election of March 28th; nor do succeeding issues. Indeed, the News seems to have wholly ignored the legal existence of Montana county through that spring. Early in May, 1859, J. T. Parkinson published in the News a "Legal Notice" that he had been "appointed by the Probate Court for Arapahoe county" administrator of the estate of Peleg T. Bassett; and in the issue of May 28th he gave "Legal Notice" that as Bassett's administrator he had "made application to the Probate court for Arapahoe county" for an order to sell real estate belonging to Bassett's estate. Various other "Legal Notices" and incidental references to county matters in the News in the summer of 1859 invariably mention "Arapahoe" as the name of the county.

Nevertheless, and whatever may have been the understanding at the time, or the authority or lack of authority for holding it, the election of March 28th was, as a historical fact, the first attempt to provide a county organization here, whether it were intended for Montana county or Arapahoe.

At this juncture we may as well add what remains to be said of Montana and the other counties provided for by the act of February 7, 1859. As the reader has seen, there is some doubt about the election of March 28th, but aside from whatever may have been its relations to Montana county, it does not appear that any of the five new counties were ever established as regular organizations, nor that any serious attempt to do so was made. Colonel T. C. Dickson, of Cheyenne, who was one of the Commissioners for Fremont county, informed the writer that so far as he knew no attempt was ever made toward establishing it; and it is also his recollection that none of them was established—the law becoming wholly inoperative. The movement for the proposed "State of Jefferson," inaugurated in April, 1859, was chiefly responsible for this. The people of the Pike's Peak country having determined to cut loose from Kansas and to manage their affairs in their own way, expected soon to be establishing counties of their own making. But, as elsewhere mentioned, the March crop of "county officers" was not wholly ignored in the various "Jefferson" proceedings in 1859.

In the annals of that year we found a few passing references to "A. D. Richardson, Commissioner," and in the files of the News covering the summer and autumn there are occasional allusions to "Montana" as if it were something that had tried to be and failed. These, Mr. Byers now says, represent the status of Montana county in public esteem at that time.

The name "El Paso" was given one of the "Jefferson Territory" counties, and with "Fremont" was perpetuated in the names of Colorado Territory and State counties. "Broderick" and "Oro" are entire strangers in the annals subsequent to the autumn of 1859—mere names in an old and forgotten statute of Kansas Territorial times—and "Montana" has only the meager, shadowy history we have outlined in the foregoing. Through the summer and autumn of 1859 while the "Jefferson" government was in course of preparation and while the "county officers" chosen the previous March were nominally holding their nominal positions, "Arapahoe" was the only county name in general use and, as we have said, the occasional references to "Montana" as a county name were as to a reminiscence of an indefinite past incident of little importance.

At that March election a total of 774 votes was cast; 144 in Denver City, 231 in Auraria, and 399 at the five other newly-established voting precincts, two of which were also "cities." Although the total vote was not large, considering that many new people had already come in early in that spring, there were charges made in the Cherry creek "cities" that the "country" precincts had celebrated and assisted the institution of county government by various and sundry "stuffings" of the ballot-boxes. However that may have been, it does not matter now.

But, as the reader has learned, before those pioneer "county officials" had entered upon the uncertain tenure of their offices and established themselves in their respective positions, the duties of which, so far as practical results demonstrated, never were much more than nominal, the movement to establish the independent State government of "Jefferson" had begun. Though we have already and at some length considered that attempt to organize here a new State, and the subsequent but less disappointing endeavors to make it a Territory, these rather frequent references to it in this chapter seem necessary to a clearer understanding of the relations between it and the much-tangled history of our county affairs in pioneer times. The county officers elected on March 28th were, as we have seen, regarded with some little favor by those then determined to cut loose from Kansas. But, as the independent movement through the spring and summer of 1859 gained headway and popularity, the authority of these officials, at no time very robust, steadily became weaker among the citizens. It was not the intention of the organizers of "Jefferson" to wholly discard them, but to have them continue as best they could until their successors should be elected under the jurisdiction of the new "government;" for, as already told, the returns of the "Jefferson" elections were later directed to be made to certain judicial officers in that county equipment.

The rapidity with which the country here filled with people in the spring of 1859 is indicated by the fact that while there were but seven "voting precincts" in the whole region when this March election was held, twenty-three precincts were named by the first Statehood convention (April 15th) to participate on May 9th in the election of delegates to the State constitutional convention to be held on June 6th.

The spring, summer, and early part of the autumn of 1859 passed without anything noteworthy having happened to those first-elected county officers, unless it were the steadily diminishing attention given them and their authority; and with the indorsement of "Jefferson Territory" by the people in the autumn of that year, they passed out of sight and knowledge without leaving any definite record of just when or how they did it.

In our accounts of the rise and fall of "Jefferson Territory" we have related the circumstances under which another election of county officers took place, on October 3rd, the day on which the election of a Delegate in Congress—not from Kansas Territory, but from the "Pike's Peak country"—and the election of delegates to the "Jefferson" Territorial convention of October 10th also took place; and we need not recount them here.

At that "election," at which votes for county officers were cast in but a few places, and the number of ballots, owing to the surreptitious character of the proceedings, a trifling aggregate, the following-named persons were "elected" as officers of Arapahoe county, Kansas Territory—Montana county having by that time practically sunk into oblivion in public esteem and political proceedings:

John H. Kehler, Sheriff; C. R. Bissell, Probate Judge; E. F. Clewell, Register of Deeds; L. W. Bliss, Treasurer; David C. Collier, Attorney; R. L. Wooton, Charles A. Lawrence, and J. M. Ferrill, Road Supervisors.

These did not constitute so full a complement as had been elected in the previous March, but the offices were the more important ones. As we have stated in our account of "Jefferson Territory," this election was instigated by men who knew that whatever lawful jurisdiction there was over this region was that of Kansas, and that the "Jefferson" movement would produce a government that would prove impotent. Yet, Bliss, of Golden City, the Treasurer, within two or three weeks became the Secretary of "Jefferson Territory." The politicians of those days were just as shifty as any we have with us now. Whether this election proceeded upon the theory that the terms of those elected the previous March had expired by limitation under Kansas law, or that they had no legal existence, we could not determine. Only one of the March officials survived in this new complement—"Uncle Dick" Wooton, who managed to make sure of continuing in his office by joining those who dismissed all his associates.

Then followed the organization of "Jefferson Territory;" and as its partisans had in the main proceeded upon the theory that this region was then wholly unorganized territory, it started out with an intention to organize it in disregard of all previous county divisions, and to establish within its domain counties and county governments under its own jurisdiction.

Very soon after the "county election" of October 3rd, its sponsors concluded that for various reasons it would better be done over; and done over it was on November 8, 1859. In our account of "Jefferson Territory" we have mentioned the causes that led up to this conclusion, and the indignation occasioned among the adherents of "Jefferson" by the political operations of those determined to uphold the jurisdiction of Kansas Territory. As we have also stated, at this repeated election of November 8th, voting was done in but a few places, and in consequence of popular hostility to it, a very small vote was cast; the highest number received by any candidate having been 273 for the Sheriff. Several changes were made in the ticket of October 3rd, those elected on November 8th having been as follows:

John H. Kehler, Sheriff; C. R. Bissell, Probate Judge; P. Peers, Treasurer; Matt. Riddleberger, County Clerk; R. E. Whitsitt, Recorder of Deeds; G. W. Barck, Coroner; G. W. West, Auditor; D. C. Collier, County Attorney; G. L. Moody, County Surveyor; R. L. Wooton, J. M. Ferrill, and Charles A. Lawrence, Road Supervisors.

There were two tickets in the field, but the second one appears to have been a mere "dummy" set up to make an appearance of popular interest and rivalry in the election, as its candidates received but twenty-five or thirty votes each. Wooton seems to have developed as much ability in office-getting as he possessed as a trapper, trader and Indian fighter, for at this election he was the third time chosen Road Supervisor, in that year.

Notwithstanding that the October election was held at the time appointed by the Kansas election laws which we have cited, and that the November one was not, the latter was held to have been the only legal one up to that time. Why it should have been so regarded is not apparent. But it was so recognized by the government of Kansas Territory, and its returns are, as we have stated, the earliest for an election of county officers that are now on file at Topeka. This county equipment was not only recognized by Kansas, but it was here, though to a limited extent, before the close of 1859. It may be said also that this was Arapahoe county's first outfit of officers of whose proceedings there is definite record, and which takes rank as constituting its first official organization, theoretically under the forms of law. The existing county records, in many ways, rest upon the beginnings of records made by several of those officers. Still, they were not generally accepted, and as the reader will have learned, had to divide official honors with rivals.

It will have been observed by those who are following us through these annals of our pioneer times, that at the county election of March 28, 1859, no provision for a Representative from Arapahoe in the Kansas Legislature had been made. The reason for the omission is not known. The "term" of "Representative" A. J. Smith expired with that of the Legislature of the winter of 1858-59 and, as there were relatively as many patriots here in those days willing to serve the people in any kind of office, as there are now, if not a greater proportion, the omission might seem to reflect some discredit on the craftiness of our pioneer office-hunters. But the managers of the county election of November 8th removed all cause for any such reflection upon their ability to provide for all positions to which there was any opening. At the head of their ticket they placed the name of Captain Richard Sopris, a pioneer of the spring of 1859, and an excellent man, as that of their candidate for Representative. Like that for the others on the ticket, his vote was small—219; but he was elected under the forms of existing law. He was recognized and received by the Kansas Legislature as a duly elected member from Arapahoe county, and served through the session held in the winter of 1859-60. His more important labors were to preserve peace between the Kansas government and the new one of "Jefferson" that was then doing an independent political business, or thought it was, in the western confines of Kansas Territory. While the "Jefferson" proposition was not viewed with any great alarm, it was certainly not pointed to with pride nor regarded with approval, by the duly constituted government of Kansas Territory.

The first "Jefferson Legislature," which had assembled on November 7, 1859, soon realized that the county election held the next day under the Kansas jurisdiction, had seriously complicated affairs, especially with relation to the most important county office—that of Sheriff, the first and foremost peace officer in every pioneer community. The "Legislature" had not yet divided its "Territory" into counties, and the county of which Kehler had been elected Sheriff, was the Arapahoe county of Kansas Territory, so far as anybody then here definitely understood its extent. Therefore, and to remedy the situation, the "Legislature," on December 7th, after it had divided the "Territory" into counties, enacted the following curious special "law" which appears in Chapter XXXVI, of the "Laws of Jefferson Territory:"

AN ACT

Confirming the Election of J. W. [H.] Kehler as Sheriff and fixing the Limits of his Jurisdiction under the Provisional Government.

Sec. 1. Be it enacted by the General Assembly of the Provisional Government of the Territory of Jefferson, the Governor approving.—That the election of J. H. Kehler to the office of Sheriff of the county of Arrappahoe, be and is hereby confirmed —provided that the said Kehler shall not exercise the duties of Sheriff in Arrappahoe unless he reside in the same, and act as the principal Sheriff therein.

Sec. 2. That the jurisdiction of J. H. Kehler, as Sheriff, extend over the first judicial district during the time for which he was elected—provided that he will by appointment of competent deputies in each county in said district, consult the will of the majority of the people of such counties, and enter into bond with the county court of such county, in such sum and manner as may be directed by such court—provided that the jurisdiction of said Kehler shall not extend over the county of Jefferson, unless, he, the said Kehler, make that county his place of residence, and perform the duties of Sheriff of said county in person.

Approved December 7, 1859.

This "act" confirming Kehler's election and making it apply to "Jefferson's" Arapahoe county, and requiring him to act "as the principal Sheriff" therein, is a most confusing "statute." He is first required to reside in Arapahoe county, and is then authorized to act as Sheriff of Jefferson county provided he reside in that county and perform Sheriff's duties in person. How they expected the man to "reside" in both counties at the same time is not clear.

The "Territory" had by that time been divided by the "Legislature" into judicial districts, and provisions had been made for establishing Courts in them and in the several counties; and aside from what appear to be special provisions of the "act" with respect to Arapahoe and Jefferson counties, it was the first intention, as we learned from other sources, to have Kehler temporarily act, through deputies, as Sheriff of the other "Jefferson" counties only until county elections could be held in them under the "Jefferson" jurisdiction. But, as the reader has seen, the intention of the "act" with respect to Arapahoe and Jefferson counties is far from definite. Inasmuch as the Arapahoe county of 1855 included or encroached upon several of the "Jefferson" counties, and as Kehler had been elected Sheriff for that county in a spirit of hostility to "Jefferson," it would seem that it was the intention to make peace with the opposition by conceding Kehler's election as Sheriff, and confirming his full authority in that office in the "Jefferson" Arapahoe county; and, also, though under the inconvenient requirement that he reside in two places at the same time, over the "Jefferson" Jefferson county; thus placing the Sheriff and his friends in a position in which they could not reasonably object to recognizing "Jefferson" jurisdiction, and so having harmony all around, the importance of which was fully appreciated by the "Jefferson Government." Any better solution than this, rests with the reader.

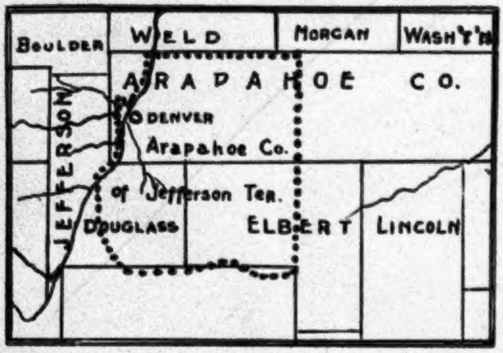
However, the proposition did not work out very well. Kehler rested his authority upon the laws of Kansas, but without having it very securely anchored to them, and continued to act as Sheriff of Arapahoe county, Kansas Territory, whenever he received a call for his official services.

The "Jefferson" "law" dividing the "Territory" into twelve huge counties was enacted early in November, 1859. One of the counties was named Arapahoe, and the one next west Jefferson. Arapahoe included a little more than one-third of the present county, and part of the present Douglas and Elbert counties; its boundaries having been defined as follows:

"Commencing at a point where the 40th parallel of north latitude crosses the 104th meridian of west longitude; thence west on said parallel to the center of the main channel of the south fork of the Platte river; thence up the main channel of said stream to the mouth of Clear creek; thence up the main channel of Clear creek to the mouth of Ralston's creek; thence in a straight line to a point where Montana creek joins the main channel of the Platte; thence up the main channel of said stream to the mouth of the canon at the base of the mountains; thence on the main divide between the waters of the Arkansas and the Platte rivers to where the 104th meridian of longitude crosses the same; thence north on said meridian to the place of beginning."

The "Jefferson Legislature" had also provided by "law" for "county officers" to be elected in each of its twelve counties, on the first Monday in January, 1860—the 2nd day of the month. A county election was held in Arapahoe on that day—the fourth one within ten months—at which the following named officers were chosen:

C. C. Post, President Judge; Thomas Pollock and A. C. Hunt, Associate Justices; Recorder, R. E. Whitsitt; Treasurer, Philip E. Peers; Attorney, D. C. Collier. In Auraria Charles Johnson was elected Justice of the Peace, and E. C. Tuttle, Constable; in Denver City, J. D. Smith, Justice of the Peace, and J. D. Hunter, constable.



Arapahoe County of "Jefferson Territory," indicated by dotted lines.

These men, as will be seen, lacked several of constituting a full complement of county officers; and the Recorder, Treasurer, and Attorney were the same men who had been elected to the same positions at the election held under Kansas jurisdiction on November 8, 1859. The reason for the omission of a Sheriff at this election was that Kehler had recently been made Sheriff of Arapahoe by the special "act" of the "Jefferson Legislature;" and it seems probable that the omission of others was due to the uncertainty and indifference that naturally grew out of such a muddled situation. Counting those elected in the previous March as being still nominally in office, and disregarding those elected October 3rd, Arapahoe had three outfits of county officials. But, as a matter of fact and as we have mentioned, the official tenure of the March crop had withered and finally vanished in the air, some time before; and it was not long until that of this January product, as such, went the same way.

At that election of January 2, 1860, Denver was formally made the county seat of Arapahoe. The "Jefferson Legislature" had previously by "law" consolidated the Cherry creek towns, and this choice applied to Auraria as much as it did to the rival division on the eastward side of the creek. Later a building in Auraria became the first Court House of the county.

During the first year of affairs here the more important records—those pertaining to real estate—were kept by the officers of the Town Companies. The Register of Deeds elected in March, 1859, left no records, if he ever made any. Whitsitt had been Recorder for the Denver Town Company since April, 1859, and after he was elected public Recorder under both jurisdictions, nearly every property-owner here had his deed or his town-lot certificate recorded by Whitsitt. He signed all his entries as "Recorder of Arapahoe county, Kansas Territory," and his were about all of the real estate records that were transmitted from the period of Kansas jurisdiction to that of Colorado Territory. As we have heretofore stated, the Town Companies in their transactions never recognized any provisional government. Officially, their towns were always located in Kansas Territory. In 1864 all of the Whitsitt records were acquired by the county and, to prevent any contention as to regularity of his election as Recorder in the early years, they were by law made part of the county's Records of Deeds, his oldest book now being book A, the first in the list of many volumes of real estate records. Richard E. Whitsitt was born March 30, 1830, in Hamilton county, Ohio, near Cincinnati. Upon the organization of Kansas Territory he located at Leavenworth and remained in that part of the country until he came hither the autumn of 1858. Whitsitt was a man of great energy, courage, and force of character, and was well fitted for his place as the leader and manager of the business affairs of a pioneer community. He acquired a fortune in Denver real estate, and remained a prominent citizen here until his sudden death at the Grand Central Hotel in the evening of March 17, 1881.

Kehler served several months as Sheriff under the Kansas jurisdiction, when he resigned and was succeeded by H. H. C. Harrison, who appears to have been appointed, as we could find no record of his election. On October 22, 1860, the day of the second general annual election under the "Jefferson" establishment, a county ticket consisting only of E. W. Wynkoop, Sheriff; and L. J. Winchester, Recorder, was elected. For some time after that Wynkoop is found figuring as Sheriff of the county; but there is no record of Recorder Winchester. On November 6, 1860, by order of the Secretary of Kansas Territory an election was held under that jurisdiction for a Representative in the Kansas Legislature, three County Commissioners, an Assessor, Probate Judge, Sheriff, Clerk, and Attorney—the last-named three "to fill vacancies."

At that election Edward M. McCook, afterward twice Governor of Colorado Territory, was elected Representative in the Kansas Legislature, and served during the winter of 1860-61. His duties were light and entailed no legislation of importance to his constituency; none having been sought, as the creation of a new Territory here had then become assured.

Our readers will probably agree with us that we have pursued far enough these details of the various and complicated pioneer affairs of Arapahoe county. It remains only to be said that the people managed to get through until relieved in 1861 by the Territorial organization of Colorado. Several members of the pioneer organizations under both jurisdictions continued to serve as best they could until succeeded by those elected in December, 1861. Those under the Kansas jurisdiction had commanded far more respect than the others; and they with the city Provisional Government really constituted the connecting links between the pioneer "county governments" and the first one under the Territory of Colorado. Subsequent legislation, as we have elsewhere mentioned, confirmed much that had been done under the several more or less irregular organizations we have here been considering. Some account of Arapahoe county's judicial organization together with some further consideration of our pioneer Courts appear in another chapter in connection with what is related of our Bench and Bar.

Governor Gilpin's attention was first given to organizing his Territorial government, and this, with the time necessary to the election of a Legislative Assembly, and also with the exigencies of that first year of the civil war, left the old county establishment without a reorganization of its machinery—or, to be more exact, without being made over and equipped with a new outfit of officers—until late in the year 1861. The first Legislative Assembly met in Denver, in its first session, on September 9, 1861. By an act approved November 1, 1861, it divided the new Territory of Colorado into seventeen new counties, viz.: Arapahoe, Boulder, Clear Creek, Costilla, Douglas, El Paso, Fremont, Gilpin, Guadaloupe, Huerfano, Jefferson, Lake, Larimer, Park, Pueblo, Summit, and Weld. The act defined the boundaries of Arapahoe as follows, and they have not since been changed:

> "Commencing at a point on the base line [parallel Forty] where the range line between the ranges sixty-eight (68) and sixty-nine (69) intersects said base line; thence south on said line to where said line intersects the first correction line south; thence east to the eastern boundary of the Territory; thence north on said eastern boundary to the base line; thence west to the place of beginning."

The act authorized and directed the Governor to appoint for each of the counties a Board of three Commissioners to take charge of and direct affairs preliminary to the election of county officers. For Arapahoe county Governor Gilpin appointed

---

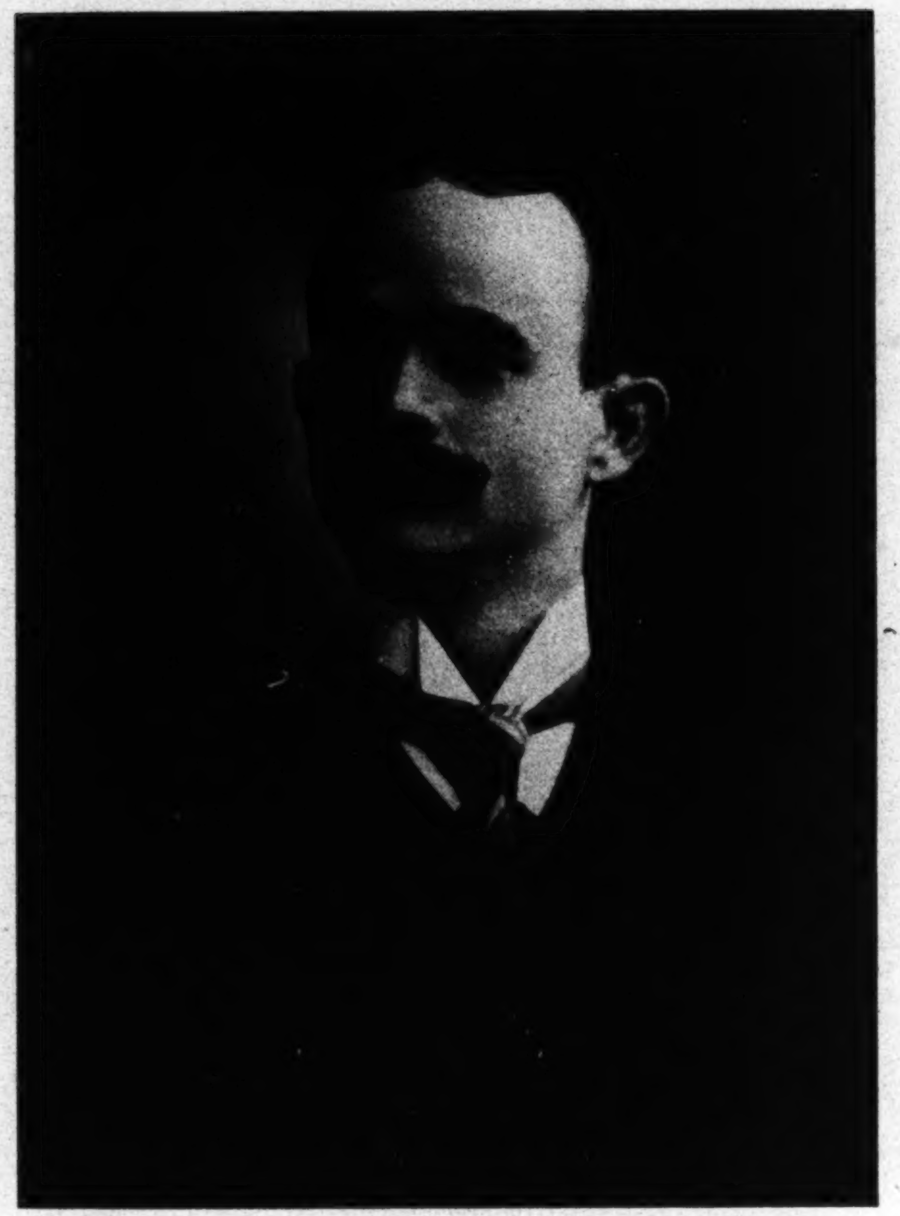
Benjamin Barr Lindsey, County Judge for Arapahoe county, was born in Jackson, Tenn., November 25, 1869; the son of L. T. and Letitia (Barr) Lindsey. His father located in Denver in 1878, the family following about a year later. When twelve years of age he was sent to Notre Dame University near South Bend, Ind., where he remained two years, and where, at the age of thirteen, he had won a gold medal for superiority in public speaking. In 1884 he went thence to his birth-place, lived on his grandfather's farm, and attended the Southwestern University at Jackson. There he won a second gold medal for superiority in public speaking; all the other contestants having been his seniors by from five to eight years. In 1887, when seventeen years old, the business reverses and ill-health of his father required him to leave the University and return to Denver where, soon after, his father died. Having been the elder of four children, though yet a mere boy, the burden of responsibility for and support of the family then devolved upon him.

Notwithstanding this termination of his University course, Judge Lindsey, having resolved to fulfill his intention to become a lawyer, entered the law office of Hon. R. D. Thompson in the capacity of office-boy, and devoted all his spare time to the study of law. His earnings during that period were increased by employment in the mornings as a route carrier of newspapers for one of the Denver dailies, and in the evenings at janitor work in one of the large office buildings. With the help of a younger brother aged fifteen, the family was thus provided for and he was enabled to prepare for admission to the Bar.

Immediately after his admission in 1893, Judge Lindsey engaged in practice of his profession. In 1896 he formed a partnership with Senator Fred W. Parks, under the firm name of Lindsey & Parks, and which soon became prominent among the law partnerships of younger members of the County Bar. This relation successfully continued until, in January, 1901, Judge Lindsey was appointed County Judge for Arapahoe county, to succeed Hon. R. W. Steele, who had resigned in consequence of his election in the preceding November to the Supreme Court of the State.

A Democrat in politics, Judge Lindsey became influential in the councils of his party in 1899, and soon won recognition of his merits. In that year Governor Thomas appointed him Public Administrator, a position he relinquished to accept the higher honor conferred by his party when he was appointed to the County Bench—generally regarded as the most important nisi prius Court in the State. In the Democratic convention in the autumn of 1900, and that consisted of over 800 delegates, he had, though but thirty years of age, come within fifteen votes of being nominated as a candidate for District Judge.

Judge Lindsey is now the youngest Judge in the State of Colorado. Unmarried, he resides with his mother and a younger brother, upon whom he continues to bestow the care and solicitude that have been his since boyhood.—J. C. S.



Benjamin B. Lindsey.

George W. Clayton, E. W. Cobb, and Dr. J. H. Morrison. They met on November 27th and divided the county into ten election precincts and appointed Judges of Elections, preparatory to holding the first duly and properly authorized county election in Arapahoe under unquestioned and unquestionable auspices. The ten precincts were the Island, with H. O. Goodrich's house at Henderson's island, as the polling place; the Platte, with E. McLaughlin's house down on the Platte, as polling place; Clear Creek, polling place at James Baker's house on that creek; Box Elder, with polling place at James B. Conant's ranche; Bijou, with polling place at the stage station on that creek; Upper Cherry Creek, polling place at Steele's ranche; Bear Creek, polling place at Joseph McBrown's ranche; Highland (town), polling place at A. Chaplain's dwelling; West Denver (for the city proper), polling place at A. C. Hunt's; Camp Weld, polling place at Camp headquarters. On November 19th the Commissioners appointed Augustus Wildman Clerk of the Board, and changed the Platte precinct-polling place from McLaughlin's to Sloane's.

The election was held on December 2nd, and resulted in the choice of Samuel Howe for Sheriff; Charles G. Chever, Clerk and Recorder; J. N. Odell, Probate (or County) Judge; C. L. Bartlett, Treasurer; Lewis B. France, County Attorney; W. T. Shortridge, Assessor; Freeman B. Crocker, Coroner; O. J. Goldrick, Superintendent of Schools; George L. Moody, Surveyor; Samuel T. Hawkins, James Brantner, and James W. Weir, Commissioners; and Phillip P. Wilcox and John Wanless, Justices of the Peace. These men started the wheels of the new county organization immediately, and by the middle of December the machinery was all in motion and Arapahoe county was finally a legally and fully established fact.

Some of these officers served the people long and faithfully. Charles G. Chever was kept in his office six years. L. B. France served as County Attorney five years; and as clerk to the House Judicial Committee of the First Territorial Legislature, framed the general practice laws enacted at that session, beside attending to the duties of his office, which were many and onerous; a large amount of business having been precipitated upon it at the outset. Freeman B. Crocker became successively Superintendent of Schools, member of the Denver City Council, chairman of the Board of County Commissioners, member of the Denver Board of Education, and President of the Board of Public Works. His record is that of one of the ablest, most conscientious, honest and straightforward men whose services have ever been at the command of this community.

The names of all the men who have been elected to the various county offices since 1861 would constitute a long list, the appearance here of which would not serve a purpose sufficiently important to warrant us in devoting to it the several pages it would require.

The transition from Territory to State brought no changes of importance to the organization of Arapahoe county, aside from those relating to the judicial system. At the session of 1874 the Territorial Legislature had by law increased the number of County Commissioners from three to six; but the first State Legislature reduced it to five, as it now stands. At the last county election under the Territorial government, held in September, 1875, officers were chosen as follows: David J. Cook, Sheriff; Wilbur C. Lothrop, Clerk and Recorder; Amos Steck, Probate Judge; James M. Strickler, Treasurer; George C. Roberts, Assessor; Dr. Charles Denison, Coroner; W. A. Donaldson, Superintendent of Schools; Joseph M. Brown and A. M. Stansbury Commissioners. At the first county election under the State organization, held in October, 1876, the officers chosen were Waldo Corbett, Assessor; E. H. Kellogg, Surveyor; O. D. F. Webb, Coroner; and Freeman B. Crocker, Commissioner. As will be seen, a majority of the county officers held over and completed their terms under the State government, among them having been Commissioners Steele, Williams and Batchellor; provision for them doing so having been made by the organic law of the State.

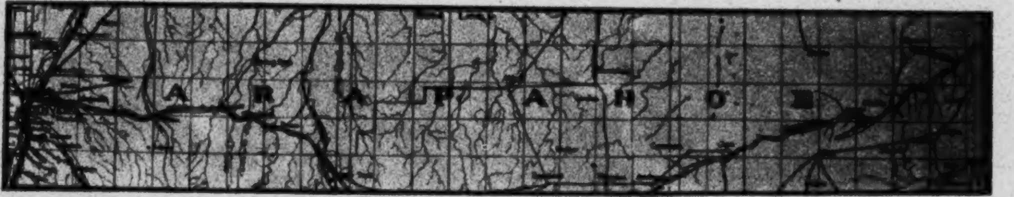
As we have mentioned, Arapahoe county still retains the area and boundaries designated for it by the first Legislative Assembly of Colorado Territory. Section 1 of Article XIV of the State constitution says: "The several counties of the Territory of Colorado, as they now exist, are hereby declared to be the counties of the State;" and Arapahoe still exists as it then existed.

In the pioneer times the expenses of maintaining the Arapahoe county organization were upon a very modest scale, as they had to be when resources were so limited. A few figures indicating both will doubtless be of interest. The property valuations for taxation in 1862 aggregated $1,047,370, and the tax levy was $17,491. The county's expenditures during the fiscal year ended September 1, 1862, its first one, were $10,842. In 1863 the valuation was $1,365,054, and the tax levy $22,080. In 1864, valuation $2,007,298, tax levy $31,277, and county expenses for year ended September 1, $18,338. In 1864-65, on account of extraordinary expenses due to the Indian troubles, special county taxes amounting to $31,09[illegible] were collected to assist in maintaining the volunteer troops called into service to protect the people. Under the rule of martial law, when the District of Colorado was under command of Colonel Thomas Moonlight, the county was compelled to supply stores and other necessaries for the soldiers. In 1865 the county valuation was $2,804,402, tax levy $44,309, and county expenditures $22,051. In 1866, valuation $3,991,151, tax levy $58,515, and county expenditures

$39,861. During the next four years valuations increased in greater ratio under the influence of prospective railway communications, and in 1871, when the lines of the Denver Pacific and Kansas Pacific were first included in the assessment, the county's valuation rose to $12,115,347. Under the shrinkage of values in 1873 the valuation was reduced to $11,871,908. As valuations in subsequent years are mentioned elsewhere we need not repeat them here.

For more than twenty years the Arapahoe county offices and Courts occupied rented quarters here and there over town, and it was not until 1883 that it had a Court House of its own for its officers, business, and archives. The records of the Auraria City and Denver City Town Companies contain some references to "the Court House," each town appearing to have had a building they called by that name; but there is nothing definite concerning them in the records, nor do any of the pioneers of 1859 recall what or where they were. The Auraria record refers to "the Court House" and to "the public square" in connection with donations of lots in 1859; yet, the plat of their town shows no "public square" nor does it indicate the location of "the Court House." In the Denver City record an entry states that some lots "near the Court House" were given away; another entry in the minutes of a meeting of the Directors held July 18, 1859, sets forth that "the contractors of the Court House were given until the first of September to complete the building." But the record is silent as to who the contractors were, when they were authorized to begin it, where "the Court House" was to be built, and what kind of a building it was to have been; and none of the "old-timers" knows anything about it. So, it would seem that these pioneer "Court Houses" were somewhat mythical propositions.

On December 13, 1861, a few days after the first county officers under Colorado Territory had been elected, the County Commissioners leased from R. E. Whitsitt for the accommodation of some of the county business, a small building that stood on or near the southwest corner of Sixteenth and Larimer streets at a rental of forty dollars monthly. Whitsitt had occupied the building while he was Recorder of Arapahoe county, Kansas Territory, and general manager of the Denver Town Company's affairs. On December 18th the Commissioners instructed Sheriff Howe to find a place for and to construct a jail. A log cabin in the first alley between Market and Blake streets on the west side of Cherry creek, was converted into a jail; but in 1862 a new prison was provided on the south side of Larimer street between Fourteenth and Fifteenth streets, which remained in use some ten years or more. The Whitsitt building was occupied by some of the county officers until 1863, rooms for the others and for the Courts having been rented elsewhere. In 1863 a building owned by Asa Middaugh, built for commercial purposes, on the north side of Larimer street between Tenth and Eleventh streets, was leased for county purposes. It had been used for school purposes, as we have elsewhere narrated, and the Legislature held one of its sessions in it. The Middaugh building thus became really the first "Court House" of the county, for all the county business was assembled in it. It was so used until 1873 when the upper part of the Hughes building still standing on the northwest corner of Lawrence and Fifteenth streets, was leased for county uses and the Courts and county officers installed there. The Hughes building was continued to be used as a "Court House" until the erection, and occupation in the spring of 1883 of the present real one.



Arapahoe County, 1900

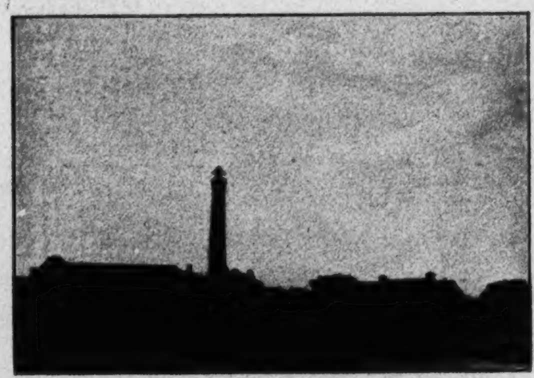
Arapahoe county has been a rather heavy investor in railway stocks, and from one standpoint a heavy loser in them. But, in the broader sense her railway investments repaid her many times, the first one having been the principal means of bringing salvation to the city and county in the construction of the Denver Pacific railway. In 1868 the county, after an overwhelmingly favorable vote, issued $500,000 of bonds (for which it ultimately received $1,000,000 of stock in that company), and thus assured the road's construction. Additional particulars of this transaction appear in our historical accounts of the Denver railways.

In 1872 the county was called on to aid in the construction of another railway. On October 10th a petition was presented to the County Commissioners praying them to submit to a vote of the people a proposition providing for the county taking $100,000 in stock of the Denver, Georgetown & Utah Railway Company and paying for it in bonds of the county. The question was voted on

November 11th of that year and approved by a majority of 520. The bonds were prepared but afterward cancelled for reasons also stated in our historical accounts of our railways.

In 1873, came yet another railroad aid proposition to the county. On June 18th the Commissioners were petitioned to authorize a vote on the question of assisting the Denver, South Park & Pacific Railway Company to the extent of $300,000, on the basis of exchanging county bonds for that amount for an equal nominal amount of the railway company's stock. The petition was withdrawn on June 19th, and again presented on June 25th. The Commissioners ordered an election to be held July 28th, at which time a majority of 1,302 was given the proposition, and the bonds were subsequently issued.

The county retained its railroad stock until late in 1879. In November of that year the Commissioners took action with relation to it as indicated in the following:



Arapahoe County Hospital.

> Whereas, In 1868 the county of Arapahoe issued bonds to the amount of $500,000 in payment for stock in the Denver Pacific Railway & Telegraph Company, of which the county now holds 10,000 shares of stock of the par value of $1,000,000; and
>
> Whereas, In 1873 the county issued bonds to the amount of $300,000 in payment for stock in the Denver, South Park & Pacific Railroad Company, of which the county holds 3,000 shares;
>
> Resolved, That the county sell its interest in the Denver Pacific for $100,000, and in the Denver & South Park for $150,000.

The proposition was approved by the people and the stock was transferred on December 9, 1879, to Jay Gould, who was then preparing for consolidating the various roads that later constituted the Union Pacific, Denver & Gulf system. The $250,000 received in cash for the stock was prudently invested in United States bonds to await the time when it would be needed for a county building. The interest received and the advance in the market value of the bonds added between $50,000 and $75,000 to the county's cash resources. As the stocks yielded no income, the transaction was regarded as a most advantageous one for the county; and the two railroads had been worth to the community many times the amount of the bonds issued to aid, and really assure, their construction.

It was not until 1873 that Arapahoe county erected its first public building—which was one of the several now constituting the County Hospital, though at that time it was commonly known as "the poor-house." It was not, however, the first "poor-house" owned by the county. In October, 1866, a "poor-farm" embracing something like forty acres, then some distance south of the city and east of the present line of Broadway, but now far within the city limits, was purchased by the county. A small house stood on the land, and for several years it was used for Infirmary purposes. In later years the land of that "poor-farm" was sold to the corporation of the National Mining and Industrial Exposition, and the large building for the Expositions of 1882-83-84 was erected on it. The land is now occupied by dwellings. Early in 1873 the county bought from R. E. Whitsitt for $1,250 about three acres of land now the site of the County Hospital; and on May 5th, of that year, contracted for a building to be erected there at a cost of $4,900, and which was completed before the close of the year. As we have stated, it was at that time called "the Poor-house," but later, when the county had acquired another "poor-farm," north of the city, and in deference to the feelings of those who temporarily became public charges, yet shrank from the thought of being inmates of a "poor-house," the institution was given the name it now bears—the County Hospital.

The other county public building decided on in 1873, and the second on land owned by the county, was a Jail. On June 3rd, of that year, by direction of the Commissioners, the people voted on a proposition to issue $50,000 of bonds to provide money for building the Jail, and rejected it. On July 28th the question was again submitted, and approved by a majority of 1,527. On September 13th George W. Smith contracted with the Commissioners to erect the Jail building, proper, for $26,023. The $50,000 worth of Jail bonds were not sold until February 3, 1874. On the 14th of that month the Commissioners bought from former Governor A. C. Hunt the block of land bounded by Colfax, Santa Fe, and West Fourteenth Avenues and South Eleventh street, for the Jail site, paying $8,500 for it. The present fine Jail Building also stands on that block; this part of the story applying to the "old Jail." Contractor Smith began work on the building and then assigned his contract to Hallack & Brother who satisfactorily completed it and turned it over to the Commissioners September 5, 1874. The old structure is still there and now affords quarters for the Criminal Division of our District Court, for offices, and so forth.

An Infirmary and a Jail having been provided, the next proposition was to prepare for building a Court House, and the location of the proposed structure became a bone of contention that was fought over from the spring until the autumn of 1875. Each proposed site was opposed by a strong faction, and the entire project was condemned by a considerable number of people on account of the expense it would entail. Most of the contention grew out of purely selfish motives, while the downright opposition was divided between "conservatism" and stupid indifference to the actual necessity for an appropriate county Capitol.

The matter had been taken up by the County Commissioners early in the spring of 1875, and on May 5th they bargained with George W. Brown and John J. Reithmann for eight lots at the northwest corner of Larimer and Fourteenth streets, (the City Hall site,) at a purchase price of $10,000, a reduction of $3,250 from what the owners had declared was their lowest possible selling price. This action and the proposed location of the Court House instantly caused howls of protest in which the newspapers joined with great vigor. But the most uproarious of the remonstrances came from or were inspired by real estate owners and dealers interested in property in other parts of the town. The Commissioners were petitioned, and personally appealed to, from every hand to undo their action, and were threatened with injunctions and pelted with protests. Various other sites were recommended and urged, and the owners of several offered them at low prices. One party of about thirty citizens and real estate owners urged the purchase of the block, then on the outskirts, bounded by Court Place, Fifteenth, Sixteenth and Tremont streets—the site finally bought—and pledged a donation of near $2,000 toward paying for it. For a couple of days the Court House storm swept the city, and the Commissioners found official life a great personal burden.

The Board at that time consisted of Freeman B. Crocker, Joseph W. Bowles, H. D. Steele, A. J. Williams, I. H. Batchellor and A. M. Stanbury. They were men of high standing, and their personal integrity was in no way involved in the uproar by which they were beset. The site for which they had bargained, although it was conveniently located in what was then the business center of the city, was undeniably very bad—or it appears so now; but the price agreed upon for it was undeniably very reasonable. On May 7th Commissioner Steele proposed by resolution to cancel the purchase agreement with Brown and Reithmann. On this the Board evenly divided; Crocker and Batchellor voting with Steele in favor of the resolution, while the other three voted against it. This official deadlock continued through that summer.

Early in July came a petition asking the Commissioners to buy the then new Arapahoe street school house for a Court House. On July 9th a committee from the Board of Education of District Number 1 offered that property to the Commissioners for $60,000. The building was deemed unsuitable, the premises too small, and the price too high; so the proposition was declined.

The contention over and opposition to the Brown-Reithmann site afforded steady employment for many and equally steady pastime for many others all summer, the Commissioners remaining divided in the meantime. But, on September 7th the resolution to cancel the purchase agreement was again taken up, and passed. Then it was decided to purchase the block on which the Court House now stands. That property, as stated elsewhere in this volume, was donated to the Roman Catholic church in 1860 by the Denver Town Company in pursuance of its policy to encourage the establishment of churches in the pioneer town. In 1875 the title to it was in Bishop J. P. Machebeuf, of this Diocese. The unalterable price placed upon it by the Bishop was $18,000; the price proposed by the Commissioners was $16,000. The citizens who had previously petitioned for that site and pledged a donation toward paying for it, came forward with $2,000, the trade was closed and title to the property passed to the county.

While there was undoubtedly a very large majority of the people utterly opposed to the Brown-Reithmann site, almost, if not quite, a majority were equally opposed to the one taken. It was too far out; it was a half-mile from the business section of which Larimer, Market and Blake streets were then the great thoroughfares; it was out in the country; it was out on the back streets; and it was many other things undesirable, and few commendable. However, as matters have turned out, it was a most fortunate selection, and as wise an investment of public money as public officers ever made anywhere. The property probably could now be sold for upward of a half million dollars.

Nearly five years elapsed before preparations were begun to put a building on the site. The county had become somewhat cramped in its resources chiefly in consequence of having issued railway aid bonds to the amount of $800,000 bearing a rather high rate of interest. But in 1879, as we have related, it disposed of its railway stock received for the bonds, and came into possession of a quarter-million dollars in cash.

Early in 1880 the Commissioners invited from architects plans for a new Court House to be built on the full block of ground bought in 1875. From several designs submitted, those of E. E. Myers, of Detroit, Michigan, and who later became the architect of the State Capitol, were adopted on March 31st. On August 30, 1880, a contract was made with George Kunmacher for erecting the building at his bid of $178,112. Kunmacher could not, or did not, furnish proper bond, and two weeks later the contract was given to Lester Fillmore and Peter Gumry upon their bid of $185,000. These men gave proper bond and immediately began work on the foundations.

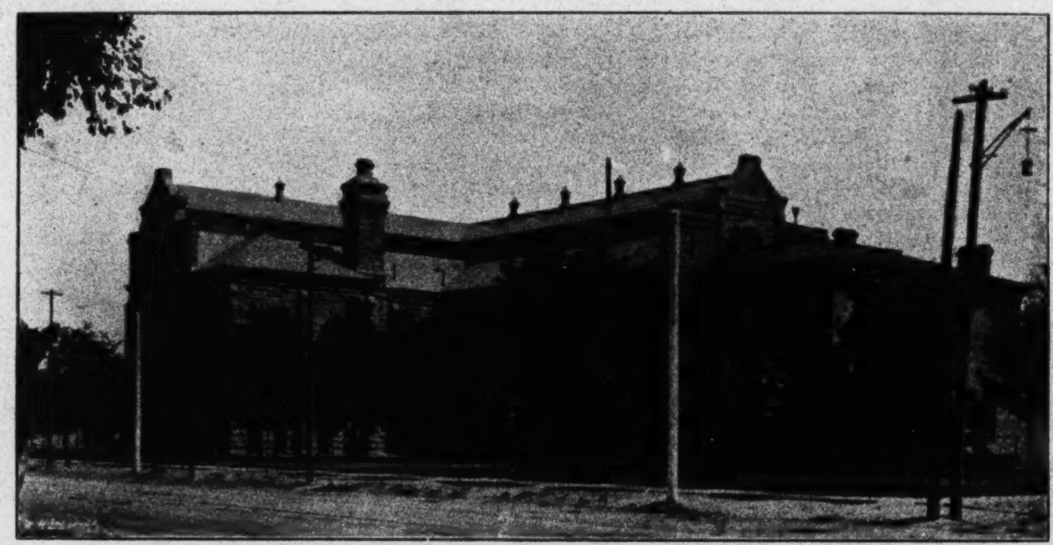
The Colorado Grand Lodge, F. & A. M., of which L. N. Greenleaf was then Grand Master, laid the corner stone on June 24, 1881, with appropriate ceremonies, to which were added a masterly address by Governor F. W. Pitkin. The contractors met with no delay in their work, and by April, 1883, had completed the large building. On Tuesday, April 17th, it was dedicated to the uses for which it had been built, upon which occasion there were more ceremonies and many congratulatory speeches in the presence of a large concourse of citizens. Those who had condemned the site chosen for it and those who had opposed its erection anywhere, were, when the building was finished about as well pleased by it as were the most ardent friends of the improvement. No bonds were issued to provide means for its construction; the funds derived from the sale of the county's railroad stocks, with some added from regular income sources, having constituted the building fund.

The Court House was built of fine-grained, light-colored sandstone quarried near Canon City, and as completed in 1883 was of three stories and a basement. As finished at that time, with furniture, and with paving, coping, foundations and other improvements on the ground, architect's fees and all incidentals, it involved an expenditure of $311,602.74. The ground, exclusive of the donation of $2,000, cost $16,000, thus bringing the total public outlay at that time up to $327,602.74. In July, 1892, the Commissioners decided to add another story to the building, the county's business having outgrown the capacity of the original structure. In June, 1893, a contract for the work was made with Frank Anderson at his lowest bid of $105,000, and by the close of December of that year the fourth story was completed, its cost having been met by funds on hand. This made the Court House as it now stands represent an outlay of $432,602.74.

While the Court House is not such an edifice as would now be built for public purposes, it is a handsome, commodious and well-arranged building, conspicuous, in its spacious surroundings, among the prominent structures in the city; its dome ranking next in height to that of the State Capitol. Its construction was a thoroughly honest transaction. There was not the suspicion of jobbery or neglect or deception associated with it; and the people were more than satisfied with the management of the trust confided to their Commissioners. Those who served as members of the Board during the original construction period were Joseph Bates, Joseph M. Brown, F. B. Crocker, John C. Kuner, Wolfe Londoner, J. A. Shreve, H. D. Steele and Peter Winne.

The early construction on the southward side of the Court House of a fire-proof "Hall of Records" in which to more safely keep the large accumulation of county records, is now under consideration upon plans that contemplate the ultimate erection of another and similar structure on the northward side, which would then make the thus greatly enlarged Court House cruciform in ground plan.

In 1887 it was determined to build a new jail on the jail property at South Eleventh street, Colfax and Fourteenth Avenues, the old one by that time



Arapahoe County Jail, Old Jail Building, now used for Criminal Court purposes, on the right.

having been unable to accommodate the increasing business offered it. On July 6, 1889, a contract for the building, proper, was made with the E. F. Hallack Lumber & Manufacturing Company; and later with the Pauly Jail and Manufacturing Company for the jail and other iron work. The building was completed in June, 1891, at a cost, including all incidentals, of about $400,000. It can accommodate 350 persons under restraint, but its capacity could easily be increased to 500. Built of Colorado red sandstone, it is an admirable structure of its kind, standing in a large and well-kept park. As a public building it is more than creditable to the county, and for its purposes, its architectural appearance is quite unusual. No bonds were issued on account of it, its cost having been defrayed out of surplus money in the general fund.

The County Hospital, owned and maintained by Arapahoe county, is now a large and excellent charitable institution, though its location on Sixth Avenue, between Evans and South Fourteenth streets, is not the most desirable one. There are several good buildings, the older one having, as we have heretofore stated, been erected in 1873. The "nurses' home" was added in 1889, and the "surgical building" in 1892; the three representing an outlay of about $75,000. In the summer of 1900 a fourth building was put under way, to cost about $65,000; and upon its completion the institution will accommodate upward of 200 patients.

The county also has a large Infirmary Farm near Henderson, fifteen miles northeast of the city and on the Platte river. For many years the county had such a farm northeast of the Globe smelter, but the present one of 260 acres was bought in 1898. It is well improved, has good buildings, and for land and improvements represents an outlay of about $50,000. The average number of inmates is near 125. The old farm is still owned by the county.

Technically our public schools may be said to rank as county institutions, and the school statistics of Arapahoe county are chiefly those of the Denver schools, of which full historical accounts appear in subsequent chapters. Nevertheless, and considering the relatively sparse population in the greater part of the county, excellent provisions for education elsewhere exist. The country schoolhouse is a prominent object in every hamlet, and also in the remoter districts wherever there are people with children of school age. In the county, including the towns, and the city of Denver, there are ninety-six organized school districts, and in the year 1900 schools were maintained in all but two. A first-class district is one having a school population of 1,000 or more; a second-class, one having 350 but less than 1,000; a third-class, one having less than 350. The law provides for organizing a district for a minimum of ten children. Boards of Education in first-class districts consist of five members; in the other districts, of three members. The Denver districts Numbers 1, 2, 7, 17 and 21 are of the first-class; the Globeville district is now the only one of the second-class; and all the others are of the third-class. The larger third-class districts are those of Littleton, Harman, Valverde, Montclair and Brighton. According to the last enumeration, made in April, 1900, there were 41,458 children of school age in the county, of which 20,613 were males and 20,845 females. The number outside the city of Denver was 3,365. Of that enumerated number, 32,496 were of school enrollment—15,720 males and 16,776 females, the average daily attendance having been 21,010. Of the enumeration of April, 1900, there were, of the compulsory school-age, eight to fourteen years, 9,889 males and 9,949 females; a total of 19,833; and of these, 8,270 males and 8,439 females, a total of 16,709, were enrolled in the public schools. There were, also, 1,707 pupils enrolled in private schools. In the several High Schools there were 950 males and 1,375 females, a total of 2,325, enrolled in 1900. Among those in attendance at Arapahoe county public schools in 1900 were fourteen deaf mutes and seven blind children. In 1899 the enumeration of children in the county, of school age, was 38,369, of which 18,858 were males and 19,511 females.

Arapahoe County Court House as completed in 1883.

In 1900 there were forty-six male and forty-four female teachers, a total of ninety, in the High Schools in the county; thirty-two male and 544 female teachers, a total of 626, in the graded schools; and fifteen male and ninety-eight female teachers, a total of 113, in the rural schools; a grand total of 829 teachers in all the schools of the county. During that year $532,652.89 were paid in salaries to teachers. The average monthly salary paid to male teachers in graded schools was $103.79; to female teachers, $68.24. The average in the rural schools was, to male teachers, $44.42; to females, $35.82.

The present estimated value of school property in the county is $3,001,791. There are 176 buildings, of which eighty-two are brick, sixty-six frame, twenty-seven of sod, and one of stone. These have 697 rooms and afford 28,487 desks or sittings, and have school libraries aggregating 29,618 volumes exclusive of text books. Text books are supplied free to all unable to provide them. The county's total school expenditures during the year ended June 30, 1900, were $930,844.59, the larger item of which respresented teachers' salaries. $165,166.55 went for fuel, rents, insurance and various miscellaneous purposes; $125,938.95 for sites, new buildings, and other permanent improvements; $6,849.23 for library purposes; $7,304.72 for rebate taxes and fees; $52,404.49 for temporary loans and interest thereon; and $40,527.76 for bond redemption and interest. But thirteen of the districts now have a bonded indebtedness, the aggregate amount of which was on June 30, 1900, $586,100. The general school tax levy by the County Commissioners for the year ended June 30, 1900, was five mills which producted $307,058.81. All the Districts made a special levy of their own, the highest in any having been twenty-one mills; and the average of special levies, eight mills. These special levies produced $551,660.21; and the county had during that year miscellaneous school-fund receipts aggregating $71,136.92.

The domain of Arapahoe county is large enough for a fair-sized State and is larger than some of the Atlantic seaboard States. It stretches in its peculiar, elongated form from within twelve miles of the base of the Rocky Mountains eastward to the Kansas line, being one hundred and seventy-four miles long by thirty miles wide, and embraces 5,220 square miles; all in the plains district. Its area is nearly five times that of the State of Rhode Island, nearly three times that of Delaware, considerably more than that of Connecticut, and about two-thirds that of New Jersey. In form the county is a parallelogram, and its lines as surveyed by United States Surveyor-General Francis M. Case, in 1861, have remained unchanged. Under the first division there were two or three other counties larger than Arapahoe; Weld county having been more than twice as large. The present Routt county in the northwestern part of the State is one-sixth larger, but practically undeveloped. Originally, the Arapahoe county of Kansas Territory was potentially probably the richest county in the United States, for it embraced nearly all the region in which Colorado's mining districts were subsequently developed. But the present county is not now a mining county. Aside from the pioneer placer work along the Platte river and Cherry creek, the gold production of the county, all from placers, has been of trifling importance, and in recent years has ceased to be anything.

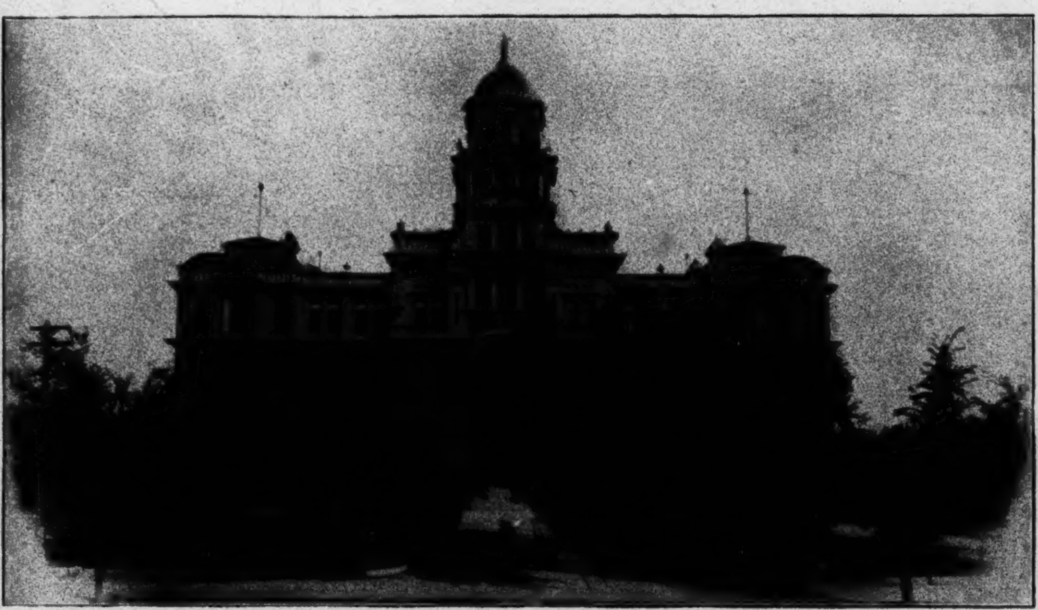
To a very large extent in one sense, Denver, the county seat, is Arapahoe county. The great mass of the county's population is concentrated in its extreme western end—in and near Denver; and, of course, the great bulk of the county's taxable property in valuation is also in and adjacent to the city. The assessed valuation for taxation of all property in the county, in 1899, approximated $70,000,000; and in 1900 approximated $78,000,000; of which Denver's portion was about three-fourths. The highest valuation for taxation was that immediately preceding "panic times," when it reached about $103,000,000. The tax levy fixed in December, 1900, (for 1901) was, for school purposes, five mills; for general county purposes eight mills; to which is added the State's poll-tax of $1.00 on each male inhabitant of lawful age. The rate fixed in 1899, including school tax, was twelve mills; and in 1898, 1897, and 1896, it was eight mills each year, including school-tax. From the small annual expenses of pioneer times, county expenditures have increased with the growth of population and needs until, in 1900, they approximated, all told, $545,000, exclusive of expenditures for public schools.

The population of Arapahoe county, by the census of 1900, was 153,017, an increase of 15.8 per cent. over the enumeration of 1890, which made it 132,135. The total vote in Arapahoe county in November, 1900, was 59,261, of which forty-two per cent. was cast by women.

Outside of Denver and its immediate environs Arapahoe county contains few important towns in all its vast area. Littleton and Brighton are the only ones much above mere hamlets, and the former might be considered a suburb of Denver, as it is only eight and one-quarter miles south of the State Capitol and three and one-quarter south of the city's south boundary. It was founded by Richard S. Little, a native of New Hampshire (1829), a civil engineer who had been engaged in railway construction in the States, and who came to Colorado in 1860, and settled on the site of the town, where he engaged in farming. In 1867 he, L. A. Cole, John G. Lilley and Jesse Estabrook built the "Rough and Ready" flouring-mill there, and the mill soon became the nucleus of a town. Little platted the town in June, 1872, when it was named for him. The mill became a noted one in Colorado and still retains its fame. It was burned in January, 1872, with a loss of $40,000, and was rebuilt. In 1874 the new one was burned. The third structure was one of stone and still endures. Littleton is situated in a rich agricultural section and by the census of 1900 had a population of 738. It is a tidy town with several churches, good schools, and a newspaper—the "Littleton Independent." In many respects the place has the air and quaintness of a new England village. Its founder died at his home in the town on December 22, 1899.

Brighton, a smaller and less important place on the right bank of the South Platte river, nineteen miles by rail northeast of Denver, was founded by D. F. Carmichael, who platted it in February, 1882. Carmichael was a native of Canada, but of New York parentage and, like Little, was a civil engineer and railroad constructor. He was engaged on the Union Pacific, and later in the construction of the Julesburg-LaSalle branch; and still later with the operation of roads leading out of Denver. Brighton is a growing town, and by the census of 1900 had a population of 366. It is at the junction of the old Denver Pacific division of the Union Pacific Railroad and the branch line to Boulder, in an excellent agricultural and dairying district, is well provided with churches and schools, and has an "opera house," and a newspaper—the "Brighton Register."

Beyond these there are no towns in Arapahoe county, out of sight of Denver, of any consequence. The others are mere hamlet way-stations and shipping points on the railways, or small post-office settlements in the interior barely of sufficient importance to appear on the county map. The railroads appear to have as much as possible avoided traversing the Arapahoe county area to the eastward of Denver. The Kansas Pacific division of the Union Pacific Railroad, extending southeastward from the city, has about sixty miles of road in the county; but the others have no more than required to take them out of it by the shortest desirable routes.



Arapahoe County Court House, 1900.

About four-fifths of the area of Arapahoe county is arid and beyond the reach of the present means of irrigation; therefore, it can not be said to be an agricultural county. The problem of generally irrigating the arid area is a difficult one, and at present no solution is at hand. The South Platte river flowing across the extreme western end of the county intercepts all the mountain-fed streams and deprives the remainder of the county of their benefits. Irrigation by artesian wells has not proved expedient or resultful. Only a general system of artificial reservoirs will ever bring extensive districts in the arid area under cultivation. Still, the growth of fruit trees has in some instances flourished without artificial irrigation. A large orchard on the summit of a hill east of Littleton is a noted example. It has thrived by the persistent cultivation of the soil between the rows of trees.

In the general central part of the county are numerous stream-beds but most of them are dry the greater portion of the year. A few, such as the Box Elder, Kiowa, Bijou, Badger, and Beaver creeks usually do better.

In the eastern end of the county, embracing an area of about twenty by thirty miles—say six hundred square miles, the conditions are different, that part of the county being within the so-called "rain-belt" region in which there is sufficient rainfall for agricultural purposes; and is less thinly settled and approaching a fair development. The rain-fall in that belt is accounted for by the cold currents of air from the mountains meeting warm currents from the southern and southeastern plains, the moisture carried by them condensing in the union and being precipitated. The soil in that section is a deep, rich sandy loam, and highly productive, wheat and corn being the principal crops and each yielding well. The soil in the vast central arid region is also excellent, and sometime, by irrigation, it may be brought under cultivation. At present the land can only be utilized as a grazing country for cattle and sheep.

The western end of the county in and near the immediate valley of the Platte is exceedingly favorable for agriculture and is highly improved, being thoroughly irrigated by ditches supplied from the river. All the country in the vicinity of Denver is cut up into ranches, orchards and gardens. Denver affords a ready market for the products of farms, gardens, orchards and dairies, at excellent prices. Dairying has grown to large proportions.

The officers of Arapahoe county at the close of our record and including those elected in November, 1900, were: Benjamin B. Lindsey, Judge of the County Court (appointed to succeed R. W. Steele elected to the State Supreme Court, November, 1900); Frederick P. Watts, Frank L. Bishop, E. E. Goodale, D. A. Rankin, and Thomas Phillipps, Commissioners; R. J. Jones, Sheriff; Julius Aichele, Clerk and Recorder; C. S. Elder, Treasurer; Cass E. Herrington, Attorney; S. H. Alexander, Assessor; Miss Emma M. Herey, Superintendent of Schools; H. C. CHAPTER LIII.

MINING AND SMELTING—PERIOD OF THEIR GREAT DEVELOPMENT—BEGINNING OF SILVER MINING—PIONEER SMELTERS AND DEVELOPMENT OF SMELTER PROCESSES—DENVER SMELTERS—VARIOUS REDUCTION PROCESSES—COLORADO'S OUTPUT OF PRECIOUS METALS—UNITED STATES "MINT" AND ITS PROCESSES—GOLD VALUES—CRIPPLE CREEK DISTRICT—ITS OUTPUT, GREAT MINE DISCOVERY, DIVIDENDS, AND GEOLOGICAL CHARACTER—RAILROAD AND SMELTER CHARGES—MINING CASUALTIES—LARGE "NUGGETS"—MINING ROMANCES AND TRADITIONS—ELEMENT OF "LUCK" IN MINING—MINING EXCHANGES—MINING STOCKS AND DEALINGS IN THEM—COLORADO GOLD DISTRICT—POSSIBILITIES AND FUTURE OF COLORADO MINING—MINING AS AN INDUSTRY.

Mines and mining have already figured conspicuously in our Story of Denver but, it would seem, not unduly so. Denver may be fairly said to be a consequence, one of the direct outgrowths, of that great industry; and, while we will not revert here to that industry's pioneer aspects, character and conditions, there remains more to be said concerning it, and from what we may term the modern point of view.

It was not until after Colorado became a State that mining in its domain really attained a commanding importance; and it was not until comparatively recent times, as the reader will have seen, that values of enormous proportions were produced. Popular conceptions of results in the pioneer years and in the Territorial period involve many exaggerated notions. As late as 1875 far the greater part of all the mining going on in the Territory was confined to Boulder, Gilpin, and Clear Creek counties. Some placers in Summit county, the South Park, and in a few other localities were being worked, but those in California Gulch had been cleaned out early in the "Sixties," the Gulch deserted and left to await re-discovery of its riches. The whole ore output of the lode mines in 1873—and they supplied the bulk of the gold production then—was only about 150 tons daily. The little Boston & Colorado Smelter at Black Hawk was then the only one worthy the name in the Territory, and its processes were far from the present highly-improved practices. Down to 1876, according to the reports of the United States Mint, all the gold and silver that had been produced in Colorado had aggregated only about $50,000,000. This represented the work of seventeen years, and gave an average of less than $3,000,000 per year. But, as it is probable that one-fifth of that total was produced in 1859 and 1860 in the palmy days of placer work and of the easy operations on and near the surface of the lodes, the average in the fifteen years between 1860 and 1876 was somewhere near two and three-quarter millions a year. The total for gold and silver in 1870 was only $2,650,000. In those fifteen years Colorado lacked a good deal of living upon her own resources, for agriculture and stockraising were not sufficiently advanced to make up the difference. The chief interest now attached to these matters is in the strong light they throw upon the faith, courage, fortitude and determination of the founders and foundation-makers of Denver and of Colorado, who so persistently clung to the conviction that Nature had endowed this region with inestimable resources for the making of a great commonwealth, and that such an one would arise here amid their proper development.

It was not until 1870 that silver mining became an established industry in Colorado and caused some excitement in mining circles. In 1859 the miners had found a little silver mixed with their yellow metal, and some of them not recognizing it, took it to be a different kind of gold—"white gold," a name by which it became commonly known in the summer of that year by the amateur miners. However, the more experienced men knew it to be silver, but regarded it only as a troublesome intruder in their mining operations, and in its then known quantities, not worth bothering with.

Hollister, in his "Mines of Colorado," thus refers to the appearance of native silver in Colorado mining operations just after the close of the civil war:

> "Native silver containing a small percentage of gold, has been found in the Fulton Company's mine on the Crystal Lode in Virginia Kanyon. It occurs in the form of very fine wires and in branches or 'snarls,' in cavities about 90 feet below the surface. This is the only mine in Colorado, within the writer's knowledge, in which native silver has been found."

By that time "silver glance"—sulphuret of silver; and "brittle silver ore"—sulphuret of silver and antimony, had become somewhat familiar to the miners in many of the districts on Clear creek and its tributaries, but they attached no importance to them and made no attempt at that time to add silver mining to the industries in the mountains.

As will be seen in the tabulated statement of gold and silver production in Colorado, the total at coinage value of both in any year up to 1879 did not reach ten million dollars. The increase in 1878 of nearly fifty per cent. above that of 1877 was due to the extraordinary developments at Leadville. From that time until 1893 the gold production increased very slowly, even receding in some years; but the silver output went upward by leaps and bounds. The silver development had been slow in coming. In the early years of smelting the smelter made little account or returns to the miners, of silver extracted from the treated ores. As our statement shows, the entire Colorado production of silver in the eleven years—1859-69, inclusive—aggregated but $330,000 in value.

Of the $27,213,081 worth of gold credited to the period from 1859 to 1870, inclusive, much the larger part of it was taken from placers; probably more than sixty per cent. of it. Placer gold is widely distributed over the plains and in the mountain valleys of Colorado. It can be found almost everywhere but, of course, not in profitable quantities. The metal is known to exist in forty of the counties, and a pan-full of soil taken at random from most localities in either of them would show, chemically at least, a trace of gold.

We have heretofore recounted at length the difficulties in reducing refractory ores that beset the miners through the "Sixties." The efforts and expedients for their removal were many before successful smelting processes were applied, and which took several years to develop. In 1862 Professor Caleb Burdsall built a small smelting furnace in the Nevada district, that promised fairly for a while, but it did not prove successful in its practical operations. Several other small furnaces were built elsewhere in the Clear creek districts soon afterward, and all of them failed to profitably do the work required. The crude stamp mills, and many that were supposed not to be crude, had likewise failed. In the attempts to find a way out of the trouble all sorts of processes had been and were being introduced, and hundreds of thousands of dollars expended on them and for their mechanical appliances; the latter soon becoming worth only their value as scrap iron. So, the prospects for Colorado, and for Denver especially, wore a rather darkish blue.

In 1864, Nathaniel P. Hill, previous to that time a Professor of Chemistry in Brown University at Providence, R. I., came to Colorado to inquire into the mines and mining interests then very much depressed, as stated at length in a preceding chapter, in consequence of failure of all existing processes for extracting gold from the refractory ores. Mr. Hill attacked the problem and after two or three years' work solved it—an event of tremendous importance to the mining interests. In 1867 he organized the Boston & Colorado Smelting Company with a capital of $275,000, and in June began building at Black Hawk the first smelter adapted to scientific and economical methods, in the State. The fires were lighted in January, 1868, and burned continuously, day and night, during the ten years the smelter was in operation at Black Hawk and until its removal to Denver.

This event marked an epoch in the economic history of Colorado and in the fortunes of this city; and it was of inestimable value and importance. The successful operation of the smelter warranted the company, in 1873, in increasing its capital to a half million dollars and in doubling the plant's capacity. Provisions were also made for refining the gross metal produced. The "matte"—a combination of all the metals carried by the ores, and of other substances—had earlier been sent to Swansea, Wales, for final treatment; but later the company had erected a small refinery at Boston, to which it was sent for a while. Then came Professor Richard Pearce, a trained metallurgist, direct from Swansea to Denver, who took up the problem of treating the "matte" at Black Hawk; and soon thereafter bars of pure silver were being produced. For a brief period longer the copper product containing the gold was sent to Boston for treatment. This continued until arrangements could be made at Black Hawk for separating the gold from the copper; then all shipments of base bullion from Black Hawk ceased. This resulted in abandonment of the Boston refinery and concentration here of all the company's business; and also in larger returns to the miners.

Boston & Colorado Smelter at Black Hawk.

These events were followed by a great revival of mining industry. They imparted new and vigorous life to the Clear creek districts; new mines were opened and old ones re-occupied; and a ready-cash market was afforded for their output. It may be said that mining in Colorado then began on the permanent basis that enabled it to reach its present magnitude and importance.

The original Black Hawk plant consisted of one reverberatory furnace, and one calcining furnace, with necessary machinery for crushing and pulverizing the ore. Its construction was an expensive undertaking. Every fire-brick used had to be wagoned across the plains from the Missouri river and cost about one dollar; iron cost twenty-two cents a pound; skilled labor. eight dollars a day, and unskilled four dollars. Correspondingly high prices had to be charged for smelting; the rate being from $20 to $45 per ton, according to the character of the ore. Still the smelter was the salvation of the mining interests. The nearest railroad was not then far this side of the Missouri river and was absorbed in hauling its construction material; wagon transportation was excessive in cost, and all the necessaries of life were high. During half the period in which the "matte" product was sent to Wales it had to be wagoned to the Missouri river, thence taken by rail to New York and thence sea-shipped; all at a heavy expense.

Ore values here in Colorado had been greatly exaggerated or over-estimated by most of the miners, and a general erroneous public estimation of them also existed. Soon after the Black Hawk Smelter went into operation a spirit of great hostility to it was aroused among the miners. Over-estimating the value of their ore, and decrying the prices for treating it, they complained bitterly because their returns were not larger; some proclaiming that they were not getting proper returns even after allowance for treatment. But when they began to understand what it cost to build and operate the smelter, and to ascertain by actual and thorough tests the true values in their ores, the hostility to the agency that enabled them to get anything from their output, soon disappeared.

The development of Professor Hill's processes had involved much labor on his part. After having thoroughly investigated all the difficulties presented in the Clear creek districts, he took a large quantity of the ore to Swansea, Wales, for treatment by the smelters there, and remained at Swansea through the winter of 1865-66 studying their processes; which, however, were not perfectly adapted to managing the Colorado mineral. He returned to Colorado in the spring of 1867—and the rest has already been told.

Early in 1869, after the success of the Black Hawk Smelter had been thoroughly demonstrated, and desiring to make Denver the seat of a similar establishment, the late John W. Smith, a man of much enterprise and public spirit, endeavored to organize a company to build the Denver Smelting & Refining Works, with $50,000 capital. He designed locating the plant in "West Denver" on land he proposed to donate. Some progress was made toward organization, but the project was finally abandoned. Some time afterward the late E. F. Hallack tried to organize a corporation to build a smelter in Denver, but failed.

Upon the completion of the Kansas Pacific and Denver Pacific roads to Denver a demand arose for the erection of a smelter here to operate on the successful methods followed by the smelter at Black Hawk. A company was later organized and a large tract of land acquired near the junction of the two railroads, where the "Swansea Smelting Works" were built and the town of Swansea established. Through mismanagement, or ignorance of applying the processes, the smelter proved a failure after a short period of operation, was shut down and subsequently abandoned.

Soon after Colorado was admitted as a State, the Boston & Colorado Company decided to remove its smelter and refinery from its cramped quarters in the gulch at Black Hawk to a point near Denver, where it could have plenty of room, be near to sources of cheaper fuel supply, and in more direct connection with railways to other mining sections. A large tract of land was acquired a mile or so north of the then northern limits of the city. In 1878, a new smelter was built there, and around it the suburban town of Argo was laid out. The city and town now run together. The new plant was a large and completely equipped one at the start, and since that time extensive additions have been made to its capacity. The results of the first year's operations at Black Hawk had been comparatively small, $270,886; but increased each succeeding year until, in 1872, the value of produced bullion was $1,000,000. The increase continued after removal to Denver, until, after the twenty-two years of operation ended with 1889, the total amount had risen to about $45,000,000. Since that time the total product has advanced to about $75,000,000; lead not being one of its products. In 1880 the company again increased its capital stock, making it $1,000,000, at which it now stands.

After the Boston & Colorado establishment began operations at Argo several small experimental smelting concerns were built here, but were not very successsful in their work, not important in magnitude, and not of permanent duration. Two others of that general period were of greater consequence. The lesser of these was the Bailey, or Tabor, Smelter up the Platte in the southern part of the city, and with which the late Senator H. A. W. Tabor experimented for several years. The other was the Holden Smelter built in 1885-86 by Edward R. Holden and his associates. The Holden concern was a relatively small establishment, and was the predecessor on the ground of the present great Globe Smelter; the latter being in one sense an outgrowth of the Holden which, however, had not been very successful. Upon these various more or less experimental concerns much labor and large sums of money were expended.

The Argo establishment remained the only large one here until 1883, when the Omaha & Grant Smelter was constructed. This one was in one sense, an outgrowth of the Grant Smelter built at Leadville in 1878 when that place first became an ore-producing camp of importance, and which was badly damaged by fire in May, 1882. Its name was derived from that of its manager and principal owner, later Governor James B. Grant, who is, and has been from its beginning, identified with the control and management of this great industrial institution at Denver. After the misfortune to the Leadville Grant Smelter there was an union of interests between its owners and the Omaha Smelting Company at Omaha, Nebraska, which resulted in the reconstruction of the Leadville smelter, and the erection in 1883 of the Omaha & Grant at Denver. The numerous buildings, furnaces and other structures of these works occupy nearly fifty acres of land on the right bank of the Platte river, in the northern part of the city, and from them rises to a lofty height a chimney that ranks among the tall ones of the country and is a land-mark visible for many miles. Since its fires were started in 1883 the Omaha & Grant had produced, up to the close of 1900, about $130,000,000 worth of gold, silver, lead and copper.

The Globe Smelter, the younger of Denver's three giant smelting concerns, was the successor of the Holden Smelter built in 1885-86, though the successorship was more in theory than in physical fact. An association of Denver men headed by Dennis Sheedy, having acquired the Holden Smelter that had been continued in rather unsuccessful operation, on January 16, 1889, incorporated the Globe Smelting & Refining Company. The new organization took over the Holden property that was situated on an easy elevation on the left bank of the Platte river and to the northward of the Argo and the Omaha & Grant establishments. In the spring of 1889 additional and adjoining land sufficient to make a tract of 140 acres was purchased, that afforded room for a greatly enlarged smelting plant. Upon land south of this, the suburban town

---

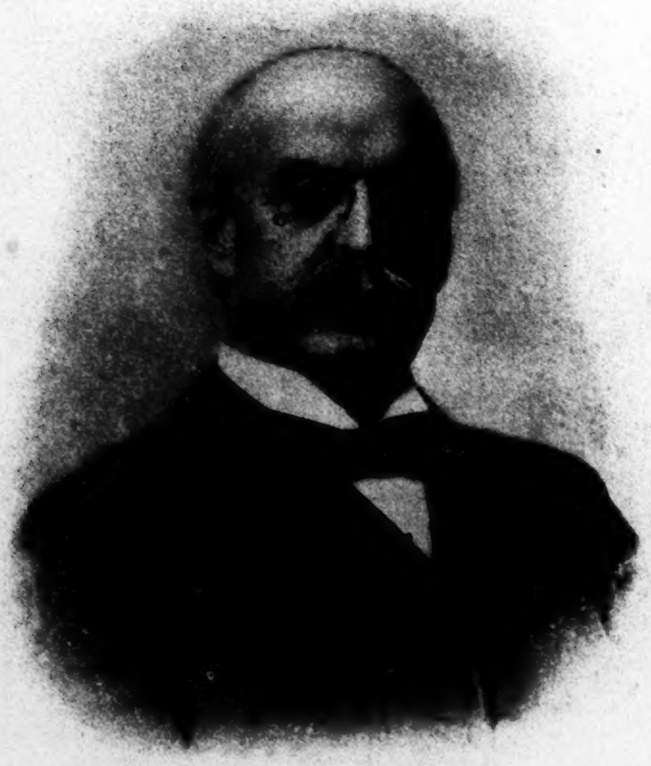
Nathaniel P. Hill was born in Orange County, N. Y., February 18, 1832. The son of a farmer of the same name and who had served several terms in the New York Legislature, the death of the father in 1842 soon placed unusual responsibilities upon the boy; for, at the age of sixteen, he assumed charge and active management of the family estate. After several years' attendance at the Montgomery, N. Y., Academy, young Hill, at the age of twenty-one, entered Brown University at Providence, R. I., where he was graduated. After graduation he became a member of the University's faculty; in 1858 was appointed Instructor in Chemistry; and in 1859 was advanced to the Chair of Chemistry which he filled nearly five years and demonstrated his ability as a man of great scientific attainments. Of his coming to Colorado in 1864, of his attack upon the vital and most difficult problem of reducing our refractory ores, of his success in dealing with them after so many others had failed, and of the founding of the Black Hawk Smelter out of which later grew the great Boston and Colorado Smelter at Denver, the circumstances are related in detail on these pages. His solution of the then most grave and menacing problem of successfully dealing with our ores marked an epoch in the affairs of Colorado, and made him one of the most conspicuous two men among those who rank as builders of our Commonwealth.

Professor Hill's first home in Colorado was at Black Hawk. In 1871 he was elected Mayor of that town, as which he served two years. In 1871 he was also elected the Gilpin county member of the upper branch of the Ninth Legislative Assembly (Territorial). When the Black Hawk Smelter was removed to Denver in 1878, Professor Hill transferred his residence to this city where it remained until his death. A Republican in politics, his election to the United States Senate was urged by some of his friends, in 1876; and in January, 1879, he was chosen to succeed Jerome B. Chaffee in that high office for a term of six years by the Second General Assembly of the State. As a Senator his services were brilliant and secured enactment of several laws of commanding importance to his State. In the debates upon the great public questions of that time—especially those of public financial policies—he became a leader where leadership is attained by but few, and made a record for ability that is not an obscure part of our National history. One consequence of this was his appointment by President Harrison in January, 1891, a member of the International American Monetary Commission, the object of which was to secure uniform coinage by all the nations of the American continent.

In July, 1887, soon after his retirement from the Senate, Senator Hill became interested in operations in the Colorado oil field at and around Florence, and united under the corporate name "United Oil Company" several struggling concerns that had been operating there. The new company, of which he became President, with its abundant capital was the instrument with which that oil field was given its present important development. In December, 1887, as related more particularly in another chapter, he purchased a controlling interest in the Denver Republican, of which newspaper he was the guiding spirit until his death.

But it was his relation to the great mining industry, and the inestimable value of his technical knowledge and practical services to that industry, that made Senator Hill a commanding figure in the history of our city and State. To the close of his career his chief pride was in the results of his hard and industriously prolonged work as a mineralogist as exemplified in the Argo Smelter. These and his other labors justly brought him a very large fortune.

Senator Hill, after two years of steadily declining health, died at his Denver home on May 22, 1900, leaving a widow, one son and two daughters. He was a good man in everything implied by that term, and the end of his busy, well-spent life, came peacefully.—J. C. S.



Nathaniel P. Hill

of Globeville—to which additions were later made—was laid out, after the example set by the Argo company; and like Argo, Globeville has been reached by the growth of the city, proper, but retains its village government. The Globe Smelter was built in the spring, summer, and early autumn of 1889, and in these proceedings little was left of the Holden concern; and the fires of the new establishment were first lighted on October 1st of that year. 1890 may be said to have been its first year of operation with everything completed and in thorough working order at full capacity. In that year the value of its metal production was, in round numbers, four and one-half millions of dollars, operating almost exclusively on silver ores; the silver values having been upward of $3,000,000, the lead more than $1,000,000, the gold about $280,000, and the remainder copper. The value of the total output of the Globe to the close of 1900 was about $145,000,000.

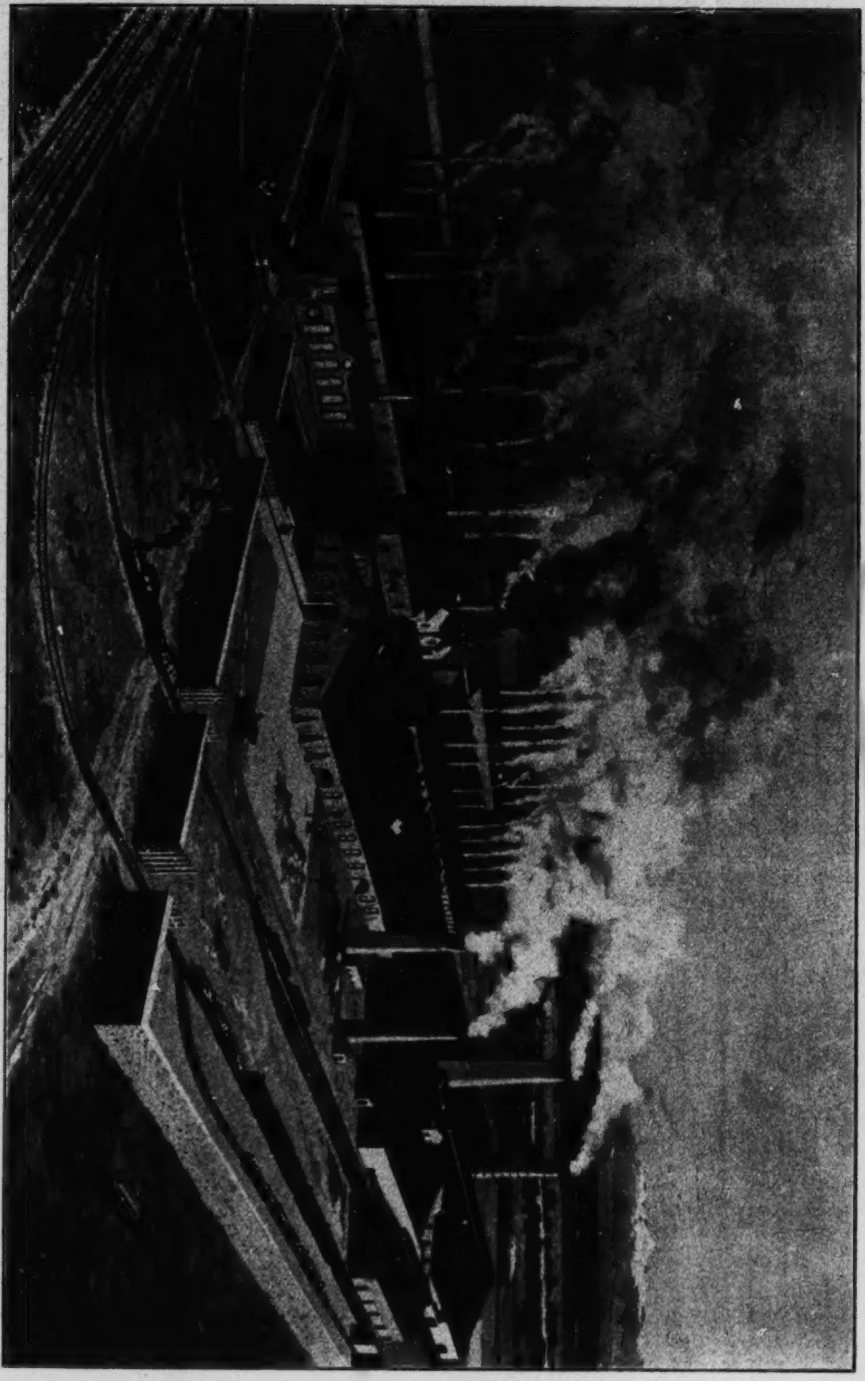
Denver with these three great smelting establishments representing a vast amount of invested capital, is the foremost smelting center in the world; and from the beginning of smelting operations here to the close of 1899 these smelters have produced gold, silver, lead, and copper exceeding $350,000,000 in value. Everything connected with their operations must be represented by large figures, a few of which pertaining to the last three years may be admissible here. In 1898 the Argo Smelter produced $1,304,720 worth of gold, $436,736 of silver, and $195,252 of copper—that smelter producing no lead; a total of $1,936,708. The Globe produced $3,872,146 of gold, $4,260,424 of silver, $137,065 of copper, and $821,085 of lead; a total of $9,090,720. The Omaha & Grant produced $3,697,563 of gold, $2,545,424 of silver, $261,357 of copper, and $846,708 of lead; a total of $7,351,052. These items make grand totals for the three smelters in 1898 of $8,874,429 of gold, $7,242,584 of silver, $593,674 of copper, and $1,667,793 of lead; aggregating for the year $18,378,480 of metal values.

In 1899 the output, owing to the protracted labor troubles, was somewhat less. The Argo, not having been involved in the troubles, increased its production; which was $1,505,702 of gold, $396,733 of silver, and $384,821 of copper; a total of $2,287,256. The Globe produced $4,536,565 of gold, $2,638,371 of silver, $73,472 of copper, and $1,333,322 of lead; a total of $8,581,730. The Omaha & Grant produced $1,570,899 of gold, $2,094,560 of silver, $4,783 of copper, and $1,085,055 of lead; a total of $4,755,297. These items make grand totals for 1899 of $7,613,166 of gold, $5,129,664 of silver, $463,076 of copper, and $2,418,377 of lead; aggregating for the year $15,624,283.

In 1900 the Argo Smelter produced $1,428,406.55 of gold, $352,441.85 of silver, and $629,928.00 of copper; a total of $2,410,776.40. The Omaha & Grant produced $2,096,000 of gold, $2,103,000 of silver, $83,000 of copper, and $1,591,000 of lead; a total of $5,873,000. The Globe produced $5,139,615.47 of gold, $3,476,442.03 of silver, $112,237.16 of copper, and $2,117,303.60 of lead; a total of $10,845,598.26. These items make grand totals for 1900 for the three smelters of $8,664,022 for gold, $5,931,883 for silver, $825,165 for copper and $3,708,303 for lead; aggregating for the year $19,129,374. All these figures stand for the market values of the several products, which were in the main from Colorado ores, though some from Idaho, Utah, California, New Mexico, Nevada, South Dakota, Arizona, Montana, and Old Mexico were among those treated.

The decrease of upward of $3,000,000 in the combined output of the Omaha & Grant, and the Globe, in 1899, from that of 1898, was due to a strike of their workmen in May and continued until about the close of July, during which time the output not only ceased, but large quantities of ore were sent elsewhere for treatment. The strike did not involve rates of wages, but was precipitated by an act of the Legislature of 1899, attempting to limit the number of hours in a day a workman might labor in certain enumerated employments held to be prejudicial to health, one of which was the smelter industry; regardless of the fact that smeltermen, as a rule, are a healthy set of men of unusual physical development. One construction of the law actually made it a misdemeanor, punishable by fine, for a man to work more than eight hours in a day, regardless of his desire or need to do so. This example of vicious legislation, of which we have had a burdensome load in recent years, was, of course, held to be unconstitutional by the State Supreme Court as soon as it could be reached; but it served to wholly suspend industrial operations at the two smelters for nearly three months. No other serious "labor trouble" ever occurred at the Denver smelters since they first began operations.

In the early mining operations silver, as we have said, was but little known or sought for; yet lead and copper were still less so, as they are, practically, exclusively the products of smelter processes. In 1872 the lead output of the State was only of $5,000 value. By rapid annual increase in later years it became $5,000,000 in 1888, there having been up to the close of that year a total of $37,345,000 worth of lead produced. Since then the annual output has steadily increased, until in 1899 its value was $6,051,156; and in 1900, $6,788,232. In 1870 $20,000 worth of copper was produced in Colorado; in 1888 the copper values were $900,000, and up to the close of that year the total Colorado copper product had risen to $6,750,000, covering a period of about twenty years. In 1899 the value of the Colorado copper output was $1,975,518; and in 1900, $1,543,820. In the early years of copper production little of the values were in metallic copper.



Present Boston & Colorado Smelter at Argo (Denver).

It was converted into sulphate and marketed in that form.

In recent years zinc has become a Colorado product of importance approaching that of copper; its value in 1899 having been nearly $1,000,000, and in 1900 about $1,200,000.

The three Denver smelters treat about two-fifths of all the ore mined in Colorado, and disburse for wages to their employees upward of $100,000 monthly. In one sense they are manufacturing establishments; that is, somewhat in the sense that pig-iron blast furnaces are such. But their operations, by custom, have always been regarded as part of the mining industry—certainly a very large and vitally important part of it—and, therefore, they are to be considered in connection with mining instead of as manufactories.

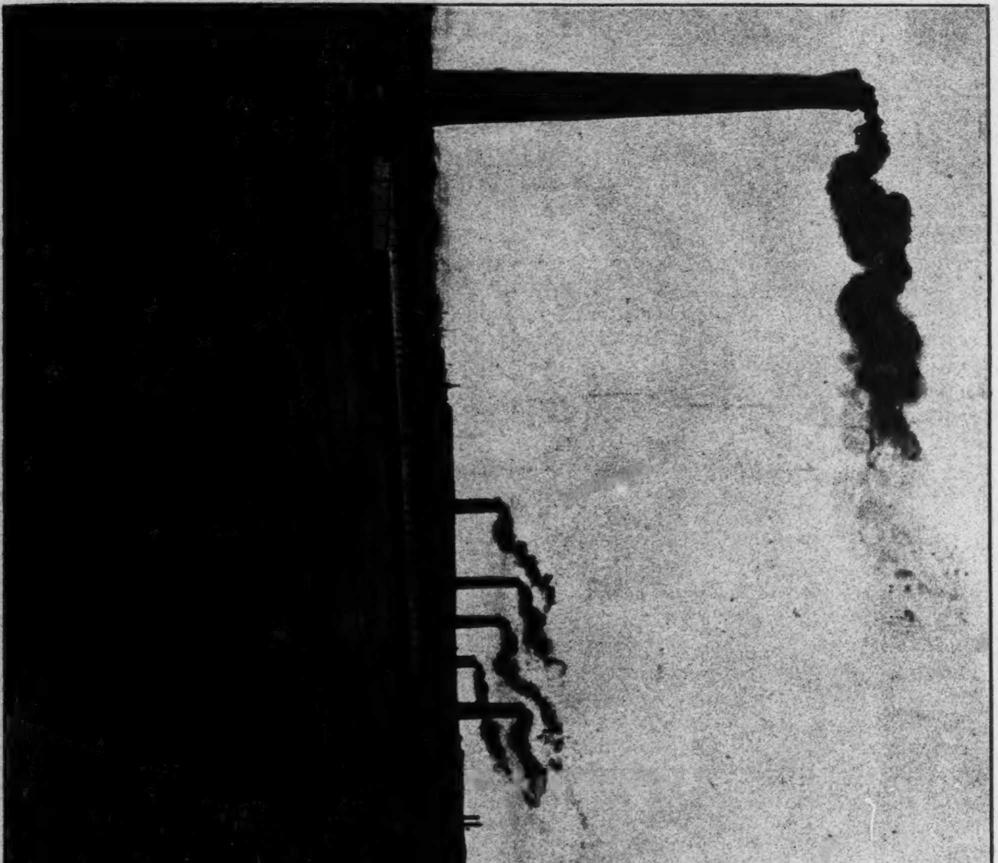
Their economic value to the city of Denver far exceeds that of any other industry; indeed, it may be said that it overshadows that of all other industries. The three establishments employ a small army of workmen, the nature of their processes calling for a relatively large proportion of manual labor and attention, and the character of much of the work precluding the substitution of machinery for the brawn and brain of man. Furthermore, the nature of the work requires that it go on unceasingly, day and night, the year round; so and correspondingly the outflow of money for wages goes on unceasingly, day and night the year round. The wage-rate for smeltermen is a good one; averaging somewhat higher than that paid in other industries for equal experience, skill and knowledge, with the additional advantage of continuous employment throughout the year. Indirectly the smelters bring employment to many additional men. Their operations afford an enormous traffic to the railways in hauling ores, fuel and fluxes; many trains of such freightage figuring in each day's transactions. As this goes on every day, the importance of the smelters to the railways may be conjectured. The Denver smelters by no means confine their operations to Colorado ores. They receive and treat ores from British Columbia, Idaho, Montana, Utah, New Mexico, Arizona, and some from Mexico. But the fast increasing products of Colorado mines will have a tendency to place the home product nearer a monopoly of home smelters' attention. It is to be said, also, that the methods followed by the Denver and other Colorado smelters enable the ore-producers to realize somewhat better net returns than are received from others. So, the reader will see how difficult it would be to trace in detail the far-reaching benefits to city and State arising from the operations of these great industrial establishments.

Early in 1899 the property and business of twenty-three smelters in the United States were consolidated for more economical operation, under the general ownership of the American Smelting and Refining Company, with a capital of $55,000,000. The Omaha & Grant, and the Globe, at Denver, with seven others elsewhere in Colorado participated in this union; the Boston & Colorado remaining in its independent position. The consolidation has resulted in still more effective methods and an advance toward successfully treating lower grades of ore than have hitherto been susceptible to manipulation on a basis of profit to both miner and refiner.

In addition to the Denver smelters there are large establishments at Pueblo, Canon City, Leadville and Durango, a few less important ones at other points in the State, and some new ones building, including one at Golden. The treatment charges on gold-and-silver-bearing ores are now lower in Colorado than those at the old-established smelters at Swansea and other places in Great Britain where it is generally supposed cheaper labor and fuel render possible a greater economy in all the operations.

The methods of extracting the precious metals by the smelting process are so technical that it is quite difficult for the lay mind to grasp their multifarious details; yet, not all of the details are made public, as some are regarded as trade secrets. In a general way much of the work in all the Denver smelters is similar, but in the final processes they differ; more so in the Boston & Colorado plant than in the other two; those of the Boston & Colorado being rather close trade secrets. Furthermore, the methods differ for each of the metals, the processes for gold extraction being in many respects unlike those applied to silver; and both, also, unlike those applied to the baser metals carried by the ores. Colorado ores are naturally comparatively rich in positive deposits, but they have, withal, very vexing combinations of sulphur and bismuth, copper and antimony, lead, zinc, and many other elements besides the silver and gold contained in them. To free the precious metals from the various and changing conditions of complicated metallic fusion with all these refractory elements, requires many successive treatments and expensive processes which, it may well be said, constitute a distinct technical division of science. The present advanced stage of this advancing art of arts is the result of years of scientific study and experiment and, therefore, the writer confesses that an undertaking on his part to convey to other laymen an intelligible description or outline of the varied processes, would be rather too much like the blind trying to lead the blind for the attempt to find reasonable justification.

Much of the gold product of Colorado comes direct from the stamp-mills, the operations of which are a mechanical pulverizing of richer ores, the gold being recovered from the powdered material as it is carried by water over deposits of quicksilver with which it amalgamates, and is recovered by



Omaha & Grant Smelter at Denver.

comparatively simple methods of retorting. The cyanide, and the chlorination mills, of which there are none in Denver, handle low-grade ores and recover a good proportion of the total product. Their processes may be said to be chemical in their general features, and also to a great degree technical. The product of these classes of reduction works usually comes direct to the Denver Mint. In addition to these are the concentrating mills in or near the mining camps, which treat lower grades of ore for rejection of much of the worthless material, after which the concentrated mineral is sent to the smelter; the process resulting in economy in freights and in final treatment charges.

The Boston & Colorado Smelter refines its product, sending its gold to the Denver Mint, the silver to the best available market, and the copper to eastern consumers. The Omaha & Grant Smelter ships its product in the form of base bullion to its associated plant at Omaha where it is refined, the gold usually being sent back to the Denver Mint, and the silver and baser metals disposed of in the most favorable market. The Globe refines all its product, the gold going to the Denver Mint, much of its silver being sent to the Orient, and its baser metals finding their way into the general markets. Since 1893 silver has, in one sense, practically been a by-product of the Denver smelters, as it has been in all reduction works in Colorado; the great bulk of the silver yield coming from ores carrying both gold and silver, the gold being the primary object of treatment.

The following statement, prepared at the Denver Mint, shows the values of all the precious metals mined in Colorado from 1858 to the close of 1900; those of the period, 1859-70, being estimates, though accepted as close approximations; and those of the subsequent years being of record:

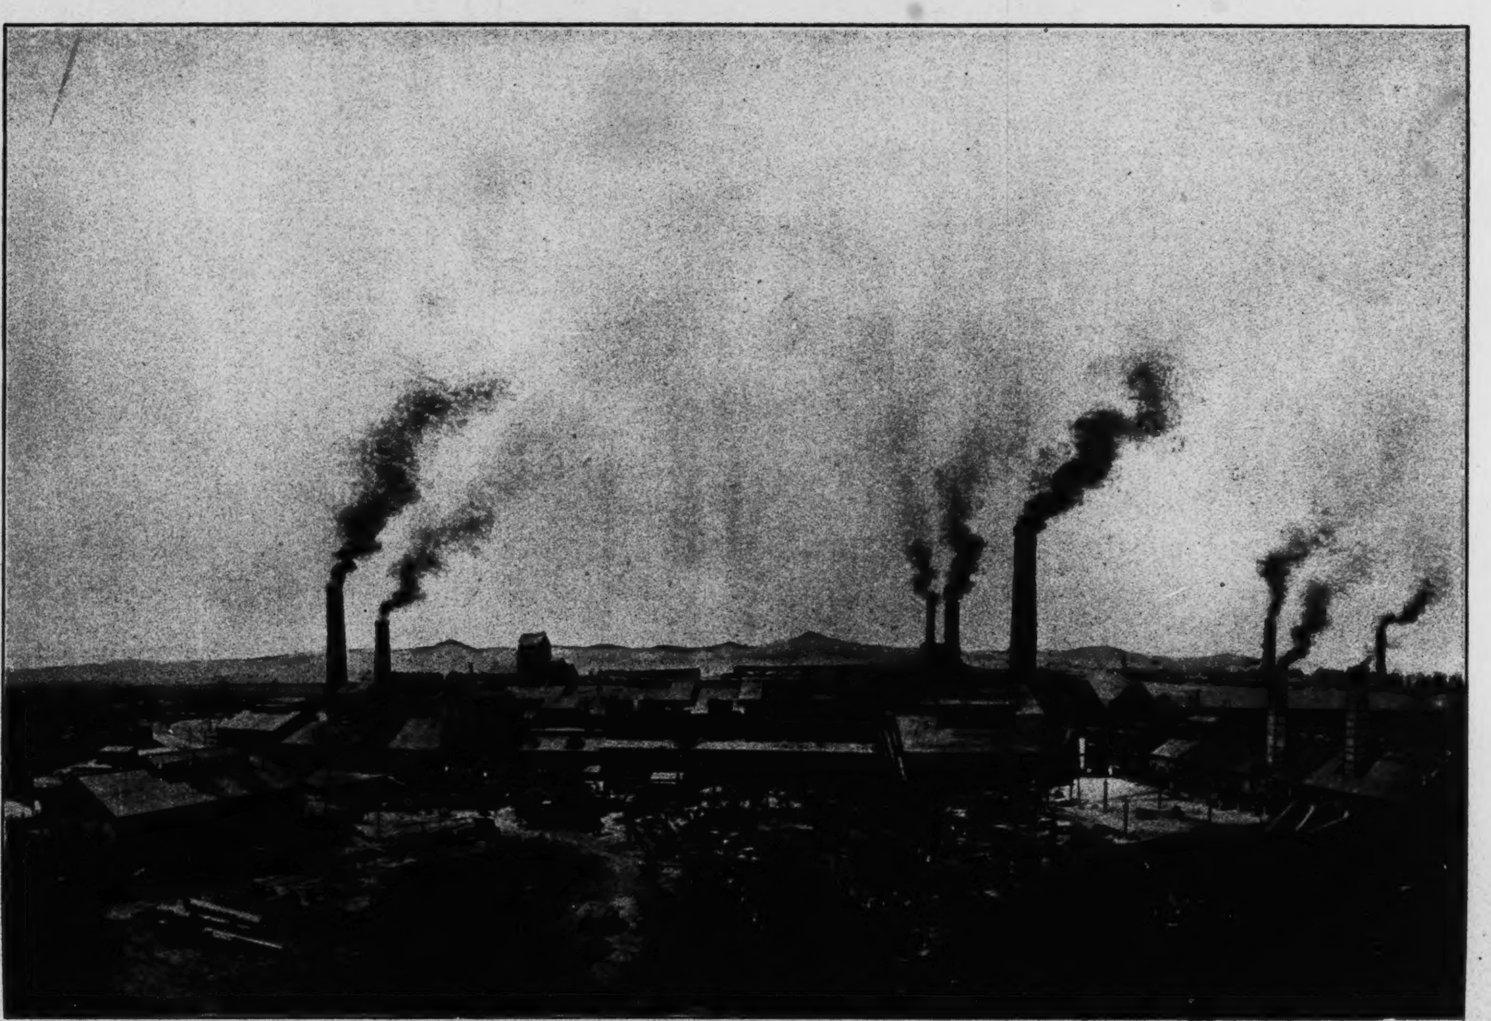
COIN VALUE OF THE GOLD AND SILVER PRODUCED IN COLORADO.

Year.	Gold.	Silver.	Total.
1859-70	$ 27,213,081.00	$ 330,000.00	$ 27,543,081.00
1870	2,000,000.00	650,000.00	2,650,000.00
1871	2,000,000.00	1,029,046.34	3,029,046.34
1872	1,725,000.00	2,015,000.00	3,740,000.00
1873	1,750,000.00	2,185,000.00	3,935,000.00
1874	2,002,487.00	3,096,023.00	5,098,510.00
1875	2,161,475.02	3,122,912.00	5,284,387.02
1876	2,726,315.82	3,315,592.00	6,014,907.82
1877	3,148,707.56	3,726,379.33	6,875,086.89
1878	3,240,384.36	6,041,807.81	9,282,192.17
1879	2,920,326.43	12,068,930.27	14,989,256.70
1880	3,206,500.00	18,615,000.00	21,821,500.00
1881	3,300,000.00	17,160,000.00	20,460,000.00
1882	3,360,000.00	16,500,000.00	19,860,000.00
1883	4,100,000.00	17,370,000.00	21,470,000.00
1884	4,300,000.00	16,000,000.00	20,300,000.00
1885	4.165,794.00	15,824,557.00	19,990,351.00
1886	4,446,417.07	18,209,406.40	22,655,823.47
1887	4,874,387.66	15,668,236.65	20,542,624.31
1888	3,758,098.46	24,347,777.44	28,105,875.90
1889	3,636,218.00	26,559,058.00	30,195,276.00
1890	4,016,229.00	25,788,819.00	29,805,048.00
1891	4,767,880.00	27,295,093.00	32,062,973.00
1892	5,539,021.00	31,478,972.00	37,017,993.00
1893	7,487,071.00	29,482,882.00	36,969,953.00
1894	10,616,463.00	30,704,375.00	41,320,838.00
1895	15,012,434.00	31,075,314.00	46,087,748.00
1896	15,110,960.00	27,859,042.00	42,970,002.00
1897	19,572,137.00	27,178,475.00	46,750,612.00
1898	23,512,819.00	29,971,830.00	53,484,649.00
1899	26,265,487.00	29,679,706.00	55,945,193.00
1900	28,869,392.00	26,998,928.00	55,868,320.00
Grand Totals	$250,806,065.38	$541,291,162.24	$792,097,247,62

These enormous values in precious metals have flowed like a great stream from the mountains of Colorado to stimulate and invigorate commerce and industry throughout the wide world. It should be stated, however, that amounts given in this statement are, after mint practices, based on the coinage values of the metals. That of gold being $20.67 per ounce; that of silver, $1.2929 per ounce—a fraction over one dollar and twenty-nine cents. But, since 1893, the "coinage value" of silver has been a rasping mockery to the silver miner. Instead of receiving the "coinage value" for his output, he gets the "market value" which is a quite different proposition. The depreciation of silver in recent years, and the effects thereof in Colorado, are too well known to call for any consideration here. Silver found its lowest market price, a shade over 54½ cents per ounce, in February, 1898; making the bullion value of a silver dollar about 47 cents. But in 1900 the price hovered around sixty-two cents per ounce; the monthly average in 1900 having been 61.15, with 64.25 in December as the highest price. Therefore, the market value of the silver production of the State in recent times has been about nine-twentieths—less than half—of the coinage value; and that is what the miner now receives, less the expense of production, freight and smelter charges; and that, also, is why so large a proportion of Colorado silver mines that ten years ago were being profitably worked—many of them opulently—are now idle and deserted.

Yet, the Mint's official figures contradict the somewhat prevalent belief that the quantity, in ounces, pounds or tons, of silver produced in Colorado has rapidly diminished since 1893, and is now down to an unimportant level. The money returns, and not the quantity, have greatly decreased. The figures show that the production in 1899 was less than two million short of that of 1892 when the State's silver product reached its highest point; the output being measured by the "coinage value" in both instances. As will be seen in the preceding table of Colorado's precious metals output, the production of silver was near three millions less in 1900 than in 1899.

But the most remarkable thing connected with mining in Colorado is the astonishing increase in the production of gold in recent years. Prior to 1893 the importance and value of gold-mining was heavily overshadowed by the operations and results in silver. In 1892 the silver product in value was nearly six times that of the gold. The gold product of 1894 was almost double that of 1892, and it has kept on climbing upward, until the total production in the seven years, 1894-1900, inclusive, constitutes far more than one-half of all the gold that has ever been mined in Colorado; and has far more than made up for what is termed "the slump in silver." Of course, a different story would probably be told had not Cripple Creek arisen at the opportune



Globe Smelter at Globeville (Denver).

period. Its vast stores of the yellow metal were fully revealed just at the time when silver values took their headlong plunge into the depths. There are those who say: "Blin', blin' maun they be who see not the finger o' God in this."

The history of Denver's old Mint—a "mint" by courtesy rather than of fact—appears elsewhere in this volume. For a short time after the government acquired the property from Clark, Gruber & Company and, by additions to that firm's building, gave the structure its present size and appearance, it ranked as a mint, though the government coined no money there. But, soon afterward the establishment was officially reduced to an assay office and "branch receiving Mint;" and at that it has stood down to the present time. The structure has undergone few changes in the intervening period, and appears now just about as it did thirty-five years ago. Its career has been uneventful, and for a long time the business transacted in it was of comparatively modest proportions. Its principal dealings are with gold, but little silver being handled; and it was not until the gold production of recent years reached its vast proportions that the transactions at the Denver Mint attained great magnitude. The following figures covering the period 1890-1900, inclusive, indicate the volume of the Mint's business—a business quite out of proportion to anything the modest-appearing old establishment itself would suggest—and show the percentage of the Colorado gold production it handles:

Year.	Colorado Production of Gold.	Gold Receipts at Denver Mint.
1890	$ 4,016,229.00	$ 1,197,387.00
1891	4,767,880.00	1,304,912.00
1892	5,539,021.00	1,368,867.00
1893	7,487,071.00	1,814,604.00
1894	10,616,463.00	5,637,148.00
1895	15,013,434.00	4,306,214.00
1896	15,110,960.00	4,246,235.00
1897	19,572,137.00	12,223,451.00
1898	23,512,819.00	19,456,594.00
1899	26,265,487.00	16,840,761.00
1900	28,869,392.00	17,254,326.00
Totals	$160,770,893.00	$85,650,499.00

These figures are for the calendar years. They show that above 53 per cent. of all the gold mined in Colorado in the eleven years specified was treated at the Denver Mint. The falling off in receipts in 1895 and 1896 was owing to large quantities of gold having been sold directly to eastern brokers, practically at a premium, instead of to the local Mint.

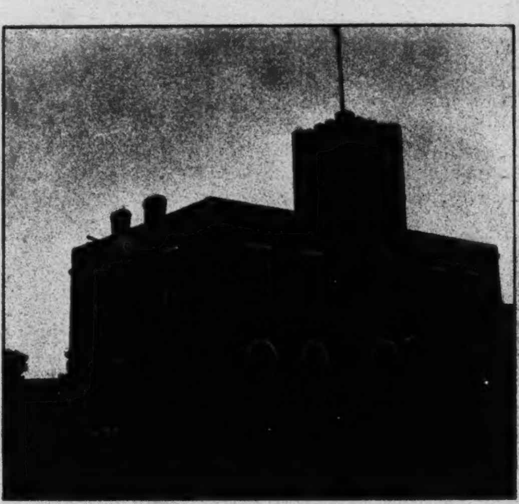
With a few more figures we will end the statistics. During the calendar years 1898, 1899, and 1900, the Mint's business in bullion treated was as follows:

1898—Colorado out-put, new gold, $19,456,594.70; silver, $22,826.51; total, $19,479,421.21. Miscellaneous gold $36,753.38; miscellaneous silver $330.88; total, $37,084.26. Foreign to Colorado, new gold, $674,625.64; silver, $4,864.58; total, $679,490.17. Grand total of the Mint's business for the year, $20,195,995.26.

1899—Colorado out-put, new gold, $16,840,761.58; silver, $25,783.61; total, $16,866,545.19. Miscellaneous gold, etc., $34,718.18; silver, $335.40; total $35,153.58. Foreign to Colorado, new gold, $928,744.62; silver, $9,430.45; total, $938,175.07. Grand total of the mint's business for the year $17,839,773.84.

1900—Colorado output, new gold, $17,254,326.33; silver, $33,372.29; total $17,287,698.62. Miscellaneous gold, etc., $23,295.00; silver, $195.14; total $23,490.14. Foreign to Colorado, new gold, $1,008,574.33; silver, $11,025.17; total $1,019,599.50. Grand total of the Mint's business for the year, $18,330,788.26.

The shrinkage in the business of 1899 from that of 1898 reflects an effect of the smeltermen's strike in the summer of 1899; but the fact that the value of bullion treated at the Mint does not appear to increase in ratio to the annual increase of the Colorado output, is due to the growing tendency to ship bullion directly east from some of the various reduction works without passing it through the Denver Mint.



Old "Mint" Building, from a photograph made in 1868.

In 1895 Congress authorized the construction of a new Mint building at Denver, and appropriated $500,000 to its building fund. There was some delay in deciding upon and acquiring a suitable site, the choice finally resting upon a half-block of land on the south side of Colfax Avenue, between South Thirteenth and South Evans streets, and three blocks west of the Capitol building park. Work upon the building was begun in 1897, and at the close of our record is approaching completion with prospects of being finished early in 1902. The structure is a fine one of granite and steel, and would seem to be designed to endure forever. It is probable that the new mint will become a Sub-

Treasury of the United States from which all disbursements by the government for the central west will be made. It is anticipated that the total cost of the establishment with its machinery and outfit complete, will approximate $800,000.

Of the processes, methods and practices in handling bullion at the Denver Mint, Mr. Thomas Tonge, in a recent issue of "Mines and Minerals," gave the following specific and comprehensive description, which will afford the reader an intelligent understanding of them:

The increased supply of gold from the cyanide and chlorination plants in Colorado is very large. They are treating ore of much lower grade than the smelters can touch and a large portion of the increase, during the past few years, in the Colorado gold production is due to this fact. The cyanide and chlorination plants handling Cripple Creek ore exclusively, during the fiscal year ending June 30, 1898, turned into the Denver mint over $4,000,000 worth of gold, irrespective of the large amount of Cripple Creek ore treated at the smelters and stamp mills.

The crude gold bullion received at this (Denver) mint therefore consists of: (1) gold dust and nuggets from the placers running from .750 to .800 fine and from $16 to $17 per ounce in value; (2) retorts from the stamp mills averaging from .800 to .850 fine, containing all kinds of impurities; (3) gold bars from the Denver smelters, more or less pure, running as high as .997 fine; (4) gold bars from the cyanide and chlorination plants, averaging from .800 to over .900 fine, one plant occasionally sending in bars .993 fine. Each lot from the time of its arrival at the mint, is kept separate and distinguished by a serial number.

It is first weighed by the weigh clerk and again by the melter to whom it goes, and who has charge of it until it comes back to be weighed by the weigh clerk after melting, the loss of weight in melting being carefully noted. If the loss amounts to 2½ per cent., the melter who treats it makes a memorandum, at the time, of the character of the base materials, and also saves the slag for the information of the person who brought the gold. The loss is usually greater in the retorts than in the other classes of crude bullion.

In the basement of the building there are four melting furnaces, operated by gas fuel, with a strong air blast generated by a Baker blower, operated by a dynamo of about 2½ horsepower. The gold is melted at over 2,000° F. in large graphite crucibles.

From long practice, the melter, on splitting open a "retort" from the stamp mill prior to melting, can tell approximately what base metal predominates, and what flux is most suitable for the removal of that particular base metal. The principal fluxes used are borax, nitre, bicarbonate of soda, cyanide, and charcoal. In the molten mass, the gold being heavier sinks to the bottom of the crucible, and the flux brings the base metal to the top, which is constantly skimmed off by the melter by means of a plumbago stirrer. When all the impurities have been so removed, the remainder, consisting of almost pure gold, is poured into a mold to cool off and becomes a "gold bar." Bars that have a poor appearance, due more or less to sulphide coating, are treated in a bath of diluted nitric acid and cleaned with a wire brush. All bars are stamped by the melter with original number.

The bar is then returned to the weigh room and weighed to discover the amount, if any, of base metal that has been removed.

The assayer then receives the bar, takes small portions from diagonally opposite corners by clipping, or drills samples from both top and bottom; then reweighs the bar (the third time of weighing) to discover the amount of metal with which he is charged as having taken for assaying purposes.

The clippings are taken to the assay laboratory, rolled, certain amounts weighed out, wrapped in zinc covering and, in a bone-ash receptacle known as a 'cupel,' put into a highly heated 'muffle' furnace. The functions of the 'cupel,' are to absorb the base metal contained in the gold clipping, leaving what is known as a "total button," composed of gold and usually a minute quantity of silver.

The record of the fineness of this "total button" is kept by the assayer, who then dissolves the silver therefrom, by means of nitric acid, leaving the pure gold. Subtracting the fineness of this gold from the fineness of the original "total button" determines the proportion of parts of silver contained in the gold bar from which the sample was clipped.

The assayer next records this fineness upon an assay certificate, which goes to the calculating department, where the exact value of the original "deposit" of crude gold bullion represented on each certificate is determined, and the person who made such "deposit" is then promptly paid by check upon one of the local banks, or, if it is a very large deposit, by check upon the U. S. Assistant Treasurer at Chicago. In this way the Denver Bank Clearing House does not get the full amount of the business actually done in Denver, much of it being credited to Chicago.

The refined gold product at the Denver mint as above described, consists of bars of various sizes ranging from 100 ounces, worth about $2.000 up to about 1,200 ounces, worth about $25,000. They are piled up, as nearly as possible in a cube, and a strong case built to hold and fit it closely, so as to avoid abrasion in transit. It is shipped to the U. S. Coinage Mint at Philadelphia, where each individual bar is again tested and an official return thereupon made to the Denver mint, as if for an ordinary private depositor, the result being that the weight and fineness of each individual bar, after being so carefully tested and checked, as above described, at Denver, is again equally carefully tested and checked in Philadelphia, as against the Denver mint. Such is the remarkable exactitude that in a business for the last fiscal year aggregating over $12,000,000, the difference in valuations on the entire year's business, between the two mints, was only $33.40, the Philadelphia coinage mint crediting the Denver receiving mint with $33.40 more than the Denver mint had paid the individual depositors for the crude gold, and the Denver mint at once paid this small balance to the Treasurer of the United States.

Over 90 per cent. of the gold received at the Denver mint is of Colorado origin, but there is at least $5,000,000 worth of Colorado gold which does not go to the Denver mint at all, going in various forms of base bullion or matte from the Pueblo and Leadville smelters to eastern refineries, not being suitable for treatment at the Denver mint.

It will readily be understood from the foregoing that in advance of the completion of the $500,000 coinage mint, now well under way in Denver, the present Denver receiving mint is the third point in importance in the United States, in the item of gold purchases. It is, of course, exceeded by the United States Assay Office in New York, which receives the output of two of Colorado's large smelters and also much of the gold bars and coin imported from abroad. Heavy imports of gold from Australia and other countries, together with the bulk of the Alaska product, give the San Francisco mint the second place.

Recognizing the fact that Denver is the eastern gateway of the great gold producing districts of Colorado and the whole Rocky Mountain region, the United States Government is now building at Denver a coinage mint to cost $500,000, which will furnish local employment to a large number of people. The gold mining country tributary to Denver, including Colorado, Utah, Wyoming, Idaho, Montana, New Mexico, Arizona, and Nevada will then send all or most of its gold to Denver.

The values of pure gold, in troy, avoirdupois, and metric weights are as follows:

One ounce, troy	$ 20.67
One pennyweight	1.03
One grain	.04⅓
One ounce, avoirdupois	18.84
One pound, avoirdupois	301.37
One ton (2,000 pounds)..............	602,737.20
One metric gramme	.66⅓
One metric ton	663,289.00

One dollar's worth of gold, United States standard, is equal to .0484 troy ounce; or .0531 avoirdupois ounce; or 1.508 grammes. In Germany one gramme of gold is worth 2.60 marks; in France one gramme is worth 3.20 francs; in England one troy ounce of gold is worth four pounds, five shillings.

In recent years the Cripple Creek district has surpassed all others in the State in annual value of precious metals output. In 1899 Teller county, in which it is situated, was credited with nearly $16,000,000 worth; in 1900 with about $22,500,000. Since Stratton's discovery there in 1891, the district has had an estimated total output of gold exceeding $90,000,000. In 1899 the Leadville district (Lake County) produced about $11,000,000 of gold and silver, "coinage values," and in 1900 about $12,000,000; largely silver in both years. During its history of twenty-two years that district has yielded a total of more than $260,000,000 worth of precious metals, far the greater part of which was silver at the old-time values. In 1899 Gilpin county produced about $2,500,000 of gold; and in 1900 upward of $3,000,000, omitting fractions. It is estimated that since Gregory discovered his great lode there in 1859, the area within that county and its immediate environs has produced nearly $100,000,000 of gold.

The great mine of the Cripple Creek district is Stratton's "Independence" which, early in the sum-

---

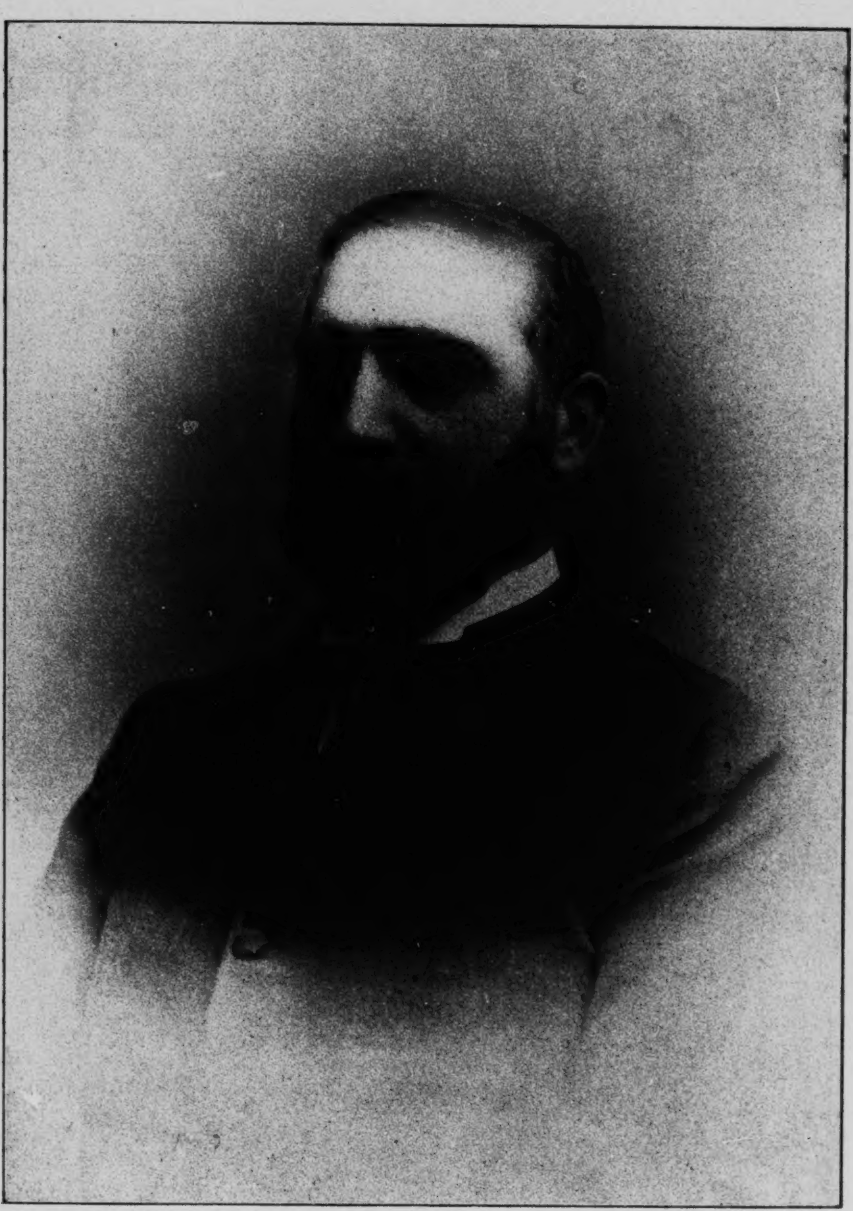
Dennis Sheedy, who personifies the development of the great Globe Smelter in this city, was born in Ireland, September 26, 1846, and when a child came to this country with his parents. His father, John Sheedy, a farmer in moderate circumstances, first settled in Massachusetts, but in 1858 removed to Iowa where he died soon afterward. The son was then early thrown upon his own resources, and quickly developed unusual capability. Attending school in the winter months, the remainder of his time was fully employed in a general store where he earned a modest salary and acquired a practical knowledge of business.

In the spring of 1863, when in his seventeenth year, he crossed the plains to Denver and at once found employment here as a clerk in one of the general merchandising stores of that period. He then remained here but a year when he went to Montana Territory where he successfully engaged on his own account in merchandising and in mining. By the spring of 1868, with his accumulating capital, he had become a wholesale grocer doing at Helena a large business that extended over much of Montana and Idaho Territories, and in the autumn of that year had begun his dealings in cattle which he later developed into an enormous business and to which he soon gave his exclusive attention.

During the years in which he was so extensively engaged in the cattle business, Mr. Sheedy acquired an intimate knowledge of the Great West possessed by but few men. He traversed it afoot and on horseback many thousands of miles, and his undertakings led him into almost every section of it. In doing so he encountered many vicissitudes, braved the storms and blizzards of winter and the hardships of arid regions in summer, and was not infrequently in danger of losing his life at the hands of the Indians. Though still comparatively a young man, his experiences place him among the pioneers of the west—among the men who have witnessed and aided in an empire's development the like of which will never be seen again.

Mr. Sheedy's operations in cattle as a business to which he devoted his entire attention began in Texas and was later transferred to Kansas and afterward to Nevada. Then, after a season of travel in California and Old Mexico, he purchased large herds in Arizona. Another season of travel, in the eastern and southern States, followed, and he next bought several large herds in Texas. In the autumn of 1870 he established his headquarters in Kansas City, where they remained until 1881; and from that base his transactions extended over nearly all the western States and Territories. At various times in his operations he had ranges and ranches in Texas, Indian Territory, Kansas, Nebraska, Wyoming, Colorado, Nevada and Arizona; and it was through these States and Territories that he made repeated journeys, often alone, looking after his interests. His cattle were numbered by thousands.

Mr. Sheedy continued his dealings in cattle until 1881, when, having deservedly won a fortune by them, he returned to Denver and here permanently established his home. Acquiring large interests in the Colorado National Bank of Denver, he became one of its Directors, and in January, 1886, was elected its Vice President, a position he still fills. About that time he bought an interest in the old Holden Smelter and became President and General Manager of the company owning it. It had theretofore proved not very successful, but under Mr. Sheedy's management new methods and new processes were introduced. In 1889 the Holden company



Dennis Sheedy.

mer of 1899, was transferred to an English corporation for a consideration reported to have been ten millions of dollars. It then ranked as the most valuable mine in Colorado. It is situated on the south slope of Battle Mountain, and was discovered by W. S. Stratton in July, 1891—the first mine in the Cripple Creek district. Up to the time of its sale it was the individual property of its discoverer. Its underground development at that time consisted of two shafts, and a total aggregate length of 34,450 feet of workings, or a little more than six and one-half miles. From the time of its discovery to the close of 1898, there had been taken from the mine 41,694 tons of ore, the gross value of which was $3,837,360—an average of $92.03 per ton. After deducting the cost of development, buildings, machinery, and the current expenses of working the mine and treating the ore, there remained a net profit in the period indicated of $2,402,164, which was sixty-two per cent. of the gross value of the ore hoisted out of the mine. According to official reports made late in 1900, the English company's methods of operating the mine had much reduced its known value, inasmuch as the known ore-bodies had been greatly depleted, while development work to open new bodies had been suspended by the new proprietary company.

Few gold mines in the world have had a record comparable with this one's. Several accounts, most of them fanciful, have been given of the circumstances attending its discovery and the consequent development of the Cripple Creek district. In March, 1899, Mr. T. A. Rickard, of Denver, State Geologist of Colorado, made a report on the "Independence," as one of the preliminaries to its transfer to its new owners, in which he relates the discovery circumstances. His account, which may be accepted as accurate, is as follows:

"When gold was discovered in the Cripple Creek district, early in 1891, it was a cattle range, which had been the scene of more than one unsuccessful mining excitement. It had suffered in reputation, and became neglected by the gold-seekers of Colorado. Among the herdsmen were several who did a little prospecting, at odd times, so a certain amount of desultory digging was done. This led finally to a discovery of some importance made by a man named Robert Womack, who found a rich vein in Poverty Gulch, and went to the neighboring town of Colorado Springs with samples of the ore. He was aided in his work by others, who incidentally spoke to W. S. Stratton about the discovery. Stratton was at that time a house-builder by trade, and had been prospecting for twenty years in the intervals of his business; he had learned the use of the blow-pipe, and was familiar with the outlines of mineralogy and geology; in fact, an energetic,

---

was reorganized as the Globe Smelting and Refining Company, of which Mr. Sheedy became President and General Manager. Out of these circumstances and changes has grown in our suburb of Globeville one of the world's great smelting establishments, and of which, as remarked at the beginning of this note, Mr. Sheedy is the personification. The responsibility for its successful management and the credit for its great development and enormous increase of capacity were his. Many of the new devices and methods introduced in the Globe and now in use, and that have greatly increased the refinements of smelting processes, are of his invention. He continued as the executive head of the Globe Smelter until the spring of 1899 when a union of interests resulted in the consolidated American Smelting and Refining Company. Since then he has been an officer of the new organization and General Manager of the Globe.

After Mr. Sheedy became interested in smelting, he personally made arrangements with the railroads for shipment of lead ores from the Coeur d'Alene mines in Idaho to Denver where the smelters stood in great need of them. A short time later he had an experience at Washington in connection with lead that was unusual to a private citizen. The tariff bill of President Harrison's administration was pending report, and by some means the Ways and Means Committee had been persuaded to reduce, in the bill, the lead tariff to one-half cent a pound. Through Mr. Sheedy's active and forceful interposition the rate was restored to one and one-half cents only a few hours before the bill was reported to the House. In the debate that followed, Representative Hopkins, of Illinois, who was an advocate of practically "free lead," and who had supposed the nominal duty of a half-cent had been fixed to stay, stormed and raved over the change. In his speech he paused and, pointing out Mr. Sheedy who sat in the gallery, vociferously charged him with responsibility for the restored rate. This is said to have been the only instance to this day in the history of the United States Congress in which a member speaking on the floor of either house so transgressed the rules as to single out a private citizen in the gallery and reproach him. However, the Sheedy lead-tariff became law and was of vital importance to the mining and smelting industries of the west.

In 1894 when the Denver Dry Goods Company was organized and in which he became largely interested, Mr. Sheedy was elected President of that great commercial corporation; and he still continues that relation to it. He has been and is identified with several semi-public associations for the advancement of the city's interests, and a good friend to the various charitable organizations. On February 15, 1882, Mr. Sheedy married Miss Catherine V. Ryan, daughter of Matthew Ryan, a prominent business man and pioneer of Leavenworth, Kan. Mrs. Sheedy died June 22, 1895, leaving two children. On November 25, 1898, he married Mary Teresa Burke (his present wife), of Chicago, and who is a niece of Bishop Burke of the Catholic diocese of St. Joseph, Mo.

The foregoing contains but the outlines of the business career of a man who started as a boy upon his own resources which were only those of a clear and honest head and a good and brave heart. It has been one of successive triumphs achieved without at any time lowering a high standard of personal and business integrity, or repressing the instincts of a nature filled with kindness and consideration for his fellow-men.—J. C. S.

well-informed man, well-equipped for prospecting work of any kind. At the time above mentioned he had been searching for cryolite, a mineral from which the metal aluminium is obtained, and had been camping on the Cripple Creek side of Pike's Peak. This was in May, 1891. After hearing about Womack's discovery, which, by the way, subsequently became a rich mine (now known as the Gold King), Stratton went up to Cripple Creek, and began an investigation of the district. Nothing of importance occurred until the 5th of June, when he crossed over to the eastern part of the district, and began prospecting on what is now Legal Tender Hill, close to the town of Goldfield. An old ranchman, Billy Fernay, came along one day and asked Stratton what he thought of a piece of float (surface ore) which he had found on a neighboring hill, now known as Battle Mountain. Stratton went over to see the locality, and in following the ridge southward he came upon a big outcrop of granite. It was the Independence vein, which had already been seen by many, including nearly all the prospectors and ranchmen then in the district, but it had been condemned by all of them as worthless granite. Stratton did as the others had done, chiefly because he could not detect the presence of any metallic mineral, and from this fact inferred that it was not gold ore. His previous experience in the southwestern Colorado, more especially in the San Juan region, led him to associate valuable ores with the sulphides of lead and copper and an encasement of quartz, not with this, apparently common granite."

"It may be well to state that the outcrop was indeed granite, decomposed assuredly, especially as to the mica, but nevertheless wholly unlike the ordinary gold ores of other districts, and therefore misleading to the most veteran prospector. In after years, when car loads of this ore was sent to the smelters, the managers of the works thought at first that loads of ballast had been consigned to them in error, and it required a keen eye to detect that the mica of the granite had been decomposed, leaving iron-stain spots amid which free gold was distinguishable."

"So Stratton overlooked it too—but not irretrievably—for when he went to Colorado Springs a few days later it occurred to him that that outcrop must be a lode. He had taken five samples to Colorado Springs for assay, and they all gave poor results, but he had, by panning, found gold in the loose fragments of porphyry covering the south face of Battle Mountain, without, however, being able to trace the gold to any vein in the porphyry itself. It came to him in a flash that the granite outcrop must be the lode which had shed the gold."

"Acting on the impulse of the moment, he took a horse and rode to the camp, and on arrival immediately staked out two claims, the "Washington" and "Independence." It happened to be the Fourth of July, hence the names."

"He broke some pieces from the granite outcrop, and sent a man to Colorado Springs, thirty miles distant, to have them assayed, while he awaited the result. The assay certificate arrived next day, and proved that the granite contained nineteen ounces of gold per ton."

"I doubt if any man ever celebrated the Glorious Fourth to better advantage. From that day to this the great value of the mine has never been in doubt."

The total gold production of Colorado in 1899 and 1900 was about forty-one per cent. of the entire output of the United States. Of the Colorado output in 1899 the Cripple Creek district contributed about three-fifths; of that of 1900 it contributed considerably more than two-thirds.

The proved gold bearing territory of the Cripple Creek district embraces an area of about ten square miles. Its development dates from the discovery of the "Independence" mine in 1891, and from that time the yield has steadily increased at the rate of something like fifty per cent. per annum. In 1898 the Cripple Creek district paid in dividends to shareholders in its mining properties $2,596,144; in 1899, $4,322,000; and in 1900 more than $6,000,000; yet these sums do not include the profits of lessees of certain mines in the district which would add several hundred thousand dollars to the aggregate for the three years. Roughly estimated, the profits in the district are about 28 per cent. of the gross yield of all its mines.

Of the geology of the district Mr. Rickard says:

"The geology of the Cripple Creek district, and of Battle Mountain (where the Independence is situated) in particular, is of unusual interest and exhibits the close relation between the structure of the rocks and the occurrence of bodies of gold ore. The mines are situated in a complex of volcanic rocks, which, during different periods, were extruded through the granite. The principal rock is andesite-breccia. Andesite is derived from Andes, the mountains where the rock is specially prevalent. Breccia is a word of Italian origin, and means "broken;" it is a term applied to rocks which are made up of fragmentary material. The very nature of the breccia suggests the violence of the volcanic action which brought it to the surface of the granite. The andesite-breccia, together with finer material of the same character called "tuff" (from the Italian word "tufa." Vesuvius is responsible for the Italian nomenclature of many volcanic products), now lies in the uneven hollows of the ancient surface of the granite, and has a thickness which has been proved by the mine workings, to at least exceed a thousand feet. * * * Long after the deposits of the breccia, it became penetrated by dykes of material having an allied composition, chiefly phonolite. Phonolite comes from the two Greek words: phone, sound—and lithos, stone. It derives this name from the fact that when struck by a hammer it rings. This is due to its hardness and close texture. Phonolite is a rare rock, and its association with great mineral wealth is a new fact, which has been one of the most notable features of Cripple Creek's development. It occurs in dykes; that is to say, in approximately vertical sheets, which traverse the older rocks, the granite and breccia, in various directions, and are probably united at depths far beyond the reach of human exploration, to larger masses of rock having a similar composition, just as the cracks in ice are filled with a liquid similar to that beneath.

"The Phonolite dykes followed lines of weakness in the older rocks, which developed into fractures during those periods when the rocks underwent readjustment in obedience to slow movements due to the shrinkage of the crust over the earth's cooling interior. The phonolite rose in a mobile if not molten condition, through the fractures thus formed, much as water rises in the cracks of the overlying ice."

"These lines of weakness, thus developed, gave a direction to the fracturing along which underground waters subsequently circulated, and eventually deposited the gold which they carried in solution. This is the modern philosophy of ore deposition, stated briefly and crudely. * * *"

"The ores are tellurides, that is, the gold does not, except in the upper oxidized zone, occur free, but is combined in definite proportions with the element tellurium. The principal minerals are sylvanite and calaverite, the former containing 28 and the latter 44 per cent. of gold."

As a rule the men who dig the ore from the depths of the mountains do not extract the precious metals from it; mining being one line of business, and smelting or reducing the ores another. In treating them the usual practice is to divide the ores into two classes or grades, according to their gold contents. Ores containing two or more ounces of the yellow metal per ton are sent to the smelters, while the lower grades go to the chlorination, or to the cyanide process, mills.

The Colorado railroads are important factors in the mining industry, and the transportation of ore forms a conspicuous part of their freight earnings. A peculiar system of freight charges on ore is in vogue—one quite different from that attaching to freight transportation elsewhere in the country, and different, also, from that which applies to other freight here at home. The railroads practically share some of the uncertainties of mining, their proportion of the proceeds being determined by the values obtained from the ore by the mills and smelters. For example, the present (1900) freight on ore from the Cripple Creek district to the Denver smelters is five dollars per ton on all from which one hundred dollars or more of gold values

---

Winfield Scott Stratton, of Colorado Springs, who has been and continues to be the more conspicuous figure in the development of the Cripple Creek gold-mining district, is a native of Indiana. He was born at Jeffersonville, July 22, 1848; his father, Myron Stratton, having been a contractor and boat-builder there. After young Stratton had been graduated in the Jeffersonville High School at the age of seventeen, he began learning the trade of a carpenter, and at the end of three years had become skilled in draughting, and a competent craftsman. He then came west and worked at his trade successively in Sioux City, Omaha, and Lincoln; remaining in the last-named place about a year.

Mr. Stratton came from Lincoln to Colorado Springs in the summer of 1872, soon after that city had been established, and has ever since made it his home. Having a small sum of his savings, he continued work at his trade, later became a contractor, and erected many buildings in the Pike's Peak city. Early while thus employed, the fascination of the mining industry exerted its influence upon him and at intervals he engaged in prospecting, though devoting most of his time to his regular business. Thus his affairs went on through a good many years without results of much consequence arising from his prospecting. In 1884, having realized his need for both technical and practical training in mineralogy, a course in Colorado College made him a fairly competent assayer. He then learned the practical side of dealing with ores by employment in a reduction mill at Breckenridge, Summit county; after which he continued to divide his time between his business at Colorado Springs and prospecting in the Colorado mountains.

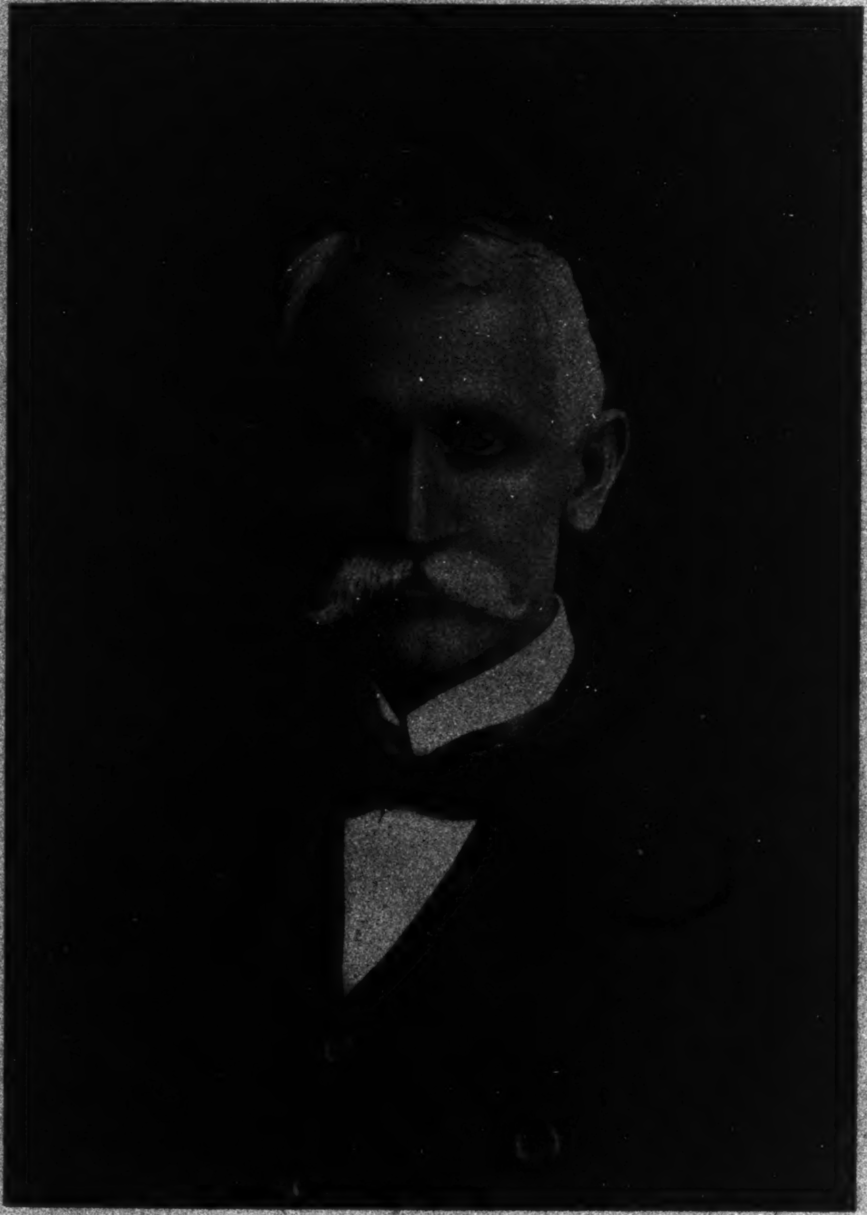
During all the years in which he was thus engaged his surplus earnings from his trade were used to pay the expenses of his prospecting. One of his earlier experiences was the loss of $3,000, (about all the ready money he had), in the winter of 1873-74, by investing it in an unproductive claim in the San Juan country. Still, he kept on.

After seventeen years of hard work and during which he had found little but disappointment and had often been on the verge of privation, his reward came in his discovery, as related in these pages, of his famous and opulent Independence Mine. The results of that discovery after those years of patient toil and unwavering hope, have made Mr. Stratton a commanding personality in the romance of Colorado mining. At the time of the discovery his financial resources were very slender, and to obtain means with which to develop his claims he had to bond one of them—a transaction that encountered not a few denials and discouragements before it was accomplished. The rest of the story is related elsewhere in this chapter.

Since the sale of his great mine Mr. Stratton has continued an active interest in the Cripple Creek district. An owner of, and in, several large and rich mining properties there, he has entered upon a system of development contemplating far deeper workings than have yet been reached in Colorado mining, and calling for expenditure of large sums of money. As elsewhere mentioned, it is the belief of many miners that ores from deeper workings would prove richer, and therefore the results of this new development will be awaited with much public interest.

After Fortune smiled upon him, Mr. Stratton began acquiring real estate in Colorado Springs, and has continued doing so until he is now the owner of much valuable and finely improved business property in that city. Recently he has made large investments in real estate in the business section of Denver and become directly identified with the city and her welfare. The first of his improvements of these properties is seen in the Coronado Building at Fifteenth and Stout streets.

Appreciating through his own experience the importance of having young men properly trained in all that pertains to mineralogy, and the value to the State of having such training available to its young men, the State School of Mines at Golden has received from Mr. Stratton very substantial financial evidence of his interest in its welfare. Aside from this he has for several years filled his present position as a member of the School's Board of Trustees.—J. C. S.



Winfield S. Stratton.

are obtained from each ton of ore; four dollars per ton on all yielding from thirty to one hundred dollars per ton; and three dollars on that producing less than thirty dollars per ton. It cost the roads as much to haul one kind as another, yet they do not know what they are to receive for their cargoes until the mills, or smelters, or sampling works have determined their values.

The chlorination, and the cyanide process, mills also have a sliding scale of charges for treating the ore consigned to them. At this time these charges including freight, are as follows:

$7.00 per ton on ores carrying up to ½ oz. of gold per ton.

$7.75 per ton on ores carrying up to ¾ oz. of gold per ton.

$8.50 per ton on ores carrying up to 1 oz. of gold per ton.

$9.00 per ton on ores carrying up to 1¼ oz. of gold per ton.

$10.00 per ton on ores carrying up to 1½ oz. of gold per ton.

$10.50 per ton on ores carrying up to 2 oz. of gold per ton.

As we have stated, ores containing more than two ounces of gold to the ton, are usually sent to the smelters, where the charge for treatment is practically uniform per ton, though frequently the mills receive ores yielding more than two ounces. In such cases they charge the smelter rate which is now six dollars and fifty cents per ton, including freight. In 1894 the smelter charge for the same service was fifteen dollars per ton, the reduction having been made possible by improved methods, greater skill of the workmen, larger capacities, and lower freight rates.

As several parties thus become interested in the value of the stuff, it is a frequent practice to have the ore sampled at one of the several public sampling works while it is in transit from the mine to the mill or smelter. For this service, which determines the value of the ore earlier than it would be by the mills and smelters, a charge of seventy-five cents per ton is made. This sampling is usually near enough to accuracy to be satisfactory to the miner, the railroads, and the mills and smelters, and settlements are made accordingly, the miner

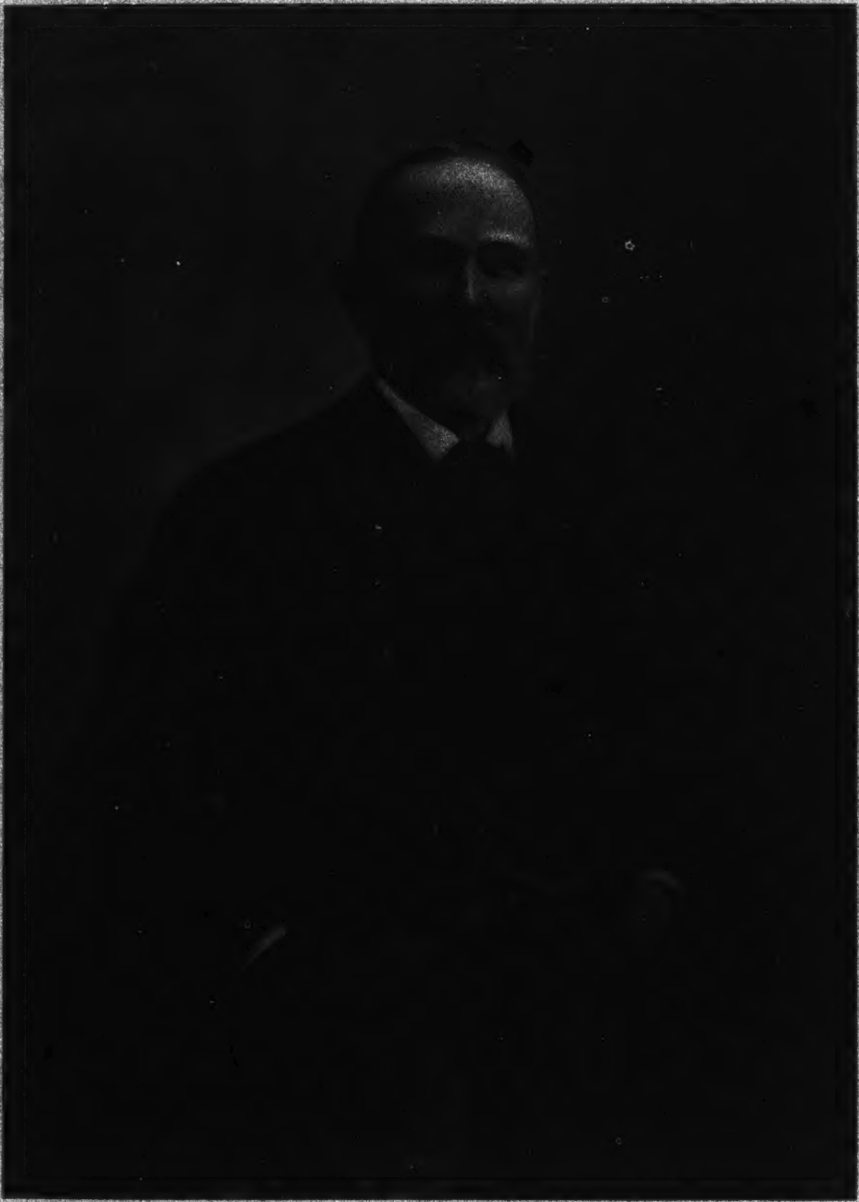
---

Richard Pearce, manager of the Boston and Colorado Smelter, is a native of the village of Barripps, near Camborne, Cornwall, England, where he was born June 29, 1837. The place of his nativity is in the midst of England's old and prolific tin-mining region that has been worked for many generations; and where his father for more than fifty years was identified with tin-mining, and for a long time one of the managers of the old and famous Dolcoath mine. Reared amid such surroundings Mr. Pearce early became deeply interested in mining and the problems involved in it; and resolved to make their study his life profession. With this purpose in view he entered the Truro Mining School in Cornwall and soon became assistant to the principal, in which capacity he served three years. The school was then closed for a season after which it was reopened through the instrumentality of Mr. Pearce who also devoted a large part of his time to lecturing on science as applied to mining throughout the Cornwall districts. In 1859 he went to London where he entered the Royal School of Mines as an advanced student, under the most capable instructors in England, and where he completed his collegiate training. In 1865 he became manager of the silver and copper reduction works of Williams, Foster & Company at Swansea, Wales, where he remained until he came to America and entered upon his brilliant career as Colorado's foremost metallurgist.

Mr. Pearce first visited Colorado in 1871 to investigate for English investors the silver mines in the Georgetown district, upon which he made a favorable report. Upon that visit he became so thoroughly convinced of the greatness and value of Colorado's mineral resources that he decided to permanently establish himself here and assist in their development. In 1872 he left England with his family and located at Empire where he took charge of a small smelter near that camp. His thorough attainments as a metallurgist and his fine executive abilities made him a conspicuous man in the Clear creek mining districts, and in 1873 he accepted an invitation to become the metallurgist for the Black Hawk Smelter of the Boston and Colorado Smelting Company. From that time to this he has been identified as an executive with the development of the Boston and Colorado Company's great establishment. When the smelter was removed from Black Hawk to Argo Mr. Pearce brought his family to Denver and made this city his home. In 1887 he became the manager of the smelter, a position he has continuously filled since that time.

Mr. Pearce is an authority on the technicalities of mining and ore reduction. A large part of the difficult but successful work that won the victories over the refractory substances composing Colorado ores has been his. In a large measure the step by step advances that have been made in profitably treating lower and lower grades of the output of our mines have been due to his well-trained genius and remarkable intuition. To a degree outside the limits of practical computation the prosperous condition of Colorado's mining interests reflects the value of his services to the people and to the State.

Mr. Pearce is a member of many scientific and technical societies in this country and in England, and is the author of papers on metallurgy and kindred subjects sufficient to constitute a valuable metallurgical literature. In 1890 Columbia College of the city of New York conferred upon him the degree of Doctor of Philosophy in recognition, as stated by Professor Eggleston, "of the very distinguished position which Professor Pearce holds and the large number of additions which he has made to metallurgical science. * * * We here regard Professor Pearce as one of the first, if not the first, gold and silver metallurgists of the present time, and by honoring him we feel that we have not only done justice to him, but have done honor to ourselves." In 1889 Mr. Pearce was also made President of the American Institute of Mining Engineers. Since 1885 he has most acceptably served as British Vice Consul at Denver, a position for the duties of which he finds recompense in the opportunities it affords him to be of service to his countrymen here in the west.—J. C. S.



Richard Pearce.

getting what is left after the others have taken their shares, which are always preferred claims.

Sometimes there is little or nothing left for the miner, as much "low-grade" ore is taken out and the assay of a few pounds of it, which, from circumstances that appear fond of association with the business, are pretty sure to consist of the most promising pieces in the heap, and, therefore, do not hold out when applied proportionately to a carload. In such instances the miner receives the unfavorable report with complacency, and continues his development work until he finds something better, or else tries his luck in another place.

But this uncertainty rarely attaches to shipments from well developed mines, the values and extent of their ore bodies, whatever the grade may be, being pretty definitely known, and the gold contents of every shipment closely approximated before it is hoisted to the surface. It is the hopeful prospector who is always expecting to "strike it rich," or the ever sanguine owner of a partly developed mine, who thinks he has so struck it, who receives an "Irish dividend" from a premature consignment of rock which, through no fault of its own, inspires hopes in its owner's mind that the smelters or mills can find no way to fulfill.

The mines of Colorado provide employment for about 40,000 men, who receive good wages; the average pay being about $2.50 per day. The work does not in a general way require what would elsewhere be termed skilled labor, yet many of the men who make mining their business rise above the grade of laborers and become craftsmen in their calling. It is a dangerous occupation, the casualties approaching those among an equal number of soldiers in war service. According to the report of the State Bureau of Mines there were, in 1899 and 1900, 1,200 men injured in mine accidents—about 200 of them with fatal results.

No very large "nugget" or mass of gold has ever been found in Colorado; that is to say, not large enough to rank with "nuggets" of world-wide fame. The largest individual mass was taken out of the Gold-Flake Mine, at Farncomb Hill, Summit county, July 23, 1887. It weighed 156 ounces, 7 pennyweights—a value of nearly $3,700. It is known as "Tom's Baby," and with several other but smaller ones, was sold to the Chicago World's Fair Commissioners for $15,000. The largest placer gold "nugget" was found in McNulty Gulch, early in the "Seventies," and weighed 13 ounces—a value of $268. The largest mass of comparatively pure silver yet found in Colorado was taken from the Smuggler mine at Aspen in 1894. It weighed 1,840 pounds, was 90 per cent. pure, and worth about $38,000. Silver does not so often reveal itself to the eye, as gold, and to the uninitiated very rich silver-bearing ore is usually rock of a most unpromising appearance—a slatish colored mass that gives no optical indications of the great values it carries, which have been as high as 94 per cent. of its gross weight. Occasionally, in the "wire" or "horn" form, silver is found pure.

The gold found in and along Cherry creek in pioneer times, and at other points where the ancient flow of the creek deposited silt and gravel, such as those where the Russell party mined along the Platte in the present southern outskirts of the city, in 1858, was of a different color, finer in particles, and nearer pure than that found in the mountains and in the streams leading directly from them. Much of this Cherry creek gold was extremely fine—as fine as flour, if not finer. A pinch of it would disappear under a puff of the breath, and would float in the air like dust, or like a bit of gold-leaf. It was so easily dissipated that much of it could not be handled or preserved by the pioneer miners. This Cherry creek gold evidently came from the Palmer Lake divide, a general district that has not yet been thoroughly explored in search of the mother lode from which has drifted the vagrant gold scattered far and wide by Cherry creek. There are those who believe, and of whom the writer is one, that the great discovery of gold in Colorado is yet to be made; and that when the time comes it will have been made in the region drained by the headwaters of Cherry creek.

Mining in Colorado already has its romances and traditions. In the one are involved the stories of great wealth suddenly pouring in upon poor and obscure prospectors; of vast fortunes being heaped upon discoverers who developed and operated their mines, such as Tabor, Stratton, and Walsh; and of those who found mines of opulence but allowed them to slip from their control. In the other are stories of lost mines—lodes of tremendous values having been discovered by wandering prospectors who, when they returned with means of developing them, could not again find their locality; of lonely prospectors who met death in some form, and upon whose bodies when discovered were found ores of fabulous richness, the sources of which have been long but vainly sought by others. Routt county enjoys a tradition of a lost mine surpassing the wealth of the Indies; and the Glenwood Springs country has another. With a silver mine that was never found, though it is not in Colorado, the late Senator H. A. W. Tabor had some experience. A few weeks before his death, he took from his safe and handed to the writer of these lines, a dark brown mass which looked like clay but was nearly as heavy as iron. In explanation of its character and history he said:

> "That is sulphide of silver and is one of the most wonderful pieces of ore I have ever seen. It is eight per cent. pure silver, and one of the most remarkable of mining mysteries is connected with it. It was picked up on the plains of Arizona, near a placed called Kingston, and probably one thousand pounds were found in the immediate vicinity.

> A curious fact is that it was all found lying loose on top of the ground, and where it came from is a mystery I spent over $10,000 in trying to solve, but was not successful. There were no high hills anywhere around the place where the ore was found, so it could not have rolled off the side of the mountain; and how it came to be lying around on top of the ground was more than I could find out. I employed experts and, as I have said, spent $10,000 in wasted efforts to locate the vein."

A popular but quite mistaken belief is that the discovery of valuable mines does not call for the services of experienced men with minds trained in technicalities; that men ignorant of mineralogy and geology are, as prospectors, just as likely to make the discoveries as the "expert" who is prowling along the hill on the other side of the gulch; and that as a rule all the great discoveries have been made by such men, to the humiliating discomfiture of the man with book-learning, or practical experience, or both.

This common impression—that is to say, more common among people at a distance from mining districts—is chiefly due to imaginative writers whose regard for facts is subordinated to the inclination for romancing. An example of this interesting but, unfortunately, visionary literature, recently appearing in an eastern publication, begins thus:

> "It is a curious fact that the discoveries of rich gold and silver deposits in Colorado have been made, with few exceptions, by men who had little or no knowledge of mining or mineralogy. Rank tenderfeet have stumbled upon fortunes which experienced prospectors had trodden upon for years and neglected in their wisdom."

If this statement were true, it certainly would be "a curious fact." The writer of the article to which the foregoing is the introductory then goes on, after the fashion of his kind, to recount some half-dozen instances of "lucky finds" and to hold them up as examples of the usual methods of locating profitable mines in Colorado.

It was just such notions as these, elaborated in mining stories manufactured for popular consumption, that led thousands of misguided souls to the Pike's Peak country in 1859-60, and to the most bitter disappointment and disastrous loss. Our reader has seen that the only men who located gold-bearing lodes in 1859 were experienced men, and that the so-called "tenderfoot"—a term, by the way, rarely used in Colorado except by passing visitors—was practically helpless in his ignorance and with his "luck."

It would, of course, be another "curious fact" if, among the thousands of men who have since carefully searched every hill, slope, gulch, nook and cranny of Colorado for "prospects," there had not been a few instances of "luck." But for every such instance there have been fifty discoveries made as the direct results of intelligent search, and practical knowledge of geology and mineralogy. If, in the cases of the "lucky finds" the "expert" miner had trodden upon them for years and neglected them in his wisdom, it was because there was nothing visible to indicate their presence and he had not gone beneath the surface in that particular spot. The theory of "lucky finds" takes no account of the aimless, fruitless, wasted efforts of thousands of ignorant men who have wandered around through these mountains, toilsomely burrowing here into rocky material that would not assay a trace of metal in a thousand tons; there laboriously drilling shafts down into vertically standing strata that never did and never could carry a grain of gold or silver. The intelligent and experienced men have made such mistakes a-plenty, but the ignorant ones have made them a hundred-fold more. They constituted the rule with the ignorant men; the exception with the experienced.

The uncertainties of mining are quite sufficient in themselves, without imaginative embellishments. But it is not a mere game of chance in which intelligence, training, experience, and technical knowledge give their possessor no advantage over the inexperienced, the ignorant, or the fool. Year by year the uncertainties are being eliminated, the "chances" reduced, and the occupation brought nearer an understood and enduring basis. Only the trained men, the "experts," are instrumental in this important work. It would, indeed, be "a curious fact" if here we had before us one of Nature's problems in the solution of which human knowledge would be wholly impotent.

The case of W. S. Stratton in his discovery of the Independence, is one which the romancers are fond of exploiting as an average example of the way mines are located in Colorado; and the "curious fact" of it is paraded in a way calculated to lead the uninformed to believe that others may do what he did. Stratton is usually presented as a poor carpenter who knew nothing of mining until he found his famous mine. The reader has seen what Mr. Rickard has said of that. Stratton was poor, and a carpenter, and these are about the only facts stated in the stories as usually told. It is not told that, while being a carpenter, he was also an intelligent, long-experienced, practical prospector of considerable geological knowledge. With a few, a very few, exceptions the facts concerning the discovery of the Independence will apply to the other so-called "lucky finds" of valuable mining properties in Colorado.

While there are, from the inherent general character of the occupation, many uncertainties in mining for the precious metals, the business is not a lottery. Intelligence, skill, experience and capital are as essential in it as in other undertakings. The time when any man owning a pick, shovel, pan, and a few weeks' supply of "grub," and possessing wit enough to use his simple tools, could go out along the streams and in the gulches and become a gold-miner, has gone forever. Even where placer work is still carried on, the old methods are discarded, because placer gold is no longer found in quantities sufficient to warrant efforts at its recovery by mere hand labor. Extensive mechanical appliances—large "plants"—are necessary, for enormous quantities of material must be handled to recover profitable amounts of the gold still left in the gulches, bars, and creek beds.

However, this kind of work in Colorado is now of almost insignificant proportions. At present everybody understands "mining" to mean workings in the rocky masses of the mountains by means of shafts, drifts, tunnels, and other excavations; and it is in this sort of work that intelligence, skill, experience, and capital must be combined if good results be attained; and it is, also, in this kind of work that money is consumed in what often appears to be amazing amounts. It has been almost a fixed rule in the history of every mining camp in the State that mines are made by development, rather than merely found; though the latter is, of course, an important part of the preliminary proceedings. In every mining camp, also, there are profitable mines that in some period of their history were unsuccessfully operated by novices in mining and in business management, who could find surface indications, locate the vein and make the beginning of a mine, but failed in the supreme test of properly and judiciously expending their capital. Then came failure and abandonment, to be followed by the operations of men who knew how, and who made a mine out of what the others had made only a bankrupting failure. Skill, good judgment and experience in developing a mine, and economy in its operation are of most vital importance in the average producing mine in Colorado; in many instances they alone stand between fair profits and ruinous losses. Nevertheless, the uncertainties of mining, while not of the mere chances of a lottery, are great; every fair prospect at the surface does not mean a profitable mine farther down; every shaft or tunnel into the bowels of the mountains, even if directed by skill, intelligence and experience, and close by successful workings, does not bring rewards. Perhaps the proposition may be made plainer by an illustration: there is laid down for us an elaborate system of rules for spelling and pronouncing the English language; but, though the rules are good, sound, and necessary to a fair understanding of the tongue, we find appended to them a rather surprising number of exceptions. So it is with mining: starting with a fair surface prospect, developing under the guidance of intelligence, skill and experience supplied with sufficient capital, the rule is that such operations will result in a profitable mine; but there is a surprising number of exceptions.

Out of mining operations and mining exploitations have arisen permanently established mining stock exchanges in Denver, Colorado Springs, and Cripple Creek, the business of which reaches very large amounts annually, notwithstanding that many of the transactions are on a basis of nominal stock-values.

The first movement toward organizing a Mining Stock Exchange in Denver was made in February, 1875. On the 6th of that month a meeting of those who had become interested in the proposed Exchange, was held at the office of Job A. Cooper and Peter Winne, who were then insurance agents. W. J. Barker was made President of the meeting, and Fred Z. Salomon Secretary. After some dis-

---

Simon Guggenheim, General Manager of the Philadelphia Smelting and Refining Company, is a native of Philadelphia, Pa., where he was born December 30th, 1867, the son of Meyer and Barbara Guggenheim. He was educated at Philadelphia, Pa., and spent several years traveling in Europe, after leaving college and before entering business.

Mr. Guggenheim is actively and prominently identified with the business life of Colorado. The firm of M. Guggenheim's Sons, of New York, of which he is a member and the representative in Colorado, have interests of vast magnitude identified with the mining industry. They are the sole owners of the Philadelphia Smelting & Refining Co. at Pueblo, Colo., the Guggenheim Smelting Co. at Perth Amboy, N. J.; the Great National Mexican Smelting Co. at Monterey, Mexico, and the Great Central Mexican Smelting Co. at Aguascalientes, Mexico; beside many mining properties in Colorado and Mexico.

In January, 1889, Mr. Guggenheim came to Colorado to become connected with the Philadelphia Smelting & Refining Company which has contributed so much to the industrial development and prosperity of the State. In his successful business career he has had the advantage of a winning personality and a generous nature, with means to give effect to their benevolent impulses.

In the autumn of 1898 a political distinction that rarely comes to so young a man, was conferred upon Mr. Guggenheim, undesired and unsought by him. On September 9th the Silver Republican State Convention in session at Colorado Springs nominated him as that party's candidate for Governor of Colorado. Owing to the demands of his personal and business interests, and to his reluctance to engage in political strife, he requested the party's executive committee to subsitute another in his place and withdrew, much against the wishes of many of his fellow-citizens. Though barely within the constitutional age-limit, there can be no doubt that he would have given Colorado a most creditable administration.

On Thanksgiving Day (November 24th) 1898, Mr. Guggenheim and Miss Olga, daughter of Mr. Henry Hirsh, of the city of New York, were married at the Waldorf-Astoria Hotel in that city, by Rabbi William S. Friedman, of Denver. After a wedding journey to Japan they established their home at Colfax and Washington Avenues, in Denver.—J. C. S.

Simon Guggenheim.

cussion, Daniel Witter, Amos Steck, C. B. Kountze, John W. Smith, L. C. Elsworth, R. R. McCormick, and Henry Crow were appointed a committee to confer with mining men and others and to generally consider the prospects for the success of such an institution. The meeting then adjourned to March 19th.

On that date the second meeting was held at Cooper and Winne's office; the attendance was larger than at the first, several more men having in the meantime become identified with the movement. Chairman Witter on behalf of his committee reported that the encouragement received had not been so great as had been anticipated, but that this was partly due to lack of thorough understanding of the utility and importance of a Mining Exchange. After hearing the report the meeting decided to proceed with the organization. A committee to formulate a plan of organization, draft by-laws and rules of government for the exchange was appointed after which the meeting adjourned to re-assemble when the committee should be ready to report.

On May 10, 1875, the promoters of the enterprise met, their committee reported, and "The Colorado Stock & Exchange Board" was organized, with a membership limited to sixty. Officers were then chosen as follows: Daniel Witter, President; Dr. A. B. Robbins, First Vice President; William D. Todd, Second Vice President and "caller;" E. W. Cobb, Secretary; George E. Snider, Treasurer; E. M. Ashley, Chairman Executive Committee; Owen E. LeFevre, Chairman Stock List Committee. Walter S. Cheesman, Chairman Arbitration Committee.

Quarters for the new institution were secured in Henry C. Brown's building at the southeast corner of Sixteenth and Market streets, which also then sheltered the Daily Tribune of that era. The Exchange was formally opened on June 1st. The first transaction was the sale of one share of stock in the Marshall Tunnel at Georgetown. To give the institution a becoming start that share had been presented by General F. J. Marshall projector of the tunnel with instructions that the proceeds of its sale be donated to the Ladies' Relief Society. After spirited bidding which advanced it from ten to one hundred dollars, it became the property of Daniel Witter, who immediately gave it back to the Exchange. It was again sold to Jeremiah Kershaw, for sixty dollars; and Jeremiah also gave it back. It was then offered for the third time, and sold to Owen E. Le Fevre for one hundred and five dollars, and the Relief Society received two hundred and sixty-five dollars from these initial transactions of Denver's first Mining Exchange. The institution

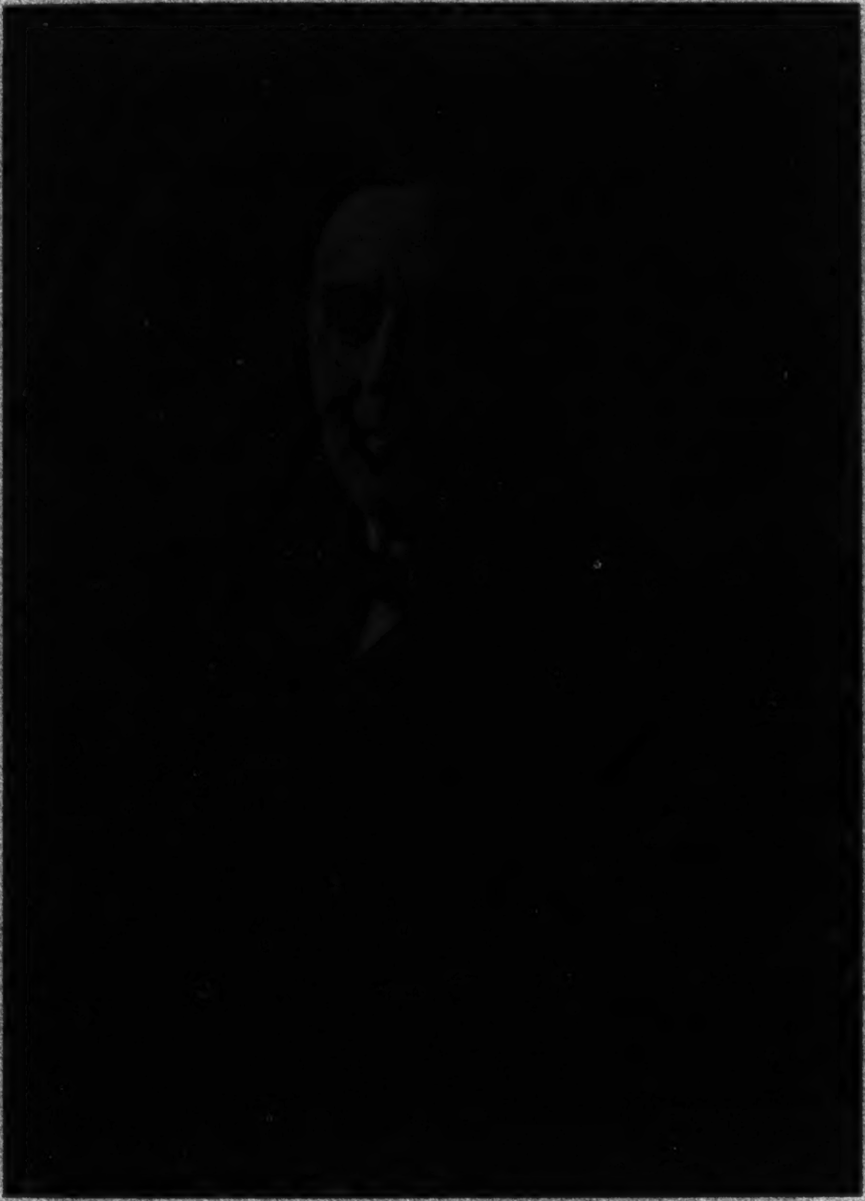
---

Samuel Newhouse, who has for many years been actively, usefully and successfully identified with the mining interests of Colorado, was born in the city of New York, October 14, 1853, his parents removing to Pennsylvania soon afterward. He received a thorough academic education and was graduated in the schools of Philadelphia, after which he began the study of law.

He was preparing for admission to the bar when the fame of the great carbonate discoveries at Leadville in the late Seventies spread over the country. Abandoning his plans for a legal career, Mr. Newhouse came to Colorado in 1879 and located in Leadville, where his first undertaking was the organization and operation of a freight transfer company for the transportation of supplies, machinery and merchandise into that camp, from the nearest railroad point. This company transacted a large business until the railroads built into Leadville. In the meantime he had acquired valuable mining interests in the Leadville district, and to these he then devoted his attention with characteristic energy.

In 1886 he became interested in mining properties in the San Juan country in the vicinity of Ouray, and removed thither where he remained for several years. He next turned his attention to Denver and its vicinity and was identified with several important mining enterprises in the Clear Creek district, for the active prosecution of which, upon a visit to London, England, he enlisted the co-operation of English capitalists. He made large investments in the Denver, Lakewood & Golden Railroad, is its President, and was instrumental in pushing that line through to completion. The Newhouse Tunnel at Idaho Springs was projected by him and he is now the largest stockholder in the company owning the property. The tunnel begins at a point on South Clear Creek about half a mile below Idaho Springs and runs in a general northerly direction, its ultimate destination being a point below Central City in Gilpin County. It is now in about 9,000 feet and its length when completed will be about four and a half miles. The country which the tunnel traverses is filled with a net work of veins and many of these veins have been opened and developed into mines from the surface. All of these mines are more or less troubled with water. The tunnel will cut the veins at depths far below any point yet reached from the surface, it will drain the mines, and will enable the owners to work their properties and ship their ores to market much more cheaply and effectively. The tunnel is one of the greatest mining enterprises of the State and will always stand as a monument to the energy and industry of Mr. Newhouse and of his steadfast belief in the mining resources of Clear Creek and Gilpin counties. More recently Mr. Newhouse has acquired extensive mining interests in Utah, which have proved exceedingly profitable. Recently he made large investments on Broadway in New York, which make him a prominent owner of real estate in that city.

Mr. Newhouse is still a young man and his success in life has been won upon broad lines. His operations have been upon a large scale, his views are wide, and his generosities are many and lavish. Notwithstanding the fact that his diversified interests take him away from the city much of his time, Denver still claims him as one of her useful and loyal citizens who have aided in making her what she is. In 1883 Mr. Newhouse married Miss Ida H. Stingley of Denver.—J. C. S.



Samuel Newhouse.

did not long exist, as it was premature in the mining world. For a few months it did considerable business, but after a career of a little more than a year it disintegrated, and wound up its affairs.

After the demise of the "Colorado Stock & Exchange Board" Denver was without a mining exchange for several years. Sundry propositions and attempts to organize another one were made within a year or two afterward, but nothing was accomplished until the autumn of 1879; and the one at that time instituted hardly deserved the distinction attaching to such a name. It was an organization of men principally engaged in dealing in Leadville mining stocks. Upon the completion of the Windsor Hotel early in 1880, a room in it was fitted up as headquarters for the Exchange; but the organization continued only a year or so longer, when it passed out of existence.

Denver then remained without one until after the great "boom" had set in. In July, 1889, a large meeting of Denver men interested in mines and mining stocks was held for the purpose of organizing an exchange on an enduring basis. This resulted in incorporating the Colorado Mining Stock Exchange, which was organized by the election of George F. Batchelder, President; C. E. Taylor, Vice President; W. C. Wynkoop Secretary; and John L. McNeil, Treasurer; and which began business on July 18th, of that year.

Quarters for the transaction of business were found in the basement of the earlier "Times Building," on Lawrence street, and then a three-and-one-half-story structure, and the new organization started off under favorable auspices and with good prospects. Its business developed with such rapidity that in 1890 more room was required, and a removal was made to the exchange hall in the Chamber of Commerce building, where the Exchange remained a short time and was then transferred to a building on the north side of Curtis street between Sixteenth and Seventeenth streets, which was its home until the Mining Exchange building was completed.

Early in 1891 when Charles E. Taylor was its President; Charles N. Perkins, Vice President; Dennis Sheedy, Treasurer; and Oney Carstarphen, Secretary, the Exchange corporation began the erection of the fine stone and pressed brick Mining Exchange Building on the southwest corner of Arapahoe and Fifteenth streets; Frank A. Miller having been chairman of the building committee. The edifice was completed late in 1891 and "dedicated" on November 18th. About that time, however, financial complications arose and which resulted in title to the property passing to other interests and in which it is now vested. But the Mining Exchange since that time has retained its quarters in the building.

Notwithstanding that the Exchange has had, in one sense, a continuous existence since 1889, it has not been free from difficulties and embarrassments. All went fairly well until after the times of 1893, when a season of extreme depression ensued. As time went on these conditions either developed, or were made the pretext for, certain objectionable practices which gradually crept into transactions on the Exchange. These practices became influences asserting control, and the institution began to lose its standing among the business public, and fell into actual disrepute, many persons terminating all business relations with it. This state of affairs became intolerable to reputable men connected with it, and in the spring of 1899 it was determined to completely rehabilitate the institution by removing every vestige of these practices and of the management that permitted them. To do these things effectively it was decided to incorporate a new organization to succeed the old one, which was done in April. On May 1st the new corporation was brought into effective existence by electing a governing board consisting of John F. Campion, D. H. Dougan, James B. Grant, Crawford Hill, E. T. Jefferey, John L. Jerome, H. M. Joralmon, Harry H. Lee, John C. Mitchell, D. H. Moffat, George E. Ross-Lewin, Eben Smith, J. A. Thatcher, Charles H. Toll, and Henry R. Wolcott. On July 1st this board elected John F. Campion, President; Henry R. Wolcott, First Vice President; H. M. Joralmon, Second Vice President; D. H. Dougan, Treasurer; and Thomas A. Painter, Secretary.

While these proceedings were intended as the shortest and quickest way to crowd out the objectionable element and practices, they really constituted an entirely new corporation. The old one sold its effects to the new and formally ceased to exist, though the desirable membership was the same in both. Therefore, as a matter of fact, the present Mining Exchange is not the one organized in 1889; but the difference is rather more technical than actual aside from the disrepute into which the old one had fallen and the elimination from the new of the causes of that disrepute.

The corporate name of the new organization is "The Denver Stock Exchange," though it is commonly called the "Mining Exchange." Its primary purpose was to provide and sustain systematic methods of buying and selling mining stocks the character and standing of which are determined by the established rules or by the governing board; to assist those having meritorious mining properties to raise money for their development; to stand between the prospective investor and worthless mining schemes; and, in the language of its articles of incorporation to—"promote uniformity in the business, usages and customs of stock brokers and investors; to inculcate principles of justice and equity in the purchase and sale of stocks, securities and commodities; to facilitate the speedy adjustment of business disputes; to acquire and to disseminate valuable commercial economic, mining and statistical information, and generally to secure to the members and to the community at large the benefits and advantages of co-operation in the furtherance of their legitimate business pursuits."

Notwithstanding these very praiseworthy motives the reorganized Exchange has not prospered so well as its friends had hoped it would. After the reorganization business revived and prospects became fair. But, in the spring of 1900 dissension arose among the broker members, some of whom withdrew and organized in rivalry the Denver Consolidated Exchange which is now established at 1630 Stout street; and this was the Stock Exchange situation at the close of our record.

Mining Exchange Building.

There are many legitimate reasons for the existence of a properly conducted stock exchange. In times passed the Denver Exchange aided to a commendable extent in the development of mining properties, and in discrediting illegitimate and unworthy schemes; and it would seem that such an institution maintaining a high standard would be an influential factor in making Denver the center of transactions in Colorado mining stocks.

A very large proportion of the transactions on the Denver, Colorado Springs, and Cripple Creek Exchanges are speculative, for there are thousands of people who habitually "dabble" in mining stocks. It, also, is an uncertain business, but the "losses," or the "profits," are the mere shifting of the sums they represent from the pockets of one class of speculators to those of another. Many so-called "stocks" have no value whatever, as they represent illegitimate enterprises in the hands of unprincipled and unscrupulous men who exploit them solely for the purpose of fleecing the unwary. Another class of valueless "stocks" represents prospective enterprises of honest but inexperienced and incompetent men. People who part with their money in exchange for such "stocks" as those in these two classes may depend on losing it, no matter whether the deal is in the one or the other. However, the mining exchanges and reputable brokers do not tolerate the presence of such "stocks," and persistently expose the worthless character of all "wild-cat" mining companies. The worst of the schemes are not possible in Colorado, but are incorporated and exploited in the east solely for the purpose of selling very prettily printed certificates. In a recent article on this general subject, appearing in a mining journal, Mr. Thomas Tonge thus classified such mining stocks as are regarded as representing honest, legitimate enterprises:

> "There are three classes of mining stocks, viz.:
>
> 1. Higher priced dividend paying stocks, representing ore shipping properties, as a somewhat permanent investment, looking to dividends as interest thereon, and if bought at the right time, rise in price also.
>
> 2. Lower priced stocks, representing partially developed, not yet dividend properties, more as a speculation, looking for profit to the probable rise in the market value, as the property becomes more developed, and finally transformed into an ore shipper and dividend payer.
>
> 3. Another variety of lower priced stocks, viz., treasury stocks; that is, that portion of the capitalization of a company put into the treasury, the proceeds of sale being applied solely to developing the property, the shares enhancing in market value as the ore is opened up.
>
> Treasury stocks are not listed on the exchanges, and are only obtainable privately from the companies themselves, the money being used in developing the properties. It is largely by means of the proceeds of the sales of treasury stocks, utilized in developing embryo mining properties, that Colorado has become the greatest gold-producing State in the Union.

In frequent instances "treasury stock" of mines that are now on a profitable basis of development, was sold for a small fraction of its present market value. Such stock, of the "Gold Coin" mine, sold at ten cents, advanced to two dollars after the mine's development; of the "Victor," at forty cents, the dividends on which have equalled three times that sum; of the "Isabella," at twelve cents, that advanced more than twelve-fold. Nevertheless, all, and more of the uncertainties that hang around physical mining attach to "speculative mining."

The gold-district of Colorado, that is, the region in which gold is found in its original place in the rocks, is about three hundred miles long by one hundred wide, all in the center and western, mountainous part, of the State. Twenty counties rank as regular gold-producers. The silver distribution is all within the same area but is not so general over it as the gold, the white metal seeming to have had a disposition to concentrate in extraordinary richness in certain localities. Much of the gold and silver ore carries lead and copper in varying quantities, and these metals, as the reader has seen, constitute quite important by-products of the regular mining operations. Accepted estimates of the value of lead and copper thus produced in Colorado since 1859 make the total about $100,000,000. Estimates apply only to the earlier years, as accurate records have been kept in later times.

Some imaginations have been violently exercised in "estimating" the amounts and values of the precious metals Nature still has locked up in Colorado, and the results vary from enough to pay off the National debt of the United States, to enough to pay the debts of all the nations of the earth and have some left. Not satisfied with these exemplary statements, these metalliferous forecasters have also calculated the period of profitable employment the recovery of these vast stores of debt-paying wealth will afford to worthy and industrious miners, and find that it will extend to the end of the twenty-first century. These performances conflict with none of the Colorado statutes, but they do great violence to the common law of common-sense. Absolutely nothing is actually known of such matters, nor is there any present available way of finding out. The extent and thickness of coal measures may be approximately determined by boring; and geological science may make a stagger toward outlining deposits and quantities of iron. But the geological history of gold and silver is too profound a mystery to be explicitly dealt with in the present stage of human knowledge, and such "estimates" of duration for mining and of future production are the merest vaporings.

It would seem probable that vast, untouched deposits of precious metals lie in the ranges within sight of Denver, and it would also seem probable that all the mining that has been done is but a scratching of the surface as compared with the possibilities of future operations, if the situation of all the probable concealed treasures could be revealed. But this is theory, surmise; and the logic of probabilities is against any such general revelations, even if theory and surmise could be advanced to something more substantial. However, there is a suggestiveness in the somewhat general conclusion that the lodes appear to yield richer results as excavations progress downward. To what extent this increase is cumulative, there is not sufficient experience and established fact on which to base a statement. Deep mining, in the true sense of that term, has not yet been reached in Colorado, nor has the conclusion that the deeper ore is richer, prompted anyone to penetrate far down into the presumably still richer regions. Therefore, until something of this kind be done, and until other new light be thrown upon the geological mysteries associated with gold and silver, we may amuse ourselves with pleasing theories and opulent fancies, but for established facts must depend in patience upon what the day, the month, and the year may bring forth.

This is doubtless the more practical view to take of it, and from all present indications we may confidently depend upon the mining industry taking care of itself in the future. Whatever may be the increasing output of our mines as the years pass, and whatever may be the duration of mining, it is quite certain, however, that applied science will add to the former and prolong the latter. Methods of profitably extracting the precious metals from the ores are growing better and more exact every year. Old "dumps" of what was non-paying ore have been attacked in recent times and, under improved processes, the once rejected mineral has yielded good results. There are still thousands of these "dumps" in the mining districts, containing millions of tons of gold-bearing ore of a grade too low to leave any value after paying the expense of reduction by existing processes. It costs just as much to dislodge and raise to the surface barren rock and now worthless low-grade ore, as it does to bring out that which goes to the mills and smelters. The art and science of extraction will yet, in their increasing refinements, rescue much of this wasted effort and vastly augment the net results of every mining operation. Therefore, if national-debt-paying calculations are to remain in vogue, it would seem wiser to base them upon the certain development of processes for handling what we have in hand, rather than upon guesses at what there may be concealed over there in the depths of the ranges.

The mining industry carries with it one unique feature; and that is that its product, generally speaking, is not consumed. It is a permanent addition to the comparatively small number of concrete things that, through the store mankind sets by them, and because of the watchful care bestowed upon them, may be regarded as of permanent value; or, according to our ability to anticipate the preference of future generations, of value so long as mankind itself shall exist. Men may come and men may go, but the precious metals pass on to those who follow. No doubt there is metal in our current coins that served men in the same capacity thousands of years ago, and will be so serving men thousands of years hence, unless the millennium intervenes and brings with it that beatific condition in which values and selfishness shall find no harbor in the thoughts and motives of mankind. The miner is a true producer, and may enrich himself from Nature's treasure-house without encroaching to the worth of a penny upon any other man's possessions.

CHAPTER LIV.

DENVER'S PIONEER RAILROADS—EARLIER DISCUSSIONS OF A TRANS-CONTINENTAL ROAD—FIRST PROPOSED RAILROAD TO DENVER—CLEAR CREEK SURVEY—UNION PACIFIC AND KANSAS PACIFIC ROADS AUTHORIZED—DENVER'S DISAPPOINTMENT—GOLDEN'S PRIORITY IN RAILROAD PROJECTS—COLORADO CENTRAL & PACIFIC—UNCERTAINTIES OF THE RAILROAD SITUATION IN 1867—VARIOUS "RAILROAD MEETINGS"—ORGANIZATION, STRUGGLES, PROGRESS AND TRIUMPH OF THE DENVER PACIFIC RAILROAD COMPANY—OPERATIONS OF THE KANSAS PACIFIC—COMPLETION TO DENVER OF THE DENVER PACIFIC AND KANSAS PACIFIC—OTHER RAILROAD PLANS—GOVERNOR EVANS' RECOMPENSE TO ARAPAHOE COUNTY—EFFECT OF RAILROAD CONNECTIONS—HIGH RATES.

The history of Denver is unmistakably divided along a line marked out by the wheels of the first railway engine that entered her precincts. When that old locomotive, obtained from the Union Pacific road by the Denver Pacific company, rolled into the city over a not remarkably even track, on June 15, 1870, the pioneer era ended and a new order of things began.

Prior to 1870 Denver was distinctively a little frontier "city" presenting the aspects apparently inseparable from every community depending wholly on stage-coach communications. The town was crude, and after ten years of ups and downs had practically no greater population than that with which it had been credited in 1860. The pioneer manners, practices and customs still held sway, and something like the so-called "woolliness" certain people fancy still clings to western things and places, was undoubtedly visible here to keen observers. While we are accustomed to attributing the city's rise and progress to the great industry of mining, we should not overlook the tremendous influence wielded and services rendered by the railways in the mighty work of development and upbuilding, the results of which stand before us to-day.

Long before Denver had been founded, a railway from the Missouri river to the Pacific coast had been seriously discussed in the eastern part of the United States and had received the attention of Congress. The operations of the American Fur Company, and especially the reports of Marcus Whitman who, more than any other man, was instrumental in saving the Oregon country to the United States, had made the construction of such a road seem feasible to many people, but by a great majority and as late as 1850 it was regarded as impracticable if not wholly chimerical. The reasons for this adverse judgment have been indicated in our chapter dealing with the "Great American Desert." Fremont's expeditions were primarily for the purpose of officially determining the engineering practicability of constructing a railroad across the mountains, and his reports did much toward correcting popular misbeliefs of the general character of this western country. His reports also caused Senator Thomas H. Benton, of Missouri, to change his long-entertained opinions of the far west and to become an earnest advocate in Congress of the immediate construction by the United States government of a transcontinental railway. In 1846 such a proposition was first actually submitted to some of the voters in the country east of the Missouri river as a political issue, by James Burch who, in that year became an independent candidate for Congress in the old "St. Joe district" in northwestern Missouri. His "platform" had but one "plank"—the construction of a railroad to the Pacific. Burch was subjected to much ridicule, both in and out of his district, and was overwhelmingly defeated; but he stands in history as the first man who made a "race for Congress" as an advocate of a transcontinental railway.

Colonel John Doniphan, of St. Louis, a writer and commentator on western history of great care and ability, and an accepted authority on much of it that pertains to the country west of the Mississippi river, in a recently published article (1900) on the inception of a transcontinental railway, thus refers to a speech delivered in St. Louis in 1849 by Senator Benton:

> "Colonel Benton delivered a speech in favor of a line starting at St. Louis, going by Kansas City and up the valley of the Kansas river, and crossing the Rocky Mountains at the head of the Platte river. It was then that I heard him give utterance to the grand declaration: 'When this mighty work is completed and the commerce of the East is being brought over it, and the iron bands connect the oceans, a grateful country will carve out of the granite pillars of the Rocky Mountains a statue of Columbus pointing to the West and exclaiming—'There is the East! There! There is India!'

Senator Benton held in his left hand a scroll received by him from Colonel Fremont about the practicability of a road across the mountains, which he had just read, when he elevated his head from the reading, let his gold-rimmed glasses fall on his immaculate white vest, then, looking as if in retrospect at the horizon, pointing his hand and extending a finger to the West, turned partially round, as he had been facing the northwest, and deliberately uttered the words as though addressing the place indicated by the finger in the far distance; and doubtless many of his hearers, like myself, by the eye of faith, saw the blue waters of the Pacific and heard the murmur of its waves."

Colonel Doniphan, who is a nephew of Colonel Alexander W. Doniphan of the First Missouri Regiment of the Mexican war time and whose name is so intimately associated with our southwestern history of that period, goes on to say:

"On December 15, 1850, Colonel Benton introduced in the Senate a bill 'To locate and construct a great national highway from St. Louis to the bay of San Francisco on the Pacific ocean.' In his advocacy he said the bill conformed to all the ideas of a national highway. (1) It is central, as it begins and ends between the thirty-eighth and thirty-ninth parallels. (2) It is national, as it combines a railroad, a graded wagon-road and a turnpike or paved roadway, and a telegraph line, all parallel, and to be built upon the right of way, of one mile in width, in the public domain. (3) It would have a branch to Santa Fe, one to Salt Lake, and one beyond to Oregon. (4) It would be national, as the work was to be done and owned by the government. And (5) to be paid for by the sale of public lands. The details had been worked out in his prolific brain, but the pigmies at home defeated Benton for re-election in 1851, and this magnificent project was suffered to sleep the sleep of death."

The reader will observe that the line of Senator Benton's proposed great transcontinental highway would have encountered the mountains not far from the site of Denver.

It is not within our province to further follow the discussion of a railway to the Pacific that soon afterward became general, both for and against it, in what was then the settled parts of the vast territory of the United States, and that eventually resulted in the construction, with government assistance, of the Union and the Central Pacific railroads which constituted the first transcontinental railroad. All that belongs to National history. But the fact that there are now a half-dozen or more of what may be termed transcontinental railroads emphasizes the almost incredible development of this country within the observation of men who are still in active business life.

To the sanguine and enthusiastic pioneers in this Denver region in 1859-60 the early construction of a railroad to the Pacific did not appear improbable, and in the event of its probable early undertaking it did not seem possible that it would be built anywhere except by way of this then embryo city. Assuming the completion of the long-talked-of road, to Denver, the Rocky Mountain News, in its issue of November 24, 1859, thus mapped out a route for it over the mountains to the Utah basin:

"From here westward the route may deflect a little to the northward, passing through the Cache-a-la-Poudre Pass of the Black Hills, crossing the Laramie Plains and entering the great basin through Bridger's Pass; or it may continue from here directly westward, entering the mountains by the Platte Canon, following up that stream to the junction of the North and South Forks; thence up the North Fork to the South Park, cross a low mountain summit, and thence down the waters of the Colorado into the heart of the great basin. This route we consider entirely practicable, presenting less obstacles—if we except the first fifteen miles after entering the Platte Canon, and even they are not at all unsurmountable—than have been overcome on the Baltimore & Ohio railroad, and traversing the gold field in the exact direction of the great leads, and its greatest known length, for a distance not less than five hundred miles."

Mr. Byers' experience as a topographical engineer and his intimate knowledge of the mountain country warranted him in laying down this route for a trans-montane road even in that early day; and his judgment was justified in later years by the construction of railroads on nearly every mile of the line he thus defined by way of the South Platte.

In the summer of 1860 it appeared to many Denver people that the construction of a railroad from the Missouri river to Denver was to be undertaken at once by private enterprise with some assistance from the United States government, to the extent, at least, of a land-grant. There had been organized at St. Joseph, Missouri, the "Missouri River & Pike's Peak Railroad Company," a corporation that proposed to build a railroad from St. Joseph to Denver. Its projectors solicited the co-operation and assistance of the Denver people, and the enterprise caused considerable commotion here and not a little enthusiasm. The Denver newspapers supported it with great vigor, and several public meetings were held to consider ways and means by which to aid the all-important undertaking; though the resources of the community for railroad building were then very slender, indeed. While it does not appear that any field-survey for the road had been made, or that its route was definitely located, it seemed to the people of Denver in that summer a rather tangible enterprise. At the Denver meetings estimates of the cost of construction, and of the business there would be for the road, were submitted and discussed and, altogether, the project was taken up with much earnestness.

But in the excitement, consternation and apprehension caused all over the country by the outbreak of the great civil war, the Missouri River & Pike's Peak Railroad became utterly lost and practically forgotten. This disappointment to Denver's early and hopefully cultivated railroad ambitions was a serious one. In 1861 her nearest railroad point was St. Joseph, the western terminus of the "Hannibal & St. Joe Railroad," cutting across northern Missouri from Hannibal, on the Mississippi. It was a long, tiresome distance across the plains from the Missouri. The probability of the government, menaced as it was by disruption, even considering the construction of a Pacific railroad, seemed hopelessly out of the question; and the possibility of private enterprise and capital undertaking to build in the time of such a war a railroad across that great and then uninhabited expanse was reluctantly admitted by the most sanguine of Denver's pioneers to be not worth talking about. So, the problem of providing Denver with railroad communications was abandoned to the then very great uncertainties of the future.

Yet, it was in the spring of 1861, at the time when the first crash of the civil war had been heard, that the first actual survey for a railroad out of Denver was made. At that time and at the instance of W. A. H. Loveland of Golden, F. J. Ebert of Denver, surveyed a line from this city to Golden and thence up the Clear creek canon to Central City. However, under the conditions then existing, that survey was regarded by nearly every Denver citizen as merely a waste of time and money upon a purely visionary enterprise, and it inspired hardly any confidence. The present division of the Colorado & Southern road, from Denver by way of Golden to Central City, is located nearly all the way upon the line of that survey.

But it happened that the civil war was the immediate cause of government action toward the construction of the long talked of railroad to the Pacific, and when Congress on July 1, 1862, passed the first Pacific railroad bill with its vast grants of land and subsidies of bonds, to aid corporations to construct the road or roads, it gave Denver its first really rational hope for railway communications. In addition to the early exploration surveys, several preliminary field-surveys had then been made, and while our town was not directly on the line of any of these affording what were believed to be the better passes through the mountains, the fact that our pioneers held it to be the only town of prominence and promise in the region, made it appear certain to them that if a Pacific railroad were really to be built it must be built by way of Denver.

So, hope and confidence encouraged anticipation; and both were needed. But the adversities of the dragging war caused the railroad enterprise from the Missouri river to the Pacific to be slow in getting started. Additional and even more liberal legislation by Congress was required and received, and in the meantime the days of waiting at Denver seemed as long as the distance to the nearest railroad track. Finally, in 1865, the beginning was made at Omaha, and the great iron trail later began taking form up the valley of the Platte. It then appeared to be only a matter of speed in railway building as to the day on which Denver would open her gates to the iron horse.

Moreover, it appeared early in 1865 that Denver would have two lines of railroad to the Missouri river within a comparatively short time, although the second one was not generally regarded as promising so nearly a certainty as the Union Pacific. In addition to providing assistance in the construction of the latter, Congress had also authorized the Kansas Pacific road with a land grant and a bond subsidy. The Kansas Pacific was the outgrowth of one of the pioneer railway projects west of the Missouri river—the "Pawnee & Western Railroad," that was organized in eastern Kansas before the civil war, and one of the early petitioners for a land grant. As the Kansas Pacific it was an enterprise in the interest of the city of St. Louis, and while Congress had provided that it should form a junction with the Union Pacific at the 100th meridian, its projectors intended and expected to have that Legislative requirement repealed by a substitute that would make the road a transcontinental line crossing the Rocky Mountains somewhere near the thirty-seventh parallel. But, as matters then stood its subsidies did not extend west beyond a point in western Kansas that later became known as Pond Creek and is now Monument station. Construction work upon the road began about the same time as upon the Union Pacific, and it was soon pushing the end of the tracks into the prairies of eastern Kansas. It was anticipated here that Congress would later provide aid by subsidies for the construction of the Kansas Pacific west of Kansas, and that if the main line did not come to Denver there would in any event be built a branch to the Colorado metropolis, which, with the expected coming hither of the Union Pacific, would more than fulfill the most sanguine ambitions of the "city."

However, the equanimity of Denver's citizens was seriously disturbed in 1865 by operations in progress at Golden that were intended to make that town the pioneer railroad center in Colorado, and of which we will presently give some particulars. Golden had an organized railroad company, it was then the Territorial capital, and had grown so arrogant that it professed not to regard the much larger town at the mouth of Cherry creek as a rival. The competition between the two places was very sharp, and while it did not seem probable that Denver's supremacy would yield, the railroad scheme that had been elaborated at Golden caused much uneasiness here.

Construction work on both Pacific roads was pushed with great activity through 1865 and 1866, with the greater progress on the Union Pacific. As the tracks of the latter advanced, the mountain-crossing point became of apparently vital impor-

Matthews' view of Fifteenth street, looking southward from Wazee street, in 1865.

tance to Denver. In the autumn of 1865 John Evans and others began laboring with the Directors of the Union Pacific to adopt a route through this way, up Clear creek canon, and thence by way of Berthoud Pass across western Colorado to Utah, but without having received definite encouragement. In 1866 these efforts were renewed, but about the middle of July came the evil tidings, in terms so definite as to cause profound dismay, that the Union Pacific could not or, at any rate, would not, be built by way of Denver and Berthoud Pass. With this information it was stated that there was some probability that a route up the canon of the Cache-a-la-Poudre would be adopted, and that in that event a branch road could probably be built to Denver, although the Union Pacific had then no authority to build branch lines on its own account. This intelligence, so incredible that some persistent souls insisted that it could not be true, paralyzed Denver's railroad expectations for a season. In November, 1866, General Grenville M. Dodge, after his engineers had made final examination of all proposed mountain-crossings, reported in favor of the Bridger Pass route and soon afterward the company conclusively adopted it—finally building the road upon it. This meant that the Union Pacific would pass west more than a hundred miles north of Denver.

In the spring of that year the Denver people had learned that the Kansas Pacific company was planning to continue its road, after it had reached the subsidy-terminal in western Kansas, in a southwesterly direction that would take it even a greater distance from them than the Union Pacific on its Bridger Pass route. But, as our people had given less attention to the Kansas Pacific than to the Union Pacific on which they had set their hearts, the proposed southwest route of the former had caused no grave public disappointment here, because all anticipations had been centered upon the Union Pacific. However, late in June, 1866, Congress by law constituted the Kansas Pacific the "Eastern Division" of the Union Pacific, although the two corporations had been, and were, otherwise, entirely independent of each other; and also required that the Eastern Division should change its westward route so as to connect with the Union Pacific at some point not farther west than fifty miles west of the longitude of Denver, instead of at the 100th meridian. The contemplated route of the Kansas Pacific under this change was up the Smoky Hill Fork of the Republican river, and while a land-grant was made, no additional bond subsidies were provided. Notwithstanding that this change made it seem practically a certainty that the Kansas Pacific would be built through Denver under the new legislation, the people here did not, in 1866, turn to that road for relief from the situation in which they found themselves after they learned that the Union Pacific would pass west a considerable distance to their northward.

Golden had been about three years ahead of Denver in making the first organized effort to locate and construct a railroad in Colorado. In this, W. A. H. Loveland was the tireless advocate and leader. We have already referred to the survey for a railroad from Denver by way of Golden to Central City he caused to be made in the spring of 1861. He was one of the founders of Golden in 1859, and even at that early time began in his energetic way to discuss the construction of a railway up the canon of Clear creek, notwithstanding the engineering difficulties presented by that route, and soon afterward proposed the seeming impossible work of its construction across the mountains, either as an independent line or as part of the railway he predicted would be built within a few years from the Missouri river to the Pacific coast. In the early years he was the business life and soul of the town of Golden, and a man whose foresight, energy, and ability as a Captain among men were unusual.

In 1861 the overland stage company had been seeking a shorter route across the mountains into Utah, and in the summer of that year an exploration survey by a party under Captain E. L. Berthoud, was made up Clear creek, crossing the range through Berthoud Pass, and locating a practicable route thence to Salt Lake City of 458 miles from Golden—some two hundred miles shorter than the one then traversed by the stage company. In 1863 Loveland and his associates obtained from the Territorial Legislature a charter to build a wagon road up Clear creek on the line of that survey. Some work was later done on the road but Loveland, with his railroad idea persistent in mind, procured from the Third Legislative Assembly (session of 1864) an amendment—or re-enactment, of his wagon road charter, creating the Colorado Central Railroad Company, and authorizing it to build a standard gauge road "from Golden City up Clear creek canon to Empire and Central City, and Golden City to Boulder, and via Denver to Bijou." In 1865 the Legislature amended this charter, changing the corporate name to that of the "Colorado Central & Pacific Railroad Company," and authorized the company to build a road from Golden by way of Clear creek canon to the west line of Colorado, and from Golden eastward to the east line of Colorado to meet and form a junction with either the Union Pacific or the Kansas Pacific; and also to build several branch lines. The incorporators named in the amended law were William A. H. Loveland, Henry M. Teller, John T. Lynch, John A. Nye, Thomas Mason, A. Gilbert, Milo Lee, and E. K. Baxter, of Colorado; James Mills, George A. Hoyt, John A. Dix, Ebenezer Cook, W. W. Wright, Thomas Small, L. C. Pollard, and William Bond, of New York; M. Laflin, of Chicago; A. McKinney, of Boston; Samuel Wheelwright, George B. Satterlee, W. V. Ogden, and Jonathan Cox. Loveland's plan was to make this proposed road a part of either the Union Pacific or Kansas Pacific transcontinental line, on the route by way of Golden, Clear creek and Berthoud Pass.

Loveland effected a formal organization of his company in New York, but had enlisted with him in the enterprise Jerome B. Chaffee, of Denver, who was one of the Directors of the Union Pacific and who, also, was made a Director in the Colorado Central, for the sake of his influence with the greater corporation. Loveland had originally expected to obtain capital for the construction of his road from foreign sources, but having found no encouragement in that direction he turned in the autumn of 1865 to the Union Pacific people for co-operative assistance. General John A. Dix, then President of the Union Pacific company, was inclined to look upon Loveland's project with much favor, and the latter was soon led to believe that negotiations had almost reached the point of closing an agreement for the Union Pacific adopting the Clear creek-Berthoud Pass route through the mountains, and making the Colorado Central & Pacific a part of the transcontinental line. But in this he either deceived himself or was deceived, for before the close of the winter of 1865-66 the life had departed from the negotiations. They had really never reached an advanced stage, and were all the time held subject to a survey of the Clear creek route by Union Pacific engineers. While they were pending, John Evans and other citizens of Denver, as we have stated, were urging the Union Pacific Directors to locate their road through Denver and west by way of the Clear creek canon, but did so with no particular reference to Loveland's railroad enterprise. In the spring and summer of 1866 the route was surveyed by the Union Pacific, and soon thereafter, as already stated, the company finally and conclusively decided upon the Bridger Pass crossing as the more practicable, far cheaper, and as affording a way for quick construction. The greater distance, moreover, secured to the Union Pacific more subsidy bonds, more lands, more mileage upon which to issue its own first mortgage bonds, and more construction profits; for nearly every mile of it yielded large profits to the builders.

Loveland's next move was to procure the co-operative assistance of the Union Pacific people in making the Colorado Central a system of roads in Colorado tributary to the Union Pacific. General Grenville M. Dodge in his report of November, 1866, upon which the Bridger Pass route for the transcontinental road was adopted, had strongly favored encouraging the construction of a branch road to Denver and to the mining districts of Colorado, both for the general traffic it would develop and for the coal supply it would afford the Union Pacific. The Directors of the Union Pacific approved General Dodge's recommendations, and in January, 1867, appointed a committee consisting of

Oliver Ames, Thomas J. Carter, Sidney Dillon, John Duff, Thomas C. Durant, and Jesse L. Williams to investigate the resources of the Colorado country and report upon the advisability of assisting in the construction of a system of Colorado roads tributary to the Union Pacific and with Denver as their central point. This committee made a very favorable report, in which the construction of a road from some point on the Union Pacific to Denver, thence to Golden and up both Forks of Clear creek; and also a line to Boulder with the view of making the latter the beginning of a north and south line along the base of the mountains with branches such as subsequent development of the mining and other resources of the country might require. In the spring of 1867, in Boston, Loveland effected an arrangement with the Union Pacific people under which his project was to be made the basis upon which the Colorado tributary system was to be built; and to that end the Colorado Central & Pacific was reorganized in June of that year with Union Pacific interests practically in control.

Matthews' sketch of Golden in 1866, looking down Clear creek.

In the foregoing we have marshalled the circumstances associated with the railroad situation at Denver and in Colorado as it existed in midsummer of 1867 when the movement that finally eventuated in the construction of the first railroad on Colorado soil was inaugurated in this city.

On July 11, 1867, Thomas J. Carter, who was one of the United States Directors of the Union Pacific, came to Denver to ascertain what the people of the city could and would do toward aiding the construction of the contemplated Colorado tributaries of the Union Pacific, as a basis for which he proposed using the Colorado Central & Pacific organization. A public meeting of citizens was held at Cole's Hall in the evening of that day to consider any propositions Mr. Carter might submit; Governor A. C. Hunt presiding, with Roger W. Woodbury, then of the Denver Tribune, serving as Secretary. Mr. Carter's plan was to begin the Colorado Central & Pacific by constructing a road from the Union Pacific to Denver, thence to Golden, and on up the Clear creek canon, with a branch from the main line to Boulder; that the people along the route should as stockholders in the road prepare the road-bed ready for the iron; and, that done, the Union Pacific interests would iron, equip and, if found best to do so, would lease and operate the road in direct connection with their main line. Mr. Carter dwelt upon many details directly and indirectly connected with the project, but which are not of interest now. He was followed by General Bela M. Hughes, John Evans and Governor Hunt in addresses in which the assembled citizens were urged to carefully consider Mr. Carter's plans and prepare to act promptly if they should be accepted.

To provide means with which to prepare the roadbed for the rails, in the most equitable manner, it was proposed that Arapahoe, Jefferson, Gilpin, Clear Creek and Boulder counties should issue bonds and receive railroad stock in exchange therefor; the company to take the bonds at par and find its own way of converting them into cash. As the roadbed was estimated to cost $600,000—a suspiciously small sum, considering the mountain work—it was proposed that Arapahoe should be bonded for one-third of the amount. After various other collateral questions had been discussed, former Governor John Evans submitted a resolution asking the County Commissioners to submit to a vote of the people the question of issuing $200,000 of county bonds to aid the construction of the proposed railroad. The people of Denver had regarded the Loveland railroad project with a feeling in which jealousy and suspicion were about equally mingled, and therefore Governor Evans had been careful in the phraseology of his resolution. It specifically stated as a condition precedent to the issue of county bonds, that the road should be located from the most available point on the Union Pacific "direct to Denver," and thence to Golden, Black Hawk, and Central City; and also to Georgetown.

At that time the Union Pacific had been completed and opened for business between Omaha and the confluence of the North and South Platte rivers, a distance of 295 miles, and advance construction work was bearing in a direction that left no possible hope of its diversion to Denver. So it appeared that Mr. Carter's plans and Governor

Evans' bond resolution were opening the way for providing Denver a railroad connection with the great transcontinental road. After appointing Governor Evans, M. M. DeLano, Governor Hunt, Dr. J. H. Morrison, Bela M. Hughes, L. M. Koons and Frederick J. Stanton a committee to confer and co-operate with the County Commissioners, that "railroad meeting" adjourned with something like a conviction in the minds of all present that a beginning toward building a railroad to Denver had actually been made.

At this juncture the Kansas Pacific suddenly and unheralded appeared on the scene. Although it had been overshadowed by the great line to the northward, of which Congress had decreed it should become nominally a division, it had by midsummer of 1867 almost completed its grading to its bond subsidy terminal and its further progress was then a matter of some uncertainty. The act of Congress reducing it, prospectively, to be merely a division of the Union Pacific had not been well received, and its projectors had conceived plans for constructing on their own resources an independent connecting line to the southwest and which, they hoped, could be pushed through to the Pacific coast with some aid from the government which they anticipated could be later obtained from Congress. Considerable difficulty in financing even the beginning of the independent line had been encountered, and the future of westward operations was seriously in doubt. Two or three routes to the southwest had been surveyed, either of which would have taken the road much farther from Denver than the Union Pacific would be, as all of them were projected to Las Animas on the Arkansas river.

It was believed by most of our people that the Kansas Pacific would later secure from Congress reconsideration of the act of June, 1866, would obtain a continuation of its bond subsidy and land grant, and would build up the Arkansas river from Las Animas into western Colorado where it would diverge either to the northwest to a connection with the Union or Central Pacific, or to the southwest and continue its line to tidewater in southern California. Others believed that it would cross the Arkansas at Las Animas and continue southwest after the later fashion of the Santa Fe road. But all hands were agreed that it evidently intended to leave Denver very far out in the cold; and Loveland and Thomas J. Carter had carefully done all they could to confirm these beliefs, in their intercourse with the Denver people.

Therefore the sudden precipitation of the Kansas Pacific into the railroad question in Denver was a surprise to our people; and also something of a gratification, temporarily. After the proceedings of the railroad meeting of July 11th were made public, Isaac E. Eaton, representing the Kansas Pacific, had announced in the newspapers that Loveland and Carter had misrepresented the intentions of the Kansas Pacific; that he was authorized by its officers to say that the road would be built to Denver without subsidies, bonds, or other aid, and as quick as men and money could do it; and that surveying parties had been put in the field to locate the line from the then western terminus in Kansas direct to Denver.

This announcement caused much excitement in the city, and also soon brought about a division of sentiment as to the propriety of adhering to the plans laid down at the meeting of July 11th to co-operate with Loveland and Carter. Early in August, though the Kansas Pacific surveyors had not yet come into view, a new promise came from the people of that road. This was to the effect that the company had decided to build both northwest and southwest from western Kansas; that the northwest line would be direct to Denver and thence north to a junction with the Union Pacific, while the southwest line would be headed into New Mexico; and that surveys on the Denver line would be instituted without any more delay. The statements were accompanied by so many assurances of good faith that a majority of the Denver people were ready to anchor their railroad hopes in the Kansas Pacific plans.

The work of locating Loveland's Colorado Central & Pacific road had then been started. The surveys began at Cheyenne and proceeded almost due southward. This route aroused suspicions in the minds of many Denver people that Loveland intended making the road a direct line to Golden, with a branch to Denver if anything were built by him to this point. The Arapahoe County Commissioners had readily consented to order an election on the bond proposition, and had fixed the date, August 13th, for holding it. A large number of our people became opposed to voting the bonds, but as Boulder county had voted in favor of issuing $50,000 worth to secure a connection with the proposed road, and as the Arapahoe Commissioners had provided that their bonds should be issued on condition that the road be located and built on the southward side of the Platte river, direct to Denver, this opposition gave way, and the issue was approved by an almost unanimous vote on August 13th; there having been 1,160 affirmative, to 157 negative, votes.

The Kansas Pacific people, in the meantime, through John D. Perry, then President of that road, continued their assurances in letters to Denver men that they intended building their road to Denver forthwith; and in the first week of September a party of their engineers under W. H. Greenwood, arrived in Denver and immediately began work on a line southeastward. This promising movement, and the fact that Loveland's surveyors were continuing on a line evidently intended to be run direct to Golden, caused the Denver people, in October, to declare against any further attempts to co-operate with the Colorado Central scheme, and in favor of awaiting the relief the Kansas Pacific promised to afford them. All interest in the Loveland road was discarded and, it may be stated here, it was not again revived, nor were the bonds voted at the election of August 13th ever issued to aid its construction.

Interest in the Kansas Pacific had been kept in a rather warm condition by the correspondence of its officers. At that time Colonel James Archer, of St. Louis, was one of the leaders in Kansas Pacific affairs, and on November 8th he came to Denver to meet our citizens for a general consultation, and discussion of railroad matters. He was hailed and treated as the prospective railroad saviour of the community, but when it was learned that his mission was to obtain a large bonus for the construction of the Kansas Pacific to Denver, the adverse climax of the local railroad situation appeared to have been reached.

Colonel Archer in conference with Governor John Evans, M. M. DeLano, Bela M. Hughes, W. F. Johnson and others, stated that his company had found itself unable to finance its contemplated extensions beyond the point at which the government bond subsidy terminated in Kansas; that the southwestern extension had been abandoned; that with the means at command the road could be built no farther than Pond Creek where it would end in an open, unsettled prairie country; that the company could not build farther in any direction without outside assistance; that he had come here to ascertain what the people could do for the Kansas Pacific that would soon be stalled in the prairie wilderness of western Kansas unless some means were found with which to push it through to Denver and on north to the Union Pacific; and that a bonus of two million dollars would be required from the people here to assure construction of the road to this city.

The Denver men to whom Colonel Archer made these statements realized that the time had come for instant action on their part if serious disaster to the city were to be avoided. They decided to at once organize a Board of Trade through which the people could act in concert and as an unity. A meeting of citizens was held for that purpose at Cole's Hall on Larimer street, November 13th, at which the Board was organized; its Directors consisting of Isaac Brinker, J. D. Brown, W. M. Clayton, Henry C. Leach, D. H. Moffat, Jr., J. H. Morrison, Frank Palmer, John Pierce, F. Z. Salomon, John W. Smith, J. M. Strickler, George Tritch and R. E. Whitsitt. The Directors organized by electing John W. Smith, President; General John Pierce, Vice President; Isaac Brinker, Second Vice President; Frank Palmer, Treasurer; and Henry C. Leach, Secretary.

At that time the Chicago & Northwestern Railroad was represented in Denver by D. C. Dodge, now Vice President and General Manager of the Rio Grande Western Railway. As the reader will have seen, something closely akin to a crisis in Denver's career was then impending, and an incident for which Colonel Dodge was chiefly responsible demonstrated in a striking way how great consequences may develop from a simple but timely act.

On the day of Colonel Archer's arrival Colonel Dodge had telegraphed General Grenville M. Dodge apprising him of Archer's visit, of its purposes, and of the certain failure of the mission; and asking that someone be sent here to take up the railroad question with the people of Denver on some basis within their reach. Promptly came a reply stating that George Francis Train would come to Denver immediately. Train was then about as erratic as he was later in life, and when the Denver people learned who was coming to lead them out of the wilderness, they were inclined to resent the appearance of such a guide and counsellor.

The New Board of Trade called a general meeting of citizens at Cole's Hall for the evening of November 14th, which was largely attended. General Bela M. Hughes addressed the audience in his characteristic manner, urging the imperative necessity for heartily supporting the new organization of business men, and the even greater necessity for immediate action upon the railroad question if the supremacy of Denver in Colorado were to be maintained—if the city's very existence were to be continued. Colonel Archer, who had remained in the city in the meantime, then spoke briefly. He told of the condition of the Kansas Pacific, what it could do and what it could not do, and closed with the statement that if the people of Denver would provide a bonus of two million dollars the Kansas Pacific would be built to the city; otherwise it would not. Those in the audience who had not been informed of the proposition Colonel Archer had been authorized by his company to make, were dumbfounded on hearing this. The Colonel might just as well have been authorized to ask for twenty millions, for all the difference the larger sum would have made as a practical proposition. The two millions were impossible.

George Francis Train had arrived in Denver in the morning of that day, and was present at the meeting. He had busied himself through the day in gathering information, and when Colonel Archer concluded his remarks, Train began his speech which proved so potent and notable in Denver's railroad annals. He urged the people to no longer look to others for help but to remember and act upon the fact that "God helps those who helps themselves;" to abandon all thought of subsidizing Colonel Archer's road, and to let it end in Kansas or go in any direction its owners desired; that the valley of the Platte afforded an easy and direct route for a road to the Union Pacific that could be cheaply built; to organize a company within themselves and build a railroad of their own either down the Platte or on the shorter route to the Union Pacific directly north to Cheyenne; to own and operate it, and if there were any money to be made in the business to make it for themselves. After entering into some explanatory details, Train concluded by urging the people, as competent and sensible business men, to carefully consider his advice and suggestions, and then immediately act upon them.

That was the turning point. The erratic Train's sensible, vigorous and logical address was exactly the proposition called for by the situation and circumstances. It is, of course, useless to theorize over what might have happened if Colonel Dodge had not sent his message, and if George Francis Train had not come to Denver in response to its request. But certain it is that great consequences did follow the one and the other—consequences that absolutely and forever determined that Denver should be the metropolis of this vast mid-continent region, instead of some point farther to the north or to the south; for it was inevitable that somewhere near the base of the Rocky Mountains a metropolitan city would arise.

The new Board of Trade lost no time in acting upon Train's suggestions and advice. A meeting of its members was held two days later—November 16th—at which the first definite steps were taken toward building what proved to be the first railroad to Denver and, aside from the few miles of the Union Pacific crossing the northeast corner of the Territory, the first in Colorado. Preliminary estimates by General Francis M. Case of the cost of preparing the road-bed ready for the rails from Denver to Cheyenne, a distance of a little more than 100 miles, were submitted and discussed. They anticipated a total expense for that purpose of about $500,000—which was far under what the actual cost proved to be—and it was argued that with the road-bed thus prepared there would be no difficulty in inducing the Union Pacific people to put down the track and equip and operate the road. Then, a series of resolutions, prepared and offered by General John Pierce, was unanimously adopted. The resolutions provided for committees to select corporators for the proposed railroad company, to secure from the Territorial Legislature any legislation that might be needed, and to also keep in view the possibility of having the Kansas Pacific build to Denver if its prospects became brighter.

On November 18th a mass meeting of citizens was held in the old Denver Theater at Sixteenth and Lawrence streets, with W. F. Johnson as President, and John Walker, of the Denver Tribune, Secretary. John Evans was the principal speaker. His faith in the future development of Denver and of Colorado was of the kind that is said to move mountains; and it seldom wavered. At that meet-

---

Governor John Evans was a native of Ohio, and a descendant of an old Quaker family of Philadelphia. His parents, David and Rachel Evans, removed to Ohio when nearly the whole of that State was a wilderness, and located in Warren county, near Cincinnati, where they acquired land that later became one of the fine farms in that fertile country. Their son, the subject of this sketch, was born on that farm, near the village of Waynesville, on March 9, 1814, and lived and worked on the homestead farm until he attained his majority. Having attended the local district school a few months each year as opportunity offered, he had received the fundaments of a fair education. At the age of twenty-one he went to Philadelphia, and entered the Clermont Academy. Upon completing the course in that institution he began the study of medicine, and in 1838 was graduated a Doctor of Medicine.

Dr. Evans located in northern Illinois and began practice as a country physician among settlers on the Illinois river. In 1838 he married in Ohio Hannah Canby, daughter of an old Ohio family and whose father, Joseph Canby, was an eminent physician in that State; General E. R. S. Canby of the United States Army having been one of that family and a nephew of Dr. Canby. After his marriage, Dr. Evans established himself at Attica, Ind., where he acquired a large practice and became a young man of wide influence in the community. Proper care and treatment of insane persons early received his attention, and at that time such unfortunates were almost unprovided for in that State. Through the active interest and instrumentality of Dr. Evans, the Legislature of Indiana in 1841 provided for the erection of a State Asylum for Insane, and upon its completion Dr. Evans was appointed its first Superintendent.

In 1845, his fame as a most successful practitioner and as a man of broad views having gone abroad, he was elected to a Professor's Chair in Rush Medical College at Chicago, at that time as it still is, one of the great medical colleges of the country. Dr. Evans filled that Chair for eleven years and in that time became nationally known as a leader in his profession. During the epidemic of cholera in 1848 49 he carefully studied that disease, and was the first to clearly demonstrate its contagious character and the methods by which infection passed from person to person. His researches resulted in a recommendation to Congress urging, upon the lines now followed, a quarantine against the pestilence.

While a citizen of Chicago his activities in other directions were many. For several years he edited the "Medical and Surgical Journal;" was founder and member of the staff of the "Illinois General Hospital," later conveyed to the Sisters of Mercy and re-named the "Mercy Hospital;" a member of the Methodist Episcopal church, he was instrumental in establishing the "Northwestern Christian Advocate," and in founding the "Methodist Book Concern," in Chicago; and was the projector of the original "Methodist Building" which in recent times was succeeded on the same site by one of the present great business structures in Chicago.

When the Chicago & Fort Wayne Railroad, one of the pioneer railways of Illinois, and now a part ing he predicted that before the century closed Denver might be made one of the great railway centers in the United States, and that it would then also be the center of precious metals production in the United States. Within twenty-five years his conclusions, that had been regarded by nearly all his hearers as extravagant, exceedingly improbable, were fulfilled; and he lived to see their consummation. Other speakers followed Governor Evans, outlining the probable development of a system of railroads in Colorado that would follow the construction of the proposed road to Cheyenne; all of which seemed very like flights of the imagination, yet that development came with marvelous swiftness.

Then the assembled citizens were informed that all arrangements had been made for incorporating the "Denver Pacific Railroad and Telegraph Company" with a capital stock of $2,000,000, by the following named members of the Board of Trade: Joseph E. Bates, William M. Clayton, John Evans, Bela M. Hughes, W. F. Johnson, Luther Kountze, David H. Moffat, Jr., John Pierce, and John W. Smith. The conspicuous though unpleasant facts presented by all the speakers at that meeting were these: that Denver was threatened with a crisis in her career; that only united and immediate action could avert the gravest misfortunes to the city; that to avert them sacrifices must be made by every citizen having property or other vital interest in the city; and that each citizen must at once decide how much he would give of what he had in order that the remainder of his possessions might retain value.

In that year (1867) Denver was gravely menaced by the town of Cheyenne. It had been established by the Union Pacific company as a division terminal on that road; it was to be the location of the company's great construction and repair shops; and under the company's fostering care it was to be made the commercial metropolis of the middle region of the Rocky Mountain country. The town was ambitiously planned, and lots were given to those who would expend reasonable specified sums for buildings upon them. The town had become a place of great activity as the headquarters of railroad construction, and swarmed with the piebald collection of humanity such as congregated in every frontier railroad town in the old times. Many people had gone thither from Denver, and many others were considering the same change, for the new "city" was already receiving much business that had formerly come to Denver. Other citizens had pulled up stakes and gone to other towns springing up along the line of the Union Pacific, but it was the shadow of Cheyenne that was so portentously clouding the prospects of Denver at that particular time.

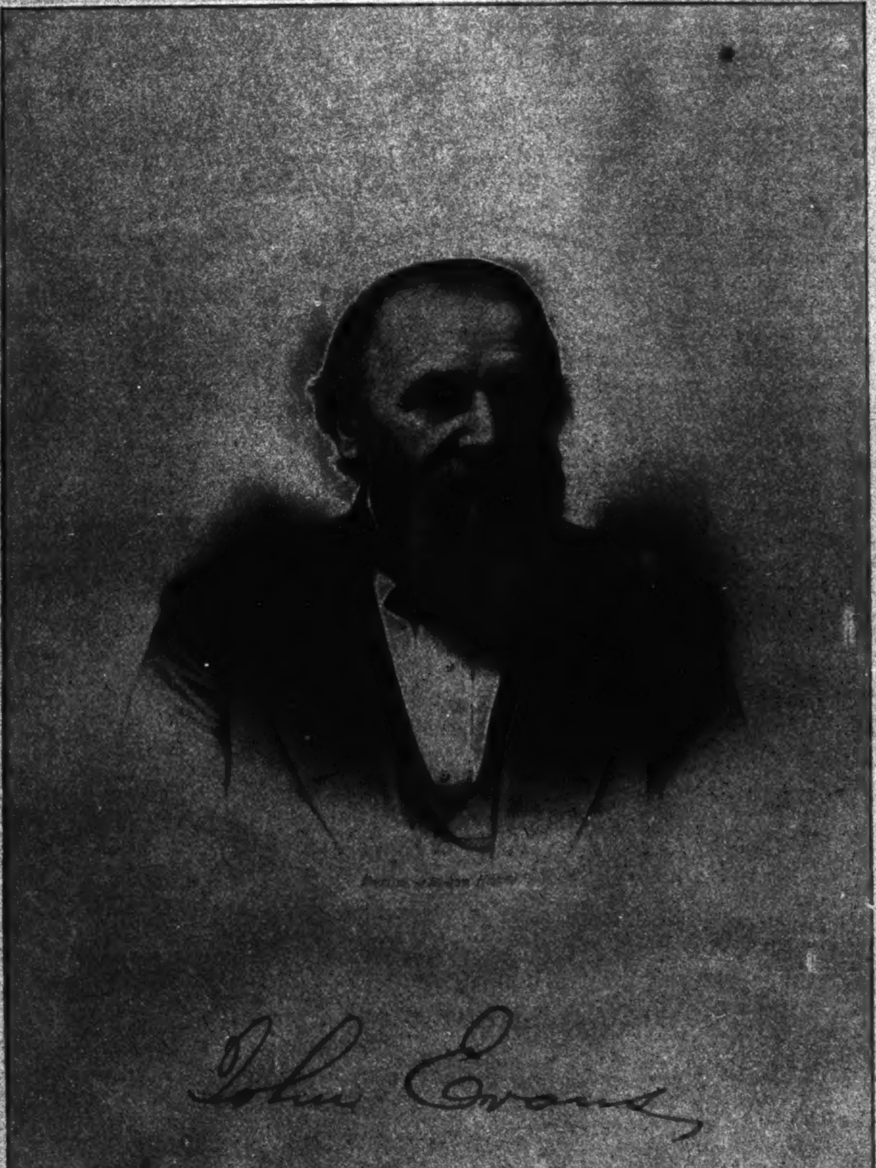
The Denver Board of Trade also lost no time in preparing for practical action. On November 19th

---

of the Pittsburgh, Fort Wayne & Chicago road, was proposed, Dr. Evans immediately became interested, personally and financially, in its construction. For several years he was one of the active members of its Board of Directors, and was chiefly instrumental in obtaining right of way into Chicago for the road. He was one of the men who early realized the enormous potentiality of railways in the development of the country, and his judgment led him to make large investments in Chicago real estate, the increment of which subsequently constituted the foundation of a large fortune. His experience with the Chicago & Fort Wayne road during its construction period was of inestimable value to him and to his fellow-citizens of Colorado when the salvation of Denver depended, late in the "Sixties," upon the immediate construction of a railway connecting the isolated town with the outside world.

Dr. Evans also interested himself in the cause of education at Chicago. In 1853-54, while a member of the Chicago City Council, he introduced and pressed to passage an ordinance first creating the position of Superintendent of Public Schools in that city; thus bringing an almost systemless system into a harmonious and effective organization under a proper and responsible executive head. He next urged that a High School be added to the system, and with the co-operation of others succeeded in having the first one in Chicago established. An ardent member of and believer in his church, he, in 1853, also proposed and urged the founding of a great Methodist University at Chicago. Largely by his zeal and influence the Northwestern University organization was effected in that year, and a suitable location for the proposed new institution was found just north of that city where has since arisen a beautiful suburb of Chicago. Dr. Evans was one of those who selected the University's seat, and in his honor the new college-town was named Evanston. The University was established there in 1855, and Dr. Evans endowed the Chairs of Latin, and Mental and Moral Philosophy, with $50,000, to which he later added $50,000 more. He had been chosen in 1853 President of the University's first Board of Trustees, a position he uninterruptedly and zealously filled for forty-two years, and until within three years of his death.

Amid all his other activities and duties while a citizen of Chicago, Dr. Evans took a deep interest in the political affairs of that period. He was nominated a candidate for Representative in Congress from Chicago but was defeated by the influences of the old "Know-Nothing" organization. In the first Republican State convention in Illinois, held at Aurora, he was a prominent figure and a forceful speaker. A close personal friend of Abraham Lincoln and an advocate of the cause he represented, Dr. Evans was an active delegate in the Illinois State convention that indorsed and recommended Lincoln for the nomination by the Republican party in 1860 as its candidate for President. Upon the outbreak of the civil war he advocated and urged the emancipation of the slaves and their employment as soldiers in the Union army for suppression of the rebellion; a means that was tardily adopted before that great conflict closed. For this, Dr. Evans was engaged in a public con-



John Evans

the Denver Pacific Company was incorporated, and another public meeting was held in the evening of that day at which the election of the officers of the company was announced. They were Bela M. Hughes, President; Luther Kountze, Vice President; David H. Moffat, Jr., Treasurer; W. F. Johnson, Secretary; and F. M. Case, Chief Engineer; the Board of Directors consisting of Joseph E. Bates, William M. Clayton, John Evans, Bela M. Hughes, W. F. Johnson, Luther Kountze, David H. Moffat, Jr., John Pierce, and John W. Smith. There were more speeches at that meeting, but they were confined to statements that the time had come for talk giving way to work in which every man must do his duty.

Canvassing committees began soliciting subscriptions to the railroad company's stock within a day or two. In one day's work they secured about $225,000 of such subscriptions, and by November 22nd had $300,000. Assistance of any kind was received; men were allowed the privilege of paying in work on the roadbed, or in furnishing ties, or in anything necessary to railroad building. The progress made was extraordinary in so small a town as the Denver of that day with its prospects most seriously clouded; it was also rather eloquent evidence that the people realized that the value of their property and the future of the city, were at stake. The enthusiasm became feverish, and the future was anticipated by a railroad map in which Denver figured as the center of a fine system of radiating railroads. These maps appeared in the newspapers, and were printed on envelopes, and thus were broadcast over the country. It is of interest to note that practically every road shown on that map is now represented in Denver's railroad system.

But the most important contribution to the sinews of railroad-building came from Arapahoe county. Acting upon a petition from many citizen-taxpayers the County Commissioners on December 27, 1867, ordered a special election to be held on January 20, 1868, to decide for or against the proposition for the county issuing $500,000 in bonds to aid the construction of the Denver Pacific Railroad; the county to receive the company's stock to an equal par amount in exchange therefor. The proposition was approved by 1,259 affirmative to forty-seven negative votes.

The removal of the capital of the Territory from Golden to Denver at the time the railroad enthusiasm here was at its height, inspired new hope and confidence among our people. The fact that Golden was the capital had been not only a humiliation to Denver, but had given the smaller town great prestige abroad, and appeared to justify its claims that it was and always would be the metropolis of Colorado. The bill providing for the

---

troversy by Judge Scates of the Illinois Supreme Court, and in it he plainly pointed out the importance of immediately doing what later had to be done as a military necessity.

In 1861 President Lincoln desired and proposed to appoint Dr. Evans Governor of Washington Territory, but the position could not be accepted. In 1862, after the removal of Governor Gilpin had been decided upon the President asked Dr. Evans to become the successor, and the latter accepted the appointment. That was a critical period in Colorado's pioneer history, and Governor Evans was equal to the emergencies and proved to be the man for the times and for the place.

The personal history of Governor Evans after he became a citizen and a leader in Colorado is interwoven in much of this Story of Denver. There is scarcely a chapter of the many that deal with events subsequent to 1861 in which he is not a conspicuous figure. His ability and services as Governor; his part in the efforts to earlier secure Statehood for the Territory; the founding of the Colorado Seminary out of which grew the University of Denver; his aid to pioneer churches; his masterful and indomitable leadership in the construction of our first and several later railways; the far-reaching influences among the people of his courage and hopefulness; his participation in the many affairs of the later fast-growing city and rapidly developing State; particulars of all of these, and of many other direct results of his activities and his usefulness, are set forth in the text of this volume.

The life-careers of few men exceed in interest and eventfulness that of John Evans. Farmer boy; professional man; founder, friend, and executive guide of a great University; business man; politician and statesman; Governor; builder of colleges and churches; railway builder and manager; philanthropist and benefactor; and withal a shrewd, energetic, far-seeing man. What he did for Colorado and Denver can hardly be estimated in words and figures, but it made him the foremost man among all his fellow-citizens here, just as he had made himself a leader of men before he came here. When he came here, direct from a relatively large city to a region almost in its primitive condition, he saw much in the new country where other men saw little. When he publicly outlined the future of Denver and of Colorado as he saw it, other men smiled at what they regarded as an enthusiast's dreams. But he caused the dreams to be fulfilled, and to his memory the city and State with whose rise and development he had so much to do will stand as fitting monuments.

The death of Governor Evans at his residence on the northwest corner of Fourteenth and Arapahoe streets, July 3, 1897, in the fullness of his years and honors, brought a profound sorrow to this community. He had retired from active participation in affairs three years before, and his death was due to general debility incident to old age. His first wife died in 1850. Three years later he married Margaret, daughter of Samuel Gray, of Maine, and who survives. The two sons and one of the two daughters born to them are living; the other daughter, who became the wife of the late Samuel H. Elbert, former Chief Justice, and Governor, of Colorado, died in 1868.—J. C. S.

removal was introduced, as stated elsewhere, on December 2, 1867, was passed and approved on the 9th, and the Legislature met in Denver on the 10th. The measure was bitterly opposed by the indefatigable W. A. H. Loveland and the other citizens of Golden, and its enactment was a fatal blow to the metropolitan ambitions of that pretty little city.

Still, Golden had lost none of its spirit and combativeness. Loveland had persisted in endeavors to advance his Colorado Central & Pacific enterprise, yet had really accomplished but little beyond making surveys. But to have a demonstration of progress, a formal beginning of construction work was made at Golden on January 1, 1868. With much ceremony on that day the citizens of the town assembled and graded a little stretch of roadbed about 900 feet long in an easy place. But, as will be related further along in our story, that bit of road-bed constituted for several months, all physical evidence of the Colorado Central's existence.

The sudden awakening of the little city at the mouth of Cherry creek and the exceedingly vigorous action that followed, aroused the Kansas Pacific people to renewed efforts to persuade the Denver people to join railroad fortunes with them and to help them get the end of their road out of the wilds of western Kansas to a terminus that would afford it some business. In January, 1868, J. P. Usher, and former Governor Carney of Kansas, representing the Kansas Pacific, came to Denver to renew negotiations to that end. In the evening of January 18th the Board of Trade held a meeting, which was attended by many citizens, to afford the visitors an opportunity to publicly present the purposes of their mission. In their remarks they did so at much length. Their more important statements were that the Kansas Pacific had definitely and finally abandoned the proposed southwestern extension, and, as the road must be continued in some direction, its construction to Denver was its only hope. But their persuasions availed nothing. They were publicly informed in speeches addressed to the same meeting that the people of Denver had resolved upon constructing a road of their own, to Cheyenne, and that nothing would then dissuade them from going on with the work; that they had determined to no longer look to others for help but would help themselves; that they would be glad to see the Kansas Pacific built to Denver, but that it would have to provide ways and means of its own with which to get here; and that the people had been sufficiently disappointed by Kansas Pacific and other promises and were going to find their own way out of their isolation. With that visit of Usher and Carney, attempts at reconciliation by the Kansas Pacific interests ceased during a long season, but that road ultimately proved an invaluable friend in a time of great need, as we will presently see.

Late in January, 1868, assurances were received in Denver from the Union Pacific people that they would be willing to enter upon the construction of the Denver Pacific whenever Denver was prepared to provide means for making the road-bed ready for the iron, and that the line could be finished before the close of that year. Governor Evans and General John Pierce went east to make arrangements with them to that end, and returned to Denver toward the close of February. At a meeting of citizens held on February 24th they reported that they had reached an agreement with the Union Pacific managers that would result in the immediate construction of the Denver Pacific. The Denver Pacific company was to begin work at Cheyenne, and as fast as twenty-mile sections of road-bed were made ready for the rails the Union Pacific people would put down the track and equip and operate it; and that the road was to be built on a direct line to Denver, following the right bank of the South Platte as great a distance as would be found practicable. This appeared to be the final confirmation of that for which hopes had so long been nurtured.

At that time Bela M. Hughes resigned the Presidency of the Denver Pacific and was succeeded by Major W. F. Johnson who had been ardent and active in all these preliminary proceedings. An attempt had been made to induce the city of Cheyenne to vote some bonds in aid of the road, but beyond the appointment of a City Council Committee to consider the matter, it came to nothing. Therefore Governor Evans determined to go ahead and work out the road's salvation with the means immediately in view. One of the preliminaries, the grant of right of way through the public lands, was provided for by a bill introduced in Congress, March 6, 1868, and which became a law soon afterward.

A contract for constructing the Denver Pacific, on the basis outlined in the agreement, was made at Cheyenne with Thomas C. Durant and Sidney Dillon of the Union Pacific. Under this arrangement the Denver interests were to provide and expend $500,000 in cash toward preparing the road-bed for the iron, and those of the Union Pacific were to provide the additional sum required to complete the road; that a road should also be built from Denver to Central City and to Georgetown—a clause intended by the Union Pacific to help the Colorado Central enterprise; and that application should be made to Congress for a land grant for the Denver Pacific. But in April, at the instance of Durant and Dillon, a new contract was made under which the arrangement for ironing, equipping and operating each successive section of twenty miles was discarded; Durant and Dillon were to build the road, complete; the Denver Pacific company was to take a contract under them to the extent of expending a half-million dollars; in lieu of the amount required above that sum the Union Pacific interests were to receive a large mileage-allowance of Denver Pacific stock, and were to lease and operate the finished road, paying a rental equivalent to eight per cent on the $2,000,000 of Denver Pacific common stock. Apparently this was an advantageous proposition, but in reality it was intended to be a rather hard bargain with which the Denver men were not in a situation to quarrel. But it provided for active construction work to begin early in May. It then appeared that every obstacle to speedily providing Denver with railroad communications had at last been far removed.

While it was understood that track-laying would necessarily begin at Cheyenne and that the first locomotive would have to come in from that point, it was deemed fitting that the nominal, ceremonial, beginning of construction work should be made at Denver. Therefore, after several days of most agreeable anticipations, the ceremonial first breaking of ground for the Denver Pacific road occurred in the forenoon of Monday, May 18, 1868, which was made a general holiday. The work was done at a point nearly a mile outside the then northeastward limits of the city and, as there was nothing on the open prairie to definitely identify the place, it can not now be precisely located. It was, however, not far from the intersection of Blake street and the present Fortieth Avenue. A large part of the city's population congregated there to see it, brass bands helped with their music, and former Governor Gilpin made one of his singularly prophetic speeches. The "rights" of women were recognized, for the plow that made the first railroad disturbance of Denver soil was guided by Mrs. Frederick J. Stanton and Miss Nettie Clark, while Lyman Cole and T. G. Anderson drove the mule teams that really did about all the actual work performed that day; though John W. Smith shifted a few shovelfuls of earth.

Prior to this formal beginning of construction some embarrassment had been entailed by failure to find a market for the Arapahoe county bonds. Before the winter had closed an attempt to sell them in the east had failed. In March Governor Evans had tried to dispose of part of them to Chicago business men, and had been unsuccessful. Then the Denver Board of Trade sent Henry M. Porter, J. S. Brown and F. Z. Salomon there to assist the Governor, but that resource remained practically fruitless. The bonds were eventually absorbed in the financial operations directly connected with the construction of the Denver Pacific.

Under the original proposition Arapahoe county was to receive in Denver Pacific stock an equal nominal amount for its $500,000 of bonds, and thereby would have become holder of one-fourth of the company's total capital stock. But, although the Union Pacific people had not begun construction work on the Denver Pacific in May as promised, and that the Denver people had become suspicious of their intentions and purposes, Governor Evans and his associates had realized before the close of that month that to comply with the provision of the contract calling for a large mileage issue of their stock to the Union Pacific interests, to provide for accumulated indebtedness, and for various heavy collateral expenses, would require that the Denver Pacific stock be doubled in amount. Therefore, on June 24, 1868, the Denver Pacific's stock was increased by the Directors to $4,000,000. This cut in half whatever value there would prove to be in Arapahoe county's holdings; but Governor Evans had in mind, and which he kept to himself, a way through which to subsequently rectify that, and which he did rectify after the trouble was over, as will be presently related.

In the meantime Governor Evans had sought to obtain some assistance for his road from Congress. This had resulted in the introduction of a bill by Senator Harlan, of Iowa, providing for the Denver Pacific connecting with the Union Pacific at Cheyenne, giving it a land grant, and making it the connecting link between the Union Pacific and Kansas

"Breaking ground" at Denver for the Denver Pacific Railroad. From a photograph.

Pacific when the latter should be completed to Denver; thus consummating the purpose of the act of June, 1866, requiring the Kansas Pacific to build to a connection with the Union Pacific at some point not farther west than fifty miles west of longitude of Denver. It was merely a proposed substitution of the Denver Pacific for the Kansas Pacific between Denver and Cheyenne.

The Kansas Pacific people naturally opposed this measure with great vigor. Although they were still in sore financial straits, they were endeavoring to negotiate a foreign loan, and did not care to have more than a hundred miles of their land grant—alternate sections for twenty miles on each side of the roadway—turned over to another corporation. They succeeded in defeating the Harlan bill at that session, but the measure brought about an agreement between the two companies under which the Kansas Pacific assigned its land grant claims between Denver and the Union Pacific, to the Denver Pacific, and which was the beginning of a co-operative understanding between the two roads. The Kansas Pacific people had not at that time really abandoned all hope of building southwest from western Kansas, through New Mexico, to the coast in southern California, for which a route had been surveyed; they had also contemplated an alternative route, through New Mexico or southern Colorado, thence northwest to a connection with the Central Pacific, for they were not on friendly terms with the Union Pacific. They had endeavored to obtain from Congress at that session subsidies for their proposed California extension, but the measure had failed. Still they clung to the project, and it may be remarked here that after they built into Colorado to Denver, they constructed a branch from Kit Carson to Las Animas and which was extended to La Junta in 1875. In 1878 this branch was sold at auction, the purchasers removing the ties and rails and abandoning the road which has never been rebuilt.

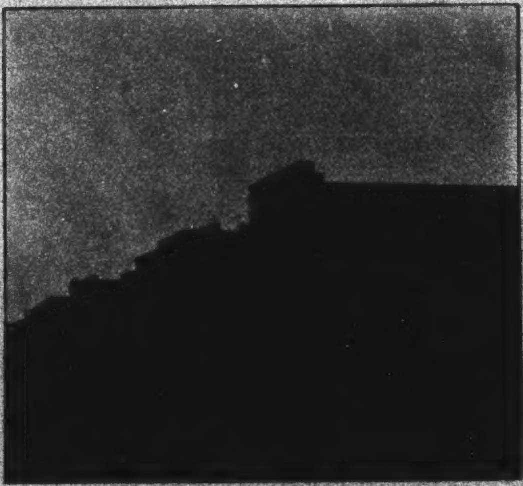
Grading the roadbed at the Denver end of the Denver Pacific was inaugurated by the home company early in the autumn of 1868. The contractors, Banning, Carlisle & Moore, began operations on September 12th, and completed the grade between Denver and the Platte river crossing, at the present town of Evans, before the close of that year. The Union Pacific people had still delayed action, and as that year wore on it became evident that they did not intend to perform their contract. They were still toying with the Colorado Central scheme, and would give the Denver men no satisfaction. The northern half of the Denver Pacific route had not been located and surveyed as promised, and altogether the relations with the Union Pacific had about reached the breaking point. We may dismiss that road from our narrative by stating here that soon afterward, in Boston, upon a peremptory demand by Governor Evans for an explicit and final statement of their intentions with relation to the Denver Pacific, the Union Pacific people pleaded financial inability to carry out their contract. That ended the Denver Pacific's relations with them, and the contract was cancelled.

At the first annual meeting of the Denver Pacific company, held here on December 14, 1868, W. F. Johnson was re-elected President, and no important changes were made in the other executive officers or Directors. A contract had been made with a local telegraph company, some account of which appears elsewhere, to build a telegraph line on the proposed route of the Denver Pacific between this city and Cheyenne. The line was constructed in about sixty days, and was opened for service on January 1, 1869; being the first completed part of the Denver Pacific enterprise.

The Denver Pacific company had also renewed its efforts to secure government aid, and in consequence thereof a bill was introduced in Congress early in January, 1869, that became a law on the 5th of the following March and cleared the situation. It provided that the Kansas Pacific should build to Denver and terminate here; authorized it to co-operate in the completion of the Denver Pacific and to operate it afterward, thus constituting a through line from Kansas City to Cheyenne, practically as contemplated by the law of June, 1866; confirmed a land grant to both companies, and authorized each to bond its road and land grant for an amount not exceeding $32,000 per mile. This act marked the beginning of the end of the Denver Pacific's troubles, and its passage was largely due to the persistent labors and influence of John Evans. News of its passage was received in Denver with great enthusiasm and rejoicing that found expression in a celebration matching anything that had been done for the Fourth of July. Yet, the season of rejoicing was saddened by the death of Major W. F. Johnson, that occurred on March 5th, just when the action of Congress had cleared the way for the speedy completion of the road. Governor Evans was then elected to succeed him as President of the Denver Pacific.

The Kansas Pacific had completed a survey of its route to Denver in 1868, and had also made one northwest of Denver, by way of the Cache-a-la-Poudre, and thence to a junction with the Union Pacific's route; but the latter was put out of the way by the act of March 5, 1869. The Kansas Pacific people readily consented to the requirements of the act, and on July 27, 1869, General William J. Palmer, who was then identified with that road, came to Denver and closed an agreement with the Denver Pacific company under which the two roads were to become practically one upon completion. The Kansas Pacific people had negotiated in Germany a loan of $6,500,000, and were prepared to build their road to Denver without any further delay.

The land grant, the authority to issue bonds, and the alliance with the Kansas Pacific placed the Denver Pacific on a substantial financial basis. The company issued $2,500,000 of seven per cent. bonds, the lien covering 800,000 acres of land grant, as authorized by the act of Congress. Governor Evans, Walter S. Cheesman, David H. Moffat and several associates undertook the contract to complete the road. The northern half of the route was immediately located and surveyed, and grading started at Cheyenne. Early in September, 1869, track-laying began at the northern end, and by the middle of December was completed to the Platte river crossing, fifty-eight miles, where the town of Evans, Weld county, named in honor of the Governor, was established. That part of the road was put in operation, and at that time the rolling-stock consisted of three locomotives, two passenger and half-dozen freight cars. Construction work rested at Evans until the following spring.



South side of Blake street from Fifteenth to Sixteenth, in the late Sixties.

On January 18, 1870, the stockholders of the road elected as Directors John Evans, John Pierce, Walter S. Cheesman, William M. Clayton, David H. Moffat, and Frank Palmer, of Denver; and Robert E. Carr, William J. Palmer, and R. H. Lamborn representing Kansas Pacific interests. These Directors elected John Evans, President; John Pierce, Vice President; R. R. McCormick, Secretary and Auditor; David H. Moffat, Treasurer; and L. H. Eicholtz, Chief Engineer.

In March, 1870, General W. J. Palmer then in charge of Kansas Pacific construction, and W. H. Greenwood prepared for beginning active work at the Denver end of the Kansas Pacific to meet and connect with construction then advancing from the Pond Creek terminus of that road. There was some delay, and operations did not begin here until May 26th, when work was instituted near the location of the present Union Pacific shops. Construction was then rapidly advancing from the east, and had also been resumed early in the spring on the Denver Pacific. A friendly but keen rivalry then arose between the two to first build into Denver, and some of the fastest railroad-building ever seen in this country was done.

The Denver Pacific won the race. In a preceding chapter we have told of the arrival of Denver's first locomotive—used in construction—on June 15, 1870, and of the celebration attending the formal completion of the Denver Pacific on June 24th when the first passenger train came in, and when the silver spike was driven. It was a gala day of processions, music and speeches. On one side of the silver spike was engraved, "Georgetown to the Denver Pacific Railway;" on the opposite side, "John Evans, President, June 24, 1870."

The Kansas Pacific was not completed to Denver until August, 1870; its first train arriving here at 6:45 in the evening of the 15th, when the city actually became a point on a transcontinental railroad by way of Cheyenne. On October 7th the Kansas Pacific brought in the first sleeping car seen in Denver, the "Comanche," from Chicago.

On the evening of August 12th the advancing ends of the Kansas Pacific tracks had had a gap of a little over ten miles between them, and it was resolved to close it in one day's work. Delay in the arrival of rails postponed the job until the 14th, on which day the gap was filled in ten hours of work, a feat never equalled in other railway construction at any time or anywhere. During the spring and summer of 1870 the builders of that road had to work under a protective guard of United States troops. The Cheyenne Indians made them much trouble, killed several men and stole many horses used on the work. Several towns sprang up successively along the road at temporary terminal points, and most of them proved temporary as construction advanced. The town of Sheridan, Kansas, was picked up and transferred into Colorado and became the town of Kit Carson. It was a very busy place for a while, but now retains few of its former glories. Colonel James Archer, who was the Kansas Pacific's official representative to Denver in November, 1867, later became a prominent citizen and resided here until his death in 1886.

While Governor Evans and his associates were struggling to get the Denver Pacific on its feet they were also planning the construction of various other roads in Colorado, all of which were built within a few years thereafter either by them or others. Their plans contemplated a road across the range from Denver by way of the Platte canon and the South Park to the valley of the Rio Grande; south to Trinidad by way of Colorado City and Pueblo; to Boulder by way of the intervening coal fields; and from Denver to Golden and thence to both Central City and Georgetown. They even went so far as to give some of these projects definite routes and names, as in the Denver & Santa Fe Railway, and the Denver South Park & Rio Grande Railway.

We have already told of Governor Evans' intention to rectify the shrinkage of Arapahoe county's interest in the stock of the Denver Pacific, caused by increasing that company's capital stock from two to four million dollars. In April, 1870, at a meeting of the Denver Board of Trade that had so faithfully sustained the enterprise, Governor Evans made an address in which, after reviewing the history of the road, then nearing completion he said:

> "When, last summer, the Board of Trustees of the railway company, this Board, and the Board of County Commissioners, severally and unanimously urged me to take a contract to build the Denver Pacific Railway, I unhesitatingly accepted. Before taking the contract, however, the Board of Trustees made an effort to reduce the capital stock of the road from four millions to two millions, which would have enhanced the interest of the county of Arapahoe one hundred per cent. But it was discovered that this act, if consummated, would prevent the company from borrowing enough money to complete the road, for the law prohibits the indebtedness exceeding the amount of the capital stock of the company. Therefore, the only alternative, if we proceeded to complete the work in hand, was to leave the capital stock at its existing amount —four millions. The stock represented all the value then existing, and it was an absolute necessity that the stock should all be given to secure the prosecution and completion of the work. Even then it was doubtful if it could be made to answer the purpose, for it must either be sold for cash enough, or the assets it represented be made to serve the purpose of borrowing enough money upon, to pay for the entire work. Nothing but cash will build railways."
>
> "I took the contract, therefore, to build the road with the remaining stock. The county bonds in hand, at the best price that could be obtained for them, were barely sufficient to finish the grading and pay the pressing indebtedness already incurred for ties and other material. While the contract was thus pressed upon me, and while there were serious doubts as to the success of our efforts to make the means accomplish the end in view, I held in mental reservation a determination to so manage the matter as to make enough out of the contract to enable me to donate to the county an additional half-million of the capital stock of the road."
>
> "This purpose I did not at first allow myself to express to any one, for fear of disappointment in making the necessary profit on the contract to enable me to do so, and in my negotiations I found it absolutely necessary to place the half-million capital stock in trust, to be voted in perpetuity, but reserving to myself and my assigns the entire right of property in the same, and all profits and dividends arising therefrom."
>
> "I will, therefore, have, to all intents and purposes, the whole intrinsic value of said stock in my possession and ownership as soon as the road shall be completed, and I now for the first time publicly declare, that it is my full purpose and intention to donate the same to Arapahoe county as soon as I shall become entitled to it by compliance with my contract to complete the road to the city of Denver. This I do on the condition that the people shall go forward with the other enterprises so necessary to our prosperity."

After the road was finished Governor Evans found himself able to do what he had anticipated doing, and donated the stock to the county.

This somewhat long recital of the circumstances associated with the inception, progress and completion of Denver's first railway connections would seem to be justified by the fact that they really were the city's means of salvation. They fixed Denver as the metropolis of the Rocky Mountain country. In one sense they were the result of unity of action in the community under very able leadership, and they created property values out of all ratio to their cost. In the form of direct stock subscriptions, allowing for shrinkage, the Denver Pacific cost the people about $250,000; to this was added the $500,000 of county bonds, which indirectly proved the best investment of public credit and money the county ever made, and it could well have been an outright gift, if necessary. Eventually, as told elsewhere, it proved to have been ninety per cent. donation. The Kansas Pacific, as the reader has seen, received no financial assistance from the Denver people. It remained for some years the more important road to the city because of its more direct route to the east. While the two were operated as one line under Kansas Pacific control the charges were such as would now seem extremely exorbitant, and they were equally high on the Union Pacific. In those good old times a business transaction with either required the customer be something of a capitalist. In 1868 the passenger fare from Cheyenne to Omaha by the Union Pacific had been $51.50. Adding to this the stage fare of $10 from Denver to Cheyenne then made travelling to the Missouri river an expensive undertaking. It was also a slow one compared with present doings, for as late as 1874 the schedule between Denver and Chicago, was based on sixty-four hours of time, and often that proved not enough. In 1868 the Union Pacific freight rates per 100 pounds from Omaha to Cheyenne were: first class, $3.85; second, $3.70; third, $3.55. A freight-tariff sheet issued December 15, 1870, made the following-stated rates from Missouri river points to Denver by way of either the Union Pacific or the Kansas Pacific: first class, $2.60; second, $2.00; third, $1.75; fourth, $1.40. But any of these freight rates were trifling in comparison with some that had been paid in earlier years for "prairie schooner" transportation. Subsequently, during the manipulations of the Union Pacific by railroad schemers, the Kansas Pacific became and for some time remained the more friendly to the interests of Denver.

CHAPTER LV.

Colorado Central Railroad—Its Completion Between Denver and Golden—Projected Main Line—Construction in Clear Creek Canon—Effect of Panic of 1873—Denver, Georgetown & Utah Railway—Union Pacific and Kansas Pacific Roads—Consolidation of Latter With Colorado Central—Extraordinary Proceedings in Connection With Disruption of Consolidation—Subsequent History of the Central—Denver & Boulder Valley Railroad—Denver & Rio Grande Railroad—History of Its Inception and Construction—Its Remarkable Development—Its War With the Santa Fe Road, Reorganization, and Subsequent History—South Park Road—Story of Its Origin, Progress and Misfortunes—Reorganization as Denver, Leadville & Gunnison Railway.

The Denver Pacific and the Kansas Pacific were not the only railroads in the vicinity of Denver upon which more or less work was in progress in 1868, 1869 and 1870. W. A. H. Loveland had retained his alliance with the Union Pacific through the several years of his endeavors to inaugurate construction of the Colorado Central, and, as we have stated, made a nominal beginning of work at Golden on January 1, 1868. Jefferson county voted $100,000 of bonds in exchange for stock in the road, and before midsummer of that year the company had contracted for about six miles of grading and masonry on the first division of the road, eastward from Golden. This division was not located direct to Denver, but to a junction with the Denver Pacific and Kansas Pacific roads near the present Omaha & Grant smelter, and about three miles from the heart of what there then was of this city. It was then Loveland's determination to side-track Denver, and to divert business from the Denver Pacific and Kansas Pacific over his line to Golden, after their completion, and so give supremacy to his energetic and ambitious little city. The present transfer track to and from the Omaha & Grant smelter is part of that old main line of the Colorado Central.

Through the summer and autumn of 1868 construction work on the Colorado Central between Golden and the junction above-mentioned was confined to the six-mile stretch east from Golden, but in November of that year contracts for grading nearly the whole of the remaining distance to the eastern terminus were made. The Jefferson bonds were about the only resources the company had at that time, and by the close of 1868 $87,000 had been expended on the road. Although the enterprise was controlled by the Union Pacific interests, they had not provided any money for its advancement. At the annual election of Directors held January 11, 1869, six of the eleven members chosen to constitute the Board were Union Pacific men, namely: T. J. Carter, F. G. Dexter, John Duff, A. Lambert, J. B. Taft, and J. G. Tappan. The other five were W. A. H. Loveland, of Jefferson county; John Turk, of Clear creek; and Henry M. Teller, Truman Whitcomb, and E. K. Baxter, of Gilpin.

Through 1869 but little progress was made on the Colorado Central, consideration in detail of the various reasons for which would be unduly tedious here. Loveland had some of the same difficulty in getting active assistance from the Union Pacific that our own people had encountered; but their help came to him later. The road east from Golden was to be of standard gauge, while that part of it up Clear creek canon was to be of narrow gauge. The entire line had been projected and surveyed as a standard gauge, but the great, if not at that time prohibitive, cost of a standard gauge road in that winding canon had later made it imperative to adopt the narrow and more adaptable track.

In 1870 when the Denver Pacific and Kansas Pacific roads were approaching completion, active construction work was resumed on the Colorado Central eastward from Golden and was continued without interruption until the line was completed to a junction with the Denver Pacific and Kansas Pacific in September of that year. It was ironed and equipped by the Union Pacific, and the first train passed over it between Denver and Golden on September 23rd, using the Denver Pacific track from the city to the junction. We may state here that in October, 1874, the line was changed to the present more direct route into the city. Upon the opening of the road to Golden the stages that had operated between Denver and the Clear creek mining towns made Golden their eastern terminus.

The Union Pacific people had come to the active support of the Colorado Central in 1870, principally because the Denver Pacific that at one time had promised to be their connecting line to Denver and the Colorado mining districts, had become practically a part of the Kansas Pacific, thus compelling the Union Pacific to adopt other means for securing the business of the Colorado country. An ambitious campaign was planned and opened for the Colorado Central. In 1870 the narrow gauge line from Golden up the Clear creek canon was located, and construction work on it was begun soon afterward. At the same time a standard gauge road was surveyed direct from Golden down the valley of the Platte to Julesburg, which was intended to be the main line, leaving Denver off to one side and reached by the branch road to the junction with the Denver and Kansas Pacific roads. This Golden-Julesburg road was located by way of the Marshal coal-fields, Boulder, Longmont and Greeley, and in July, 1872, Boulder county voted it $200,000 in bonds, and Weld county $150,000. Work on the road began in September, 1872, and by midsummer of 1873, the track had been completed from Golden to Longmont and opened for traffic. The panic of 1873 stopped further proceedings on that line and they were never resumed by Loveland. As will presently be made clear, some of his operations involved expenditure of large sums of money that proved to be a total loss. In later years the present Union Pacific "cut-off" road from La Salle to Julesburg occupied part of that Golden-Julesburg route, and still later the track was taken up from a part of the section that had been completed between Golden and Longmont. The Golden-Julesburg line, in connection with the road up Clear creek canon, was designed to defeat construction of a road direct from Denver across the mountains; an enterprise conceived about that time by John Evans, and to which we will presently again refer. At that period the rivalry between railroad undertakings represented by John Evans and his associates on behalf of the Kansas-Denver Pacific roads and Denver, and by Loveland and his associates on behalf of the Union Pacific and Golden, had become of great bitterness, and soon developed feelings of personal hostility between the rival leaders.

The narrow gauge division of the Colorado Central from Golden up the canon of Clear creek was a tedious piece of construction. In 1871 Gilpin county had voted $300,000 of bonds in aid of the road on condition that it should be built to Central City and Nevada, and that it should be completed to Black Hawk by May 1, 1872. Physical conditions in the canon prevented the company reaching Black Hawk on time, and it lost the bonds. A new arrangement was then made with Gilpin county under which $250,000 of bonds were voted upon condition that the road be completed from Golden to Forks Creek by September 1, 1872, to Black Hawk by January 1, 1873, and to Central City within one year. The road was finished to Forks Creek on time, to Black Hawk on December 15, 1872, and to Floyd Hill on the Georgetown division in March, 1873. Progress beyond Black Hawk at that time was interrupted by engineering difficulties, but before a satisfactory solution of them was found the panic of 1873 brought all railroad construction in Clear creek canon to a standstill, and it remained so for several years.

Another part of the Colorado Central's plans to isolate Denver and concentrate railroad influences at Golden was the construction of a road south from Golden to a junction with the Denver & Rio Grande line near Littleton. The roadway of about eighteen miles was graded in the spring and summer of 1873 but, in common with the Golden-Julesburg enterprise, the Golden-Littleton project suddenly went down in the financial gale of that year, and was never revived.

The years 1872 and 1873 were, as we have mentioned, times of great turmoil between rival railroads, rival railroad projects and rival railroad builders in the Denver region. Soon after the Kansas and Denver Pacific roads had been completed, thus forming the "Eastern Division" of the Union Pacific as contemplated by Congress, a violent war broke out between the two routes. Congress intended that they should co-operate, and exchange and divide business with each other, but the Union Pacific refused to recognize the Eastern Division, and diverted from it all business that the stronger road could control. To better enable the Kansas Pacific to meet its adversary, John Evans resigned the Presidency of the Denver Pacific early in March, 1872, and was succeeded by General R. E. Carr, who was also President of the Kansas Pacific. This gave the latter absolute control of the route from Kansas City to Cheyenne and made the Eastern Division one route in fact, although the Denver Pacific remained nominally a separate corporation. The next step was to organize a company to build a road from Denver directly west across the mountains to a connection with the Central Pacific in Utah, so that the Eastern Division might later become independent of the Union Pacific. For this purpose the "Denver, Georgetown & Utah Railway Company" was incorporated March 9, 1872, and organized with R. E. Carr, President; John D. Perry, Vice President; R. R. McCormick, Secretary; and David H. Moffat, Treasurer; Governor Evans acting as advisor and forwarder of the enterprise. The road was to extend from Denver by way of Mt. Vernon canon to Idaho Springs, and thence to Georgetown and over the range to Utah; with a branch to Central City, and a division northwest from Denver through the coal fields and up into the Middle Park and North Park countries. In April, 1872, Clear Creek county voted $200,000 in bonds to aid construction of the road, having lost faith in the intentions of the Colorado Central company; and in November of that year Arapahoe county, always liberal with its railroad bonds, voted $100,000 worth to the enterprise. None of these bonds were ever issued. This movement on the part of the Kansas Pacific interests had aroused the Colorado Central people to extreme activity in Clear creek canon and was largely the cause of their road being completed to Forks Creek and Black Hawk in the autumn of 1872; and that advance of the Central up Clear creek caused a change of plan by those interested in the Denver, Georgetown & Utah, and that proposed road as an independent mountain-crossing enterprise was in itself abandoned.

View in Golden in the later Sixties.

Prior to that time, John Evans and his Denver associates had projected yet another railroad from Denver into the mountains—the Denver and South Park line, of which we will presently relate the history. At the close of September, 1872, a company to build this road was incorporated, and it was anticipated that the Denver, Georgetown & Utah company might, by branching from the South Park line at some convenient point, build by way of Idaho Springs and Georgetown across the range into Utah; or, that the Denver & South Park company might, itself, build into Utah. In 1872 the need for the Kansas Pacific having an independent friendly outlet to the west was very great, for its relations with the Union Pacific had gone from bad to worse, and it saw starvation not far ahead of it. But subsequent changes in the plans and route of the South Park enterprise, as mentioned in our account of that undertaking, and the effects of the panic of 1873 on railroad building everywhere, ultimately resulted in permanently denying to the Kansas Pacific the coveted outlet from Denver west across the mountains.

Aside from the embargo it placed upon railroad building in Colorado, as elsewhere in the United States, because of the adverse effect it had upon investment of capital in new railroads, the panic of 1873, as we have mentioned in another chapter, did not entail very grave consequences in Denver; the most serious having been the shrinkage of local business due to railroad builders becoming unemployed. So far as the struggle between the Union Pacific and Kansas Pacific and their respective allies was concerned, the panic left the former rather in the lead, for the Colorado Central had managed to establish itself in the canon of Clear creek, while the Kansas Pacific was still helplessly at the mercy of its great rival. There was no more railroad building around Denver for several years, and in the meantime the Kansas Pacific became so seriously crippled that its situation and condition were almost desperate.

Somewhat prior to 1875 the Union Pacific people had determined to acquire control of the entire Kansas Pacific route from Cheyenne to Kansas City. As a step toward that end they proposed in that year a reconciliation with the Kansas Pacific and a consolidation of the Colorado Central with it on a basis that would have destroyed four-fifths of the nominal value of the stock held by the counties which had voted bonds to aid the construction of the Central. An agreement to that effect was made between the principal two companies in April, 1875, and under the management of Henry M. Teller, who was President of the Central at that juncture, it was ratified by the Directors of the Central at a meeting held in Golden in December of that year. Loveland, though a Director, had not been taken into the secret and, while he had heard vagrant rumors of the contemplated consolidation, his first actual knowledge of it came as a surprise at that meeting of the Directors. The lease went into effect at once, the Kansas Pacific took possession, and for a few months thought it saw the beginning of the end of some of its troubles.

But Loveland was merely biding his time for upsetting the arrangement. In May, 1876, a meeting of the Central's stockholders was held at Golden. On alleged illegality of the proxy presented by the representative of the Union Pacific, all the holdings of that company in the Central's stock—which constituted a majority of the shares—were denied a vote. Boulder, Gilpin and Jefferson counties, which had refused to give up their stock under the terms proposed, although their bonds had not yielded much more in cash than half their nominal value, wrathfully sustained this proceeding. The meeting then utterly repudiated the action of the company's Directors in the previous December, and elected a Board opposed to the consolidation project. The new Board elected Loveland President of the company in place of Teller, and prepared for war.

The consolidation scheme had aroused the indignation of the people of Gilpin, Jefferson and Boulder counties to a high pitch, and they were ready to support Loveland by force of arms. Refused possession of the road by the Kansas Pacific management, Loveland's forces physically took possession on May 21, 1876, without encountering serious opposition. Then the Union Pacific went into Court at Boulder with a suit for $1,500,000 for materials, rolling stock, and so on, alleged to be due it from the Central, and enjoined the Loveland management from doing a great variety of things. On August 12th David H. Moffat, Jr., was appointed Receiver for the Central by Judge A. W. Stone of the Second Judicial District, and this precipitated events that made a great time all around.

The unfaltering Loveland was not dismayed by these proceedings, and held firm his grip on the railroad. As that term of Court was near its end and would terminate with August 15th, the Central people, or those acting for them, concluded that the Receivership proceedings could be interrupted by capturing Judge Stone and holding him until after the limit of the term. So, when the Judge was on his way from Denver to Boulder in the morning of August 15th to qualify Receiver Moffat, his train was stopped at Ralston creek, the Judge forcibly taken from it by a band of armed masked men, and carried off up into the foot-hills. The abductors had expected to capture the Receiver, also, on that train, but he had taken the other road to Boulder, and so escaped. News of this remarkable proceeding created a tremendous sensation in Denver. Loveland telegraphed Governor Routt of what had happened, and asked authority to organize a party to pursue and capture the bold captors of the Judge. Routt referred him to the Sheriff of Boulder county, urged immediate action by that officer, and solicited Loveland's co-operation. But matters were so managed at the Boulder end of the line that Judge Stone's hosts were given plenty of time to get well up into the foot-hills. News of this delay reached Denver late in the afternoon and added fresh fuel to the public excitement. Rumors that the Sheriff of Arapahoe county was preparing to lead a force in pursuit of the brigands caused all sorts of men with all kinds of weapons to congregate at the railroad station to take train for the hunting grounds. But they did not get to go.

In the evening of that day the Governor peremptorily extended the term of Court and assigned Judge A. W. Brazee to go to Boulder and to open Court and remain there until disposition was made of the judicial business in hand. The Governor's Guard was mobilized under Arapahoe county Sheriff D. J. Cook, who was also a Brigadier General of militia, and the military-judicial expedition, the Governor accompanying it, reached Boulder about ten o'clock that night, where Court was immediately opened.

In the meantime Judge Stone's captors had kept him moving. He had been put in a carriage, driven up into the foothills to a ranche-house, where a supper was obtained. After night the party proceeded on horseback to a point near Golden, the brigand escort of twenty-four men wearing their masks all the while. There the Judge was put into another carriage with two of his masked captors and driven to Denver where he was released in front of the Alvord House late at night—or early in the morning—and none the worse for his adventure; his brigand friends having treated him with great courtesy and consideration while he had been in their custody. The identity of none of them ever became publicly known.

Judge Stone then went to Boulder with a military escort, approved Receiver Moffat's bond, and ordered the Colorado Central surrendered to him. The Receiver's demand for possession was refused, and a writ from Judge Stone on August 21st failed to accomplish that end. Loveland managed to retain his hold, and in November, Colorado having become a State in the meantime of the contentions, the judicial proceedings were transferred to the higher United States Courts. There they were see-sawed back and forth, and in February, 1877, the Union Pacific began another suit against the Central, for $2,000,000, for rolling stock, track material and damages. The resourceful Loveland met and parried this attack, and then the Union Pacific people capitulated. The Kansas Pacific having been ousted by Loveland from its brief possession of the Central, and in its generally dejected state of mind having concluded that the consolidation scheme had been made by Loveland a hopeless proposition, had resumed its old rate-cutting war on the Union Pacific, and which had destroyed the recent amity between the two that had grown up with the scheme to dump the Colorado Central into the Kansas Pacific's nearly empty hopper. In its surrender, the Union Pacific agreed to stop all litigation, to retain Loveland at the head and in command of the Colorado Central, and to at once provide means for the immediate extension of the Central's lines, under Loveland's direction; all of which was done, but about two years later Loveland was forced out of the great railroad system of which he had been the life and soul from its conception in early Territorial times.

The people of Boulder, Jefferson and Gilpin counties had heartily approved Loveland's daring methods, while those of Denver bitterly denounced them. Loveland's railroad operations had, from the beginning, been a menace to Denver, and while the people here could not refuse recognition of his remarkable ability as a leader, they had long and with reason regarded him as inimical to this city's progress; though at the time of these happenings all grave danger from his railroad operations had passed away.

Immediately after the treaty of peace, the Colorado Central entered upon an active campaign of railroad construction. The Clear creek line was extended from Floyd Hill to Georgetown and opened in August, 1877. Soon afterward Loveland contemplated extending this road to Leadville, but the operations in that direction by the South Park line and the Denver & Rio Grande caused him to abandon the project. On the Central City branch of the Central, beyond Black Hawk, the "switchback" method of overcoming the physical obstacles was adopted, and the road was completed to Central on May 21, 1878. Because of the delay in reaching that point the Gilpin County Commissioners withheld $50,000 of their county's bond subsidy that had been voted several years before. But the most important of the construction was the extension of the Golden-Longmont standard gauge road from Longmont north through Fort Collins to a junction with the Union Pacific four or five miles west of Cheyenne—at "Colorado Junction" as it was called; the "Colorado Central Railroad Company of Wyoming" having been organized to build the Wyoming mileage. This work was done in 1877 and the road opened for business on November 7th. This new road gave the Union Pacific access to Denver and to the Clear creek mining districts over lines directly under its control and made the Colorado Central what it was long intended to be—practically a part of the Union Pacific. It meant still leaner business for the Denver Pacific division of the Kansas Pacific, for the Union Pacific routed everything it had for Colorado, over the new line.

This condition of affairs brought on a violent rate-war between the rival lines which soon resulted in an agreement under which both roads charged "all the traffic would bear," and often a great deal more. The Kansas Pacific passed to the control of the Union Pacific in 1879, and then instead of the high pool-rates, a system of still more outrageous extortions was inaugurated and that continued for several years.

In November, 1879, the Union Pacific leased the Colorado Central for fifty years; and until the organization of the Union Pacific, Denver & Gulf company, operated it as part of the Union Pacific system. Loveland, who had been continued at the head of the Central, was then displaced and cast off by those who were most indebted to his energy and ability. But in the lexicon of Jay Gould and his associates such considerations had no place. Loveland engaged no more in extensive railroad building, and he had quit it with very little to show for his twenty years of tireless, heroic, work in behalf of the system of roads he planned in pioneer times; but only a part of the great whole he had in view had been constructed. His purchase of the Rocky Mountain News in 1878, and his acquisition of other interests here, identified him with Denver during the remainder of his life which terminated December 17, 1894. The Colorado Central proper when he left it consisted of the following-named lines with mileage as stated:

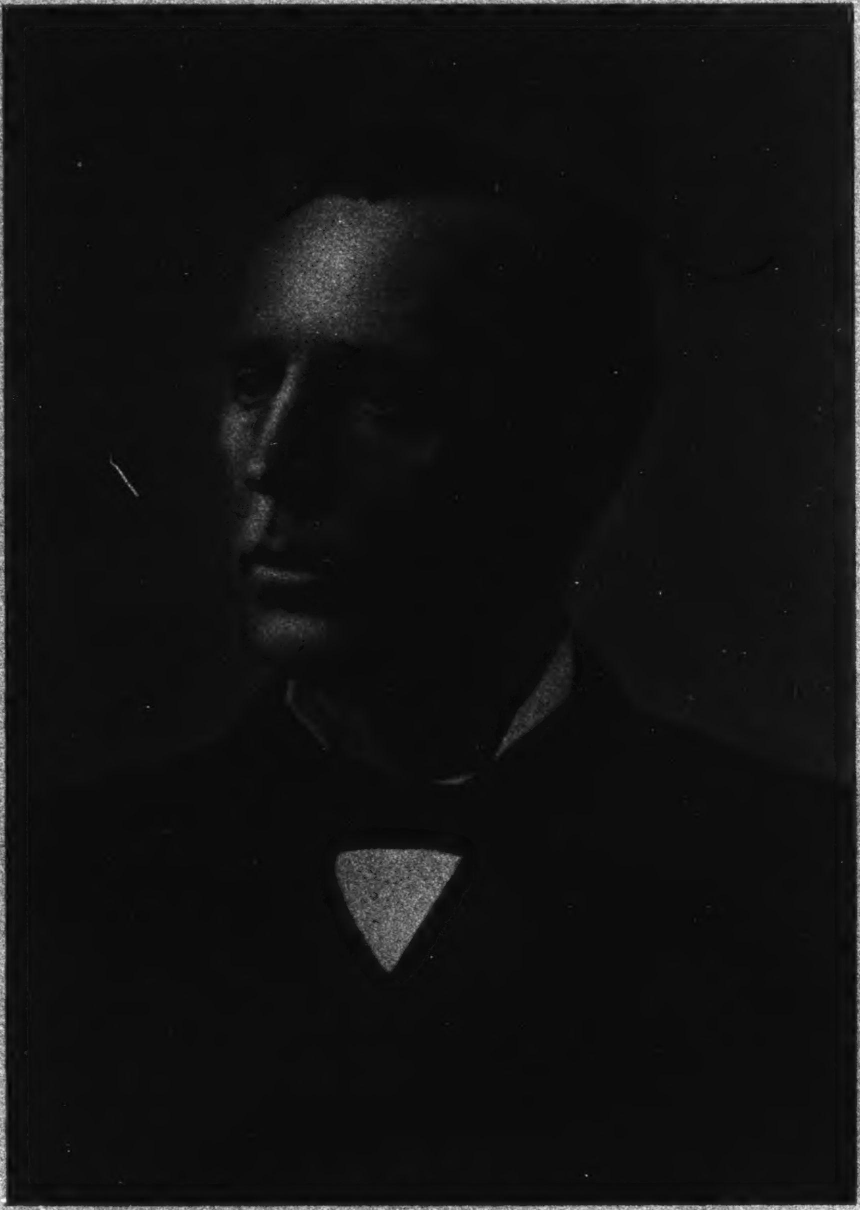
William Austin Hamilton Loveland was born in Chatham, Mass., May 30, 1826. In 1837 his parents removed to Illinois and, taking up land near Brighton, began pioneer farm-life in that State. After attending McKendree College at Lebanon, Ill., and Shurtleff College at Upper Alton, Mr. Loveland went with the American army into Mexico and was severely wounded at Chepultepec. In 1848 he returned to his Illinois home, and in the spring of 1849 crossed the plains to California and was there among the pioneer miners in Grass Valley. Failing to find gold enough to make his stay there profitable, he went to Central America and thence, in 1851, back to Illinois where, for several years afterward, he was engaged in merchandising.

In the spring of 1859 he crossed the plains to the Rocky Mountains, with an ox-train laden with a stock of general merchandise, and halted on the site of Golden. As we have related, he was one of the founders of that town, immediately became the leader of the community, and his store was its headquarters. In his determination to make Golden the Colorado metropolis, he personally influenced its selection in 1862 as the seat of the Territorial government, which he kept there until the close of 1867 despite several attempts to have it removed, and then lost it only in consequence of applied ways and means the details of which may well be left to sink into oblivion.

Of Mr. Loveland's career as a Colorado pioneer, as a road-builder, a Captain among the people, a projector and executor of great undertakings, as a State builder, the particulars appear in more than one chapter of this volume. A man of great force of character, of extraordinary energy and executive ability, an enthusiast in his faith in this Colorado country, an unwavering friend to his friends and a tireless antagonist to his opponents, and withal gentle, kindly and lovable in his personal relations, his is one of the heroic figures in the history of this Denver region.

As we have elsewhere mentioned, he became in later years of his eventful life identified with large affairs in this city, and practically one of its citizens. In 1888 after he purchased control of the Rocky Mountain News, and having always been an ardent Democrat, he was nominated as his party's candidate for Governor of Colorado; but with the rest of his ticket failed of election.

Mr. Loveland died December 17, 1894, at Lakewood, where he had established his residence in 1888.—J. C. S.



W. A. H. Loveland.

Denver to Golden, 3 rails, completed in September, 1870	15.10
Golden to Forks Creek, narrow gauge, completed in September, 1872	13.30
Forks Creek to Black Hawk, narrow gauge, completed in December, 1872	7.77
Forks Creek to Floyd Hill, narrow gauge, completed in March, 1873	3.30
Golden to Longmont, standard gauge, completed in April, 1873	39.15
Floyd Hill to Georgetown, narrow gauge, completed in August, 1877	18.13
Black Hawk to Central City, narrow gauge, completed in May, 1878	4.00
Longmont to Colorado Junction, standard gauge, completed in November, 1877	72.52
Total	173.27

A part of the agreement under which the Kansas Pacific Company co-operated in completing the Denver Pacific was that a railroad should immediately be built from Denver to the coal-fields in Boulder county to insure a supply of fuel here for the engines of both roads. In the autumn of 1870 the Denver & Boulder Valley Railroad Company was organized with a Board of Directors consisting of John Evans, J. B. Chaffee, David H. Moffat, Jr., Walter S. Cheesman, P. M. Housel, Granville Berkeley, and W. J. Palmer. J. B. Chaffee was elected President; Walter S. Cheesman, Vice President; R. R. McCormick, Secretary; and David H. Moffat, Jr., Treasurer. The road was really to be a branch of the Denver Pacific and that company guaranteed $300,000 of its bonds, to provide for construction. Work began on October 24, 1870, at Hughes station (now the town of Brighton) on the Denver Pacific, and a line fifteen miles long was completed to the Erie coal-field in Boulder county and opened for business on January 24, 1871. Its proprietary interests organized the Boulder Valley Coal Company, and established the coal-mining village of Erie at the terminus of the road. The citizens of Boulder were vitally interested in having the road extended to their town, and by subscriptions provided means for preparing the roadbed ready for the rails, the railroad company agreeing to put down the track and operate the road. The Boulder people began grading in March, 1871, and completed the work within a few months, but the railroad company long delayed its part of the contract. In June, 1872, the extension grade was transferred to the Boulder Valley company in expectation of its immediate completion, but there were more delays, and it was not until September 2, 1873, that it

---

Sylvester T. Smith, late President of the Florence & Cripple Creek Railroad, has long been identified with railway management in the west. He is a native of New York State, having been born in Buffalo, June 20, 1840. His parents, of English descent, were also born in that city, where they resided until 1858, when they removed to Kansas. The son had received a good education in the excellent schools of Buffalo, and continued his studies after he went with his parents to Kansas, although civic conditions in that Territory at that time were not very favorable to educational pursuits.

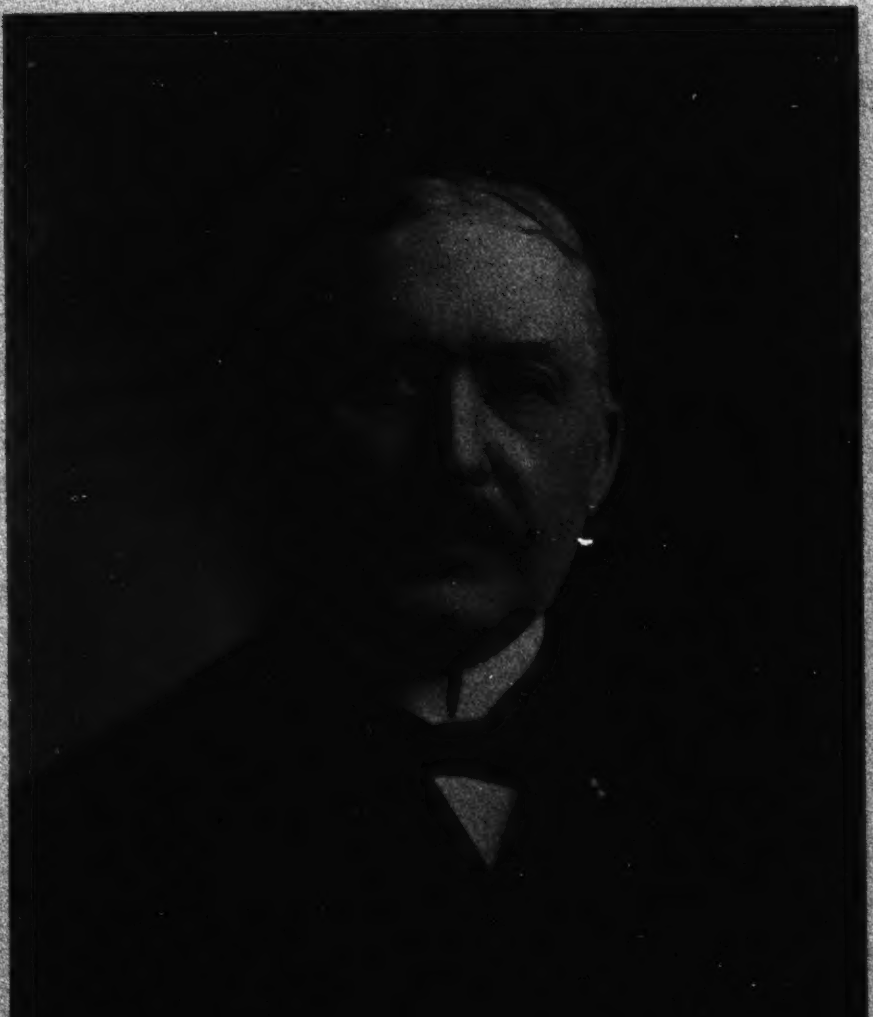
When the great civil war began and the call for volunteers was made by the President, Mr. Smith enlisted as a private in Company B, First Regiment of Kansas Volunteers. Before the close of 1861 he was advanced to the rank of First Lieutenant, and in 1862 became a Captain. In 1863 he was made Assistant Adjutant-General on the staff of Brigadier General George W. Dietzler.

In the autumn of 1863 Mr. Smith resigned from the army and within a few months afterward entered upon his long and successful career in railroad management. On February 1, 1864, he began as cashier and general accountant of the Kansas Pacific Railroad, the construction of which had but recently begun at its eastern end. He remained in that position until February, 1867, when he became auditor of the company, and so continued until October 22, 1878. In the meantime the road had been placed in charge of Henry Villard and Charles S. Greeley as Receivers. On November 1, 1878, the United States District Court appointed him Receiver to succeed Villard and Greeley; and in the spring of 1879, when General Superintendent T. F. Oakes resigned, the duties of that position were assumed by Mr. Smith in addition to those of the Receivership.

A few months later the road passed into the hands of the reorganized Kansas Pacific Railway Company, and Mr. Smith was appointed its General Superintendent, a position he retained until October, 1884, when he was called to be the General Superintendent of the great system of the Union Pacific Railway; in which capacity he served until the close of April, 1887. In the spring of that year the Directors of the Denver & Rio Grande Railroad were looking about for a General Manager of their system and unanimously tendered the position to Mr. Smith. He accepted, left the Union Pacific on April 30, and assumed his duties with the Rio Grande two days later. He remained General Manager of that road until 1892, when he resigned to give his attention to mining properties he had acquired.

In 1893, when the necessity for railroad connection into the new Cripple Creek mining camp became imperative, Mr. Smith became identified with the organization of the Florence & Cripple Creek Railroad Company and the construction of that road, of which he later became the President and General Manager. He retained these relations to the Florence & Cripple Creek line until early in 1900 when he retired to give attention to his private affairs and for a brief period of relaxation.

The foregoing, which is a mere summary of Mr. Smith's long and active career, will suggest to the reader something of his usual executive ability. Entering the Union army as a private soldier in the ranks, within two years he became an Assistant Adjutant-General. Beginning as cashier and accountant of a railroad which itself was only beginning, in a few years he was the manager of transcontinental systems. He has proved by his works his right to be recognized as an exceptionably able manager of railways.—J. C. S.



Sylvester T. Smith.

was finished to Boulder and opened for business. The track is now the Boulder branch of the Union Pacific which owns and operates what was once the Denver Pacific railway.

The year 1870, as will be noted by the reader, was one of great activity in both railroad construction and railroad projection in the Denver region, and in the autumn of that year the "Denver & Rio Grande Railway Company" was born. A railroad southward from Denver had been projected by a company of Denver men in 1868, before there was a foot of railway track in Colorado except the few miles of the Union Pacific clipping the northeast corner of the Territory. They organized in that year the United States and Mexico Telegraph Company, and the United States & Mexico Railway Company; and of their operations in telegraph building and railroad planning at that time something is told in another chapter. But as an actual undertaking the Denver & Rio Grande was, more than to any other man, due to General William J. Palmer who, as our reader has seen, was conspicuously identified with the completion of the Kansas Pacific and Denver Pacific roads. The proposition to immediately construct such a railway under existent conditions was a daring one, because it meant building into and through a country then almost uninhabited; and to do it with private capital. General Palmer's plans were not entirely fulfilled, but so far as they have since been carried out by the Denver & Rio Grande in Colorado, his conceptions were followed. His ideas called for a main line south from Denver along the base of the mountains, with branches penetrating the recesses of the Rockies which he declared would be required and supported by the development of the mineral and other resources of the Territory that would begin immediately, since railways had at last reached Denver. He also anticipated, and the plans of his company were made with that end in view, that the trunk line of the road should ultimately but at no distant time be extended through to El Paso, Texas, a distance of 850 miles from Denver.

During the earlier period in which the Kansas Pacific Company was hoping and expecting to build through to the southern California coast, General Palmer had traversed on horseback the country between western Kansas and the coast by way of Pueblo, Trinidad, Las Vegas, Albuquerque, Fort Wingate, Mojave and Los Angeles to San Diego, for the purpose of verifying the practicability of building the Kansas Pacific through that way. He then believed that if the Kansas Pacific did not build through that country, some other road would before many years; and later events justified his conclusions. But he was especially impressed by the natural resources of the southern Colorado country east of the range, and it was while on that journey that he conceived the idea of building a road southward from Denver, no matter what might prove to be the future course of the Kansas Pacific.

Arrangements for the organization of the Denver & Rio Grande company were concluded early in October, 1870, and it was incorporated on the 27th of that month by General Palmer, former Governor A. C. Hunt, and W. H. Greenwood. The first Board of Directors consisted of Palmer and Hunt, of Colorado; W. P. Millen, of New York; R. H. Lamborn, of Philadelphia; and Thomas J. Wood, of Dayton, Ohio. These elected General Palmer, President; Lamborn, Vice President; Howard Schuyler, Secretary and Treasurer; Samuel E. Browne, Solicitor; J. P. Mersereau, Chief Engineer; and W. H. Greenwood, Superintendent of Construction. The company's capital stock was placed at $14,000,000, and the road was to be bonded at the rate of $10,000 per mile. General Palmer, in whom capitalists had unbounded confidence, had arranged in the east for these financial sinews, and the company was prepared to begin building as soon as the route southward could be located and surveyed.

While the Denver people of that period believed almost anything within reason were possible if guided by the indomitable Captains of that time, most of them thought Palmer's enterprise was rather outside the border line of reason, and not a few regarded it as a wild project that would bring financial ruin to every man who became an owner in it; and that if the road were built even no farther than the southern limits of Colorado it would not be long operated before starvation would cause its abandonment. South of Colorado the long way to El Paso was through an inhospitable region then practically uninhabited by Americans and, it was supposed, always would be. Nearer home the conditions from a railroad standpoint did not seem much better. At that time the Colorado country through which the road was to be built was occupied by but few people. Colorado Springs, of course, did not exist. Pioneer Colorado City, the erstwhile capital of the Territory, had retrograded to a mere hamlet of cabins, occupied by a few dejected beings who were staying there rather from force of habit than for any brilliancy of future their "city" could promise. Pueblo was an ugly, straggling village of no great importance, and between it and Colorado City there were but a few ranchmen. Denver, as the reader knows, was then a small town, Littleton an insignificant place, and thence south to Colorado City the country was almost unoccupied. The Denver-Pueblo stage line considered itself fortunate if it carried two-dozen passengers each way weekly, and it is doubtful if there were 500 people, all told, permanently settled along the route of the road between Denver and Pueblo. The mountain districts the road was to serve had yet to receive a population that would need railroad service.

Nevertheless, it was into such a country that the main line was to be built, and in which it was to create a supporting business. The company had decided that its system of roads should be of the narrow (three-foot) gauge Prior to that time the advantages of such railroads for mountainous districts had begun to attract much attention, chiefly because of the cheap and successful construction and operation on heavy grades and sharp curves of the Festinaog Railway in the mountains of Wales, though there were also several similar roads in Europe. Preparations for the construction of such roads in the eastern part of the United States were then under way, and before the Denver & Rio Grande Company was organized, the Colorado Central had decided to make its Clear creek canon road of narrow gauge. It has been made to appear in bygone times that the Denver & Rio Grande was the pioneer in preparing for the introduction of that system of roads here in the west; but that was an error.

Congress having willingly granted the Denver & Rio Grande company right of way through the public lands, the intermediary of a construction company, the Union Contract Company, was employed to build the road, and it began grading, at the Denver end, in March, 1871. Track-laying was begun, in Denver, at the foot of Fifteenth street on July 27th of that year, with some ceremonies, and several speeches appropriate to such an occasion addressed to a medium-sized crowd of rather incredulous people. The rails were light—thirty pounds to the yard, and the road was built with thirty-two degree curves and ninety-foot grades. Construction proceeded rapidly, and the seventy-four miles to Colorado City were completed on October 21, 1871; less than ninety days from the time the first rail was laid.

As rolling-stock for such a road, for either construction work or initial traffic, could not be obtained by buying or borrowing from near neighbors, the company had provided itself in advance with three engines and some flat-cars. These arrived before track-laying began, and soon afterward several cars for passenger train service and some for freight were received. They seemed like toys, and were much smaller and lighter than present narrow-gauge equipment. The passenger locomotive had four wheels, connected, and weighed 25,000 pounds; those for freight had six wheels, connected, and weighed 35,000. The passenger and freight cars were proportionately small, and altogether the rolling-stock outfit, still further dwarfed by the towering mountain ranges along the base of which it crept, seemed better adapted to the amusement of children than to the initial operations of what the orators had promised was to become a great system of railways. Some people speculated as to whether it would really hurt very much to be run over by one of the trains, and as to what would become of the train if such a mishap occurred.

The Denver & Rio Grande company had neither asked nor received public aid in the construction of its line to Colorado City. When plans for its farther southward extension were under consideration, the people of Pueblo became interested in having the road diverge to the eastward from the contemplated due south route, and make their town a point on the line. Early in March, 1872, a public meeting was held there at which General Palmer and Governor Hunt, and R. E. Carr, at that time President of the Kansas Pacific, were present. The latter stated that his road was prepared for a reasonable issue of Pueblo county bonds, to give Pueblo an almost direct connection with the east by building a southward division of the Kansas Pacific from Kit Carson, Colorado, by way of Fort Lyon to Pueblo; and that the road would ultimately be continued to the Pacific coast. Palmer and Hunt presented the merits of their road and won their case. In June of that year Pueblo county voted $200,000 of bonds in exchange for stock in the road. This result had been so well assured that construction from Colorado City to Pueblo had been put under way in March, and the road was completed and opened for business to Pueblo on June 29th. The arrival of the first train was made the occasion of a great celebration, and from that time Pueblo dates her transformation from a straggling, sleepy, more than half-Mexican village to a busy, growing, progressive young city.

The Denver & Rio Grande road was largely a Philadelphia enterprise. General Palmer, though a fine fighter, was a Quaker City man, and nearly all of the capital invested in the road under Palmer's administration came from that city.

It would be tedious to enter far into details of constructing the various extensions and new lines subsequently built and that now constitute the great system of the Denver & Rio Grande; a few of the more important facts being believed to be sufficient. The line up the Arkansas river from Pueblo was built to the coal field near Florence in 1872, and was extended to Canon City in 1874. In 1876 the company built south from Pueblo to El Moro, with a branch from Cuchara to La Veta. In 1877 the La Veta branch was extended through La Veta Pass, and completed to Alamosa, in the San Luis valley, on July 4, 1878. Extension of the Pueblo-Canon City branch west to Leadville, through the Grand Canon of the Arkansas, initiated early in 1878, was resumed in the autumn of 1879 and completed to Salida in May, 1880; and to Leadville two months later. The line west from Salida, through Marshal Pass to Gunnison, was undertaken in May, 1880, and completed to Gunnison in August, 1881; and to Crested Butte in October of that year. Early in 1880 extension of the La Veta

Pass-Alamosa line was begun, over the Conejos range to Durango, with a branch from Antonita to Espanola, New Mexico. The latter was finished in December, 1880, and the line to Durango, in July, 1881. In June, 1880, a branch was completed from Alamosa to Del Norte, and extended to South Fork in November of that year. In April, 1881, a branch was finished from near Canon City, up Grape creek to Silver Cliff, but on account of repeated damages by floods, was abandoned in 1887. However, a new line is now approaching completion into the Wet Mountain valley on a somewhat different route, by the Rio Grande Railroad Company, a subordinate corporation. The road will be twenty-five miles long, extending from Texas creek station in Fremont county, to Westcliffe in Custer county, and involves some unusual feats in mountain railroad building. The Villa Grove branch from Mears Junction on the Gunnison line, south to the upper end of the San Luis valley, was completed in September, 1881, with a branch to the iron mines at Orient. The extension from Leadville, through Tennessee Pass, to Rock Creek, was finished in February, 1882; the extension from Leadville, north by way of Fremont's Pass to Dillon, on the Blue river, in November, 1882; and the Gunnison extension west through Montrose, Delta, and Mesa counties, reached Grand Junction in November, and the Colorado-Utah line on December 19, 1882.

About that time the Pleasant Valley Railway of Utah, extending from Provo to Clear Creek, Utah, was purchased by the Rio Grande Western Railway company and extended east by way of Spanish Fork and Price River canons to a connection with the Gunnison extension at the State line. This connection made a through narrow gauge line from Denver to Salt Lake City, and a year later was completed on to Ogden, making connection with the Central Pacific Railway at that point. This line was operated as one road from Denver to Ogden until the latter half of the year 1884, when the Rio Grande Western Company commenced the operation of its line from Utah State Line to Ogden under separate management; and in December, 1889, the latter-named company leased from the Denver & Rio Grande that portion of its road between Utah State line and Grand Junction, since which time the Rio Grande Western has operated under separate management from Grand Junction west.

In July, 1883, the Denver & Rio Grande completed a branch from South Fork to Wagon Wheel Gap which, after the developments at Creede several years later, was finished eleven miles to that camp, in November, 1891. In 1886 the Texas, Santa Fe & Northern Railway Company (a subordinate organization) built a narrow gauge road from Espanola to Sante Fe which enabled the Rio Grande to reach the New Mexico capital; and in August, 1887, the Rio Grande's El Moro line was extended to Trinidad to connection with the Atchison, Topeka & Santa Fe road. Early in 1887 the Aspen district had developed, and the extension west of Leadville, terminating at Rock Creek, was hurriedly built down the canons of Eagle and Grand rivers to Glenwood, and up the Roaring Fork to that camp, which was reached in October. At that time a branch line from Montrose to Ouray was also constructed, and with which the Rio Grande Southern road, built in 1892, in the southwestern part of the State, made connection. In the spring of 1888 the short branch to Fort Logan was built, and in July, 1889, a branch from Sapinero, on the Gunnison extension, to Lake City; and another, from Glenwood Springs to Rifle; were completed.

Up to 1881 all the lines of the Denver & Rio Grande were of narrow gauge It then became important for the Company to have a standard gauge line between Denver and Pueblo, in order to com-

View on Market street in 1866, from near the old "Mint," looking southward.

pete for business from the Missouri river; and laying a third rail was completed on December 23, 1881, which resulted in an arrangement by which the trains of the Atchison, Topeka & Santa Fe were run through over the Denver & Rio Grande from Pueblo to Denver, and continuing until 1887. The Missouri Pacific having built to Pueblo during the same year enabled the Denver & Rio Grande to make a similar arrangement with that road, which is still in existence; and when the Chicago, Rock Island & Pacific was completed to Colorado Springs in 1890, the Rio Grande made an arrangement, which continued several years, for taking care of its Denver and Pueblo business.

These events had made the trans-continental importance of the Denver & Rio Grande apparent, and also made necessary the standard gauging of its Arkansas river canon mountain division a necessity. The Rio Grande Western Railway company, which, since December, 1889, had been in possession of the line west of Grand Junction, cooperated with the Denver & Rio Grande, and the work was pushed to a speedy completion in the autumn of 1890, from Pueblo, up the Arkansas, through Tennessee Pass, to Rifle, from which point the Denver & Rio Grande, in conjunction with the Colorado Midland, extended the standard gauge to Grand Junction (the joint line being now known as the Rio Grande Junction Railway); the Rio Grande Western continuing it on to Ogden.

In the meantime the road from Pueblo to Trinidad had been made of standard gauge. As this called for a transfer of business for points on the Alamosa extension through La Veta Pass, the Villa Grove extension was continued south to Alamosa in 1890 and all business for the San Luis Valley was then sent around that way. On account of the costly operation of the La Veta Pass line it was at that time closed, but late in 1891, after the excitement at Creede developed, the road was reopened to give the southern part of the State a more direct connection with the new camp, and has remained so ever since. In 1894 the branch from Crested Butte to Ruby, into the great anthracite coal fields, was constructed, and which affords an outlet for an enormous output of very fine anthracite coal. In 1896 the Rio Grande company bought outright what had been the Texas, Sante Fe & Northern railroad, which purchase gave it a complete line of its own between Denver and Santa Fe. In 1898 the revival of mining in the Leadville district called for the construction of the Ibex branch of seven miles to various mining properties, and which was opened on November 1, 1898; it having been the last addition of importance to Denver & Rio Grande mileage, proper, up to the close of our record. The road's connection with the Cripple Creek district is over the Florence & Cripple Creek Railroad, built in 1893-94, from Florence, on the Pueblo-Grand Junction main line. The Rio Grande Southern railroad in the western and southwestern sections of the State, extending from Ridgway on the Ouray branch, south by west to Dolores and thence east to Durango, was recently ingrafted on the Denver & Rio Grande system. This line of 172 miles was completed in February, 1892, and the company is a subordinate corporation having Denver & Rio Grande executive officers.

It having been demonstrated that the old La Veta Pass narrow gauge line to Alamosa, having a standard gauge connection at its eastern terminus, was impracticable in operation on account of that broken connection, it was decided in 1897 to make the La Veta Pass line of standard gauge also, and to locate the greater part of it on a new route having lower grades. This work was begun early in 1899 and completed in November of that year, giving the San Luis valley a standard gauge outlet to the east in addition to the narrow gauge route that now extends from Salida southward all the way to Sante Fe.

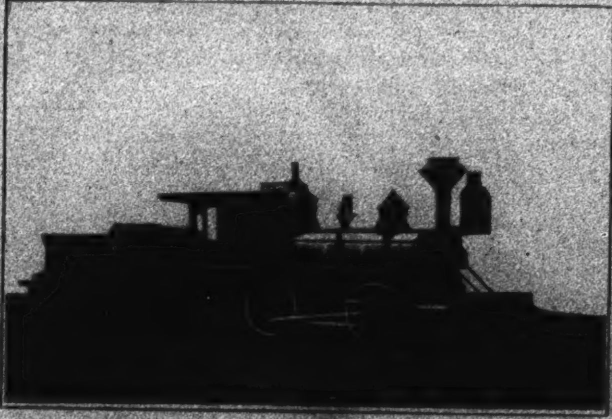
In 1900, the Rio Grande, Pagosa & Northern Railroad was completed from Pagosa Junction on the Rio Grande Southern, to Pagosa Springs in Archuleta county, a distance of 30.8 miles, and intended chiefly for lumber traffic. While the proprietary company is nominally independent, it represents Denver & Rio Grande interests.

In the foregoing is briefly outlined the origin and remarkable development of General Palmer's one time "baby railroad," as it used to be called by all Colorado people. Including late acquisitions, the system now embraces about 1,850 miles of railway, exclusive of its interest in the Rio Grande Junction road, and represents a total construction cost of nearly $110,000,000. Practically, the entire system is tributary to Denver, and its large shops in the southern part of the city constitute a great manufacturing establishment. The road's growth has not been more remarkable, however, than the wonderful development of the sections of the State it serves so well; yet, it is to be remembered that the road was itself the pioneer in nearly every part of the regions into which its tracks extend. It has been one of the great factors in the upbuilding of Denver and in making the Commonwealth of Colorado what it is.

The Denver & Rio Grande did not escape fierce rivalry and severe misfortune in the earlier years of its career. The advent of the Santa Fe road into southern Colorado in the middle "Seventies" was followed by the most remarkable conflict between the two companies, in the history of American railways; and their contest for possession of the canon of the Arkansas in 1878 brought conditions in the southern part of the State to the verge of civil war. The dispute was quickly taken into the Courts and ultimately the Supreme Court of the United

States decided in favor of the Denver & Rio Grande on nearly all the points at issue.

Late in 1878, a truce having been patched up between the two companies, the Denver & Rio Grande was leased to the Santa Fe for a period of thirty years, the Santa Fe engaging to proceed with the work of constructing the Rio Grande's line through the Grand Canon and on to Leadville while awaiting the decision of the United States Supreme Court in the litigation between the two companies for possession of the canon. The Santa Fe took possession of the Rio Grande's 337 miles of road in December, 1878. In the spring of 1879 war broke out again between them. As part of the proceedings by which the Denver & Rio Grande company sought to regain possession of its leased road, a Receiver for it was appointed by a State District Judge in the southern part of the State. The Rio Grande forces, aided by Sheriffs acting under orders from the District Judge, took possession of their road by force which occasioned some bloodshed; and again a small civil war was threatened. But, under a decree of the United States Court at Denver, the Santa Fe was later restored to possession, and the Receiver appointed by the District Judge discharged. On July 24, 1879, the United States Court here appointed another Receiver who continued in charge until April, 1880, the Supreme Court at Washington then having decided in favor of the Denver & Rio Grande company re-possessing its road. Therefore, the lease was cancelled, and a general compromise agreement for the future was made between the two companies; and since that time they have dwelt together in the State in as much peace as rival railways usually enjoy.



First Engine on the Denver & Rio Grande road.

General Palmer remained President of the Rio Grande until August, 1883, when he resigned and engaged in railroad enterprises in Mexico. He was succeeded by Frederick Lovejoy who soon got into turmoil with the Rio Grande Western company. The road's extensions had been overbuilt, its conflicts very costly, internal dissensions had arisen, and in consequence of it having defaulted in payment of interest on its bonds, it was placed in the hands of a Receiver in July, 1884. In February, 1885, David H. Moffat, Jr., was elected President of the company in place of Lovejoy; Moffat having prior to that time terminated his interests in what were called the "Evans roads." On July 12, 1886, the road was sold under foreclosure to interests which, on July 14th, organised the Denver & Rio Grande Railway Company, of which W. S. Jackson of Colorado Springs, was elected President. In May, 1887, Jackson retired and was succeeded by Mr. Moffat, who continued at the head of the company until the autumn of 1891. Much of the broad-gauging of the system, and a great mileage of narrow-gauge extension was done under his administration. In October, 1891, E. T. Jeffery, the present President, succeeded Mr. Moffat, and under his management the company passed through the financial storm of 1893 without the insolvency and the receivership that fell to the lot of almost every western railroad corporation. Since the re-adjustment of its affairs in 1884-86 it has had a prosperous career.

We deemed it inexpedient to give place in this volume to the details of the Rio Grande's memorable conflict with the Santa Fe, in the field by force of arms and in the legal arena. The field campaign was much like the strifes between feudal lords supported by their respective phalanxes of vassals, while the litigation growing out of the conflict was the most tortuous and extended from a legal standpoint, and the most exciting to the popular mind, ever known to arise from one group of circumstances in Colorado. Those affairs more properly belong to State history, and General Frank Hall in his History of Colorado has very elaborately dealt with them.

In the autumn of 1872 another ambitious railroad enterprise, to which we have already incidentally referred, was undertaken by a group of Denver men most of whom had been conspicuously instrumental in building the Denver Pacific. On September 30th the "Denver & South Park Railway Company" was incorporated by Joseph E. Bates, Walter S. Cheesman, F. A. Clark, Henry Crow, John Evans, Bela M. Hughes, Charles B. Kountze, David H. Moffat, Jr., and F. Z. Salomon, with a capital stock of $2,000,000, to build a narrow gauge railroad from Denver into the South Park country, with the ultimate view of extending it across the mountains and on to the Pacific coast. The incorporators with L. H. Eicholtz and John C. Reiff became the first Board of Directors, which elected John Evans, President; David H. Moffat, Jr., Vice

President; George W. Kassler, Secretary; and Charles B. Kountze, Treasurer.

Early in the spring of that year John Evans had resigned the Presidency of the Denver Pacific, that road had passed to the absolute control of the Kansas Pacific, and the Denver men who had caused its construction had withdrawn most of their personal interest in it. The Denver & South Park road was intended primarily as an offset to the Colorado Central's line up Clear creek, as a friendly western connection for the Kansas Pacific, and further, as a narrow gauge trunk line into and beyond the mountains. The theoretical popularity of narrow gauge railroads was then at a high stage all over the country, and many men believed they were destined to permanently displace all other types of road. The original route proposed for the Denver & South Park line was by way of Bear creek into the mountains and thence, by the most practical route, to and across the South Park; yet the entire region through which it was projected was practically uninhabited. There were a few houses at Morrison's stone quarry, but beyond there there was not even a hamlet this side of Fairplay, and the latter was not much more than a name. To make a beginning toward bettering this condition of things, the proprietary interests of the South Park road organized in October, 1872, the "Morrison Stone, Lime and Town Company," and platted the town of Morrison; though because of the few houses previously built there at the quarry the place had been called "Morrison" for some time before.

In June, 1873, the company was re-organized as the "Denver, South Park & Pacific" with its capital stock increased to $5,000,000. John Hughes took the place of Bates in the Directory, and the same executive officers were continued. Aid was asked from Arapahoe county, and on July 28, 1873, the people by a decisive vote authorized the County Commissioners to issue $300,000 of county bonds in exchange for an equal nominal amount of the railroad company's stock; one of the conditions having been that the road should be completed to Morrison within nine months. A subordinate corporation, the "Denver Railway Association," had been organized by the Denver & South Park interests, and by which surveys and other preliminary work had been done. In August, 1873, that association undertook the contract and began work on grading the road, between Denver and the Morrison townsite. The road was completed to Morrison July 1, 1874, and in consequence of conditions entailed by the panic of 1873 it made no farther progress for several years. The Platte canon route into the South Park had at first been deemed impracticable, but before the road was finished to Morrison, a re-survey of the canon located a way through it. Plans for the future were then changed; a route from what is now Sheridan Junction on the Morrison road was surveyed and located up the Platte, through the canon, on through the South Park, and to the confluence of Trout creek and the Arkansas river; and some grading between Sheridan and the canon had been done.

Although the Platte canon route had been thus adopted for the main line, renewal of work upon it was long delayed. The panic had put an end, temporarily, to railroad building everywhere in the country. Notwithstanding the well-known financial conditions in consequence of the panic, Governor Evans and his associates were bitterly assailed here at home because they did not go ahead and build the road to which Arapahoe county had voted $300,000 in bonds. The burden of the unreasonable criticisms and fault-finding fell upon Governor Evans, and by the spring of 1876 had become so unjust that he offered his resignation as President of the road, but the Directors would not even consider it.

An effort was then made to obtain subscriptions to the road's stock from Denver business men, but without much success. Then John W. Smith proposed to raise $150,000 with which to build the road to Bailey's Ranche. Smith's plan called for the organization of the "San Juan Construction Company" which was to construct the road to the point named and take pay in the form of the railroad company's first mortgage bonds. The construction company was organized in July, 1876, with a capital of $350,000, with John Evans, W. S. Cheesman, Charles B. Kountze, David H. Moffat, Jr., John W. Smith, William Barth, F. J. Ebert, J. S. Brown, and George Tritch as Directors. Under this management the San Juan Construction Company completed the road to Bailey's Ranche early in the summer of 1878.

Prior to that time the road's prospects had much improved and financial conditions had become easy. For constructing it beyond Bailey's Ranche, the "Denver & South Park Construction Company" had been organized in November, 1877, by practically the same men who had formed the San Juan company. The extension of the South Park railroad, inspired by the developments at Leadville, was pushed with extraordinary vigor in 1878 and 1879. Before that time Jay Gould and his associates, having previously acquired control of the Union Pacific, Kansas Pacific and Colorado Central, had also purchased a large interest in the South Park road. Desiring to absolutely control it in view of the business it would bring from the Leadville district to those roads, the Gould party in November, 1879, bought at par practically all the remaining Denver, South Park & Pacific interests and became owner of the road.

Under the new dispensation the Directors chosen on January 9, 1880, consisted of Jay Gould, Russell Sage, Cyrus W. Fisher, Walter S. Cheesman, John Evans, David H. Moffat, Jr., J. S. Brown, John W. Smith and Charles B. Kountze, and the officers elected were John Evans, President; Walter S. Cheesman, First Vice President; Cyrus W. Fisher, Second Vice President; George W. Kassler, Secretary; and Charles B. Kountze, Treasurer. The road, by great exertions, was completed to a connection with the Denver & Rio Grande's Leadville extension, near the mouth of Trout creek, on February 9, 1880, the South Park trains running into Leadville from Trout creek, a distance of about thirty miles, over the Denver & Rio Grande tracks.

For a few years, during the hey-day of the Leadville "boom," the road did a heavy business, but its later history is a story of disaster. When the Leadville tide began to ebb the road's operation became very unprofitable; a result, by the way, that was not changed until recently. The company was maintained as a separate organization, but the Denver men soon withdrew from it. The burden of the extremely heavy construction account, the great expense of operation, and a diminishing income from traffic finally brought the company to bankruptcy, and it passed to a Receiver's care. The road was sold under a foreclosure decree, on July 6, 1889, and bought in by Union Pacific interests which organized the "Denver, Leadville & Gunnison Railway Company" to take over the property. But, through a peculiar system of railroad financing, the Union Pacific became owner of all the stock and securities of the new company. Within a few years the Denver, Leadville & Gunnison was greatly extended, but all was of narrow gauge. A line of its own into Leadville, the extension to Gunnison and Baldwin, and several short branches were built, until the various roads then constituting the system, and representing a total construction cost of $5,331,851, aggregated 324.03 miles, as follows:

Denver to Leadville, main line	151.90
Como to Baldwin	131.05
Dickey to Keystone	7.04
Garos to London Junction	15.41
Sheridan Junction to Morrison	9.96
Como to Coal Mine	2.30
Schwanders to Buena Vista	3.98
Baldwin up Ohio Creek	3.09

With its enlarged mileage and the fast-increasing general business of the country it was expected that the system would prove profitable. After the Union Pacific, Denver & Gulf aggregation was created in 1890, this road had become practically a part of that, though continuing an independent corporate existence. According to its annual reports it never earned its way during the years of good times that were ended by the panic of 1893. Its annual deficit in the five years ended with 1893 were: 1889, $248,497.53; 1890, $165,276.86; 1891, $208,062.51; 1892, $145,887.19; 1893, $245,678.43. In the autumn of 1893 it went down aheap in common with all the other Union Pacific interests, and was put in Receivers' charge. Its subsequent history is involved in that of the Colorado & Southern Railway.

CHAPTER LVI.

Denver & New Orleans Railway and Its Successor—Denver, Texas & Fort Worth, and Fort Worth & Denver City Roads—Construction of Various Local Railways—Burlington, Santa Fe, Missouri Pacific, Colorado Midland, and Rock Island Roads—History of the Colorado & Southern and Its Constituent Former Companies—Colorado & Northwestern—Other Local Railroads—Union Pacific—Denver Union Passenger Station—Cripple Creek District Railroads—Prospective Trunk-line Extensions—Denver's Railway Facilities—Characteristics of Colorado Mountain Roads—Denver's Railway Builders.

While the decade, 1870-80, had been, as our reader has seen, one of remarkable activity in railroad building in the Denver region and elsewhere in the central west, the succeeding one surpassed it in mileage constructed and in general development of the country. In the presence of all that was in preparation and all that was going forward in that succeeding decade, the Denver group of railway builders did not remain idle. Their next undertaking was one of commanding importance to this city and this region of country.

On January 25, 1881, the "Denver & New Orleans Railway Company" was incorporated at Denver by John Evans, Cyrus W. Fisher, David H. Moffat, Jr., George Tritch, J. F. Brown, Isaac Brinker, William Barth, John R. Hanna, Job A. Cooper, T. G. Lyster, J. Sidney Brown, George W. Kassler, and Charles B. Kountze, with a capital of $10,000,000. The charter named as Directors of the company for the first year of its existence, John Evans, Cyrus W. Fisher, David H. Moffat, Jr., William Barth, George Tritch, Isaac Brinker, J. Sidney Brown, William B. Daniels, and Charles B. Kountze.

This company originally contemplated building the Denver & New Orleans railway from Denver straight southeast to La Junta, with a branch to Colorado Springs. From La Junta the road was to extend on southeast to a connection in Texas with the Texas Pacific and various other roads in that State, thereby forming a through and rather direct route to New Orleans. But these plans were changed, and an almost air-line south from Denver to Pueblo, passing out of this city by way of the Cherry creek valley, was adopted, with the view of building into Texas from Pueblo.

The company sought neither subsidies nor bonuses, but immediately proceeded with the construction of the road upon its own resources, in 1881. On May 3, 1882, the first fifty miles out of Denver were completed and opened for business, and before the close of that year the line was finished to Pueblo, a distance of 124.37 miles; the Denver & New Orleans Construction Company having been the contractor. A branch of 4.51 miles from Franceville Junction to Franceville, and one of 9.12 miles from Manitou Junction to Colorado Springs, were also built in 1882, making in all 138 miles of standard gauge road. The completion of the Denver & New Orleans between Denver and Pueblo was celebrated in this city by a great public demonstration of rejoicing.

Circumstances delayed building into Texas from Pueblo and, having only local business on its line, the Denver & New Orleans company fell into financial straits, and finally into the hands of a Receiver. All its property was sold on March 18, 1885, under foreclosure proceedings, and bought by a committee representing its bondholders. A new corporation, the "Denver, Texas & Gulf Railroad Company," was then organized, and in May, 1885, took possession of the old company's roads. The Denver, Texas & Gulf company was merely a reorganization of the first corporation, its Board of Directors having been John Evans, George Tritch, William Barth, J. Sidney Brown, C. B. Kountze, S. H. Elbert, Job A. Cooper, F. A. Keener, and William G. Evans, all of Denver; with John Evans as President; J. Sidney Brown, First Vice President; Job A. Cooper, Second Vice President; Charles Wheeler, Secretary; and W. B. Berger, Treasurer.

Under its re-organization and under the extraordinary influences of the ensuing "boom" times, this road fared well and became prosperous. Its individual existence continued until 1890, when it was made a constituent of the Union Pacific, Denver & Gulf system, the particulars of which consolidation will presently be related. But in the meantime new roads had been built, affording the Denver, Texas & Gulf connections into Texas and on to points on the Gulf of Mexico; and to these we will now briefly give some attention.

The "Denver, Texas & Fort Worth Railroad company" was incorporated April 12, 1887. Its original purpose was to build from Pueblo, by way of Trinidad, to the Texas line at a point near the northwest corner of that State's "pan-handle." However, this plan was changed in consequence of an arrangement having been made with the Denver & Rio Grande company for joint use of its line by a third rail between Pueblo and Trinidad, and therefore the Denver, Texas & Fort Worth's construction was confined to that part of the route beyond Trinidad. On March 14, 1888, it had completed its 134.90 miles of track between Trinidad and Texline, and on April 15th the road was opened for business. The company had also constructed a branch of 16.23 miles from Trinidad to Martinsen; another, of 6.52 miles, from Beshoar to Chappell; another, of 3.63 miles, from Pueblo to Bessemer Junction; and .56 miles of freight house track at Pueblo; and in January, 1889, built a branch of 4.62 miles from Forbes Junction to Ludlow; making in all 166.46 miles of standard gauge road constructed by the company. Three short roads, subsidiary to the Denver, Texas & Fort Worth, were built down there in 1888 by independent companies. These were the Chicosa Canon Railway, Chicosa to Forbes, 4.18 miles; the Canon de Agua Railroad, from Ludlow to Hastings, 2.96 miles; and the Road Canon Railroad, 2.82 miles; all of standard gauge. These roads were leased by the Denver, Texas & Fort Worth, and increased its mileage to a total of 176.42 early in 1889. While its northern terminus so far as its own main line extended was at Trinidad, its trackage arrangement with the Denver & Rio Grande made Pueblo its actual northern terminus where it had direct connection with the Denver, Texas & Gulf to Denver. It paid $160,000 a year to the Rio Grande for using the 92.24 miles of the Rio Grande main line between Trinidad and Gulf Junction in the suburbs of Pueblo, and it also had trackage rights over certain of the Rio Grande's coal branches in southern Colorado. This use of the Denver & Rio Grande tracks between Pueblo and Trinidad is continued by the present Colorado & Southern company, successor to the Denver, Texas & Fort Worth. The Denver, Texas & Fort Worth company was principally composed of eastern men interested in the Union Pacific, but John Evans was its Second Vice President. This road and its belongings also went into the Union Pacific, Denver & Gulf consolidation in 1890, and we may remark here that with that change the active participation of Governor Evans in railroad construction and management terminated.

The construction of the two roads whose history is outlined in the foregoing was not all that was required to afford Denver a rail outlet to the Gulf of Mexico. The third link in the chain was the "Fort Worth & Denver City Railway Company," an old organization incorporated in Texas May 26, 1873. Some work was done on it out from Fort Worth before 1880, but it was not until after the re-organization of the Denver & New Orleans company that very active work on the extension of the Fort Worth road was instituted, and then only when the builders of the Denver, Texas & Fort Worth took a hand in it and a controlling interest in the company. The Texas road was completed from Fort Worth to Texline, 454.49 miles, on January 26, 1888, with a branch, of 14.54 miles from Washburn to Pan Handle City; thus with the Denver, Texas & Gulf, and the Denver, Texas & Fort Worth, forming, with connections beyond Fort Worth, a through route from Denver to Gulf tidewater.

The Union Pacific, Denver & Gulf consolidation in 1890 did not include the Fort Worth & Denver City road, though the consolidation carried with it a controlling interest in the Texas company. The latter retained an independent corporate existence, and still does so as a southern connection of the present Colorado & Southern Railway.

In 1881-82 the Union Pacific people, stimulated by the approaching extension of the Burlington road, built the "cut-off" from Julesburg to LaSalle, 151.53 miles; a portion of it on the old roadbed graded by Loveland in 1872-73. It was made to figure as part of the Colorado Central system under lease, though it lacked the six miles between LaSalle and Greeley of connecting with the nearest of the Central lines. The "cut-off" retained that identity, and later went into the Union Pacific, Denver & Gulf consolidation. In 1887 the Cheyenne & Northern Railway Company which, with its road, was also made an appendage of the Colorado Central, built 125 miles of standard gauge road from Cheyenne north to Wendover, and opened it for business in the autumn of that year. The Union Pacific company, controlling, as it then did, the Denver Pacific road, and with all these amplifications of the leased Central system, was pretty well in command of Colorado local rail transportation north of Denver and east of the Divide in the decade 1880-90.

During the twenty-five years between 1867 and 1893, in the history of Denver and of Colorado, scores of railway companies were incorporated in our State. The records in the office of the Secretary of State bristle with entries relating to railroad corporations. Had all these projected roads been built the State would have been literally gridironed by tracks; but the very large majority made no headway, and the beginning and end of their histories appear in the dry records of the State Secretary. The greater of this activity in railroad projects was in the decade 1880-90, and during that period several short lines of railroads, with names nearly as long as their tracks, were built, or attempted to be built, in the districts north and

View northwest from electric light tower near Eighteenth and Grant Avenues in autumn of 1882.

west of Denver; but they were small concerns, either dependents of the Union Pacific's leased Colorado Central or incapable of troubling it, and all but one of which became in 1890 part of the Union Pacific, Denver & Gulf system some account of which is given on succeeding pages in connection with that of the present Colorado & Southern railway. Minor details of the affairs of these small roads, names of their company organizers and so forth, are omitted because of their lack of interest.

The Denver, Utah & Pacific company was incorporated as a Denver enterprise on December 11, 1880, with the ambitions indicated by its name, though its subsequent achievements were out of all relation to its imposing title. It was a narrow gauge enterprise, and on November 24, 1881, the road, by having utilized under lease, between Utah Junction and Burns Junction, about eleven miles of the Denver, Western & Pacific roadbed, was completed and opened between Denver and Longmont, a distance of thirty-seven miles. In April, 1884, it absorbed the Colorado Northern Railroad Company, a contemporary organization that had made a small beginning toward building a road on part of the route, and on September 17, 1885, the St. Vrain extension of eleven miles from Longmont to Lyons, was completed and opened for traffic; several miles of coal mine branches having been built about the same time. In 1892 the road was sold to the "Burlington," having had at that time $881,400 of stock and $820,000 of bonds outstanding.

The Denver, Western & Pacific Railway Company in 1881 graded about sixteen miles of standard gauge road between Denver and Marshall, and a little more than four miles of the same gauge road from Longmont toward Denver. In October, 1883, the road passed to a Receiver, and in April, 1885, the company was re-organized as the Denver, Marshall & Boulder Railway Company, and the lines graded in 1881 were completed. The road, of standard gauge, was finished to Boulder in 1886, and the branch from Louisville to Lafayette in 1888. The short roadbed from Longmont toward Denver, and a track of two and one-half miles, from Denver to Argo Junction, had been abandoned in 1885-86. In 1882-83 the Greeley, Salt Lake & Pacific Railway Company built about thirteen miles of narrow gauge road from Boulder to Sunset; in 1882-84 nearly forty miles of standard gauge from Greeley to Stout; and in 1887 over eight miles of standard gauge from Loveland to Arkins. It may be remarked here that in 1894 nearly thirteen miles of that mileage were destroyed by floods, and abandoned. In 1882-84 the Georgetown, Breckenridge & Leadville Railway Company, an Union Pacific corporation that contemplated crossing the range with an extension of the Colorado Central's Clear creek line, built the eight and one-half miles of narrow gauge road between Georgetown and Graymont—the famous "Loop" line, and opened it in June, 1884. In 1884 the Denver & Middle Park Railway Company built four and one-half miles of narrow gauge road between Ralston and Glencoe and opened it in December of that year. All of these roads were consolidated in the Union Pacific, Denver & Gulf system in 1890 along with the Colorado Central lines, proper, and others. In addition to these various local lines there were several others projected in the "Eighties," and companies were incorporated to build them; but they did not get beyond the stage of "paper railroads."

The Chicago, Burlington & Quincy Railroad, or as it is more familiarly known here in the west, "the Burlington," made its advent in Denver early in the "Eighties," and was the third line between the city and the Missouri river. The origin of the Burlington system that now aggregates about 8,000 miles of railroad in eleven States, was in Illinois in 1849, and the road reached the Mississippi opposite Burlington, Iowa, from Chicago, before the outbreak of the civil war. An early intention to build far west was shown in 1854 when the "Burlington & Missouri River Railroad Company," a subordinate corporation, was chartered by the Iowa Legislature to build a road from Burlington across to the Missouri river. Congress in 1856, made it a land grant of six square miles for each mile of completed road, but even with that not much headway was made for more than a decade. It was built to Ottumwa, Iowa, by the close of 1859 and there rested until after the civil war when the parent company went to its assistance. By January 1, 1870, the road was completed to East Plattsmouth (now Pacific Junction) on the Missouri river a few miles below Omaha, and on January 1, 1873, under a perpetual lease that was practically a consolidation of the two companies, passed to the control of the parent line.

On May 12, 1869, there had been chartered in Nebraska the "Burlington & Missouri River Railroad in Nebraska," another subordinate line, to extend still farther west from opposite East Plattsmouth. Work on this road began in 1870, and on September 3, 1872, it was completed to Kearney Junction by way of Lincoln and Hastings. This road had a land grant of ten square miles to each mile of road, under an act of Congress approved July 2, 1862, and it eventually realized an average of six dollars an acre for those lands—more than it cost to build the road. In 1878 the extension of that road to a point on the border of Yuma county, Colorado, was begun and in March, 1881, completed; but it had in the previous year passed to the control of the parent line on terms similar to those under which the trans-Iowa division had been absorbed.

The Burlington, of course, was heading to Denver. In 1879 the "Burlington & Colorado Railroad Company" had been incorporated by the parent line to build from our State line, just east of Wray, to this city, a distance by the route followed of about 175 miles. Work on this road was a continuation of that on the Nebraska extension and was prosecuted with great vigor in 1881 by way of Akron and Fort Morgan, and was completed to Denver on May 29, 1882. It was then absorbed by the parent line after the established fashion.

In the construction of the "Burlington" into Denver there were none of the difficulties, the uncertainties, the haltings, that beset the earlier roads. It did not have to depend upon donations or subsidies, nor upon local organizations whose zeal and ambitions far exceeded their resources. There were none of the struggles, the make-shifts, the alternations between sanguine hope and utter despair that attended the pioneer railway enterprises. This road, with experienced ability and abundant resources behind it, swiftly made its way across the plains, entered the city's gates, and was ready for business, almost before the people here realised what had happened.

In 1892 the Burlington acquired by purchase the Denver, Utah & Pacific extending from Denver by way of Longmont to Lyons, and of which we have given some account. In September of that year its forty-seven miles of road (including leased track) were changed to standard gauge. Subsequently, periodical movements gave some color to the theory that the Burlington intended this Denver-Lyons division to be the beginning of a Burlington line across the mountains of northwestern Colorado to Salt Lake City, but recent events would seem to point to a Burlington-Utah extension from its line through central Wyoming, and therefore have dimmed the brilliancy of the future of the local branch.

Early in 1899 the construction of a cross-country road giving Denver a direct rail connection to western South Dakota, and to Montana was begun. This new line leaves the Denver main line at Brush, eighty-eight miles northeast of the city, and by utilizing twenty-four miles of the Union Pacific's LaSalle-Julesburg division, between Union and Sterling, extends northward to Alliance, Nebraska, on the Burlington's Montana division, a rail distance of 238 miles from Denver. This new road which was opened for business September 16, 1900, affords Denver a direct rail connection with the Black Hills country of South Dakota, and with Montana. From Bridgeport, Nebraska, where the Denver-Alliance road crosses the North Platte river, another extension, northwest along that stream, has recently been built to the vast coal and iron fields around Guernsey, in central Wyoming. It is this road that, it is anticipated, will be extended to Utah, and probably to the coast.

The Burlington is one of the great railway systems of the world, but it would be going beyond our reservation to proceed much farther here with details concerning it, having dealt with the essential facts bearing upon its relations to Denver. Its extension into southern Wyoming from Holdredge, Nebraska, on the main or Denver line, skirting through the northeastern part of Colorado to

Cheyenne, was built in 1885-87. Its great northwest line from Lincoln, Nebraska, through to Billings, Montana, with a branch to Deadwood, represents construction begun in 1884 and continued, with various intervals, until completion in October, 1894.

To consider the vast net-work of roads constituting the Burlington system would call for the use of several of these pages and, as we have already said, would take us far off our reservation. However, one fact of interest here is that this great system of railways is one of the very few that has weathered all the storms, escaped the protective attention of Receivers, and has always paid its stockholders regular and very good dividends.

The Atchison, Topeka & Santa Fe Railway Company completed its extension to Denver from Pueblo by way of Colorado Springs in 1887. Its history dates back to the Territorial times in Kansas, and to the Atchison & Topeka Railroad Company organized February 11, 1859, to build a road of fifty-one miles between those two then little frontier towns in eastern Kansas. That company had a small land grant, and in March, 1863, was re-organized as the Atchison, Topeka & Santa Fe Railroad Company with intentions to build to Santa Fe. Congress increased its land grant to about 3,000,000 acres (including that given the original company), but no construction was undertaken for several years. In 1868 control of the company passed to interests centered in Boston, and in 1869 building was started. From such slow and modest beginnings the Santa Fe has expanded until its lines stretch from Chicago around by the southwest to San Francisco; to Galveston; to El Paso; to Denver; and with scores of branches from the main lines, the total now aggregating 7,798 miles, with still more building.

Construction was pushed westward in the "Seventies" and the road was completed to Pueblo and opened for business March 1, 1876. Its various operations in southern Colorado then and thereafter were through subsidiary corporations with local names but which were subsequently absorbed by the parent company. To aid the road in building to Pueblo, Pueblo county in March, 1874, voted a bond subscription of $350,000 to the dependent company's stock, and about the same time Bent county voted $150,000. With the exception of the period in 1879 during which it operated the Denver & Rio Grande narrow gauge road under lease, the Santa Fe was not directly known in Denver until 1882. At the close of 1881 the main line of the Denver & Rio Grande, Denver to Pueblo, had been made a standard gauge road, and early in 1882, under a traffic arrangement with the Denver & Rio Grande, the Santa Fe began running its passenger trains to Denver from Pueblo over the tracks of that road, and continued doing so until it built its own line between the two cities.

The Denver extension had been determined upon two or three years before it was built, but the Santa Fe company had some difficulty in obtaining an entrance to the city. For that purpose it purchased what there was of the Denver Circle Railway, of which a brief account is hereinafter given. The Circle road's right of way extended up through the southern part of the city, thence along the west bank of Cherry creek to Larimer street. After much debate and considerable wrangling, and a great waste of effort if not of other things by the Santa Fe, the City Council wisely refused to permit the company to build its road into the heart of the city upon the route of the Circle road. The Santa Fe then adopted the route around through "West Denver" upon which it completed its road to the Union Passenger Station and opened it for business early in October, 1887. The road parallels the Rio Grande all the way to Pueblo, and the two are side by side the greater part of the distance. No public aid was asked or received for constructing the Denver extension. The panic times of 1893 bore hard upon the Santa Fe, it passed to a Receiver, was later re-organized and financially rehabilitated, and its name changed from "Railroad" to "Railway" company. It then resumed its career of extension and development, and recently completed its line to San Francisco. Its general management is directed from its headquarters in Chicago, and its operations at Denver are wholly those of transportation.

While the Missouri Pacific Railway, having in 1900 a mileage of 5,326 in its system, figures in the Denver railway time-tables, it is not, properly speaking, a Denver road, for its line in Colorado terminates at Pueblo. Its Kansas-Colorado extension was built from Kansas City in the "Eighties," reaching Pueblo in 1887. A traffic agreement was then made with the Denver & Rio Grande Railroad for handling its Denver business, instead of building and operating a line of its own between the two cities. Under that arrangement the Missouri Pacific's through passenger cars to and from Kansas City have come and gone by way of Pueblo in the trains of the friendly Rio Grande ever since, and its Denver freight traffic follows the same route. Periodically it has been reported that the Missouri Pacific "will build to Denver," but there is no prospect for it immediately doing so.

The Colorado Midland Railway is another road the name of which appears in our local railway time-tables, but which does not extend to Denver. However, its general offices are in Denver, and its relations to the city are so intimate and important that a brief history of the road is appropriate here. Its main line extends from Colorado Springs to Newcastle in the western part of the State, a distance of 224 miles, and represents solution of many exceedingly difficult railway engineering problems. To one standing on the plains a short distance east of Colorado Springs and viewing the mountains, the task of projecting and constructing a railroad through their lofty rugged masses would seem to be an impossibility. The Midland Company, organized in November, 1883, was a dependent of the Atchison, Topeka & Santa Fe Company which owned all its stock. The road was begun in 1885 and completed by way of Leadville to its western terminus in January, 1889, having been the first standard-gauge road to enter western Colorado. Until February, 1894, it was operated as a part of the Santa Fe system. The branch from Aspen Junction to Aspen was built and opened simultaneously with the main line, and subsequently various other short branches were constructed in western Colorado until the total proprietary roads aggregated 263 miles. It also built jointly with the Denver & Rio Grande, the Rio Grande Junction Railway from Newcastle to Grand Junction, a distance of seventy-seven miles, over which both roads reach Grand Junction where connection is made with the Rio Grande Western; and later acquired trackage rights over several parts of the Denver & Rio Grande in western Colorado. After the Cripple Creek development the Colorado Midland was instrumental in constructing the Midland Terminal Railway, begun in 1892, from Divide on the main line to the great gold camp, a distance of thirty miles, and reducing the rail distance of the camp to 131 miles from Denver. Between Colorado Springs and Denver the business of the road was done over the tracks of the Santa Fe. On February 1, 1894, the Colorado Midland passed to a Receiver, and it was several years before its affairs were straightened out and re-adjusted. The cost of the road at the time of the Receivership stood at about $19,000,000. After its re-organization it was operated more independently, but still used the Santa Fe tracks for its Denver business. In the spring of 1900 control of the road passed to the Colorado & Southern and the Rio Grande Western Railways, and its business between Colorado Springs and Denver was transferred to the Colorado & Southern. Its independent corporate existence is maintained, with Frank Trumbull, President of the Colorado & Southern, as President; and D. C. Dodge, Vice President and General Manager of the Rio Grande Western, as Vice President. This change has made the Colorado Midland a far more important factor in Denver's railway system than formerly.

Still another railway operating into Denver without a route of its own to the city, is the Chicago, Rock Island & Pacific, one of the great transportation systems of the United States, with a present mileage of nearly 4,000, in seven or eight middle-west and southwestern States. It originated in Illinois and built its road between Chicago and the Mississippi before the civil war, and its later western extensions crossed Iowa, Missouri, part of Nebraska, Kansas, the Indian Territory, Texas, and into Colorado, with many branches from its several trunk lines. Its Colorado extension was begun late in the "Eighties" and completed to Colorado Springs in 1890, crossing the old Kansas Pacific road at Limon, eighty-nine miles southeast of Denver. For some time it transacted its Denver business over the Denver & Rio Grande from Colorado Springs, but several years ago a trackage arrangement was made with the Union Pacific company, to which the old Kansas Pacific had passed, under which the Rock Island runs its trains directly into Denver from Limon in the same manner as if it owned the road. It has long been expected that the

---

David C. Dodge, Vice President and General Manager of the Rio Grande Western Railway, born in Shirley, Mass., November 17, 1837, is of an old New England family which came from England in 1638 and settled at Salem, Mass.; he being of the eighth American generation, and the eighth of his name in order of descent.

Colonel Dodge, as he is generally known in Denver, began his railroad career early in life. At the age of sixteen he entered the engineering department of the Fox River Valley road at Elgin, Ills., and continued with that road and with the Wisconsin Central until March, 1858, when he engaged with the Chicago, Iowa & Nebraska railroad, for which he was General Freight and Passenger Agent, and Paymaster, from 1857 to 1862. In 1861 he served in the Commissary Department of the Federal army at Chattanooga, Tenn., and in the Quartermaster's Department at Memphis. Terminating that service in October of that year, he returned to Iowa and became General Agent of the Chicago & Northwestern road at its then western terminus.

Colonel Dodge came to Denver in May, 1865, and for nearly two years was engaged in mercantile pursuits. In 1867 he became the General Agent of the Chicago & Northwestern road for Colorado and New Mexico, a position he retained until 1870 when, upon completion of the Kansas Pacific road to Denver in August of that year, he accepted a like position in the service of that road and in which he continued until the spring of 1872. On May 1, 1872, he was appointed General Freight and Passenger agent of the Denver & Rio Grande road, and so served until December, 1878. In March, 1879, he was appointed General Manager of the Denver & Rio Grande in which position he continued until April, 1884, when he became Vice President and General Manager of the Rio Grande Western road, a position he has ably and continuously filled since that time.

Colonel Dodge is prominent among the many great managers of railroads developed by the American system of railways. In addition to his services as outlined in the foregoing, he was, from 1885 to 1888, in charge of the Mexican National Railway in Mexico. While his railway interests and duties have much of the time required his presence elsewhere, his home has always been in Denver since his coming to Colorado in 1865, and he has been closely identified with the development and advancement of the city.—J. C. S.

David C. Dodge.

Rock Island would build into this city and hence to the Pacific coast; and annually in recent years the announcement has been made that it was about to do so. In the year 1900 such anticipations were enlivened by published reports that the company had acquired an entrance to the city from the east by purchase of the little Colorado Eastern, and an exit to the west by similar dealings with the Denver, Lakewood & Golden road. But at the close of our record there was nothing definite to indicate the immediate undertaking of the Rock Island's extension of its proprietary line in Colorado by way of Denver to the farther west.

The Colorado & Southern Railway Company is the latest addition to the Colorado railroad corporations whose tracks enter our city; but while the name is new, nearly all of the constituent lines of "The Colorado Road," as it is now popularly known, are old ones. More or less of the history of those of its lines immediately tributary to Denver has appeared on preceding pages, but to present a clearly understandable account of the circumstances out of which arose this new, great and very efficient system of Colorado railroads, requires that we turn backward a few years and consider the origin of its immediately predecessor corporations, what had been done by them, and also something of the causes that finally led to their translation.

Just prior to 1890 the exceedingly "practical railway financiers" who then directed the destinies of the Union Pacific and its allied roads, determined upon absorbing, consolidating, re-organizing and making more surely tributary to their ulterior purposes all of the local lines of railroad in Colorado within their reach, some of which were, and had been for several years, more or less under the control of the Union Pacific, either by ownership of their securities or by arrangements with the proprietary companies.

The Union Pacific and Kansas Pacific companies had previously been made one corporation; control of the Colorado Central lines had long been held, and the Denver, South Park & Pacific had been obtained. To carry out the plans in view, control of various other roads, either by agreement with the proprietary companies, purchase, or foreclosure, had been acquired until, by the close of 1889 domination over a half-dozen or more additional roads

---

Frank Trumbull, President of the Colorado and Southern Railway Company, of the Fort Worth & Denver City Railway Company, and of the Colorado Midland Railway Company, is a native of Missouri. He was born in the town of Arcadia, Iron county, November 11, 1858, and is, therefore, within a few days of being as old—or as young—as the city of Denver. When he was yet a child his parents removed from Arcadia to De Soto, and thence, in 1865, to Pleasant Hill, Cass county, Missouri. There he attended school until he was twelve years old, when he became a clerk in the village book-store, working in that capacity for two years. He was then made clerk in the Pleasant Hill Post Office, in which position he was employed a like period, and where he faithfully discharged his duties.

Mr. Trumbull began his railroad career in the autumn of 1874. Leaving the Pleasant Hill post office he went to Sedalia, Missouri, and on October 1st entered the service of the Missouri, Kansas & Texas Railway as a clerk in the comptroller's office, where he remained until that road became identified with the Missouri Pacific system, December 1, 1880. At that time he had served in every department of the comptroller's office and as traveling auditor; and was chief clerk of the office. In 1881 he was appointed chief clerk of freight accounts in the office of the auditor of the Missouri Pacific at St. Louis, where he remained a little more than five years, filling, during the last two, the position of freight claim agent of that system. In January, 1886, he was called to Dallas, Texas, by the Receivers of the Texas & Pacific Railroad, and put at the head of the auditing department of that road. Mr. Trumbull remained in Dallas two and one-half years in charge of the accounts and finances of the Texas & Pacific, and upon its reorganization in 1888 he removed to Denver, since which time this city has been his home.

For several years after locating here Mr. Trumbull was engaged in the wholesale coal trade and built up a large and prosperous business, in which he was actively employed when called, in December, 1893, to take charge of the Union Pacific, Denver & Gulf Railway system as Receiver. In August, 1894, he was appointed Receiver, also, of the Denver, Leadville & Gunnison Railway.

The history of his five years of service as Receiver of those two important railways appears elsewhere in these pages and need not be recounted here. In each of his successive positions, from that of clerk in a village book-store to that of Receiver for great railway systems, he served with his characteristic faithfulness.

Upon the organization of the Colorado & Southern Railroad Company, the successor to the Union Pacific, Denver & Gulf, and the Denver, Leadville & Gunnison roads, the Board of Directors of the new corporation, on January 7, 1899, elected him President of the company, which now owns and operates one of the large and important railway systems in the west. In March, 1899, he was elected President of the Fort Worth & Denver City Railway Company, the Texas ally of the Colorado & Southern. In July, 1900, upon the readjustment of proprietary interests in the Colorado Midland Railway, Mr. Trumbull was elected President of that company, also; being now the executive head of the three corporations.

This brief outline of President Trumbull's unusual and brilliant career, which is yet in its forenoon, renders almost superfluous everything that would attempt to tell how and why success so conspicuous has come to him. The story carries with it sufficient eulogy, and the only comment it admits by way of explanation is, that it demonstrates the results of enduring, unswerving fidelity to duties and trusts confided to the attention and care of a young man who placed them above every other consideration.—J. C. S.

Frank Trumbull.

of varying importance had been secured. The aggregation thus marshalled to form the new consolidated corporation consisted of the following-named lines, part standard and part narrow gauge:

Canon d' Agua Railroad.
Cheyenne & Northern Railway.
Chicosa Canon Railway.
Colorado Central, of Colorado.
Colorado Central, of Wyoming.
Denver, Marshall & Boulder Railway.
Denver & Middle Park Railway.
Denver, Texas & Ft. Worth Railroad.
Denver, Texas & Gulf Railroad.
Georgetown, Breckenridge & Leadville Railway.
Greeley, Salt Lake & Pacific Railway.
Road Canon Railroad.

Early in 1890 the Union Pacific, Denver & Gulf Railway Company, with an authorized capital of $36,000,000, was organized to absorb all these lines and operate them as one dependent system tributary to the Union and Kansas Pacific roads. The outstanding bonds of the constituent companies amounted tp $35,319,000, on which the annual interest charges aggregated $1,213,010. Under these arrangements the Denver, Leadville & Gunnison road (the reorganized South Park line) was to continue as a separate corporation, but in reality as a tail to the Union Pacific, Denver & Gulf kite.

The new corporation took possession of the consolidated roads and began business on April 1, 1890. Soon afterward it built nearly a dozen short branches, principally in the southern part of the State, aggregating about fifty-six miles; and continued the use of about 106 miles of the Denver & Rio Grande tracks in that section of the State.

As part of the proceedings in connection with this wholesale consolidation, the track of the Colorado Central line between Fort Collins and Colorado Junction near Cheyenne, about forty-two miles, was taken up and the roadway left in its present abandoned condition. The material was used in extending the Cheyenne & Northern from Wendover to Orin Junction, Wyoming, a distance of about twenty-eight miles, which was completed in 1890. Other track abandonment at that time was of a part of Loveland's old road from Golden to Longmont. Its track between Ralston and Louisville Junction, a distance of about twelve miles, was removed, and its roadbed still remains abandoned. The track between Ralston and Golden was reduced to narrow gauge and is now part of the short line from Golden to Glencoe, in which is incorporated the bit of road built in 1884 by the Denver & Middle Park company.

The Union Pacific, Denver & Gulf road, like its sister enterprise, the Denver, Leadville & Gunnison, failed from the start to make both ends meet. With the exception of 1894, after it had passed to Receivers, and in which there was a surplus of $111,594, its operations resulted in loss every year during its corporate existence; the aggregate deficit far exceeding the solitary surplus. According to the last public report the company rendered, which was made on October 12, 1893, the day before Receivers took charge, the total construction account or, as the statement termed it, "cost of Road and Fixtures," was $45,152,866.

In the financially fateful year 1893, with its far-reaching entailment of disaster, the Union Pacific went down and carried all its allies and dependents with it; the entire aggregation having obligations on stocks, bonds and floating debt exceeding the enormous total of $470,000,000. On October 13, the Union Pacific (which included the Kansas Pacific and Denver Pacific), the Union Pacific, Denver & Gulf, and the Denver, Leadville & Gunnison were placed in the hands of S. H. H. Clark, Oliver W. Mink, and E. Ellery Anderson as Receivers. Clark was President of all of them, and the others were also officers. On November 1, J. W. Doane and Frederick R. Coudert were appointed additional Receivers for the Union Pacific, on petition of the Attorney General of the United States; Doane then being one of the Government Directors of that road. On November 13, Doane and Coudert were made additional Receivers for the two dependent bankrupt corporations. At that time the floating indebtedness of the Denver, Leadville & Gunnison road amounted to about one million dollars; and of the Union Pacific, Denver & Gulf to more than one million with capital and bonded debt aggregating $73,319,000.

On the 18th of the following December, in consequence of a suit instituted by a stockholder, the five Receivers of the Gulf road, all of them non-residents of Colorado, were removed, and Frank Trumbull, of Denver, and a most capable man, was appointed successor Receiver.

Construction by the Union Pacific, Denver & Gulf company of new branches, extension of others, and various minor changes in old lines account for some discrepancies between figures we have heretofore used and those given below; but when Receiver Trumbull took charge of the system its total mileage, including the two allied roads in Texas, was as follows:

Standard Gauge.	
Cheyenne to Orin Junction	153.68
Julesburg to La Salle	151.53
Jersey to Cut-off Junction (3 rails)	3.08
Denver to Fort Collins	73.86
Loveland to Arkins	8.24
Marshall Junction to Boulder Junction	11.46
Louisville to LaFayette	3.28
Louisville to Allen Bond Mine	3.35
Greeley to Stout	39.86
Denver, West Side line	4.85
Denver to Bessemer Junction	125.00
Beshoar to Gray Creek	7.34
Cable Junction to McFarren Mines	.04
Trinidad to Texas State line	134.90
Trinidad to Rolling Mill	1.88
Manitou Junction to Colorado Springs	9.12

Franceville Junction to Franceville	4.51
Chicosa Junction to Forbes	4.18
Forbes Junction to Acme Junction	11.60
Pueblo Freight House track	.56
Road Junction to Berwind	2.82
Trinidad to Vasquez, N. M.	39.43
Catskill, N. M., down Red River	6.43
Sopris to Sopris mine	.66
Victor Junction to Hastings	2.96
Acme Junction to Aquilar	2.51
Total Standard gauge	810.68
Narrow Gauge.	
Argo Junction to Georgetown	47.34
Georgetown to Graymont	8.47
Forks Creek to Central City	11.76
Golden to Glencoe	8.70
Boulder to Sunset	3.39
Total Narrow gauge	79.66
Lines operated under Contract and Trackage Rights, (D. & R. G.).	
Gulf Junction to Trinidad	92.24
Chucara Junction to Walsenburg	7.34
El Moro to Engleville	6.34
Total Trackage Rights	105.92
Allied Lines.	
Fort Worth and Denver City, Texline to Fort Worth	454.49
Pan Handle Railway—Washburn to Pan Handle City	14.54
Total allied lines	469.03

The aggregate of these owned, leased and allied lines was 1,465.24 miles. In 1895 Receiver Trumbull added two branches to the mileage: one from Walsenburg to Acme, 19.93 miles; and one from Forbes Wye to Rolling Mills, 7.61 miles; raising the total to 1,492.78.

At the beginning of August, 1894, judicial proceedings were instituted by parties interested in the securities of the Denver, Leadville & Gunnison road to take it out of the hands of the Receivers of the Union Pacific and place it in those of an independent Receiver. This movement resulted in the appointment on the 7th of that month of Frank Trumbull, Receiver of the Union Pacific, Denver & Gulf road, as successor Receiver of the Denver, Leadville & Gunnison.

Under Receiver Trumbull's management during the five years of his double duty, both roads, having the benefit of skill and economy behind the counter, and an increasing business in front of it as the country recovered from the effects of 1893, demonstrated that they could be made valuable railroad properties. He had, as we have stated, added two new branches to the Union Pacific, Denver & Gulf in the southern part of the State in 1895, and in 1896 he built a branch, of 11.82 miles, from Fairplay to Levick under the charter of the old Denver, South Park & Hill Top Railway Company, which never constructed any road of its own. This branch was merged in the Denver, Leadville & Gunnison in September, 1897. Before the close of the Receivership the physical condition of both roads was brought to a very high standard of excellence.

In the meantime arrangements were in progress among holders of the securities of these former dependencies of the Union Pacific, for their reorganization into one new company on a general scaling of valuations that would bring the paper and the real values somewhere near a common level.

On November 18, 1898, the Denver, Leadville & Gunnison road was sold in Denver under a foreclosure decree; the purchasers being committeemen representing its bondholders, who bid it off at $1,500,000, and were the only bidders; that sum having been the minimum as specified in the decree. On November 19, 1898, the Union Pacific, Denver & Gulf road, under a decree for foreclosure, was sold at Pueblo for $6,250,000 (the minimum price) to the same committeemen, representing the bondholders, who had the day before bid in the Denver, Leadville & Gunnison at Denver; and in this instance, also, they were the only bidders.

On December 20, 1898, the "Colorado & Southern Railway Company," with a capital of $48,000,000, was organized by the holders of Union Pacific, Denver & Gulf, and of Denver, Leadville & Gunnison, securities, to take over the properties of those corporations. The new company's Board of Directors, constituted almost wholly of eastern men, elected Grenville M. Dodge, of New York, Chairman of the Board; and Frank Trumbull, of Denver, (former Receiver) President of the company, and who has since been successively re-elected to that position. The Colorado & Southern took possession of its constituent roads at midnight January 11, 1899, and retains all the roads of the former two corporations except the La Salle-Julesburg "cut-off," which was transferred to the Union Pacific in the summer of 1899. The Cheyenne & Northern road is reached by a traffic arrangement with the Union Pacific over the line of the old Denver Pacific. The removal of the track of the old Colorado Central, between Fort Collins and its junction with the Union Pacific near Cheyenne, had left the Wyoming road similarly detached from the Union Pacific, Denver & Gulf. The Colorado & Southern Company in the re-organization proceedings came into possession of a majority of the stock of the Fort Worth & Denver City Railway Company, which practically makes its system an unity between Denver and Fort Worth, Texas, a distance of 810 miles.

Owing to the release of the La Salle-Julesburg road, and to trackage and other minor changes, affecting the mileage of the two old systems that were incorporated in the Colorado & Southern upon its organization, and to some change in the allied system, the total mileage is not now represented in the new system exactly according to figures we have previously used; though no additions of importance have been made to the new system. At the close of 1900 the mileage of the Colorado & Southern, and of its Texas ally, was classified as follows:

Pueblo District—Denver to Pueblo, and branches	134.05
Trinidad District—Pueblo to Trinidad, and branches	113.65
New Mexico District—Trinidad to Texline, and branches	191.86
Clear Creek District—Denver to Silver Plume, and branches	65.49
Fort Collins District—Denver to Greeley, and branches	148.97
Platte Canon District—Denver to Como, and branches	98.36
Leadville District—Como to Leadville	71.24
Gunnison District—Como to Gunnison, and branches	164.25
Wyoming District—Cheyenne to Orin Junction	153.68
Mileage, Colorado & Southern Railway	1,141.55
Mileage, Fort Worth & Denver City Railway	452.00
Total	1,593.55

In the spring of 1900 the Colorado & Southern jointly with the Rio Grande Western acquired control of the Colorado Midland of which Mr. Trumbull, as heretofore mentioned, became President; making him the executive head of the two organizations.

In 1900 the Colorado & Northwestern Railway from Boulder to Ward, Colorado, also became practically a part of the Colorado & Southern, though it continues a separate corporate existence. The present company was incorporated July 22, 1897, as successor to the Intermountain Railway Company which had succeeded to the property of the old Greeley, Salt Lake & Pacific that in 1882-83 had built a road between Boulder and Sunset. The present corporation extended the road, which is of narrow gauge, from Sunset to Ward, a distance of thirteen miles, and opened it for traffic in June, 1898.

While the Colorado & Southern by its connection at Texline, Texas, the southerly terminus of its own line, proper, with the Fort Worth & Denver City Railway, a road it controls, provides Denver with its important outlet to the Gulf of Mexico, it is in popular esteem and more generally regarded as "the Colorado road." Its headquarters are at Denver, and in 1900 the company built, and occupied December 1st, a complete system of large shops at the foot of Seventh street in "West Denver," and not far from the spot where the first cabin on the site of the city was erected in 1858. These shops, which cost upward of $250,000, constitute a very important addition to Denver's industrial establishments. Since its organization the company had been a tenant in the old shops of the Union Pacific in the northern part of the city, and which had been utilized by the Union Pacific, Denver & Gulf company; the Union Pacific having long since transferred its shop operations to Cheyenne. The Pullman Company in recent times had been a joint tenant in the Union Pacific shops for repairing sleeping cars, and arranged for their full possession upon the Colorado & Southern's vacation, under a permanent lease. When our record closed the Pullman Company was refitting the shops for building new sleeping cars as well as repairing others, and calling for the employment of a much larger force of men than has hitherto been engaged

---

George Ady, long identified at Denver with the passenger department of the Union Pacific Railroad, was born in Harrison county, O., October 20, 1842. Early in 1861 he enlisted in the Second Iowa Cavalry and served three years, when he re-enlisted. During his later service he was commissioned First Lieutenant Fourth United States Colored Heavy Artillery. Serving on staff duty as Ordnance Officer, Provost Marshal, Acting Assistant Adjutant General, and Assistant Inspector General, he was not mustered out until February, 1866. During his long service as a volunteer he was wounded, taken prisoner, and at one time figured among those reported killed in action.

Soon after returning to civil life Mr. Ady entered railway service as a clerk in the passenger and ticket department of the Missouri Valley Railroad, at St. Joseph, Mo., and since that time has been uninterruptedly engaged in railroad work. From May, 1869, to November, 1878, he was chief clerk in the passenger and ticket department of the Kansas City, St. Joseph & Council Bluffs Railroad; from November, 1878, to May, 1880, passenger accountant (auditor of passenger accounts) at Kansas City of the Kansas City, St. Joseph & Council Bluffs, the Atchison & Nebraska, the Kansas City, Fort Scott & Gulf, and the Kansas City, Lawrence & Southern railroads; from May to December, 1880, general ticket agent of the Denver, South Park & Pacific Railroad; from January, 1881, to October, 1887, general agent of the passenger department, Union Pacific Railway; from December, 1887, to February, 1888, Colorado passenger agent of the Atchison, Topeka & Santa Fe Railroad; from February, 1888, to January, 1890, general passenger and ticket agent of the Denver, Texas & Fort Worth Railroad; from January, 1890, to January, 1891, general passenger agent Gulf division of the Union Pacific system; from January, 1891, to July, 1900, general agent at Denver of the passenger department Union Pacific Railway and its successor the Union Pacific Railroad; and since then city passenger and ticket agent at Denver of the last-named road.

Long a member of the Grand Army of the Republic, he is a Past Commander of the Department of Colorado and Wyoming, having filled the position in 1887. He is also a member of the Society of the Army of the Tennessee, and of the Military Order of the Loyal Legion, and is an Ex-Commander of the last-named organization. He is also a Royal Arch Mason, a member of the Woodmen of the World under charter No. 1, and of the Fraternal Union of America.—J. C. S.

George Ady.

upon its work. These changes and additions in railway shop arrangements will prove of much importance to the business interests of Denver, both taking rank as great manufacturing establishments.

Under the Colorado & Southern organization and management new life has been given the old roads that constitute the system. The discouraging results that formerly attended them have been turned the other way, and greater usefulness to the public with reasonable returns to investors have also characterized the change.

There are but two of what may be called independent "local" roads in Denver's railway system, neither of which enters the Union Passenger station, and but one doing a regular passenger business. They are the Colorado Eastern, and the Denver, Lakewood & Golden roads. The Eastern is a mere coal-traffic, narrow gauge road, extending from the Omaha & Grant smelter east to the coal mines at Scranton, seventeen miles distant. The company was originally incorporated, January 16, 1886, as the Denver Railroad & Land Company, by E. H. Hallack, C. M. Wicker and others, of Denver, co-operating with eastern associates. The road was built in that year and opened September 1st. In 1888 the company was re-organized as the Colorado & Eastern Railway Company, the Directors of which were E. H. Hallack, President; George C. Wilde, of New York, Secretary and Treasurer; C. M. Wicker, of Denver; B. F. Vaughan, of Providence, R. I., and C. L. Horton, of New York. The original company, judging from the language of an ordinance passed by our City Council in 1886, granting right of way over certain streets, intended also building a kind of connecting road in the city for transferring cars between the several railroad systems. The successor company contemplated building from the Omaha & Grant smelter to the Union Passenger Station, and from Scranton to the eastern line of the State; but did neither. In May, 1894, the road was sold under foreclosure and was bought by creditor interests which organized as the Colorado & Eastern Railroad Company, the present proprietary corporation. The company possesses valuable terminal property in Denver, and claims to own right of way into the Union Passenger Station; and is also said to have right of way, 100 feet wide, to the east line of the State. Its actual ownership is stated to rest in the Havemeyers, of New York, through holdings of securities. In common rumor in recent times the Rock Island, Illinois Central, Great Northern, and Missouri Pacific, each, has been reported as an intending purchaser of the Eastern for the purpose of building into Denver on its right of way; but the little road has survived each of these alleged attempts to absorb it. The Denver, Lakewood & Golden Railway Company was incorporated July 11, 1890, by J. W. Starkweather, R. Ryan and H. J. Hersey, of Denver; and W. B. Willard and J. P. Haynes of Hartford, Connecticut, with a capital of $600,000. Its first Board of Directors consisted of W. A. H. Loveland, W. F. R. Mills, Caldwell Yeaman, J. C. Hodges, Jr., C. C. Welch, Samuel Newhouse, and F. P. King, all of Denver. These elected as officers, Welch, President; Newhouse, Vice President; Hodges, Treasurer; and H. J. Hersey, Secretary. The road, of standard gauge, began to be operated in September, 1891, but was not fully completed until some months afterward. The line extends from its passenger station at 1450 Arapahoe street, by way of Lakewood to Golden, with a branch to the suburban town of Barnum. From its city passenger station to Barnum it is operated electrically, and the consideration for its right of way upon the city streets it traverses is free transportation for city officers. The electric route to Barnum is 5.50 miles long. The steam division, beginning at the western limits of the city is 13.10 miles to Golden, and has an extension (now disused) of 1.41 miles thence to Ralston, making a total of 14.51 miles of steam road. Like its small neighbor on the east side of the city, this road has a valuable right of way and terminal property. It has been in a Receiver's hands since July 31, 1896, but Samuel Newhouse is and for several years has been President of the corporation.

During the period beginning with 1880 and ending with 1893 there were many local steam railroads projected here to serve various purposes in and around the city, but the majority of such enterprises came to naught. Of some of those that were built, accounts are given in our history of the street railways. One rather important undertaking in that period, was the "Denver Circle Railroad," for constructing which the Denver Circle Railroad Company was incorporated November 16, 1880, with $300,000 capital; W. A. H. Loveland, who had become prior to that time principal owner of the Rocky Mountain News, and T. C. Henry another newspaper man of that period, having been the leaders in the enterprise. Its Board of Directors consisted of Loveland, Henry, and Joseph P. Ord, of Denver; and Charles A. Jewell and Charles L. McIntosh, of Hartford, Connecticut. Mr. Loveland was elected President, and Henry became general manager of the road, which was of narrow gauge and operated by steam locomotives. As indicated by its name, the road was intended to be a belt line around the city, but only part of it was built. Early in January, 1881, the City Council granted the company right of way along Cherry creek and across various streets, and on February 10th of that year the road opened for business with six and one-quarter miles of track. The line started on the left bank of Cherry creek, at Larimer street, at which point a passenger station was located, and followed that bank of the creek to about Fourteenth Avenue where it diverged due south, with a few turnings, to Bayaud street. On Bayaud one branch turned eastward and another westward, the latter crossing the Platte river and extending some distance beyond, while the east branch passed the old Exposition site and continued toward the present eastern limits of the city. After this mileage had been constructed the company got into financial difficulties and subsequently gave up the ghost. Its property passed to the Atchison, Topeka & Santa Fe Railway Company, for purposes already mentioned, and still later nearly all of its tracks were taken up; what is now left of them being a mile or so of the branch crossing the Platte in the southern part of the city, widened to standard gauge, and that is occasionally used for storing freight cars.

The limitations of this volume deny further accounts in much detail of the Union Pacific, and of the old Eastern Division into which the historic Denver Pacific was practically merged. The warfare between the two trans-prairie lines continued almost incessantly until their consolidation. The Kansas Pacific had at an earlier period become so reduced that its road was barely able to permit passage of the few trains it operated, and the company had gone into a Receiver's hands. A similar fate had befallen the Denver Pacific, as it was still nominally a separate corporation, and the affairs and prospects of both had been brought low. In March, 1879, as we have told, the Kansas Pacific passed to the control of the Union Pacific, then and for several years previous, under the command of Jay Gould. In January, 1880, those roads and the Denver Pacific were formally consolidated into one Union Pacific corporation with an enormous total of stock and bonds. In the earlier years of its history the Kansas Pacific never earned enough to balance expenses and fixed charges, as there was little local business along the western half of its route except what it found at Denver. The Union Pacific, determined to starve it out, had steadfastly refused it co-operation at Cheyenne, and upon Denver the effect of this attitude was outrageous and the extortions and discriminations shameful. Freight charges between San Francisco and Denver were higher than between San Francisco and Chicago, and travel rates were not much better.

The piratic domination of Jay Gould in Union Pacific affairs terminated in 1883, after having created huge burdens that did not well prepare the great system for encounter with the panic times of 1893. On October 13, 1893, Receivers were appointed. In magnitude, extent, and variety of interests involved that Receivership was the most important in the great list of American railway bankruptcies; for the stocks, bonds and floating debts of the various roads with which the Receivership had to deal aggregated, as already mentioned, more than $470,000,000. Then followed the intricate task of untangling the company's affairs, of re-organizing and rehabilitating the corporation, and of paying the enormous sums due the United States on account of the old construction subsidy bonds. While it is now several years since the reorganized system passed to the successor Union Pacific Railroad Company, the affairs of that Receivership were not finally closed until November 7, 1900. The re-organized system of the Union Pacific, proper, now includes 3,060 miles of railroad, in which are still embraced the lines of the old Denver Pacific and Kansas Pacific raised to a very high standard of excellence, and in efficiency and frequency of service maintained at par with everything that is done on the main stem of the system. If all could be known and told of the history of these Union Pacific roads the story would rank with anything related of the black-flag-men of old on the Spanish Main, with the difference that the piracies were effected under modern methods that did not call for personal blood-letting nor for physically walking the plank. But the days of railroad buccaneering are past, and the old pioneer roads of the plains united in a new life have begun their new record on a clean page.

Denver Union Passenger Station as originally built.

In the early period of railroading in Denver there were several passenger stations in the railroad district of the city. Late in 1870 when the pioneer roads, the Denver Pacific and the Kansas Pacific, had been completed to Denver, they united in the construction of a very creditable building where they intersected Twenty-second street, which marked the terminus of the lines. It was a rather large, two-story brick structure, and for its time was regarded as a very liberal provision for the accommodation of passengers, though it was then on the outskirts of the city in that direction. The Denver & Rio Grande and the South Park road, both of the narrow gauge, had their passenger stations on the westward side of Cherry creek, in "West Denver;" and the Colorado Central, after it had withdrawn from its brief association with the Kansas Pacific, had built a frame passenger station on the eastward side of Sixteenth street on part of the present Union Passenger Station's site.

These arrangements continued until the autumn of 1879 when, on October 24th, D. C. Dodge, of the Denver & Rio Grande; former Governor John Evans, of the South Park; and W. A. H. Loveland, then at the head of the Colorado Central, made an agreement under which the three narrow-gauge roads were to use the Central's passenger station at the foot of Sixteenth street. The Denver & Rio Grande, and the South Park then bridged Cherry creek, and ran their trains to the not very inviting nor commodious station of the Colorado Central.

This movement was only the beginning of one to bring all the passenger business of Denver under one roof; for, within a few weeks afterward the organization of the Union Depot and Railroad Company was undertaken. On November 24, 1879, there was a meeting of the representatives of all the roads, at which the Union organization was effected, the incorporators of the company being Walter S. Cheesman, D. C. Dodge, A. A. Egbert, Bela M. Hughes, and J. F. Welborn. The arrangement provided for five Trustees, and W. S. Cheesman, S. H. H. Clark, D. C. Dodge, A. A. Egbert, and Sylvester T. Smith were chosen for the first year. These Trustees elected W. S. Cheesman President of the company; S. T. Smith, Vice President; George W. Kassler, Treasurer; D. C. Dodge, Secretary, and the organization was completed. Its capital stock was $400,000.

W. S. Cheesman negotiated for twelve acres of land lying between Sixteenth and Eighteenth streets with Wynkoop street as its southward boundary; and on December 10th the company issued $300,000 worth of seven per cent. twenty year bonds and prepared for erecting a suitable Union Passenger Station. On February 2, 1880, at a meeting of representatives of all the roads, agreements were made under which all their passenger trains were to begin and end their trips at the new station upon its completion.

The plans having been perfected construction work was let by contract and begun about the first of June. The building was to be 503 feet long, by 65 wide, two and one-half stories high, built of sandstone and lava, with a central tower 180 feet high, and quite a large area of park in front of it. The main, or central part of the building, only, was undertaken at that time, and within a year it was near enough finished to be used. On June 1, 1881, it was opened to the public, the finishing work being completed within a couple of months afterward. The Union Pacific and the Denver & Rio Grande roads later became the owners of all the Union Depot and Railroad Company's stock in the respective proportions of four-fifths and one-fifth, the other roads becoming tenants and paying rental for the use of the station and for the equal facilities it afforded them. Several years later a wing was built on each end of the main building which completed the structure according to the original designs.

On the morning of Sunday, March 18, 1894, an electric light wire started a fire under the roof of the main building and before the flames could be subdued the larger part of the structure's interior was burned out—an unusual experience for a building of its quality and character—entailing an insured loss of $125,000. It was decided to rebuild on an improved plan at a cost of about $200,000; and at that time some of the other companies acquired proprietary interests. In the reconstruction and repairing that immediately followed many changes were made in interior arrangements and exterior appearance, both much for the better. The extent of these outside changes is indicated by the accompanying engravings. Notwithstanding its railway proprietorship, the Union Depot Company has usually had Denver men for its executive officers.

While there are now many larger and more imposing union passenger stations in the country, it is doubtful if there is any of more pleasing architectural effects, and surroundings, or of greater convenience of arrangement and location than ours. Its handsome aspect is heightened by the parks in front of it, and by and by when lower Seventeenth street has done still more to make itself presentable, the agreeable impressions received by strangers when they pass out of this great gateway to the city will be even more favorable and gratifying than they now are.

There are now (at the close of 1900) 4,338 miles of steam railway in operation in Colorado, with several additional but relatively short lines almost completed. When the fact is recalled that practically all of it was built within the twenty-five years preceding panic times, the energy that made such a development possible stands out stronger and clearer to the mental view. Little has been added to the mileage since those times, and none directly into Denver excepting that the Burlington's cut-off road to western Nebraska might be so regarded, about sixty miles of which was new work in Colorado. The Rio Grande, Pagosa & Northern of thirty miles, the Colorado Fuel & Iron Company's Crystal river road from Red Stone to Coal Basin of twelve, and various minor additions and spurs to the old roads brought the new mileage in the State built in 1900 up to about 150 miles

On November 17, 1899, the Colorado Springs & Cripple Creek District Railway Company was incorporated to build a standard gauge steam railroad between Colorado Springs and Cripple Creek over a track distance of about thirty-five miles. This road, which is nearing completion, will much reduce the rail distance between Denver and the great gold camp, as the present shortest route affords a somewhat roundabout way of getting there. The road has grades of three and one-half per cent., encounters many engineering difficulties, and traverses a region of magnificent scenic beauty and grandeur. The company, which is a Colorado Springs organization, owns an electric railroad system in the Cripple Creek district and with which the main line will connect. Counting various branches, spurs, and sidings this road will have, including the electric lines, an aggregate of about seventy miles.

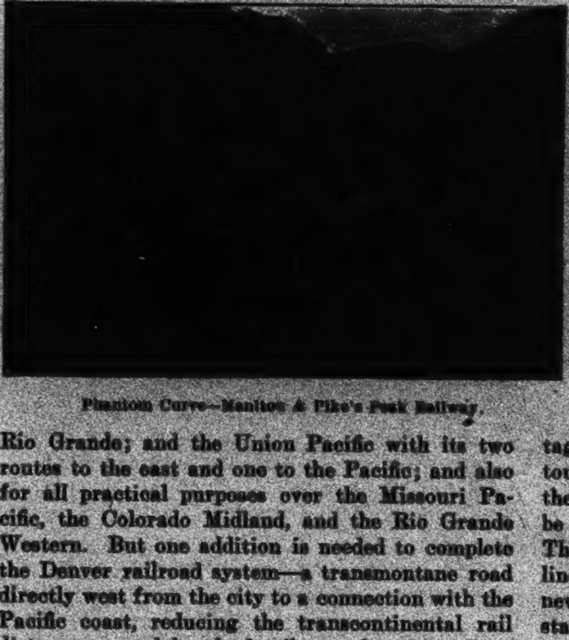
On November 18, 1899, the Denver & Southwestern Railway Company was incorporated, but notwithstanding its name it has no direct connection with Denver. It is a consolidation of the Florence & Cripple Creek narrow gauge road; the Midland Terminal Railway, standard gauge, on which the Colorado Midland and the Colorado & Southern reach Cripple Creek; the Golden Circle Railroad (electric); the Canon City & Cripple Creek Railroad, narrow gauge, from Ora on the Florence & Cripple Creek, to Canon City; the Colorado Trading & Transfer Company; the LaBelle Mill, Water & Power Company; and the Metallic Extraction Company; a rather queer combination under a railway name. All its property and operations are in what passes under the general name of "Cripple Creek district," and it has at present no connection of its own with Denver. Having built seven miles of new track, the company now has about 131 miles of road in its system.

Denver Union Passenger Station.

In 1899 the Colorado & Southern company made surveys for a connecting road that would afford the shortest possible route between Denver and Cripple Creek; and the public anticipated its immediate construction. Recently the company's Board of Directors gave the President authority to build it if his judgment approved. The proposed route diverges from the main line of the South Park division at South Platte station, twenty-seven miles south by west of Denver; following a fork of the South Platte river, it crosses a divide, and connects with the Colorado Midland; thence by that road and the Midland Terminal trains would enter Cripple Creek. About forty-five miles of new road, costing approximately $2,000,000, are required for this "cut-off," and it is not improbable that this will be one of the early additions made to Denver's railroad system. The plans include a third rail on the South Park road, between Denver and South Platte station, and contemplate that the road shall become part of a new transmontane route across Colorado and to the farther west. As such it would be several hours shorter than any of the existing routes, and by it Cripple Creek would be brought within three or four hours of Denver.

In very recent times the probability of the Great Northern and the Illinois Central roads soon building across the plains to Denver has received much attention from the Denver press. The Northwestern has also been the object of local interest, and its intention to extend a line of some 300 miles from a point on its Fremont, Elkhorn & Missouri Valley road in Nebraska, direct to Denver, entering the city by way of the Colorado & Eastern road, have been presented in detail. But, as in the cases of the Missouri Pacific and the Rock Island roads, whatever may be done by either or all of these roads to the end announced, will figure in the annals of the new century.

Denver's railway transportation facilities are exceptionally good. In the autumn of 1900 the arriving and the departing regular daily passenger trains numbered 120, the greatest number operated on regular schedules in the history of the Denver Union Passenger Station. These trains moved upon lines that radiate from Denver almost as the spokes from the hub of a wheel, and that place the city in rail communication with not only all the country but with every important town and mining camp in the State. The mere local road no longer figures in the train schedules at the Union Passenger Station. All of those trains operate upon vast systems—the Atchison, Topeka & Santa Fe; the Chicago, Burlington & Quincy; the Chicago, Rock Island & Pacific; the Colorado & Southern; the Denver & Rio Grande; and the Union Pacific with its two routes to the east and one to the Pacific; and also for all practical purposes over the Missouri Pacific, the Colorado Midland, and the Rio Grande Western. But one addition is needed to complete the Denver railroad system—a transmontane road directly west from the city to a connection with the Pacific coast, reducing the transcontinental rail distance several hundred miles, and making Denver the great gateway in the central west. It will not be many years in coming.



Phantom Curve—Manitou & Pike's Peak Railway.

The several Denver railways which penetrate the mountain regions of Colorado present many features of great interest, not only to the constructing engineer, but to the intelligent traveler who passes over their routes. The topographical difficulties and problems encountered in locating and building these roads would have appeared to the layman, as they did to many engineers, insurmountable and insoluble. But they were overcome successfully, and the theory advanced by some railway men that a locomotive can go wherever a horse can climb, would seem to have been satisfactorily demonstrated. The extraordinary profiles of these mountain roads indicate the high order of practical and technical ability required in their construction on lines enabling them to be regularly and profitably operated. On the maps these systems with their many crooked spurs and branches, shown in heavy black lines after the railroad fashion, look like a lot of snakes squirming around in their dens.

It was thought at the outset that only narrow gauge roads could be constructed and operated through the deep and crooked canons and over our lofty ranges, and it was because of that view that the pioneers of our mountain roads were of the three-foot gauge. The Colorado Central company was, as our reader has seen, the first to prepare to build that kind of railroad in Colorado, though the Denver & Rio Grande company was not far behind it. Of the physical aspects of the Central's Clear creek canon road some account appears on a succeeding page.

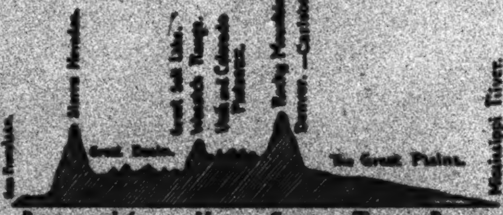
The Denver & Rio Grande company constructed the most extensive system of narrow gauge railroads in the world, much the greater part of which was mountain work. Its main line westward from Pueblo struck boldly into the mountains, by way of the tremendous canon of the Arkansas river, winding through the vast and tortuous chasms, climbing and climbing as it went, until it emerged among the peaks and precipices where it began such twistings and turnings as may be seen in the Marshall Pass, with its elevation of 10,856 feet above the sea; and thence downward by the same devious ways to the lower levels of western Colorado. Later the Rio Grande realized the disadvantages of being an isolated narrow gauge system touched by standard lines at various places, and at the same time concluded that standard tracks could be operated over part of its narrow-gauge routes. Then followed a third rail on many of the narrow lines, including the main line south from Denver, new standard construction in other places, and great standard gauge trains on their journeys between the Atlantic and the Pacific were soon winding their way through the mighty gorges, up into the clouds, over the summits of the ranges, and down toward the Utah Basin—the very poetry and romance of railroading.

The road has, of course, an unbroken succession of ascending grades on the eastern slope, and a similar succession of descending grades on the western. The grades of the Denver & Rio Grande's existent narrow gauge lines, all of which are in the mountain districts, are extremely heavy and the curves very sharp, as they have to be to make the passage. The grades of its standard gauge mountain lines are somewhat modified, the Tennessee Pass, elevation 10,433 feet, through which part of the new standard construction was built, affording easier approaches. But there is one standard branch, the famous Calumet, with a grade of seven per cent., which is operated by ordinary locomotives. The Rio Grande has, practically, four of these transmontane lines. One of standard gauge from Pueblo across the State to Grand Junction; another of standard gauge from Cuchara to Alamosa, and narrow gauge thence to North Creede; the third, of narrow gauge, from Salida, by way of Gunnison, to Grand Junction; and the fourth, narrow gauge, from Antonita westward to the southwest section of the State and thence by the Rio Grande Southern north to a junction with the Salida-Grand Junction line. All of them traverse mountain regions not surpassed by any in the world in wildness and ruggedness of scenery. The branch from Leadville to Dillon runs through Fremont Pass at an altitude of 11,330 feet, the highest point on the Denver & Rio Grande system.

The Colorado Midland, a standard gauge road from its inception, keeps out of the greater gorges and canons, and begins its run for the summit at the eastern base of the mountains, crossing two intervening summits before reaching the Great Divide. Leaving Colorado Springs it heads westward by way of Manitou and begins its mountain-climbing. By grades as heavy as four per cent. it reaches and passes the Hayden summit, and then has a decline toward Eleven Mile canon, followed by easy ascending grades over the rolling country of the South Park to the second summit, in Trout creek Pass. Beyond this it drops down until the foot of the great grade to the main summit is reached, where its greatest work begins, though not on grades as heavy as the approach to the Hayden Divide. A winding route of a little more than forty-eight miles brings it to the mouth of the Hagerman tunnel, 2,064 feet long, through the summit ridge of the Continental Divide, the tunnel being 11,528 feet above sea level, and 6,330 feet or about one and one-fifth miles higher in the air than the city of Denver. The approach to Hagerman Pass and tunnel from the east is through a region of majestic grandeur and exceeding beauty. Here the road turns and twists and zig-zags, forming four or five lines along the mountain side. One of the curves by which the track changes its direction is carried by a long, high trestle, there being no way of keeping it on the ground. On this approach to the summit the road is protected by several snowsheds, useful but exceedingly ugly structures. A winter view from Hagerman Pass is one the beholder will never forget.

Beyond the Divide the Midland finds its way down by grades of from two and a half to three and one-third per cent. At Busk is another tunnel reached through long snow-sheds. Here there are two lines—one through the tunnel which saves climbing over a ridge five hundred feet high; and the other, "outside," which climbs over the ridge; the latter being the original line. On down and far away through the fastnesses of the Rockies the Midland winds along to its Utah connection with the Rio Grande Western at Grand Junction. Trains of five cars—baggage, mail, passenger and sleeping—of the regular standard type are operated over this road through cloud-land, but two huge engines are required to get them to the summit in that wilderness of peaks and ranges.

The greater part of the Colorado & Southern system is on the plains and of standard gauge, but it has some narrow gauge mileage in the mountains which presents many most striking and interesting engineering achievements in railroad building. As already told, it now includes the old Colorado Central's Clear creek canon narrow gauge roads, which are remarkable examples of most difficult railroad work. The main line, having a track distance of thirty-nine miles between Golden and Silver Plume overcomes an elevation of 3,521 feet; but it takes many tortuous paths to do it. Beyond Golden the road may be said to consist of a succession of curves as it twists its way along the creek flowing through the great, contracted, water-worn chasm. Near the upper end of the line, between Georgetown and Silver Plume, is its famous "Loop." The two towns are but a little more than a mile apart in a direct line, and between them the road by its looping is developed to more than four miles of trackage. This expedient was resorted to to overcome the difference in elevation between the two towns (700 feet) and at the same time keep within the maximum gradient of three and one-half per cent. The "Loop" is one of the popular novelties in Colorado mountain railroading. The "switchback," on the branch to Central City, and by which the elevation of 471 feet between Black Hawk and that city is overcome in a track distance of four miles, is another very interesting expedient in mountain-climbing by a railroad.



PROFILE OF WESTERN UNITED STATES: THROUGH DENVER.

The Colorado & Southern's line to Leadville and other points in that general region—the old "Denver & South Park" road—encountered as many engineering difficulties in its construction as any of the others. It is of the narrow gauge, with a most irregular profile, abounding in grades of from three to four per cent.; and with curves of from fifteen to twenty-four, and even twenty-eight, degrees. It enters the mountains by way of the canon of the South Platte, and its ascent to the summit of the Divide is continuous. The famous Alpine tunnel by which the summit range is pierced for this road is 11,524 feet above the sea. After passing the tunnel the road descends by grades of about three per cent. to Leadville, having traversed a region of panoramic magnificence and the rarest beauty. One of the branches on the western slope makes its way to Keystone, a point which is but a few miles from the terminus of the Clear creek division and separated from it by the great Snowy Range. A tunnel through there will some day complete another of these remarkable transmontane lines in Colorado, and afford us further evidence of the capabilities and resourcefulness of modern railway engineering.

On the summit of Pike's Peak.

The Colorado & Northwestern is the younger of the mountain lines. At present its road extends from Boulder northwestward to Ward, but it has ambitions to cross the main range, and will no doubt eventually do so. The direct crow-flight distance between Boulder and Ward is not more than fourteen or fifteen miles, but the track distance in consequence of many windings as the climb is made, is elongated to a fraction over twenty-six miles. From one point in the Culbertson Pass seven tracks of this line are visible, each on a different level and each apparently leading in a different direction as the road turns and twists up the sides of the mountains on its way to and through the Pass. As on all the others, the scenery on this line presents many magnificent aspects.

No line of Colorado's mountain railways is more interesting and of greater novelty than the road that climbs to the summit of Pike's Peak—the Manitou & Pike's Peak railway; and while it is not, properly speaking, a Denver railroad, a few lines concerning it may not be out of place here. Ascending to the summits of the lofty mountain-peaks in a railway car would not have been thought of by the preceding generation, but in our own times no place accessible over solid ground appears to be beyond the reach of the locomotive. The ascent of high mountains has always had an attraction for many people, but a comparatively few can endure the fatigue of laboriously climbing into the regions of rarefied atmosphere. The extraordinary increase in recent years in what is known as "tourist" travel has been the immediate reason for constructing railways to the summits of several great mountains in this country and in Europe.

The Pike's Peak road was first projected in 1884, as a line with the ordinary form of track. A survey was made on a maximum grade of five per cent., which developed a sort of spiral route winding upward around the mountain, with a length of thirty miles of track. However, nothing further than the survey came of that enterprise, and it was not until 1888 that the present more direct line operated on the rack system, was located. Construction was begun in 1889 and completed in October, 1890. The track is a little more than nine miles long (47,992 feet), and in that distance overcomes an elevation of 7,250 feet, the altitude of the rails on the summit of the Peak being 14,147 feet above sea-level. The road is constructed on the Abt system and is the only one of the kind in this country. In addition to the ordinary pair of rails there is a rack between them made of sets of bars having teeth in the upper edge, the bars being set with the teeth "staggered" to coincide with the "staggered" teeth of the gear-wheels attached to the under part of the engine. The average grade is sixteen per cent., the maximum being twenty-five per cent. The curves are sharp, the maximum being sixteen degrees; and the road is on solid ground, practically all the way, as there are no trestles and only four small plate-girder bridges. The engines and cars are so constructed as to overcome in their planes most of the grade of the road, and are equipped with many safety devices. Ascending, the engine is behind the passengers' car; descending, it is in front; and so the journeys are made up and down with but little, if any, more danger than attends movements on an ordinary railroad.

Among the men who laid the foundations and far advanced the superstructure of Denver's great system of railways, the names of five, as our reader will have observed, appear conspicuously in the list—those of five master leaders,

Mount of the Holy Cross, from Frenchman's Lakes. On a line of the Denver & Rio Grande road.

John Evans, William A. H. Loveland, and William J. Palmer, the directors-general; and David H. Moffat and Jerome B. Chaffee, the financiers. Evans, Loveland, and Chaffee sleep in honored graves, but Palmer and Moffat are still in active and useful business life. The first-named two were strenuous rivals. Loveland was to the Clear creek canon roads and to those to Boulder, Fort Collins, and various other places to the northward of Denver, what Evans was to the Denver Pacific, the South Park road, and the Denver, Texas & Gulf road and its tributaries. All but one of the lines of those one-time rival railroad builders are now harmoniously combined in the Colorado & Southern system, but the two master-men who built them never thought of such an union except that it might result from one crippling and exhausting the other and absorbing his roads. Evans expected to see his South Park road terminate at Pacific tidewater. Loveland was confident that his Clear creek canon road would make its way there first. Neither lived to see his hopes fulfilled, nor has either road yet justified them.

The Colorado builders of the earlier Colorado railroads had, as we have attempted to set forth in these railroad annals, many trying situations to meet and pass, and many great obstacles to overcome. Physical, financial, and political difficulties dogged their steps, while litigation seemed to beset them on every hand. Their courage and struggles were heroic and their victories worthy the indomitable men who won them.

CHAPTER LVII.

CITY GOVERNMENT—FIRST CITY "CHARTER," AND PIONEER ORGANIZATION—PROVISIONAL CITY GOVERNMENT—CITY'S FIRST LEGAL GOVERNMENT AND ITS ORGANIZATION—OUTLINE OF THE GOVERNMENT TO 1885—WARD DIVISIONS AND EXTENSION OF CITY BOUNDARIES—ELECTION TIMES—CHANGES IN FORM OF CITY GOVERNMENT—APPOINTIVE CONTROLLING BOARDS—OBJECTIONS TO THEM, AND MOVEMENTS FOR RETURN TO "HOME RULE"—POLITICAL ASPECTS—NAMES OF DENVER'S MAYORS—FIRE DEPARTMENT—POLICE DEPARTMENT—CITY PARKS—CITY HALL AND OTHER PUBLIC IMPROVEMENTS—VITAL STATISTICS—DENVER'S SUBURBAN TOWNS.

Part of the story of Denver's pioneer "municipal governments" has incidentally appeared in preceding chapters, and therefore a separate review of the origin and development of the city government presents another instance in our narrative in which some repetition of statement seems unavoidable. The "act" of the "Jefferson Territory" "Legislature," approved December 3, 1859, "incorporating," as one municipality Auraria City, Denver City, and Highland, resulted in a municipal organization that had even less vitality than the "Territorial government" from which it derived its authority for existence. But after having gone through one year in which there was no government, a majority of the people were ready to welcome any form of civil organization that promised relief from existing conditions.

That "Jefferson" "statute" did not, as has so often been stated, "confer a charter on Denver City," but united the three towns as the "City of Denver, Auraria and Highland," thus retaining the identity of each in the somewhat unwieldy corporate name. The title and sections one and two of the "act," were as follows:

An Act.

To Charter and Consolidate the Towns of Denver, Auraria and Highland.

Section 1. Be it enacted by the General Assembly of the Provisional Government of the Territory of Jefferson, the Governor approving:—That all that tract of country described as follows, to-wit: commencing on the northwest side of the South Platte River, at that point where the most northeastern portion of the north-east line of the Denver Town Plat produced would touch high-water mark; thence following said line to the north corner of said Town Plat, thence along the north-east line of said Town Plat to the east corner, thence along the south-east line of said Town Plat to the point where it intersects Cherry Creek, thence up said creek to the point where the south-easterly line of the Auraria Town Plat intersects it, thence along said line and said produced line to high water mark on the north-west bank of the South Platte River, thence down said river to the point where the most south-westerly line of the Highland town site produced would intersect it, thence along said produced line and said line, thence following the line of said town plat with its angles to the westerly corner of said town site, thence along the northwesterly line of said town site to the northerly corner, thence along the most north-easterly line and the same produced to high water mark on the South Platte River, thence down said river to the point of beginning, is hereby erected into a city, by the name and style of the City of Denver, Auraria and Highland, and by that name they and their successors shall be known in law, have perpetual succession, sue and be sued, plead, and be impleaded, defend and be defended in any and all courts of law and equity, in all actions whatsoever, and may contract and be contracted with, may purchase, receive and hold property, both real and personal, within said city, and may sell, lease and convey, or otherwise dispose of the same for the benefit of the city, may purchase, receive, hold, lease or convey property both personal or mixed, beyond the limits of the city, to be used for the burial of the dead, for the erection of water works, for the establishment of hospital, poor houses, work houses of correction, or for any purpose which may tend to the general good of the city, and may have a common seal and change the same at pleasure.

Sec. 2. The corporate powers and duties of said city, shall be vested in the mayor and the board of councilmen, to be styled the Council of ———

The "act" then goes on to specifically confer power to enact and enforce ordinances, rules and regulations "not inconsistent with the Constitution of the United States and the Organic Act of this Territory." Qualifications of voters were defined as follows:

Sec. 5. That all free white male citizens of the United States, or persons who have lawfully declared their intentions to become such, and all who are twenty-one years of age, and who shall have resided within the city limits sixty days next preceding any election, shall be deemed qualified electors of said city, in the ward in which they may reside."

The officers of the "City of Denver, Auraria and Highland" were specified to be "a Mayor, twelve Councilmen, City Clerk, Recorder, Marshal, Assessor, Treasurer, Attorney, City Engineer, Street Commissioner, and such other officers as may be created by ordinance."

The "act" then defines much in detail the powers and duties of all officers, the methods of Council proceedings, manner and time of holding elections, authority for levying and collecting taxes, for policing the city, for borrowing money, for establishing and maintaining public schools, water works, hospitals, infirmaries, work houses, and all the other usual institutions of a city. The "act" provided for a comprehensive and complete form of city government. The concluding section specified that the first election held under the "charter" should occur on the third Monday after the passage and approval of the "act," and that the regular annual election should be held on the first Monday of October in each year thereafter.

By virtue of that "Jefferson Territory" "charter" the first city election was held on December 19, 1859, and the following named city officers were chosen for terms to end in October, 1860:

Mayor, John C. Moore; Recorder, C. A. Lawrence; Marshal, W. E. Sisty; City Clerk, J. C. Spencer; City Assessor, P. Talbott; Treasurer, S. S. Curtis; Engineer, E. D. Boyd; Street Commissioner, John C. Nelson; City Attorney, D. C. Collier; Councilmen, H. J. Rogers, Thomas Pim, C. Bedolet, N. G. Wyatt, John W. Jones, J. H. Gerrish, M. D. Hickman, John Shear, Thomas Pollock, A. Jacobs, J. B. Atkins, and A. C. Hunt.

These officers were elected by majorities ranging from seven for Marshal Sisty to 360 for Mayor Moore; the total vote for Mayor having been 526. The "charter" provided for its submission to a vote of the people, for approval or rejection, at this same election. There were 367 votes for and 302 against it; an approving majority of only sixty-five.

This "charter" vote revealed a rather strong opposition to having a city government at that time. Mayor Moore and his ticket were opposed by candidates for all the offices except some of the positions in the Council. They were William Davidson for Mayor; J. G. Harris, Recorder; W. J. Welch, Marshal; C. C. Post, Clerk; J. Lewis, Assessor; Amos Steck, Treasurer; H. M. Fosdick and G. L. Moody, Engineer; William Regan, Street Commissioner; —. —. Mayhew, Attorney; R. L. Wooton, William M. Slaughter, C. J. Johnson, John Hughes, R. B. Bradford, D. P. Wallingford, P. P. Elmore, and several "scattering," for Councilmen. The Judges of the election were A. Jacobs, C. L. Dahler, Charles Johnson, J. W. Smith, J. J. Saville, and L. L. Barney; the Clerks, John B. Atkins, T. O. Duncan, J. H. Jack, and L. W. Bliss.

The opposition to the city "charter" was partly based on the belief that the irregular Territorial government, itself without legal existence, could not transmit lawful authority to a subordinate, municipal government; and partly because of mere captious objection. It was alleged at that time that it was the plan of the opposition to elect officers who would refuse to qualify, and thus leave the people practically where they would have been had no election been held. John C. Moore, the candidate for Mayor, of what we may call the government party, was a very capable man with whose brief history as a citizen of Denver our reader is already familiar.

The City Council held its first meeting on January 21, 1860, when Mayor Moore sent it an able message of advice and recommendation. This government made a good beginning and sustained itself very well for several months. But before midsummer of 1860 it had weakened, and lost the fealty of a large majority of the people. The parent Territorial government was in much the same condition, but the weakness of the offspring was not wholly due to heredity. The issues between the northern and southern States had become sharply defined at that time, and the out-spoken sentiments of loyalty to the south by the executive head of the city government had much to do with impairing the usefulness of the organization, aside from the general debility into which it was sinking. Before the summer ended it had sunk into utter impotency and was ignored by nearly all the people; and the city was again without a government. As we have elsewhere stated, Mayor Moore entered the Confederate army in 1861, and served through the war. After the conflict he returned to Colorado, and later located at Pueblo where he engaged in newspaper work. A few years ago he removed to Kansas City where he is now living—or was a short time since. If his "city government" left any "archives" to its successor they probably went down with the old City Hall in the Cherry creek flood of 1864; as no "city records" of that brief era are now known to exist.

The lawlessness that prevailed in the city in the summer and autumn of 1860, partly due to its governmentless condition and partly to the criminal instincts of desperadoes, compelled the people to organize on their own responsibility and in self-defense. The "People's Courts" summarily called into existence to deal with offenders whenever flagrant crimes had been committed, did not fulfill all the requirements of the emergency. We have heretofore briefly referred to a meeting of citizens held early in September, 1860, to take action toward organizing a new city government. It assembled in the old Apollo Hall, a place that was put to a great variety of uses, from very good to exceedingly bad. At that meeting a committee consisting of Hiram P. Bennet, A. C. Hunt, William Larimer, Jr., John Hughes, C. A. Cook, and A. Jacobs, was appointed to draft a "constitution" defining a form of local government to be known as "The People's Government of the City of Denver." On the evening of September 21st another meeting was held at Apollo Hall at which the "constitution" of the proposed new city government was submitted by the committee and, after a few changes, was adopted. It provided for the immediate election of officers to serve until the ensuing spring, and also for holding elections in the spring and autumn "of each year, thereafter."

It was resolved to submit the proposition to the people of the city for adoption or rejection, at an election to be held on the first Monday in October—the date appointed by the "Jefferson" "charter" for annual city elections. The arrangements did not provide for a Mayor, and Mr. Moore was left undisturbed in his nominal possession of his equally nominal position. The meeting also nominated officers to be voted for at the October election, and their titles fairly indicate the general form of "The People's Government of the City of Denver."

The election was held on Monday, October 1st, and a total of 1,169 votes was polled; 1,122 for the constitution, eleven against it, and seven for what the voters termed a "limited constitution." This was an overwhelming vote in favor of the new form of city government which had, at least, as good legal standing as the one that had been established under the "Jefferson" "charter." By practically the same overwhelming vote the officers that had been nominated by the citizens' meeting, or convention, were elected; there having been no "opposition ticket," and but a few "scattering" votes for other individuals. Those elected were—

Appellate Judge, A. C. Hunt; Judges of the Court of Common Pleas, D. P. Wallingford and N. Sargent; Clerk, A. H. Mayer; Treasurer, J. H. Gerrish; Marshal, Thomas Pollock; members of the "Legislative Council"—which was a body similar to the ordinary City Council, D. C. Oakes, J. M. Taylor, William Dunn, C. A. Cook, L. N. Tappan, and J. M. Broadwell.

These members of the Council were elected, as were the other officers, in the city at large. The officers-elect assembled on October 8th, all except Judge Hunt and Councilman Taylor being present. The oath of office was administered to all present, and the Council immediately organized by electing William Dunn President pro tempore. The constitution provided that the Appellate Judge should be, ex officio, President of the Council; but as Judge Hunt did not qualify and preside until October 20th, a temporary President was chosen for each of the several Council meetings held in the meantime. At the second meeting Councilman Taylor presided; and at the third, Councilman Tappan. At the fourth, Clerk Mayer presided.

The machinery of the new government having thus been promptly put in motion, the first ordinance introduced and passed was one prohibiting gambling, and the sale of liquor or merchandise on the streets of the city or in tents.

The constitution having provided for holding elections under the new government semi-annually—on the first Monday in April and in October—the officers chosen to constitute this first administration under the "People's Government of the City of Denver" served until the following spring. In the meantime provisions were made for adding at the election of April, 1861, several more general officers to the establishment, and the city was divided into three "Divisions." The old "Denver City" side became the East Division; the "Auraria City," the West Division; and Highland, the North Division. On April 8, 1861, in the interval between the passage of the act of Congress creating the Territory of Colorado and the arrival here of Governor Gilpin to institute his government, the second city election under this provisional city government occurred. The only law under which it and the one of the previous October were held was the Law of Necessity. At that election the following-named officers were chosen:

Judge of the Appellate Court, W. M. Slaughter; Judges of the Common Pleas Court, J. H. Sherman, John Wanless, and A. Chaplin; Clerk and Secretary, J. C. Spencer; City Attorney, I. N. Bassett; Treasurer, T. P. Ames; Marshal, J. R. Shaffer; Engineer, J. M. Sheafor; Street Commissioner, A. H. Barker; Councilmen, East Division, W. H. Farner, G. W. Clayton, H. Murdock, and M. H. Bailey; Assessor, East Division, O. P. Thomas; Collector, East Division, A. Stansbury; Councilmen, West Division, D. C. Oakes, J. M. Iddings, J. C. Wicks, and L. Buttrick; Assessor, West Division, C. L. Dahler; Collector, West Division, J. A. Nelson; Councilman, North Division, R. Sopris; Assessor, North Division, J. W. Wier; Collector, North Division, A. B. Sopris.

This was the last city election held in Denver under any form of People's, or Provisional, Government. Under the constitution of the government established in the autumn of 1860, its third election would have occurred on the first Monday in October, 1861; but before that time the Territorial Government of Colorado had been established, and its first Legislative Assembly had begun its first session. Therefore, the third election was never held. However, the officers elected in April, 1861, served capably but with diminishing forcefulness, and more or less nominally, until the following November. Their government formed the connecting link between emergency governments without authority of statute law and the first legally constituted city organization, established in November, 1861, under the authority of an act of the first Legislative Assembly of Colorado Territory.

This act was passed and approved on November 7, 1861, and first gave a legal existence to the City of Denver. It consolidated the three pioneer towns as "The City of Denver," and provided for it the form of government indicated by the official positions mentioned below in connection with the first election held under it. This "charter" law was almost a copy of that of the "Jefferson Territory" "Legislature" under which Mayor Moore and his "city government" had endeavored to operate. Its language is much the same, and its provisions do not differ in any very important features. The territory of the city was practically the same as that defined by the "Jefferson" "law;" and it may be said that the Colorado Legislature adapted and in a general way merely re-enacted the "Jefferson" "statute" with some changes in details. The first election under the "charter" was held on November 19th when the following-named officers were chosen, to serve until April, 1862:

C. A. Cook, Mayor; P. P. Wilcox, Police Magistrate; W. M. Keith, City Marshal; J. Bright Smith, City Clerk and Attorney; E. D. Boyd, City Surveyor; Joseph B. Cass, City Treasurer; George W. Brown, City Collector; and D. D. Palmer, Street Commissioner. Aldermen—H. J. Brendlinger and John Nye, First Ward; L. Mayer and W. W. Barlow, Second Ward; J. E. Vawter and L. Buttrick, Third Ward. (George E. Thornton appointed Chief of Police.)

This ended what may be called the pioneer era in city government, or attempted government. From that time until the spring of 1885 the general character of the city government remained unchanged, though in the meantime there were various minor shiftings of duties and authority. The Mayor has been a fixture all the time, but in April, 1874, there appeared a "Vice Mayor." To this position Alvin McCune was elected at that time, and Andrew J. Williams in April, 1875. Then the Vice Mayoralty disappeared. From 1861 to 1885 each ward was represented by two Aldermen elected annually, and they constituted the legislative body.

Other than the Mayor and Aldermen, the official outfit provided for by the city "charter" of November, 1861, comprised as we have seen, a Police Magistrate, City Marshal, City Clerk and Attorney, City Surveyor, City Treasurer and Collector, and Street Commissioner. In 1862 the duties of Clerk and Attorney were separated and two positions succeeded the former consolidated one. In 1863 two Police Justices succeeded the former Police Magistrate, the office of Street Commissioner was suspended, and that of Treasurer and Collector was separated into two, as had been done the previous year in the instance of Clerk and Attorney. In 1864 the City Clerk was also made Assessor, and no Collector was elected; but in 1865 the Collector resumed duty. In 1867 the Street Commissioner was restored, and the office of Clerk and Assessor separated into two. In 1868 the unfortunate Street Commissionor again disappeared, and remained out of sight for a long time. In 1874 the County Treasurer became, ex officio, City Collector; the two Police Justices were abolished and one Police Magistrate substituted; and the office of City Marshal was also abolished, the Chief of Police succeeding that functionary. In 1876 the position of City Physician was created, and a Police Justice was substituted for the Police Magistrate. In 1878 the City Surveyor was succeeded by the City Engineer, and the position of City Scavenger was added to the list. In 1881 the Street Commissionership was revived, and the position of Chief of the paid Fire Department created. In 1882 the City Scavenger was relieved from further duty, and in 1883 the Street Commissionership was again abolished. But in place of the latter, two new positions were created—those of Auditor and of Building Inspector. After that there were no more changes until the general re-organization that went into effect in April, 1885.

City's old Seal, in use from 1861 to 1901.

The city had remained content with its division into three wards until the spring of 1866, when the Fourth was added; an arrangement which continued until the spring of 1873 when the Fifth and Sixth were created. Ten years later the city was re-districted into nine wards; in 1893 the number was increased to twelve; in 1895 to fourteen; in 1897 to fifteen; and in 1899 to sixteen, the present number.

The city's boundaries remained as defined by the "charter" act until 1864. By an act of the Legislature approved March 1st, the area was enlarged to embrace a total of 2,240 acres. As we have already related the circumstances of this expansion, in connection with what has been said of the "Congressional Grant," we need not further dwell upon them here.

It was not until 1868 that the city's area was again increased, and there was no crying need for it, even then. By an act of the Legislature approved January 9th, between 1,600 and 1,700 acres were added. In this new Territory the more important additions platted were Barth's, H. C. Brown's second, Case & Ebert's, Downing's, Ford's, Horner's, Hyde Park, Kountze's, McMann's, Porter's Park Avenue, Provident Park, Riverside, San Rafael, Schinner's, J. W. Smith's, Witter's second, and part of Wyman's.

The next large extension of the city limits was that of February 13, 1883, which added 4,625 acres to the southern and western portions of the city and bordering on Alameda and Gallup Avenues. Since then there have been several other great extensions, that of March 11, 1889, including 2,400 acres in the eastern part of the city and of which the City Park is a part. To specify all of them would be unduly tedious.

Large additions have also been made to the city by the annexation of former suburban towns, such as Highlands and South Denver; and a considerable portion of the area at present within the city's boundary lines is that of various other suburban towns that still retain their independent village form of government. Other large areas within the city limits, which now embraces nearly fifty square miles, are still unimproved expanses of prairie, though a large portion of this open country is platted into city lots. In certain directions, especially on the west, in Jefferson county, extensive outside tracts are also platted into lots.

View on Larimer street just prior to erection of the City Hall.

After the first one, in November, 1861, city elections were held annually in April up to and including April, 1877, and all officers were chosen for one-year terms with the exception of Mayor Barker who, in April, 1874, was elected for two years. The first State Legislature, in 1877, changed the time to October so as to have city elections coincide with those of the State; and at the election of April, 1877, city officers were chosen to serve until the following October, when another election was held for terms of one year. The Legislature of 1879, to again keep city and State elections together, changed city election time to November; and at the election held in October, 1879, officers were chosen for terms ending in November, 1880. The Legislature of 1881 made another change, providing for a return to elections in April, and city officers chosen in November, 1882, were for short terms ending in April, 1883, when others for full terms of one year were elected. Annual elections in April then continued until and including April, 1885, when, in consequence of an act of the Legislature approved March 16th in that year, which also made other changes, city officers were chosen for terms of two years. Since then our city elections have been biennially held in April.

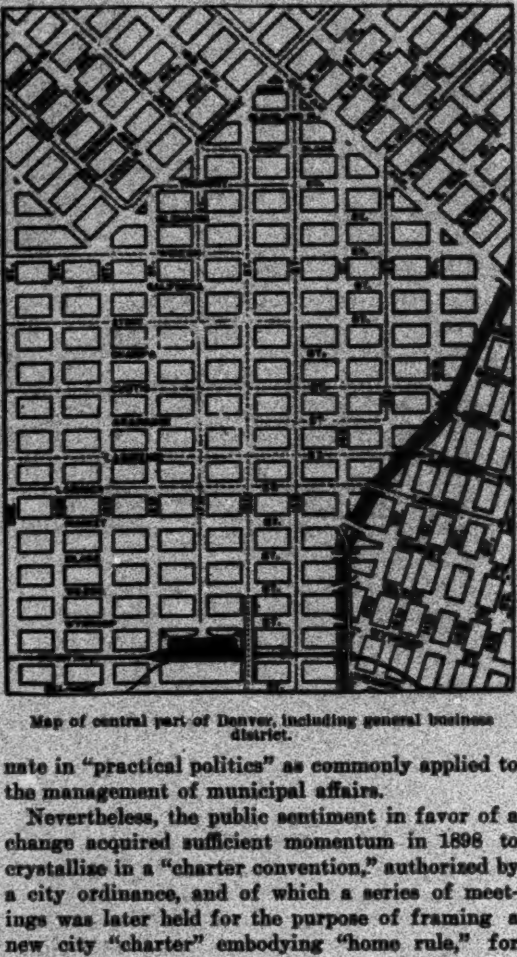
That act of the Legislature of 1885 reduced the law incorporating the City of Denver and the several acts amendatory thereto to one act, revising and amending the older legislation, and making some changes in the form of our city government. At that time and under the previous dispensation, the officers consisted of a Mayor, two Aldermen from each ward, a City Clerk, City Attorney, City Engineer, Police Magistrate, Building Inspector, City Collector, City Assessor, City Auditor, City Physician, and City Treasurer. By the act of 1885 the Legislature created an additional body in the city's legislative department—a Board of Supervisors, consisting of five members to be elected from the city at large. This Board, which continues, constitutes the upper branch of the City Council, corresponding somewhat to the Senate of the State Legislature. The first Board of Supervisors, elected in April, 1885, consisted of O. L. Smith, Thomas Nichol, C. J. Clark, Fred Cramer, and C. D. Cobb. The act also reduced the number of Aldermen from two to one from each ward, and provided for other elective city officers as follows: a City Treasurer, City Clerk, City Attorney, City Auditor, City Engineer, Water Commissioner, and Street Commissioner; the first of the last-named two being an entirely new position, and the latter a revival of an old one. It was at that time that the two-years terms of office were inaugurated.

The Legislature of 1887 made various amendments to the law of 1885, but provided for no important changes in the form of government. The Legislature of 1889, by an act approved March 11th, attacked what was thought by some citizens to have become by that time a serious problem in Denver's government, and made a revision that instituted a radical change. This was the introduction of a Board of Public Works consisting of three members to be appointed by the Governor of the State, at least one of whom to be of a political faith different from that of the Governor. The term of office of the Board members was fixed at two years, and the first Board was to enter upon its duties June 1, 1889. In compliance with this law Governor Cooper appointed Freeman B. Crocker, F. A. Keener, and D. C. Dodge as members of Denver's first Board of Public Works. The other executive officers, Mayor, Treasurer, Attorney, Auditor, Clerk, Engineer, Street Commissioner and Water Commissioner remained as they were provided for by the act of 1885, and were elective. The act of 1889 also re-defined the city's boundaries and extended them.

In 1891 the Legislature made another radical innovation by creating a second appointive Board. An act approved March 4th established the Denver Fire and Police Board consisting of three members, to be appointed by the Governor for a term of two years, and to be divided in partisanship the same as the Public Works Board. The act declared an emergency to exist, and provided that the Board should enter upon its duties on March 10th—only six days after its passage. Governor Routt appointed as members of the first Fire and Police Board, Robert S. Roe, Egbert Johnson, and Robert W. Speer. The other executive offices remained as they stood in 1889.

These two Boards, now constituting the more important agencies in the city government, possess a very large share of administrative authority. The Board of Public Works controls and directs the execution and maintenance of all public improvements authorized by the city, except for school, hospital, work-house, fire, and police purposes, but including street improvements paid for by assessments on abutting property; the street cleaning and engineering work is under its control; it alone is authorized to sell bonds of the city, other than those for school purposes, that may be issued; and until the Park Board was created, it had the management of the parks in its hands. The Fire and Police Board has exclusive jurisdiction over the Fire and Police Departments, which the law contemplated should be placed on a non-partisan, tenure-during-merit basis. It was authorized to, and did, organize the corps of detectives. It also has licensing jurisdiction over all places where intoxicating liquors are sold. One of its members acts as Excise Commissioner, while the other two are, respectively, Fire and Police Commissioner; the Board as a whole being the absolute governing body in all Fire Department, Police and Excise matters. This Board in conjunction with the Health Commissioner also constitutes the Board of Public Health and Safety.

These Boards are wholly the creatures of the Governor of the State; and the power of summary removal of any of their members is vested in him; the preference and power of the people of the city having naught to do with them except as may be recognized by the Governor. After a decade of experience with these Boards, there has arisen a considerable public demand for their abolition, and for a return to what is called "home rule." Their members being the appointees of the Governor, though the membership must be bi-partisan, it is charged, and also denied, that these Boards are made, through the dominance of the majority members, political machines to aid the fortunes of the party in State control, and especially to assist the personal ambitions of the man who may be occupying the chair of the Chief Executive of the State. However, the opinions of warring partisans, whose strifes are seldom conducted under low pressure in Denver, may not be the safer testimony. While much has been said adversely to the Boards along these general lines, an impartial judgment would probably reach the conclusion that the difference between "Board government" and "home rule" lies rather more in the beauty of the latter's theory, than in practical betterments to arise from a municipal government wholly elective and controlled by the influences that usually dominate in "practical politics" as commonly applied to the management of municipal affairs.



Map of central part of Denver, including general business district.

Nevertheless, the public sentiment in favor of a change acquired sufficient momentum in 1898 to crystallize in a "charter convention," authorized by a city ordinance, and of which a series of meetings was later held for the purpose of framing a new city "charter" embodying "home rule," for submission to the Legislature. One of the propositions that grew out of this movement was to form a new, unified city-and-county government—that is, to consolidate the two into one, wholly elective by the people. This plan involved a division of Arapahoe county by cutting twelve miles off its western end. This detached territory was to constitute a new Arapahoe county, and the city area was to be co-extensive with it; the remainder of the county to be made into a new one with the county seat at Brighton. During the session of the Legislature of 1899 there was much talk, both in it and out of it, about "home rule for Denver," but the session closed without any important legislation affecting our city government; and that movement to secure a new "charter" became inanimate and passed out of public notice. However, a renewal of the demand for "Home Rule" was being vigorously pressed upon the Thirteenth General Assembly at the close of our record.

Aside from the legislation we have specifically mentioned in the foregoing, there has been much other affecting our city government, but it concerned itself with details. Each Legislature has done more or less tinkering and patching against the inroads of the "practical" local politician. By "An Act to Revise and Amend the Charter of the City of Denver," approved April 3, 1893, all preceding legislation pertaining to the city and its government was reduced to one act. It was an elaborate act defining in much detail the powers and duties of the various divisions of the city government and of their officers, but beyond establishing the Park Commission, re-defining and extending the city boundaries, and authorizing the addition of a few minor appointive officers, it embodied no new legislation of special importance. In 1895 the positions of Water Commissioner and Street Commissioner were abolished, the duties of the two being consolidated in a new appointive office—that of Highway Commissioner. This left as elective city officers the Mayor, Supervisors, Aldermen, Clerk, Auditor, Treasurer, Attorney, and Engineer; and at that they now stand. The positions of Chief of Police, Chief of the Fire Department, Police Magistrate, Highway Commissioner, Health Commissioner, Building Inspector, Boiler Inspector, Electrician, Plumbing Inspector, Superintendent of Street Sprinkling, Superintendent of Street Cleaning, Superintendent of Supplies, and several others of lesser consequence, being appointive. The Police Magistrate is appointed by the Governor, and the others by the two Boards and the Mayor. The President of the Fire and Police Board receives a salary of $3,000; the other members $2,500 each. The President of the Board of Public Works receives $4,000; the other members $3,000 each.

There exists among the citizens generally a rather settled belief that the municipal machinery is, in some respects, needlessly complex; that there is unnecessary division of authority and duties; and that the establishment is made top-heavy by a surplus of executives in positions of minor importance. In other words, that the municipal ship is found to be structurally defective when she encounters the billowy proposition that municipal administration must conform to strictly business principles and methods.

The amended "city charter," as it now stands, contemplates the extension of the city into Jefferson county Section 1, Article I, of the act says:

> "The inhabitants of the City of Denver in Arapahoe county and Jefferson county, in the State of Colorado, are hereby constituted a body politic and corporate by the name and style of 'The City of Denver.' "

Notwithstanding this, and that considerable areas in Jefferson county have been platted into city lots, the city's west boundary has not yet been extended beyond Sheridan Avenue, the dividing line between Arapahoe and Jefferson counties in the city neighborhood; but it will not be long until it will nominally, as it now does actually, encroach upon the area of our adjoining county.

Thirty years ago the entire expenditures by the city government aggregated less than $50,000 for the year; and were inside an average of $4,000 each month. This is not stated in the sense of making a comparison of economy or extravagance between that period and this, but rather to emphasize the remarkable growth and development of the city in every direction. The assessment of the spring of 1871, of real and personal property produced a valuation of but $6,772,908; and the tax levy for that year was seven mills. The city's entire income for that year from taxes, licenses and other sources, was only $50,245. The expenditures for all city purposes under the jurisdiction of the city government, including a few permanent improvements, were $47,079.89; or $3,165.11 less than the receipts.

Quite different figures are required to express present annual expenses. In 1900 the payments for all general city purposes (exclusive of public schools) aggregated $950,866.87; but deducting paid floating debt of preceding years, the expenses, proper, approximated $825,000. Estimates for 1901 call for about $940,000. These expenditures, however, do not include street paving and other public work provided for by special assessments on abutting property. The tax rate fixed in 1900 (for 1901) was 15.3 mills, and the 1900 valuation of city property for taxation was $62,202,405; perhaps about forty per cent. of real values. The largest assessment in the city's history was that of 1893, $76,849,420. Thence it shrunk to $58,425,000 in 1899. The bonded debt, proper, is relatively small, now being $1,929,300; or about fifteen dollars per capita of population. The paving and other special indebtedness raises the present outstanding obligations to an amount exceeding $3,000,000. The constitutional limit to the city debt, proper, is three per cent. of property valuations for taxation.

During the first thirty-four years of Denver's corporate existence "straight" party tickets, Democratic and Republican, were put in nomination for

View westward from electric light tower near Eighteenth and Grant Avenues in the autumn of 1882.

each election, excepting at times prior to 1866, and during all that period the Republicans were sufficiently successful to retain general control of the city government. Usually they were in absolute control. In the spring of 1895 came the first interruption, Mr. T. S. McMurray being elected Mayor. Personally he was and is a Republican, but the movement and ticket which he headed that year, were non-partisan and pledged to reforms and economy, and to some extent reflecting a public sentiment rendered abnormally sensitive by the great financial reverses of 1893-94. In 1897 Mr. McMurray and the policy and purposes he represented again received the favor of the electors. In the spring of 1899 a most unexpected and extraordinary election result occurred. Four city tickets were before the people: the "straight" Republican, with Russell Gates as the candidate for Mayor; the "Teller Silver Republican," with Williard L. Ames for Mayor; the "straight" Democratic, with Henry V. Johnson, for Mayor; and the "Independent"—good government and so on—with T. S. McMurray as a candidate for a third election; each ticket having a full complement of candidates for the other offices. To the profound astonishment of everybody, including themselves, the Democrats were triumphantly successful; the vote for the head of the Republican ticket being 7,999; for the "Teller Silver Republican," 7,351; for the "Independent," 8,172; and for the Democratic 9,324—a plurality of 1,252 for Mr. Johnson, who enjoys the distinction of being at the head of the first practically complete Democratic administration of city affairs in Denver's history. While it is true that the Democratic vote was but little more than one-fourth of the total of 32,846—omitting the "scattering"—yet, the result was a distinct victory for that party.

The following is a list of Denver's Mayors from the legal beginning in 1861 to the present time, together with the periods of service:

Charles A. Cook	November, 1861, to April, 1862.
Charles A. Cook, (re-elected)	April, 1862, to April, 1863.
Amos Steck	April, 1863, to April, 1864.
H. J. Brendlinger	April, 1864, to April, 1865.
George T. Clark	April, 1865, to April, 1866.
M. M. DeLano	April, 1866, to April, 1868.
William Clayton	April, 1868, to April, 1869.
Baxter B. Stiles	April, 1869, to April, 1871.
John Harper	April, 1871, to April, 1872.
Joseph E. Bates	April, 1872, to April, 1873.
Francis M. Case	April, 1873, to April, 1874.
W. J. Barker	April, 1874, to April, 1876.
R. G. Buckingham	April, 1876, to October, 1877.
Baxter B. Stiles	October, 1877, to October, 1878.
Richard Sopris	October, 1878, to November, 1881.
Robert Morris	November, 1881, to April, 1883.
John L. Routt	April, 1883, to April, 1885.
Joseph E. Bates, (second term)	April, 1885, to April, 1887.
William Scott Lee	April, 1887, to April, 1889.
Wolfe Londoner	April, 1889, to April, 1891.
Platt Rogers	April, 1891, to April, 1893.
M. D. Van Horn	April, 1893, to April, 1895.
T. S. McMurray	April, 1895, to April, 1899.
Henry V. Johnson	April, 1899—

The history of the Denver Fire Department dates back to the spring of 1866 when the first volunteer fire company was organized; though it was not equipped for its work until several months afterward. The first movement to guard against danger from fire appears to have been that taken by the Legislative Council of the Provisional City Government organized in the autumn of 1860. The Council on October 12, 1860, provided for the appointment of six Fire Wardens, to inspect buildings and their chimneys, to prevent accumulations of inflammable rubbish, and so forth. A. Jacobs, Samuel Howe, A. Fenton, J. S. Travilla, J. C. Bradford, and J. P. Sears were appointed Wardens, but there is no record that they ever performed many important duties. Prior to the "great fire of 1863" there was a slip-shod, half-organized "bucket brigade," but it had neither coherence nor efficiency sufficient to entitle it to rank as a fire company; and so the city may be said to have gone along without one until 1866. The fire of 1863 was, for the town of that time, a conflagration that entailed heavy losses, but it did not impress upon the citizens the importance of immediately providing organized means of extinguishing fires. It was, however, generally agreed that "that fire ought to be a lesson to us," but that was about the extent of the lesson's influence in the direction of organizing a fire company. The newspapers continued reading the lesson to the people and insisting that it be heeded, but without much effect until late in the winter of 1865-66, when several fires occurred in quick succession, which were attributed to incendiaries, and which caused much commotion and alarm among property-owners; there having been three on one day.

A public meeting was called, and held in the old People's Theater on Larimer street, on the evening of March 22nd to consider what ought to be done; Captain Edward Scudder presiding. Of course, there were speeches in plenty, and the inevitable committee on resolutions was appointed. This committee reported in favor of creating "a committee of safety and vigilance to consist of ten or more of our property-holders, whose names shall be under no circumstances made public;" of appointing a Fire Marshal to have charge and direction of extinguishing all fires "until a Fire Department shall have been organized by the City Government and be in operation," to do which the Mayor promised to call a special meeting of the City Council the next day; and for the appointment of a committee to raise funds for the purchase of hooks, ladders and buckets. The city was called upon to immediately purchase a steam fire engine with at least one-half mile of hose, and the City Marshal was directed to appoint twenty-five special policemen to patrol the city as a guard against further incendiarism. But all these proceedings would not put out fires nor did they organize a fire company; and in practical results that meeting went no further. On the afternoon of Sunday, March 25th, a small number of citizens met quietly at the grocery store of Davis & Curtis, in the one-story frame building then on the northeast corner of Larimer and Fifteenth streets, and within an hour or so organized the first efficient fire company in Denver—the Denver Hook and Ladder Company, No. 1. George W. McClure was made foreman; Frank W. Cram, assistant foreman; C. C. Davis, second assistant foreman; H. L. Rockwell, third assistant foreman; John B. Lesaul, Secretary; and Hyatt Hussey, Treasurer. From that small beginning Denver's present great fire-fighting organization has grown.

The reader may suppose that the first thing done by these pioneer firemen was to get some kind of effective apparatus for extinguishing fires; but it was not so. The first thing actually accomplished was to get uniforms, and they were not ready until about the first of July. On the 7th of that month the thirty members of the company paraded forth in all the bravery and glory of their black trousers, red shirts and leather hats, drawing a little home-made hook and ladder truck that had just been finished by the United States Quartermaster for use in protecting government property. It would have been hard to tell whether the greater pride dwelt in the breasts of the firemen or in those of the citizens, generally.

The City Council had provided the company with a few ladders and some wooden buckets, and in May had authorized A. Jacobs to contract in Cincinnati for a hook and ladder truck with an equipment of leather buckets and other belongings, at the city's expense. But the apparatus had to be built to order, and did not arrive in Denver until late in October, having been several weeks dragging across the plains from the Missouri river. The truck, which was a heavy, unwieldy affair, and its outfit, cost $1,685. It remained in service until 1873 when it was sold to Pueblo for $600.

In the meantime the city had bought a lot on the south side of Lawrence street between Fifteenth and Sixteenth streets, and had built on it a brick building two stories high in front and one in the rear, and the company and its apparatus were installed there. That building remained the only fire-engine house for nearly ten years, and company No. 1 the only fire company for six. In 1867 the city purchased in Boston a 2,100 pound alarm bell for $1,200 which was used until 1873 when a larger one was ordered in Cincinnati by Phillip Trounstine who saw it made from an old Spanish cannon that had been captured in Mexico by American soldiers. This bell, which is still here, could make itself heard far beyond the city limits.

On April 9, 1872, the second company was organized. As the Holly system of the Denver Water Company had then been completed, this was a hose company—the James Archer Hose Company, No. 2, named in honor of the water company's President. Quarters were later provided for it in the building erected by the city for the company, and still standing at 1714 Curtis street. A month later the third company, the Joseph E. Bates Fire & Hose Company, No. 3, came into existence in "West Denver" and was quartered in a brick building rented for it on the west side of Eleventh street between Larimer and Market streets. It was named in honor of Mayor Bates who had given the fire companies much substantial assistance in their organization and maintenance, and "West Denver" was exceedingly proud of her fire company. On July 31, 1872, the fourth company was organized—the Woodie Fisher Hose Company, named for Redwood Fisher who had been foreman of Hook and Ladder Company No. 1, and who was killed on May 12, 1870, at Fourteenth and California streets, while endeavoring to stop a runaway team of horses. This company shared the Lawrence street building with Hook and Ladder Company No. 1. Next came the Denver Hook and Ladder Company No. 2, organized March 4, 1873. A second-hand out-fit was procured for it and established in an old shed on Twenty-third street between Lawrence and Larimer streets, but on July 4th the company moved into a building erected for it by the city at the southwest corner of Curtis and Twenty-sixth streets. In the autumn of that year the old apparatus was sold to the Boulder fire company and a rather inefficient Babcock chemical engine was substituted for it.

In 1875 the city built the Central Fire Station on the site of the pioneer one erected in 1866. The new building cost $20,000 and was completed by the close of that year, and occupied by the pioneer Hook and Ladder Company Number 1 and the Fisher Hose Company, in January, 1876. The building was handsomely outfitted by the city, and citizens subscribed funds enough to provide it with pictures, and with books to form a creditable library. This may be regarded as having been Denver's beginning in modern fire department methods, for the fire alarm telegraph also followed in 1876. Upon the completion of the City Hall in 1883 the Central Station was removed there and the older building sold. It is now a business house, Nos. 1532-34 Lawrence street.

In November, 1877, Hook and Ladder Company Number 2, organized from its members Hose Company Number 4, and took over the Woodie Fisher Company's old reel which had been displaced by a new one. In March, 1879, the Tabor Hose Company Number 5 was organized in "North Denver," the first one in that section of the city, and named for Horace A. W. Tabor. It occupied temporary quarters until November of that year when it moved into the two-story brick building built for it by the city, at old number 81 Fifteenth street. The Tabor Company became the last survivor of the volunteer organizations, having continued in service until the middle of February, 1885.

The foregoing accounts cover all the effective organizations that constituted the Denver Volunteer Fire Department before the paid system began its encroachments in 1881. There had been, several years before, another organization formed in "West Denver" and named in honor of General and Mayor Francis M. Case, but it seems not to have gone into active service. It was for this company that the Babcock chemical engine, used by Hook and Ladder Company Number 2, had been brought to Denver. The paid system was not at once applied to all the old companies, several of which continued in volunteer service some years afterward; and three additional ones were organized in 1881.

The old volunteer department had no Chief until 1872, the foreman of Hook and Ladder Company No. 1 being, ex officio, in command of everything and everybody at fires. On April 25, 1872, Phillip Trounstine was appointed "Chief Engineer of the Fire Department," and served capably until July 13, 1873, when he resigned. Joseph L. Bailey was appointed July 31, 1873, and served until April 21, 1875, when he was succeeded by Julius Pearse who held the position two years and was followed by Thomas S. Clayton who served until July, 1879. Of Mr. Clayton the old records say that the efficiency of the Department in that period was "largely due to his efforts in behalf of promptness and discipline, and to his spirit of enterprise, exemplary conduct, and kindness of heart." Clayton's successor was George Duggin, who served until November 15, 1881. It was under his administration in 1881 that the first paid companies were organized from the volunteer forces, and the first steam fire engine, a Silsby, in the Department was introduced. These companies were Hook and Ladder Number 1, Hose Number 1, and Engine Number 1. Prior to that time none of the companies had a water-throwing engine of any kind. The hose companies depended wholly upon the fire hydrants of the waterworks company, and that service usually met very satisfactorily every emergency in the Denver of that period.

The first steam fire engine brought across the plains to this region was not used by a fire department nor for extinguishing fires. In 1865 during the era of "speculative mining" an eastern mining company sent out here a steam fire engine that had been bought from a Brooklyn, N. Y., fire company; probably because of its inefficiency, for in those days the steam fire engine was a crude, uncertain kind of machine. It was sent out here—slowly hauled across the plains—for use in hydraulic mining in the gulches, and was expected to do good work. But it proved to be a failure, and what became of it no one seems to know. In those days all sorts of schemes and appliances for recovering gold were in vogue, but the introduction of a steam fire engine as a mining tool was probably the most unique of all that were tried.

The old volunteer fire companies, aside from the duties for which they were primarily organized, were really most influential nurseries of civic pride and public spirit. The service was more than a gratuitous one for the public welfare and safety, for the earlier organizations not only turned out and ran at the best of their speed to put out fires, but paid the expenses of doing it. In their organization it was provided that—"Each member shall supply himself with a uniform [for parade and holiday use] within sixty days after his election, and shall bear an equal proportion of all expenses incurred by the company, and shall have an equal and proportionate interest in all property belonging to the company."

The uniforms were usually of black trousers, red flannel shirts, and leather hats or helmets; but one company had white flannel shirts; and another dark blue trousers. The old-time "tournaments" of Colorado firemen were great and popular festivals; and, as a rule, the participating Denver companies carried off the trophies, to the great pride and satisfaction of themselves and their fellow-townsmen, women and children. To be a member of one of the old companies was a civic distinction the way to which was not open to every Tom, Dick and Harry. Members were men of consequence who had a stake in the community, but it is doubtful whether all their worldly possessions afforded them as much solid comfort and keen satisfaction as a parade of the company in uniform upon a gala day. Of course, at a fire, even in those earlier days of small and low buildings, there was much confusion, uproar, and wasted effort among the volunteer firemen, that would oddly contrast with the quick, systematic, precise and effective operations of the present paid department under its almost military discipline.

The old companies were influential social organizations as well as enemies of the "fire-fiend." Their annual balls were events anticipated with much eagerness and proved no disappointment to the favored ones, whose numbers were limited only by the size of the hall in which, as present-day "society editors" term it, the "function," was given. Everybody was glad of an opportunity to be "among those present." The first ball given by the Woodie Fisher Company occurred on the evening of November 25, 1874, at Guard Hall. A chronicler of that time has recorded that "every company in the city was present in full-dress uniform; altogether it was one of the largest and finest parties ever given in the city of Denver." Duly considering the effects of the "full-dress uniforms," it would seem not improbable that many fond hearts were breaking, after that Thanksgiving ball.

The Denver Fire Department, whatever may be the merits or demerits of controlling and directing it by an appointive Board, is a finely equipped organization of very high efficiency, and equally high standing in the esteem of our citizens. As we have stated, the paid system was introduced in 1881 to a limited extent, but several of the old volunteer companies continued to form part of the Department, with three additional volunteer ones that were organized in 1881. One was the Broadway Hose Company Number 6, organized February 27th, and for which the present engine house at Broadway and Colfax Avenue was soon afterward built; the company continuing in service until the spring of 1884. The second of these late-time volunteer companies was the James Archer Hose Company Number 4, the second one of that name. The original one disbanded in April, 1881, and a month later the second was organized, and occupied the house at 1714 Curtis street. It was in service until the spring of 1884. The third company was the J. W. Richards Hose Company Number 7, organized in the autumn of 1881, and named for the then owner of the Crescent Mills. This company was located at Twenty-first street and McNassar Avenue, and also remained in service until the spring of 1884.

"Dress Parade" of one of the old volunteer fire companies, on Fifteenth street near Larimer.

As already stated, the conversion of the volunteer into a paid system was begun in the summer of 1881 while George Duggan was Chief of the Department. On June 2nd, of that year, the City Council ordered Denver's first steam fire engine, a Silsby machine, which arrived on August 13th and was placed in the Lawrence street Central Station. To use it, Engine Company Number 1 had been organized, and on August 19th went into service. On September 1st Hose Company Number 1, succeeding the volunteer Fisher Hose; and Hook and Ladder Company Number 1, succeeding the pioneer volunteer company of the same number, also went into service at the Lawrence street station; the remaining volunteer companies continuing duty. The Bates Company was disbanded in the spring of 1882, and year by year immediately thereafter the paid system was further extended until, in February, 1886, the Tabor Company, the last of the volunteer organizations, was displaced. Since then the number of paid organizations has been increased with the growth of the city, until there are now fifteen of them.

To operate the Department now requires the services of one chief, two assistant chiefs, one secretary, one assistant secretary, fourteen captains, fourteen lieutenants, seven engineers, seven assistant engineers, twenty-two drivers, twenty-five hosemen, thirteen laddermen, four wardens, three custodians, one carpenter, one telegraph lineman, and one assistant lineman; a total of 117 men. "Civil service rules" govern appointments in the Department, the tenure of position depending solely upon meritorious services. While the Department has not been exempt from fatalities in service, the number of deaths and serious injuries to firemen has been gratifyingly small. The most serious misfortune of this kind in its history was that attending the fire in the St. James Hotel on March 28, 1894, when four men—Captain Harold W. Hartwell, Frederick S. Brawley, Richard D. Dandridge, and Stephen Martin, of Hose Company Number 3—lost their lives; the last-named three having been colored men.

The present equipment consists of seven steam engines—each with an accompanying hose wagon, one chemical engine, five chemical and hose wagons, and three hook and ladder trucks; requiring the use of sixty-five horses. The companies and apparatus are well distributed over the city in good buildings at the following-named locations: an engine company and a hook and ladder company at the central station in the City Hall building, an engine company and a hook and ladder company on Curtis street between Twentieth and Twenty-first streets, an engine company at Broadway and Colfax Avenue, an engine company at Colfax and Santa Fe Avenues, an engine company at 1817-23 Blake street, an engine company and a hook and ladder company at West Third Avenue and Evans street, an engine company at Marion street and Park Avenue, a hose company at South Broadway and Center Avenue, a hose company at Arapahoe and Thirty-third streets, a hose company at Lincoln Avenue and Twenty-eighth street, a hose company on Highland Avenue between Boulevard F and Grove street, and a hose company at Erie street and Fairview Avenue. The total cost of maintaining and operating the Department in 1900 was $149,995.

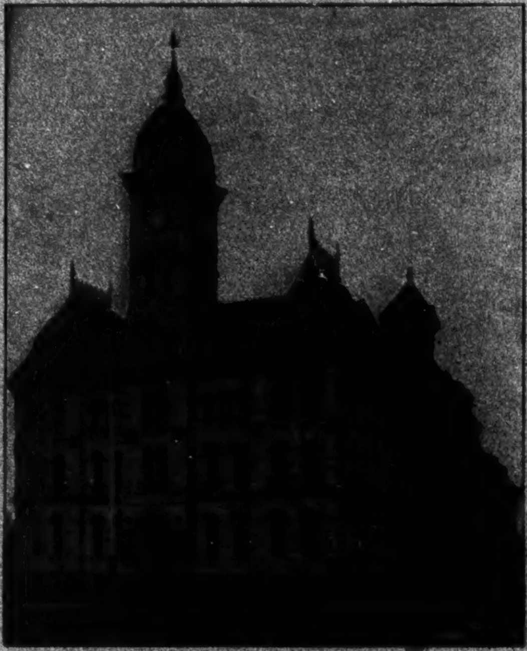
The fire-alarm telegraph was introduced in the summer of 1876, and as then completed, at a cost of $5,600, consisted of eight miles of wire and fifteen signaling boxes. From that small beginning it has been enlarged until at this time it requires several hundred miles of wire to which are attached 163 boxes.

Losses by fire have never been seriously heavy in Denver. We have elsewhere told of "the great fire of 1863" which was only relatively a heavy loss. The statistics of the Fire Department show that during the twenty-one years from 1880 to 1900, inclusive, and covering the period of systematic records, the fire losses have aggregated $3,804,689; an average annual loss of almost $181,176 through that period. The greater aggregate loss in any of those years is charged to 1885 when it was $367,263; and the lowest annual aggregate is credited to 1884 when it was only $72,033. The loss in 1900 was $357,140. The basis of these aggregates represents estimates having a strong tendency toward the maximum. The city has been fortunate in its experience with fires and, as we have said, has never had since pioneer times a fire that would relatively rank among those of the first magnitude. In the history of the paid department the most costly one, in property value, was the burning of the Union Passenger Station in March, 1894. At no time since 1863 has there been a fire that got beyond control and became a conflagration. The rule is, and with but few exceptions, that fires are confined to the structures in which they originate. Considering that Denver has upward of 30,000 buildings, and that the area to be covered by the Fire Department is relatively very large, the record is somewhat remarkable. However, the freedom from great aggregate annual losses is largely due to the non-combustible character of nearly all the buildings in Denver. There are few frame structures, and most of them belong to a past era. The city's exacting regulations affecting buildings, and the practical prohibition of frame structures have placed serious fires in Denver among the extreme improbabilities.

There have been but three men in the position of Chief of the Fire Department since the paid system was fairly established. George Duggan, whose term covered part of the transition from volunteer to paid men, was succeeded by Thomas S. Clayton as "Chief Engineer" on November 15, 1881. Under the ordinance of December, 1881, providing for a re-organization of the Department, Mr. Clayton became "Fire Marshal," and perfected the foundations of the paid system; of which he is generally regarded as the father. He served one year, and was succeeded by Julius Pearse whose term continued until April, 1894. William E. Roberts (present incumbent) followed him for a term of one year, when Pearse again became Chief, serving from April, 1895, to September, 1897. Mr. Roberts was then re-appointed, and has since continuously been at the head of the Department.

The Denver Police Department, as such, dates from the spring of 1874. The first city government, that under the "Jefferson" "charter," had a City Marshal; and the Provisional Government of the autumn of 1860, also included such an officer. The

Legislative Council of that Provisional Government, on October 12, 1860, provided for eight policemen to serve under the Marshal. Between 1861 and 1874, excepting a brief interval in 1862, the policing of the city was done by a City Marshal and a few deputies. A Marshal was, as we have stated, elected in November, 1861, at the first election held under the city "charter" enacted by the first Territorial Legislature of Colorado. The first City Council created the appointive office of Chief of Police, but abolished it in June, 1862. It appears, also, that in 1862 the City Marshal was commonly called the "Police Marshal;" but thereafter the other title was resumed.



The City Hall

The city got along very well with its Marshal and his deputies through a dozen years or more; but not quite so well as some of the citizens ofttimes thought it should. However, in 1874 the office of City Marshal was abolished and that of Chief of Police substituted; a few men constituting the police force under the command of the first Chief. From that time to this the increased number of men employed seems never to have kept pace with the growth of the city; though the present force is many times larger than that of 1874. But even at the present time it appears small when the great area of city territory, and the fact that duty must be performed twenty-four hours each day, are duly considered.

While the Police Department, in itself, is merely a natural development following the expansion of the city, and possessing little of historical interest as an organization, the annals of its operations would, if presented in much detail, more than fill a volume the equal of this one in size. Parts of them have been put in book form of not small dimensions dealing with only the more conspicuous events in Denver police history. The subject is one of such extent that we could see no way to include even a summary of it. A mere summary would be of little value; and treatment in circumstantial detail is prohibited by the limitations necessarily placed upon this work. Therefore, and regarding Denver's criminal annals as constituting a special subject to be more properly dealt with separately, as it already has been in more or less comprehensive forms by other writers, we have not, beyond some events in pioneer times, entered upon its consideration in this volume.

It is due, however, to our Police Department to state here that during its existence it has had to deal with more desperate men, trained professional criminals, and miscellaneous human dregs of society than any similar organization in any city of equal size in this country has encountered. Notwithstanding that there are stains upon its history, that there was a time that certain of its former members were in collusion with criminals years ago, the Denver Police organization as a whole, has a record for efficiency of which it need not be ashamed, and that places it above the passing ebullitions of unreasonable or purblind fault-finding. The ninety and nine successful efforts for the protection of the community are not to be forgotten in the din of outcries over one that proved a failure; or that was not made, at all. Furthermore, there is something in the fate of the not few members of the Denver police force who have perished by violence while in the discharge of their duties, that points to as high a standard as men usually establish for their line of conduct.

There were, in December, 1900, 121 persons employed in the various branches of the Police Department, including clerks, jailers, and janitors. Active duties were divided between the Chief, two Captains, three station Sergeants, the Chief of Detectives with a staff of six men, two Surgeons, two matrons, and two wagon-men; leaving a daily average of about sixty patrolmen on duty. As the period of duty is of eight hours, the present small force does not admit of much more than twenty men being on duty at one time, except in emergencies. Considering the large territorial area of the city to be protected by so small a number of men, the results indicate a very high standard of efficiency. The total expenses of the Department during the year 1900 were $132,505. The following named men have served as Chiefs of Police during the terms stated:

George E. Thornton	November, 1861, to June, 1863.
(office abolished June 12, 1863; re-established April, 1874.)	
J. C. McCallin	April, 1874, to April, 1876
D. W. Mays	April, 1876, to October, 1877.
C. S. Stone	October, 1877, to October, 1878.
W. R. Hickey	October, 1878, to November, 1880.
D. J. Cook	November, 1880, to November, 1881.
J. M. Lomery	November, 1881, to April, 1883.
W. A. Smith	April, 1883, to April, 1885.
A. W. Hogle	April, 1885, to April, 1887.
H. T. Brady	April, 1887, to April, 1889.
John F. Farley	April, 1889, to March, 1893.
James Veatch	March, 1893, to July, 1893.
A. W. Kellogg	July, 1893, to March, 1894.
Hamilton C. Armstrong	April, 1894, to February, 1895.
George Goulding	February, 1895, to February, 1896.
I. L. Russell	February, 1896, to May, 1897.
W. H. O'Brien	May, 1897, to September, 1897.
John F. Farley (present incumbent)	since November, 1897.

During March and part of April, 1894, at the time of Governor Waite's "war on the City Hall," and when there were dual Fire and Police Boards, there were also, but nominally, dual Chiefs of Police. Kellogg had resigned, and one Board appointed John F. Stone, while the other appointed John F. Farley; but the latter declined to serve, and Armstrong was chosen after the war was over. The Police Department has been made, through the decade just closed, to figure more or less in partisan politics during campaign times; though probably not to so great an extent as partisan accusations might indicate. Nevertheless, tenure of position as a member of the Police force, is theoretically at all events, dependent upon merit.

Denver's park system is beginning to assume proportions in harmony with the city's size, importance, and prospective growth. It is almost entirely a creation of later years. In a preceding chapter we have said that the pioneer founders and platters of the city made practically no provision for parks in their "cities." That is the reason we have none in the older parts of the city. The Aurarians, it is true, designated on the plat of their town one block, upward of a mile south-east from the mouth of Cherry creek, as a "park," but it was far out, and was cut off by the lines of the "Congressional Grant;" and that was the last of it. "Denver City" had not even one block set aside for park purposes. As mentioned in an earlier chapter, the acquisition of parks was first seriously urged by Mayor Joseph E. Bates in 1872, but it was some years before anything effective followed his far-sighted suggestions. However, the actual though nominal beginning of our park system may be said to have been made in that year in the cession by Congress to the city of the land now constituting Congress Park, secured at that time by Jerome B. Chaffee who was then the Colorado Delegate in the House of Representatives at Washington; and about that time the Lincoln Park land was donated to the city by former Territorial Governor A. C. Hunt, who had contemplated that it should become the site of the county Court House. Hunt had a large ranche in that vicinity and his residence stood on the park tract. At the time of the Congress Park cession the ground was still in use, as it had been since the first settlements were made here, and as it was for several years afterward, for cemetery purposes. It has not yet been improved as a park, partly owing to pending litigation over title to a small portion of it, and partly to lack of sufficient funds.

Properly speaking, the park system had its beginning during the administration of Mayor Richard Sopris, and it was largely through the instrumentality of Henry Lee and Jacob Downing that it was inaugurated. Mr. Lee was a member of the lower branch of the Third General Assembly and Chairman of its Committee on Public Lands. He and Major Downing, co-operating with other citizens, caused a bill to be introduced in the House providing for sale to the city at a nominal price and without competition of two sections of school lands for park purposes. One of the sections was that of which the present City Park is the south half; the other, which was not to be an individual section, but an equal amount of land made up of parts of sections, was to have been around and west of Sloan's Lake; a half-section of it lying within Jefferson county and bordering on the present Sheridan Avenue. The bill passed the House providing for the sale of these tracts, but in the Senate it met opposition and was considerably disfigured. Many citizens also opposed it because they neither saw nor appreciated the necessity, value nor utility of parks, and could not have foreseen the development that was to come to the city within the next dozen years. So, when the bill finally got through, the Sloan's Lake part of the proposition providing for what was proposed to become Edgewater Park, had been eliminated, and the area of the proposed City Park had been cut in half. But the founders of our park system accepted the half-loaf as being far better than none and the City Park, the real beginning of the system, entered upon its existence, though destitute of every park-like aspect. Washington and the other small parks followed by purchases of lands at intervals since that time. The failure of the Edgewater part of the plan has proved, as the years have passed, to have been a public misfortune. The proposed two large parks, of 640 acres each, would have been, due east and west, about equidistant from the center of the city; and the Edgewater land, which then could have been secured for a small sum, is now probably worth a million dollars.

In the beginning, control and management of the parks were vested in the City Council, but in the spring of 1889, when the Board of Public Works was created, they passed to the care of that body. In those years they were directly under the care of an appointive Commissioner of Public Parks, former Mayor Sopris having filled the position for about ten years—1883-01. In 1893 the Ninth General Assembly, as already mentioned, in revising the city "charter" provided for placing the park system under the charge of a Park Commission, consisting of three members, appointed by the Mayor. John L. Dailey, President; E. Monash and J. T. Cornforth constituted the first Commission, the first meeting of which was held April 20, 1893. The greater part of park development has been by the Commission, the present members of which are Stuart D. Walling, President; Henry Youngs, and Henry Lee.

In Denver's park system there are now twelve established parks, in number rather fairly distributed over the city; the City, Congress, Curtis, Dunham, Fuller, and Park Avenue in "East Denver;" the Chaffee, Highland, and Jefferson in "North Denver;" and the Lincoln, Platt, and Washington in "South" and "West Denver." However, five-sixths of the total park area is in the City and Congress parks in the eastern part of the city. The area of Chaffee, Curtis, Dunham, Fuller, and Platt is but one city block each; and that of Highland and Jefferson two city blocks, each. The so-called "River Front Park" skirted by the Sixteenth street viaduct is not a park nor city property. The land is and long has been owned by J. Brisben Walker, of the Cosmopolitan Magazine, New York. Before the Union Passenger Station was built he had a plan for building such a station on that land, and the stone building now standing there was erected by him for some purpose connected with that plan.

In the City Park.

The combined present areas of the twelve parks is equivalent to about 436 acres. The City Park embraces 320 acres; Congress, 40; Washington, 80; Park Avenue, 10; Lincoln about 9; Highland and Jefferson about 6, each; Platt, Curtis, Dunham, Chaffee and Fuller about 3, each. Washington, Jefferson and Highland Parks are new ones and, with Congress, rank as "unimproved," the land for them having been recently purchased at an aggregate cost of $53,000. The expenses of the Park Department in 1900 for administration, improvements, and maintenance approximated $67,000. The park tax-levy as fixed in 1900 (for 1901), and contemplating extraordinary improvements, is nine-tenths of a mill.

Beyond the magnificent view of the mountains from several of them, especially from that of Congress, nature had done little toward preparing the localities of our parks for the purposes to which the land has been devoted; the lands of the plains possessing almost no natural picturesqueness or other feature commonly associated with park-like aspects. But by the application of intelligent landscape engineering, creation of artificial lakes, and lawn, tree and flower culture, the managers of our parks are overcoming natural deficiencies and are converting what were weed-grown or barren areas into blooming gardens. In our City Park the well-advanced beginning has been made upon what bids fair to become one of the notable large parks in this country. Looking forward and anticipating construction of boulevards connecting the larger parks, it would seem that Denver's park system is capable of being developed into one that will equal that of any other city possessing corresponding opportunities and resources.

The most complete collection of Colorado fauna preserved by the processes of taxidermy, that has ever been made, is that of the late Professor Edwin Carter, of Breckenridge, Summit county. In 1899 he generously offered to convey it to either the State of Colorado or the City of Denver on terms that would have made it practically a gift. Governor Charles S. Thomas, John F. Campion, Joseph A. Thatcher and other public-spirited citizens of Denver arranged with him to secure it for the city, but Professor Carter died (in January, 1900,) before the transfer had been made. Subsequently they purchased it from Carter's heirs, for $10,000, and had it shipped here and stored in the Capitol building, where it remained at the close of our record. An organization was then formed to establish the "Colorado Museum of Natural History" and to erect in the City Park an appropriate building for housing the collection, and that will also accommodate later additions to the exhibit; thus providing for what is destined to be a most interesting and valuable Museum of Natural History. In December, 1900, the City Council included in the city tax levy an amount sufficient to produce $35,000, to which the museum association agreed to add $30,000, for the purpose of erecting the museum building. With the Carter collection installed in a fine permanent building in the park, and with the increasing number of wild creatures in the zoological collection already there, the visitors to that pleasure ground will have unusual opportunities for becoming familiar with the appearance of the almost extinct wild animals of Colorado.

The Park Commissioners late in 1900 decided to add a rather unique object of historic interest to the attractions in the City Park. The log building that stood near Cherry creek, on Market street in "West Denver," which was the first home owned by the Rocky Mountain News, and the first structure erected in all this Rocky Mountain country for a newspaper printing office, was removed from the site it had occupied since the autumn of 1859, to be re-erected in unchanged appearance in the park. It is anticipated that this ancient structure may ultimately shelter a collection of objects of general historical interest.

Prior to the erection of the present City Hall the city government for many years occupied rented quarters in various private buildings, after the fashion set by the county. In pioneer times there was a "City Hall" owned by the city, but it was not a structure of great dignity nor value. This was a small building on stilts that stood in, or on, the bed of Cherry creek, on the north side of Blake street. That choice of location appears to have been made to satisfy the two sections of the city divided by the creek; as it was about midway between them. That establishment with all it contained was, as we have already narrated, utterly destroyed by the Cherry creek flood of May, 1864. After that the municipal headquarters occupied different rented buildings for several years until they were installed in the Bartels Building on the east side of Fifteenth street, near the northeast corner of Blake street, where they remained until the erection of the present City Hall was decided on. However, they were removed from the Bartels Building to the second story of the old Central Fire Station on the south side of Lawrence street between Fifteenth and Sixteenth streets before the new City Hall was erected, and stayed there until 1883, when the new municipal Capitol was finished.

The city government has not had occasion to engage in the construction of many large public works. Neither sewerage nor street grading has entailed the slightest engineering difficulties, and a few short bridges have overcome the not very serious obstacles interposed by the Platte river and Cherry creek. The City Hall and the Fourteenth street viaduct are the two conspicuous structures erected by the city.

The City Hall, completed in 1883, is in many respects a regrettable edifice. As a building it is a fine and substantial one, but it is lamentably destitute of attractive architectural elements. Its location is unfortunately bad, and the configuration of the plot of ground on which it stands was the chief obstacle in the way of making it such a building as the permanent home of Denver's city government should have been. Including the site it represents an outlay of about $325,000, a sum that should have produced a structure far more creditable. However, it is to be said that the City Hall in its exterior aspects does not do itself justice; and so far as capacity and utility can compensate for architectural poverty it is entitled to generous consideration. During its period of construction and for several years afterward its name and fame were associated with certain processes which, in the public mind, are regarded as almost inseparable from the application of "practical politics" to the management of large municipal expenditures. How much of truth and how much of mere surmise there were in these theories would be hard to specify; and would be of little value or importance now, even if some one should come forward and tell us all about them. In that period building was an expensive business.

The great viaduct, which is practically an extension of Fourteenth street to "North Denver," was opened to traffic late in September, 1899. Though

Views in City Park—Photographed by James H. Brown, Jr.

the approach to it at the "East Denver" end extends from Market street, the structure, proper, begins at Blake, spans the numerous railway tracks between that street and the river, crosses the Platte, and terminates at Platte street; a distance of 4,276 feet, or about four-fifths of a mile. Its cost was $367,068, which was assessed on about 30,000 different city lots more or less benefited by the improvement; the assessments ranging from $4.35 to $71.80 per lot. This fine improvement, of such great benefit to "North Denver," was first proposed back in the middle "Eighties." Its construction was primarily undertaken by property-owners on both sides of the river who, in the winter of 1887-88 organised the Fourteenth Street Viaduct Association, of which M. J. McNamara was elected President, and C. B. Gurley, Secretary; with General R. W. Woodbury as Trustee for the interested property-owners. The Association obtained some financial aid from the city and from the State, and began construction which was slowly continued three or four years. Financial conditions then incapacitated the organization for further progress, and work was suspended for several years. Finally, the Board of Public Works took the viaduct in hand and built it as it now stands. It is quite a different structure from the one contemplated by the Association, and the elaborate plans upon which it was fortunately built required the displacement of nearly all construction made by the old Association.

The viaduct extending Twenty-third street across railroad tracks and the river, a distance of 2,790 feet, was built in 1887. Excepting a few spans of steel bridge, it is a ramshackle wooden trestle affair unworthy to long exist. Of the Sixteenth street and Larimer street viaducts, which were built by the old Denver City Cable Railway Company, some account is given in our history of the street railway system. The Board of Public Works had under consideration at the close of our record the construction of a great viaduct of steel from the intersection of Seventh and Colfax Avenues in "West Denver," across the river, on the line of Colfax, bifurcating it on the west side to Boulevard F, and toward Villa Park. The plans for this improvement call for expenditure of about $700,000.

In the approximately fifty square miles of territory within Denver's corporate limits—an area about double that of the city of Cincinnati—there are about 830 miles of dedicated streets, the general width of which is sixty feet, though some are wider. To be sure, in parts of the outskirts they are not all very well-developed streets, but everything can not be done at once. At the close of 1900 there were, wholly in the business and Capitol Hill districts, 16.40 miles of asphalt-paved streets; 2.29 of stone block; 2.07 of macadam; and 3.26 miles of miscellaneously paved alleys; making a total of 24.02 miles of paved public ways, at a total cost of $2,000,258; with preparations made for very extensive immediate additions to this paved mileage. The first asphalt paving was laid down in 1892, the stone block paving having been introduced several years before. The mileage of the broad, smooth, stone side-walks is practically co-extensive with that of the graded streets, and reaches somewhere far up in the hundreds of miles—probably quite enough to make a wide foot walk from Denver to Omaha and from there down to Kansas City.

Denver was without a sewer system for nearly twenty years after its founding, having depended on surface drainage during that period. The public need for a general system of sewerage had become apparent as early as 1873, and at that time was the subject of much discussion. But the proposition did not take practical form until 1875-76, when the beginning of the underground work was made. Engineer H. C. Lowrie planned the first system, the construction of which was largely done under his direction. Though it was laid down with a view to future needs as well as those of that time, the estimates of what the future would bring were far short of the later development. Therefore the original system had to be greatly amplified in the districts it was planned to serve, and new and independent systems laid down for the later and vastly expanded built-up area of the city. The general sewerage system now comprises 254 miles of underground work, that cost $2,906,087; with new construction for several large districts pending at the time of this writing. All discharges are received by the Platte river, and it would seem probable that that small and often attenuated stream will presently be unable to move the discharges from the growing city, and thus compel the adoption of other methods of sewage disposition. Between the demands upon it for irrigation and the burdens imposed by the city sewers, the Platte is destined soon to become a most disreputable water-way.

The population of Denver is, to an unusual proportion, of American birth, the ratio as compared with that of sister cities in the United States being as follows:

Denver	76.14	Jersey City	67.27
Cincinnati	75.95	Buffalo	65.00
Alleghany	75.15	Boston	64.73
Omaha	75.05	Minneapolis	63.24
St. Louis	74.57	Cleveland	62.85
Philadelphia	74.26	Milwaukee	61.08
Rochester, N. Y.	70.29	Detroit	60.31
Providence, R. I.	69.45	St. Paul	60.06
Newark, N. J	69.44	Chicago	59.02
Pittsburgh	69.29	New York	57.77
Brooklyn	67.54	San Francisco	57.59

The census of 1890 enumerated 106,713 inhabitants of Denver, of whom 81,249 were born in the United States, and 25,464 in other countries. Of the native born, 15,282 originated in Colorado, these having been when that census was taken mostly young people and children. The 65,967 born elsewhere in the United States were, according to that census, distributed as follows:

New York	8,545	Michigan	2,021
Illinois	7,693	Wisconsin	1,963
Ohio	6,731	Kentucky	1,506
Pennsylvania	5,477	Nebraska	1,381
Iowa	4,899	Maine	934
Missouri	4,577	Virginia	855
Indiana	3,093	Connecticut	807
Kansas	2,662	Other States and Territories	10,655
Massachusetts	2,148		

The 25,464 of foreign birth were credited as follows:

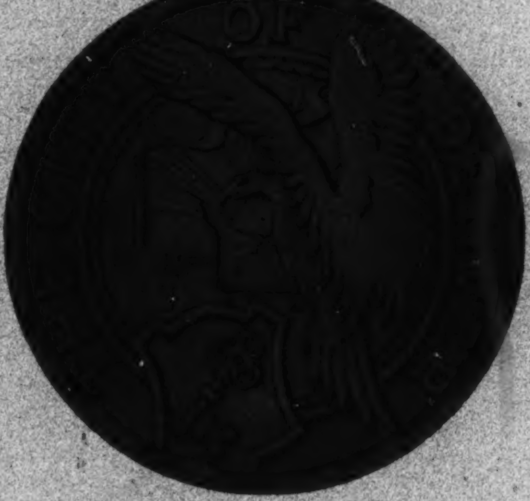
Germany	5,373	Canada	2,672
Great Britain	5,061	Italy	608
Ireland	4,216	Other countries	3,912
Sweden	3,622		

All the foregoing statistical figures are from the report of the census of 1890, that being the latest authority in which such analyses are found in trustworthy form. Similar statistics based on the census of 1900 will probably not be available until late in 1901; but they will show very largely increased proportions of native-born, and especially of Colorado-born, persons.

The population of Denver on June 1, 1900, according to the United States census, was 133,859,—about one-fourth the population of the State—a gain in ten years of 27,146. For convenience we repeat here the figures for 1880, and 1890: in 1880 the population was 35,629; in 1890, 106,713, a gain in ten years of 199.51 per cent. The percentage of gain from 1890 to 1900 was 25.44. In a subsequent chapter some reference is made to circumstances and conditions tending toward an explanation of this much reduced percentage of decennial gain.

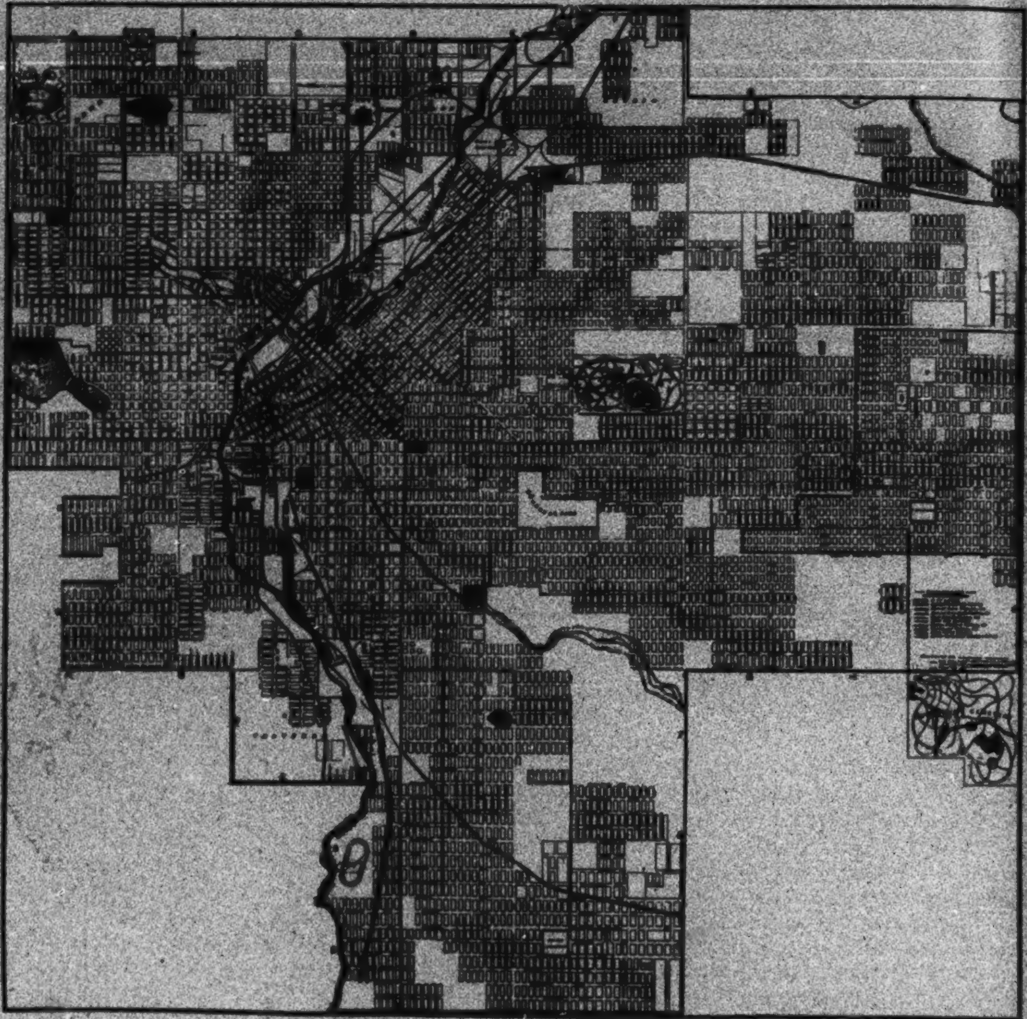
Since 1890 our Bureau of Health had based its mortality ratio upon the presumption of a greater annual increase of the city's population than the census of 1900 confirmed. The population estimates of the Health Bureau were, for 1891, 113,874; for 1892, 120,000; for 1893, 125,000; for 1894, 140,000; for 1895, 145,000; for 1896, 150,000; for 1897, 160,000; for 1898, 167,000; for 1899, 170,000; and for 1900, 175,000. Using these estimates as a basis, the mortality ratio appeared to be unusually low; excluding fatal cases of consumption contracted elsewhere, the deaths annually in each 1,000 of population were about 9.50. But as the recent census proved these population estimates to have been much too high, the corrected mortality ratio, based upon mortality in 1900 and the official census, is 13.63, excluding deaths of non-residents who had been sojourning here; but including deaths of such persons the ratio is about 17.50. While the ratio directly chargeable to the city is not a high one, it is greater than that of either of several other American cities with which Denver may be classed in population statistics. Usually, however, the maximum ratio is taken for comparisons, and in this Denver pays a penalty for the genial, attractive, health-restoring climate she possesses.

There were 2,356 deaths in Denver in the year 1900, tuberculosis having claimed far the larger number of victims, with pneumonia, heart disease, and death by violence, as specific causes, standing next, in order as named. Of every 1,000 recent deaths in Denver about 250 were due to tuberculosis; but in the great majority of cases the malady was contracted elsewhere. A rather curious feature of the city's vital statistics is the fact that in births male children distinctly predominate. Of the 2,401 births in the city in 1900, 1,322 were of males and 1,079 of females. In the United States, east of the Mississippi river, the ratio is generally favorable to girls.



Seal of the City of Denver, designed by Henry Read and adopted February 28, 1901.

Denver has not yet reached the stage at which suburban towns supply a great public need. There is yet no crowding, nor does it seem that Denver ever will become a crowded city, for there is no lack of room for expansion. Still, there are nearly a score of suburban localities bearing distinctive names. A portion of them are separate civil divisions, while others have been politically annexed to the city, proper; though when established the latter were also separate communities. The city's great corporate area includes nearly all these suburban places, several of which have their own municipal governments and are not under the city's jurisdiction—small wheels working independently within the larger one. By the census of 1900 these still independent towns had populations aggregating about 7,000. All these suburban places are accessible by the electric railways, and in most



Map of Denver in 1900. Reduced from the Rollandet Company's copyrighted map.

instances the lines of demarcation between city and suburban towns are not apparent to the casual observer.

Argo, in the central-northern part of the city was, as we have previously stated, established in 1878, when the Boston and Colorado Smelter was removed to Denver and located in that section of the present area of the city. The incorporation of Argo was authorized at an election held November 22, 1879, and its certificate of incorporation was filed with the Secretary of State January 12, 1880. Though within the city limits, it continues under its own village form of government, and by the census of 1900 had a population of 443. All the following suburban population figures are those of the census of 1900.

Aurora, a hamlet beyond Montclair and outside the city's eastern limits, was established in 1891, but it does not appear to have been incorporated, has no municipal history, and did not figure in the census.

Barnum, in the southwestern part of the city, on a branch of the Denver, Lakewood & Golden railroad, was platted on land acquired early in the "Eighties" by P. T. Barnum, the one-time famous showman, and for whom it was named. It was incorporated as a village August 27, 1887, and on September 3, 1896, was annexed to the city. Barnum is now a well improved part of Denver.

Berkeley, in the northwestern corner of the city area, was formerly the outlying village of "North Denver," a repetition of the common designation applied to that general section of the city to the north and northwest of the Platte river. This village of North Denver was incorporated June 25, 1892. On April 13, 1898, a certificate changing its name to "Berkeley" was filed with the Secretary of State. It has a population of 707 people, and they still prefer to retain their village government.

Colfax, across the Platte, in the western part of the city, was incorporated as a village May 14th, 1891; and on February 1, 1895, was annexed to Denver. It was one of the consequences of the city's rapid expansion in 1888-93.

Elyria, in the central-northern part of the city, was platted in March, 1881, by A. C. Fisk, President, and C. F. Laimer, Secretary; of the Denver Land and Improvement Company. On July 21, 1890, its citizens voted to incorporate as a village, and the certificate was filed August 2, 1890; and it has since continued under its independent local government. Its population is 1,384.

Fletcher, just beyond Denver's eastern boundary, and a close neighbor of Aurora, was incorporated as a village May 1, 1891, and has a population of 202. It remains an independent municipality, but like Aurora, it is a hamlet in fact; the population of that entire district not being very large.

Globeville, in the central-northern section of the city, on the westward side of the Platte and between Elyria and Argo was, as elsewhere mentioned, a consequence of the Globe Smelter having succeeded in that locality the former small Holden Smelter in 1889, at which time the town was laid out. It was incorporated as a village July 9, 1891, and is still under its independent government. By the census of 1900 Globeville had a population of 2,192—sufficient to advance it to a city of the second-class, under State law.

Harman, in the southeastern part of the great area included within the city's present boundary lines, was founded by L. B. Harman, in March, 1882. It appears that at an election held October 26, 1882, its citizens voted to incorporate, but its certificate of incorporation was not filed with the Secretary of State until November 19, 1886. It was annexed to Denver on February 20, 1895.

Highlands, having had in 1890 a population of 5,161, and now constituting a large portion of the "North Denver" section of the city, was laid out early in the "Seventies," and incorporated as a village by the County Commissioners on April 8, 1875, upon petition of H. B. Bearce, F. D. Hager, P. H. McGowan, Owen E. Le Fevre, John H. Hager, J. H. Newcomb, C. J. Wolff, T. R. Warner, S. Ferguson, H. A. Sleight, J. H. Morrison, W. H. Hager, C. W. Wright, T. W. Poole, J. E. Ayers, John Howland and A. P. Taylor; the town's area embracing almost two square miles of territory—nearly the whole of Sections twenty-nine and thirty-two. On November 4, 1885, it was incorporated as a city, as which it independently continued until July 24, 1896, when it was annexed to Denver. Its citizens had voted in favor of annexation some time before that, but a minority opposed the union which was not accomplished until after rather vigorous litigation finally confirmed it and directed that the will of the majority should have effect.

Manchester, on the west side of the Platte, south of the city, is the hamlet location of the Overland Cotton Mills to which the existence of the place is due. It is not an incorporated village.

Montclair, two miles east of the Capitol building by way of Colfax Avenue, and within the city's boundaries, is regarded as the most attractive of Denver's suburban towns. It was founded and platted in May, 1885, by Mathias F. Cochrane, and incorporated October 5, 1888; Cochrane becoming its first Mayor. At that time his domain was mostly open and unoccupied prairie, and his town had a hard time in getting a start, as it was then far outside the city. It now contains some fine residences, among them being a large one built of stone by the late Baron W. B. Richthofen in the fashion of a castle on the Rhine. He was one of Montclair's most active promoters, and died a few years since. Montclair retains its village form of government and scorns all proposals for an union with Denver. Its population is 415.

Petersburg, on the east side of the Platte, and adjoining the city on the south, was laid out in September, 1873, by former County Commissioner Peter Magnus, who came to Colorado in 1859, and was elected to his first term as Commissioner in the autumn of 1866. The town has not yet had very much development, and has not been incorporated. 506 people in that election precinct.

Sheridan, lying between the southwestern limits of the city and the Fort Logan reservation, was laid out by Isaac E. McBroom in November, 1887. Its incorporation was authorized at an election held February 18, 1890, but its certificate was not filed until April 16, 1892. The town includes a large area with a population of 442.

South Denver, another of the annexed towns, was laid out in March, 1874, by William Hodgson, Joseph H. Hodgson, Susan E. Poole, Theodore W. Poole, Francis M. Hawes, and William J. Morgan. While it is now mostly a built-up part of the city, it was when platted, some distance outside the Denver of those days. Its territory was that now traversed by south Broadway beyond Alameda Avenue, and east of the Platte river. South Denver was not incorporated until August 14, 1886. It remained under an independent village government until February 7, 1894, when it was annexed.

Valverde, on the west side of the Platte, in the southwestern part of the city area, was laid out in July, 1882, but was not incorporated as a village until September 29, 1892. Several manufacturing establishments are located there, and the place has a local government with a population of 665.

Villa Park, the last of the list, is merely a locality in the western part of the city, having, like Aurora and Manchester, a distinctive name of its own. It is a constituent part of Denver that was never independently incorporated, and did not figure separately in the census.

CHAPTER LVIII.

Pioneer Newspaper Annals—Rocky Mountain News—Rocky Mountain Herald—Mountaineer—First Typographical Union—Pioneer Conditions—Denver Gazette—Newspapers and Newspaper Enterprises of the Middle Period—Special and Miscellaneous Publications—Denver Tribune—Later History of the Rocky Mountain News—History of the Denver Times, of the Denver Republican, and of the Denver Post—Character of Denver Daily Newspapers—Present Special and Miscellaneous Publications—"Newspaper Graveyard."

In various preceding chapters of this volume has appeared much of the history of the pioneer newspapers of Denver, as their relations to and associations with other events required accounts of them to be given in somewhat chronological connection with those of the historic work of laying the foundations of this city and State. In this continuation of newspaper annals, intended to outline their more important features to the close of the Nineteenth Century, some repetition of statement is intentionally made for the reader's convenience and for convenience of reference.

The appearance here on April 23, 1859, of the Rocky Mountain News, marked an epoch in the affairs not only of the pioneer community at the mouth of Cherry creek, but in those of the whole Rocky Mountain country. The paper preserved much of the primitive history of that eventful year in this region, and no other single agency did so much to hearten the people, to uphold the right, and to lead the way through the many difficulties that beset the paths of those who founded Colorado and its Queen City. It was the valiant champion of the new country under oft discouraging conditions; and the defender of faith in the ultimate triumph that would come to those who were steadfast. It rose above the trials and disappointments of the day and pointed, with what would now seem to have been the gift of prophecy, to that which the future held for town and country.

Still, the fact that Auraria possessed the only newspaper published at the mouth of Cherry creek, was a sore grievance to the people of "Denver City" in the spring and summer of 1859. The Directors of the Denver Town Company determined to do something toward removing that disadvantage, and after the arrival of Horace Greeley and Albert D. Richardson in June of that year, solicited the latter to supply the not long-felt but much-felt want. Richardson was then inclined to permanently remain here, and so gave the matter serious consideration. Therefore, we find the following entry in the record of the Denver Town Company under date June 24, 1859:

> "Board met to make arrangements with A. D. Richardson to establish a paper in Denver City. A proposition was read from Mr. Richardson to print a weekly News paper equal in size to the Rocky Mountain News. The Board voted a donation of 25 lots in Denver City; 2 select & 23 draw lots for the establishment of said paper, with stipulations to be agreed upon."

But the "stipulations" were never agreed upon, Richardson abandoned the enterprise, and the lot subsidy was later "rescinded" by the Directors. In the meantime, in September, the News had been removed from the second story of Wooton's building to the east side of Cherry creek to temporary quarters in a log building that stood on or near the southeast corner of Fourteenth and Market streets. Byers and Dailey had acquired from the Auraria Town Company some lots on the north side of Market street between the creek and Thirteenth street, and the change to the east side was intended as a temporary arrangement until they could erect on one of those lots a hewed log building of their own as a home for their paper. Having failed with Richardson, the Denver City Directors thought they saw in these circumstances, an opportunity to permanently secure the News for their town. Therefore, on October 8th Hickory Rogers was appointed "a committee of one to negotiate with Mr. Byers in reference to him locating his press permanently in Denver City." On October 15th Mr. Rogers reported favorably on his negotiations, and the action indicated by the following was then taken by the Directors:

> "On motion of Judge Smith a donation of 4 select lots and 20 draw lots be given to W. N. Byers for making his paper a Denver City paper, and Denver City his place of business."

Director William Clancey was appointed a committee "to close contracts with Mr. Byers," and at a meeting of the Directors held on December 5th their record says "the committee on the Byers case reported that Mr. Byers would accede to any proposition we might require of him." So, at their meeting of December 12th, on motion of Mr. Curtis, it was resolved "that an agreement be drawn up between the Denver City Town Co. and Mr. Byers Binding him to issue his paper for one year in the City, and the Secretary be instructed to give him a Certificate for his lots by his So doing." But "the Byers case" was not to be summarily disposed of by a one-sided arrangement, and he was not willing to "accede to any proposition." Meanwhile Byers and Dailey had erected on one of their Market street lots in Auraria—the one on the westward corner of the alley—a long, one-story and attic hewed-log building. Caring little for the pending negotiations, they moved the News into it on December 27, 1859; thus re-locating the paper on the Auraria side. As we have previously mentioned, the front part of the building was occupied by the printing office, and Mr. and Mrs. Byers lived in the rear portion.

But this move did not cause the Denver City Directors to abandon hope of having the News moved back to their side. Thinking a little coercion might be effective, they resolved on January 9, 1860, that "the Secretary be instructed to notify Mr. Byers he is requested to Either accept or reject the donation tendered him by the Company by next meeting of the Board as the Board cannot extend the donation." This failing dismally, the Directors abandoned the old negotiations and undertook an entirely new treaty which on February 14th was by resolution committed to the care of Judge N. G. Wyatt. While this new phase of "the Byers case" was pending, another publisher proposed to supply the want in Denver City, but the Board held him off on March 12th, under which date their record says: "The subject of donating lots to Conklin for printing press &c being brought before the board, on Motion the same was laid on the table." Some weeks thereafter, Judge Wyatt concluded an agreement with Byers and Dailey by which the latter were to build a new printing office in the bed of Cherry creek at the Market street crossing, and thus place the News practically as much in one town as in the other; the Denver Town Company having claimed the creek bed and having platted lots in it. By that time Byers and Dailey, as related toward the close of this chapter in some further account of the News, had taken two newcomers, Rounds and Bliss, into partnership, the four doing business as the "News Printing Company."

On June 25th the Denver City Directors con-

William N. Byers, a native of Ohio, was born near the village of West Jefferson, Madison county, that State, on February 22, 1831. His father, Moses W. Byers, was a farmer who had located in that Ohio county when that country was but little changed from the conditions of a wilderness; and his mother, Mary A. Brandenburg, was of a family that early settled in what is now Miami county, Ohio, in the beautiful Miami valley. The subject of this sketch spent his boyhood on his father's farm, attended the primitive district school of the neighborhood in his earlier years, and then entered the West Jefferson Academy where, with his other studies, he learned surveying. When he was about seventeen years old he was employed in hauling ties for the old Cleveland, Columbus & Cincinnati Railroad; his father having taken a contract to supply ties for a long stretch of that pioneer Ohio road, which passed through the home farm. In 1850 the elder Byers with his family removed to Muscatine, Iowa; and at that time what was called the "frontier" was about half way across that State.

Young Byers did not long remain at Muscatine, though for some years afterward he regarded it as his home. In 1851 he joined a United States surveying party organized for work in western Iowa—on the Missouri river slope of that State—and with which he was engaged through that season and in the spring of 1852. In the summer of 1852 he joined a party bound for Oregon, and with it crossed the plains by way of the Platte river and Fort Laramie, and thence to the Pacific coast by way of the old Oregon Trail. The party was 145 days on the journey and, after a few days' travel from the Missouri river, saw no white men's habitations except those at Fort Kearney, Fort Laramie, the fur-trading posts of Forts Hall and Boise, and the Umatilla Indian Agency, until arriving at Oregon City, on the Willamette river. In Oregon Mr. Byers was attached to an United States surveying party engaged in work in that region, and remained with it until the close of the summer of 1853. While thus employed he ran the first township lines in what is now the State of Washington. In the autumn of 1853 he traversed the gold-fields of California, and then went to San Francisco.

Mr. Byers returned to Iowa by way of the Pacific ocean and the Isthmus of Panama late in the autumn of 1853, reaching his home at Muscatine in the last week in December of that year, where he remained but a short time. Congress having in the spring of 1854 created the Territories of Kansas and Nebraska, an inviting field for enterprising and ambitious young men was opened west of the Missouri river. In the summer of 1854 Mr. Byers located in Omaha, a metropolis then represented by a partly surveyed and platted town-site of magnificent distances and one lonely log-cabin. He was soon employed in completing the platting of the town, and afterward on survey work in the eastern part of the Territory for the United States. On this last-mentioned work he ran the first Township and sub-division lines in that Territory. He was, also, elected a member of the first Legislative Assembly of Nebraska Territory, and in that position assisted in putting in motion the official machinery of the new Territorial government. Upon the organization of the municipal government of the "city" of Omaha, he was elected a member of the Board of Aldermen, and for two years served in that position. He remained a citizen of Omaha until early in 1859. He had heard the reports from the Pike's Peak country in the summer and autumn of 1858, and had resolved to cluded that "Byers & Co. be asked to give bond for compliance with contract, and to build house on lots to value of $500 in 90 days." As the contract did not provide for a bond, and as "Byers & Co." had prepared to do better than the bargain required, they declined to give bond; and rendered one unnecessary by immediately constructing a roomy frame building on stilts right over the bed of Cherry creek, on the northward side of the Market street crossing, but on the west side of the creek bed; yet practically midway between the main divisions of the city. On July 13th the Denver City Directors "rescinded" their action of June 25th and instructed their Secretary "to issue certificates of Stock" to the proprietors of the News; and so ended "the Byers case."

The "News Company" moved into their new quarters that midsummer, and on August 27, 1860, issued from that building the first number of the Daily Rocky Mountain News. The paper remained in that home builded upon the sand until the building and all it contained were carried away by the flood of May, 1864. Among the equipment was the first power printing press brought to the Rocky Mountain country—a clumsy Northrup cylinder "thrashing Machine."

The Aurarians having soon learned of the later negotiations afoot for the permanent location of the News in Denver City, had at once cast about for a successor newspaper in their town. They were several weeks in finding a prospective publisher, but at a meeting of the Auraria Town Company's Directors held March 13, 1860, they

"Resolved, That there be given to R. W. Furnas a liberal donation for the location of a Press for the publication of a local News Paper, provided he arrives by about the first of June."

Furnas failed to arrive with his press "by about the first of June," or at any other time. But, as we have seen, Auraria had not been deprived of the pioneer News, nor was she until a long time afterward. However, instead of being paperless in the spring of 1860, as she had anticipated, she had another beside the News.

The reader will recall our earlier statement that Thomas Gibson the partner of William N. Byers in establishing the News in April, 1859, sold his interest in it to John L. Dailey about three months later, and, having previously traded for Merrick's little printing outfit, took it to Mountain (Central) City and there began publishing the "Rocky Mountain Gold Reporter and Mountain City Herald," a small four-page paper. This paper did not survive the early snows of autumn, and its publisher

---

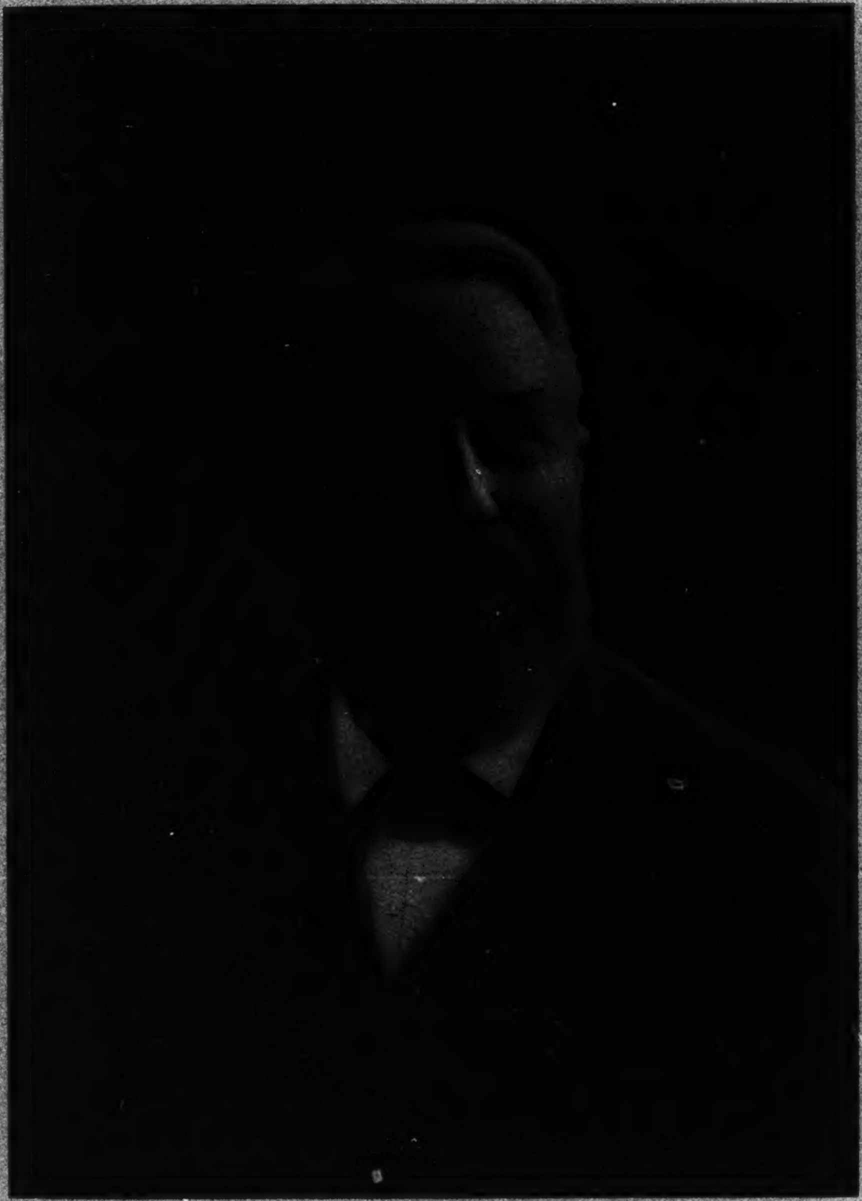
set out for it at once, but was prevented doing so by an accidental gun-shot wound that came near being a fatal one. In the meantime, being familiar with the Platte river route to the west, and having encountered several men who had returned from the Pike's Peak region late in the autumn of 1858, he prepared and published his "Pike's Peak Guide" to which we have elsewhere referred.

Though he had had no experience whatever as a newspaper editor and publisher, and with but limited means at his command, Mr. Byers decided toward the close of 1858 that he would effect arrangements under which he and others would take to the new gold region the equipment and material for the publication of a newspaper. Of the consummation of those arrangements, of the coming to Denver of that newspaper equipment, of Mr. Byers' arrival here on April 17, 1859, and of the appearance here of the Rocky Mountain News on April 23rd, all the circumstances are elsewhere in this volume related in detail.

The life-history of Mr. Byers since he became a citizen of Denver at that time, forms a large part of the history of the city as narrated in many Chapters of this work. As will have been seen by the reader, his name is encountered almost everywhere in the Story of Denver, in the preparation of which it became to the writer a matter of much personal interest to ascertain whether anything of commanding importance in the city's history had been consummated without Mr. Byers' personal participation. The reader who follows the Story to its close will not need to be told that the exceptions to the rule are very few, and that even in most of the exceptions the indirect influence of this eminent figure in the annals of Denver is apparent. For this reason it is not deemed necessary in this note to enter into the particulars of his long and useful life in this city; for they are interwoven in the larger part of the contents of this volume. Nor is it needful to refer at length to his personality. The thousands who personally know him know what it is, and know the sterling worth of our ranking pioneer; and those who do not so know him, may see the man's nature revealed in the lines and expression of the accompanying portrait from a recent photograph, and in the picture read the character that made him a leader among men as it has made him beloved by the people of a great community and a great State.

It has been the fortune, or the opportunity, whichever it may be termed, of but few men to have witnessed so wonderful a development of an empire as that which has come within the lifetime of William N. Byers, and to have so conspicuously participated in the causes that wrought it. He has seen the majestic panorama of civilization unroll from the Mississippi river to the Pacific Ocean over the plains and mountains he traversed as a pioneer in the vast domain; and it would seem, than he, no man bore a nobler, more unselfishly useful, part in preparing the way for it.

With the establishment of the News in April, 1859, the local record and perpetuation of the history of Denver and of Colorado began. In that and succeeding pioneer years Mr. Byers carefully explored, and intelligently described in his newspaper, nearly every part of the area now within the State, pointing out the great natural resources and urging their development, tracing the streams to their sources, witnessing the founding of towns and hamlets, and giving to the outside world through his reports its earliest and best intelligence of the possibilities and development of the Denver region; and in two notable instances as elsewhere related, he was directly instrumental in locating in



William N. Byers.

returned east for the winter. In the spring of 1860 Mr. Gibson came to Denver with a new printing outfit which he installed in a building on the southwest corner of Larimer and Twelfth streets; and, on May 1, 1860, made the first issue of the "Daily Rocky Mountain Herald," the first daily newspaper in the Rocky Mountain country. A furious warfare soon broke out between the Herald and the News which continued about as long as Mr. Gibson published his paper, and into which was injected a great deal of unseemly and unnecessary acrimony, notwithstanding that the two papers were of the same political faith. On July 1, 1862, the name of the paper was changed to the "Daily Commonwealth and Republican," Thomas Gibson & Co., publishers; and enlarged to six columns to the page. In that issue it declared itself to be "a Republican Union Journal." At the time this change was made it was rather generally understood that Governor Gilpin had become the partner of Mr. Gibson and was represented by the "Co." of the firm name. At the close of 1863 the paper was sold to Major Simeon Whitely who took possession on January 1, 1864, and Mr. Gibson retired from the Denver newspaper arena and returned to Omaha where he lived thereafter. While Whitely was the nominal purchaser and owner, it was no secret that he in reality acted for Governor John Evans. Within a month after the Rocky Mountain News establishment had been utterly destroyed by flood, Byers and Dailey completed negotiations for buying the Commonwealth and its equipment, and resumed publication of their paper; the Commonwealth then passing out of existence.

Office of the Rocky Mountain News destroyed by the Cherry creek flood of May, 1864.

The little press with which, as mentioned in

Colorado two great colonies of eastern people about the time the first railway was completed to Denver. Having passed through all the storms of the primitive era here, he was a leader in every movement to secure Statehood for Colorado, and in every other that promised improvement in conditions and advancement of the people's welfare. The favorite of the people, nothing but the unworthy strifes of contending political factions kept him from becoming the first Governor of the State; a position for which he was in every way most eminently qualified.

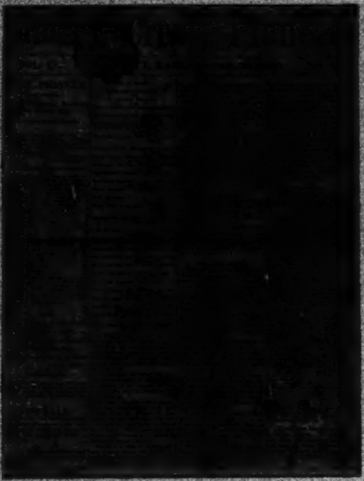
Though, as already said, Mr. Byers had had, prior to his coming hither with the material for publishing the Rocky Mountain News, no experience in editing and publishing a newspaper, he immediately developed into an editor of unusual ability, and of physical and moral courage of the highest type. His energy and fearlessness, the intimate knowledge of the entire region that he made his business to acquire, his faith in its resources and destiny, his incessant labors for its development and welfare, resulted in a personal identification with affairs and events in the progress of this city and this Commonwealth that has rarely been equalled anywhere. At the time he retired from the News, he had become the embodiment of the annals of the city and State in which he had for nineteen years been one of the chief directing forces; and in the esteem of the people he seemed, more than any other man, to personally represent and recall all that had been done here. The growth and character of his newspaper had, also, reflected in its own advancement the rise and progress of the city, and of the Territory that had two years before become at last a State of the Union; and for each and all of which its editor had so tirelessly labored through the years of his service.

Mr. Byers had been appointed Postmaster at Denver in 1864 and, after a little more than two years, had resigned on account of the pressure of his private business. Having sold and retired from the News in May, 1878, he was again appointed Postmaster, in March, 1879, and served through a term of four years and a few months. At the close of his term he withdrew from his more active participation in business affairs and gave attention to his accumulated interests in Denver and elsewhere in Colorado. When the Tramway Company was proposed he took part in the organization of that corporation, and ever since has been interested in and identified with it, having long been, as he now is, its Vice President.

Although, at the time of this writing, Mr. Byers has just passed his seventieth birthday, he is yet a hale and sturdy man who might readily lop off ten or fifteen years from the figures of record, notwithstanding his earlier adventurous life of many hardships and perils. With the old-time spirit as young as ever, his interest in the progress and well-being of his city and State is undiminished, and as of old he continues to promptly respond to many calls for his services from them and from his fellow-citizens.

In November, 1854, Mr. Byers married Miss Elisabeth M. Sumner, of Muscatine, Iowa—a granddaughter of former Governor Lucas of Ohio and later Governor of Iowa—and that union formed nearly a half-century ago, remains unbroken. Mrs. Byers did not accompany her husband on his first journey to Denver, but soon after he had established the News he went to Omaha where she had awaited him at their home in that town, and they crossed the plains that summer, arriving in Denver on August 3rd. They have two surviving children; Frank S. Byers, of Grand county, Colorado; and Mrs. William F. Robinson, of Denver.—J. C. S.

Chapter XXV, Merrick printed the first and only issue of his "Cherry Creek Pioneer," later became of great utility to Colorado newspaper founders. After Thomas Gibson discontinued his Gold Reporter at Mountain City, the press (which was the first one brought to Denver) and its accompanying small equipment were sold by him about the close of 1859 to the "Boston Company," as the founders of Golden called themselves. The new custodians established at Golden the "Western Mountaineer," which was printed on the Merrick press, but in a few months the paper was enlarged and the old press discarded. The little machine was next taken to Canon City where, in the winter of 1860-61, it was used in printing the Canon City Times which existed only a few months. The press was next used in printing a little paper at Buckskin Joe in the South Park, in the spring of 1862, and which soon suspended. The press then came back to the News office in Denver and laid idle for several years. In January, 1866, a young man who had been employed on the News took the press to Valmont, near Boulder, and on it printed the Valmont Bulletin which was later moved to Boulder and became the enlarged "Boulder Valley Herald." The press was then taken to Elizabethtown, New Mexico, where it was again used for printing a small newspaper, and where it finally disappeared. Merrick, its one-time owner, returned east at the out-break of the civil war and served three years in an Illinois regiment. He then became an officer in a Kansas regiment of veterans, and while serving as Provost Marshal at Leavenworth was shot and killed.



First page of the Cherry Creek Pioneer.

The Western Mountaineer, at Golden, was published about one year. Through the winter of 1859-60 it was edited by Albert D. Richardson and Thomas W. Knox, who had been sojourning at Cherry creek, and who later became, for eastern newspapers, war correspondents of National reputation; and still later authors of wide repute. Both in after years published volumes of much interest in which they recounted their experiences in the west, including those in and around Denver; and from their writings we derived accounts of many interesting events in our pioneer times.

The summer of 1860 was a rather active one in Denver newspaper circles, for it brought still another new newspaper enterprise, which the vigilant Directors of the Denver Town Company secured for their division of the theoretically united community. On August 18th they met and—

"Resolved, That James T. Coleman proprietor of the Press be donated ten lots in Denver City, provided he Establishes & Maintains said paper in East Denver City."

John C. Moore, who was then "Mayor" of Denver under the "Jefferson Territory" "city charter," and whose authority and "city government," had by that time become extremely emaciated, became associated with Coleman in this venture. On August 25th they issued the first number of the "Daily and Weekly Mountaineer." The office was in the second story of William Graham's frame two-story building then on the northwest corner of Fifteenth and Larimer streets, now commonly known as the "Riethmann corner." The Mountaineer was the first Democratic paper in this part of the country, and before its brief career closed it had become a paper of strong southern sentiments. Early in 1861 its publishers became anxious to dispose of their mechanical outfit in order that they might leave Denver and join the southern forces. One day in March of that year the proprietors of the News made them an offer for their little equipment and within ten minutes the deal was closed; and so the publication of the Mountaineer ceased. Coleman and Moore later became capable officers in the Confederate army.

It would seem that three daily newspapers in such a town as Denver was in 1860, were more than enough. Yet, in proportion to population their circulations were very large. In the isolated situation almost every man was eager to read a newspaper; and as the tension of political affairs in the States increased, the demand for the Denver papers became greater, both in the city and in the various mining camps; large numbers regularly going to the last-named places. The pioneer newspapers were ably conducted, with an individuality, intensity of purpose and profound earnestness that still strongly impresses one who studies their old files.

The business as well as the editorial rivalry between the Herald and the News had soon become very keen. Late in the autumn of 1860 the "News Company" arranged with the Central Overland, California & Pike's Peak Express Company for a

View from intersection of Fourteenth and Lawrence streets looking across "West Denver" the morning after the Cherry creek flood of May, 1864.

daily news report to be transmitted by that company's Pony Express from St. Joseph to Denver. The first report, that of Abraham Lincoln's election was, as mentioned in an earlier chapter, received and published on November 13, 1860. As an example of newspaper enterprise this was, duly considering all the circumstances, equal to anything accomplished nowadays. This example was immediately followed by the Herald, and both papers were soon giving daily the substance of important news that was but a few days old. Then both papers opened branch business offices in Central City in the heart of the Clear creek mining districts, and both dispatched their papers thither and to intervening and adjacent towns by pony expresses of their own. For a short time in the autumn of 1860 the News issued a second daily edition called "The Bulletin," which contained much general information about the country and the progress of its development. The Mountaineer was less vigorous in its operations, and suffered from the rather common belief that it would not long endure, and which proved true. Editorially it was exceedingly peppery in its politics. In the autumn of 1860 the yearly subscription price of each daily paper was twenty-four dollars, and single copies sold for twenty-five cents.

Before a year had elapsed after the first issue of the Rocky Mountain News, the pioneer printer-compositors had organized an union. Among those who worked on the News was Charles S. Semper, a young compositor who set type for the first issue of the paper, and was mechanically engaged on it for several years afterward. In the autumn of 1859 he built a frame dwelling in Auraria, and on April 12, 1860, Denver Typographical Union, No. 49, was organized in that house, with John L. Merrick as President, George L. Sanborn, Secretary; and Semper, Treasurer. This was the first labor organization in what is now the State of Colorado. A scale of wages for printers was fixed, and the rules and regulations of the New Orleans Typographical Union temporarily adopted. Mr. Semper is still a citizen of Denver and still engaged at his old-time calling.

The foregoing part of this chapter deals with the history of the really pioneer newspapers of Denver—of those of the times when the nearest railroad was still on the Missouri river border, and which struggled against the trying circumstances and conditions of the strictly pioneer years. Although the pioneer era in Denver's history is considered in this volume as having continued until railroad construction reached the city, the conditions for newspapers were different and better in and after 1865. Still later in that decade the advancing railroads further improved these conditions and relieved newspaper publication here of many of its former difficulties and embarrassments.

In pioneer times the Denver newspapers were often troubled by delay of printing paper in the long haul across the plains. The plains freighters would make no contracts or assurances to deliver freight on or before a date desired by the consignee; nothing better than "we'll deliver when we get there" could be obtained. Therefore the pioneer publishers had to borrow and lend, the size of the papers was frequently reduced to fit anything that could be had, and occasionally editions were printed on colored and wrapping papers. Freights in those days were always much more than the cost of the paper at the Missouri river. During the Indian blockade beginning in the autumn of 1864 publishers were put to sore straits for stock, and the wrapping paper expedient was frequently in evidence. Upon several occasions even wrapping paper was not available.

One of the conspicuous local events in the spring of 1865 was the appearance of a new newspaper. On May 13th Frederick J. Stanton, who had been local editor of the Mountaineer of the earlier years and had done other newspaper work, issued the first number of the Denver Daily Gazette, a four-page paper, five columns to the page. Stanton had been what was then known as an Union, or "War," Democrat, and his paper, of which there was a weekly edition, also, was very ably Democratic in politics. The publication office, at first located on the east side of Fifteenth street, between Lawrence and Larimer streets, was later in that year removed to the north side of Blake street, between Fourteenth and Fifteenth streets, where it occupied the second story of the old Elephant Corrall building. Stanton published his paper until late in 1869. In September of that year he changed its name to the Denver Daily Times, and a month or so later sold the establishment to George Barnett and E. H. Saltiel who had theretofore been, respectively, associate editor, and local editor, of the paper. Under Barnett and Saltiel the Times collapsed, and about the close of 1869 ended its career. They soon afterward took a part of its mechanical equipment to Wyoming where they again tried their fortune in newspaper publishing.

Mr. Stanton, who is still a citizen of Denver, is a native (December 22, 1826,) of Northampton, England; the home of the Washingtons. Coming to America in 1851, he later located in Iowa, and in 1857 was Cashier and book-keeper of one of the banks in Des Moines. He came from Dubuque, Iowa, to Denver in 1860, and since then, with the exception of several years of service as Geologist of Wyoming, has been identified with the city. As will appear on a later page of this chapter, the Gazette was not his only newspaper undertaking in Denver. Since 1876 he has given almost exclusive attention to his profession of Geologist and Mining Engineer, and to affairs incident thereto; and is now so engaged.

The later years of the decade, 1860-70, were not prolific of new journalistic undertakings in the city. The only newspaper event of that period that was of commanding importance in results was the founding of the Denver Tribune that appeared in small form and under a modest name in February, 1867, but later became a vigorous and influential newspaper. On other pages of this chapter an account in some detail is given of the origin, advancement, and ultimate decline and disappearance of the Tribune from the Denver newspaper field.

In 1868 O. J. Goldrick, Denver's pioneer school teacher of whose services something further is told in Chapter LXI, established a weekly newspaper for which he revived the name of Thomas Gibson's pioneer daily, the "Rocky Mountain Herald." In the earlier times Goldrick had been a writer for the Rocky Mountain News and became regularly attached to that paper; a relation that continued until 1865. He then went to Salt Lake City and became interested in the publication of the "Daily Vidette," an anti-Mormon newspaper. Returning to Colorado, he became editor of the Central City "Daily Times" in 1867. Goldrick continued publication of his weekly Herald at Denver until his death in 1886. Subsequently the paper

John L. Dailey. From a recent photograph.

John L. Dailey is a native (November 19, 1838,) of Seneca county, Ohio. Learning the printer's trade in Fort Wayne, Ind., he went to Omaha in 1855 and worked on the Nebraskian, and later published the Dakota City Herald for upward of two years. His next move was to the mouth of Cherry creek in the spring of 1859; his subsequent connection with the printing business in Denver being related in this chapter. After his permanent retirement from it in 1874 he was interested in various other business enterprises until elected Treasurer of Arapahoe county in 1877; a position to which he was re-elected in 1879. He is still an honored citizen of Denver, and is now, as he has been for a long time, engaged in real estate transactions.—J. C. S.

was purchased by Halsey M. Rhoads who still continues it as a vigorous member of Denver's family of weekly publications.

The foregoing pages of this chapter contain all of noteworthy importance and interest in Denver newspaper annals in the pioneer era. After Goldrick began issuing his Herald, Denver's journalistic family received no additions that left definite footprints on the sands of time until the young metropolis had become fairly accustomed to the distinction of being a railroad town.

Frederick J. Stanton. Photographed about 1890.

Completion of railroads to Denver in 1870 was not, however, followed by so much of an upspringing of publications in the city as might have, under the stimulating consequences, been expected. The first city directory of the regular and uninterrupted series that is still continued was issued early in 1873. In that issue, under the classification, "Newspapers and Publications," are named the following six, their locations having been given according to the old street-names:

Colorado Journal, German, weekly, W. Witteborg, publisher and proprietor. E. side G street between Larimer and Holladay.

Colorado Monthly, J. H. Wilhelm, editor. N. side Holladay street, between F and G.

Daily Denver Times, R. W. Woodbury, editor and proprietor. E. side F. street between Larimer and Lawrence.

Rocky Mountain Herald, weekly, O. J. Goldrick, editor and proprietor. Tappan's Block, Holladay street, between E and F.

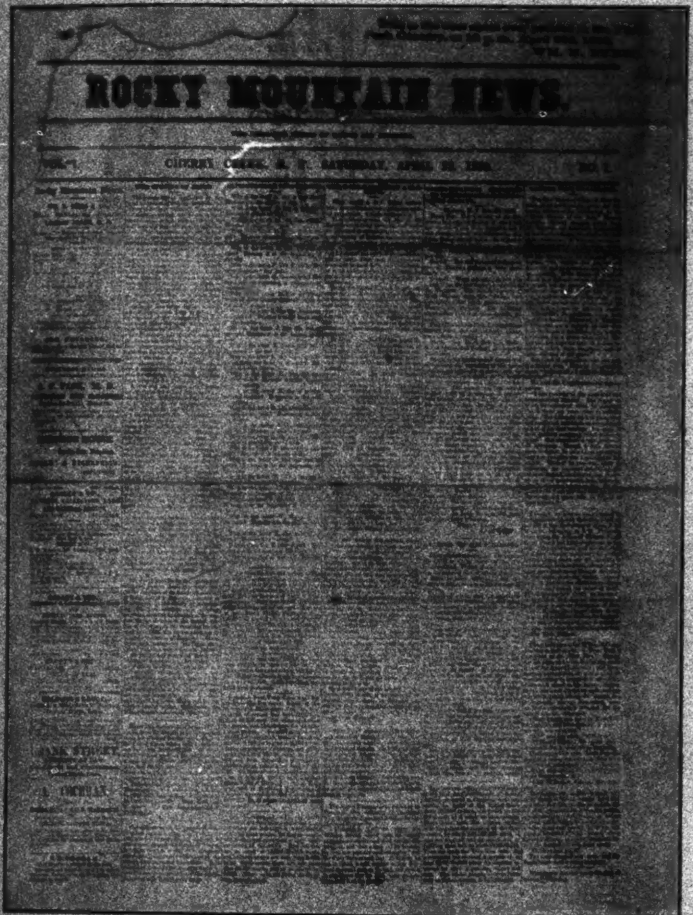
Rocky Mountain News, daily and weekly. W. N. Byers, editor and proprietor. News Block, N. side Larimer street, between F. and G.

The Denver Tribune, daily and weekly, Henry C. Brown, proprietor. F street, southeast cor. of Holladay.

Later in 1873 several new newspapers made their appearance in the city. August Gueck began publishing the weekly Colorado Courier at the northwest corner of Fifteenth and Market streets; J. Bliman, the Denver Commercial, at (old) number 353 Market street; the Denver Daily World, a small sheet by the "World Publishing Company, proprietors," at (old) number 379 Market street. Each of these existed about one year. The fourth product of 1873, established in the autumn, was Stanley G. Fowler's Denver Mirror, published at (old) number 391 Lawrence street. This was the city's first Sunday newspaper, and was published by Fowler until late in 1876 when the Denver Mirror Company succeeded, and began issuing it on Saturday afternoon. Fowler continued as its editor until the paper passed out in the latter part of 1879.

The most important newspaper enterprise in Denver in 1874 brought into existence the Colorado Democrat. Previous efforts to permanently maintain here a Democratic newspaper had, as the reader has seen, proved unsuccessful; though Stanton's Gazette of the preceding decade had been continued upward of four years. In the spring of 1874 Thomas G. Anderson undertook the task of filling the apparent newspaper void in the city, and began publication from a moderately equipped establishment on the east side of Sixteenth street between Larimer and Lawrence streets, of the Colorado Democrat, daily and weekly; each issue being about the same size as that of the other city papers of that time. Anderson published the Democrat about six months when he sold it to Frederick J. Stanton, the former founder and publisher of the old Denver Daily Gazette. Anderson had made the Democrat a rather lively paper, but Stanton made it much more so. Immediately after buying it from Anderson he also had bought the steam job printing office of John L. Dailey & Co., (Dailey and Smart) then located on the north side of Market street (old number 379) between Fifteenth and Sixteenth streets, consolidated the two offices, and occupied Dailey and Smart's location. As proprietor and editor of the paper, Stanton made the Democrat one of the forceful institutions of the city, and published it until late in 1876 when, owing to financial reverses, he ceased to be its owner. In 1875 the publication office had been removed to (old) number 322 Blake street.

However, Stanton's misfortune did not terminate the Democrat's existence. The property immediately passed to Thomas G. Anderson (the paper's founder), Joseph Farmer and Benjamin D. Spencer, who continued publishing both daily and weekly editions with the name of the daily changed to Denver Daily Democrat; Spencer figuring as business manager. The publication office was removed to a small building at (old) number 371 Larimer street—about where the Railroad Building now stands. In 1877 J. D. Bristol became general manager, Spencer having withdrawn his interest and the paper having been published in that year and 1878 by "Farmer & Anderson, Proprietors." The Democrat was continued at 371 Larimer street under these proprietary interests until June, 1879, when it passed out of existence under circumstances the particulars of which are part of the initial history of the present Denver Republican, and which are related in our account of that newspaper appearing on a subsequent page.



ROCKY MOUNTAIN NEWS.

First page of the first copy of the Rocky Mountain News. The dimness is due to the "form" having been wet, thus preventing proper inking with the hand-roller.

The Colorado Journal, weekly, established in 1872 by W. Witteborg, was Denver's first German newspaper. Witteborg continued it until, in 1880, it passed to the Colorado Journal Publishing Company, in which he was an owner and manager. Later, Witteborg became identified with the Denver Herold, and altogether was engaged in German newspaper publishing here for many years. The Colorado Journal is now published at 1452 Blake street by the German Publishing Company, under the editorial and general management of Carl Moritz.

In the spring of 1875 Smith & McDonald began publication of the Colorado Sentinel at (old) number 386 Market street. The Sentinel was a small daily, with a weekly edition, also. The paper was continued a year or so and then gave up the ghost.

At the beginning of 1876, the year of Colorado's Statehood, there were only nine existing publications in the city; the city directory, published in January of that year, having named them as follows, the old name of Market street and the old street-numbers having then been in use:

Colorado Democrat, daily and weekly, Fred J. Stanton, editor and proprietor, 322 Blake street.

Colorado Farmer, weekly, J. F. Wilbur, manager. 210 Sixteenth street.

Colorado Journal, (German), weekly, W. Witteborg, proprietor. 402 Holladay street.

Colorado Sentinel, daily and weekly, Smith & Macdonald, editors and proprietors. 386 Holladay street.

Denver Mirror, published every Saturday morning, Stanley G. Fowler, editor and proprietor. 391 Lawrence street.

Denver Times, daily and weekly, R. W. Woodbury, editor and proprietor. 387 Lawrence street.

Denver Tribune, daily and weekly, Herman Beckurts, proprietor. Tribune Building, southeast corner Sixteenth and Holladay streets.

Rocky Mountain Herald, weekly, O. J. Goldrick, editor and proprietor, Tappan Block, southwest corner Fifteenth and Holladay streets.

Rocky Mountain News, daily and weekly, W. N. Byers, editor and proprietor. News Block, north side Larimer street between Fifteenth and Sixteenth streets.

As will be seen, five of these were daily and four weekly.

The later years of that decade (1870-80) brought forth several newspapers of brief endurance. In the summer of 1878 A. Macready launched the "Colorado Greenbacker"—the name standing for the provocation—a weekly paper published about fifteen months at (old) number 380 Market street. About the same time in 1878, Saxby, Owers & Co., began the Journal of Commerce, a weekly, at (old) number 389 Lawrence street, that lived a year or so. Early in the autumn of 1879 the Rocky Mountain News Printing Company established the Colorado Post, a German semi-weekly, the publication of which was suspended late in 1880. The Post was the first German paper between the Missouri river and California to be issued oftener than once a week. In 1879, also, the Saturday Call made its appearance from (old) number 367 Market street; W. H. Fisher, editor and proprietor. The Call passed away before the close of 1880.

The city directory issued in January, 1880, named the "Newspapers and Publications" then existing in the city as follows—a total of fourteen:

Colorado Farmer, weekly, J. S. Stanger, editor and propr, 380 Holladay street.

Colorado Journal, German, weekly, W. Witteborg, propr, 345 Holladay street.

Colorado Mining Review, weekly, Warden Cumming, pubr, southwest corner Fifteenth and Holladay streets.

Colorado Post, German, semi-weekly, Rocky Mountain News Printing Co., proprs, 389 Larimer street.

Daily and weekly Times, R. W. Woodbury, propr, 387 Lawrence street.

Denver Advocate, H. D. Calvin, propr, 367 Holladay street.

Denver Daily Hotel Reporter, W. H. Farnham, propr, 344½ Larimer street.

Denver Republican, daily and weekly, C. B. Wilkinson, propr, 371 Larimer street. (Weekly edition, also.)

Denver Tribune, daily and weekly, Herman Beckurts, propr, southeast corner of Sixteenth and Holladay streets.

Rocky Mountain Herald, weekly, O. J. Goldrick, editor and propr, Tappan Block, southwest corner Fifteenth and Holladay streets.

Rocky Mountain Mining Review, weekly, Blake & Elliott, pubs, Fifteenth, corner of Holladay street.

Rocky Mountain News, daily and weekly, Rocky Mountain News Printing Co., proprs, 389 Larimer street.

The Financial Era, weekly, F. C. Messenger & Co., pubs, 380 Holladay street.

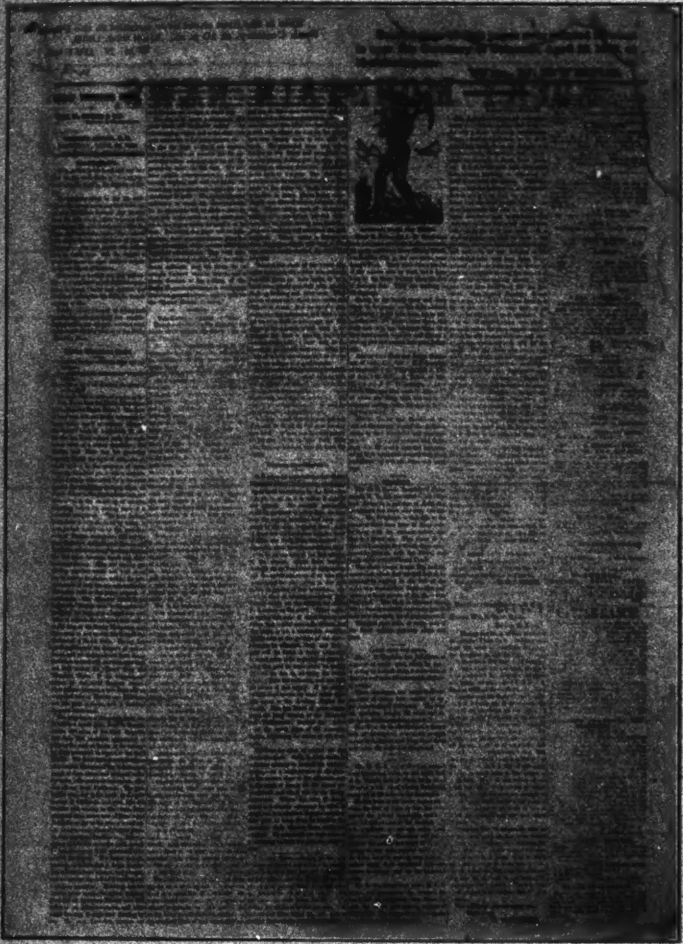
The Saturday Call, W. H. Fisher, propr, 367 Holladay street.

It was not until after the advent of the railroads that publications devoted to special interests made their appearance in Denver. Prior to that time both the town and the Colorado field were too limited, the one in size and the other in development, to afford sufficient sustenance for such issues; and exploitations of the advantages and prospects of the city and proclamation of the results in and resources of the Colorado country were part of the regular work of the city newspapers, proper. An early special publication was The Presbyterian, a religious monthly founded in 1871 by S. Jackson, and that did not survive a great while, though it appears to have been later revived. In the spring of 1873 T. E. Picott established here the weekly Real Estate and Mining Review that appears to have lived but a few months. About the same time in 1873 Feebles & Phillips began the weekly Colorado Farmer at (old) number 210 Sixteenth street, and which soon underwent successive changes of ownership. In 1874, the Colorado Farmer Company had it; in 1875 J. F. Wilbur figured as its manager; and in 1876, J. S. Stanger became its editor and proprietor and held on several years; the paper having been continued by others thereafter until late in 1885. Picott's publication, and the Colorado Farmer, were represented to have been the pioneers of their kinds. In the autumn of 1873 Strahorn & Schlapp, at the northeast corner of Fifteenth & Blake streets, established the Colorado Agricultural and Stock Journal, a weekly issue. In 1874-75 James R. Hill was its proprietor, but it did not survive 1875. In 1874 the American and European Mining Association began issuing the weekly Denver Mining Journal that was continued about a year. In 1876 the weekly Mining Review was started by the Mining Review Publishing Company at (old) number 400 Market street, but it did not live into its second year. In 1879 Warden Cumming instituted the weekly Colorado Mining Review, but it lapsed before the close of 1880. In 1879, also, the weekly Financial Era, the character and purposes of which were indicated by its name, was brought into existence by F. C. Messenger & Co., and would seem to have been the first financial publication in the city. It was published at (old) number 380 Market street but did not survive the year 1880. In the last-named year the same publishers began issuing the Argus which, also, was short-lived.

As the reader has seen many of the minor publications instituted prior to 1880 were more or less ephemeral, and only by a close shave were most of these we have mentioned of sufficient importance to receive even the brief record herein given them. They, with numerous later ones having various aims and soaring ambitions, now sleep in the "newspaper graveyard."

After 1880 the number of miscellaneous and minor publications became, with the few exceptions hereinafter mentioned, too great to be taken into the kind of consideration we have given the earlier ones. To do so would be unduly tedious and probably also be of no historical value. While in the earlier part of the period since 1880 these publications followed each other at what might have been no more than a fair pace, as the years wore on into and through the times of the great "boom" they began to tread upon each other's heels; and in very recent times, under the restoration of prosperity, several new ones have sought and are now receiving public favor. In the names of some now flourishing we have revival of some of those that figure in annals of preceding periods; and while some of those still with us originated in the early times, the majority of the ante-panic miscellaneous and minor publications launched at various times back to 1880 have passed away, and but few of that majority are now recalled in current journalistic reminiscences.

A special publication that deserved to be not forgotten came into existence in Denver in 1880. This was the monthly "Colorado Antelope," published by Mrs. C. M. Churchill, and "Devoted to women's political equality and individuality." Harmonizing that name with the noble purposes declared is a task that must be left to the reader. The Antelope gambolled about two years when it was discontinued by its publisher who then began issuing the Queen Bee that buzzed until 1889.



Second page of the first copy of the Rocky Mountain News; printed by a wet "form."

Another product of 1880 was the Evening Bulletin, a small daily sheet published by Jeffries & Wynne at (old) number 480½ Lawrence street, and that had a career of about a year. In 1881 the Evening Truth, published by John M. Scanland at the northwest corner of Twelfth and Larimer streets, followed the Bulletin, but appears to have been crushed to earth within twelve months. It was in 1880, also, that the somewhat famous M. M. ("Brick") Pomeroy appeared in the Denver newspaper arena. In that year arose the rather flamboyant weekly Great West, Pomeroy & Glafcke, publishers and proprietors, at (old) numbers 433-35 Larimer street. The Great West lasted about two years, and was followed by Pomeroy's Democrat, a weekly issued at (old) number 483 Larimer street by John Keller, publisher, and having Pomeroy for its editor. It, also, survived about two years. Both these publications, beside being very decidedly Pomeroyish, were also employed in exploiting various other enterprises in which the noted "Brick" was engaged in Colorado. Still another publication originating in 1880, and worth mentioning, was the Inter Ocean, of which Henry M. Feldwish was editor and manager, but that was really an undertaking by John Brisben Walker, now owner and publisher of the Cosmopolitan Magazine. The Inter Ocean was published at (old) number 340 Larimer street, first as a weekly, but, we believe, became a daily later in its life. It did not survive the year 1884.

In 1882 another "World" swung into view—the Denver Evening World, daily and weekly, published by the World Printing and Publishing Company at (old) number 407 Arapahoe street. Like its predecessor of the same family name, it made little history for itself and left no permanent impressions of its yearling life. In 1882, also appeared Denver's first "labor" publication—the Labor Enquirer, a weekly, published by Buchanan & Laverty at (old) number 370 Larimer street. The Enquirer lived until about the close of 1888.

Among the less unimportant publications instituted in the last half of that decade was the third attempt to make a "World" go in Denver. In 1887 the daily Denver World was started on its orbit by George H. Gray at 1541-43 Market street. About one annual revolution was all this orb succeeded in making. Beside the World, there appeared in 1887 the daily Volksblatt, (German), issued by the Volksblatt Publishing Company at 1019 Sixteenth street. This first daily German paper in Denver (we have none now) proved unsuccessful after several months of rather earnest effort. Yet another enterprise of 1887 was one bearing a name made familiar to our reader

—the Denver Daily Democrat, R. F. Stapleton editor and manager. This last attempt to have a Daily Democrat in Denver was made by the Democrat Publishing Company, with an office in the Cass & Graham building on the southeast corner of Sixteenth and Curtis streets. The period of its existence was measured by months, not years. About that time, a small daily, the Denver Afternoon, was begun by the Denver Afternoon Publishing Company, H. B. Jeffries, manager, at 1753 Lawrence street. Late in 1887 it appeared as, or was succeeded by, the Afternoon Reporter, published by John C. Kennedy, proprietor, at the same place. The latter was continued until about mid-summer of 1889.

With one more subject of these merely running reminiscences in which exactness and detail were not thought of very great importance, we will end them. With the tidal wave of Populism in Colorado that lifted Davis H. Waite into the office of Chief Executive of the State, there appeared in Denver a newspaper organ of that party. This was the weekly National Populist, published at 1638 Curtis street, and edited by H. E. Harris. About the time the advance clouds of the financial storm of 1893 appeared above the horizon, it was converted into the daily Denver Populist, under the editorial and general management of S. J. Shirley. After the worst of the tempest was over, the remains of the Populist were among those of other enterprises hopelessly buried in the wreckage.

Old Tribune building, Lawrence street. Photographed in 1868.

The famous old daily and weekly Tribune which, in one period of its career, was a great and influential newspaper of National renown, was founded by L. M. Koons, as "The Denver Daily," in 1867, its first issue having appeared on February 6th. The "Daily" was published every morning except Monday, and on May 15, 1867, appeared as the "Daily Colorado Tribune." It occupied the old Christian building that stood on part of the site of the Times Building, 1547-51 Lawrence street. Mr. Koons continued sole owner of the Tribune until January 4, 1868, when General Roger W. Woodbury and John Walker acquired proprietary interests in it. General Woodbury had been appointed city editor of the "Daily" early in March, 1867, and on June 7th was advanced to be associate editor, Mr. Walker succeeding him as city editor. Early in 1869, Koons sold his interest to his two partners who at the close of 1870 removed the publication office to the east side of Fifteenth street, between Market and Blake streets. Woodbury and Walker continued as proprietors and editors of the Tribune until December 31, 1871, when they sold the paper to E. P. Hollister, H. G. Bond and their associates who, on December 29, 1871, had organized "The Tribune Association." In July, 1872, the Tribune was removed to Henry C. Brown's building on the southeast corner of Sixteenth and Market streets. In December, 1872, the Tribune passed to Henry C. Brown, to whom the company had become heavily indebted, and it was then made an evening paper. Mr. Brown continued its owner until November 15, 1875, when he sold it to Herman Beckurts. In 1880 the paper was purchased from Beckurts by Herman Silver, G. B. Robinson and their associates, who formed the "Tribune Company;" Silver becoming President and General Manager of the corporation. It was under this ownership and management that the Tribune reached the zenith of its greatness. In 1881 William A. Hamill bought the property and owned it about two years when he sold it to T. C. Henry under whose ownership the Tribune was consolidated on August 12, 1884, with the Denver Republican; Mr. Henry becoming Secretary of the "Tribune-Republican" corporation.

The subsequent practical extinction of the Tribune's name is part of the history of the Republican. At one time, say twenty years ago, the Tribune, was a power in Denver and in Colorado, and none of the Denver newspapers appeared at that time to have promise of a longer career or a more brilliant future than awaited it. An exceptionally capable group of newspaper men was then engaged in its service, but with subsequent mismanagement, or rather neglect of management, its decline set in and was accelerated by the vigor of its rivals; and its decadence continued until the paper sought and obtained refuge, and later found oblivion, in consolidation with the Republican.

Much of the history of the Rocky Mountain News has already appeared on the pages of this volume; yet, there remains more to be told. It was William N. Byers, then of Omaha, who, in the winter of 1858-59, conceived the idea of transporting a "Washington" hand-press, type, paper, and other materials across the plains to Cherry creek and establishing a newspaper in the new land of gold. Dr. George C. Monell, of Omaha, had an interest in the enterprise, but which he disposed of to his associates before the outfit reached Denver, and returned to Omaha. The press and other printing material had been used in printing a newspaper at Bellevue, a little frontier town a few miles below Omaha, and had been purchased as it stood, by the Rocky Mountain News "syndicate," as we say nowadays. Merrick, the other Denver newspaper publisher in April, 1859, and of whose single issue of the "Cherry Creek Pioneer" we have already told at length, had brought his little equipment from St. Joseph. Thomas Gibson, the active partner of Mr. Byers in the News enterprise was from Fontanelle, Nebraska. The party which accompanied the News' outfit to Denver consisted of Mr. Byers and Mr. Gibson, John L. Dailey, Robert L. Sumner, Edward C. Sumner, I. Sansom, P. W. Case, L. A. Curtice, W. J. Curtice, James Creighton, Henry Creighton, Harry Gibson, H. E. Turner and "Pap" Hoyt. The story of the journey, of the arrival, and of the issue of the paper has been told.

Its career in the pioneer times was attended by many disheartening events and circumstances well calculated to weaken faith, and to discourage men less courageous and determined than those in charge of its destinies. Beset by countless difficulties, enduring many hardships, repeatedly threatened with destruction of their lives and property, they steadily faced to the front and continued their newspaper upon the lines laid down for it, regardless of the daily trials and dangers. The history of the News is almost the equivalent of that of Denver and of Colorado. Within the many volumes of its issues during the forty-two years of its existence, are found the economic, social and political records of the rise and progress of the city and State.

The News was not long published by the two active partners who founded it and sent forth its first issue on that 23rd of April. In August of that year, as already stated, Thomas Gibson sold his interest to John L. Dailey who had from the start been in charge of the mechanical department; the firm name remaining W. N. Byers & Company. This continued until the spring of 1860, when Edward Bliss and H. E. Rounds each acquired a proprietary interest, the four partners doing business under the name, "News Printing Company." Bliss and Rounds had brought from Chicago that spring a small newspaper-printing equipment with the intention of establishing a new paper here. Gibson had then arrived with the Herald outfit, and Bliss and Rounds seeing the field rather well occupied, merged their equipment into that of the News and thus acquired an interest in the pioneer newspaper. This partnership continued until the spring of 1863, when Bliss and Rounds sold their interest to Byers and Dailey, and left Denver. After that there were no proprietary changes in the News until Byers and Dailey dissolved their partnership.

On November 1, 1871, Mr. Dailey sold his interest in the News to Mr. Byers who then became its sole owner; the retiring partner engaging in the job printing business with the first steam printing establishment of its kind in Denver. Prior to June, 1870, the News had been an evening publication, but since that time it has been issued in the morning. Mr. Byers continued as sole owner of the paper until May 5, 1878, when he sold the entire property to the late Kemp G. Cooper and his associates. The new owners organized the "Rocky Mountain News Printing Company," of which Mr. Cooper became President and Manager; and William F. Robinson, Secretary and Treasurer. Mr. Byers then, after eighteen years of service as editor and publisher, permanently retired from the newspaper business. Beside having been an able and most fearless editor through times when fearlessness brought greater responsibilities than it does now-a-days, he had been an explorer and miner, and as a mountaineer the first man to stand on the summit of Long's Peak; as a guide to visiting strangers he had been the friend and associate of Horace Greeley, Bayard Taylor, Albert Bierstadt, Major J. W. Powell, Samuel Bowles, and of Professor F. V. Hayden on his geological surveys.

Office of the Rocky Mountain News, erected late in autumn of 1859. First structure built for a newspaper printing office in the Rocky Mountain country. Photographed in 1900 shortly before its demolition.

On July 16, 1878, a controlling interest in the News company was purchased by the late W. A. H. Loveland, of Golden, who became its President, with James T. Smith as Vice President; William F. Robinson continuing as Secretary and Treasurer. Mr. Loveland's chief purpose in acquiring control of the News was of a political character, for, on July 17th he became the Democratic nominee for Governor.

At that time the News occupied its building on the north side of Larimer street next to the site of the present Good Building on the northwest corner of Larimer and Sixteenth streets. It was then a four-page, eight-column newspaper, without a Sunday issue, and had always been robustly Republican in politics. Mr. Loveland changed it to an eight-page paper, and began the publication of a twelve-page Sunday edition—the first Sunday issue of a Denver daily paper. The new dispensation also changed the political complexion of the News, and its conversion into a strongly Democratic journal was one to which the old-timers were several years in becoming accustomed.

New home of the Rocky Mountain News, south side of Welton street adjoining southeast corner of Seventeenth.

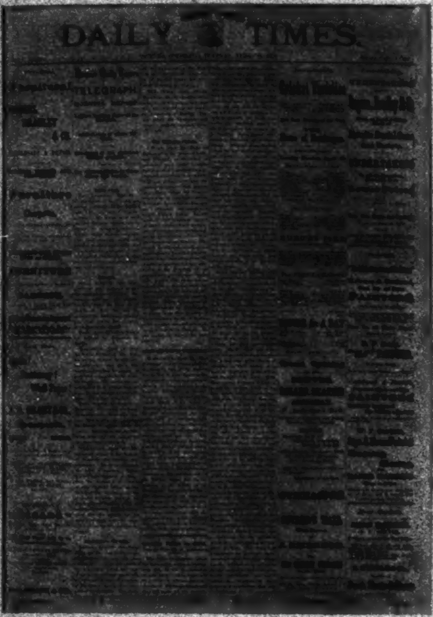
On June 14, 1880, Mr. John Arkins bought one-fourth of the News Company's stock from Mr. Loveland and became Vice President and General Manager of the company. There were no further changes until March 2, 1886, when Maurice Arkins and James M. Burnell joined John Arkins in purchasing the remainder of the stock from Loveland; the three becoming equal owners. On August 9, 1890, Mr. Thomas M. Patterson bought the interest of Maurice Arkins (then deceased) and that of Mr. Burnell, which transaction established the proprietary interests in the News as they now exist—two-thirds in Mr. Patterson and one-third in the estate of John Arkins.

Since W. A. H. Loveland bought control of the News in July, 1878, the political character of the paper has not always been what is sometimes called "straight Democratic," though it has not been Republican. During the eight years it was under Loveland's control and through several thereafter, it was pretty regularly Democratic; but upon the rise and in the subsequent progress of the Populist party in more recent times, it gave aid and comfort to that organization. Otherwise it has, upon the whole, been a Democratic paper under its present ownership, and strongly supported William J. Bryan in 1896. It is now recognized as one of the great exponents of that party in the west and is, as it always has been, a newspaper of powerful influence in Colorado.

Since Senator Patterson acquired control of the News it has occupied quarters in the Markham Hotel building on the southwest corner of Lawrence and Seventeenth streets, but at the close of our record work was in progress on a fine new structure, exclusively for the paper's uses, on the south side of Welton street near the southeast corner of that street and Seventeenth.

Throughout its long career the only interruption to the regular daily publication of the News was that caused by the complete destruction of its establishment by the flood in May, 1864, but the courage and determination of its owners limited that interruption to one of only a few weeks. It is the historic newspaper of the Rocky Mountain country, and its name will always be historically associated with the humble beginning, the retarded progress, and the subsequent magnificent development of our city.

The present Denver Times, the afternoon newspaper by which this History of Denver is published, and now, among the daily papers of the city, next to the Rocky Mountain News in age, is not, as the reader has seen, the first Denver newspaper of practically the same name. It is, however, the outgrowth of an exceedingly humble beginning, and one for which no such evolution was anticipated. On August 1, 1870, Clarence E. Hagar, a newspaper compositor, began publishing a little sheet called "The Lorgnette." It was merely a theatrical programme used in the old Denver Theater, and in other amusement places as occasion offered. In addition to the theatrical programmes, the sheet carried advertisements and a few "stage notes," and was printed at a job printing office. Gradually local news items crept into the Lorgnette, and in 1871 the sheet was enlarged and the name changed to "The Daily City Item." At the time the little sheet abandoned theatricals and became a local evening newspaper, Mr. Hagar was joined in the enterprise by S. T. Sopris, who had been employed on the other city papers. As the Item, the paper appeared in enlarged form, well provided with the local news of the town, and possessing its own mechanical equipment; the publication office having been in a second-story room on the south side of Larimer street between Fifteenth and Sixteenth streets.



DAILY TIMES

First page of the Denver Times, issue of April 21, 1872.

At that time Denver had a population of 6,500, or thereabouts, and the Item was the third daily newspaper serving the people. It persisted in asserting its right to live, and soon became popular and fairly prosperous. It continued under its second title until the following spring when, on Monday, April 1, 1872, it appeared in enlarged form as the "Denver Daily Times," (daily, except Sunday). The paper was of four pages, with six columns to the page; but the columns were but one and one-half inches wide, and the full page less than half the size of one of the fourteen pages of the Times' present usual week-day edition. At that time the publication office was still on the south side of Larimer street, between Fifteenth and Sixteenth streets. Not having a press capable of printing it, its publishers had the first and many successive editions of the Times printed at the steam job printing office of John L. Dailey & Company; Mr. Dailey having engaged in commercial printing in company with N. A. Baker who had entered the business office of the News in 1868.

On April 20, 1872, Hagar sold his interest in the Times to A. J. Boyer, the publishing firm becoming Sopris and Boyer. On June 10th, of that year, Sopris also sold his interest to Boyer who became sole proprietor and editor, and plunged into an enthusiastic support of Horace Greeley for President. This performance lasted about three weeks when, on June 24th, Mr. Boyer sold the property to Edward Bliss who, as heretofore stated, in 1860 and for three years thereafter had had a proprietary interest in the Rocky Mountain News. Bliss suspended the Greeley demonstration, but was in command only a few weeks. On August 10, 1872, the property passed to General Roger W. Woodbury by purchase, and that last of the rather numerous changes of ownership in 1872, marked the beginning of the Times' career as a great newspaper. As already related, he had been editor and one of the proprietors of the Denver

The "Times Building" at 1547-51 Lawrence street as erected in 1881.

Tribune for several preceding years, and had sold his interest in that paper in the previous December.

During the ensuing ten years General Woodbury was the directing spirit of the Times. Soon after buying the property he organized "The Times Printing Company," of which he was practically the sole owner, and also President and Manager. The paper was provided by him with a new and adequate mechanical equipment, enlarged in form, and placed in new quarters on the east side of Fifteenth street between Larimer and Lawrence streets. In 1874 he purchased the old Tribune Building property that was part of the site of the present Times Building, 1547-51 Lawrence street, and removed the Times from Fifteenth street to these premises that he had formerly occupied as one of the proprietors of the Tribune; the old building remaining the home of the Times until, in 1881, it was torn down to make way for the new Times Building. Temporarily removing the paper to other quarters, General Woodbury erected the Times Building (of which some further account appears in Chapter LXXIV) in 1881, and then made it, as it ever since has been the newspaper's home.*

General Woodbury was editor as well as manager of the Times for several years after purchasing it, and gave the paper a prosperous life and a high standing. In December, 1879, Judge Albion W. Tourgee, the author of several books famous in their time, was called to the editorial chair by General Woodbury who continued in general management. Judge Tourgee remained but a few months, when General Woodbury again took editorial charge. On May 20, 1882, he sold the paper to Frank W. Woodbury (his son), Thomas F. Dawson, and R. G. Dill. In October, 1883, Dawson and Dill sold their interests to Frank W. Woodbury who, as sole proprietor, published the Times until May 28, 1888, when it was purchased by William H. Griffith. Griffith re-equipped it mechanically, provided it with a Scott perfecting press, and remained its owner until January 1, 1891. He then sold it to H. W. Hawley and W. E. Brownlee, who formed a new corporation—"The Denver Times Publishing Company"—and who became, respectively, business manager and editor. About a year after this change, Hawley bought Brownlee's interest, became practically sole proprietor, and so remained until the summer of 1894. As will have been seen, the Times was under corporate ownership through these various changes which were merely transfers of stock holdings.

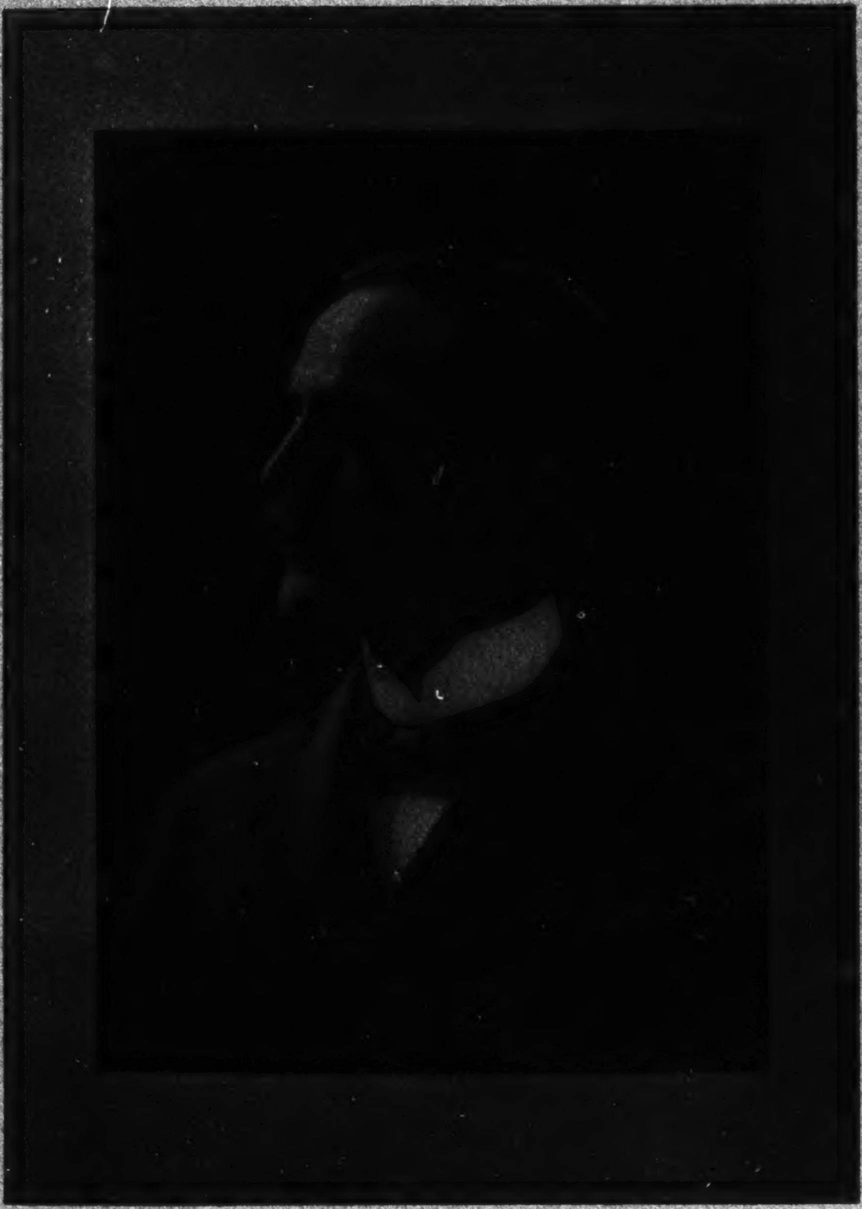
Immediately after Griffith sold the Times to Hawley and Brownlee he prepared to enter the morning field with a new paper, and on March 6, 1891, there appeared on the streets of Denver the Colorado Sun, a full-fledged, well-equipped, well-edited newspaper, Republican in politics, with its publication office at 1224 Fifteenth street. Griffith published the Sun until the spring of 1893 when, in consequence of a business transaction, it became the property of Earl B. Coe who changed it to an evening paper and continued its publication.

In July, 1894, Mr. Coe, having procured an option on the Denver Times, organized "The Times-Sun Publishing Company," with capital stock of $500,000, of which he purchased a controlling interest. In that month this new corporation bought the Denver Times and the Colorado Sun and consolidated the two papers. The daily issue was continued as the Denver Times, while the weekly became the Colorado Times-Sun. This name of the latter was retained until the autumn of 1900 when the "Sun" end of it was dropped, the paper then becoming the Colorado Weekly Times; the last vestige of the Sun as a newspaper passing into oblivion. The Times, since the consolidation, has been controlled by Mr. Coe who has a majority of the stock and is, as he has been since the company's organization, President of the Times-Sun Publishing Company. In 1900 the establishment was supplied with new mechanical appliances, a huge Goss

---

*While this work was in press the Times was removed to new and farther up-town quarters in the Charles Building on the south-west corner of Fifteenth and Curtis streets.

Earl B. Coe, President of the Times-Sun Publishing Company, the corporation proprietary of the Denver Times, was born in Oswego, N. Y., on July 15, 1858. After the usual terms in the public schools of that city he entered the University of Michigan at Ann Arbor where he was graduated in the Law Department of that institution in 1880. Coming to the west in the autumn of that year, he located in Omaha where he established himself in the practice of his profession. After about one year of residence in Omaha, he removed to Denver, practiced alone a few years, and then formed a partnership with Edward L. Freeman, under the firm name of Coe & Freeman, that continued until Mr. Freeman's death in 1891. Mr. Coe then joined Samuel L. Carpenter in a law partnership under the firm name of Coe & Carpenter. This relation existed until the spring of 1893 when Mr. Coe became the owner of the Colorado Sun newspaper. The particulars of his subsequent organization of the Times-Sun Publishing Company, of the acquisition of the Denver Times newspaper property, and of the consolidation of the Times and the Sun, are related elsewhere on these pages. These transactions took him out of legal practice and, while he has been and is connected with various other business enterprises, he has, since 1894, given the greater part of his time and attention to the Times and its proprietary company. In 1892 Mr. Coe was the Republican candidate for Congress in the First (Denver) District, but that not having been a prosperous year for Republican candidates in Colorado, he shared the common defeat that befell his party. He was chiefly instrumental, as related in chapter LXIX, in the comparatively recent introduction in Colorado of the sugar beet industry, which has already grown to large proportions and bids fair to become one of great magnitude in the State.—J. C. S.



Earl B. Coe.

perfecting press capable of hourly printing 48,000 eight-page papers, having been among the added equipment.

During almost its entire career the Times has been, as it now is, strenuously Republican in its politics. But in the campaign of 1896, and in the presence of what was then believed by our people to be an emergency in Colorado affairs chiefly due to the then almost ruined condition of the silver-mining industry, the Times supported William J. Bryan for President of the United States, and Alva Adams for Governor of Colorado. It was, however, the first of the Denver newspapers to accept the National verdict on the leading issue in 1896, and in the State campaign of 1898 was found at its old-time political moorings. It has, moreover, become one of the great newspapers of the western country, and was never so vigorous in all that it undertakes to do as at the present time.

The Denver Republican, one of our present two morning papers, and which now stands third in order of age among the Denver daily newspapers is, as a historical fact, of Democratic antecedents. We have already related the history of the daily Democrat founded in 1874, and that in 1879 was published in an old building on Larimer street, about where the Railroad Building now stands, by Joseph Farmer and Thomas G. Anderson—Farmer & Anderson. The owners of that paper possessed ample capital, but as has so often been demonstrated, something beside that is necessary to a successful newspaper. While the Democrat was edited with considerable ability it did not win its way among the people.

About midway of Farmer & Anderson's proprietorship, the Rocky Mountain News had, as we have seen, passed to W. A. H. Loveland, by him had been made a vigorous Democratic newspaper, and had soon become too strongly intrenched in its new political position as the great Democratic newspaper of Colorado to be easily disturbed; and this change in the situation seriously affected the Denver Daily Democrat's fortunes.

Farmer died in December, 1878, leaving the proprietary interests of the Democrat in his estate and in Thomas G. Anderson. Realizing that the field would not support two Democratic daily newspapers, Mr. Anderson and the heirs of Farmer sold the Democrat, in June, 1879, to Henry Ward, W. H. Price, and W. G. Brown. The new owners, being Republicans, made a radical change in the Democrat, which then ceased to be, and the "Denver Republican" succeeded it, as a morning newspaper. Three months later—on September 16th—the Republican was sold to Charles B. Wilkinson, formerly of St. Joseph, Missouri. Although Wilkinson was a man of much experience in the newspaper business, the Republican did not have a full measure of prosperity under his management, and because of that he sold the property on November 1, 1880, to General Joseph C. Wilson, George T. Clark, and Amos Steck. On November 12th the new owners organized the "Republican Publishing Company," with a capital stock of $50,000, with General Wilson as President, and George T. Clarke, Secretary and General Manager.

At that time the Republican occupied a building on the north side of Lawrence street (old number 339), and just east of the present Chamber of Commerce building. General Wilson and his associates enlarged and much improved the paper, but they found in the Times, and in the Tribune which was then at the height of its prestige, business competitors as Republican daily newspapers that made its daily life one of many trials, although the paper was ably edited. Chiefly because of business reasons, General Wilson and his associates, on June 20, 1881, after about seven months of ownership, sold the entire stock to the late Senator N. P. Hill and the late Kemp G. Cooper and their associates.

The able business and other management that followed that change removed all obstacles to a successful career for the paper. The capital stock of the company was increased to $100,000, and Mr. Cooper elected President and General Manager; both of which positions he filled until the summer of 1884. The new owners bought the site of number 1118 Sixteenth street and erected there a fine permanent home for the Republican, and equipped it with a new mechanical outfit. Under Mr. Cooper's general supervision the paper entered upon a career of remarkable vigor that soon placed it upon broad and sure foundations and in a position of great influence.

On August 12, 1884, the Tribune, as already stated, was consolidated with the Republican under the name "Tribune-Republican," the Republican Publishing Company, proprietor. With that change the capital stock was increased to $300,000; Henry R. Wolcott became President of the new company; Kemp G. Cooper, Treasurer and General Manager; and T. C. Henry, of the Tribune, Secretary; an organization that continued with the substitution of Crawford Hill as Secretary, until December, 1887. The dual name of the paper was retained until January 1, 1887, when "Tribune" was dropped and the former distinctive name resumed; that of the associate passing from public notice. However, the Republican, at the left of the first page date-line, still carries in small letters a record of each paper by name, and that is the only existing reminder of the erstwhile duality and of the once powerful and influential Tribune.

In December, 1887, Senator Hill had, by additional purchases, become owner of four-fifths of the company's stock, and Mr. Cooper held the remainder. This was immediately followed by Wolcott's retirement and by the election of Cooper as President and General Manager; Crawford Hill, Secretary; and William F. Robinson, Treasurer—

The Denver Times

THE NATION'S LEADING MEN PAY TRIBUTE
TO THE MARVELOUS PROGRESS OF THE WEST

New Year's issue of the Denver Times, December 30, 1900—Forty-four pages.

the latter retiring about two years later. In 1888-89 Senator Hill served as President, Cooper being Vice President and General Manager, with Crawford Hill as Secretary. In the next year, however, Cooper again became President and General Manager, with Crawford Hill as Secretary, and both continued in these positions until after the death of Senator Hill in May, 1900. Crawford Hill then became President; and William Stapleton, long associated with the paper as editor, was made General Manager, also; which executive arrangements were continuing at the close of our record. Mr. Cooper, who died September 26, 1900, had not, on account of ill health, actively participated in the paper's management for several months prior to these last changes.

Until the "silver question" became an acute one to and for the people of Colorado, the name of the Republican had always very clearly indicated the political character of the paper. In 1896, in common with nearly all other Colorado newspapers of the same political faith, it found itself out of sympathy with certain policies of its party, and supported the Democratic propositions and candidates. After that year it favored the organization known in our political annals as the "Silver Republican" party, and continued to do so until the summer of 1900, when it resumed its very able support of Republican policies.

The history of the Denver Post, the younger of the city's four newspaper dailies, began in 1892. On August 8th of that year "The Post Publishing Company" was incorporated by Hugh Butler, George D. Herbert, Caldwell Yeaman, R. T. McNeal, M. C. Jackson, I. C. Cross, and M. J. McNamara, with a capital stock of $50,000. The certificate named as the company's first Board of Directors, George D. Herbert, W. P. Caruthers, A. B. McKinley, Charles J. Hughes, Jr., and Platt Rogers. The publication office was at 1744 Curtis street, W. P. Caruthers having been General Manager of the paper which was a week-day daily, the first issue of which appeared on August 8, 1893.

It was a Democratic newspaper of rather high ideals and, it may be said, stood for the political methods and purposes then represented by Grover Cleveland. The events of 1893 not having made Mr. Cleveland's views extravagantly popular in Colorado, and the wreck and demoralization of that year having most gravely affected its fortunes, the Post of that time suspended publication on August 29, 1893. It had been a bright and well-edited newspaper, and because of its ideals and ambitions in its political aims some of its city contemporaries had re-named it "White Wings."

In that season of general disaster the original company did not resume publication of the paper, but in the summer of 1894 it was revived by a new company organized for that purpose. On June 22, 1894, "The Post Printing Company," with capital stock of $100,000, was incorporated by H. Y. Anderson, William Kavanaugh, and Frank J. Medina, Jr.; the certificate naming as the company's first Board of five Directors, Kavanaugh, Medina, E. E. Dorsey, Samuel W. Shephard and J. J. Cronan. This new corporation issued the paper as the week-day "Evening Post," the publication office having been at 1734 Curtis street. It was a Democratic newspaper, but the general and severe financial depression of that period reduced it to straightened circumstances. However, its publication was regularly continued by the Post Printing Company until the autumn of 1895 when, on October 28th, the paper and its property were purchased by Frederick G. Bonfils and H. H. Tammen. Frederick G. Bonfils had formerly resided in Kansas City, and H. H. Tammen had long been a citizen of Denver; but neither had had experience in the publication of a daily newspaper. On November 4, 1895, "The Post Printing and Publishing Company," with capital stock of $50,000, (which was later increased), was incorporated by H. H. Tammen, Frederick G. Bonfils, and Carl Litsenberger; the three incorporators having been named in the certificate as constituting the company's first Board of Directors.

The new company, of which H. H. Tammen was elected President, and Frederick G. Bonfils Secretary and Treasurer, took over the Post newspaper property and prepared to endue the paper with new life and vigor; the President, and the Secretary-Treasurer, becoming, as they remain, its active general managers. The publication office was removed to its present location, 1019 Sixteenth street, provided with a complete modern mechanical equipment, and its working forces reorganized. In these changes the Post had a new birth, and with them entered upon a new and successful career which has been one of rapid newspaper advancement. Having discarded its original partisan character, it has become independent in its political position, but with occasional leanings toward the party the principles of which it originally advocated. Since the organization of the present proprietary company the Post has undergone no change of ownership, officers, nor of management.

The four daily newspapers of Denver are metropolitan in their methods, size and character, and every day lay before their readers the news of all the world. Each of the four issues weekly and Sunday morning editions. In every respect the Sunday issues take rank with those in any city in the west. Indeed, it may fairly be said that there is no division of human activity in Denver in which more enterprise, greater energy, higher ability, are employed than in the production of our newspapers every day in the week. Political zeal in heated campaigns sometimes leads to perhaps undue manifestations of vigor but, after the Colorado custom that probably is an outgrowth of the altitude, or the climate, or the environment, our

New Year's issue of the Rocky Mountain News, January 1, 1901—Fifty-six pages.

newspapers are fearfully and wonderfully in earnest in whatever they undertake to do.

In addition to the special news-gathering facilities of each, each is a member of the Associated Press and receives the full reports of that great organization. The News and the Republican may be said to confine themselves to their regular morning editions, as they do not often issue extra editions; but the Times and the Post allow no reasonable provocation for an "extra" to pass unheeded whatever may be the hour of day or night. All but the Republican have color-printing attachments to their presses, and these machines with their apparent preference for red produce a gayety of effect that is sometimes made startling.

Denver, for a city of its size, is a voracious consumer of daily newspapers. While each of the four dailies has a considerable circulation throughout Colorado, western Kansas and Nebraska, and in southern Wyoming, the major part of it is here in the city. Unlike the older States in which the larger cities are surrounded by a thickly populated country, the Colorado field does not yet afford opportunity for great newspaper distribution away from the locality of production. As to which of the Denver daily newspapers has the larger circulation, is a question upon which we could not undertake to pass; as their several managers, who know more about it, are not in harmony upon it among themselves. Yet, it is quite safe to record that an aggregate of more than 100,000 copies of our four daily newspapers are now printed and circulated every day.

Beside these four daily general-news papers there are three daily publications devoted to special interests. For many years, as indicated heretofore, there has been a daily issue dealing with hotel affairs. These now have an exponent in the "Daily Hotel Bulletin." A recent consolidation of the "Denver Daily Stockman" and the "Denver Daily Live Stock Record," each of which had been published several years, resulted in the "Denver Record-Stockman," a daily publication of much importance, standing as it does for the general live stock business of the city, and published at 1840 Lawrence street by the "Record-Stockman Publishing Company." This company also publishes the "Colorado Price Current and Produce Record," which daily reflects the conditions of and prices current in the Denver and other Colorado general markets, and which is the third of these daily special publications in the city.

As a whole, the Press of Denver includes a representative of almost every division of human thought and action. Politics of all shades, religion of various creeds, education, mining, commercial and manufacturing affairs, railways, labor organizations, the learned professions, secret societies, the women's clubs, and several other interests are represented by one or more publications which, as a rule, are conducted with much ability. Many of them go far abroad, and some of the weeklies and monthlies are authorities upon the subjects with which they deal.

Beside the weekly editions of the several daily newspapers in the city, there are now about seventy-five regular publications issued in Denver, once a week or less frequently, with a tendency toward an increase in the number. Fifty-four are weeklies, nineteen monthlies, and one, each, semi-monthly and bi-monthly. Those that may be classified as being political, or independent, or non-political, or as representing social life and women's clubs, aggregate thirty; those devoted to agriculture, live-stock and kindred interests, six; the secret and benevolent orders have six; religious, five; mining, four; educational, medical, labor, railroad, three each; financial, and commercial and manufacturing, two each; legal, one. Three are German, one Swedish, and one Italian; and two are edited and published by colored men.

Among the weekly publications are several that are by no means inconspicuous because they issue but once-a-week. Some of the weeklies may be termed local to the divisions of the city in which they are published. "North Denver," "West Denver," and "South Denver" each have one or more local weeklies. There are, also, two or three weeklies that rank as illustrated publications, and as such are well presented. Among the monthlies "Outdoor Life," secure in its established position, stands foremost. It is a finely illustrated magazine dealing with subjects such as are suggested by its name.

We have on a foregoing page made passing allusion to Denver's "newspaper graveyard"—a possession common to all cities of or above fair size. To that silent place of buried hopes Merrick's Cherry Creek Pioneer, after its one gasping effort at life, was the first to go. Within two years, as the reader has seen, the Mountaineer followed it; and a few years later they were joined by the Commonwealth continuation of the earlier Herald. Next, the Gazette took up its abode with them; and the Tribune of the later era and that once bid fair to have a life of vigor so long as the city might endure, is also there. To extend the list by adding the names of only the more important others now slumbering within its bounds and whose more or less brief and troubled lives began and ended since the close of the pioneer era, would result in no more than a needless summary of much that has just been told on preceding pages. Between the longer hillocks that remind us of these more worthy departed ones, are seen in far greater numbers the resting-places of the ephemera, the weaklings, and the misbegotten, of widely varied types and of missions sadly unfulfilled. These would be numbered by dozens if anyone cared to recall and record their names; but to do so here would hardly be worth while.

CHAPTER LIX.

OUR BENCH AND BAR—DENVER'S FIRST LAWYER—UNPROMISING SITUATION FOR LAWYERS—GOVERNMENT IN THE MINING DISTRICTS—CONDITIONS IN CHERRY CREEK TOWNS—PLURALITY OF GOVERNMENTS—"JEFFERSON" JUDICIAL SYSTEM—TERRITORIAL COURTS—DENVER BAR IN 1861—COMPLEXITIES OF COLORADO LITIGATION—QUALIFICATIONS OF THE SUCCESSFUL DENVER LAWYER—STRENGTH OF THE DENVER BAR—STATE JUDICIAL SYSTEM—UNITED STATES COURTS—ROSTER OF JUDGES—BAR ASSOCIATIONS—OUR COURTS THE GUARDIANS OF THE RIGHTS OF MEN.

The first lawyer and jurist who came to the mouth of Cherry creek was the Cherokee Indian, George Hicks, Sr., who, as we have told, was a member of the Cherokee contingent in W. Green Russell's historic expedition to the Pike's Peak country early in the summer of 1858. But as Judge Hicks came as a gold-seeker and not as a lawyer or jurist, and stayed only a few days, we can not accord him the honor of having been the pioneer member, and founder, of the Denver Bar; though gold-seeking was not altogether outside the professional purposes of those who constituted it in pioneer times, nor is it foreign to the inclinations of those who now contribute to its honor and dignity.

The earlier parties of autumn immigrants to the Pike's Peak country in 1858 were destitute of lawyers, and it was not until December 1st of that year that the first one who became a citizen of the new country and of the new settlement that had sprung up at the mouth of our historic creek, reached what is now Colorado. He was David C. Collier, an excellent man who has already figured in our narrative of pioneer times. Besides having been the first of his profession to locate in our city and in the region now our State, Mr. Collier became in 1859, as we have elsewhere mentioned, the first Superintendent of the first Sunday School established in Denver or anywhere in the Rocky Mountain country. Thus, it will be seen, the founder of the Denver Bar set an example the good influences of which, it may be hoped, but not asserted, have clung to its members from that time to this.

Mr. Collier came hither to engage in the practice of his profession, and it is not known that any other lawyer followed him here in 1858; if there were others among those who arrived here during the closing months of that year they did not make themselves known, nor were they known, as lawyers. But with the incoming hosts of 1859 there was a full ratio of pioneers more or less "learned in the law," and before the close of that year their numbers were, in proportion to others who had determined to remain and erect here a new Commonwealth, rather above a normal ratio and quite sufficient for the business there was to do.

The pioneer lawyers of 1859 found themselves strangely circumstanced. They were in a region in which there was no law in practical force except that of self-preservation which each man had to be prepared to execute for himself; there was no government; no Courts. The situation and conditions would seem to have offered few attractions and slender opportunities for lawyers. However, a lawyer's first impulse under such circumstances would be to at once set up some kind of legal machinery even if he had to improvise it, just as the miners were contriving rockers, sluice-boxes and flumes for working their placer claims; though the legal placers did not promise to be anywhere near so rich as many of the others. Our record shows that the initial movement toward providing some form of government was instituted in the spring of 1859 by men who were not lawyers, but before anything definite grew out of it the pioneer attorneys and counsellors had done much constructive work.

Within a year the condition of no law, no government, no Courts, was changed to one of extraordinary plentitude of all, as we have in detail set forth in other chapters of this work. The lawyers then had a varied assortment of "jurisdictions" to offer their clients, and a still greater variety of "laws" under which to proceed. He would have been an exceedingly captious man who could not have suited himself among the many brands of "law" and "jurisdiction" which his attorney offered. These conditions, as the reader will understand, were those of the town communities, and did not prevail to any extent in the mining districts.

Of all the primitive forms of government established in the pioneer times in Colorado, the Miners' Courts were the most compact and effective. They were called into being by the supreme law of Necessity which supercedes all others. These Courts were organized at a general meeting of the inhabitants of a proposed District, at which codes of "laws" or regulations, civil and criminal, were enacted, the boundaries of the district defined, officers elected and their duties and compensations specified. In a general sense these regulations were the same in all the districts, differing only in minor details called for by some special local conditions. They were based on similar practices in California and Nevada where like emergencies had been met and provided for by pioneer populations similarly circumstanced.

The officers of a Miners' Court usually were a President, a Probate Judge, a Sheriff or Constable, a Collector, and one who was Surveyor and Recorder combined, and ex-officio Secretary and Treasurer of the district—a man of many duties and responsibilities. All officers were accountable to a Miners' Meeting, which was an ever-ready Court of Review, and final, arbitrary jurisdiction. Thus, these Mining Districts were little, individual republics in the government of which every citizen directly, personally, participated.

The "Probate Judge" was the chief executive of the district, subject always to the approval or disapproval of any act of his the consideration of which might come before a Miners' Meeting. The region being actually within the bounds of legally constituted Territories of the United States, he and his associate officers were theoretically assumed to act under the authority of Territorial laws. But, as a matter of fact, they recognized no law but that which expressed the will of the popular assemblages which placed them in office, and which was always in readiness to call them sharply to account for any dereliction of duty, or misconduct. Under such a system malfeasance, misfeasance, or oppression by officials were lapses from the straight and narrow path not to be meditated by those entrusted with public duties. It is to be said that there is no noteworthy instance of record of any officers of a Miners' Court becoming implicated in practices forbidden by the expressed or implied will of their constituents, or adverse to the welfare of the little communities they served.

As we have heretofore stated, the first of these

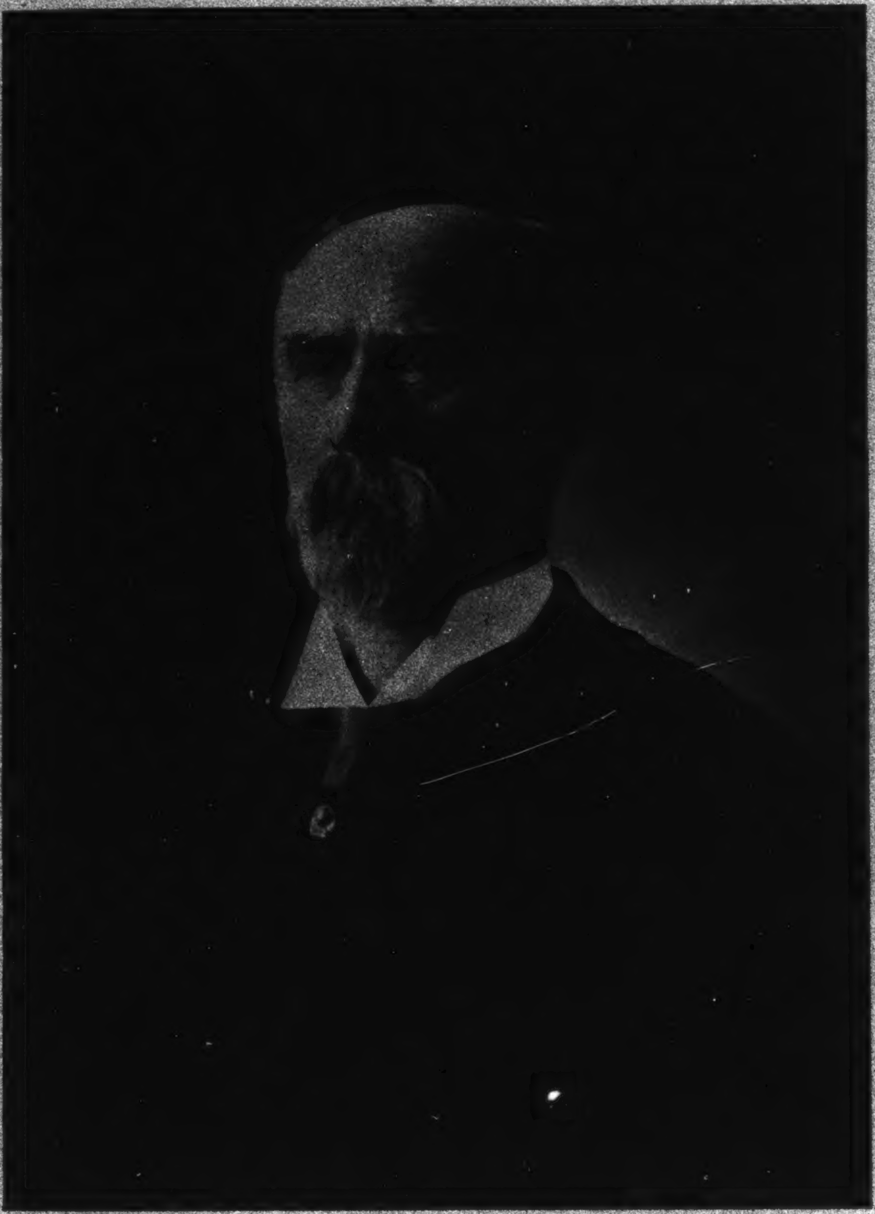
The life history of Judge Wilbur Fisk Stone is one of unusual interest. A descendant of an old English family, representatives of which were members of the Guilford, Conn., colony, he was born at Litchfield, Conn., in 1833. In 1839 his father removed to the west and after brief successive residences in western New York, Michigan, and Indiana, located in 1844 upon a large tract of farming land near Oskaloosa, in the then Territory of Iowa.

Our subject lived and worked with his father on the Iowa farm until he was eighteen years old, when he went to Indiana to build upon the educational foundation that had been laid in country schools previously accessible to him. After two years in the Rushville, Ind., Academy, in which during part of that time he was an assistant teacher, he entered Asbury University at Greencastle, Ind., where he remained until the close of his junior year, having earned his tuition by writing prize essays, and having provided for his personal needs by teaching country schools during vacations, in the good old fashion. Concluding another round as a country school teacher, he joined the senior class of the Indiana State University at Bloomington, and after having been graduated with it, began the study of law while serving as a tutor in the classical department of the University; a position to which he had been appointed soon after his graduation as a Senior. He subsequently entered the law department of the University and was graduated therein in 1858. During those years at Bloomington young Stone's natural ability as a reasoner and a writer had been given some expression in various contributions to the Bloomington and other Indiana newspapers.

Upon completion of his course in the law department of the Indiana State University, Mr. Stone located at Evansville in that State to engage in practice, but was soon called to the editorial chair of the Evansville "Daily Enquirer," and which he occupied upward of a year, though in the meantime devoting part of his energies to legal work. In the autumn of 1859 he went to Omaha, Neb., on legal business, and was detained there by it through the following winter. Partly to relieve the tedium and partly to provide means of support, he became assistant editor of the Omaha "Nebraskian," of which the present "World-Herald" is the successor. Having acquired the art and mystery of short-hand writing, then a rare accomplishment, Mr. Stone reported verbatim the proceedings of the Nebraska Territorial Legislature in session at Omaha during that winter. None of the legislators had ever seen that kind of writing, and most of them refused to believe that it could be translated into anything of meaning; though they were mystified by the exactness of the reports as they appeared in the Nebraskian, a daily issue of which was published during that session, and which was the first daily newspaper ever printed in Nebraska, and the first between the Missouri river and San Francisco.

Mr. Stone remained at Omaha until the spring of 1860, when, having been exposed to the Pike's Peak contagion, he crossed the plains to Denver. In the summer of that year he joined the mining community at Tarryall in the South Park, where he became a prospector, miner, and a practicing lawyer; and with that general section of the Territory he was identified during the ensuing five years. Soon after Canon City was founded he went there as a settler, and with the late George A. Hinsdale formulated a code of laws for the first "People's Court" of that district. Upon the organization of Colorado Territory he was elected a Representative from Park county in the first Territorial Legislature, and in 1864 was again elected to that position; and in 1862-65 served as Assistant United States District Attorney under General Samuel E. Browne.

After his marriage at Bloomington, Ind., in the winter of 1865-66 to Miss Sarah Sadler of that city, Mr. Stone located in Pueblo and resumed practice of law. In 1868 he was appointed District Attorney of the Third Judicial District and was subsequently elected to that position for a full term. In 1868, also, when the Pueblo "Chieftain" newspaper



Wilbur F. Stone.

districts and Miners' Courts was organized immediately after the discovery of the Gregory Lode in May, 1859, and was named the "Gregory District." It became the example for many others which soon followed.

The legislation "enacted" by these People's meetings was clear-cut in its primitive crudeness, and the simplest man could readily comprehend the meaning of the "laws," which afforded little opportunity for technical "construction." The criminal code was about the same in all the mining districts, and the following extracts from that of the Spanish Bar district are examples of this curt but comprehensive frontier legislation:

"Sec. 1. Any person guilty of willful murder, upon conviction thereof, shall be hung by the neck until he is dead."

"Sec. 2. Any person guilty of manslaughter, or homicide, shall be punished as a jury of twelve men may direct."

"Sec. 3. Any person shooting or threatening to shoot another, using or threatening to use any deadly weapons, except in self-defense, shall be fined a sum not less than fifty nor more than five hundred dollars, and receive, in addition, as many stripes on his bare back, as a jury of six men may direct, and be banished from the district."

"Sec. 4. Any person found guilty of petit larceny shall be fined in a sum double the amount stolen, and such other punishment as a jury of six men may direct, and be banished from the district."

"Sec. 5. Any person found guilty of grand larceny shall be fined in a sum double the amount stolen, and receive not less than fifteen nor more than three hundred lashes, on his bare back, and be banished from the district, and such other punishment as a jury of six men may direct."

The conspicuous feature of these concise laws is the provision that enacts measures for permanently ridding the community of convicted offenders. This was clearly understood in every mining district. Section One specifies hanging for willful murder, a most effective form of banishment; but for other offenses, the reserved clause, "such other punishment," or the optional form of punishment to be designated by the jury, made it possible that enforcement might also have a coil of rope in connection with it.

---

began publication, Mr. Stone became its editor, having George A. Hinsdale as his associate; and continued editor of that paper until 1873. He was instrumental in organizing in 1869 the first Board of Trade in Pueblo, and became its Treasurer and Corresponding Secretary. One of the active promoters of the Denver & Rio Grande railroad, and a member of the company, he served as its General Attorney until his election to the Supreme Bench of the State in 1877. In 1874 at Boston he arranged with the Atchison, Topeka & Santa Fe Company details of plans and agreements for extensions of its lines through southern Colorado. A member from Pueblo county, of the convention that framed the constitution of the State in 1876, he served as chairman of the Committee on Judiciary, as a member of several other important committees, and had been the choice of his party for President of the convention. The constitution having been ratified, Mr. Stone was unanimously nominated by the Democratic party as its candidate for Associate Justice of the new State's Supreme Court but, in common with the rest of the ticket, failed of election, by a narrow margin.

In 1877, Judge E. T. Wells, who had been elected a Supreme Judge for the long term of nine years, at that first State election, resigned. To nominate a candidate to succeed him, a convention of the lawyers of the State, representing both political parties, was held at Colorado Springs, and by which Mr. Stone was unanimously chosen for the high position. His election followed in the autumn of that year without opposition. Such recognition of popularity and professional ability was unprecedented, and of these proceedings that placed Judge Stone on the Supreme Bench of the State there has been no repetition.

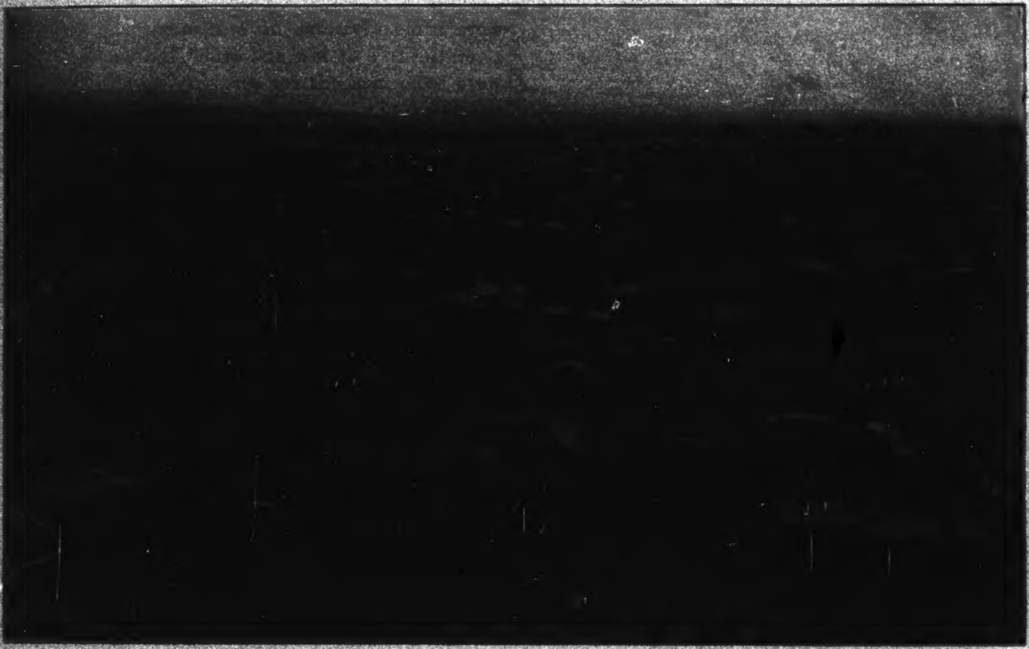
Judge Stone's term expired in 1886, and in 1887 he was appointed by Governor Adams Judge of the Arapahoe county Criminal Court, in which position he served until the spring of 1889, when the Court was abolished by legislative enactment. He then engaged in the practice of law in Denver which he continued until the summer of 1891. Congress, by an act approved March 3rd of that year established the "Court of Private Land Claims," for the purpose of adjudicating Spanish and Mexican land-grant titles in accordance with the treaty of Guadalupe-Hidalgo, its jurisdiction extending over Wyoming, Colorado, Utah, Nevada, Arizona and New Mexico; the Court to consist of five Judges appointed from different States by the President. On June 10, 1891, President Harrison in response to requests from Colorado men of both political parties, and in recognition of his ability and fitness, appointed Judge Stone one of the Judges of that Court, which judicial position he yet fills. His intimate knowledge of the western and southwestern country, of the Spanish language, and of the Mexican people to whom much of the business of the Court extends has made him one of its most efficient members. He was selected by the Court to visit Spain to investigate the archives at Madrid for information bearing on old Spanish grants in what is now Colorado and New Mexico territory; and on this duty, upon one of his several visits to Europe, he spent the winter of 1894-95 in the Spanish capital and at Sevilla.

Scholarly, versed in French and German as well as in Spanish and his mother tongue, Judge Stone is, aside from his learning and ability as a lawyer and a jurist, a man of high attainments, and a writer who clothes his subjects with many charms of expression. In the earlier days he was a frequent and always welcome contributor to Colorado newspapers. He has written freely upon the history of southern Colorado and New Mexico, and the historical review of Pueblo for the National Centennial Records of the United States Government was prepared by him. His description of Mount Lincoln and its surrounding scenic magnificence, written and published in 1864, still stands without equal as a word-picture of the majestic grandeur and beauty of Nature's work in the Colorado mountains.—J. C. S.

The civil code was just as straightforward and concise. Section Twenty-three deserves a shining place in the annals of human liberation, for it defines citizenship on the broadest possible lines, without any restriction as to age, sex, color or previous condition of servitude. Its brief but all-embracing language was as follows:

> "Any person owning a claim, or working, or living in this district, shall be entitled to a vote and all the rights of citizenship."

While it is probable that this section was intended to apply only to white men over twenty-one years of age, there was nothing in its language to forbid persons of any age, sex, and color acquiring and exercising "all the rights of citizenship" in that mining district in 1859.



View northward from electric light tower near Eighteenth and Grant Avenues in autumn of 1882.

The officers of these districts exercised an extended authority. They discharged the duties of District, Probate, and Criminal courts, and by virtue of their offices were county, city and village executives. Records of mining claims, of pre-emptions, and of transfers of real property were duly made by the Recorder in books which were accessible to every one; he also kept the public accounts of the community and served as its treasurer. The President presided at the miners' meetings and at Courts in the absence of the Judge, and in cases wherein that officer might be interested. If the President were absent the Judge presided at the general meetings. The Sheriff's duties were such as that functionary usually performs in regularly organized counties; and the Collector attended to gathering in the dues, fees, and other obligations to the public treasury. All the officers gave bonds for the faithful discharge of their duties.

With this simple machinery the "laws" of the mining districts were administered with efficiency, promptness, and fairness. It constituted their government until Congress by regular enactment created the Territory of Colorado in 1861. The miners, as a class, did not take kindly to the proposed "State of Jefferson," nor to the attempted "Territory of Jefferson," and did not give much heed to the "acts" of the latter's "Legislature." Their own simple but alert district governments suited most of them far better than that of a sporadic Territory with no more legal authority back of it than their local organizations possessed.

Their regulations concerning the rights of property were comprehensive and well considered. They specified what should constitute a lode discovery and regulated the size of each mining claim on the lode, explaining what was necessary to ownership and proper title in them. They also regulated the extent and boundaries of mill-sites, water powers and rights, and gulch and placer claims; and made suitable provisions for recording and confirming transfers of other kinds of real property. These enactments while lacking the legal forms, technical terms, and exactness of expression of later statutes by Territorial and State authority, were usually plain enough in their literal meaning. If any man were disposed to quibble over possible verbal obscurities of meaning, or a not improbable grammatical eccentricity, the power that formulated the alleged defective "law," would soon convince him of the uselessness of pointing to an uncrossed "t," or an undotted "i," as means of salvation for his cause. Therefore, there was little inclination to grasp at literary defects in the "statutes" for help in a suspicious situation.

But things were quite different in the town communities, and especially so in the Cherry creek towns, as the reader has seen in various preceding chapters. The difference was due to several causes. There was less unity of common purpose among the town-dwellers and a greater variety of character. The mining communities were composed almost wholly of men who were hard at work every day, while in the towns a considerable proportion of the population was of a kind bent upon a parasitic livelihood that did not involve manual labor. This class did not encourage the enactment of such "legislation" as that governing the mining districts, and was quick to point out the "illegality" and the "irregularity" of the provisional governments that were organized here in 1859 and 1860. Lawbreakers, men who habitually disregard the law and the rights of their fellow-men, have in all times and everywhere been great sticklers for the forms of law duly and properly enacted and applied; and by those of that class in Denver prior to 1861 the absence of lawfully constituted government was not allowed to be forgotten. Furthermore, the intense jealousy and rivalry between Auraria and Denver City were undoubtedly in part responsible for the laxness that existed.

Among the substantial citizens, those who had a stake in the permanent welfare of the community and who were very largely in the majority, there were some divisions of sentiment. All these desired the rule of law and order, but the differences were as to methods for securing it. All were conscious of the technical correctness of the contentions made by the community's parasites, and this consciousness reinforced by partisanship that had

---

Samuel H. Elbert was born in Logan county, Ohio, in 1833. His father, a physician of prominence in his profession, removed in 1840 to the then Territory of Iowa where young Elbert passed his boyhood on his father's farm. Having made the best of the advantages offered by the pioneer schools in Iowa, he entered the Ohio Wesleyan University at Delaware in 1848 and was graduated with honors there in 1854. He then studied law at Dayton, O., and was admitted to the bar in the autumn of 1856. In the spring of 1857 he located at Plattsmouth, Neb., engaged in the practice of his profession, and became identified with the political affairs of the Territory.

In 1860, Judge Elbert was a delegate from Nebraska Territory in the National Convention that nominated Abraham Lincoln for the Presidency; a choice he most earnestly advocated. Taking an active part in the campaign of that year, he was elected to the upper branch of the Nebraska Territorial Legislature, where he served with characteristic ability. In 1862 President Lincoln appointed him Secretary of Colorado Territory to succeed Lewis L. Weld. He arrived in Denver in April of that year and at once entered upon his duties.

During the remainder of his life Judge Elbert was very prominently identified with the political and other affairs of Colorado. While Secretary of the Territory he was, by virtue of his office, frequently the Acting Governor; and, as elsewhere related, was Acting Governor in the winter of 1864-65, when the Indians were so gravely menacing Denver, and had executive charge of the improvised military preparations for the city's defense. An ardent supporter of the government during the civil war, he was a delegate from Colorado in the National convention at Baltimore that re-nominated President Lincoln. In 1865 he took an active part in the movement of that year for Colorado's admission to the Union, and in the election of Governor Evans and Jerome B. Chaffee as Senators from the prospective new State. His service as Secretary of the Territory terminated in May, 1866, and he then formed a law partnership with the late John Q. Charles and began practice of his profession in Denver. In 1869, he was elected a member of the Territorial Legislature, and became a leader in that body.

In the spring of 1873, Judge Elbert was appointed Governor of Colorado Territory, his term extending from April in that year to July, 1874. Than Judge Elbert, no man more sincere in his efforts to give the Territory a capable and good government ever occupied the executive chair.

Upon Colorado's admission to the Union in 1876, Judge Elbert was one of the three Justices elected to constitute the State's first Supreme Court, and under the provisions of the constitution his term was the one for the six years ending in 1883. In January, 1880, under the constitutional provision, he became the Chief Justice of the Court and so served until the close of his term. In 1885 he was again elected a Justice of the Supreme Court, for a term of nine years, but owing to the pressure of his private affairs for attention, he resigned in September, 1888. Judge Elbert's record as an able, conscientious and distinguished Judge has not been surpassed by that of any of the profound men who have served in the highest Court of our State. During his term as Chief Justice the Ohio Wesleyan University conferred upon him the degree of LL. D.; having previously bestowed the degrees of Bachelor and Master of Arts.

The foregoing is but the briefest outline of Judge Elbert's active life of great and conscientious usefulness to his fellow-men. He devoted its closing years to the affairs of his estate and to extended travel, but his health became much impaired. In the autumn of 1899 he went to Galveston, Tex., expecting to remain there through the ensuing winter. His unexpected death occurred in that city November 27, 1899, and he was buried in our Riverside cemetery on December 3rd.

In June, 1865, Judge Elbert married Josephine, daughter of Governor John Evans. She and their only child, a son, died in 1868, and he did not again marry.—J. C. S.

Samuel H. Elbert.

arisen, led to divided allegiance to the provisional governments.

But it is not of record or of reminiscence that any pioneer lawyer during those days of makeshift governments ever sought in his practice to break down the frail barriers they interposed between the community and anarchy, by repudiating them on the ground of their illegality of origin and existence. On the other hand, the lawyers consistently upheld the provisional governments as they sprang up side by side, or succeeded each other, on the theory that any kind of government, even that of conflicting plural organizations, were immeasurably better than none. They well should have done so, for the provisional affairs, as well as the efforts late in 1859 to establish here the proper jurisdiction of Kansas Territory, were largely their work.

At this late day it may seem strange to some of our readers that recourse to the Kansas jurisdiction was not had at the beginning of attempts to establish government here, but the reasons therefor are found in the ambition to have an independent State or Territory; in the expectations that Kansas would become a State with reduced area much sooner than it did; in the remoteness of the Pike's Peak country from the Kansas seat of government then on the Missouri border; and, to some further extent, in rising partisanship; the particulars of all of which have been elsewhere related. So, as matters turned out, they had a curious and interesting jumble of conflicting jurisdictions, and a great abundance of "law."

It is doubtful if anywhere in the history of the United States will be found a parallel for the peculiar and complicated political and legal conditions which surrounded the pioneers of Denver and of Colorado before the country here became Colorado. In 1859 and 1860 many people who desired to be "law-abiding citizens" were hard put to it to decide how to act or where to bestow their allegiance to attain that end. The Kansas Territorial government was rightfully asserting jurisdiction over, and legislating for, them; the "Jefferson" government was doing the same things, but in a contrary direction; the "Miners' Courts" constituted another power and authority exclusively recognized by many, and which were about the best of the lot; the "Arapahoe County Claim Club," an association of town-lot and country-land owners that had been organized for mutual protection and common defense of property rights soon after the town companies had come into existence, was maintaining a limited but vigorous jurisdiction; and the new provisional municipal government of the city of Denver, through its "legislative council" and its common pleas and appellate "Courts," asserted legislative and judicial powers over them to an extent that made it much more like a Territorial government than that of a city; independent of all these, in 1860, were the "People's Courts" that took the flagrant cases of outrage and crime into their prompt and effective hands without consulting any of the other alleged executive or judicial powers.

Under such conditions and circumstances none of the governments had much vitality nor could it effectively enforce in grave cases and under the forms of law any authority it claimed to possess. This soon resulted in public indifference at times bordering on contempt for all of them, excepting the "People's Courts," which uniformly commanded the profoundest respect for their decrees. Until

---

Ebenezer T. Wells, former Judge of the Supreme Court of the Territory of Colorado and of the State of Colorado, was born in the town of Richland, Oswego county, N. Y., May 15, 1835. His father was a merchant and the son of Rev. William Wells of Brattleboro, Vt., who was an eminent clergyman of the Unitarian faith and who settled at Brattleboro soon after the close of the War of the Revolution.

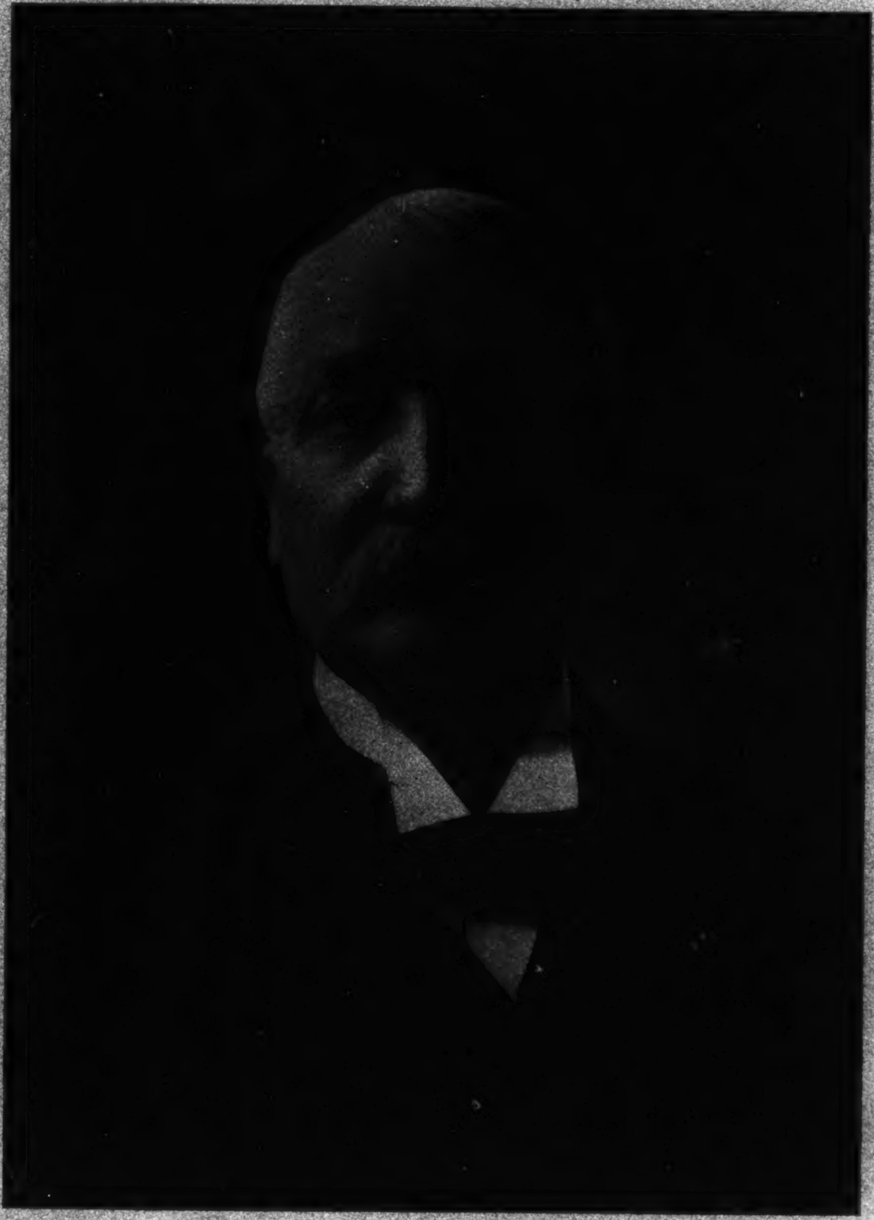
Judge Wells' father removed with his family to Henry county, Ills., in 1838, where the subject of this sketch spent his boyhood. Entering Knox College, young Wells was graduated there in 1854, and then began the study of law. Admitted to the bar in March, 1856, he located at Rock Island, Ills., and was there engaged in the practice of his profession until the outbreak of the Civil War.

Judge Wells saw much hard service throughout that war. Commissioned a Lieutenant in the Eighty-Ninth Regiment Illinois Volunteer Infantry, he was soon promoted Captain in the same organization. Later, he was appointed by the President an Assistant Adjutant General, and his last year of service was as Assistant Adjutant General to the Third Division of the Fourteenth Army Corps and the Sixth Division of the Cavalry Corps, in the Army of the Cumberland.

Judge Wells came to Colorado in the autumn of 1865, and located in Gilpin county where he followed his profession until March 1, 1871, when he was appointed Judge of the Supreme Court of the Territory; a position in which he ably served four years. Upon Colorado's admission to the Union in 1876, he was elected to the Supreme Bench of the State, but resigned before the expiration of the first year of his term. Additional particulars of his service on the Supreme Bench appear elsewhere in this volume.

Judge Wells was a member of the Territorial Legislative Assembly in the winter of 1866-67, and framed the revision of the Territorial statutes known as the "Revised Statutes of 1868." Elected a member of the State Constitutional Convention of 1876, he bore a prominent part in framing the fundamental law of our State. He has also been twice chosen as one of Colorado's Presidential Electors.

Upon his retirement from the Supreme Bench, Judge Wells became a citizen of Denver and has since been, as he now is, actively engaged in the practice of his profession. In politics he was long a Republican, but in recent years his convictions have led him to affiliation with the Democratic party.—J. C. S.



E. T. Wells.

the establishment of the Colorado Territorial government in 1861, the proceedings of the several "governments," each at variance with the others, that claimed and more or less exercised jurisdiction over Arapahoe county, became a fearfully confused tangle; and the wonder is that anything like order was ever brought out of it. To do so, however, some short cuts across lots had to be taken.

Fortunately, there was comparatively little litigation in the first two and one-half years after the beginnings of Denver had been made; but this resulted from no lack of "Courts," of which there was a large abundance and a great variety, as our reader will have seen. Probably their lack of legal standing had much to do with discouraging litigation, and therefore, also, their decisions and judgments did not command the highest respect. But aside from all that, there was but little litigation among the pioneers, and there is no record of a civil suit in which large and valuable interests were involved. Real estate in Arapahoe county was not worth enough to produce even a small crop of large lawsuits, and there were no mining claims in the county over which to go to law. Such cases as were taken into Court were often there by mutual agreement between plaintiff and defendant, and the proceedings rather like an arbitration instead of a judicial determination that could and would give effect to its decrees; for a defendant might, if he chose to do so, wholly ignore notice of suit against him, or snap his fingers at a judgment rendered against him by default. Where there were so many conflicting trial "Courts" and none by authority of unquestionable law, legal proceedings of a civil character could not command general respect and attention. After the city of Denver set up its new provisional government in the autumn of 1860, with its "legislative council" and its common pleas and appellate Courts, and went into the business of providing both legislative and judicial accommodations for the people in competition with the other organizations, an attempt, which strikingly reflects the condition of judicial affairs at that time, was made to harmonize things between rival Courts, to increase respect for them, and in effect to make them co-operative—suggestive in our times of a sort of Court "Trust." On November 27, 1860, the Denver "legislative council" adopted a resolution introduced by the late James M. Broadwell, one of its members, which provided as follows:

> "All judgments, decrees and proceedings now had and obtained before the Arapahoe County Claim Club, the Courts of Kansas, the Probate Court of Arapahoe County so-called, and the Provisional "Jefferson" Government Courts within the jurisdiction of the Government, which have been obtained according to the rules, regulations and usual practices of said respective tribunals shall be, and the same are hereby declared to be good, and valid, and binding, as judgments obtained in the Court of Common Pleas [the city's new Court], upon filing in said Court a duly authenticated transcript of the same."

It was easy enough to resolve all this, but quite different to define or cite the authority for any of it. So that action did not mend matters very much. The "Arapahoe County Claim Club" was something like a thorn in the sides of Courts under

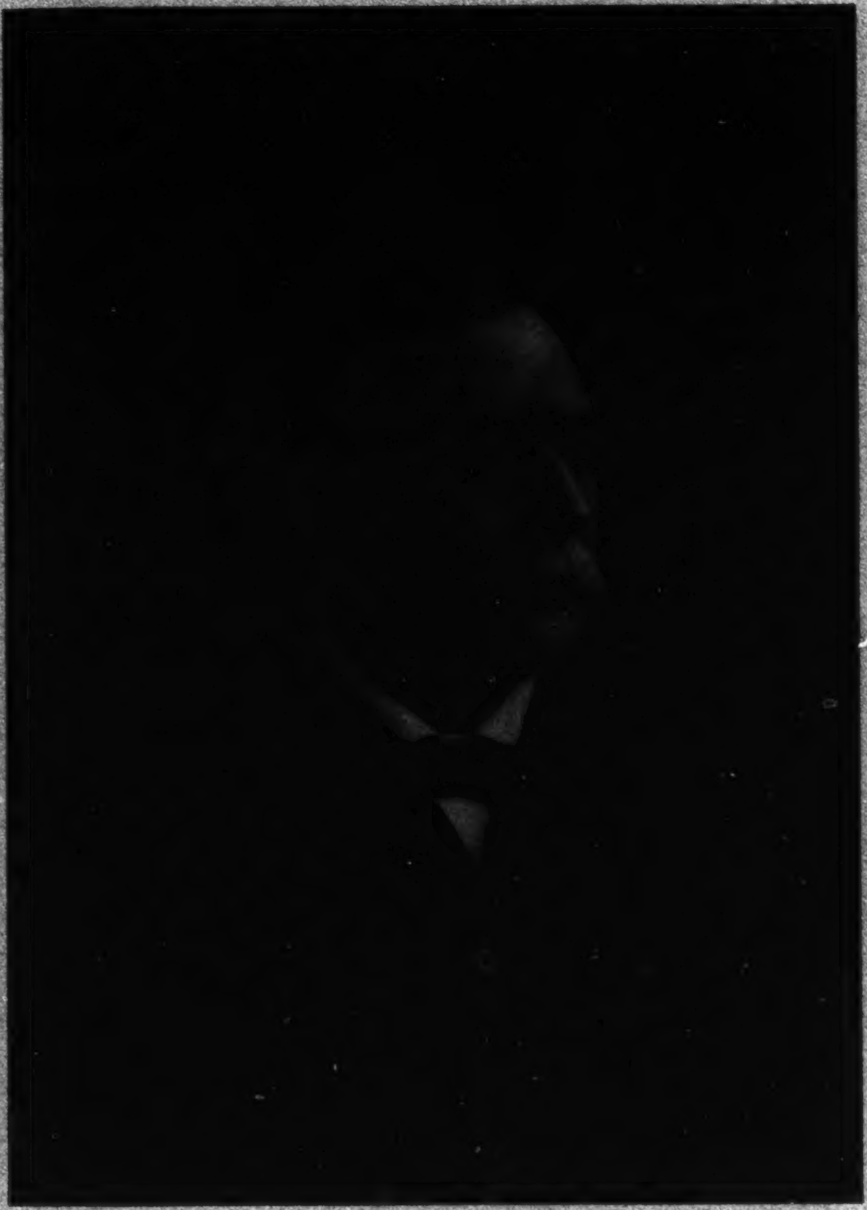
---

Thomas M. Patterson, United States Senator from Colorado, was born in County Carlow, Ireland, November 4, 1840. At the age of nine years he came with his parents to New York, in which city he attended the public schools until he was fourteen years old. He then entered a mercantile house in which he was employed a short time, when the family removed to Crawfordsville, Indiana. There, the son entered the office of one of the local newspapers and was employed two years in the mechanical department. He then engaged with his father, who was a jeweller, and began an apprenticeship to that business which continued until the outbreak of the civil war, when he enlisted in the Eleventh Regiment of Indiana Volunteers, of which Gen. Lew Wallace was then Colonel. Upon the expiration of his term of service he returned home and resumed his place in his father's establishment.

In 1863 he decided to prepare for a professional career. In that year he entered Asbury University at Greencastle, Indiana, and in 1864 Wabash College at Crawfordsville, Indiana. In 1865 he became a student in the law office of M. D. White at Crawfordsville, with whom he remained until the autumn of 1867, when he was admitted to practice in all the Courts of Indiana. He then engaged in the practice of his profession at Crawfordsville until 1872. Having decided to remove to the West, he came to Denver in December of that year and began here his long, prominent and useful citizenship.

Mr. Patterson's career in Denver and in Colorado is identified with many important events in their history since he became a citizen here nearly thirty years ago. He had immediately engaged in the practice of his profession and had soon established himself as a lawyer of commanding ability. A Democrat in politics, deeply interested in the welfare and success of his party, he was at once received and made a leader in its councils. In the spring of 1874, within eighteen months after his arrival in Denver, he was elected City Attorney. Three months later he was nominated by his party as its candidate for Delegate in the Forty-Fourth Congress from the Territory of Colorado, and was elected in September by a majority of more than 2,000; his Republican opponent having been H. P. H. Bromwell. Early in 1875, in the interval between his election and the assembling of the Forty-Fourth Congress, he was influential and instrumental at Washington in assuring the passage of the Enabling Act under which Colorado became a State in 1876.

In the Forty-Fourth Congress, though a young man and hedged about by the limitations attending the position of a Territorial Delegate, his ability enabled him to secure the enactment of several laws of great importance to his constituents; among them having been one authorizing all quali-



Thomas M. Patterson.

other jurisdictions. This organization, formed in the winter of 1859-60, was an association of real-estate owners, most of whom were citizens of Denver. Its purpose was to protect its members against the acts of "jumpers," and against any other assaults upon titles to their real estate. It adopted a code of regulations, and established a trial Court of its own to deal with "jumpers," to determine property rights and to protect its members therein, and also to settle disputes between members. The Club proclaimed its intention to command respect for its proceedings and decrees by force of by no means gentle character. There was need for such an organization, and its original purposes were laudable, but there later came times when there were some abuses of its power, and in consequence thereof it suffered in public repute. But in its prime it was, aside from the "People's Courts" for murderers, more directly influential for quick and strictly practical business purposes within the limits of the jurisdiction it asserted, than any other organization then in Denver that included a Court as part of its equipment.

The judicial system of "Jefferson Territory," so far as it was established, was a simple piece of machinery. It provided for Justices of the Peace with about the same jurisdiction as such officers have at present; next above was the County Court with very much the same general jurisdiction as that possessed by our present County Courts, with the important addition of having to do the work of County Commissioners in "locating roads and highways;" next above, again, was the Supreme Court of the Territory with the jurisdiction indicated by its name. This Court was provided with one Chief Justice and two Associate Justices. As to the methods by which the Jeffersonians were to appeal cases of paramount importance from their Supreme Court to that of the United States, this deponent saith not; no provisions for doing so having been discovered in our researches into the affairs of that historic organization. It would seem, furthermore, that it would have been somewhat of a presumptuous undertaking to have asked the Supreme Court of the United States to pass upon the decisions of the Supreme Court of a government organized and existing outside of, and as a legal fact in defiance of, the laws of the United States. However, that caused no embarrassments, as there does not appear ever to have been a case before the "Supreme Court of Jefferson Territory" of sufficient importance to tempt an appeal to Washington by a dissatisfied litigant; and so "Jefferson Territory" escaped judicial complications with the rather more powerful National government.

While this whole Rocky Mountain region south of parallel Forty and west to the summit of the range had been part and parcel of Kansas Territory, no Courts higher than that of Probate were established here under Kansas jurisdiction. As related in our historical account of Arapahoe county, there was an alleged Probate Court here as early

---

fied electors in Colorado to vote upon the State constitution, the Enabling Act of March, 1875, having limited that suffrage to those qualified at the time it became a law; another was a law appropriating money for the pay and expenses of the members of the Colorado State constitutional convention; another providing for establishing Federal Courts in Colorado immediately upon its admission as a State. In 1876, before Colorado's admission, Mr. Patterson prevailed upon the National Democratic Committee when it issued the call for the St. Louis convention that nominated Samuel J. Tilden for President, to recognize Colorado as a State and to provide for its representation by delegates upon the same footing as those from the States. He was then made the first Colorado member of the National Democratic Committee, elected a delegate to the St. Louis convention, and chosen chairman of the Colorado delegation in that historic assemblage.

After Colorado was admitted, the Democratic party unanimously nominated Mr. Patterson as its candidate for Representative in the Forty-Fifth Congress; the new State having been entitled at that time to but one member; and by the election in October, 1876, he became Colorado's first member of the House of Representatives at Washington. He was then under thirty-six years of age and in the fourth year of his citizenship here. As a Representative in Congress he was active and influential, and was recognized as a leader among those of his party faith. In that Congress he originated and brought to passage a half dozen or more measures of especial importance to the people of Colorado.

In 1878 Mr. Patterson was unanimously renominated for Representative but, after a brilliant canvass, shared the common defeat that befell his party in the campaign of that year. He did not again become a candidate until 1888, when his party nominated him for Governor but failed in his election. In January, 1901, the Thirteenth General Assembly of Colorado elected him United States Senator to succeed Edward O. Wolcott whose term expired March 4, 1901.

In the meantime, Mr. Patterson had actively engaged in the practice of his profession in which he had become, as he remains, a master. As a counsellor, a Court and a jury lawyer, few members of the bar anywhere have brought more profound legal learning, acumen, thoroughness, and brilliancy of intellect to the service of clients than he. His fame as a lawyer and as an orator long since passed beyond the bounds of the State and became National.

Mr. Patterson had also continued his active interest and participation in political affairs with which he has been so long, conspicuously and ably identified. He stands today among the leaders of the people in the west who are not in harmony with the policies of the present dominant National political organization.

In 1890 Mr. Patterson purchased a controlling interest in the pioneer Rocky Mountain News, and since then has devoted part of his time and attention to it.—J. C. S.

Platt Rogers, Lawyer.

as the spring of 1859, but it lacked much of having unanimous indorsement and recognition by the people. However, they managed to get through with their picturesque but makeshift forms of government with their conflicting "authority," and more or less impotent Courts, until relief finally came from Congress in the form of the Territory of Colorado.

The early Territorial Legislatures of Colorado by statutory enactments confirmed much that had been done under "Jefferson" "laws," by the Miners' and these other pioneer Courts, and by pioneer officers acting under their authority, or by election. This curing of "defects in title" extended, also, to marriages solemnized by pioneer officers whose authority to have done so was questionable. Congress soon afterward by law confirmed, as to public lands, mining and water rights equities that had been acquired prior to the organization of Colorado Territory; all of which legislation helped very materially in straightening out many complications that had arisen.

The organic act creating the Territory of Colorado provided for a Supreme Court, District Courts, Probate (or County) Courts, and Justices of the Peace; the Judges of the Supreme Court to sit separately as District Judges, and together as a Supreme Court. President Lincoln appointed Benjamin F. Hall, of New York, Chief Justice; and Charles Lee Armour, of Ohio; and S. Newton Pettis, of Pennsylvania; as Associate Justices. Judge Hall was commissioned March 25, 1861, and Judges Armour and Pettis on March 28th.

Governor Gilpin administered the oath of office to Judges Hall and Pettis on July 8th. The Court was organized on July 10th, Judge Hall presiding; there having been a little delay in consequence of the belated arrival of Judge Armour. These proceedings were instituted with prayer led by Reverend J. H. Kehler; L. L. Bowen, who was later succeeded by James E. Dalliba, was appointed, pro tem., District Attorney; and Baxter B. Stiles, Clerk of the Court.

The organic act authorized and directed the legislative branch of the new Territorial government to divide the Territory into three Judicial Districts, at its first session, and to assign one of the three Judges to each District, respectively; each Judge being required to reside in his respective District. Among the early acts, if not the first one, of the first Territorial Legislature, that convened at Denver, September 9, 1861, was a statute creating the three Judicial Districts and assigning a Judge to each. The First, which became commonly known as the "Central City District," was made to embrace the territory west of a north-and-south line passing through the now vanished town of Arapahoe (just east of Golden), and north of the latitude of the town of Bradford, another almost forgotten pioneer hamlet about four miles south of the present town of Morrison; and to this District Judge Armour was assigned, his Court to be held at Central City. The Second, or "Denver District," embraced the territory east of that of the First and north of the latitude of Bradford; and to it Chief Justice Hall was assigned, his Court to sit in Denver. The Third, or as it was first called, the "Southern District," embraced the remainder of the Territory—about three-fifths of its

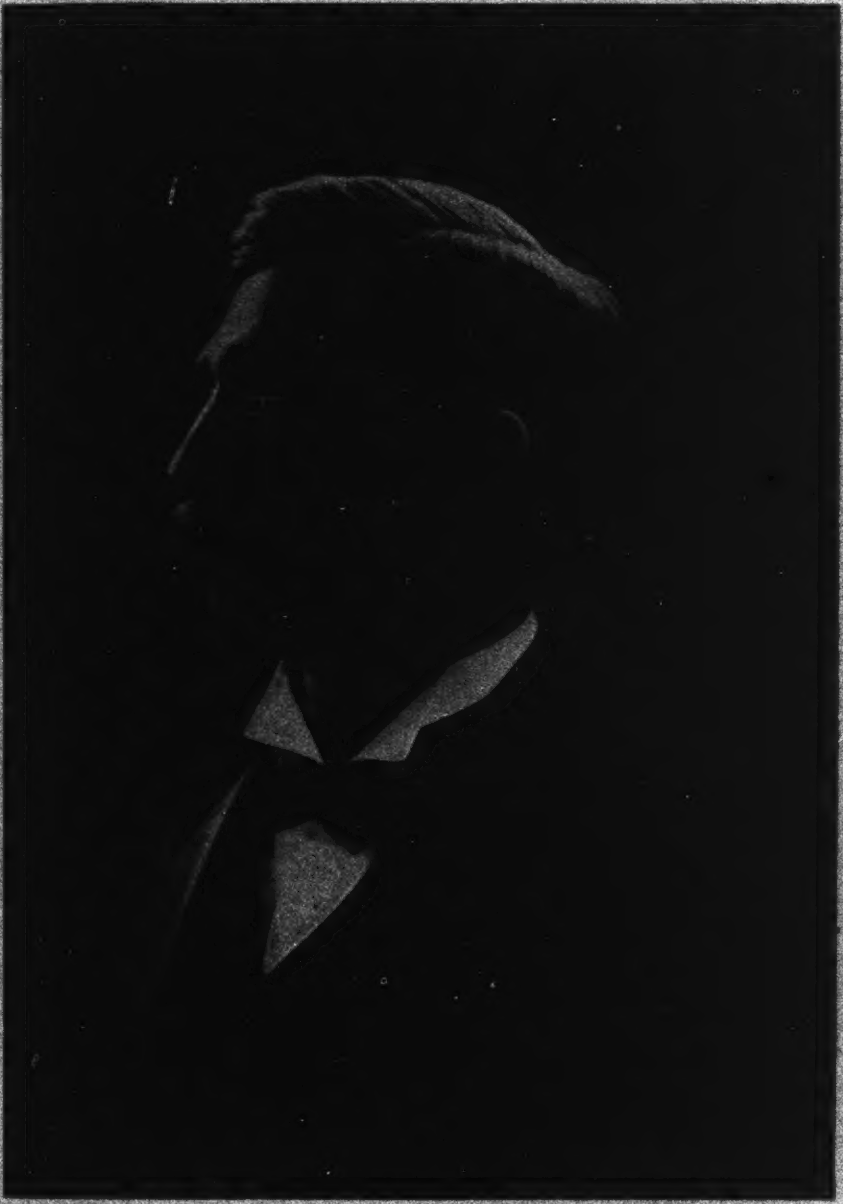
---

Charles J. Hughes, Jr., son of Charles J. and Serena C. Hughes, was born at Kingston, Caldwell Co., Mo., February 16, 1853; and later resided successively in Kingston, Richmond, Westport, and Kansas City, Mo. Educated in the public schools and at Richmond College, he studied law in his father's office and then entered the Law Department of the Missouri State University from which he was graduated. After graduation he taught a country school for a short time, then became Instructor in Mathematics and Political Economy in Richmond College, and in August, 1877, engaged in the practice of law at Richmond where he soon established himself as a successful young lawyer.

Having first visited Denver in September, 1879, Mr. Hughes then resolved to locate here; and removed hither in February, 1880, since which time he has been actively engaged here in the practice of his profession. Later he became a partner with General Bela M. Hughes and so continued for five years, but since then has practiced alone.

In his profession, Mr. Hughes is and long has been a leader in this western country, and has been of counsel in many of the noted cases, of much public importance and that attracted general attention, in the Courts of Colorado and in those of other western States. Among these have been numerous instances of the complicated litigation arising from mining and which, as related in the text of this chapter, calls for legal ability of the highest order. In other directions—in general litigation, in that arising from irrigation, and in that between corporations, he has been no less successfully conspicuous; among the famous instances of the latter having been those of the Western Union Telegraph Co. vs. the Union Pacific Railroad Co., and the Adams Express Co. vs. the Denver & Rio Grande Railroad Co.

In politics, Mr. Hughes is a steadfast conservative Democrat. While never having been an office-seeker, his services as an adviser to and campaigner for his party have always freely been at his party's command and have as freely been effectively utilized. Since April 1, 1889, he has filled, as elsewhere mentioned, the non-partisan position of member of the Board of Capitol Managers. In 1888 he was one of his party's candidates for Presidential Elector, and in 1900 was chosen to that position and cast for the Democratic candidate for President of the United States one of Colorado's four votes in the Electoral College. The Colorado election of November, 1900, having assured the election of a Democratic United States Senator by our General Assembly, Mr. Hughes was the choice of many Colorado Democrats for that position, but did not become a candidate.—J. C. S.



Charles J. Hughes, Jr.

total area—and to it Judge Pettis was assigned, his Court to be held at Canon City.

Subsequently the Legislature made successive changes in the boundaries of these Districts, but Denver and Central City continued as places of holding District Courts until the close of the Territorial era. Canon City did not fare so well, for when the Legislature convened at Colorado City in July, 1862, the southern Court moved up there and remained a short time. But soon afterward its seat was fixed at Pueblo, and the Southern became commonly known as the "Pueblo District." But owing to Pettis' failure to attend to his duties, as will later be related, the Southern District really had no Court until the appointment of Judge Bradford early in June, 1862.

The first Grand Jury in Colorado under the new government was impanelled at Denver September 4, 1861, and consisted of Nelson Sargent, foreman; Andrew Sagendorf, John M. Clark, Charles A. Wright, John W. Smith, Alexander M. Smith, John L. Boggs, John G. Vawter, William D. Davis, John B. Ashland, Jonathan U. Price, Milton E. Clark, Warren Hussey, J. F. Goraline, James M. Iddings, M. M. DeLano, Edward H. Hart, and P. H. Smith.

Although a proclamation had been issued on July 23rd appointing a term of the Supreme Court to begin at Denver on the first Monday in the following September, that Court could have no business until some developed from the District Courts, and so had to await in idleness about a year, though the Judges were employed in the meantime in the District Courts. The first case was that of Gardner vs. Dunn, an action in forcible entry and detainer, began before a Justice of the Peace in Park county, April 16, 1862; appealed to the District Court of the Third District; and from that Court to the Supreme Court. The first criminal case before the Supreme Court was that of William Franklin convicted of murder by the District Court at Central City, and sentenced to be hanged. The appeal was based on an alleged flaw in the indictment which specified that the crime had been committed "at the said county of Gilpin," without further designation of the place, and without naming the Territory in which Gilpin county was situated. The Supreme Court reversed the District Court and sent the case back for a new trial, thereby saving Franklin's life for he was not again tried, but released on bail. For several years thereafter he promptly appeared at the Gilpin county Court House whenever Court convened, expecting his case to be called, and ready to be tried. His unusual conduct aroused great sympathy for him, and a large majority of the people of Gilpin insisted that the case should be dropped, and were glad that he escaped the rope.

The organization of Arapahoe county's first Probate (or County) Court did not occur until December, 1861, when J. N. Odell was elected Judge, as related in our historical account of the county in Chapter LII.

Our pioneer bar was neither deficient in numbers nor in men of ability. Immediately upon the organization of the Territorial Courts several were admitted to practice before them, and within a few months the following-named lawyers were engaged in untangling, or still further snarling, the litigated affairs of their fellow-citizens:

Baker, Samuel L.,
Bassett, I. N.,
Bowen, Leavitt L.,
Cassidy, A. M.,
Coleman, James T.,
Collier, David C.,
Crocker, George F.,
Dallibs, James E.,

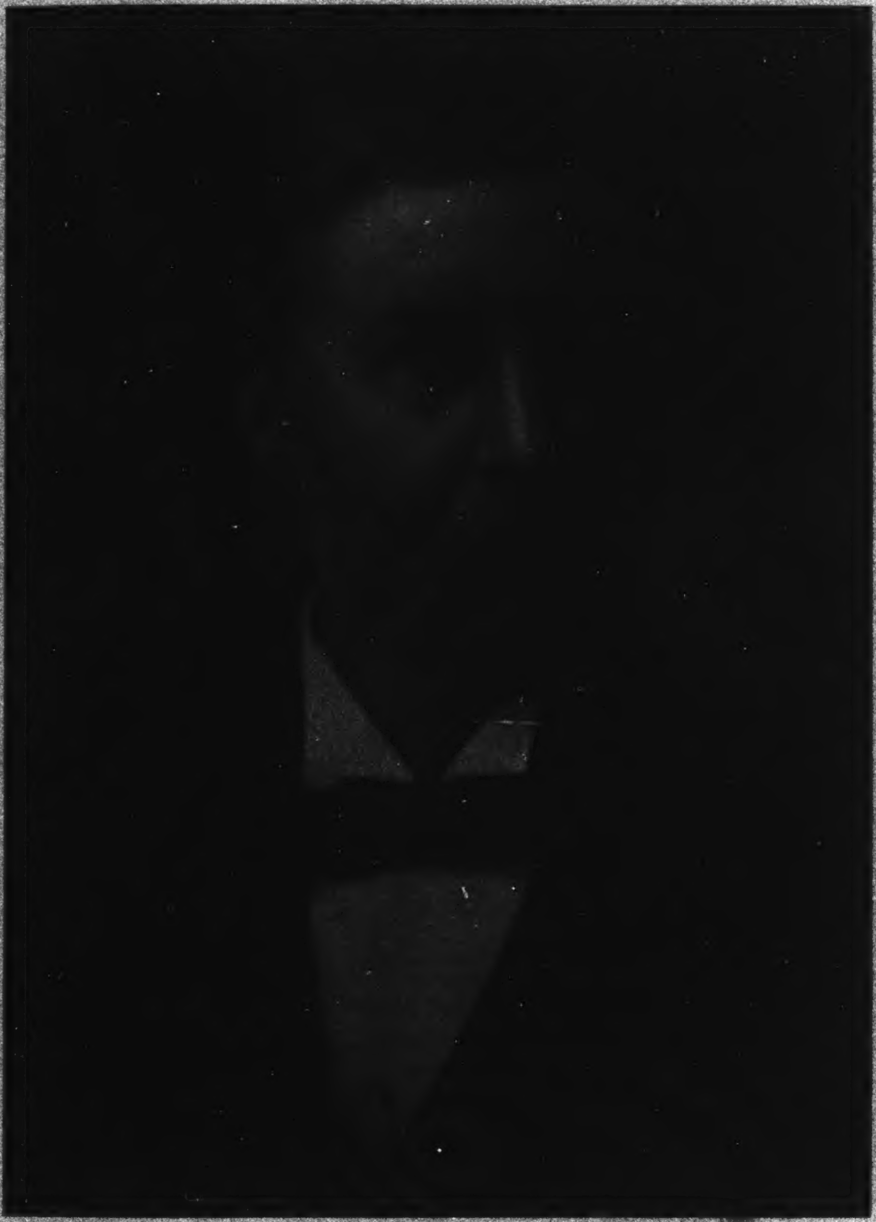
Hugh Butler, of Denver, was born near Airdrie, Lanarkshire, Scotland, May 31, 1840. His father was Thomas Butler of Kings county, Ireland, who settled in Scotland when a young man. In 1849 Thomas Butler came to the United States and finally located in the town of Hawesville, Kentucky. In 1853 he was joined by his wife and son Hugh. In 1857 the family removed to Lewistown, Illinois, where Hugh, who had acquired a good education, engaged in school-teaching, though he was but seventeen years of age. With his teaching, which continued through three winters, he diligently pursued the study of law. In 1860 he entered the office of a lawyer at Lewistown where he continued his legal studies, and was admitted to the bar in February, 1862.

Mr. Butler then went to Chicago where he began practice, remaining there until the autumn of 1863, when he removed to Colorado and located in Central City. His abilities soon won for him a large practice and an influential position in that community. In 1864 a vacancy occurred in the office of Prosecuting Attorney for Gilpin county, and the young lawyer was elected to fill the unexpired part of the term. In 1865 he was re-elected for the ensuing full term, but resigned in 1866.

In the autumn of 1867 Mr. Butler was elected to the upper house of the Territorial Legislature in which he served for four years with distinction and ability. In 1871 he was chosen Mayor of Central City, a position in which he served for one year. In 1873 he was again elected to the upper branch of the Territorial Legislature. In politics Mr. Butler is a Democrat, but he has never been a politician nor an office-seeker. In 1876 he was chairman of the Democratic State Central Committee, and directed the first campaign of his party in the Centennial State. Since that time he has not participated in political management, the demands of his professional business engrossing his attention.

Mr. Butler removed to Denver early in 1874, since which time this city has been his home, and where he advanced to the front rank of his profession in Colorado. In 1882 Governor Grant selected him for appointment as Judge of the Superior Court of Denver, but Mr. Butler was obliged to decline the appointment on account of his large and increasing practice. In 1892 this thorough lawyer and brilliant speaker was called to the chair of Common Law and Code Pleadings in the law department of the Colorado State University, which he ably and acceptably filled.

On February 13, 1872, Mr. Butler married Miss Annie, daughter of Hon. John Milton Thatcher of Kentucky.—J. C. S.



Hugh Butler.

A large proportion of these men had come to Denver in 1859 and 1860 and had participated with more or less prominence in forming and conducting the various makeshift "governments" of the pioneer era; and in these affairs they had really been guiding spirits. There were, as we have said, men of decided ability among these pioneer lawyers, and if the several primitive "governments" they conspicuously assisted to frame failed in the test of practical application, the causes therefor grew out of conditions they could neither remove nor effectively remedy.

Still, they had their critics. When the city Provisional Government was under consideration and discussion in the autumn of 1860, one citizen, in an article in the Rocky Mountain News, delivered himself of this opinion:

"This appears to be a very acceptable plan of government to the committee who framed it, as well as to all the business and laboring men of that meeting. The only ones who made any obection to it were the Lawyers—they took sides for and against the plan and consumed the whole evening gassing over it. Now, sir, as a laboring man and a mechanic, I protest against having our time consumed at all our public meetings, by any such notoriously gassing fraternity as the Lawyers."

"We have had a government of their getting up, and now already have even two governments administered by lawyers; and such governments as they are! Why, sir, two more such governments administered by Lawyers as they are would not

---

Thomas J. O'Donnell, lawyer, was born near the village of Mendham, Morris County, New Jersey, June 12, 1856. He attended the local public school near his birth-place until he was twelve years old, when he entered a private classical school conducted at Mendham by William Rankin, New Jersey's noted blind educator. After his course under Professor Rankin, Mr. O'Donnell prepared for Princeton College, but later decided to engage in newspaper work. In 1873 he formed an association with the Morris, New Jersey, Republican, in its business management and as a writer for its columns. In 1875 he became a contributor to the more prominent New York daily newspapers and to several periodical publications.

In 1876 Mr. O'Donnell became a law student in the office of Col. Frederick A. DeMott, of Morristown, who was a distinguished member of the New Jersey bar, where he remained until Colonel DeMott's death in 1878, when he continued his studies in the office of Hon. George T. Werts, of Morristown, (who later became Governor of New Jersey,) under whom he completed his studies and was admitted to practice.

In the autumn of 1879 Mr. O'Donnell came to Colorado and spent several months in travel through the State. In the spring of 1880 he located in Denver and began the practice of his profession. His abilities soon won for him a prominent position as a lawyer in a community which is exacting in its standards of merit. He practiced alone until January 1, 1891, when Hon. Westbrooke S. Decker resigned from the Bench, became associated with Mr. O'Donnell, and the firm of O'Donnell & Decker was formed. In 1895 Mr. Milton Smith was admitted to the firm which then became O'Donnell, Decker & Smith. Judge Decker retired in 1897, but the association between Mr. O'Donnell and Mr. Smith still continues.

In politics Mr. O'Donnell is a Democrat, and from the beginning of his residence in Denver has been prominent in the councils and active in the service of his party. In 1883 he was nominated for Judge of the County Court of Arapahoe county, but in common with his party ticket failed of election. In 1890 he was the Democratic candidate for Representative in Congress from the First District of Colorado, but again he with his party's other candidates was defeated. Two years later he was Delegate-at-Large from Colorado to the Democratic National Convention at Chicago where he was an active opponent of the nomination of Grover Cleveland for President. After that convention adjourned, Mr. O'Donnell with five others of the Colorado delegates united in an address to the Democrats of this State urging independent action in the National campaign. His continued and earnest efforts to that end were chiefly instrumental in bringing his party in Colorado into convention at Pueblo. This body, of which Mr. O'Donnell was made Chairman, almost unanimously refused its support to the Chicago ticket, and indorsed the candidacy of Weaver and Field, for whom Mr. O'Donnell made an influential canvass of Colorado, with results that are part of the political history of the State and Nation. Mr. O'Donnell was a Delegate-at-Large to the National Convention in 1896 and represented Colorado on the celebrated steering committee of the silver forces which outlined the policy of the convention and dominated it from beginning to end. In both of these National conventions Mr. O'Donnell was a member of the committee on credentials and on each occasion heard exciting and rancorous contests. The policy supported by the majority of the convention in 1896 did not have two-thirds, which, under the rules of Democratic conventions, is requisite to nominating a candidate for President, hence all interests centered in the contest over the Michigan delegation. When the committee on credentials reported in favor of ousting a portion of the Michigan delegation, (a report which if adopted gave two-thirds of the convention to the forces which had adopted its platform,) excitement ran high. Mr. O'Donnell was selected by the credentials committee to sustain its report upon the floor of the convention, and he closed the debate with the result that the report was adopted.

On October 21, 1881, Mr. O'Donnell married Miss Katherine Dwyer, of one of the old families of St. Louis.—J. C. S.

Thomas J. O'Donnell.

leave decent men and women enough in this city to make a respectable-sized class-meeting. The good book says 'no Lawyer can enter the Kingdom of Heaven,' and we think the good book is about right; for if all lawyers are like ours in this community, they, if admitted, would soon get up another 'war in Heaven.'"

The proceedings in the various "Courts" in 1859, 1860, and part of 1861, the details of their practices, the incidents arising from the confused, contradictory and hostile jurisdictions, the devices employed by pioneer lawyers to obtain some brand of justice for their clients—or to avoid it, afford abundant material for a volume that would be of extraordinary interest. The conditions were unlike any that have existed elsewhere and were of a kind that will never be again. It seems like a misfortune that the legal experiences and reminiscences, anecdotes and incidents, of those historic days should be lost.

After the machinery of the Colorado Territorial government was put in motion the business of the lawyer here rested on a more satisfactory basis than had previously been afforded it, and the difficulties in legally determining "who's who and what's what" were very greatly simplified. The civil and criminal codes adopted by the Legislature, and the general rules of practice, were founded to a great extent upon those of Illinois. But the Colorado Legislature, unlike one of those of Kansas Territory to which we have elsewhere referred, put its codes into workmanlike form which enabled the new machinery to operate with comparative smoothness.

But there was one piece of legislation by an early Territorial Legislature that was no credit to it or to the Territory. This was an act disbarring from collection by legal processes any claim or debt owed by a citizen of the Territory to a nonresident. This exemption from any but voluntary debt-paying to outsiders was to continue for five years from the approval of the act. This law did not reflect public sentiment as a whole, nor even the views and wishes of a majority of the people. But those who did want it wanted it very badly, and clamored for it; while the others, who gave it their disapproval, did so in a negative way that was not influential. Happily, the law did not long survive. Of course, such a statute would have been impotent before any Court competent to pass upon its iniquities; but such was the temper of the noisy

---

Judge Westbrooke S. Decker came to Colorado and Denver in January, 1874, and since that time has been a prominent figure in our affairs. Born on his father's farm in Seneca county, New York, April 22, 1839, he lived the character-making life of a country boy until he was eighteen years old. In 1857 he started out to seek his fortune, going to Coles county, Illinois. At his New York home he had attended the district schools, and later the Brockport Collegiate Institute; and soon after his arrival in Illinois he applied for and received the position of teacher of a school at Charleston, the county seat of Coles county; an occupation in which he was engaged until the spring of 1861, having taken up the study of law in the meantime.

Late in 1861 he returned to his old home in New York, and early in 1862 enlisted in the One Hundred and Twenty-sixth Regiment of New York Volunteers. He with his regiment became prisoners of war when Colonel Miles surrendered Harper's Ferry in September, 1862. The regiment was exchanged late in that year, and with it private Decker afterward saw much hard service. It was in Hancock's Corps at Gettysburg, and was among the troops that received and repelled the desperate charge of General Pickett's division of Confederates. In that historic conflict private Decker was dangerously wounded, and lay in hospital at Trenton, New Jersey, five months afterward. Upon his recovery he was commissioned a Second Lieutenant in the Nineteenth United States Colored Infantry, and served in all the operations of the Army of the Potomac from the spring of 1864 until the close of the war. He had been advanced to a First Lieutenancy, and was ordnance officer on the staffs of Generals Ferrero, Hartranft, and Hartsuff. Late in the spring of 1865 he was transferred to the command of General Giles A. Smith at Brownsville, Texas, and there served as assistant Provost Marshal of that military district until August, 1865, when he resigned and returned to his old home in New York.

In October, 1865, Mr. Decker entered the Law School of Michigan University at Ann Arbor, and, supporting himself from the savings of his pay as a soldier, was graduated in the spring of 1867 with the degree of LL. B. He immediately located at Kankakee, Illinois, and began the practice of law. In 1868 he was elected City Attorney of Kankakee, and re-elected in 1869. In the autumn of 1869 he was elected County Judge of Kankakee county, a position he ably filled during the ensuing four years.

His health, that had been seriously affected by his army service, had become still more impaired during his residence at Kankakee, and late in 1873 he decided to seek the benefits of the climate of Colorado. Coming to Denver, he at once actively engaged in the practice of his profession, and in January, 1877, soon after Colorado's admission as a State, was appointed by President Grant the first United States District Attorney for the Colorado District. In 1887 he was elected District Judge for the Second Judicial District (Arapahoe County) to fill an unexpired term; and in 1888 was elected to the same position for the full term of six years. He thus served until January 1, 1891, when, owing to the inadequacy of the compensation to the Judges of our Courts, as fixed by law, he resigned, and resumed the more remunerative practice of his profession, in which he has been conspicuously engaged since that time.

As a brave and faithful soldier, an able lawyer and jurist, a brilliant speaker, an honorable and popular citizen, and as a man among his fellowmen, the record of Westbrooke S. Decker is stainless.—J. C. S.

Westbrooke S. Decker.

and benefited side of public sentiment for awhile, that no lawyer dared attack the law. Under some very probable combinations of then existing circumstances he would have imperilled his life to have done so.

In early times the Legislative Assembly undertook the work of severing marital ties that were alleged to have become unsatisfactory, if not unendurable. Governor Gilpin's first exercise of the veto power was upon one of such special acts, divorcing Adams H. and Ellen C. Bateman. The Governor insisted that such proceedings should be in the Courts and not in the halls of legislation; and they were afterward transferred to the Courts. If the divorce business of our modern times had to be disposed of by our law-makers, it would seem that perpetual sessions of our General Assembly would be one of the consequences.

As the years wore on our lawyers and judges were called upon to deal with many questions that were new to them, and to the solution of which the civil code of the earlier times, and later statutes intended to remedy them, did not readily lend themselves. These questions arose, in the main, in adjustment of miners' rights and in settlement of contentions relating to irrigation. These propositions in all the varied and intricate phases they are capable of assuming were strangers to nearly all the people who settled and developed Colorado.

The California practices in mining legislation and litigaton afforded some basis for procedure, but the great difference in natural conditions here often rendered the California examples wholly inapplicable. Therefore, new remedies had to be devised, new applications of the principles of justice made, and new avenues opened for them.

To an even greater extent than with mining were our people, lawyers included, unacquainted with the complexities to which the irrigation proposition is prone. As agriculture developed, and being dependent on artificially applied irrigation, many difficult problems, each unlike the others, were presented for solution. These questions have had to be worked out in our Courts practically without the assistance of borrowed customs, precedents, and decisions, for there were few of these in our country that had become well adapted to the general requirements of justice.

Formerly, railway litigation and that growing out of land titles called for the services of many able lawyers. The railways, however, have become

---

Owen E. Le Fevre, recently one of the Judges of our District Court, is a native of Ohio. He was born August 6, 1848, in the village of Little York, Montgomery county, of that State. From the district school in Little York, and the graded schools of Dayton, he entered the preparatory department of Antioch (Ohio) College. He was there a student until May 4, 1864, when the 154th Regiment Ohio Volunteers was organized. Though but a boy, he enlisted in that regiment and shared its fortunes until it was mustered out of service in the autumn of that year.

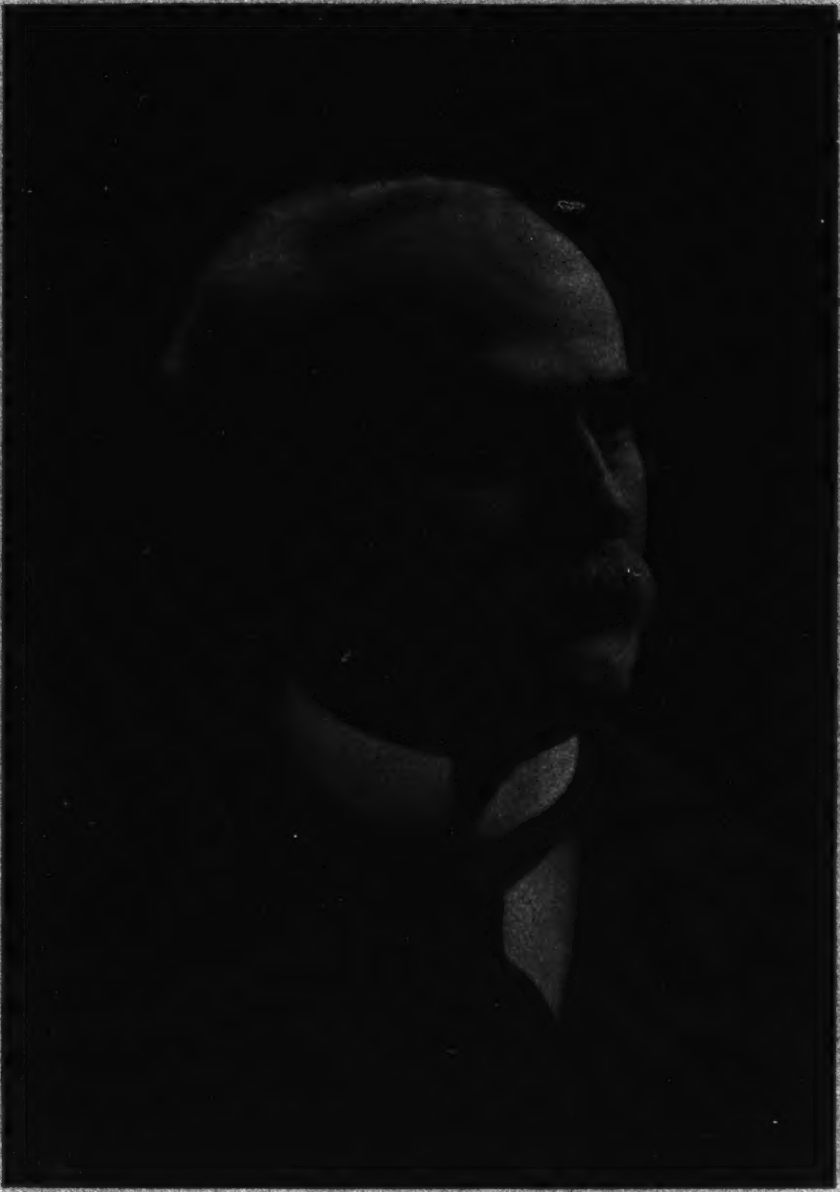
In 1868, Judge Le Fevre entered the Junior year in the University of Michigan where he graduated in the classical course with honors in June, 1870. He was engaged during the ensuing two years in teaching school, devoting his available time to study of the law. In 1872 he was admitted to practice by the Supreme Court of Ohio; he then entered the law office of John A. McMahon and George W. Houck, two noted Ohio lawyers at Dayton, and remained with them until the summer of 1873, when he came to Denver and immediately began the practice of his profession.

Judge Le Fevre established his home in the then suburban town of Highlands, now a beautiful division of Denver. In 1875 he was elected Attorney for Highlands, and re-elected in 1876. In 1885 he was chosen its Mayor, and at the close of his term received the indorsement of a re-election to that position. He was next called to the office of Attorney for Arapahoe county by the County Commissioners. He received the merited indorsement of a re-election, and to this was added a second re-election, making three terms of diligent service in that important and arduous position. In 1892 he was elected Judge of the County Court, on the Republican ticket. It was in that year that the political upheaval occurred which placed the entire State administration in the hands of the Populists under Governor Waite. Nevertheless, Judge La Fevre was elected by a large plurality. In 1894, before the expiration of his term on the county bench, he was elected one of the Judges of the Second Judicial District—Arapahoe county.

Our Courts are rarely confronted by a dearth of business, and therefore our Judges are, of necessity, busy, hard-working men. During his service on the county bench, Judge Le Fevre so systematized the order of things in that Court by his energetic, effective disposition of its business, as to relieve it of its crowded and often congested condition, and introduce an innovation in its history. On the higher bench, as on the lower, his record was that of an able, impartial jurist of unimpeachable integrity—"a just Judge" in the endless and intricate controversies of his fellow-men.

In politics Judge Le Fevre is a consistent, steadfast, conservative Republican. He is a believer in his party and its principles, was long one of its capable and successful leaders, and is still one of its safe and trusted advisers. Upon his retirement from the District bench in January, 1901, he resumed practice of his profession.

Judge Le Fevre married Miss Eva French, of Troy, Ohio, June 28, 1871, the day on which she was graduated from the Ohio Wesleyan University at Delaware in that State. They have one child, a daughter, born in 1884. They continued their residence in Highlands until 1896 when they occupied their present fine home at 1311 York street. It is adorned with what is perhaps the most choice collection of modern French paintings in Colorado, and is a center of art, literature and music. Judge Le Fevre is a lover of books, and his home library, in which he has gratified his inclinations, is one of the best in the city of Denver.—J. C. S.



Owen E. Le Fevre.

fairly well settled in their affairs; but land title matters are not quite so far advanced.

In what has been said in the foregoing, it is not intended to convey an impression that the practice in mining and irrigation litigation has been relieved of all its former difficulties. The great mining industry inevitably and unavoidably gives rise to many novel complications, and probably always will. New conditions, new situations, persistently attend it and which must be adjudicated by new definitions of rights. Perhaps no class of litigation calls for keener intellects, clearer insight, or a higher order of professional ability than that growing out of mining; nor is there any class in which precedent, previous decisions and the like so often fail to point the way to a just settlement of the case in hand. The complications are so many and often so unique that new remedies must be found for them; and between opposing counsel in such cases a vast amount of hard and able work is done, yet leaving a large share to be disposed of by His Honor. Few valuable mining properties in the State have succeeded in keeping out of Court, and many of them would seem to have habitually kept in. They are properties peculiarly subject to frequent attack, and to conflict with their neighbors of which they always have a great plenty of near ones. Irrigation also still produces many badly tangled controversies in the settlement of which the services of lawyers of commanding ability are engaged. As with those of mining, the irrigation cases often involve large and vital interests. The dividing line between right and wrong, justice and injustice, in them is not always an easy one to define, and the very nature and all-important character of the element the ownership and use of which is in dispute, irrigates many protracted lawsuits of the first rank in importance.

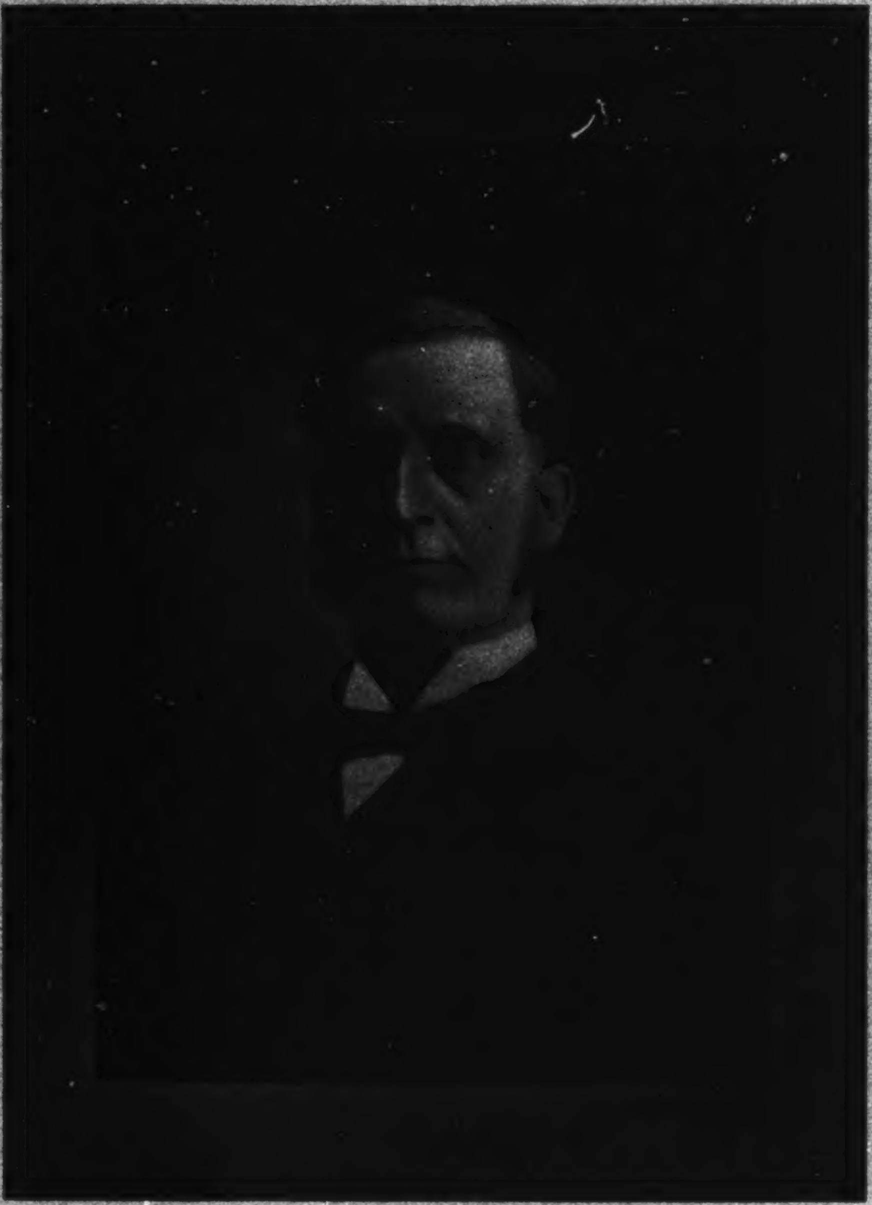
Taken as a whole, the litigation with which our Courts are called upon to deal is of a far higher average in character, in the kind and value of interests involved, and in the difficulties presented, than that of almost any other community in the country. As a logical sequence, the Denver Bar is a conspicuously able one. The successful lawyer here must be a man of decided ability and of untiring industry. The practice covers a far wider range than in other parts of the country and, as indicated in the foregoing, encounters cases of extreme intricacy. It is, therefore, quite different from that of the mere advisory lawyer, the easygoing counsellor, who elsewhere sits in his office-chair and recites a century's incrustations of customs, precedents and decisions that presumably fit and settle his client's case. The Denver lawyer must be a fighting lawyer if he expects to win; and his weapons must be those of learning, intelligent perceptions, of mental alertness, and original resources. He must, furthermore, expect and prepare to be met and opposed by another man as well equipped as he.

It is not to be inferred that the high standard of ability necessary to conspicuous success in the practice of law in Denver, has kept the Denver Bar numerically contracted. From the small number mentioned in the roster of Governor Gilpin's time, it has expanded until it now includes nearly five hundred and fifty members—a little army. It is to be assumed, at least, that each possesses in the developed or in the potential form the qualifications we have mentioned in the foregoing, and therefore if all of them should simultaneously come forth bearing their weapons of the law and with all their legal armor on, it would seem that they might appear more terrible than an army with banners. However, the increase in numbers has not, relatively, kept pace with the growth of the city. In Governor Gilpin's time there was one lawyer for about each 150 of the city population; now, we have one lawyer for about each 250 of the city population. To apply the lawyer-ratio of our pioneer times to present city population, the Denver Bar would have to be recruited to a strength of about 900. So, it would seem that there was either a surplus of legal talent in the old days, or that we have not now a full share, or that people are becoming very much less inclined than formerly, or have fewer occasions, to appeal to the blind goddess who, presumably, is also without prejudice.

Joel F. Vaile, lawyer, was born at Centerville, Wayne county, Indiana, March 14, 1848; a son of Rawson and Anna E. Vaile. Later with his parents he removed to Indianapolis, and subsequently to Kokomo, Ind. After the usual course in the public schools, young Vaile entered Oberlin, (Ohio), College where he was graduated in 1873. In that year he engaged in teaching, and in 1873-74 was Acting Professor of Mathematics in Berea, (Kentucky), College. In the meantime having decided to follow his father's profession, he studied law, and was admitted to the Bar in 1874. He joined his father in practice at Kokomo in 1875, and remained there until 1882. In 1876-78 he had served as Prosecuting Attorney of the Thirty-Sixth Judicial Circuit of Indiana, and in 1880 was an Indiana delegate in the Republican National Convention at Chicago that nominated Garfield for President.

Mr. Vaile came to Denver from Indiana in July, 1882, and began practice here. His ability as a thorough lawyer immediately commanded recognition, and he formed a partnership with Judge J. A. Bentley which continued until 1885. In that year he became associated with Edward O. Wolcott, and the legal firm of Wolcott & Vaile has continued without interruption since that time.

Mr. Vaile has won special distinction in his profession for his learning and ability in corporation and railroad law. During the past fourteen years he has been General Attorney for the Denver & Rio Grande Railroad Company, and is also the legal representative at Denver of the Chicago, Burlington & Quincy Railroad Company.—J. C. S.



Joel F. Vaile.

Section 1, Article VI, of the Constitution of Colorado—"Judicial Department"—as amended in 1886 and effective November 2, 1886, provides—

> "The Judicial power of the State as to matters of law and equity, except as this Constitution otherwise provided, shall be vested in a Supreme Court, District Courts, County Courts, Justices of the Peace and such other courts as may be provided by law."

Three judges—a Chief Justice and two Associate Justices—elected by the people for terms of nine years, constitute the Supreme Court; the Judge having the shorter period of a term yet to serve, provided that he be not holding his office by appointment or election to fill a vacancy, in turn becomes the Chief Justice. The Constitution provides that the Court shall have appellate jurisdiction co-extensive with the State, and shall have general superintending control over all inferior Courts, under such regulations and limitations as may be prescribed by law; that it shall have power to issue writs of habeas corpus, mandamus, quo warranto, certiorari, injunction, and other original and remedial writs, with authority to hear and determine the same; and under Section 3 of Article VI, as amended in November, 1885, each Judge of the Court has like power and authority as to writs of habeas corpus. That section also provides that—

> "The Supreme Court shall give its opinion upon important questions upon solemn occasions when required by the Governor, the Senate, or the House of Representatives."

At least two terms of the Supreme Court are required to be held each year at the State capital. The Clerk of the Court is appointed by the Judges and holds his office during their pleasure, his annual compensation being fixed by law at $3,500. The Judges receive an annual salary of $5,000. Under the Constitution no person is eligible to a seat on the Supreme Bench unless he be learned in the law, at least thirty years of age and a citizen of the United States, nor unless he shall have resided in the State at least two years next preceding his election.

The Court of Appeals, ranking next to the Supreme Court, was not specifically provided for by the Constitution, but was created by the Eighth General Assembly in 1891 under the authority expressed in Section 3, Article VI, in the words "and such other courts as may be provided by law." Three Judges constitute this Court, and their terms are for six years; one being appointed by the Governor every two years, the term beginning on the first Wednesday in April, next after each regular session of the Legislature. The Court of Appeals has jurisdiction over general litigation coming up from the lower courts, and is a kind of half-way station to the Supreme Court for many cases; although many others pass it and go direct to the higher tribunal. Its Judges receive the same compensation as that paid the Supreme Court Judges, and they must have the same qualifications. Recently the abolition of this Court has been strongly urged by the Bar Associations and others, proposing that the Supreme Court shall be made to consist of five members instead of three, and that their terms shall be for fifteen years; the transition to carry Judges of Appeals holding over, to the Supreme Bench for the remainder of their terms—practically a proposed merging of the Court of Appeals with the Supreme Court.

Next below are the District Courts, created by Article VI of the Constitution which provides that they shall have original jurisdiction of all causes, both at law and in equity, and such appellate jurisdiction as may be conferred by law—the latter having been defined on rather broad lines by statute since the adoption of the Constitution. These Courts also have original jurisdiction to determine all controversies upon relation of any person on behalf of the people concerning the rights, duties, and liabilities of railroad, telegraph, or toll-road corporations. The greater part of all litigation is disposed of by the District Courts.

Section 12, Article VI, as amended in November, 1886, provides that the State shall be divided into Judicial Districts in each of which there shall be elected by the people one or more Judges of the District Court therein, as may be provided by law, whose full terms of office shall be six years. The District Court Judges may hold Courts for each other, and the General Assembly has authority to provide by law for the selection or election of a suitable person to preside in the trial of causes in special cases, and by a two-thirds vote of the members of each branch, the Assembly may increase or diminish the number of Districts and of Judges therein; but such changes shall not work the removal of any Judge from his office during

---

Milton Smith, lawyer, was born in Flatbushville, Sussex county, New Jersey, January 31, 1866. He removed to Ulster county, New York, in 1879, and was graduated from the High School at Ellenville, New York, in 1883, winning a competitive scholarship for a full course at Cornell University. After four years at Cornell he was graduated with the degree of Ph. B.

Mr. Smith is a member of the Chi Psi and Phi Delta Phi fraternities, and was the former's chief executive for the United States in 1886 and 1887. His course at Cornell included law, and he was admitted to the bar in 1889. He then came to Denver and engaged in practice which, to a great extent, is in mining, corporation, insurance and irrigation litigation. He is a member of the University and Denver Athletic Clubs, takes an active interest in State politics, and for several years has been Chairman of the Democratic State Central Committee. —J. C. S.

Milton Smith.

the time for which he shall have been elected or appointed. The terms of office of all District Judges throughout the State expire at the same time. The general election held in November, 1900, included the choice of District Judges. The qualifications for these Judges are the same as those for Supreme Court Judges, with the additional one requiring them to be at the time of their election, electors within the respective Districts for which they are elected. The salary is $4,000 per annum.

The State is now divided into thirteen judicial Districts, the constitution of each of which and number of Judges in each are as follows:

First—Clear Creek, Gilpin, Jefferson, and Grand counties; one Judge.

Second—Arapahoe county; five Judges.

Third—Las Animas, Huerfano, Prowers, Bent and Baca counties; one Judge.

Fourth—Douglass, Elbert, El Paso, Cheyenne, Lincoln and Kit Carson counties; two Judges.

Fifth—Lake, Summit, and Eagle counties; one Judge.

Sixth—La Plata, San Juan, Archuleta, Dolores, and Montezuma counties; one Judge.

Seventh—Delta, Mesa, Montrose, Gunnison, Ouray, San Miguel, and Hinsdale counties; one Judge.

Eighth—Boulder, Weld, Larimer and Morgan counties; one Judge.

Ninth—Pitkin, Garfield, Routt, and Rio Blanco counties; one Judge.

Tenth—Pueblo, Otero, and Kiowa counties; two Judges.

Eleventh—Fremont, Chaffee, Custer, and Park counties; one Judge.

Twelfth—Conejos, Rio Grande, Saguache, Costilla and Mineral counties; one Judge.

Thirteenth—Washington, Yuma, Sedgwick, Phillips and Logan counties; one Judge.

The times of holding District Courts are defined by statute, but at least one term shall be held each year in each county, except in such counties as may be attached for judicial purposes to another county wherein such term of Court is held. Arapahoe county's five District Judges are kept on duty almost the entire year. The Clerk of a District

---

Harper M. Orahood has been a citizen of Colorado since the summer of 1860, and a lawyer since 1873. Born in Columbus, Ohio, June 3, 1841, he obtained in his boyhood only such groundwork of education as could be procured in public schools in Mt. Vernon, Ohio, and La Salle county, Illinois, whither his parents successively removed. Later he gained an insight into mercantile business while a clerk in country-town stores, and for a short time studied medicine. But the "Pike's Peak excitement" growing out of what had been done here in 1859 changed all his plans and made him eager to join the throng in the Rocky Mountain country. In the spring of 1860, though still in his minority, he set out from Rock Island, Illinois, with a company bound for the Clear Creek district, and which subsequently laid out the town of Black Hawk. The party arrived at the site of Black Hawk in June, 1860, young Orahood having walked nearly all the way across the plains.

Mr. Orahood engaged in mining, and subsequently in merchandising at Black Hawk, and was for ten years Postmaster at that place. During the Indian troubles in 1864 he served as an officer in the Third Colorado Cavalry, having been commissioned by Governor Evans a First Lieutenant and made regimental commissary. After two months' service he was appointed Captain of Company B of that regiment, and continued as its commander until the organization was mustered out in December, 1864. Some account of the regiment's service appears elsewhere in this volume.

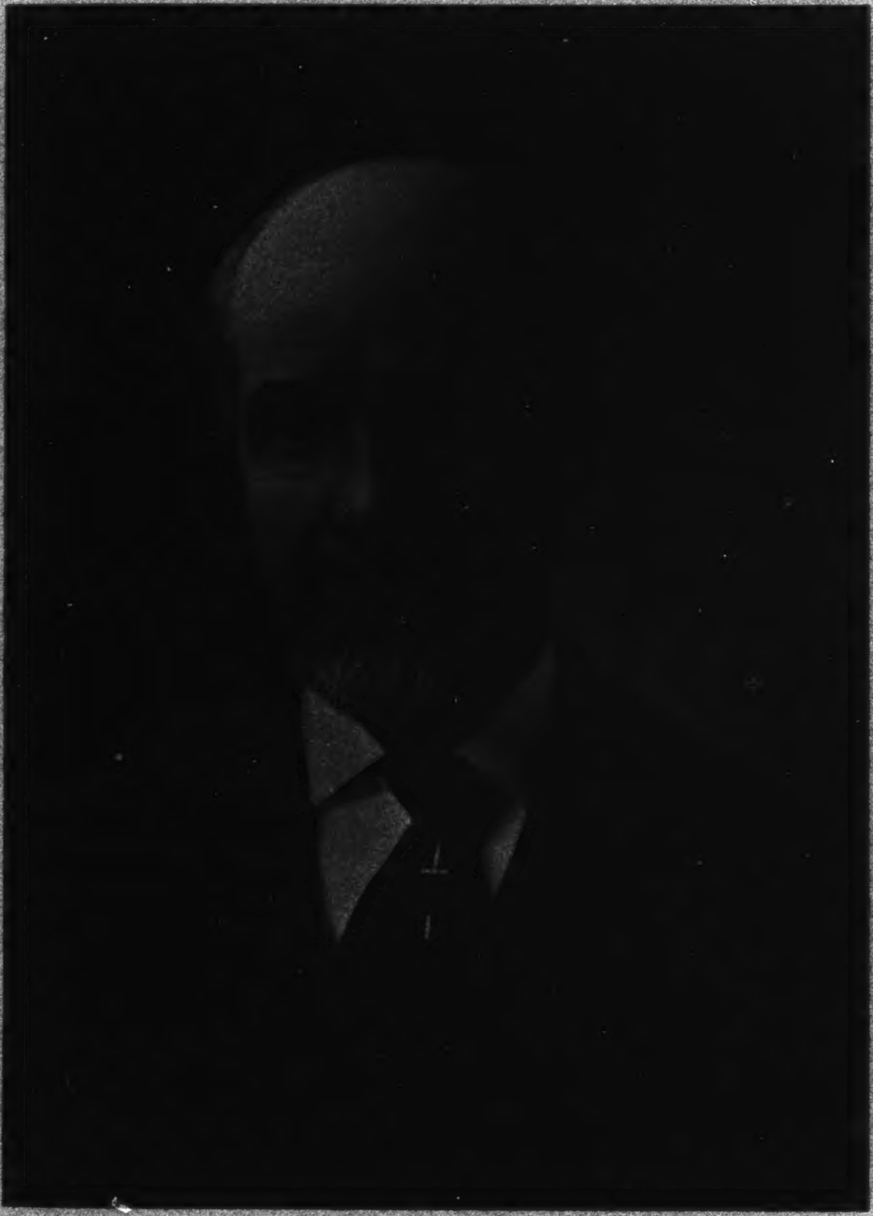
About 1870 Captain Orahood decided to study law, and for that purpose entered the law office of Alvin Marsh, and later that of Senator Henry M. Teller, at Central City. Being admitted to the bar October 1, 1873, he formed a partnership with Senator Teller and was soon actively engaged in practice. In 1879 he succeeded Edward O. Wolcott as District Attorney for the first Judicial District, including Gilpin and Clear Creek counties. At the expiration of his term, in 1881, he terminated his twenty-one years of residence in Gilpin county, located in Denver, and has since been a distinguished member of the Denver Bar.

Having, upon attaining his majority, become one of the Masonic fraternity, at Central City, he has long been conspicuous in the affairs of that Order, and was a charter member of Black Hawk Lodge No. 11, serving as its first Senior Warden and its second Master. Succeeding Senator Teller as Commander of Central City Commandery No. [illegible], he has filled every office in Lodge and Commandery, has been Grand Master and Grand Commander of the State of Colorado, and Grand Warden of the Grand Encampment. He was the first Commander of the first Commandery of Knights Templar organized in Denver, and was instrumental at Washington in 1889 in having Denver chosen as the place for the next ensuing Triennial Conclave, that of 1892. It was largely due to his services as chairman and vice chairman of the Denver committee of arrangements that that Denver gathering of Knights Templar was made so memorably brilliant.

For many years Mr. Orahood has been a leader in the local and State affairs of the Grand Army of the Republic. Long a member of Ellsworth Post at Central City, he became a member of Lincoln Post upon his removal to this city, and has served in all of its official positions. In 1898 he was chosen Senior Vice Commander of the Department of Colorado and Wyoming, and in 1899 was elected Department Commander.

A member of the Military Order of the Loyal Legion, he was its Colorado Commander in 1895. At that time he was also one of the military staff of Governor McIntire, with the rank of Colonel, and previously had been for several years an officer in the Colorado National Guard.

Colonel Orahood's activities in these fraternal organizations of his fellow-citizens have not in any sense lessened his zeal in his profession. The spirit that has led him on in his devotion to their interests and welfare is the same that has made him a conspicuously able and successful lawyer.—J. C. S.



Harper M. Orahood.

Court is appointed by the Judge, or Judges, of the District, and holds his office during their pleasure.

The District Attorney, who is the public prosecutor, is elected at each general election at which a Judge of the Supreme Court is chosen, his term being three years. He must be not less than twenty-five years old at the time of his election, and must possess all other qualifications for Judges of District Courts. The terms of all District Attorneys throughout the State expire at the same time.

The County Courts, next below the District Courts, are also provided for by the Constitution. They are Courts of Record, and have original jurisdiction in all matters of probate, settlement of estates of deceased persons, appointment of guardians, conservators and administrators, and settlement of their accounts, and various other jurisdictions, including criminal. But they have no jurisdiction in any case wherein the debt, damage, claim, or value of property involved exceeds $2,000, except in cases relating to estates of deceased persons. Appeal may be taken from them to the higher Courts. Writs of error lie from the Supreme Court to every final judgment of the County Court, but no appeal may lie to the District Court from any judgment given in the County Court upon an appeal from a Justice of the Peace. The County Judge is elected by the people for a term of three years, and must be an elector in the county at the time of his election.

Next below the County Courts are those of the constitutional Justices of the Peace who adjudicate so many semi-spontaneous affrays, drunken brawls, neighborhood quarrels, back-fence wrangles, small civil disagreements, and various other odds and ends of humanity's contentions. Their criminal jurisdiction is final to many misdemeanors, and in felonies it clears the way for further action in the criminal courts. The civil, as well as the criminal jurisdiction of a Justice of the Peace is defined by statute, but in cases wherein the value of the personal property, or the amount in controversy, exceeds $300, or where the boundaries or title to real property shall be called in question, he has no jurisdiction.

The Constitution conferred power on the General Assembly to establish Criminal Courts in each county having a population exceeding 15,000, with concurrent jurisdiction in all criminal cases not capital; the terms of such Courts to be fixed by law. As we now have no capital offenses, the jurisdiction of a Criminal Court would cover all criminal cases. Authority was also given the Assembly to provide Police Magistrates for cities and towns, as may be deemed from time to time necessary or expedient; such Magistrate, who is appointed by the Governor, in Denver, to have jurisdiction of all cases arising under the ordinances of such cities or towns. It was by authority of such constitutional provisions that the General Assembly created a Criminal Court for Arapahoe county, the present Denver city Police Court, and the former Superior Court for Denver.

The Arapahoe County Criminal Court was first established by an act of the Third General Assembly approved February 26, 1881. Charles W. Wright was appointed its first Judge, but owing to defects in the law the Court was soon afterward held to have been unconstitutionally created, and therefore its existence suddenly terminated. By an act of the Fourth General Assembly approved February 1, 1883, the defects in the former law were cured and its provisions were extended to Lake and Pueblo counties. Another act, approved February 7, 1883, provided for procedure in such Criminal Courts and repealed the original act of February 26, 1881. An act of the Seventh General Assembly approved April 19, 1889, amending the act of February 1, 1883, omitted all provision for a Criminal Court in Arapahoe county, provided for transfer of all cases then pending in it to the District Court, and so abolished the Criminal Court which was thought to have proved superfluous. Since that time the Criminal Court has been merely a Division of the District Court, with a District Judge presiding. The Criminal Court Judges were appointed by the Governor, and during the six years of its second existence in Arapahoe county it had but two—Platt Rogers and Wilbur F. Stone.

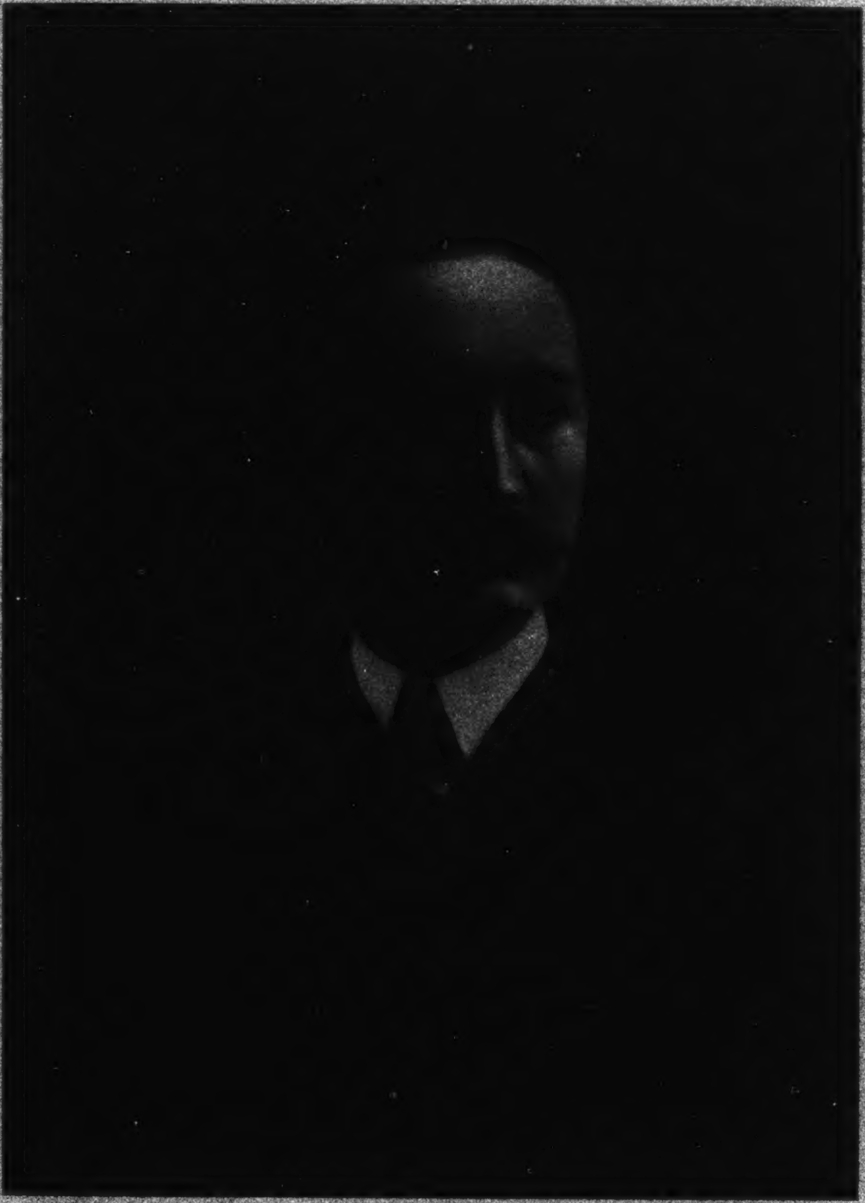
In 1883 the Fourth General Assembly by an act approved February 10th, established a Superior

---

Edward B. Morgan, lawyer, son of Samuel B. (see Chapter LXXIV) and Ellen T. (Blinn) Morgan, was born at Wethersfield, Conn., December 18, 1862. His father had come to Colorado in the autumn of 1863, locating at Central City; and in November, 1864, the subject of this sketch, with his mother, crossed the plains in a stage-coach from Atchison and joined the father at Central City. The family resided at Central City and Black Hawk until 1873 and then removed to this city.

After passing through all the grades of the "East Denver" public schools, Edward B. Morgan was graduated in the High School in 1881. Entering Yale College in 1882 he was graduated there in 1886. Then followed a two-years' course in the Harvard Law School. Returning to Denver, he entered the law office of Teller & Orahood, September 1, 1888, and in the autumn of 1889 was admitted to the Bar by the Supreme Court of the State. In 1890 he was made chief clerk to Teller & Orahood, and in 1892 was admitted to partnership under the firm name of Teller, Orahood & Morgan, a relation that continued until 1898 when Mr. Morgan withdrew. Since then he has continued his law practice in conjunction with management of his father's estate.

Mr. Morgan is a member of the University Club of New York City, and of the University, Athletic, and Overland Park Clubs, of Denver.—J. C. S.



Edward B. Morgan.

Court in and for the city of Denver. Its jurisdiction did not extend to criminal cases, but otherwise it was much the same as that of the District Court. In common with similar Courts established in other States, it did not prove to be all that had been anticipated for it, and it was abolished by an act of the Seventh General Assembly approved February 20, 1889. During its existence two Judges occupied its bench—James A. Dawson and Merrick A. Rogers.

When Colorado became a State in 1876 Arapahoe county was made a part of the Second Judicial District, with one Judge sitting in Denver, and remained so until 1887, when by an act of the Sixth General Assembly it alone was made to constitute the Second District, having two Divisions of its District Court, with a Judge for each. By an act of the Seventh General Assembly the Court was again amplified, in 1889, to four divisions and four Judges; and by an act of the Eighth General Assembly, in 1891, passed over the Governor's veto by a two-thirds vote and taking effect in April of that year, the fifth division and the fifth Judge were added, making the Court as it is now constituted.

The Constitution as amended in 1877 provides as follows for filling vacancies in any of the judicial positions created by it: Of Judges of the Supreme and District Courts by appointment by the Governor; of District Attorneys by the Judge (or Judges) of the Court of the District for which the retiring Attorney was elected; and of all other judicial officers by the Board of County Commissioners of the County in which the vacancy occurs. Judges of the Supreme, District, and County Courts appointed under these provisions hold their offices only until their successors, who shall be elected at the next general election, shall have been duly qualified. It also provides that all officers provided for in Article VI, excepting Judges of the Supreme Court, shall respectively reside in the district, county, precinct, city or town for which they may be elected or appointed.

The Constitution also provides that all laws relating to Courts shall be general and of uniform operation throughout the State; and the organization, jurisdiction, powers, proceedings, and practices of all the Courts of the same class or grade, so far as regulated by law, and the force and effect of the proceedings, judgments, and decrees of such Courts severally, shall be uniform. It further provides that all process shall run in the name of "The People of the State of Colorado;" and that all prosecutions shall be carried on in the name and by the authority of "The People of the State of Colorado," concluding with, "against the peace and dignity of the same."

Under Section 15, Article VI, the General Assembly may provide that the election of Judges of the Supreme, District and County Courts, and the District Attorneys, or any of them, shall be on a different day from that on which an election is held for any other purpose, and in doing so may extend or abridge the term of office of any such officers then holding, but not in any case more than six months. But no such statutory provision has yet been made.

As the language of the Constitution with respect to qualifications for Judges of all our Courts, as well as for District Attorney, includes only the masculine personal pronoun "he," it would seem that the fundamental law of our State denies to women the distinction of participating, as Judge or prosecutor, in the administration of justice in Colorado.

Upon Colorado's admission to the Union the State became for United States judicial purposes the District of Colorado, with its District Court sitting at Denver. On January 9, 1877, President Grant appointed Moses Hallett District Judge,

Earl M. Cranston, one of the younger lawyers of Denver, was born in Middleport, Ohio, December 3, 1863. His father, the present Bishop Earl Cranston, of the Methodist Episcopal church, who was at that time a resident at Middleport, removed to Denver in 1878 to become pastor of our old Lawrence street Methodist Episcopal church. In 1884 Rev. Earl Cranston was appointed manager of the Methodist Book Concern at Cincinnati and removed with his family from Denver to that city.

In the meantime the subject of this sketch had received the educational advantages of the Denver High School and had entered the University of Denver. Upon completing his course at the last-named institution he became a student at the Cincinnati Law School from which he was graduated in May, 1886. He then returned to Denver, took up his permanent residence here, and began the practice of his profession in which he has been continuously and successfully engaged since that time. In the third year of his practice here, having been as he still is an ardent Republican in politics, Mr. Cranston was elected a Representative from Arapahoe county in the Seventh General Assembly, and became one of the conspicuously efficient members of that body. In 1889 he was appointed County Attorney by the Arapahoe County Commissioners and capably served one term in that position. In more recent years he has given his attention exclusively to the increasing direct demands of his practice, a part of which has been in untangling and adjusting, as receiver, assignee and counsel, the affairs of two National Banks and one Savings Bank which failed in consequence of the panic of 1893.*

In April, 1891, Mr. Cranston married Miss Florence, daughter of the late Frederick W. Pitkin who was twice elected Governor of Colorado, and whose last term closed in January, 1883.—J. C. S.

---

*Subsequent to the close of our record, Mr. Cranston was appointed United States District Attorney for the Colorado District, to succeed Greeley W. Whitford.

Earl M. Cranston.

and Westbrooke S. Decker District Attorney. Judge Hallett's term of service still continues. The District of Colorado is embraced within the Eighth United States Circuit, the Judges of which are David J. Brewer, Associate Justice of the United States Supreme Court; and Circuit Judges Henry C. Caldwell, of Little Rock, Arkansas; Walter H. Sanborn, of St. Paul, Minnesota; and Amos M. Thayer, of St. Louis.

During the fifteen years in which Colorado was under a Territorial form of government there were rather many changes among the Judges of its higher Courts. Judge Pettis, after less than a year of nominal service, resigned early in the spring of 1862 (the exact date not being of record), and was succeeded by Allan A. Bradford, commissioned June 6, 1862, and who served until March 3, 1865. After about two years of service Chief Justice Hall resigned (on a date not of record) and was succeeded by Stephen S. Harding who was commissioned July 10, 1863. Judge Bradford was succeeded by Charles F. Holly, commissioned June 10, 1865. Judge Armour retired March 28, 1865, and William H. Gale was commissioned June 10 of that year to succeed him. Chief Justice Harding "resigned" December 31, 1865, and was succeeded by Moses Hallett, commissioned April 10, 1866. Judge Holly retired May 25, 1866, and was succeeded by W. R. Gorsline, commissioned June 18, 1866. Judge Gale retired July 19, 1866, and was followed by Christian S. Eyster, commissioned August 11, 1866. Congress not having been in session at that time, Judge Eyster's appointment was confirmed by the United States Senate late in the following winter, and another commission issued to him March 2, 1867. Judge Hallett was re-appointed Chief Justice April 6, 1870, and so served until Colorado became a State of the Union. Judge Gorsline retired June 18, 1870, and was succeeded by James B. Belford whose commission was dated June 17, 1870. Judge Eyster retired March 2, 1871, and was succeeded by Ebenezer T. Wells whose commission, dated February 8, 1871, was to be effective on March 2nd. Judges Wells and Belford retired March 1, 1875, and were respectively succeeded by Andrew W. Brazee and Amherst W. Stone, who qualified on that day; the dates of their commissions not now being available. This left Chief Justice Hallett and Associate Justices Brazee and Stone on the Bench of the Territory's higher Court when it passed out of existence upon the admission of Colorado as a State.

As, with a few exceptions, the men who sat as Judges of these higher Courts in the earlier period of Colorado's Territorial history did not approach a high standard for judicial qualifications, some outlines of their personal characteristics may be of historical interest.

Chief Justice Hall was a pleasant well-mannered gentleman, agreeable to members of the Bar, but of mediocre legal ability. He was an upright Judge, but left no lasting monuments in the early judicial history of Denver and Colorado. His identification with our city and State terminated with his retirement from the Bench.

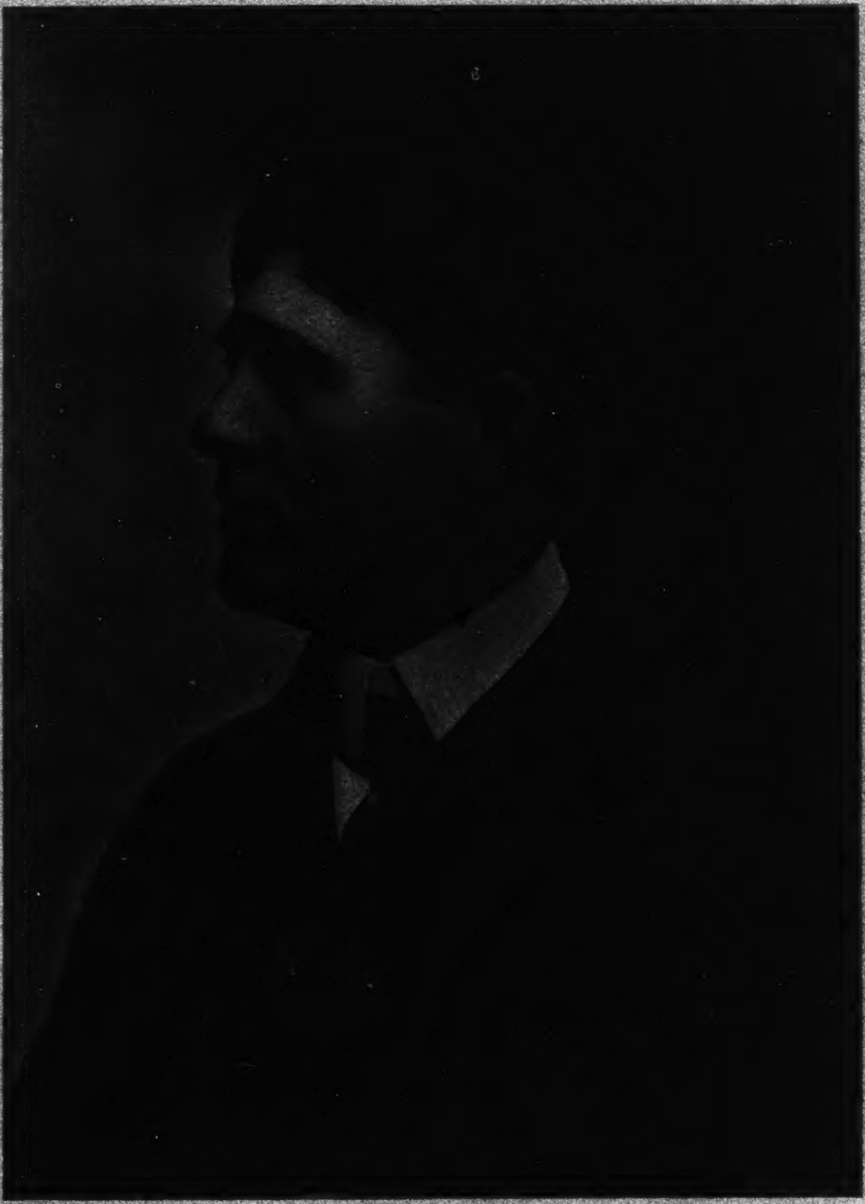
Judge Armour was an unworthy man of most unhappy if not offensive personal characteristics, and who was execrated by the Bar and by litigants. The Legislature of 1862 memorialized the President for his removal, but the civil war was on and no attention was given the memorial. A subsequent Legislature re-districted the Territory, created a Judicial District comprising the Mexican counties of Costilla and Conejos, and assigned Armour to that District as a sentence of deserved exile. But he refused to go there, continued to live at Central City, drew his salary and served out his term, meanwhile holding no courts anywhere; Judge Harding having been assigned to Courts for Central City as well as for Denver, and Judge Bradford holding the Courts in Costilla and Conejos, as well as at Pueblo.

Judge Pettis was only nominally a Judge, for it would seem that he never held Court in his District nor in any other during his brief tenure, and he had few qualifications for doing so. Rather fond of social intercourse, and of the gaieties of life, he complained of the isolation of existence in the Southern District. He remained in Denver during nearly the whole of his short stay in Colorado, and then returned to Pennsylvania.

Judge Bradford, who succeeded Pettis, was a Colorado man. Although born in Maine, he was reared in the west; had lived in Iowa, Nebraska, and California before coming to Colorado in 1859,

---

James H. Brown, lawyer, was born in St. Joseph, Mo., September 3, 1859. Eldest son of Henry C. Brown, our subject was an infant when his parents crossed the plains to Denver in the spring of 1860. He received his education in the public schools of this city, the Colorado Seminary, and in the Northwestern University at Evanston, Illinois. In 1877 he entered the Denver law office of G. G. Symes and W. S. Decker and in 1879 admitted to the bar. In 1881, just after attaining his majority, he was admitted to practice before the Supreme Court of the United States, and immediately took charge of the long litigation between his father and the State over the site of the Capitol building, and which he conducted with extraordinary ability. In 1885 he was elected City Attorney and served the city with his characteristic energy and fidelity to the close of the term, after which he became counsel for the Consolidated Tramway Company. In 1890 Mr. Brown was elected a member of the Eighth General Assembly, became the leader of his party in the House, and was the author of much important legislation enacted by that Assembly. A Republican in politics, he has served long and well in the higher councils of his party and is one of its leaders in the city and State; but neither in that nor in other avenues of activity has he permitted anything to interrupt his devotion to the profession in which he has won a stable position of distinction.—J. C. S.



James H. Brown.

and had been one of the Judges of a "Miners' Court" in the old Gregory District that embraced the site of Central City. He was proverbially eccentric, but popular, made an excellent Judge, and was the first Colorado citizen appointed to a seat on the Territory's Supreme Bench.

Judge Harding, who succeeded Hall as Chief Justice, early acquired and deserved the ill favor of the Bar of Denver, and the lawyers soon refused to try their cases before him. He had been a Territorial Governor of Utah previous to his appointment as Chief Justice of Colorado, and was considered as belonging to the "carpet-bag" class of Territorial officers. His exit from the Bench and from Colorado was inglorious to a marked degree, and his precipitate flight was thought to have been accelerated by his apprehensions of personal violence involving the use of a rope, at the hands of the people of the Clear creek districts.

Judge Holly, who chronologically succeeded Judge Bradford, was assigned to the First District, to take the place of Armour at Central City. Although a Colorado man, he was but little more popular as a Judge than his predecessor at Central City. Charges were preferred against him and he was soon removed to be succeeded by Judge Gorsline. Holly was a "Pike's Peaker," and had been a lawyer and miner at Central City, and one of the members from Gilpin and Clear Creek counties in the first Territorial Legislature. He left Colorado soon after his removal from the Bench in 1866.

Judge Gale, who nominally succeeded Armour, was assigned to take the place of the discredited Harding on the Bench of the Denver District Court, but not as Chief Justice; Harding's "resignation" not taking effect until the close of 1865. Gale was another of the political pilgrims of that era, officially short-lived, little known in Denver and Colorado, and soon forgotten after he left the Bench and the country.

Judge Gorsline was one of the leaders of the pioneer Bar of Central City. A former District Judge in Wisconsin, he was an able lawyer, a polished gentleman, one of the most amiable and kindly men among the early settlers of Colorado, and also one of the most respected and beloved of the pioneer lawyers. Indeed, when Judges Gorsline and Hallett were appointed to the Bench from the ranks of Colorado's pioneer citizens, there was great rejoicing by the Bar and by the people at large who hailed their advent to the Judiciary of the Territory as a long-sought recognition of the principle of "home rule," and as the beginning of the end of the detested system of Territorial government that admitted to official positions unworthy men who had no stake in the country and had no desire or intention to acquire one.

Judge Moses Hallett was appointed to succeed Harding as Chief Justice, but did not succeed him as Judge of the Denver District; Gale continued in that position until the summer of 1866 and was followed by Judge Eyster. Judge Hallett was assigned to the Pueblo District and was the actual successor there of Judge Bradford. Judge Hallett remained, as already mentioned, the Territory's Chief Justice until it became a State; but as Judge of the Third, or Pueblo, Judicial District.

The Territorial Judicial appointments following those of Judges Gorsline and Hallett were also of men of high standing, though not all of them were residents of the Territory when appointed. They were, as stated on a preceding page, Judges Eyster, Belford, Wells, Brazee, and Stone; and they honored themselves as well as the Commonwealth.

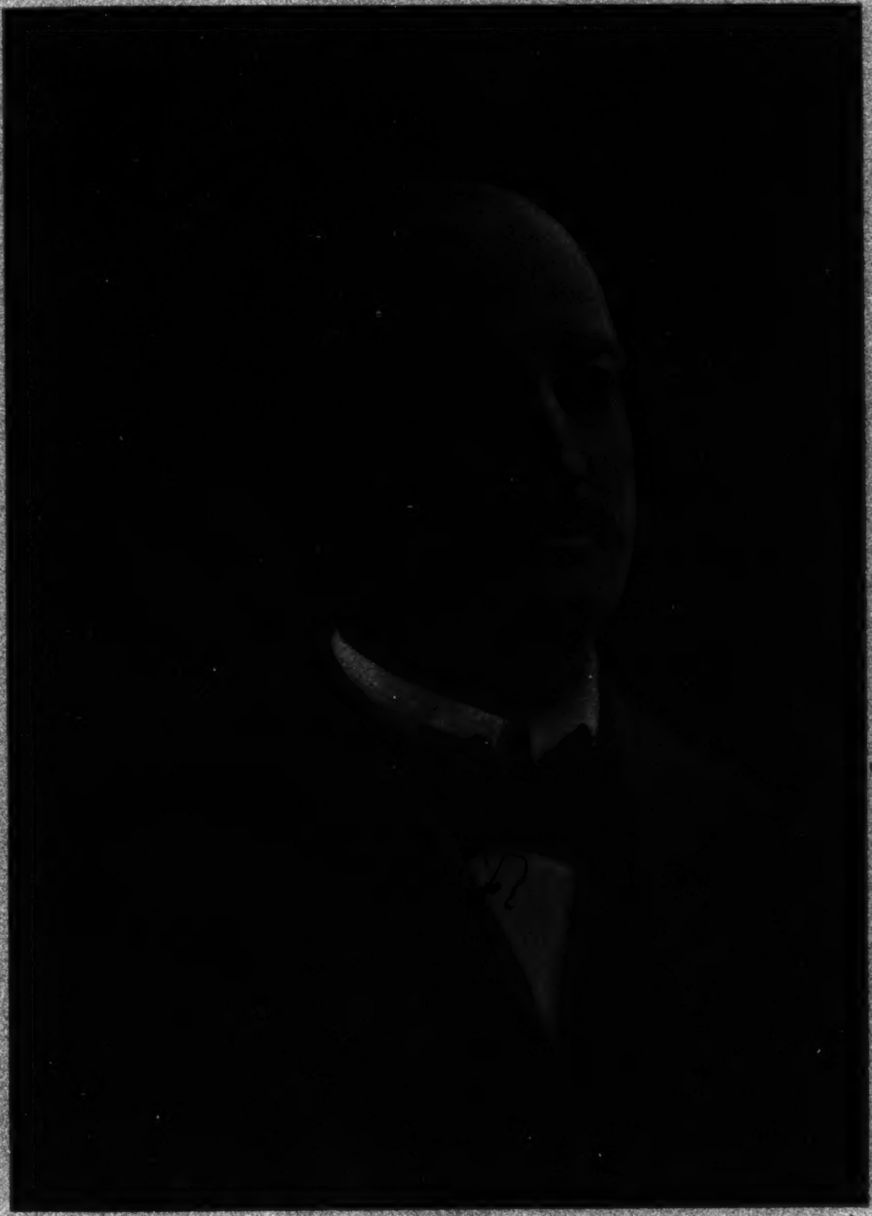
During the civil war times the movements of Judges and other officers of the Territorial Courts were not always free from danger. In 1861 when Confederate sympathizers were perniciously active, and later when the Indians were on the war-path, Court officers at times had to have military escorts on their journeys. Upon several occasions during those years the Governor provided such escorts to protect Court officers while travelling between Denver and the southern parts of the Territory.

In the Territorial period Arapahoe county was, as already indicated, part of the Second Judicial District, the Court sitting at Denver; and during that time Judges Hall, Harding, Gale, Eyster, Wells, and Brazee successively occupied its Bench.

In the Territorial period the other and lower Court at Denver was that of Probate, the predecessor of our present County Court. Its old records, incomplete as to the earlier years, do not clearly indicate exact dates upon which its Judges entered upon their duties. Its first Judge was J. N. Odell who, as related in our historical account of Arapahoe county, was elected at the first county election under the jurisdiction of Colorado Territory, held December 2, 1861. But his administration is practically unknown of record in the archives at the Court House. Odell was succeeded by the election in the autumn of 1863 of James Hall who served through 1864 and 1865, and who made the land

---

John H. Reddin, lawyer, was born in Seneca county, N. Y., October 13, 1858. After a full course in the public schools of the city of Norwich, N. Y., he studied law at that place, and was admitted to the Bar at Albany in 1880. In April, 1881, he came to Colorado and located in Denver, bringing with him little capital save the knowledge he had acquired in preparation for his chosen profession. For about a year after his arrival here he was employed in the office of the District Attorney, and then entered upon the practice of law in which he has since been continuously engaged in the Courts of Colorado. Refraining from any participation in politics beyond performing the duties of a citizen, and never having sought official position, he has during his twenty years of citizenship in Denver won his known success by fidelity to his profession.—J. C. S.



John H. Reddin

entry under the "Congressional Grant." Judge Hall's successor was Omer O. Kent who filled the position until the close of 1867, when he was succeeded by Major Jacob Downing who served two years. Major Downing's successor was Henry A. Clough whose term extended from 1869 to the autumn of 1873, and who was followed by William C. Kingsley. Kingsley retired in October, 1875, and was succeeded by Amos Steck whose period of service covered the transition from Territory to State, and did not terminate until July 14, 1880.

At our first State election (October, 1876) three Judges of the Supreme Court were elected. Section 7 of Article VI of the State Constitution provided—

> "The term of office of the Judges of the Supreme Court, except as in this article otherwise provided, shall be nine years."

Section 8 of that Article of the Constitution reads as follows:

> "Sec. 8. The Judges of the Supreme Court shall, immediately after the first election under this Constitution, be classified by lot, so that one shall hold his office for the term of three years, one for the term of six years, and one for the term of nine years. The lot shall be drawn by the Judges, who shall for that purpose assemble at the seat of government, and they shall cause the result thereof to be certified to the Secretary of the Territory, and filed in the office. The Judge having the shortest term to serve, not holding his office by appointment or election to fill a vacancy, shall be the Chief Justice, and shall preside at all terms of the Supreme Court, and in case of his absence, the Judge having in like manner the next shortest term to serve shall preside in his stead."

Section 1190 of the General Statutes of 1883 provides—

> "The regular term of office of all State, district, county, and precinct officers and of the Judges of the Supreme Court shall commence on the second Tuesday of January next after their election, except as otherwise provided by law."

At the first State election Henry C. Thatcher, Samuel H. Elbert, and Ebenezer T. Wells were elected Judges of the Supreme Court. Judge Thatcher's term was decided by lot to be the short one of three years and ending in January, 1880; that of Judge Elbert, for six years, ending in 1883; and that of Judge Wells, for the term of nine years, ending in January, 1886.

Judge Wells resigned September 1, 1877, and was succeeded, by election, by Wilbur F. Stone who served the remainder of the term, to January, 1886. Judge Thatcher was succeeded by the election in 1879 of William E. Beck who served from January, 1880, to January, 1889. Judge Elbert's successor was Joseph C. Helm elected in 1882 for the term from January, 1883, to January, 1892. In 1885 Judge Elbert was again elected, as the successor of Judge Stone for the term from January, 1886, to January, 1895; but resigned on September 1, 1888. To temporarily fill this vacancy Governor Adams appointed Melville B. Gerry, who served from September 13, 1888, to December 4, 1888. To fill the remainder of Judge Elbert's term, Victor A. Elliott, who had for twelve years been on the Bench of our District Court, was elected in the autumn of 1888, and served from December 4, 1888, to January, 1895. At that same election Charles D. Hayt was elected to succeed Judge Beck, and served from January, 1889, to January, 1898. In 1891 Judge Helm was re-elected for the full term from January, 1892, to January, 1901; but resigned September 24, 1892. In the autumn of that year Luther M. Goddard was elected for the remainder of Judge Helm's term and served until its expiration. In 1894 John Campbell was elected as Judge Elliott's successor for the term from January, 1895, to January, 1904, and is now on the Bench. In 1897, William H. Gabbert was elected Judge Hayt's successor for the term from January, 1898, to January, 1907, and is one of the present Judges. In November, 1900, Robert W. Steele, then Arapahoe County Judge, was elected to succeed Judge Goddard for the term from January, 1901, to January, 1910.

By the operation of the Constitutional provision, the Chief Justices of our State Supreme Court have successively been Judges Thatcher, Elbert, Beck, Helm, Hayt, and the present Chief Justice Campbell.

After the Eighth General Assembly had, in the spring of 1891, provided for the organization of the Court of Appeals, Governor Routt appointed G. Q. Richmond Judge for the term from April, 1891, to April, 1893; Julius B. Bissell for the term

---

Archie MacNichol Stevenson was born in Rothesay, Scotland, in 1857; son of P. C. and Elizabeth Stevenson. When our subject was six months old the family removed to Canada, and three years later located in Vernon county, Wisconsin.

Young Stevenson attended the common schools there and the High School at Viroqua; and later Houghton's Private Academy. He then studied law and was admitted to the Bar when twenty-one years old.

In the autumn of 1876 Mr. Stevenson removed to Nebraska where he practiced law three years. Coming to Colorado in 1879 he has been actively engaged here in the practice of his profession since that time. He was a Republican member (from the Gunnison District) of the State Senate in the Sixth and Seventh General Assemblies; and in 1896 a Delegate in the Republican National Convention at St. Louis, from which, in obedience to the instructions of the Colorado State Convention, he withdrew upon the adoption of the anti-silver plank of the National platform. In 1900 he returned to the Republican party, in which he is an able leader, vigorously supported its candidates and policies (silver having ceased to be an issue), and is now a member for Colorado of the Republican National Committee.—J. C. S.

A. M. Stevenson.

from April, 1891, to April, 1893; and Gilbert D. Reed for the term from April, 1891, to April, 1897. Charles I. Thomson was appointed for the term from April, 1893 to April, 1899, succeeding Judge Richmond; and Judge Bissell was re-appointed for the term from April, 1895, to April, 1901. Adair Wilson was appointed for the term from April, 1897, to April, 1903; and Judge Thomson re-appointed for the term from April, 1899, to April, 1905; Judges Bissell, Wilson and Thomson constituting the Court at the close of our record.

Of our District Court of the Second Judicial District (Arapahoe county), Victor A. Elliott who was chosen at the first State election (October, 1876), and who was the only Judge until April, 1887, served until January, 1889. Platt Rogers, appointed by the Governor under the act of 1887, served from April, 1887, to January, 1888. Westbrooke S. Decker, elected to succeed Judge Rogers, from January, 1888, to January, 1891, when his resignation took effect. George W. Allen, elected to succeed Judge Elliott, from January, 1889, to January, 1901. Oliver B. Liddell and Thomas B. Stuart, appointed by the Governor under the act of 1889, from April, 1889, to January, 1890. David B. Graham and Amos J. Rising, elected, from January, 1890, to January, 1895. John A. Bentley, elected to succeed Judge Decker, January, 1891, to January, 1895. Alvin Marsh, appointed by the Governor under the act of 1891, from April, 1891, to January, 1892. David V. Burns, elected to succeed Judge Marsh, from January, 1892, to January, 1895. Peter L. Palmer, Frank T. Johnson, O. E. LeFevre, and C. P. Butler, elected, from January, 1895, to January, 1901. At the November, 1900, election Judges Palmer and Johnson were re-elected for terms of six years, and with them Booth M. Malone, Samuel L. Carpenter and John I. Mullins were chosen as successors to Judges Allen, Butler and LeFevre. District Courts, the reader is reminded, are parts of the State government establishment, and not of that of the county.

Of the County Court five men have served as Judges since Colorado became a State. As already mentioned, Judge Amos Steck was Judge of the Territorial Probate Court of Arapahoe county when Colorado became a State, and with that change he held over and became the first Judge of our County Court, his service continuing by subsequent election, until July 14, 1880. Benjamin F. Harrington succeeded him and was continued until January 12, 1887, when George F. Miller followed and served until January 10, 1893. Owen E. LeFevre succeeded Miller for a term ended January 7, 1895, and his successor was Robert W. Steele, whose two terms covered the period terminating in January, 1901. In January, 1901, the County Commissioners appointed Ben. B. Lindsey to succeed Judge Steele who, in November, 1900, had been elected a Judge of the Supreme Court. The salary of the County Judge had been $5,000, but the Twelfth General Assembly, in 1899, reduced it to $4,000, the change to take effect in January, 1901.

The Bar of Denver is represented in two organizations of lawyers—the "Denver Bar Association," and the "Colorado Bar Association." The former and older was organized October 31, 1891, and, as its name indicates, is the local organization, with a membership of about 250 at the close of 1900. A. E. Pattison was its first President, and was succeeded in turn by George C. Norris, T. J. O'Donnell, Cass E. Herrington, W. Henry Smith, Charles D. Hayt, H. W. Bryant, and Hugh Butler. The Colorado Association, the membership of which is distributed throughout the State, was organized in Denver September 9, 1897, with Hugh Butler, of Denver, President; Charles H. Gast, of Pueblo, First Vice President; Charles Cavender, of Leadville, Second Vice President, and Lucius W. Hoyt, of Denver, Secretary and Treasurer. The by-laws provide that any member of the Bar of Colorado residing and practicing in the State is eligible to membership; and at the close of 1900 the association included about 150 lawyers, having begun with sixty-three. The two organizations are entirely separate, though a large number of Denver lawyers belong to both. The objects of these associations are to encourage more intimate relations among and between lawyers, to better serve the public interests, and to maintain a high standard of professional ethics.

It is, and with no tendency toward beneficial results, becoming fashionable to find fault with our Courts, chiefly because of their alleged "interference" in the affairs of men; and as a consequence we find the phrase "government by injunction" in our present political vocabularies. No man is in the slightest danger of being enjoined from doing right, or of being compelled to do wrong, if our Courts are given a fair chance to understand the case; and, it may be remarked, they make it their business to see that a fair chance be given. In no division of our system of government are the rights of men more watchfully guarded than in and by our Courts. Legislatures may blunder and be slow to rectify; executives may be ignorant, or prejudiced, or dishonest, or all three; but our Courts stand as a bar to injustice from these and all other sources, and the probability of a wrong passing undetected in review before them and receiving their sanction is almost too remote to be seriously considered. Analyzing their rules of practice, their deliberate methods of procedure, their cautious approaches to final decision, it would seem that every safeguard human ingenuity has been able to devise has been set up against the possibility of a wrong being committed in the name of Justice. Our Courts are the protectors and defenders of the rights of men and, far more than we are accustomed to keeping in our daily thoughts, they are the bulwarks between peaceful conditions of society and a state of anarchy.

CHAPTER LX.

Pioneer Churches—Religious Influences in Frontier Communities—First Religious Meeting at Denver—Church Work in 1859—Sunday in Mining Camps—Town Companies Friendly to Churches—Pioneer Clergymen—First Church Organization—First Sunday School—Town Companies' Lot Donations to Church Organizations—Attitude of "Bad Men"—Organization of Episcopal Church—History of the Several Pioneer Denominational Organizations—Present Number of Church Organizations in Denver—Young Men's Christian Association.

The frontier "cities," towns and settlements of the west of forty years ago have not, as a rule, left accounts of their social conditions at that time that would persuade the student of their history to believe them to have been communities in which religious sentiments exerted much influence, or that churches were institutions that successfully appealed to the better side of human nature in the motley collection of human beings which constituted their usually rough and reckless, and often boisterous, populations. Yet, he who carefully searches the records of these communities, and gathers and sifts the reminiscences of their surviving pioneers, will find that the influences of religion and churches were present in all, or nearly all, of them, from their beginning—gentle, persistent, far-reaching influences.

It would be asking too much of the readers of these pages to invite them to consider the pioneers of Denver, generally, as men in whose minds religious convictions were first and foremost, or occupied even a modestly advanced position in their thoughts. The great majority was not of such men. As mentioned in an early chapter of this work, nothing could have been much further from the purposes and motives of our pioneers in coming here, and after getting here, than the spiritual welfare of themselves or of any other human creatures in the then wilderness of plains and mountains. Nevertheless, there were among them some —more, perhaps, than might have been expected at such a time and under such circumstances—whose thoughts were not altogether given over to gaining possession of the glittering grains and scales of gold with which every bar and stream, ravine and gulch, mountain-side and valley were fondly believed to abound; some who had not forgotten that there may be influences thrown around the daily lives of women and men far higher and better than any the possession of gold may bring or its expenditure buy.

While the fact is in no way related to the institution of church work in pioneer Denver, the first clergyman, so far as there is any account, who saw the site of Denver, was the French priest who passed through this part of the country in 1739. But, as we have told, Father Mallet came as an explorer and not as a missionary; and therefore may not be counted in this chapter of our History. Then, there was the Cherokee Baptist preacher, Rev. John Beck, "promoter" of the Cherokee division of the Russell party which arrived here in June, 1858. But, as in the case of Father Mallet, Brother Beck did not qualify himself to figure as Denver's pioneer clergyman, for he came solely as a gold-seeker, and as the reader has seen, did not stay very long in pursuit of that occupation.

Among those who came here late in the autumn of 1858 was Reverend George W. Fisher, a Local Elder of the Methodist Episcopal church, who had theretofore been laboring in western Missouri. He was the first clergyman of any church in the two poor little hamlets at the mouth of Cherry creek. We have already told how he held services in the homes of the pioneers during that first winter—for a church building at that time could not be considered—and we need not repeat the story here. He preached his first sermon, the first one heard at the mouth of Cherry creek, early in December, 1858, under a cottonwood tree that stood at the intersection of what are now Eleventh and Wewatta streets and in front of the double cabin built by "the Russell boys" and Trader John S. Smith. Mr. Fisher faithfully and earnestly kept alive the religious sentiments of the isolated community through that winter; and of his further services some account will later appear on these pages.

The Directors of the two established pioneer town companies were not indifferent to the cause of religion; whatever their official motives may have been, we find them on record very early in their proceedings as endeavoring to make provisions to encourage church-building. At a meeting of the Denver Town Company's Directors, the date of which is omitted from the entry, but which, judging from the dates of the next preceding and next following entries in their record, was held late in December, 1858, or early in January, 1859, when their town was barely a month old, they unanimously agreed to donate to "the Presbyterian church" and to "the Methodist church" four town lots each for church purposes. At that time there was no church organization in Denver and, therefore, these proffered donations availed nothing. However, a year or so later lots one and two in Block ninety-seven, "East Denver," were set apart by the Denver Town Company's Directors for the Methodist Episcopal church, but the pioneer church organization neglected to accept them and acquire title. The Bank Block on the southwest corner of Seventeenth and Arapahoe streets occupies those two lots.

Although the Denver Town Company was first with its offered donations, the Aurarians across the creek were not far behind them. The Directors of the Auraria Town Company at their meeting held on January 17, 1859, when their town was fairly two months old, unanimously adopted the following resolution:

> "Resolved, That there be and there is hereby Donated to the first four Religious Societies that will build a church or house of Worship in the City of Auraria one lot each, to be selected by any one appointed by the Societies for that purpose."

It may be true that worldly motives, and the spirit of jealousy and rivalry that rioted between the two "cities," back and forth across Cherry creek, had something to do with these free-handed offers of town-lots to pioneer churches; but if they did, they did not wholly constitute the motives, for there were some men in both towns who sincerely desired to see churches built, and were ready to give further assistance.

But no churches were built that winter, nor were there any church buildings undertaken during the year 1859. The spring opened so discouragingly and the prospects for the discovery of permanent and profitable gold deposits were so dismal that it appeared doubtful whether the Cherry creek settlements would survive until another winter. Then, when, and for several months after, the gold was found, the two communities were in such an uproar of excitement, and so thronged by thousands of impatient newcomers, that church-building was forgotten, and the thoughts of nearly every man were centered on the mines or on ways and means to get a share of their output. But Mr. Fisher continued at his work and kept alive the fires he had been instrumental in kindling late in the autumn of the previous year.

On one of those June days in 1859, in the midst of the excitement over gold and the politics of the then prospective "Jefferson Territory," Reverend L. Hamilton, a Presbyterian minister—the first of his denomination to come, reached Denver. On the 15th of that month he held his first services in the Pollock Hotel, on the southwest corner of Market and Eleventh streets. Later he held meetings in a low, two-story building on the north side of Larimer street between Fifteenth and Sixteenth streets. The first meeting was held there when the building was but partly finished. Some boards were laid on the joists for the speaker, and his hearers stood or sat upon the other joists. After the building was finished the meetings were held in the second story. Mr. Hamilton also preached in other places and always had comparatively large and respectfully attentive audiences. He continued his services through the summer and autumn of that year, and they constituted the second series of religious meetings held in Denver.

Albert D. Richardson, of the Greeley party which visited the "Gregory Diggings" before the middle of June, 1859, records the following:

> "When I asked a miner if there was any church he replied: 'No; but we are going to build one before next Sunday.' Erecting a temple of worship in a week was in thorough accordance with the prevailing spirit."

Richardson was there again, later in that month, and thus describes what he saw on a Sunday morning:

> "On Sunday morning a walk through the diggings revealed nearly all the miners disguised in clean clothing. Some were reading and writing letters, some ministering to the sick, and some enacting the part of Every-man-his-own-washerwoman—rubbing valiantly away at the tub. Several hundred men in the open air were attending public religious worship—perhaps the first ever held in the Rocky Mountains. They were roughly clad, displaying weapons at their belts; and represented every section of the Union and almost every nation of the earth. They sat upon logs and stumps, a most attentive congregation, while the clergyman, upon a rude, log platform, preached from the text: 'Behold, I bring you good tidings of great joy.' It was an impressive spectacle—that motley gathering of gold-seekers among the mountains, a thousand miles from home and civilization, to hear the 'good tidings' forever old and yet forever new."

The identity of the preacher referred to by Richardson is unknown. Among the active miners there at that time were several men who had formerly occupied pulpits back in the States.

By August of that year a Union church had been organized, the communion service celebrated, preaching on Sundays, and prayer meetings on Wednesday evenings provided for, at the mouth of Gregory Gulch where the town of Black Hawk afterward came into existence. It is to be recorded that in this respect the mining camps were in advance of the town communities, just as they were in the administration of their laws for the preservation of life and protection of rights and property.

On June 29, 1859, soon after Mr. Hamilton's coming, two other ministers arrived at Cherry creek. They were William H. Goode and Jacob Adriance, and their object was to organize the first Methodist Episcopal church work in Denver. The Kansas-Nebraska Conference at its session in April, 1859, at Omaha, had established the "Pike's Peak and Cherry Creek Mission," as Superintendent of which Bishop Scott had appointed Mr. Goode, a man who had a large, varied and most interesting experience in mission work on the frontier through many years before. Jacob Adriance had also been engaged in similar work in eastern Kansas and eastern Nebraska for several years, and just prior to his coming hither had been stationed at the Rock Bluff Mission in Nebraska.

Rev. Jacob Adriance.

On the first Sunday after their arrival—July 3rd—these Methodist pioneers conducted their first services in Denver. These meetings were also held in Pollock's Hotel, Mr. Goode preaching in the forenoon and Mr. Adriance in the evening. On the following Sunday, July 10th, they preached at Mountain City (later incorporated in Central City), and the next day, July 11th, held quarterly conference there and put Rev. G. W. Fisher in charge of the mountain work. This was the first church organization anywhere in the Rocky Mountain country; all preceding religious services not having been held under any form of organization.

Goode and Adriance returned to Denver late in July, and on the 31st held services in the house of Samuel Dolman, whose name has heretofore appeared in our narrative. On August 2, 1859, Mr. Goode held quarterly conference here and effected the first church organization in Denver. Jacob Adriance served as Secretary, and Alexander Carter, H. J. Graham, and Henry Reitze were elected stewards. From that beginning Trinity Methodist Episcopal church dates its history.

On August 7th Goode preached his last sermon here. On the 8th he started on his return to the States, and never came back to Denver. The original field of the Pike's Peak and Cherry Creek Mission had embraced all the region round-about; but after the conference at Mountain City and the one here on August 2nd, the local name was changed to "The Auraria and Denver City Mission," which included Golden City, Arapahoe, Boulder City, and Twelve Mile Diggings. Mr. Goode had placed Mr. Adriance in charge of this mission, and the latter immediately established himself in Auraria. In a reminiscent letter received in Denver from him in December, 1898, he said of his preparations after Goode's departure, and of his subsequent work:

> "Up to this time I had camped with Brother Goode, but now I must find a home elsewhere. Thinking it would not be safe for me to pay $7 per week for board, I rented at $10 per month, a cabin about 12x14, with one window and door but no floor. It was located about two blocks across the creek from the church that was built in 1860 [the Methodist Episcopal-South]. I carpeted the ground with hay, bought a little sheet-iron stove with its fixtures, a tin plate and a cup, knife and fork, and spoon, made a table, stool, and bedstead, and began housekeeping, thanking God that there was one place that I could call home."
>
> "My pastoral work was with the families—not many; in business houses, hotels, camps by the wayside, travelers on the way—anywhere that I could get to talk with anybody."
>
> "Nothing seemed settled. It was going and coming. Persons would join the church, and the next time I came round I could not find them. And so it, was, largely, with my congregations. Then we had no permanent place of worship. In warm weather I would hunt up unfinished buildings on Friday or Saturday, and post notices of time and place of preaching. At the appointed time I would be there and begin to sing, when the men—and occasionally a woman or two—would gather in, fill up the room, and often more outside than in, patiently standing, with open mouths, while I would talk of the gold that was certain and pure."

Mr. Adriance's cabin was of the then usual type—one story, of rough logs, and with a "dirt-roof." As nearly as its location can now be determined, it was in the block bounded by Larimer, Lawrence, Eleventh and Twelfth streets. Its one window was a glazed sash that had been imported from New Mexico; and such things were luxuries here in those days. Late in October, 1859, Mr. Fisher, following the example of most of the miners, left the mountains and came to Denver. He then shared Adriance's cabin, and thereafter preaching services, class and prayer meetings were held in it as circumstances required; and it also sheltered the first Sunday School in Denver.

Rev. William H. Goode.

This first Sunday School was organized in November, 1859. A considerable number of the people who had come here that year and located in the two towns brought children with them. The fact that O. J. Goldrick then had between fifteen and twenty children attending his pioneer school led L. N. Tappan, formerly of Boston, and who was prominent in Denver affairs in the early days to suggest to the teacher the propriety of organizing a Union Sunday School to embrace all denominations. Goldrick at once approved, and the two sought and obtained the co-operation of Adriance and Fisher, and of D. C. Collier. A meeting was held at Mr. Adriance's cabin at which arrangements were made to open the school. In the issue of the Rocky Mountain News of November 3, 1859, the following announcement was published:

Jacob Adriance's cabin.

> "A union Sunday School for the children of Auraria and Denver will be held every Sunday at 3 o'clock P. M., at the house of Preachers Fisher and Adriance, near Cherry Creek. It is particularly requested that the parents and guardians will endeavor to have their children attend the school regularly and punctually. Books and children's papers will soon be furnished to the scholars. The school will not only be a union school for both towns, but a union of all denominations. (Signed) George W. Fisher, Lewis N. Tappan, Jacob Adriance, D. C. Collier, O. J. Goldrick."

The school was opened on November 6th with twelve children in attendance; the only adult person present beside the five who had published the announcement, was "Aunt" Clara Brown, an excellent pioneer colored woman. The school was organized by unanimously electing Mr. Collier Superintendent. Mr. Tappan had sent to the Baptist Sunday School at Lawrence, Kansas, and got a donation of books which, upon their arrival, and to his pleasant surprise, he discovered were the same ones he had sent to the Lawrence school from Boston some years before. These books were later sent to the first anti-Mormon Sunday School organized in Salt Lake City.

This Union Sunday School steadily increased in size until "the house of Preachers Fisher and Adriance" could no longer accommodate it. Its meetings were then held in the Masonic Hall that stood at present numbers 1346-54 Eleventh street, and in June, 1860, the school was merged in the one then organized by the Methodist Episcopal church. During most of the period of this pioneer Sunday School's existence, Miss Indiana Sopris, who later became Mrs. Samuel Cushman, served as assistant to the Superintendent.

In the autumn of 1859 there was also a revival of official, or town company, interest in church affairs, and we find in the old records of the two companies quite a series of resolutions and adopted motions intended to result in promoting church building. At the meeting of the Denver Town Company Directors held on November 19, 1859, the following entry was made in their record with a notation that Clancey, Blake, and Whitsitt were appointed to carry it into effect:

> "Mr. Clancey moved a committee of three be appointed to see Mr. Guiraud in relation to a Catholic Church, and that said committee be further empowered to reserve grounds for them, if they should determine to build a church in Denver City."

The Town Company brethren were strictly non-sectarian in their good-will and donations. Those of the Auraria City Company had, nearly a year before, made a sort of blanket offer of lots to the "first four Religious Societies" which would build on them; and about the same time the Denver Directors had specifically offered to provide ground for Presbyterian and Methodist churches. The latter had, also, now made a specific offer to the Catholic church, and at their next meeting went still further. On December 26, 1859, the Denver Directors resolved, on motion of R. E. Whitsitt—

> "That the trustees of the Hebrew Synagogue be donated ten lots to be selected by the Secretary and donate the same to them provided they build a house of worship in Denver City, within Eight Months from this date. Said house to cost not less than $700."

Further along in the record of the proceedings of this meeting appears the following entry:

> "The Board instructed the President and Secretary to [see] Mons. Guiraud in relation to Catholic Church and Make the Necessary agreement with him in relation to Said Church."

At their meeting held on January 9, 1860, the Denver Directors further increased their church bounties by resolving—

> "That six lots be donated to the Episcopal Church, two of said lots to be 1 & 2 in Block 132, provided a church be Erected on said lots within eight months from this date."

The lots selected for the Catholic church proved unsatisfactory to the Bishop, and on February 14, 1860, the matter was remedied as stated in the following entry:

"The deed given by the Board to the Catholic church was returned and letters from G. Guiraud and Bishop Miege were read giving reasons for declining the same, when on motion the same was accepted."

"On motion Bishop Miege was donated 8 lots in Block 208."

On February 14th, the Denver Directors continued in their liberal well-doing by favorably considering the following:

"A petition from the Congregationalists and Universalists was read when on motion of S. S. Curtis a committee of conference be appointed to confer with the applicants."

The second proposition to Bishop Miege, that of "8 lots in Block 208" appears to have also proved unsatisfactory for, on March 3, the following entry was made in the Denver Town Company's record:

"The Secretary brought up the matter of reconsidering the Donation of one Block of lots to the Catholic Church under certain restrictions, and their refusal to accept the same with the conditions; the Board complied and the same being accepted by the Board, the Secretary moved for a reconsideration. When on motion of Amos Steck that Block 208 be given to them as a donation, instructing the President and Secretary to deed the same to Bishop J. B. Miege."

This arrangement appears to have been satisfactory all around, for it is the last reference to the disagreement the old record contains. Block 208 is the one now occupied by the Court House and was sold to the county by Bishop Machebeuf in 1875. The Catholic church's title to it primarily rested upon this action of the Denver Town Company's Directors but, after the enactment of the "Congressional Grant" law in 1864, and for additional security, Bishop Machebeuf made filing upon it. This latter proceeding has long been supposed to have been that by which the Bishop acquired title to it; but, as the record shows, that supposition was erroneous.

The Denver Town Company's Directors made still further lot donations to churches at that meeting of March 3, 1860. Their record goes on to say:

"The petition of the Episcopal church being read, on motion of R. E. Whitsitt that the Congregation be given (16) Sixteen lots for to Erect their Church and building on."

This was unanimously agreed to, and was followed on April 11th by two more generous donations to other churches; as it was then resolved that—

"A donation of six lots be donated to the Presbyterians for the purpose of erecting a Church."

"On motion also six lots were donated to the Baptists for the purpose of erecting a church."

The foregoing entry, which is a verbatim copy, is the last reference to church donations in the Denver Town Company's record; and it would seem that the gifts, such as they were, had not been stinted. In the meantime the Aurarians, according to their record, had done nothing more than we have stated in the foregoing. It is probable that they realized the impossibility of competing with such lot-giving friends of the churches as the Denver Directors were demonstrating themselves to be, and refrained from engaging in so hopeless a contest.

On January 17, 1860, another clergyman arrived in Denver, from Sheperdstown, Virginia, with the view of remaining permanently. He was an Episcopalian—the Reverend J. H. Kehler of the Diocese of Virginia, who brought his family with him. Of Mr. Kehler's first preaching services in Denver, Colonel S. S. Curtis sent us the following interesting reminiscence:

Rev. J. H. Kehler.

"In January, 1860, an Episcopalian minister named J. H. Kehler ("Father" Kehler, he was familiarly called,) came to Denver, with his four marriageable daughters. As most of us had not heard a sermon for many months, General Larimer and I took it upon ourselves to secure a room for him to preach in. Accordingly, we called upon Ed. Jumps, proprietor of the principal gambling saloon, and the only house having a sufficiently large room on the second floor, for permission to allow services to be held there. He consented, but on the first Sunday the gambling was carried on on the first floor while preaching was proceeding on the second. The flooring was of rought boards with wide cracks between them, and every word uttered by the occupants of the saloon, including those at the gambling tables, was as plainly heard by the congregation as the sermon. On the next Sunday the gambling was suspended for an hour while preaching proceeded, which was considered quite a concession at that time."

It is to be said of nearly all the men like Ned Jumps, proprietor of the famous and infamous "Criterion" drinking and gambling saloon of that period, and of nearly all those who frequented such places, that they were disposed to show in their way a profound respect for religion, religious services and ministers of the gospel. The sincere Christian man who went among them was received with deference, and a misguided ruffian who behaved otherwise, would have had cause for thanksgiving if he escaped with nothing worse than a broken head. The disturber of a religious meeting was almost certain to be called to account for his misbehavior by some of his acquaintances who emphasized their intentions by a threat to use their revolvers, but who at other times and places were as bad as the worst. Most of these men, whose daily lives were periods of wantonness and crime, appeared to regard the pioneer preachers with a kind of superstitious veneration and awe. No class of men were more willing to contribute to the support of religious institutions than they; and they eagerly gave of their gains—mostly ill-gotten ones—to assist in building Denver's first churches. In many instances there was something of pathos in their manner when they were giving substantial proof of an awakened desire to be occasionally identified, in their reckless and stormy lives, with a measure or a movement intended to lead men into higher and better ways. It is questionable whether there was ever developed in any other country a class of men so singular in many of their characteristics as the gambling ruffians and red-handed desperadoes of the old frontier days in the west.

Immediately upon Mr. Kehler's arrival a movement for the organization of an Episcopal church society was begun, and on the evening of January 21st a meeting of Episcopalians, and others interested in the work, was held at Goldrick's schoolhouse in Auraria. L. Badelot was made chairman, and E. D. Boyd, the surveyor, served as Secretary. Mr. Kehler made an address, rather than preached a sermon, and the meeting unanimously decided that arrangements would be made for holding services regularly. At that meeting the foundations of St. John's church were laid.

On May 10, 1860, Rev. John M. Chivington, of the Methodist Episcopal church, arrived in Denver with his family and took up his residence in the city. He came as the First Presiding Elder of the Rocky Mountain District, a division that had been made that year by the Kansas Conference. Chivington was more a man of war than one of peace. When the First Regiment of Colorado Volunteers was organized he was tendered its Chaplaincy; but he demanded a fighting position and was appointed its Major. He became as we have told, an able, conspicuous and noted officer, but his name and fame in the public mind are more definitely associated with the Sand creek horror than with anything else in his military career, an outline of which has been given in preceding chapters.

Early in the summer of 1860 Rev. W. M. Bradford, of the Methodist Episcopal church-South, came to Denver and by midsummer of that year got together an organization of members of his denomination, and of others who had no direct church connections. He then secured ground on the southeast corner of Fourteenth and Arapahoe streets, where he built a small brick church, the first building in Denver erected for church purposes. The outbreak of the civil war in the following spring disrupted the congregation, and many of its members—including Pastor Bradford—left Denver for their former homes in the south. The church stood unused for a while, and then the trustees rented it to the other Methodist organization, and later sold it to Father Kehler's congregation of Episcopalians who made it St. John's church in the Wilderness, of which there remains much more to be told.

By the close of 1860 each of the following-named denominations had organized church societies in Denver and were more or less regularly holding services: Methodist Episcopal, Methodist Episcopal-South, Episcopal, Roman Catholic, and Presbyterian. Only two of these, the Methodist-South, and the Catholic congregations, had church buildings of their own; and the latter's barely came within that year, as the first regular services were held in their first church building on December 30th. The others occupied rented quarters wherever they could find them, and were frequently shifting from one place to another. Vacant storerooms, second-story halls, theaters, and various other shelters were utilized by the three homeless societies; but it was not long thereafter until all of them had roofs of their own over their heads. The pioneer period of church organizations in Denver was drawing to its close and the era of established congregations completely organized was opening. There are many other details associated with the primitive history of each that are of the deepest interest, and while we may not be able to enter far into their particulars, we will endeavor to further consider the more important of them in accounts of the progress of the several denominations.

Pioneer Methodist church building in Denver—Henry C. Brown's former shop. Destroyed by Cherry creek flood of May, 1864.

As our reader will have learned, the Methodist Episcopal was the first denomination to organize a church society at the mouth of Cherry creek. It was, also, the first to establish a denominational Sunday School. As we have heretofore stated, J. M.

Chivington came in May, 1860, as the first Presiding Elder of the Rocky Mountain District. On June 10, 1860, Elder Chivington assisted by Samuel Cort, G. Anderson, A. J. Gill, and others, organized the school in the old Masonic Hall on Eleventh street, in which and up to that time the pioneer Union Sunday School had been holding its meetings. The new Sunday School was named "The First Methodist Episcopal Sunday School, of Denver City, Colorado Territory." Its old record is still in existence, and it states that Elder Chivington presided at the organization meeting, and that Samuel Cort was Secretary. G. Anderson, now of Des Moines, Iowa, was elected Superintendent; H. Hamlin, Assistant Superintendent; A. J. Gill, Secretary; H. Gibson, Librarian; H. B. Potter, Assistant Librarian; and John Atkinson, Treasurer. A committee "consisting of Miss L. A. Chivington, Miss Callison, Mr. A. H. Barker, Mr. Hamlin, Mr. Carter, Mr. Cound, and S. Hart" was appointed to solicit scholars; Elder Chivington having been afterward added to the committee.

The line of descent of the present Trinity Methodist Episcopal Sunday School from that organization of June 10, 1860, is unbroken. The school continued its meetings in the old Masonic Hall and in various other buildings until November, 1861; then in succession it met in the Methodist Episcopal-South church, in the People's Theater on the north side of Larimer street near Fourteenth, in Tom Anderson's carpenter shop at 1041 Larimer street, in Henry C. Brown's carpenter shop that had been converted into a church as we will presently relate, in the Denver Theater on the northeast corner of Sixteenth and Lawrence streets, in the Colorado Seminary building on the southwest corner of Fourteenth and Arapahoe streets, in the Lawrence street church, in the present First Congregational church on the north side of Glenarm street between Sixteenth and Seventeenth streets, and finally in its present home at Broadway and Eighteenth Avenue. Following Mr. Anderson, its Superintendents have been, successively, A. J. Gill, Rev. J. Gilson, Rev. B. T. Vincent, Rev. George Skene, Rev. C. W. Richardson, Edward Nicholson, George F. Wanless, B. A. Wheeler, Frank Church, J. S. Hayes, A. J. Sampson, Rev. Earl Cranston, D. D., Rev. David H. Moore, D. D., Peter Winne, A. L. Doud, George S. Van Law, H. L. Shattuck, N. G. Tanquary, and J. P. Willard.

When Elder Chivington came to Denver he found the pioneer Methodist church society still without an abiding place it could call its own, notwithstanding that it had been organized on August 2, 1859, nearly a year before. In November, 1860, he rented for church purposes a frame dwelling owned by Charles S. Semper and that stood on the south side of Market street between Thirteenth street and Cherry creek. The meetings had theretofore been held at Adriance's cabin where the first love-feast had occurred October 30, 1859, at the homes of members, in various other places, and even in the street. After Chivington rented the Semper house the congregation met there for several months, and that dwelling appears to have been the first building regularly put to church uses in the city.

Jacob Adriance left Denver on February 16, 1860, to attend the Kansas Conference at Leavenworth, and did not return. His successor at Denver was Rev. Loudon Taylor, formerly of the Northern Conference of Iowa. Within a few months Taylor was succeeded by Rev. A. P. Allen, of the Wisconsin Conference. In the spring of 1861 Rev. W. A. Kenney took charge, and in November of that year the congregation rented the little church building of the Methodist Episcopal-South society (which, as we have related, had recently disintegrated,) and occupied it until the spring of 1862. In that year Mr. Kenney visited the Kansas Conference held at Wyandotte, and was reappointed to the Denver City work, but died before his return. For several months thereafter the congregation was without a pastor, though Rev. W. S. Lloyd, who came to Denver on his way to his appointment in the South Park, supplied the vacancy a short time. The death of Kenney had such an effect on Lloyd that he returned to Kansas without having visited the locality of his appointment in the South Park. Elder Chivington having gone away as Major of the First Colorado Regiment, was succeeded by Presiding Elder B. C. Dennis who, in October, 1862, called Rev. O. A. Willard from the Wisconsin Conference to take charge of the Denver congregation. Since the previous spring the society had again been homeless, the services under pastor Lloyd having been held wherever opportunity afforded. Through the autumn

The old "Lawrence street church." Photographed in 1865.

of 1862 and the following winter, the congregation under Mr. Willard's pastorate, met in halls, or in a theater, or wherever a place could be found. In February, 1863, Mr. Willard rented from Henry C. Brown, for twenty-one dollars a month, a small frame building that Mr. Brown had built for and was using as a carpenter's shop. It stood on the south side of Larimer street and partly in the bed of Cherry creek, on the "West Denver" side. It was fitted up by pastor Willard with seats and other furniture and made into a very fair meeting-house. It was occupied and dedicated on March 1st, and the congregation was rather proud of it, as it appeared that a place that could be considered a church home had at last been found.

Trinity Church, at Broadway and Eighteenth Avenue.

This pioneer church organization, which is directly continued in that of the present Trinity church, had not been up to that time a corporate body. In June, 1863, the Rocky Mountain Conference, then independent of that of Kansas, was organized; and on July 22, 1863, this pioneer society was incorporated as "The First Methodist Episcopal Church, of Denver," with John Evans, John C. Anderson, John Cree, John M. Chivington, and Hiram Burton as Trustees; the certificate having been attested by Andrew Sagendorf. The new Conference had made Mr. Willard a Presiding Elder, and this left the church without a pastor until late in that year, when Rev. George C. Betts came from the east and took charge. As we have elsewhere related, the Brown building was overturned, crushed as if it were made of card-board, and swept away by the Cherry creek flood of May, 1864; and the First Methodist church was again homeless. It was then resolved to at once build a new, imposing and suitable church edifice. A site was purchased on the southeast corner of Fourteenth and Lawrence streets and there, in that year, the historic "Lawrence Street Church" was erected at a cost of $21,000.

In the meantime since the flood the congregation had again worshipped in various places; in the Denver Theater, the Colorado Seminary, and in the second story of the old "Criterion Hall" building. Pastor Betts had resigned and returned east, and had been succeeded by Rev. George Richardson who conducted the services at the dedication of the new church on February 12, 1865. The building had been paid for in full without the knowledge of Joseph B. Bell, a citizen who attended the dedicatory services with $200 in his pocket he had saved to donate at the dedication. There being no collection for the building fund, Bell paid in the $200 for a pew in the church. Elder Willard, who preached the dedicatory sermon, was made the recipient of a collection amounting to more than $400, and was presented with a fine gold watch in testimony of the people's appreciation of his services.

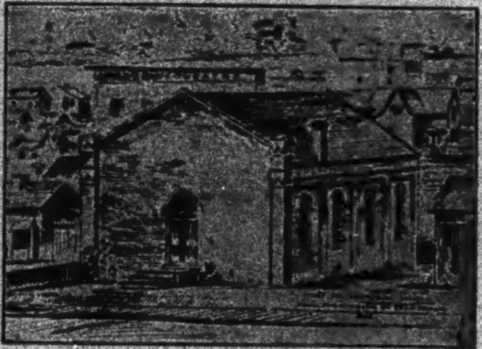
The Lawrence Street Church, as the reader has seen, was the first building owned by the congregation; and in its day and generation it was the largest and finest church, not only in Denver, but in the whole Rocky Mountain country; though in its present aspect as the headquarters of the "Salvation Army" it might seem not to warrant such a statement. To its building fund citizens of all creeds, beliefs and unbeliefs contributed; and after its completion it was the pride of every one, saint or sinner. In the pictures of Denver of that period this church was the most prominent landmark in view from any point, and it stood up like the Temple at Salt Lake City, overtowering and overshadowing all other structures in the town.

Pursuing the history of this pioneer church organization, something further of general interest remains to be recorded. In May, 1872, its corporate name was changed to that of "The Lawrence Street Methodist Church, of Denver." Within three or four years thereafter the growth of the congregation and the encroachments of the business section led some of the members to suggest a new, and larger church in a new location; but this change was not generally considered until some ten years more had passed. Then, on October 5, 1886, the movement for the erection of the present magnificent Trinity church was definitely inaugurated. In the meantime there had been the usual changes of pastors; Mr. Richardson had been successively followed by William M. Smith, B. T. Vincent, J. L. Peck, T. R. Slicer, J. R. Eads, Earl

Cranston, D. D., David H. Moore, D. D., R. W. Manley, D. D., Gilbert De La Matyr, and Henry A. Buchtel; the latter having being appointed in 1886, coming from another city church. Under his pastorate the erection of Trinity was undertaken, and his genius of leadership, great executive ability, untiring zeal, and power to inspire others to work enabled him to accomplish what, under the circumstances, was really a herculean task; for the congregation was by no means a wealthy one. But, with Dr. Buchtel came a large personal following, and this coupled with his devotion and ability and the willing generosity of the church's members, gave to Denver one of the conspicuously fine church buildings in Methodism, that may also be regarded as a monument to the Doctor's zeal and executive attainments. The corner-stone of the church was laid on September 5, 1887. Having in the meantime disposed of the Lawrence street property, the society had held its last services in the old building on July 31, 1887. After vacating it the congregation met in the First Baptist church and in the Tabor Opera House until April 1, 1888, when services were first held in the basement of the new Trinity. At that meeting additional subscriptions for the building fund, of over $60,000, were made within an hour. In December of that year the great auditorium was finished, and services were first held in it on the 23rd of that month. The cost of the land, the building, the great organ, and the parsonage, aggregated nearly $250,000.

Of the three founders of Methodism in Colorado, Fisher, Goode and Adriance, two have passed away. Fisher, a carpenter by trade, came from Illinois to Missouri and thence to Cherry creek. He returned to his family in Missouri in 1863, and soon afterward died there. Goode, a native of Warren county, Ohio, (June 19, 1807) long continued in his work, and died at his home in Richmond, Indiana, December 18, 1879. To his very interesting book, "Outposts of Zion," in which an elaborate narrative of his service on the frontier is embodied, we are indebted for some of the information we have presented here. Adriance, after his retirement from active work in the west, located at Jamestown, Nebraska, where he is still living.

We have already mentioned the arrival in June, 1859, of Rev. L. Hamilton, the first Presbyterian minister to reach Cherry creek, and have told of the meetings he held in the summer and autumn of that year. He then went up to Central City, and the Cherry creek towns were left without a clerical representative of his denomination until the following summer. On July 31, 1860, Rev. A. T. Rankin came to Denver from eastern Kansas to organize the First Presbyterian congregation effectively brought together here. He was sent hither by the Presbyterian Board of Home Missions in consequence of some correspondence with General William Larimer who was an Associate Reformed Presbyterian. On the Sunday after his arrival, August 5th, Mr. Rankin held his first services, in Miss Ring's school-house on Market street on or near the southeast corner of that street and Fourteenth, the little cabin being crowded with people. On the next Sunday he preached in a store-room on Market street near the school-house. On the next the meeting was held in the second story room of William Graham's drug store building on the northwest corner of Fifteenth and Larimer streets, where the "Mountaineer" newspaper office was established near the close of that month.

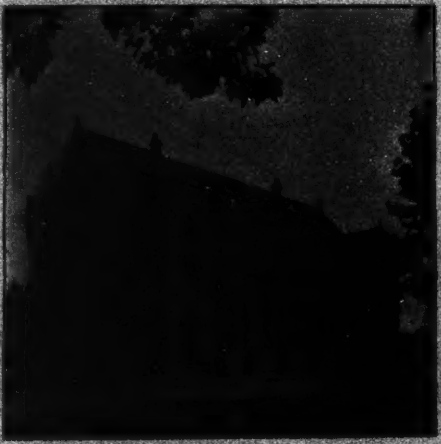


Pioneer Presbyterian church building in Denver—east side Fifteenth street, between Lawrence and Arapahoe streets.

A preliminary meeting for the organization of the church was held on Sunday, September 2nd, at which Dr. W. P. Hills, and Daniel Meyne were elected Elders. On September 5th at a meeting held in a log house at Fifteenth and Lawrence streets to organize a congregation, General Larimer, Richard Sopris, Dr. W. P. Hills, J. W. Benedict, George W. Clayton, R. E. Whitsitt, N. J. Lightnoe and Mr. Rankin were present, and a Board of seven Trustees were selected. These were General Larimer, George W. Clayton, Josiah Carlyle, Richard Sopris, Andrew Sagendorf, J. W. Benedict and R. E. Whitsitt; D. C. Collier being appointed Clerk.

After this organization the meetings were held during a short period in the Apollo Hall theater on the north side of Larimer street near Fourteenth. On one Sunday there a shooting affray occurred in the drinking and gambling room on the ground floor while the services were in progress in the room above. After that the log cabin at Fifteenth and Lawrence streets in which the meeting of September 5th had been held, was rented and was expected to be used several months; but it was sold a few weeks later, when the congregation occupied the second story of Greenleaf & Brewer's store building on Larimer street between Fifteenth and Sixteenth streets where the meetings were continued as long as Mr. Rankin remained in Denver. His Sunday School, organized in October, 1860, appears to have been the second one here in connection with a church. Its meetings were first held in Miss Ring's school-house.

Mr. Rankin left Denver on December 3, 1860, for his home in Buffalo, New York, and did not return here. It had been arranged by the Board of Missions that he would be succeeded on January 1, 1861, by Rev. A. S. Billingsley. But it was a year before the latter came, and in the meantime the congregation went adrift. Upon Mr. Billingsley's arrival services were resumed, the meetings being held in the International Hall on Eleventh street, between Larimer and Market streets, beginning on December 15, 1861; at which time Robert Lansing, Simon Cort, and John Irvine became Elders. Later the second story of Greenleaf & Brewer's building was again used.

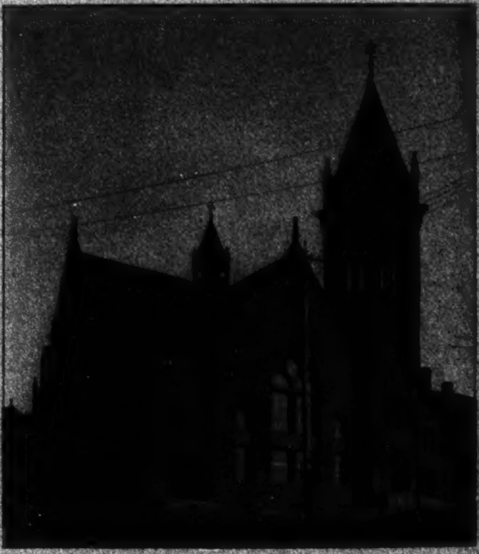


Central Presbyterian church as erected at Eighteenth and Champa streets.

Mr. Billingsley's services terminated in April, 1862, and the congregation remained without a pastor until November of that year when Rev. A. R. Day came to Denver and took charge of it. He at once declared his intention to build a church immediately. He was a man of much energy and succeeded in building his church. Major John S. Fillmore donated a plot of ground, forty by one hundred feet, on the east side of Fifteenth street, between Lawrence and Arapahoe streets, (present numbers 1121-23) and pastor Day raised by subscriptions sufficient money to build there a small but very creditable brick church at a cost of about $6,000. It is to be remembered that in those years Denver was a small town that had lost a considerable portion of its population in 1861 and 1862, and that its general prospects were much depressed. Therefore the responses to calls for aid in church-building were very generously made. Mr. Day remained until February, 1865, and was succeeded in October of that year by Rev. J. B. McClure. Rev. E. T. Wells followed Mr. McClure, and with distinguished ability occupied Denver Presbyterian pulpits for nearly twenty years.

In 1874 the name of the church was changed from the First to the Central Presbyterian, and it was decided to erect a new building. In 1875 four lots were bought on the southwest corner of Eighteenth and Champa streets for $6,250, and there, on January 6, 1876, under the pastorate of Dr. Willis Lord, the corner stone of the new Central Presbyterian church was laid. There was some delay in building, and the first services in the completed structure were not held until January 13, 1878. The lecture room had, however, been in condition for use several months earlier, and the commencement exercises of the class graduated in the "East Denver" High school in the summer of 1877, were held in it. Notwithstanding the name of the church, its location at that time was not a central one, but on the outskirts of the town; and most persons thought people would not care to go to a church situated out on the edge of the plains. The building was of lava, and with the land cost upward of $50,000, a part of which was defrayed by the sale of the Fifteenth street property to L. D. Riethmann, who erected a business block on its site.

In 1887 the congregation decided to again change location and to build another new church. In 1888 eight lots were bought on the southeast corner of Seventeenth and Sherman Avenues for $40,000. The real estate at Champa and Eighteenth streets was later sold for $130,000, reserving the building, which was sold to the Twenty-third Avenue Presbyterian congregation for a nominal consideration. That organization had the building taken down stone by stone and rebuilt at Twenty-third Avenue



Present Central Presbyterian church, at Seventeenth and Sherman Avenues.

and Ogden street, where it is now the home of that offspring of the Central. The Central congregation held its last services in the Champa street church on December 28, 1890, and thereafter occupied the Broadway Theater for Sunday service until the new Central was completed. The corner stone of the new structure was laid on July 7, 1891, and on Christmas, 1892, the services in dedication were held in the completed church. It is a large and fine edifice of Colorado red sandstone, and with the land, and the handsome adjoining residence for the pastor, represents an outlay of about $250,000.

Old "St. John's Church in the Wilderness," as it stood at Fourteenth and Arapahoe streets.

The third church organization, in chronological order, was the Episcopalian "St. John's Church in the Wilderness." To some extent its organization was due to the Ladies' Union Aid Society organized in January, 1860, as related in a subsequent chapter. The first official record relating to it is that of the Denver Town Company's Directors who resolved on January 9, 1860, "that six lots be donated to the Episcopal Church." We have mentioned the arrival here on the 17th of that month of Rev. J. H. Kehler, of the Diocese of Virginia. On January 21st the meeting, previously mentioned, was held at Goldrick's school-house in Auraria to prepare for organizing a church society; and the next day, January 22nd, Mr. Kehler, held the religious services referred to in the reminiscence of Colonel S. S. Curtis quoted on a preceding page. On January 29th, as the Parish records state, Mr. Kehler inaugurated regular services at Goldrick's school-house, and on January 30th a vestry meeting was held at the office of T. J. Bayaud. This was followed by a meeting on February 19th at which a temporary church organization was effected by electing a vestry that consisted of Thomas J. Bayaud, C. E. Cooley, D. C. Collier, Samuel S. Curtis, Charles A. Lawrence, Dr. A. F. Peck, Amos Steck, E. Waterbury, R. E. Whitsitt and Thomas G. Wildman. Of these, Bayaud and Curtis were chosen Senior and Junior Wardens, respectively. Goldrick's school-house having, by this time proved inadequate for the congregational meetings, Mr. Bayaud gave the church the use of one of his buildings on Sixteenth street where the American House now stands. On April 10, 1860, the first church election was held for a permanent organization, at which Thomas J. Bayaud, H. J. Bulkley, S. S. Curtis, O. P. Ingalls, Charles A. Lawrence, Dr. Drake McDowell, Henry J. Rogers, Andrew Sagendorf, and Thomas J. Wildman were chosen vestrymen; and Mr. Bayaud and Mr. Curtis were again elected, respectively, Senior and Junior Wardens.

In its infancy, St. John's Church in the Wilderness had much the same experience as that attending the other pioneer churches. An effort was made in the summer of 1860 to erect a church building but it was not successful. An entry in the Parish records by "Father" Kehler states that "the Denver Town Company donated 16 lots on Champa street" to aid in building a church, an action apparently in disregard of the previous donation of six lots. The Town Company's record contains no account of this second gift. Mr. Kehler continued as rector of the church until appointed Chaplain of the First Regiment of Colorado Volunteers, when he preached his farewell sermon on June 6, 1862. As reflecting conditions in those times, and also as indicating the broad character of Mr. Kehler's work, it may be stated that the Parish records show that of the first twelve burial services he conducted and with relation to which the causes of death were noted, five of the persons had been shot, two executed for murder, one had shot himself, and one had died of alcoholism; leaving only three to be accounted for by "natural causes." "Father" Kehler died in Washington, D. C., February 21, 1879, aged eighty-four years.

Bishop George M. Randall.

In the spring of 1862 the Episcopalian congregation purchased the small brick church that had been built in the autumn of 1860 by Mr. Bradford's Methodist Episcopal-South congregation, and that had been later used by the Methodist Episcopal society. This structure, as we have stated, occupied the site of the present Haish Manual Training School building at Fourteenth and Arapahoe streets, and was the first edifice erected for church purposes in Denver. Its new owners built a frame addition to it which gave the building a T-form, and on June 20, 1862, it was consecrated as St. John's Church in the Wilderness by the Rt. Rev. Bishop Talbott, of the Diocese of the Northwest. The church was incorporated as St. John's Church in the Wilderness by the Colorado Territorial Legislature in 1865.

Rev. H. B. Hitchings.

Late in 1862 Rev. William Hager came to temporarily take charge of the Parish, and remained about a year, when he was succeeded by Rev. H. B. Hitchings, whose service began November 1, 1863, and continued six years. Mr. Hitchings, who is still living, was succeeded by Rev. George M. Randall, a much-beloved man who later became Bishop, and whose lamented death occurred September 28, 1873. Rev. Walter Moore followed Mr. Randall and was in turn succeeded on Easter, 1874, by Rev. P. Voorhees Finch, who remained several years. In 1878, while on a health-seeking tour around the world, Rev. H. Martyn Hart of England, now Dean of St. John's Cathedral, visited Denver on his way, and in that little church preached a sermon that was followed by a call to the Parish to which he has ministered so long and well. Dean Hart and his family arrived in Denver from London on September 26, 1879.

An extension of the frame addition to the old brick church had been made in 1870, and in 1874 a movement was started to erect a new building, but owing to financial stress nothing came of it. Later in that decade the erection of a cathedral was determined and under the energetic influence of Dean Hart the present St. John's Cathedral was built in 1880-81. The old church remained in use until the completion of the cathedral, the last services having been held in it on November 6, 1881.

The Catholic church, rarely a laggard, was the fourth denomination in sending its representatives to Denver and in establishing itself here, though it was the second to erect an edifice especially for church purposes. It was the only one that appears to have taken any consequential advantage of the Town Companies' willingness to donate town lots in aid of churches, and the property it received later proved to be of important value. The first record pertaining to the Catholic church in Denver, is the action of the Denver Town Company's Directors on November 19, 1859, which we have quoted on a preceding page of this chapter. The "Mr. Guiraud" therein referred to was a Denver merchant of French extraction, who had for some years before been engaged in trade on the frontier, and still earlier a trader in South Africa. He was a good citizen who was held in high esteem here in the pioneer times, and it appears to have been through him that negotiations were begun that resulted in the coming here a few months later of direct representatives of the church; though it is certain that they soon would have appeared had Mr. Guiraud not have been here.

Late in the spring of 1860, Rt. Rev. J. B. Miege, Bishop of Leavenworth, Kansas, came to Denver to establish his church; the matter of the first lot donation having been, as heretofore stated, settled in the previous March. His first services were held at Mr. Guiraud's home on the southeast corner of Fifteenth and Market streets, in June of that year, after which he visited several of the mining and other towns near Denver. Upon his return the Denver Town Company's Directors donated him nearly the whole of another block, number 139, bounded by Fifteenth, Stout, Sixteenth and California streets. A church association was immediately organised with Judge G. W. Purkins as President, and arrangements began for erecting a church on Stout street near Fifteenth. At that time this part of Kansas Territory became attached to the Diocese of Santa Fe by a decree from Rome.

A building fund of a small amount was raised that summer and work started on the church. But "times were hard," subscriptions were paid in slowly, and construction had to be stopped. In the meantime the Bishop of Santa Fe had dispatched hither the Very Rev. J. P. Machebeuf, who, for ten years had been Vicar General of New Mexico; and the Rev. J. B. Raverdy; to take charge of Catholic missions in the Pike's Peak country. They arrived at Denver on October 29, 1860, ap-

St. John's Cathedral; old Jarvis Hall in rear at the left. From a photograph made soon after Cathedral was built.

plied new and great energy to the building-fund problem, and their appeals for assistance received a liberal response. Work on the church was renewed, and on Christmas night, 1860, a service was held in the building, though it was then unfinished. On Sunday, December 30th, the regular services may be said to have begun and at which the attendance filled the church. The building was larger than that of the Methodist Episcopal-South congregation, and until the erection of the Lawrence street church, was the most conspicuous structure in town. In 1862, an organ, the first in Denver, was brought from St. Louis for the church, and with it came an 800-pound bell which was the first church bell here. The bell was temporarily hung in a derrick-like tower in front of the church. The storm of Christmas night, 1864, blew down the tower and the fall broke the bell in several pieces. Soon afterward a new one was sent from St. Louis; weighing 2,000 pounds, and which was hung in the church tower where it remained as long as the building stood. Subsequently additions were made on each side of the church that gave it the appearance so long familiar to our citizens. Though several far larger and finer churches were erected by this denomination in recent years, the pioneer building remained the Cathedral until its end. Having previously acquired a fine site for a new Cathedral, on the corner of Colfax and Logan Avenues, the Stout street property was sold in the spring of 1900, to be occupied by a large business structure. On May 13, 1900, the last services were held in the old building, and the next day the work of demolition was begun; and at the close of our record a great business structure was rising on the site of Denver's pioneer Catholic church building. The statement has gone forth that the new and successor Cathedral will be the largest and most magnificent church edifice in Colorado.

Bishop J. P. Machebeuf.

Bishop Joseph P. Machebeuf was really the founder of Catholicism in Colorado. He was a sincere, earnest man; indefatigable, tireless, in the service and advancement of his church. The high esteem in which he was held here was not limited by sectarian lines. A native of the city of Riom, France (1812), he died in Denver, August 2, 1889. His pioneer associate, John B. Raverdy, became his Vicar General, and died in Denver November 18, 1889. It was a somewhat curious coincidence that Bishop Lamy, of New Mexico, and Bishop Machebeuf, of Colorado, who were friends and companions in France, who volunteered as missionary priests for labor in America and came hither together on the same vessel, should rise to the Episcopacy of adjoining Dioceses here in the far west.

St. Mary's Cathedral. (Torn down in 1900.)

It was not until the winter of 1863-64 that another denomination formed a church organization in Denver. Rev. Walter McDowell Potter had been sent to Denver at that time by the American Baptist Home Mission Society, and on December 27, 1863, the first meeting in the interest of the organization of a Baptist church in Denver was held; there being but few persons of that denomination then here. A committee was appointed to secure some place of worship, and procured the use of one of T. J. Bayaud's small buildings on the southeast corner of Sixteenth and Larimer streets, that was also used for school purposes. Meetings were held there through that winter and until March 14, 1864, on which date pastor Potter organized a Sunday School which met in a room used by the United States Court in a building on Eleventh street. The church society then also met

Rev. John B. Raverdy.

there, though it had not yet been formally organized.

On May 2, 1864, it was organized as the "First Baptist Church of Denver," with the following-named constituent members: Rev. Walter M. Potter, Miss Lucy K. Potter (the pastor's sister), Francis Gallup, Henry C. Leach, Mrs. A. Voorhies, Mrs. L. Burdsall, Mrs. Lavinia Hall, Mrs. Alice C. Hall, and Mrs. Eliza Thoroughman. Mr. Potter was unanimously chosen pastor of the church; Francis Gallup, Deacon; and Henry C. Leach, Clerk and Treasurer. Within three weeks thereafter the flood in Cherry creek made the old Court room uninhabitable, and the congregation had to go to the People's Theater, where it held its first meeting after the flood, on June 18, 1864. The church had a very slow growth, and by autumn of 1865 numbered but seventeen members. Necessity compelled it to use the old theater, and other temporary meeting places here and there, but an effort was in progress to obtain a building site and to raise money with which to build a church.

"The Baptist Dug-out," as built at Sixteenth and Curtis streets.

In December, 1865, his health having failed, Mr. Potter returned east where he died within twelve months. In May, 1866, he was succeeded by Rev. Ira D. Clark, and the congregation then held its meetings in George McClure's building on the north side of Larimer street between Fifteenth and Sixteenth streets, with an increasing membership. In the autumn of 1866 a building site was purchased, at a cost of $1,150 on the northeast corner of Sixteenth and Curtis streets (present numbers 1001-07 Sixteenth), and a beginning made on a church building which was to have been of the "basement" type. The little band got the basement walls of stone put up, and then the funds gave out. No financial reinforcements appearing in sight, the basement was roofed over with boards, fitted up with seats, and for some time thereafter used by the congregation as a place of worship. It was a queer-looking structure, and the unregenerate soon began calling it "the Baptist dug-out," a name by which it was rather commonly known as long as it remained there. As we have elsewhere stated, it was rented and used in the early "Seventies" for school purposes by District number 1. The structure was never finished, the property was sold, and the old Walhalla Hall building succeeded that first effort to erect a Baptist church in Denver. Pastor Clark had been succeeded by A. M. Averill, L. Raymond, Norman Fox, and Winfield Scott; the latter having come in January, 1872, when the congregation numbered ninety-four members. Under Mr. Scott's pastorate four lots at the corner of Curtis and Eighteenth streets were procured through the Home Mission Society and Missionary Union, "in lieu of the labors of Deacon Francis Gallup, on behalf of the Potter property [the "dug-out"], and by him donated to the church." On those lots a "Lecture Room," thirty-six by seventy-five feet in size, was erected in 1873 at a cost of $16,000 for site and building.

The congregation used that building until 1883. Rev. Reuben Jeffery became pastor in 1880 and remained until 1884. Soon after his coming preparations for the construction of the present large and very spacious church on the north side of Stout street, between Seventeenth and Eighteenth streets were begun. The church has a seating capacity of about 1,500, and was dedicated May 8, 1883, when the congregation had between 500 and 600 members; the completed edifice representing an outlay of about $80,000. The society now numbers near 1,200, a remarkable growth from Mr. Potter's little group of nine persons who organized it in May, 1864.

First Baptist Church.

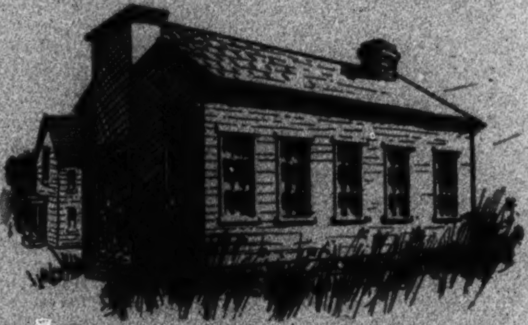
The present Jewish Temple Emanuel Congregation is the outgrowth of a small society organized early in 1860 by Isidor Deitsch, A. Goldsmith, A. Jacobs, Julius Mitchell and F. Z. Salomon. While this organization was primarily for the appropriate burial of the dead of the Jewish faith, other meetings were held, and the Passover, the Day of Atonement, and the New Year properly observed; these meetings having been held here and there in various buildings. The society continued in existence until 1873, when it was re-organized as the Congregation Emanuel. In 1874 the first Temple Emanuel was built at Nineteenth and Curtis streets, at a cost of $5,000; Rabbi Fleischer conducting the first services held in it. The present fine Temple Emanuel of that congregation, at Sixteenth avenue and Pearl street was erected in 1898, and dedicated January 29, 1899; the present Rabbi, William S. Friedman, conducting the services.

Temple Emanuel.

The present First Congregational Church is the outgrowth of the third organization of that denomination formed in Colorado; the first one having been organised at Central City in 1863; and the second, at Boulder, either late in that year or early in 1864. The records of the Denver church show that at its organization meeting the pastor of the Central City Church and a delegate "from the church in Boulder" were present. The first preliminary meeting to organize the Denver church was held by advice of a Council of Delegates from other churches of the denomination early in the autumn of 1864, and final action was taken on October 23, 1864, when the "First Congregational Church of Denver" came into existence. The members of that advisory council were Rev. J. Blanchard, of Wheaton, Illinois, College; Rev. Norman McLeod, a missionary of the American Home Missionary Society; Rev. William Crawford, of the church at Central City; Rev. Mr. Colton, of Kansas; and Deacon James Hubbard, of the Congregational Church of Boulder. At the organization meeting on October 23d, twelve persons became members of the new church. These were Mrs. Richard Sopris and her two daughters, Misses Irene and Indiana; Mrs. Melona Ellis, Mrs. C. A. Tolles, Mrs. S. M. Trumper, Miss Ellen Cooper, Miss Isabella R. Glynn, H. A. Goodman, D. G. Peabody, I. J. Stevens and W. N. Ellis. Mr. Crawford, of the Central City Church, preached at the organization meeting which, together with others in that period, were held in the United States District Court room. At these meetings Mrs. C. R. Davis was organist, and the Misses Sopris sang in the choir.

From the close of October until the end of the year 1864, Mr. McLeod served as acting pastor of the church; and from his departure, until October, 1865, the congregation remained without a pastor. Rev. G. D. Goodrich was then called to the charge, and after nearly two years of service, was succeeded by Mr. McLeod, who had assisted in organizing the church, and to whom, in September, 1867, a call had been extended. He remained until 1870, and his successors during the ensuing ten years were Thomas E. Bliss for about three years; Julian M. Sturtevant, Jr., four years; Charles C. Salter, nearly two years; S. R. Dimmock, one year; and J. V. Hilton, whose pastorate was of four years.

This congregation, like others in that and the earlier period, for several years held services in various buildings in which it could find quarters. But in 1868 it purchased two lots on the southeast corner of Fifteenth and Curtis streets, at a cost of $1,200, and upon them a small frame church building was erected in 1869-70. The cost of the building is not of record, but when the property was sold about twelve years later, the congregation received $14,500 for it. The pastor who first preached in that edifice was Thomas E. Bliss who, in 1873, and with a part of the congregation, sep-



Old Congregational church at Fifteenth and Curtis streets.

arated from the parent organization and founded St. Paul's church, at Curtis and Twentieth streets, and which later became Presbyterian.

The old church remained in use until 1881, and parts of it are incorporated in the small business structures now occupying its site. In 1879 the need of a new and much larger church in a more desirable location had become apparent and was considered by the congregation. Early in 1880 a site for a new church, on the north side of Glenarm street between Sixteenth and Seventeenth streets, was purchased at a cost of $5,000. In 1880-81 the present large and fine church was built on that site at a cost of $40,690; making the total cost of the property $45,690.

Present First Congregational church, Glenarm street between Sixteenth and Seventeenth.

The first services (in dedication) in the new church were held on May 22, 1881, and were conducted by Rev. J. V. Hilton. The date of the last services in the old church is not of exact record, but in a brief historical sketch appearing in the church's directory of 1889 it is said that "the society held their meetings in a small frame church on the corner of Fifteenth and Curtis streets until 1881, when they moved into their new church on Glenarm street." In its earlier years various circumstances combined to retard the growth of the church, but notwithstanding obstacles without and troubles within, services, excepting in the brief interval in 1865, were steadily maintained through those times. In 1880 the congregation had increased in membership to 184; and at the present time, under the pastorate of Rev. David N. Beach, it includes 430 members.

We may not follow in detail the later establishment here of churches of other denominations, nor of others of those denominations already mentioned. To enable such a record to be presented in full, a fairly-large volume would have to be devoted to the subject. The churches of which accounts have been given are those which were established under pioneer conditions, difficulties and hardships. Between 1865 and 1879 several others had been added, and at the close of the last-named year there were in the city the First Methodist Episcopal, the First Presbyterian, the Episcopal, the Catholic, the Stuart Presbyterian, the Methodist Episcopal-South re-established, Congregational, Unitarian, African Baptist, and African Methodist Episcopal, churches; a most creditable number for a frontier town of less than 5,000 people, a considerable portion of whom were of the "floating" class and neither church members nor church-goers.

At the present time almost all religious denominations known in the United States are represented in Denver by one or more permanent organizations. Almost every religious sect, from the most orthodox to the most liberal; from the ancient and historic Catholic to that of the doctrine promulgated but yesterday; may be found organized in the city and its immediate suburbs. There are 159 established churches and missions, not including the local divisions of the two "Armies" engaged among the lowly in active warfare upon Satan.

The Methodist Episcopal denomination leads in number of organizations, having twenty-nine churches and two missions. Of the churches three are German, two of the M. E.-South, three African, and one Swedish. Numerically in organizations the Baptists stand next, with eighteen churches and three missions; three of the churches are African, two German, and one Swedish. There are sixteen Presbyterian churches, of which two are United Presbyterian, one Reformed, one Cumberland, one German, and one Welsh. The Congregationalists have fourteen churches and one mission; one of the churches being German. The Episcopalians have thirteen churches and one mission, all of them English. The Catholics have twelve very large organizations, including one or more of several nationalities other than English-speaking; more than one-half of the regular church communicants in Denver being of that faith. Of the Lutheran denomination there are also twelve churches, classified as four Swedish, three German, two Danish, one English, one Norwegian-Danish, and one Scandinavian. The Christian denomination has five, and there is an equal number of Jewish organizations—the Temple Emanuel being one of the conspicuously handsome church edifices in the city. There are two United Brethren churches, and of the Reformed Church, Unitarian, and the Universalist beliefs, one each. In addition to all of these there are the Broadway Temple Association, the Chapel of the New Jerusalem, the Church of Christ (Scientist), the City Temple Institutional Church, the Friends' Church, the New Jerusalem Church, the Reorganized Church of Latter Day Saints, the Salem's Church of the Evangelical Association of North America, the Seventh Day Adventists' Church, and the Truth Seekers' Temple. In the general mission field there are the Swedish Free Mission, the Olive Branch Mission, the Railroad Mission Sunday School, the Salvation Army, and the Volunteers of America. The present value of all the property owned by these various church organizations in Denver and its immediate suburbs would probably approximate $3,500,000.

The seating capacity, with a little crowding, of all these houses of worship, aggregates 54,650. Of this total, the Methodist churches afford room for 10,550; the Presbyterian for 7,650; Baptist, 6,650; Catholic, 6,650; Episcopalian, 6,575; Congregational, 6,300; Lutheran, 2,750; Christian, 2,400; Unitarian, 1,000; United Brethren, 750; Universalist, 450; all other, 2,925. Yet, at the close of our record, several new ones were under construction. The more noteworthy of these is Rev. Thomas Uzzell's—or as he is more generally and very popularly known, "Parson Tom" Uzzell—new People's Tabernacle, at Lawrence and Twentieth streets. He has long been a leader in Denver in charitable and benevolent work, and for many years has been engaged in church-mission labor among the lowly, with his Tabernacle at Nineteenth and Blake streets. Six lots at Lawrence and Twentieth streets were purchased early in 1900 at a cost of $12,150, and a brick building 75 by 125 feet, to cost about $50,000, is now approaching completion upon them; contributed funds with which to pay for the structure as work upon it progressed having been secured by Uzzell and members of his congregation. The services of this man to those among whom he labors, and to the general community as well, possess a value that does not often attach to the efforts of any one person.

The Young Men's Christian Association, organized in 1877, has a large membership and exerts an effective daily influence over a wide field of action. It has not yet been provided with a home of its own, but at the time of closing our record a movement to that end had been instituted. In this respect the Young Women's Christian Association, first organized in 1887, and now also having a large membership, has fared much better. The present Young Men's Christian Association was not, however, the first one in Denver. In the winter of 1866-67 the pioneer association of that kind was organized with Henry C. Leach as President, and Wilbur C. Lothrop, Secretary, and continued several years thereafter.

Within comparatively recent times an impression has existed elsewhere in this country that Denver people generally do not actively concern themselves in religious influences and in building, maintaining and attending churches. But a brief review of all that has been done and is being done here for religion, certainly dispels every vestige, if any be left, of that one-time and mistaken conception of the inclinations and ways of Denver and her people.

* * *

CHAPTER LXI.

Denver's Pioneer Schools—O. J. Goldrick, the First Pedagogue—Other Early Schools—Miss Maria Ring—Town Companies' Donations for Schools—Beginnings of Public School System—First Organization of School Districts—First Public School—Slow Development of Schools—County School Organization—Period of Indifference—First Building Owned by a District—Separate School for Colored Children—First Building Owned by District No. 1—School Establishment in 1870—Legislation of that Year.

Within six months after the first important discoveries of gold were made here in these mountains—the first that gave any promise of a permanent town growing out of the ragged pair of little settlements at the mouth of Cherry creek, a school was established in one of them for the education of the limited number of representatives of the then rising generation in both. The newspaper had come in the spring of that eventful year, politics had begun to wear and tear the minds and consciences of men, and the beginnings of the first church organization had just been made when the pioneer school opened its door in Auraria. So, those six were very busy months in these parts.

Late in the summer of 1859, there arrived in Denver a gentleman whose personal appearance was an unusual one in the Cherry creek towns at that time, and whose presence was destined to exert an important influence in the communities. He was O. J. Goldrick, the most conspicuous school teacher in Denver's pioneer history. Goldrick appeared clothed in a faultless and fastidious suit of black broadcloth, with immaculate linen, and wearing a glossy black hat of the variety then called "plug." Notwithstanding his fine attire, he was driving an ox-team and bawling at the animals in the regulation fashion as he laid on the whip. Of course, an individual presenting so exceptional an appearance attracted much attention and occasioned a varied assortment of comments.

Goldrick was born in County Sligo, Ireland, in 1833; and was an Irish University graduate. Coming to the United States, he engaged in school-teaching in Ohio, and in the spring of 1859 drifted to St. Louis, where he fell in with Joseph B. Doyle, who had a large trading post and ranche in New Mexico, between Fort Union and Santa Fe. Doyle engaged the young teacher to go home with him to act as a kind of tutor to his children; and in consequence of that arrangement Goldrick soon found himself in the Rocky Mountain country. The circumstances of his change of purpose and his coming to Denver have been related in a preceding chapter.

From the day of Goldrick's arrival until his death his name was a household word in the homes of Denver. His previous occupation and his continuance of it here led the people, who were fond of bestowing titles, anyway, to soon begin calling him "Professor," a distinction to which he made no claim, himself. He was an educated, enthusiastic man, of many personal peculiarities, but withal one of high motives, and of sincere regard for his fellow-men. As elsewhere stated, he was instrumental in the organization of the first Sunday School, and participated in almost every other movement for softening the rough influences that surrounded the pioneer communities.

Soon after his arrival, Goldrick announced his intentions to open a private school for the benefit of the comparatively small number of children then in the two towns—a "Union School," as he called it. In September he circulated a subscription paper in both towns and in a few days secured pledges amounting to two hundred and fifty dollars, in support of the school. He then published a notice in the Rocky Mountain News that his school would be opened in Auraria on October 3rd. He had secured the use of a log cabin on the west side of Twelfth street, between Larimer and Market streets and nearly opposite the double cabin of Andrew Sagendorf and O. E. Lehow; and in it on the appointed day he opened his school, with thirteen children in attendance. Two of them were Indian half-breeds, and of the remaining eleven, two were Mexicans; leaving only nine of what were then considered here as white children. Within a week or two he had between fifteen and twenty pupils. He continued his school until late in the winter of 1859-60.

Goldrick's place in our local history as having taught the first school in the Cherry Creek towns remained wholly unquestioned until recent times. Among Denver's pioneers were four brothers, John, C. M., A. B., and F. B. Steinberger. The second-named later became identified to some extent with early political affairs; the fourth and younger, has stated that he engaged in school-teaching in the autumn of 1859, though he was but little more than a boy in age. They were sons of Dr. A. Steinberger, one of Denver's pioneer physicians. The third son, in later years, through his participation in the political affairs of the Samoan Islands, became prominent in international circles, and figured in newspaper accounts as "King of the Samoan Islands."

F. B. Steinberger.

In letters to us F. M. Steinberger stated that on the first Monday in September, 1859, he opened a little school in a log cabin on the east side of Eleventh street, between Larimer and Market streets, with fourteen pupils, from nine to thirteen years old, in attendance. These children, he says, were Homer Bennett, John Bennett, Samuel Bennett, Thomas Bradford, Amelia Dodson, John Dodson, Susan Dodson, Emma Fox, Frank Fox, John Haman, Lucy Haman, John Scott, Mary Scott, and Samuel Scott. He further stated that the Bennett children were those of John Bennett who kept a boarding house in Auraria City, on Larimer street near Cherry creek; but that he does not recall the parents of the others. He also stated that he still has his old roll-book, several of the school books he used, and his school-bell, which he has kept as mementoes of his pioneer seat of learning.

We were unable to find any record here of Mr. Steinberger's school having existed in 1859. The Rocky Mountain News, which was eager in those days to publish every item of local news that would indicate progress, does not mention it; nor did any of the surviving pioneers of 1859 to whom we referred the matter, recall the existence of Mr. Steinberger's school in that year. However, he conducted private schools in Denver, as circumstances enabled him to do so, in the immediately subsequent years. He went to Montana in 1862, remained there several years and then returned to Denver. A few years since, he removed to the State of Washington and is now a citizen of Seattle. We have thought it proper to make this record of Mr. Steinberger's reminiscences, but with the qualifying statement that we were unable to find here any record or oral evidence to further support them.

Therefore, and until additional testimony to the contrary arises, Goldrick's school will retain its place in local history as having been the first one at the mouth of Cherry creek, and the first in the whole region now constituting the State of Colorado. Preparatory to opening it he sent to Professor John D. Philbrick, then a noted Boston educator, for certain text books of which he stood much in need. Professor Philbrick forwarded the books, and accompanied them with a letter in which he said, in conclusion:

> "And now, imagine my arm extended with the speed of thought from this cradle of the free school on the Atlantic shores, over the Alleghanies, over the "Father of Waters," to give you a cordial greeting in your "Union School" on the frontier of civilization at the foot of the Rocky Mountains."

In less than a quarter of a century thereafter the writer of that letter visited Denver at the instance of the National Commissioner of Education, and in his report declared that Denver's public schools were equal, and in some respects superior, to the best elsewhere in this land of magnificent educational institutions.

On May 7, 1860, Goldrick reopened his "Union School" in the old cabin, with a Miss Miller as his assistant; for, in this second year the number of his pupils was considerably increased. On the same day—May 7th, Miss Indiana Sopris, daughter of Captain Richard Sopris, opened another private school in Auraria. It occupied a small building on Eleventh street near Curtis. This would entitle Miss Sopris to the place in our local history as the first woman school-teacher in this city and in the country now the State of Colorado; though Miss Miller also began work as Mr. Goldrick's assistant on the same day.

In the spring of 1860 Miss Lydia Maria Ring, formerly of Boston, came to Denver from Leavenworth, Kansas. She had been teaching in eastern Kansas for several years before her migration hither. The caravan with which she traveled was forty-two days on the journey across the plains, and upon her arrival here she could find no place to board and, therefore, lived in a tent several weeks with the family with whom she had made the journey, and until she succeeded, through the kindness of Mrs. Heminway, wife of the proprietor of one of the pioneer hotels, in securing a small room in his house. She opened her school in the latter part of May, 1860, (the exact date not having been preserved), in a small log cabin which stood on Market street on the present vacant ground at the southeast corner of that street and Fourteenth. The cabin was a wretched, loose-jointed affair, but Miss Ring had to pay twenty-five dollars a month rent for it, and at her own expense repair it so as to make it habitable. Subsequently she had her school in a better building, owned by T. J. Bayaud, and that stood on the southeast corner of Sixteenth and Market streets. In 1867 Miss Ring served as Principal of the "West Denver" schools and then permanently discontinued school work in this city. It is to be said that her school was of a more permanent character than the other private ones of the early days, for she conducted it continuously, excepting the usual vacation periods, four years. In the summer of 1895 Miss Ring, then more than four-score years of age, visited Denver after her long absence and received a warm welcome from her surviving old-time pupils and others who knew her in the pioneer times. She was born at Greensboro, Vermont, October 26, 1814, and died at Valley Falls, Kansas, March 12, 1899.

There has been some confusion in accounts of these early schools and teachers, as to priority, and a few words in explanation of its probable cause may not be amiss. Miss Ring is frequently mentioned as having been "the first teacher in Denver;" and she was the first one on the old "Denver City" side of Cherry creek. In the spring of 1860 the two towns had united, but in common speech it was, for several years afterward, the practice to retain the old names. The first schools here were established on the "Auraria City" side of the creek, as we have seen. When Miss Ring came she located on the eastward side of the creek, and here was the first school in the district that had formerly been the pioneer "Denver City."

Lydia Maria Ring

In 1861 and 1862 there were several other private schools in Denver, but none possessing the historic interest that attaches to those we have already mentioned. Mr. A. R. Brown, Mr. Arndt, Mr. Baker, Miss Steele, Miss Ames and Miss Cooper all conducted such schools in those years.

Goldrick served two years as County Superintendent of Schools, and during that time as well as through most of the period in which he was a teacher, was a correspondent for several newspapers in the States and a contributor to the Rocky Mountain News. In 1864 he discontinued his school work to engage in local reporting, and as traveling correspondent in the mining districts, for the News. In 1865 he went to Salt Lake City and became associate editor of the Union Vidette, an anti-Mormon newspaper. He later returned to Denver and engaged in the publication of a weekly newspaper. This historic figure and pioneer educator died in Denver in 1886.

The Directors of the two pioneer town companies early manifested a willingness to assist in establishing schools, but their offers of town lots—all they had to give—to aid the cause of education were nowhere near so munificent as their lot donations for church purposes. A careful search through their old records brought to light several of their transactions with relation to schools. At a meeting held September 10, 1859, the Directors of the Auraria Town Company made a donation for school purposes as stated in the following entry:

"On motion, Mr. ——— Ross was donated lots 10, 11 and 12, in Block 243, for School purposes."

We were unable to find any further record of "Mr. ——— Ross" as a pioneer in the cause of education at the mouth of Cherry creek, or that he ever utilized the three lots donated him for school purposes by the Auraria Town Company; which, as will be seen, were given him before Goldrick opened his school. This action of the Auraria Directors was the first of what may be termed an official character taken for the establishment of a school in what is now Colorado.

The Auraria Directors at a meeting held two days later—September 12th—appointed Thomas Pollock, Judson H. Dudley, and John J. Shanley

"a committee to examine and report on the best location for a schoolhouse, or houses, and report same at next meeting."

The minutes of succeeding meetings contain no further reference to the matter, nor to any report the committee may have made; and these two transactions are all that appear in the Auraria Town Company's record with reference to schools.

On December 26, 1859, the Denver Town Company's Directors, on motion of C. H. Blake,

"Resolved, That Professor Goldrick be donated six lots in Denver City provided he builds or Establishes his school in Denver City for six months."

As "Professor" Goldrick neither built nor established his school in Denver City for six months, or any other period, the donation perished by limitation.

Through 1860 the Town Companies gave no further attention to school matters, as the several private schools, as hitherto narrated, were established that year without receiving aid from either of the companies. The last meeting of the Denver Town Company's Directors of which their old record book contains an account, was held on March 11, 1861; and in its minutes the following appears:

"The petition of the Rev. Mr. Machebeauf asking for a Donation for Hospital and also for a Seminary being read, it was

Resolved, That one Block and one half Block be donated for the purposes asked, and that the

President and Secretary be appointed a committee to Select Said location and that the property donated be Selected by Said Committee West of K [Twentieth] Street and North of Welton."

Father Machebeuf did not establish a seminary until three years later; of the hospital he contemplated, something further is said in another chapter of this volume. The minutes of this meeting of the Denver Town Company's Directors also contain the following:

"Petition of Miss Ames asking for Donation, being read, was granted and a Donation of four lots hereby made to her provided she builds a School in three Months from date and locates the same East of E [Fourteenth] street and maintains a School Six months in Said building."

Further, the Denver Town Company's record saith not on any subject, and we have no means of learning whether Miss Ames ever got title to the four lots, or whether she built her school-house in compliance with the terms of the donation.

The private schools conducted in those early years in Denver were efficient and produced good results. The courses of study were upon the old-fashioned plan of every pupil for himself, and while the defects of such a system long since became apparent, its advantages in some directions still have plausible advocates. There are still a few men and women now in Denver who were given the substantial foundations of a thorough education in the private schools of Goldrick, Steinberger, Brown, Miss Sopris, Miss Ring and the others of that courageous band of pioneer teachers.

There does not appear ever to have been any attempt made to establish public schools in Denver or in the Denver region under the school laws of Kansas Territory. "Jefferson Territory" did not acquire sufficient vigor nor did it long enough survive to put into any form or effect the plans its projectors had in mind for a school system; so, Denver had no public schools under that picturesque organization. The proceedings of the Town Companies with relation to schools, that we have mentioned in the foregoing, were merely the transactions of organizations interested for business reasons in the advancement of the towns. The first definite action by any political, or governmental, organization, proposing to establish free public schools in Denver, and to maintain them by public taxation, was that of the Legislative Council of the Provisional Government of Denver that was organized early in October, 1860. At a meeting of the Council on October 12, 1860, only a few days after it had first assembled, the following was unanimously adopted:

"Resolved, That a committee of three be appointed to take into consideration the expediency of establishing, as soon as practicable, one or more free schools in this city; to ascertain the number of children and youth between the ages of 4 and 18, within our corporate limits; and to report to the Council a plan for the organization and permanent establishment of an institution, or institutions, for educational purposes. The same to be supported by levying a tax called a 'school-tax' upon the property, real and personal in this city; said tax to be used for no other purpose than for the support of said schools—to which all children and youth shall be admitted."

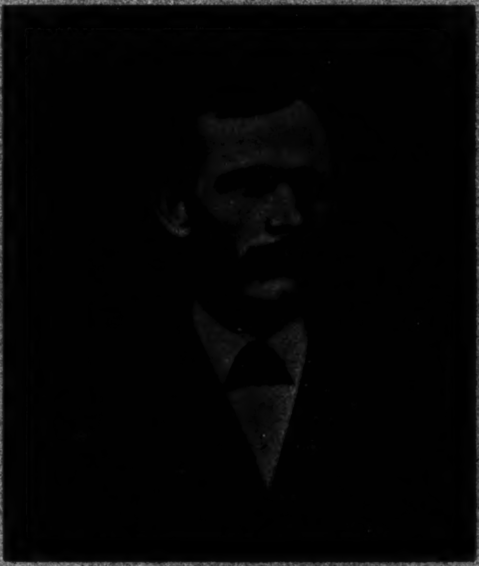
It does not appear that any of the purposes of this resolution were carried into practical effect; at all events no schools were established under it. This was probably due to the evident certainty that during the ensuing winter Congress would organize a new Territory in this region under which a public school system would be duly and lawfuly established. Colorado Territory was created about four months later.

The actual beginning of the duly organized public school system of Colorado, as well as that of Denver, was in an act passed early in the first session of the Colorado Territorial Legislature, which convened in Denver in September, 1861. The act was a rather comprehensive one and similar in its provisions to the school law then in force in the State of Illinois. It provided for appointment by the Governor, during that session, of a "Territorial Superintendent of Common Schools," who was to enter upon the duties of his office on December 1, 1861, at an annual salary of $500. The act imposed a great variety of duties on the Superintendent, provided for the biennial election of County Superintendents, and division of counties into school districts.

On November 7, 1861, Governor Gilpin appointed W. J. Curtice, who remained a citizen of Denver until his death in January, 1901, Territorial Superintendent. A few weeks before that time a public meeting of citizens, instigated by Mr. Goldrick, who announced it in the newspapers, had been held on the Auraria side to take some action toward organizing a school district. Though it was the first movement of the citizens in the direction of opening a free public school under the law, the attendance was not large, and the meeting was held outdoors in front of a store on Eleventh street, opposite the present Lindell Hotel, with a store-box as a nucleus around which it assembled. The more prominent of the citizens present were Francis M. Case, Goldrick, John Pierce, Edwin Scudder, and Baxter B. Stiles. A board, or committee, of three members was chosen to take charge of preparations for opening a public school. However, nothing effective resulted from that movement.

At the first and general Territorial and county elections, held December 2, 1861, Goldrick was chosen Superintendent of Schools for Arapahoe County; but, as the Legislature had not provided for a tax to create a school fund, there was little he could do at that time and for nearly a year afterward. However, during that interval the city of Denver—and the county, also—were divided by the line of Cherry creek into two districts, and preparations were made for getting the machinery of public schools in motion. The dividing line continued northward beyond the Platte, from the mouth of the creek, cutting in two what little there then was of the old town of Highland; the divisions becoming parts of the "East Denver" and "West Denver" districts.

The Legislature at its second session, began at Colorado City July 7, 1862, and adjourned to Denver July 11th, made its first provision for a school fund, by taxation and otherwise. One of the anticipated sources of revenue is indicated by the following provision of the act:



O. J. Goldrick.

"That hereafter when any new mineral lode, of either gold bearing quartz, silver, or other valuable metal, shall be discovered in this Territory, one claim of one hundred feet in length on such lode shall be set apart and held in perpetuity for the use and benefit of schools in this Territory, subject to the control of the Legislative Assembly."

It was confidently expected that this provision of the law would produce a large revenue, but it proved a great disappointment, and few of the claims so located contributed anything to the school fund. Some were sold at prices ranging from five to twenty-five dollars, but the total receipts from all were insignificant.

Superintendent Curtice had entered upon his duties December 1, 1861, but beyond putting together the framework of a school-system organization, little was done until the following autumn. In October, 1862, the first regular elections for members of Boards of Education were held in Denver. In "East Denver"—District No. 1—Joseph B. Cass, Lewis N. Tappan and Amos Steck were chosen. On October 23rd they held their first meeting, in the old "City Hall" that was later washed away, and organized by electing Steck, President; Tappan, Secretary; and Cass, Treasurer. So, District No. 1 was the first in Denver to complete its organization under the forms of law. In "West Denver"—District No. 2—J. H. Noteware, previously Superintendent of the schools of Kansas; Captain Edwin Scudder, and Frederick J. Stanton were elected. They met on October 25th and organized by choosing Noteware as President; Stanton, Secretary; and Scudder, Treasurer. On Saturday, November 29, 1862, County Superintendent Goldrick held the first examination of teacher candidates, on which day and a few subsequent ones he examined twenty persons, to ten of whom he gave certificates of qualification as teachers.

Notwithstanding that District Number 1 first organized its School Board, District Number 2 was ahead of it in opening a school—the first free public school in Colorado. The upper story of a roomy two-story brick building owned by Asa F. Middaugh, and located on the north side of Larimer street between Tenth and Eleventh streets, just west of the present Lindell Hotel, was rented, and there the school began its first term on December 1, 1862, in a room about fifty feet wide and about 100 feet long, and furnished with rude home-made long desks and benches. The Territorial Legislature had held one session in that historic building which, in later years, was cut down to one story and half its original width. The remnant of the old building, numbered 1013, stood there until recent times when it was removed because of its increasing decrepitude.

Mr. Abner R. Brown, now a citizen of Leadville, was appointed Principal of the school at a salary of eighty dollars a month, and had Miss Addie Simonton as his assistant. About two weeks later, Miss Emma Slaughter was employed as an additional teacher. The school was maintained until late in the following spring, the building remaining crowded to its utmost capacity. In May, 1863, the Board elected in District Number 2 consisted of Edwin Scudder, J. G. Vawter, and Eli M. Ashley.

Mr. Brown, "West Denver's" pioneer school Principal, came to Colorado in the spring of 1860 and opened a private school in Boulder City on June 19th of that year. After a three-months' term with forty pupils, in a log building, the citizens of that town concluded to build him a better house. In the autumn of that year they put up a handsome frame building twenty-four by thirty-six feet in size, lathed and plastered, and finished with dressed lumber, at a cost of twelve hundred dollars, all voluntarily contributed. It was the first building especially erected for school purposes in what is now Colorado. On December 1, 1860, Mr. Brown began the first term of school in the new building, and which he continued until the following spring, when he placed the school in charge of Miss Kate Goss (who later became Mrs. George T. Clark, of Denver) who taught it until early in the summer of 1861. Mr. Brown came to Denver in October, 1861, and opened a private school in "West Denver" which was attended by about forty pupils, and which he continued until appointed Principal of the first free public school in the autumn of 1862. He remained in that position until the close of the school year in the summer of 1864; and others of his assistants in those times were Miss Jennie Batchelder, Mrs. Fornis and Miss Glenn. Early in the autumn of 1864 Mr. Brown opened a private school here, with Miss Batchelder as his assistant and whom he married in October of that year.

Abner R. Brown

On the "East Denver" side—District Number 1—the first school was opened on December 10, 1862, in "Mr. Bayaud's room," a small frame building which stood on Sixteenth street on part of the site of the present American House, and which, also, was rented. Mr. H. H. Lamb was in charge as Principal, with Miss Indiana Sopris as his assistant. Like the "West Denver" building, this one was furnished with home-made pine desks and benches ten or twelve feet long. At that time there were 188 persons of school age in the district, but the school had only fifty or sixty pupils in attendance. The first school-tax levy enabled the district to continue the school through that winter and until the following April. In the spring of 1863 the Board increased the levy to one of four mills, and in May its members were re-elected. The "Bayaud School" was kept in operation until the spring of 1864 when it was closed for that school year owing to lack of funds, and the school interests of District Number 1 went down to a low ebb. Nor were affairs in District Number 2 any better. Abner R. Brown, as we have told, retired from the school of Number 2 in the summer of that year, and the autumn term was begun with but one teacher. Through the winter of 1864-65 the Rocky Mountain News carried in its columns a roster, or "Directory," of the Territorial, county, and city departments and officers, and in it the schools of Denver figured as follows:

"Public Schools."

"East Denver—Miss Cooper, teacher.
West Denver—Miss Wall, teacher."

It was from such beginnings as these, from the pioneer School Districts Numbers 1 and 2 into which the city and county were first divided—and in those times there was little of Arapahoe county outside of Denver, except a name and a vast expanse of unoccupied country—that Denver's magnificent educational system has developed. But it was not a quick development. It would be gratifying to record that that pair of pioneer schools were diligently nurtured, and soon grew strong under a fostering care from all the people. But it was not so. Districts Numbers 1 and 2 did not receive an undue amount of attention from the people, in the years of their adolescence, and sometimes they did not stand out of the way of absolute neglect. Until 1870 comparatively little progress was made by the public schools of Denver. School District officers were duly elected at the stated intervals required by Territorial law, though there appears to have been a lost interval in the official affairs of District Number 1 in 1865-66, and there is no definite record that Directors for it were elected in 1865 or that it had a school during the school-year 1865-66. On the other hand, the newspaper roster or "Directory" above referred to, indicates that District Number 1 had no school during that time, for its reference to public schools was, in the autumn of 1865, reduced to this:

"Public Schools."

"West Denver—Miss Wall, teacher."

Several of our surviving pioneers with whom the matter was discussed by the writer were of the impression that District Number 1 had no school in 1865-66. That general period was one of inactivity and indifference with relation to schools, outside of Denver as well as in it; and only a minority of the people whose impulses were in the right direction, took much interest in advancing the cause of popular education.

It must be borne in mind that the early settlement of Colorado and Denver was somewhat anomalous. The pioneers and immigrants of other new

Territories were usually families seeking permanent homes; while a large majority of those in this region were fortune-hunting men only. Many of those who had wives and children had left them behind, but the majority had neither. The highest ambition and practically the chief intention of a great many of the men here in those early years was to remain long enough to gather wealth with which to return to their former homes; and to such men schools here were not of much importance. These conditions changed slowly, even after there was a considerable permanent population of which a fair proportion was of children of school age, for the indifferent and not directly interested element continued in the majority practically throughout the decade of 1860-70. Some writers in endeavoring to account for the slow development of Denver's school system during that period, have stated, as the principal reason, the scarcity of children of a school age. This view does not appear to be sustained by the reminiscences of Mr. Brown who, in a recent letter referring to his first public school, said:

Miss Indiana Sopris.

"My first day's brood hatched out 260 in number, and all living and appearing healthy. Within ten days I found there had been a mistake in the first count, as the herd had increased to 500. More rooms had to be secured, more teachers employed; more noise on the playground, and more patience had to be exercised to get through with each day's duties."

Though Mr. Brown's estimate would seem to have been an exaggerated one for "West Denver," there was at that time a considerable juvenile population in the city. Yet, it was very sparse elsewhere in the Territory; not enough to constitute a first-class District at the present time.

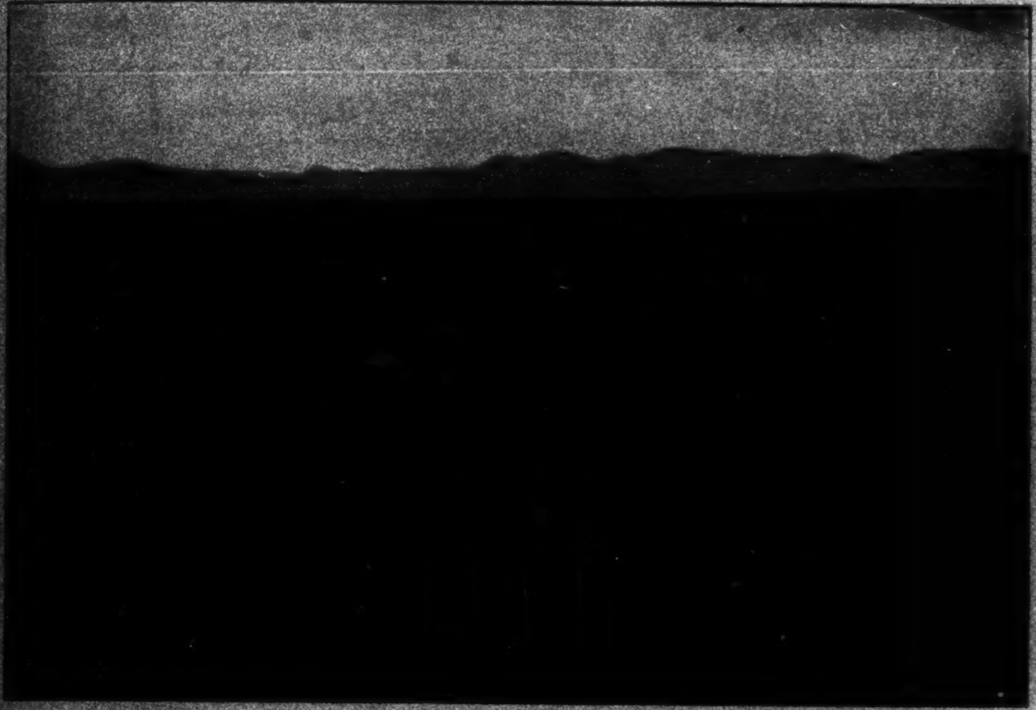
Territorial Superintendent Curtice resigned in 1863, and was succeeded by William S. Walker who, in 1865, was succeeded by A. W. Atkins the Territorial Treasurer; a change in the law in 1865 having made the Treasurer ex officio the School Superintendent. In 1867, Columbus Nuckolls became Territorial Treasurer and School Superintendent. He tried to bring order out of disorder but with indifferent success. His first report to the Legislature was the only one worthy even the name, that had been made up to that time. Superintendent Walker left no records of the little progress that was made during his term, nor were there any of much value made by his successor. Few of the counties made any reports to the Territory, and but little information concerning Arapahoe county is of record subsequent to Curtice's administration. In his report Nuckolls said:

"I would also state that several counties have never, even when requested, informed the Superintendent of Public Instruction who was or who had been County Superintendent, and that it is not yet known to him whether there is any responsible county organization."

Long before this the law with reference to school mining-claims had become obsolete, and few paid any attention to it; and it is of record that the proceeds of the sale of those that had been disposed of "were not properly accounted for." This chaotic condition of school affairs in the Territory continued with but little improvement until 1870. It was alleged that it was no uncommon thing for portions of the meager school funds to be misappropriated by both county and district officers. The burden of the few reports that were made to the Territorial Superintendent in that period is about the same: "Lack of interest," "My predecessor in office has left no records," "I hope to get matters in shape so as to render a complete account next year," "School matters here are in a very bad condition; for the past two years the County Commissioners have neglected to levy a school tax, hence we have no money;" and so on through a long category of similar stories.

It will be seen in the foregoing that up to 1870 there was far from being anything like an efficient school system. The Denver schools suffered with the rest, and in a more or less crippled condition the two old districts here struggled and dragged along as best they could during those years; and considered themselves fortunate if they could make both ends meet on a basis of almost pitiable economy.

It was not until late in the autumn of 1865 that either district owned a school building, and that District Number 9 acquired that distinction. At that time the people of the "West Denver" district bought the Iddings business property at the northwest corner of Lawrence and Eleventh streets. The building was a small two-story brick—one room to each floor—that had been built in 1861 and used as a general store until 1863. In 1863-65 it was used by the Federal military authorities as a warehouse for arms, ammunition, and other military supplies; and from that use had become known as the "Arsenal." At the time of "the great Indian scare," elsewhere mentioned, it was one of the refuges for the frightened people of Denver, and after it was converted to school purposes it was called the "Arsenal school." The price paid for the property, and which is also an indication of property values at that time, was



View in Denver, from Seventeenth and Champa streets looking westward, about 1865; Lawrence street M. E. church in middle distance on the left.

$700. In those days no special taxes were levied or bonds issued for the purpose of acquiring school property, and the entire amount had to be obtained by subscriptions among the people; the district treasury being in no condition to stand even part of such a draft as that.

With the purchase of the "Arsenal," school expansion in District Number 2 rested during the remainder of that decade of 1860-70, so far as the acquisition of school buildings was concerned. The juvenile part of the population had increased, but in those days it was always relatively less than that of the adult, according to present proportions. Nevertheless, the District's facilities and resources soon became totally inadequate to accommodate the school population, and the surplus had to stay at home. Though that part of the town had lost some of its former prestige as a business section, it still contained the greater number of dwellings and probably more than half of the population of Denver.

The "East Denver" district failed to do so well. Its schools continued to occupy rented premises, and so limited were its resources for several years that it had all it could do to pay teachers and rent, furnish the rooms and meet incidental expenses. On May 10, 1866, the roomy brick dwelling built several years before by J. H. Kehler on the site of the Windsor Hotel, was rented for seventy-five dollars a month, and converted into a school building—the largest and best the district had up to that time. In that year the district had five hundred persons of school age, of whom forty-two were colored.

In April, 1866, a German private school had been established in a frame building on the northeast corner of Fourteenth and Curtis streets. In February, 1868, this school was re-organized and taken under the care of District Number 1 as a public school, and was so used until the end of the school year in 1870.

In 1868 a portion of the people of District Number 1 demanded that a separate school be established for colored children. In that year, the exact date not being known, a small building at the corner of Sixteenth and Market streets was rented, and a school for colored children, only, was established in it for a short time; but nothing definite concerning the period of its occupancy can be learned from the old records which, as we have stated, are very deficient in many details that would now be of historical interest. This is the case in the records of both districts. On February 2, 1869, the African Baptist Church on Arapahoe street, between Twenty-first and Twenty-second streets, was rented and used for colored children. Later this school was transferred to the African M. E. Church at Stout and Nineteenth streets. This building was so used until the close of the school year of 1873, after which time the color line was abolished, and all pupils then went into the newly-finished "Arapahoe School."

It was not until 1868, when Amos Steck made a gift of two lots on the north side of Arapahoe street, between Seventeenth and Eighteenth streets, that a basis was obtained for later providing the district with its first good school building—the old "Arapahoe School," the first it owned.

Late in the summer of 1870 District Number 1 rented the "Colorado Seminary" building at Fourteenth and Arapahoe streets, at $150 per month, and on September 4th the "Kehler School" was opened in it, the Kehler dwelling then being abandoned for school purposes. This change may be regarded as terminating the pioneer school era in District Number 1, for arrangements for building a fine school structure were then under way; and to this long step forward we will later refer.

At the close of the school year of 1869-70 there were but fifteen school districts in all of Arapahoe county, and some of them nominally embraced several townships and were more nominal than actual districts. The persons of school age in the entire city numbered less than 1,200. The total school expenditures in that year in the city and county were only $17,347.37; and the valuation of all the public school property in the city and county was but $8,341.

In what has been said in the foregoing the condition of the public schools in pioneer Denver, and in the Territory, and county, is fairly reflected. Considered from one standpoint it does not appear creditable; and especially not creditable to a city of between four thousand and five thousand population, if not more in some years. Under ordinary circumstances in an ordinary town of that size it would have been positively discreditable. But the circumstances were extraordinary and so was the young city. An unusually large proportion of its population persistently consisted of men without families and without interest in schools; and the citizenship of many of them was of the most transitory character. True, there were those not of this character, and it is also true that they well realized the need for better school facilities. But resources were limited, and the attention of the average resident was directed toward and absorbed by other and quite different things.

Furthermore, as our readers who have followed us in our Story of Denver will have seen, there were yet other reasons in those times for much of this seeming neglect. In frequent periods in that decade there were many grave uncertainties in Denver's prospects, and her future often seemed very disheartening even to her most sanguine partisans. It was not until the building of Denver's pioneer railroads became assured that the clouds broke away and disappeared. With the resultant influx of many new citizens, and the era of permanent prosperity which then set in, the people began to arouse themselves to the needs of their struggling schools and to the necessity of inaugurating a new and better state of things in their affairs.

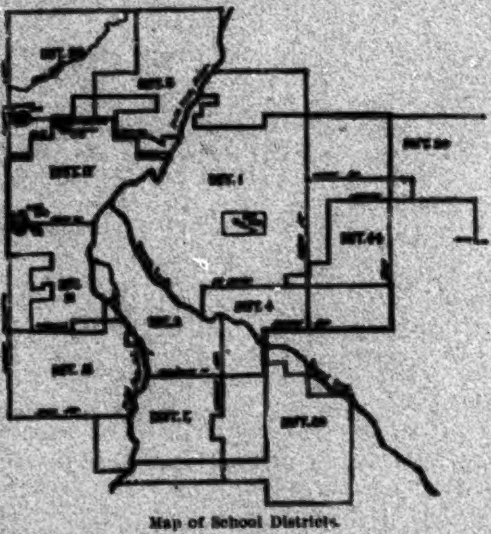
This awakened spirit was reflected in an act of the Territorial Legislature, approved February 11, 1870, entitled "An Act to provide for Common Schools." The inference to be drawn from that title is a correct one; for it is certain that previous arrangements, no matter what the intentions may have been, did not "provide." The new law clothed Boards of School Directors with broader and more definite authority, gave them entire control and management of the schools, assured them of a fair proportion of the public revenues, provided for organizing new districts, and in other ways injected life, strength and vigor into the Territory's school system. From the new legislation Districts Numbers 1 and 2 received new vigor, and from one point of view their vital history may be said to have then begun.

CHAPTER LXII.

INDEPENDENT INCORPORATION OF DISTRICT NO. 1—SCHOOL DISTRICTS—DISADVANTAGES OF DIVISION—HISTORY OF DISTRICT NO. 1—STATISTICS—DISTRICT OFFICERS—"EAST DENVER" HIGH SCHOOL—MANUAL TRAINING SCHOOL—HISTORY OF DISTRICT NO. 2—ITS SCHOOL OFFICERS—EXTENT AND CHARACTER OF ITS SCHOOLS—HISTORY OF DISTRICT NO. 17—ITS SCHOOLS AND SCHOOL OFFICERS—ORIGIN AND DEVELOPMENT OF DISTRICTS NO. 21 AND NO. 7—BREADTH AND CHARACTER OF THE DENVER SCHOOL SYSTEM.

By a special act of the Territorial Legislature in 1874, approved on February 13th, "for the support and regulation of the Public Schools of Denver," District Number 1 was made an independent "body politic and corporate in law, and to be known and designated as the 'Board of Education of School District No. One (1).'" The act provided for a Board of Directors, and organization as now exist, conferred the powers that have since been so wisely and beneficently exercised, limited the tax levy for school purposes, provided for annexing adjoining districts, repealed as to District Number 1 all conflicting parts of the act of February 11, 1870, and went into effect May 1, 1874. This law was amended by an act approved February 2, 1876, further broadening the duties and powers of the Directors; and, as amended, constituted what is often termed the "Charter of District Number 1." After Colorado became a State the substance of that "Charter" law was made the foundation for the general school law of the State; and in all subsequent revisions and amendments the general provisions originally embodied in the "Charter" have not been materially changed, though some others have been interjected that might just as well have been kept out.

The territory of the Denver city corporation now includes, or forms part of, twelve separate school districts, designated by Numbers 1, 2, 4, 5, 7, 17, 18, 21, 24, 35, 44 and 98. Of these, as shown by the map, Numbers 5, 18, 35 and 98 are almost wholly outside the city limits. Numbers 7, 21, 24, and 44 have from one-third to one-half their areas outside; Number 4 is inside, but it is relatively unimportant and in a sparsely settled locality in the southeastern part of the corporate limits, which, as we all know, are not laid down on contracted lines. This leaves the main, built-up, part of the city area divided into three districts, Numbers 1, 2, and 17, with Number 2 wholly inside the limits. Numbers 1, 2, 7, 17 and 21 are first-class districts; Number 5 (Globeville and Argo), second-class; all the others, third-class. It is not essential that we enter into details concerning all the outlying districts. They have good schools under intelligent and efficient management, and their line of work is conducted upon a high plane. They are provided with substantial buildings, most of which are comparatively new; some of those of District Numbers 7 and 21, to which we shall again refer, being equal to those in any part of the city.



Map of School Districts.

An unusual and apparently disadvantageous situation is presented in the school divisions of the city territory and the division of school administration into several independent districts under as many separate Boards of Education, instead of having our entire city school system managed and directed by one official organization. A glance at the accompanying map will reveal to the reader the outlines of this certainly undesirable situation. As a community, the people of Denver deal with the twelve separate and distinct school districts, only two of which, as we have stated, lie wholly within the city limits. Each district is, in practice, an independent organization, under management of its own Board of Directors, and not always in harmony with its neighbors. The obvious disadvantages of such a system were recognized, and made the subject of official comment, more than twenty years ago. In his annual report for 1877, Mr. E. M. Ashley, then President of the Board of Education, District Number 1, said:

> "Our city is, unfortunately, I think, divided into three school districts. I am well aware that no material advantage can come to this district by a union, but I must think, were the school interests united, it would be better for us as a city. A number of pupils are attending our schools from adjoining districts, and are required to pay tuition, notwithstanding the fact that their parents pay, in some cases, a large tax in our district; but under existing laws this cannot be remedied without a union of districts. Under the special law governing us the adjoining districts may be received at any time, upon their request, and I hope for the good of the whole city that the three districts may soon become one."

The evils of the arrangement have multiplied with the increase of districts since Mr. Ashley made them the subject of his comments. Other school officers have since frequently pointed out the disadvantages, and many unsuccessful attempts to rectify them have been made. The worst feature of the system is that it prevents an equitable per capita distribution of the city's school taxes. Using the figures of 1900, District Number 1 with 17,431 enumerated school children has property of an assessed valuation of $56,766,806; District Number 2, with 8,701 enumerated children has but $6,309,210 of property valuation; and District Number 17 with 7,106 enumerated children, has a property valuation of but $4,199,240. Far the larger part of school revenues for each district are derived from the special levy made by each District Board on the property in its own district. The county authorities levy a comparatively small, but equal and general, school-tax on all property in the county, the proceeds of which are distributed to each district in the county on a per capita basis. In this way and to a limited extent the wealthier districts contribute to the school funds of the poorer districts; but only to a limited, and not to an equitable, extent. In practice, District Number 1 has a tremendous advantage in resources, even within its statutory limitation of school-taxes. The resources of Districts Numbers 2 and 17 with a combined school population nearly as great as that of District Number 1, are limited to their share of the general county tax, and to their own taxes on property aggregating an assessed valuation of but $10,508,450; or, approximately one-sixth that of District Number 1. In other words, the financial resources of the last-named District, aside from the county levy, are nearly six-fold greater upon the special levy its Board may make, than those of the other two combined; or, to express it in still another way, the burden of a special levy is but about one-sixth as heavy on property in Number 1 as it is in the others, assuming equal educational results to be sought and accomplished in all. It is difficult to discern sound reasons for perpetuating a system so inequitable, and which appears to be the one conspicuous defect in our most admirable educational structure.

School District Number 1 is in every way the principal district of the city. It embraces one-half of the city's nominal, and near two-thirds of its built-up area; and about four-fifths of its total valuation of taxable property. The city's area being within a fraction of fifty square miles, the city territory included in this district's limits approximates twenty-five square miles; its northern boundary is beyond Riverside Cemetery; its eastern is Colorado Boulevard, east of the City Park; and its southern, southwestern and western, Cherry creek and the Platte river.

Amos Steck. Photographed 1860.

The first school building owned by District Number 1 was, as we have stated, the "Arapahoe," built on the north side of Arapahoe street between Seventeenth and Eighteenth streets. The first movement toward its erection occurred on August 5, 1868, when "five freeholders" requested the Board of Education to call a meeting to consider the matter. The meeting was called and held, but the proposition was not approved. Another meeting was called, and held on August 29th, to reconsider the previous adverse action. It was at that meeting that Amos Steck made public his willingness to donate two of the lots necessary for the site of the proposed building, their value at that time being $1,050. The gift was accepted, but nothing further was done until July 10, 1870, when the Board purchased two lots adjoining the Steck lots for $1,050. Again there was a rest, but on January 11, 1871, the Board bought three more lots, adjoining those it already owned, paying $2,250 for them. The seven lots gave ample room for a large school building. On May 27, 1871, the Board decided to go ahead with the building. A contract was made for the foundations and basement and on October 30th the President of the Board broke ground with befitting ceremonies. On April 27, 1872, the contract for the superstructure was let, and on June 24, 1872, the corner stone laid by the Masonic fraternity. There was a great civic display and parade in which the school children, the Territorial officials, the Judges of the Courts, the fire and police departments, and various societies took part. On April 2, 1873, the completed building, the cost of which, including ground and various incidentals, but exclusive of furniture, was $51,695, was accepted, and occupied by the schools.

Referring to conditions existent in the district in 1870-71, the annual report for 1885 retrospectively said:

> "About this time there were unmistakable evidences that the transplanted population of Colorado was beginning 'to grow up with the country,' and to push out new rootlets and buds and branches, that must needs have opportunity to grow up in the way they should go. The Board were perplexed to know how to provide desk room for Colorado babies that seemed to come into the State at an unprecedented rate, and were apparently born six years old, and with an insatiable thirst for knowledge. This perplexity has been handed down as a legacy from Board to Board to the present day."

In 1871 and 1872, pending the completion of the Arapahoe School the old rented houses and rooms became more and more crowded, and in those years, under the new impetus the railroads had given the city, vacant buildings and rooms were few. At the northeast corner of Sixteenth and Curtis streets the First Baptist congregation had started to build a church, and had raised the basement walls to a height of about four feet above the sidewalk. A rough, board roof had been placed over this basement, and the structure became known as "the Baptist dug-out," to which we have elsewhere alluded. On January 11, 1872, the Board of District Number 1 rented the "dug-out" and fitted it up as a school room, as which it was used until the Arapahoe School was finished. So, in that winter the district had three school houses—the Seminary, the colored school and the "dug-out;" and thought it was doing pretty well.

The Arapahoe was a fine school building for its time and would not be an indifferent one for these times. It was the pride of the city, and citizens wearied not in pointing out what, by common approval, was designated as "our magnificent temple of learning." It proved an expensive structure before they got through with it, as extensive alterations had to be made in it, and its maintenance account was heavy. These things and its furniture finally ran the charges against it up to $93,186. It sheltered the district's first High School and was also the first home of the High School Library. The building was used for school purposes only nine years, it having been abandoned in 1882. The encroachments of business rendered its location less desirable and advanced the value of the premises. The property was sold for $165,000, and the new owners later erected between the front of the building and the sidewalk line the lofty commercial structure, the "Club Building," now standing there. But the old school building is still in its old place, nearly hidden from view by the Club Building to which it is an annex, and by other adjacent structures.

The district's second building soon followed the erection of the Arapahoe. This was what became known as the "Stout Street School," and was undertaken June 18, 1873. Eight lots on the northeast corner of Stout and Twenty-eighth streets were purchased at a cost of $2,400. On August 2nd the contracts were let, and the building was finished early in March, 1874, at an all-told cost, excepting furniture, but including ground, of $19,114. It was a good-looking building, but faultily designed and constructed; and, notwithstanding the heavy expense account it entailed, it became dilapidated. Then reports became current that it was unsafe and parents feared to have their children in it. Upon careful survey it was found that a large outlay would be required to restore its lost reputation. Pending a conclusion by the Board relative to remodeling it, the city authorities condemned it on March 11, 1881, when it was just seven years old. The Board of Education then decided that it was not worth while to reconstruct it, and it was vacated, securely closed, and offered for sale. Through the following summer it was further battered and disfigured by marauding boys, and on November 10, 1881, was totally destroyed by fire. At that time it represented a total outlay of $26,871, including cost of ground. The real estate was later sold for enough to more than reimburse the total outlay.

To provide means with which to pay for these two buildings the district had to issue bonds, running twelve years, on which the interest rate was twelve per cent., or one per cent. a month. Ten years later the Board borrowed all the money it needed at five per cent.

After the enactment of the district "Charter" in 1874, and under the needs created by the fast-increasing population, new buildings were added almost at the rate of one each year, and in every instance there was a plenty of children to fill them as soon as completed; and often more than enough. In 1874 the district owned but the Arapahoe and Stout street schools, with 1,212 children in attendance and a total of 2,240 persons of school age in the district; less than half of them being in school. There was an urgent demand for more buildings which was, under the circumstances, fairly met with a liberal public spirit. Nevertheless the renting of rooms could not be entirely avoided. The records show that it had to be continued to a limited extent for eight or ten years, as there was a persistent overflow of pupils to be provided for. In 1883 the Board adopted the plan of building small temporary frame structures for primary

Laying corner-stone, Arapahoe school-building. From a photograph.

schools, on ground bought for future permanent buildings. The Twenty-ninth Street School is an example of these houses, of which class two or three others are in use.

We can not undertake to further follow in detail the erection of new schools, but will have to be content with a summary of the more important facts concerning them, presented in concise form. Each of the schools has its distinctive name, but not well-chosen in every case. The following is a list of those now in use in the district:

"Broadway"—Broadway, between Thirteenth and Fourteenth Avenues; erected in 1875.

"Columbine"—Columbine street, between Twenty-eighth and Twenty-ninth Avenues; erected in 1882.

"Corona"—Corona street, between Eighth and Ninth Avenues; erected in 1890.

"Delgany"—Delgany street, corner of Twenty-first street; erected in 1885.

"Ebert"—Corner of Logan Avenue and Twenty-second street; erected in 1880.

"Eleventh Avenue"—corner of Eleventh Avenue and Columbine street; erected in 1898; temporary building.

"Elyria"—corner of Fisk and Marshall streets; erected in 1885.

"Emerson"—corner of Alta street and Fourteenth Avenue; erected in 1885.

"Gilpin"—corner of California and Twenty-ninth streets; erected in 1881.

High School—block bounded by Stout, Nineteenth, California and Twentieth streets; west wing erected in 1881; main building and east wing in 1889.

"Hyde Park"—corner Gilpin and Thirty-sixth streets; erected in 1889.

"Ironton"—corner of Delgany and Thirty-sixth streets; erected in 1890.

"Longfellow"—corner of Welton and Thirteenth streets; erected in 1882; later, by additions, its size and capacity were doubled.

"Marie Mitchell"—corner LaFayette street and Thirty-second Avenue; erected in 1899.

Manual Training High School—corner of Franklin street and Twenty-seventh Avenue; erected in 1893.

"Park"—Park Avenue; erected in 1895; temporary building.

"Swansea"—in Ernest's addition to Swansea; erected in 1891.

"Twenty-Fourth Street"—corner of Twenty-fourth and Market streets; erected in 1879.

"Twenty-Ninth Street"—corner of Blake and Twenty-ninth streets; erected in 1882; temporary building.

"Whittier"—Marion street between Twenty-fourth and Twenty-fifth Avenues; erected in 1883.

"Wyman"—corner of Williams street and Sixteenth Avenue; erected in 1891.

In addition to these a new building contracted for in April, 1900, is in course of construction at the time of closing our record. It will succeed the Eleventh Avenue temporary building, is located at Columbine street and Eleventh Avenues, and will be among the best of the grammar schools in the district. It will be a sixteen-room building, of stone and brick, and will cost about $65,000.

In connection with the schools and as a part of the system, though under an extra provision, District Number 1 is, at this time, maintaining twenty kindergartens in eighteen of the buildings, two of them having two each. In these, two thousand little children now receive primary training; and in five of the buildings sloyd rooms are set apart, having an aggregate of one hundred and thirty-seven benches.

To conduct all these schools to the high standard established for them a little army of instructors is required. There are seventeen principals and 388 other teachers, whose salaries in 1900 aggregated $282,490.

It is no part of the purpose of this work to present arrays of statistics; we want to keep them out as much as possible. To persons having direct need for them, other sources of information are available; and, furthermore, statistics of the public schools, which are displaced by the succeeding year's reports, are especially undesirable here, beyond a very limited casual use of them. According to the enumeration made in April, 1900, there were 17,431 children of school age in District Number 1. Of these a total of 14,320—6,971 boys and 7,349 girls—was enrolled in the schools; including 827 in the High School and 381 in the Manual Training. When the district was reorganized under the "Charter," in 1874, the assessed valuation of property in it was $7,814,000, and the levy nine mills. The assessment in 1900 was $56,766,805, and the levy five mills. The property valuation has been greater. By steady large advances from that of 1880 which was $44,786,000, it had reached the maximum in 1892-93 when it was $67,486,335; but by the next annual assessment it lost $11,500,000.

Arapahoe school-building

In this connection it may be conveniently mentioned that there are still about forty acres of school lands within the city limits, probably worth from $1,500 to $2,000 per acre, and that will ultimately produce a considerable addition to the city school funds.

The present estimated value of the school property in District Number 1 approximates one and one-half million dollars, though its cost has exceeded that sum. The following statement, prepared by the District's Supervising Architect, but which does not include the new house at Columbine street and Eleventh Avenue, nor the cost of a recent addition to the Manual Training School, presents some interesting figures with relation to the cost and value of school property in use in the district in 1900:

Old Stout street school-building.

Buildings in Use.	Original Cost, Exclusive of Grounds.	Expended for Improvements and Repairs.	Total Expenditure.	Present Value of Buildings (estimated)	Paid for Lots.
Broadway	$21,512 50	$24,229 40	$45,741 90	$34,408 27	$5,500
Columbine	56,210 90	2,985 70	59,196 60	56,460 11	1,500
Corona	74,788 40	6,973 40	81,761 80	80,088 86	3,112
Delgany	14,257 30	2,853 10	17,110 40	11,391 60	425
Ebert	65,942 17	21,768 50	87,710 67	59,291 25	2,250
Eleventh Ave.	1,403 32	62 15	1,465 47	1,406 60	11,000
Emerson	72,674 25	7,369 62	80,043 87	65,787 71	5,500
Gilpin	114,142 50	20,807 80	134,950 30	108,121 97	9,000
High, E. Denver	322,684 69	50,782 51	373,467 20	340,804 13	*400
High, M. Train.	85,636 50	20,289 02	105,925 52	107,328 82	17,250
Hyde Park	72,544 79	15,023 30	87,568 09	90,302 38	4,500
Ironton	24,646 60	3,985 84	28,632 44	16,556 60	2,000
Longfellow	77,785 80	51,259 87	129,045 67	102,022 54	2,300
Maria Mitchell	36,087 56	....	36,087 56	36,087 56	2,000
Park	1,300 00	216 80	1,516 80	1,480 40	2,250
Swansea	72,358 70	5,244 97	77,603 67	69,476 64	5,400
24th Street	22,344 65	18,619 71	40,964 36	36,440 50	3,000
29th Street	2,479 30	4,497 22	6,976 52	2,347 30	2,400
Whittier	118,089 01	13,218 97	131,307 98	111,276 29	3,750
Wyman	82,570 03	5,671 83	88,241 86	75,498 08	17,000
32d Avenue	2,434 00	540 50	2,974 50	2,540 50	....
Elyria	3,497 00	....	3,497 00	3,000 00	2,000
Total	$1,304,425 46	$276,400 44	$1,580,825 90	$1,330,914 95	$110,000

Total estimated value $1,440,914 95

*Cost of small corner only, balance of block donated by the United States.

The above figures include the cost of all improvements on the grounds such as fences, sidewalks, etc., and special equipments.

As heretofore stated, the school-tax in District Number 1 is limited by statute to a levy not exceeding six mills. Currently the amount is five mills. The contributions to the county's general school fund are, of course, largely in excess of its receipts from that fund. The size and character of the district necessarily entail this. The district has no debt, the last of the outstanding building bonds having been retired several years ago. Of course, such a thing as so-called "floating debt" is unknown. The total expenditures of the district during its fiscal year ended May 5, 1899, were $396,895.44; of which amount $20,341 were expended on the kindergartens. During the school year ended May, 1900, they were $435,511.

With reference to the financial part of District Number 1's affairs Superintendent Gove, in his annual report for 1899, outlined the policy that has governed their management. It is a sound one now and always will be:

> "The financial limitations are of the highest consideration and of vast importance. More disaster comes throughout the country from failure to accede to the demands of the people on the financial, than from any other side. There is, there must be, a place where the power of the state to tax the property of the state must stop; how much of a man's income shall be taken from him by law for the public weal is a reasonable question. When the people, however desirable may be an enterprise and whatever be its character,—and the school is one—are too heavily burdened, the broadening of the work and the increase of expenditure must cease. In the educational work it is not sufficient to say: 'This is good to do, therefore do it;' but one should say: 'This is good to do, let us do it if we can afford it.' The financial conduct of a school corporation ought not to differ from the financial conduct of the individual. School officers err in undertaking to place the educational interests on so high a plane, so far above all other interests, that the dollars expended are not properly considered. Enthusiasts force progressive measures that strain the financial ability of the community, and the reaction is often disastrous. On account of this erring, too many schools spend years in advancing and succeeding years in retreating, the retreating being forced by the people who are aroused too late to the fact that too much money has been expended, not for advanced and efficient schools, for they are always acceptable, but on account of the poverty or ability of the people and the property.
>
> Under the management of the Board of Education of this school district, we have been especially fortunate in avoiding extremes, and yet, as I shall try to show in this report, kept measurably abreast with the best schools. No excessive tax has ever been imposed upon the property of the district; the houses have been built and paid for at the time of their completion. No other school district west of the Mississippi River of the size of this district is to-day out of debt, floating or bonded. It is to this fact that our health is due."

The city has been fortunate in having, as a rule, the welfare and management of its great school system in the hands of sincere, conscientious men of the highest integrity and of thorough business ability. This statement applies with equal force to all the districts since the present system took form. There have been no scandals; political questions are not permitted to enter with their apparently inevitable contaminations; and honesty and efficiency, without fee or reward, are the sole directing forces. In District Number 1 there has been a continuity of administration, members being elected and re-elected until their periods of services covered, in several instances, nine years; and in one was prolonged to twelve. This marked tendency to permanency of management is worthily exemplified in the long and most acceptable tenure of Aaron Gove, L.L. D., the executive head of school supervision in the district. He has been Superintendent since July, 1874.

The roster of School Directors for District Number 1 could not be made complete, though much time and research were devoted to that end. This is due to the deficiency of old records and to their silence on many transactions in the earlier times; and there is a complete hiatus with respect to the school-year 1865-66. Elections for School Directors were due annually in May, but no record could be found of the election of Directors for District Number 1 in May, 1865. Neither the District nor the office of the County Superintendent has any record of it, and the only reference to it that we could find was the following "Notice" published in the Rocky Mountain News, April 29, 1865:

> "The Regular Annual District Meeting for the First School District, Arapahoe county, will be held in the room in the rear of the News office, on Monday the 1st day of May, A. D. 1865, at 2 o'clock p. m., for the purpose of electing officers for the ensuing year, and for such other business as may be deemed proper by the electors of the District."
>
> "Amos Steck, President."

Notwithstanding that the meeting was called to be held "in the room in the rear of the News office," that paper, usually so vigilant, contained in succeeding issues no mention of it, nor of any result growing out of it; nor could Judge Steck, to whom we referred the matter, recall anything concerning it after so long a lapse of time. The fact that instead of the usual form of election being called, a meeting in a small room was to have been held, suggests that little importance was attached to it and that it was expected to receive little attention. At that time public interest was absorbed in the events connected with the collapse of the great rebellion, and it may be that that was one of the causes of obscurity concerning this bit of detail in the early history of District Number 1. At all events, we could find no further record of that election. Inasmuch, however, as Amos Steck had been a member and President of the Board, and Joseph B. Cass a member and Treasurer, from the beginning—the latter also having been Treasurer in 1866-67—it is not improbable that if an election were held at that time that they, at least, were reelected.

Until enactment of the law of February 13, 1874, the School Board of District Number 1 consisted of three members, and they respectively filled the positions of President, Secretary, and Treasurer. With the exception of the incumbent during the school year 1865-66, (if there were one), the following is a list of the Presidents of the District's Board to the close of our record:

Amos Steck	1862-65
—— —— ————	1865-66
W. F. McClelland	1866-68
R. G. Buckingham	1868-69
J. S. McCool	1869-70
R. G. Buckingham	1870-73
F. J. Bancroft	1873-75
D. Hurd	1875-76
E. M. Ashley	1876-77
H. K. Steele	1877-78
W. H. Pierce	1878-79
K. G. Cooper	1879-82
A. Stedman	1882-90
F. Steinhauer	1891-92
J. B. Grant	1892-99
H. M. Orahood	1899-00
L. E. Lemen	1900-

The "Charter" as amended in 1876 provides that the President "must be" a member of the Board; that the Secretary "may be;" and that the Treasurer "shall not be." Usually in later times the Secretaries have not been members. The following are the names of those who have so served, from the beginning, excepting that of the unknown incumbent in 1865-66:

Temporary school-building, District No. 1

L. N. Tappen	1862-63
B. P. Frink	1863-64
Chauncey Barbour	1864-65
—— ————	1865-66
W. S. Walker	1866-67
W. D. Anthony	1867-68
H. T. Grill	1868-69
A. Schinner	1869-71
August Opitz	1871-73
F. Steinhauer	1873-74
W. M. Newton	1874-76
W. D. Todd	1876-89
J. C. Dana	1889-98
S. Roy Wright	1898-

For reasons already stated the list of Treasurers is also incomplete:

J. B. Cass	1862-65
—— ————	1865-66
J. B. Cass	1866-67
J. N. Veasey	1867-68
Fred Kramer	1868-69
J. C. Anderson	1869-73
D. J. Martin	1873-74
E. M. Ashley	1874-75
W. C. Lothrop	1875-76
W. B. Berger	1876-90
C. B. Kountze	1890-

Between 1870 and 1874 General Roger W. Woodbury and David H. Moffat served terms as Board members but not as officers; and the addition of their names to the others on these pages makes complete, we believe, with the exceptions in 1865-66 heretofore noted, the list of citizens who have served, or are now serving, the District in directing the affairs of its schools.

Two members of the Board are now elected annually in May for terms of three years. Since the District was established as an independent one in 1874, the members of its Board of Education have been as follows—Bancroft and Hurd having also been members under the previous organization:

F. J. Bancroft	1874-75
E. M. Ashley	1874-77
P. Gottesleben	1874-83
D. Hurd	1874-76
W. M. Newton	1874-76
W. C. Lothrop	1874-76
Albert Brown	1875-77
H. K. Steele	1876-78
L. C. Ellsworth	1876-78—1883-89
W. H. Pierce	1876-78
K. G. Cooper	1877-82
C. D. Cobb	1878-82
George Schroeter	1878-84
A. Stedman	1878-90
C. A. Roberts	1879-83
George W. Kassler	1882-88
Frank Church	1882-85
F. Steinhauer	1883-92
John S. Christensen	1884-86
L. N. Greenleaf	1885-91
William W. Webster	1886-87
George Tritch	1887-90
George A. Bushnell	1888-91
John J. Smith	1889-98
J. B. Grant	1890-99
Henry Hannington	1890-93
Samuel P. Rose (died June 26, 1893)	1891-93
C. S. Morey	1891-94
Oscar Reuter	1892-95
Ione T. Hanna	1893-96
Harper M. Orahood	1893-00
Alonzo G. Rhoads	1894-97
Mary Barker Bates	1895-
L. E. Lemen	1896-99
Carrie O. Kistler	1897-00
Tyson S. Dines	1898-
D. C. Dodge	1899-
F. Steinhauer	1899-
L. E. Lemen	1900-
Thomas Keely	1900-

Prior to 1871 the office of Superintendent did not exist, each of the pioneer schools having been wholly under the charge of its Principal who, upon several occasions was the only teacher. In 1871, just before the autumn opening of the schools, H. Carver was elected the first Superintendent. He served one year and was succeeded by F. C. Garbutt who, also, served but one year. In July, 1874, Aaron Gove was elected and has served continuously since that time.

In 1874 the necessity of organizing school grades higher than those then established had become manifest. Early in the autumn of that year it was determined to establish a High School, and when the fall term began the school was opened with 108 pupils. Rooms for its accommodation had been prepared in the Arapahoe School, and it remained in that building until the west wing of the present High School building was completed in 1881. The first class was graduated in 1877.

When Congress made what was known as the "Congressional Grant" in the earlier "Sixties," to cure Denver real estate titles, it reserved to the government the block (143) on which the "East Denver" High School now stands; but the block remained unimproved, and was known by the name "Government Square." When the Board of Education was anxiously seeking for a suitable location for a High School and library building, late in the "Seventies," Thomas M. Patterson was representing the Centennial State in the Forty-fifth Congress (1877-79), and he came to the Board's relief by procuring the enactment of a law giving the entire "Government Square" to the city for school purposes, only. This widely opened the way for the improvement, and enabled the Board to plan and eventually complete a larger and finer structure than would otherwise have been erected at that time. After the west wing was finished in 1881, operations rested for awhile, and it was not, as we have stated, until 1889 that the entire structure as it now stands was completed and ready for occupation. It is a most substantial and spacious building.

"East Denver" High School Building.

The educational statistics of the "East Denver" High School are far too copious for us to deal with here. The classes are large, the work thorough through the four-years classical course, and the graduates go forth prepared for admission to the higher universities, or for participation at once in the affairs of business and social life. It is to be said, furthermore, that those graduated in the other High Schools are equally well equipped, as the methods of each are practically alike and the results represent the same high standards.

As incentives to merit and excellence, a series of prizes, established by public-spirited citizens, are now open to the advanced schools of District Number 1, and are awarded annually. The first of these prizes was established by General R. W. Woodbury in 1875, for excellence in declamation, and is open to the pupils of the High School. At first it was a sum of money, but in 1882 was changed to a fine gold medal. The "Wolcott prize," established in 1879 by Henry R. Wolcott, is a handsome bronze medal for the young lady of the High School who excels in public reading. The "Baker prize" established in 1878 by James H. Baker, then Principal of the High School, and now President of the State University, is a medal for superiority in debate. The "Phelps prize," established in 1885 by A. C. Phelps, was formerly open to the first and second classes of the High School, but in 1893 was limited to the graduate class. It is for the best historical essay. The "Stevens prize," established in 1895 by Isaac N. Stevens, is awarded annually the evening before Washington's birthday, for the best original patriotic oration. Competition is limited to one representative from each of the regularly established literary societies of the High School, including the one named for Mr. C. S. Morey. The "Morey prize" was established in 1890 by Mr. Morey. It is awarded annually for excellence in sight reading, and is open to the girls of the Manual Training High School of District Number 1.

The Corona School—Type of modern school architecture in District No. 1.

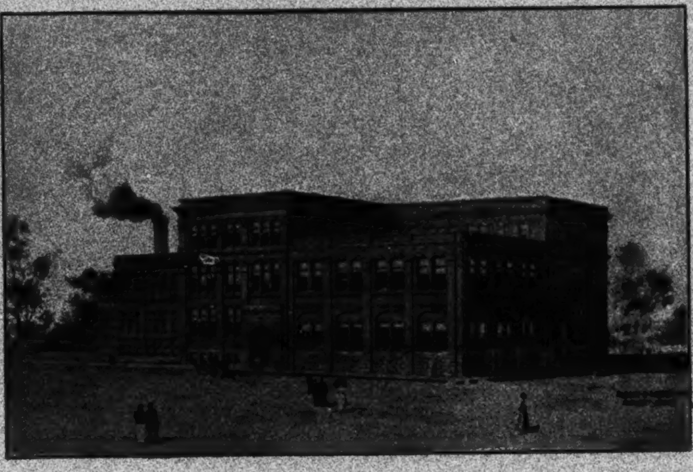
As a regulation for competition for prizes the Board, in November, 1895, adopted the following:

"No pupil may compete for any of the prizes offered for excellency in declamation, reading, debate, essay writing, or oratory, except his scholarship at the time of the preliminary contest be at or above the average required for promotion, as determined by his rank for the preceding portion of the current year. No student shall compete unless he pursues the regular courses required for graduation—or at least four full studies."

The fine Manual Training School is a recent addition to the educational equipment of District Number 1. It was primarily the conception of C. S. Morey when he was a member of the Board; and while heartily indorsed and supported by his associates, its existence is to a great extent due to his deep personal interest and untiring zeal in and for it. A portion of the building was built in 1892 and occupied in April, 1893. Recently the entire structure was finished, and its workshops, laboratories and instruction rooms are completely equipped with every appliance that experience has found useful in such schools; and it has a reference library of 1,700 carefully selected volumes. It is open to both sexes and can accommodate 650 pupils, who may be taught to use their hands intelligently, scientifically and productively. Many of the earlier manual training schools in other cities provided instruction only for boys, and in some it is still so limited; but the Board of District Number 1 very properly considered the needs of girls for this kind of training as of equal importance.

The course through the schools of District Number 1, from the primary grade to graduation in the High School, ordinarily covers a period of twelve years; and is the same in Districts 2 and 17. What is understood by the term "a thorough English education," is open to every child, with much more added. Aside from the studies constituting the classical course in the High schools, the German and Spanish languages—the latter being a recent addition, vocal and instrumental music, drawing, sewing, and cooking are taught. The Cadet organizations afford the boys opportunity to acquire some knowledge of military affairs, and physical culture is part of the training given both sexes. Hand and tool work, as a separate department, is taught in several buildings in each district, in which are laboratories equipped with tools, models, and other needed appliances. Sewing is likewise taught in various buildings in the districts. Instruction in cooking is confined to the Manual Training School of District Number 1, in all departments of which pupils are received from the other districts upon payment of a small tuition fee, this being the only separate school of the kind at present in the city. These various special departments of instruction—considered "special," perhaps, because they are comparatively new features in public schools—are under the direct charge of competent Supervisors, and have made most satisfactory progress. While we are considering the districts separately, from a historical standpoint, it is to be understood and for the sake of avoiding repetition, that what is said here concerning methods and general broad scope of instruction, applies to the several districts. There are, it is true, certain advantages possessed by District Number 1 not available to the others; but these, it is quite probable, will soon become common to all.

The legislation of 1870 and that which followed soon afterward had the same quickening effect on District Number 2, and inaugurated its present



Manual Training School, District No. 1.

advanced school system. Although it remained a district of somewhat limited area and still more limited resources, its school administration and school methods were entirely reorganized within a few years.

In 1871 a two-story brick addition was built in the rear of the "Arsenal," which made the building one of four fair-sized rooms, and which then became known as the "Eleventh Street School." To provide means for this improvement a special tax of six mills was levied on the property in the district which then had a taxation valuation of $300,000. This was the first levy in the district for a building fund, and it was sufficient to pay for the addition.

The school population rapidly increased in the next year, and in 1873 additional ground was bought. The old "Arsenal" building portion of the Eleventh street school was torn away, and a new brick building, two stories high, containing four school-rooms, was erected in its place; the rear addition built in 1871 remaining. This improvement, which made a building of six good rooms, cost $7,416.80, which with the cost of outbuildings, fences, and equipment, was increased to $9,380.10. It was regarded as a handsome structure in its time, and was the pride of the district; but it was heated by stoves, and the only means of ventilation were by opening the windows.

Nearly the whole of the cost of this improvement was defrayed by the proceeds of the sale of unclaimed city lots in the district. During the depressed periods in the previous decade men who owned town lots had left Denver for other parts, and had abandoned their little holdings of real estate here and there as being of little or no value and not worth their further attention. The Territorial Legislature, by an act passed in 1871, authorized and directed the sale of such abandoned property, the proceeds to be devoted to school purposes in the several districts. From that source District Number 2 derived $7,200, which amount was invested in this new building; the balance of the total cost having been provided for by a small special levy.

This building remained in crowded use until 1884. For a year or two previous to that time it had been deemed unsafe, and one of the old reports of the district Board of Education says it "showed signs of impending downfall." On May 16, 1884, one of the old-fashioned "meetings of taxpayers" was held to consider its case, and directed the Board to purchase an adjoining lot or two, and erect on the enlarged site "a good, commodious and substantial building." This resulted in building the "Washington School" now standing there, which was constructed in that year. It is somewhat singular that each of the old districts should have had the same experience with a building grown decrepit within a few years after its construction.

The "Eleventh Street School" had served the district alone through the previous decade. There was a check in the increase of school children through the middle years, but it set in again toward the close in an increased ratio. In 1879 half-day sessions had to be held to partly accommodate the children seeking school privileges; one contingent in the forenoon and the other in the afternoon. So, on May 29, 1880, a tax-payers' meeting was held, and an issue of $25,000 worth of bonds authorized to pay for a new building. This was the district's first bonded debt, and it represented the cost of the "Central School" completed that year.

We will not further follow in detail the circumstances of the construction of the later buildings. Between 1880 and 1885 the district had to build almost every year. In 1886 it had five good school buildings. As the population increased in far greater ratio than taxable valuations, the district was grievously burdened by the expense; a condition from which, it may be said, it has at no time been free. The report of the Board for 1886, said with reference to these conditions:

> "Whilst ordinarily a rapid increase in population and wealth from a material standpoint is desirable and generally encouraged, our experience has taught us that if conditions arise in which the increase of population is not balanced by an equal increase of wealth, a discrepancy exists, which can only be met by a burdensome tax, if all the elements which make up the comfort, safety and well-being of a community be provided. If the annual rolls of the tax assessor are truthful, then the increase in population has vastly outstripped our increase in wealth."

This, of course, is now only of interest in that it indicates the difficulties and embarrassments by which the men were beset who were gratuitously serving the community, the pressing needs of which were so far out of proportion to the resources available to the Board of Education. In 1886 a special levy of 18 mills had to be made for school purposes.

But the people of the district bravely bore the burden which, in the ten years from 1876 to 1886, amounted to about $365,000, meeting each imperative demand as it came; and they now have school buildings as stated in the following list, most of them of what is regarded as "modern" construction, and all of them substantial, comfortable and thoroughly equipped:

"Byers"—southwest corner of Byers and Idaho streets; cost of lots $5,000; temporary one-room building erected in 1891 at a cost of $697.

"Central"—South Eleventh street, between Eleventh and Twelfth Avenues; cost of lots, $8,100; main building of five rooms erected in 1880 at a cost of $21,717; an addition of four rooms built in 1889 at a cost of $13,585.

"Elmwood"—corner of South Water street and Seventh Avenue; cost of lots, $4,500; main building of eight rooms erected in 1887 at a cost of $31,337; ten-room addition built in 1895 at a cost of $21,020

"Fairmount"—corner of South Tremont street and Second Avenue; cost of lots, $1,500; main building of five rooms erected in 1883-84 at a cost of $19,272; four-room addition built in 1890 at a cost of $14,236.

"Franklin"—Colfax Avenue between South Ninth and South Tenth streets; cost of lots, $10,000; building of thirteen rooms erected in 1883 at a cost of $59,891.

"Garfield"—southwest corner of Eleventh Avenue and Thurman street, Jerome Park; cost of lots, $3,000; four-room building erected in 1889 at a cost of $13,224.

"Grand Avenue"—corner of Second street and Colfax Avenue; cost of lots, $1,000; four-room building erected in 1891 at a cost of $5,036.

High School—corner of Fifth Avenue and South Twelfth street; cost of lots, $7,500; twenty-five room building erected in 1892-93 at a cost of $95,872; cost of furniture and apparatus (about) $7,500.

"Lincoln"—corner of Pearl street and Exposition Avenue; cost of lots, $4,205; eight-room building erected in 1890-91 at a cost of $33,525.

"Logan"—northeast corner of Bayaud street and Logan Avenue; cost of lots $1,600; eight-room building erected in 1888 at a cost of $39,205.

"Myrtle Hill"—southwest corner of Tennessee Avenue and Race street; lots a gift to the District by Carrie E. Bailey; two-room building erected in 1893 at a cost of $3,396.

"Sheridan"—corner of First Avenue and South Tenth streets; cost of lots, $3,000; eight-room building erected in 1891 at a cost of $29,902.

"Sherman"—northeast corner of Second and Grant Avenues; cost of lots $9,000; eight-room building erected in 1893 at a cost of $34,124.

"Washington"—corner of Lawrence and Eleventh streets; cost of lots, $6,875; eight-room building erected in 1884 at a cost of $22,001.

These school edifices of District Number 2 represent an expenditure of $59,280 for land and more than $458,000 for buildings exclusive of their furniture and equipments; or a total in round numbers of $517,325. The present value is estimated to be $675,000.

The High School of District Number 2 was organized in the autumn of 1881, and the classes were assigned to rooms in the then recently finished Central school building. The course at first was one of three years, but in 1890 it was changed to one of four years. The first class, consisting of four girls and two boys, was graduated June 13, 1884; in 1885 six girls and two boys were graduated. The school remained in the Central building until January, 1884, when, upon completion of the Franklin school it was removed to new and larger quarters in that fine building. The Franklin continued to be its home until January, 1893, when the beautiful and spacious High School building was ready for use. At the outset, and for several years after, the Superintendent of the district was also charged with the duty of Principal of the High School. He organized it, prepared the course of study, and directed it until the end of the June, 1886, school year. During the summer of that year the Board secured the services of Professor Paul H. Hanus who had occupied the chair of Mathematics in the University of Colorado at Boulder; and in September this first High School Principal entered upon his duties.

The "West Denver" High School building is a large and exceedingly handsome structure quite outside the somewhat conventional architectural type of building for its purposes. It is thoroughly equipped for the work carried forward under its roof, and has a library of several thousand volumes.

While it has been necessary almost from the first for the district to issue bonds on account of new buildings, they were not put out for long periods; and therefore the present debt is unimportant, amounting to only $238,000. The statutory limitations of the district's indebtedness is three and one-half per cent. of the assessed value of its property. The bonds of one of its issues were the first five per cent. obligations sold at a premium in the State of Colorado. As we have mentioned, the assessed valuation of the property in the district for taxation was, in 1900, $6,319,210; but the assessment represents only about one-third of actual values. The current rate of the special school-tax levy is twenty mills. The school attendance at the close of 1900 was 7,415; of which 508 pupils were in the High School, and 690 in the Kindergartens. By the enumeration of April, 1899, there were 8,701 children of school age in the district; and by that of April, 1900, 9,112. In 1900 the district employed 134 instructors.

Old Eleventh street School, "West Denver."

In Territorial times the Boards of Education consisted of three members. The records have enabled us to present a complete list of all members of the Board in District Number 2, together with the special executive positions they filled, which is as follows, the date given indicating the time they were elected and that at which they entered upon their terms of office:

October, 1862, J. H. Noteware, President; F. J. Stanton, Secretary; Edwin Scudder, Treasurer.

May, 1863, J. G. Vawter, President; Eli M. Ashley, Secretary; Edwin Scudder, Treasurer.

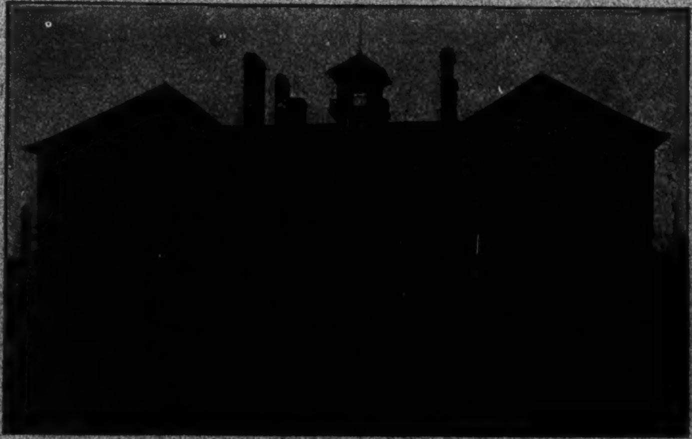
May, 1864, Daniel Witter, President; Omer O. Kent, Secretary; Stanley Hatch, Treasurer.

May, 1865, H. Prince, President; John E. Force, Secretary; Maurice Sigi, Treasurer.

May, 1866, H. Prince, President; John E. Force, Secretary; Maurice Sigi, Treasurer.

May, 1867, George G. Arndt, President; E. Wortman, Secretary; C. R. Hartman, Treasurer.

May, 1868, J. M. Strickler, President; E. Wortman, Secretary; C. R. Hartman, Treasurer.



High School, District Number 2—"West Denver."

Strickler was re-elected each successive year, and continued as President, until May, 1874; Wortman was re-elected each successive year, and continued as Secretary, until May, 1875. Hartman was re-elected each successive year, and continued as Treasurer, until May, 1874; making their terms of continuous service, respectively, six, eight, and seven years.

The Board elected in May, 1874, consisted of H. P. H. Bromwell, who succeeded Strickler as President; E. Wortman, who continued as Secretary; and Freeman B. Crocker, who succeeded Hartman as Treasurer.

In May, 1875, Bromwell was re-elected, and continued as President; George Duggan succeeded Wortman as a member, and became Secretary; and Crocker was re-elected, and continued as Treasurer.

As we have stated, the office of Superintendent did not exist prior to 1871, the Principal supervising all the schools. Abner R. Brown served as Principal until the close of the school year in the summer of 1864. During the ensuing school year there appears to have been no Principal, but in the autumn of 1865 James V. Griffin was appointed, and served one year. In the autumn of 1866 he was succeeded by R. Y. Force who served about three months, when he was succeeded by Miss Maria Ring, who continued until June, 1867. In September, 1867, Griffin was again appointed, and served until June, 1871. Superintendents then came into fashion, and since that time the District has had but three; W. A. Donaldson, 1871 to 1879; H. F. Wegener, 1879 to April 1, 1891; and L. C. Greenlee, the present capable and satisfactory incumbent, who succeeded Wegener.

There has been no change in the Secretary since Territorial times. In May, 1876, Henry Nienhiser succeeded George Duggan, and has been successively re-elected each year, including that of 1900-01. Mr. Nienhiser's tenure, among all those who have been or now are connected with our school management, is exceeded only by that of Mr. Gove, Superintendent of District Number 1.

Since 1876 the Board Presidents in District Number 2, and their terms, have been:

Alfred Sayre	1876-79
A. D. Sheppard	1879-88
C. W. Cowell	1888-95
John L. Dailey	1895-96
C. T. Harkinson	1896-99
A. W. Clark	1899-

The Treasurers, and their terms, have been:

J. C. Kuner	1876-82
A. E. Pierce	1882-84
G. W. Gildersleeve	1884-88
C. Y. McClure	1888-89
W. E. Greenlee	1889-

The following is a list of those who have served, or are now serving, as members of the Board of Education, one now being elected annually for a term of five years:

Alfred Sayre	1876-79
J. C. Kuner	1876-86
Henry Nienhiser	1876-87
A. D. Shepard	1879-88
G. W. Gildersleeve	1882-88
J. D. Dillenback	1882-85
N. W. Sample	1882-87
J. R. Groves	1883-88
Charles P. Allen	1885-88
W. E. Greenlee	1886-89
C. W. Cowell	1887-95
John L. Dailey	1888-96
J. J. Dunagan	1888-97
C. T. Harkison	1888-99
T. S. McMurray	1889-93
Frank Wheeler	1896-
John C. Kennedy	1895-00
I. B. Perkins	1896-
A. W. Clark	1897-
I. N. Rogers	1899-
Stephen Knight	1900-

In May, 1882, District Number 2 was advanced from the second to the first class, and in 1887 the Board was made to consist of five members.

To recount the educational practices and opportunities in District Number 2, would practically be to repeat what has already been said of those of District Number 1, and which applies with equal force to "West Denver's" schools. Through all the grades in all its schools the courses of instruction are the same and equally thorough; the standing and standards of the High School are the same; and the "West Denver" High School Cadets do not lower their colors to any similar organization in the State; and the Castalian Literary Society, and the Webster Debating Society of the High School, make for the upper levels as earnestly and as profitably as any in the city.

Several prizes are available to the pupils of the High School. The oratorical contest is for the Donald Fletcher prize, a gold medal awarded annually, for which provision was made by the donor some years ago. The essay contest is for the Charles P. Allen prize, which is also a gold medal, awarded annually by Mr. Allen. The reading contest is for a set of Shakespeare's works awarded annually by a donor who prefers to remain unknown. The two School Societies award a gold and a silver medal annually, and a set of historical works. The Cadets have a gold medal for military proficiency, which is quarterly contested for, and worn by the victor until it is won by another member of the company. The M. L. Sterling silver medal prize becomes the personal trophy of the winning Cadet.

School District Number 17 is third in point of relative importance in the city. It was formed March 26, 1872, under the direction of Frank Church who was then Superintendent of Schools for Arapahoe county, and when Colorado was still enjoying or trying to enjoy a Territorial form of government. The first Board of Directors consisted of H. B. Bearce, J. E. Lanphere, and Dexter Soggs. Soggs was President, Lanphere, Secretary; and Bearce, Treasurer. Their first official meeting was held at Mr. Bearce's home on the evening of May 6, 1872. The district survived unchanged in boundaries the transition from the Territory to the State, but its resources were hardly equal to the work before it, even at that time; and later they became less so.

The territory constituting District Number 17 in its beginning was detached from Districts Numbers 1 and 2. It included all there was of the "North Denver" division at that time, and the independent village of Highlands. Recently the independent village of Berkeley was added to it. Though Highlands is now part of the city, its name continues to be associated with District 17. It would seem to have been a natural process for the district to have become Number 3, but in the years between 1862 and 1872 various school districts, numbered from 3 to 16 inclusive, had been created in the county. Its boundaries in the beginning were quite different from the present ones as indicated by the accompanying map. As the city grew in later years the boundaries were enlarged, and otherwise changed, until they assumed their present lines.

The district having been set apart and organized, the next thing to do was to build a school house. In the spring of 1872 the first one was built, at the southeast corner of Fifteenth and Central streets. It was a small one-story frame building the appearance of which is preserved in one of our engravings. As it was considered sufficient for the time, its size will enable the reader to form an opinion of what District 17 was in those days. But it quickly proved wholly inadequate. In the autumn of 1872 it was so overcrowded that some of the classes had to recite their lessons outside the building.

The necessity for another building then became apparent and with this conviction arose a most discreditable factional wrangle over its proposed location. An issue of $15,000 of bonds was essential to the construction of the additional building, and at several elections held in the district the proposition was each time defeated in consequence of the disgraceful contentions over a trivial matter. The lowest and meanest forms of political trickery, and almost every form of personal vituperation, were resorted to by both sides. Finally, the rapid increase in the district's population compelled action, and a compromise as to location—that of the present "North Denver" High School—was agreed upon as the site of the contemplated new building. Then, at an election held in the autumn of 1873, an issue of $15,000 of bonds was approved, and preparations for building were begun.

First school house in "North Denver."

But the people of the district paid dearly enough for their folly. After the bonds had been authorized the Board as well as the taxpayers expected to sell them for not less than par, but were disappointed; though they should not have been. The factional dissensions so discredited everything connected with the district that the best price obtainable for the bonds when they were sold early in 1874 was eighty-five cents on the dollar, with the enormous interest rate of twelve per cent per annum; and they continued to pay that rate for more than ten years, or until their redemption in May, 1884.

With the proceeds of those bonds the Directors of District 17 built the second school house, which was named the "Ashland." Its fine location, now occupied by the High School, commanding a grand view of the city and surrounding country, contained almost four acres, and was an outright gift to the district from the old Highland Park Company, a real estate syndicate of those times. It was a most welcome gift, and the only condition attached to it was that the land should forever be used for school purposes.

The "Ashland School" was a creditable building for its time, and its builders believed they were, in its size, constructing for a long distance into the future for its section of the district; and were harshly criticised for doing so. But, after Colorado became a State every interest within its borders was quickened, and the "North Side" had a full share of the period of prosperity which soon made more school room essential.

But the district was compelled by financial reasons to get along without additional new buildings until 1882. Ashland School was relieved by renting a couple of small buildings in the autumn of that year, and in the same period two rooms of what is known as the old "Bryant School" were constructed, and were considered ample for the neighborhood. But it was the old story over again. Before the end of the following winter all the schools in the district were overflowing. In 1883 four more rooms were added to the two and the six-room building became the first "Bryant School." In the same year another good building, the "Boulevard School," was erected in the southern part of the district to accommodate the fast-increasing population in that quarter. Both were completed by October, 1883. The Board of Directors also added that year to the school equipment an ugly little frame structure near Rocky Mountain Lake on a plot of one and one-quarter acres of land which they bought cheap. This house was grandiloquently named the "Grand View School." Nearly the whole of the money for these improvements came from an issue of bonds, for the tax levy could be made to produce but little more than enough for operating expenses. On January 30, 1883, an issue of $37,000 of 6 per cent. bonds was authorized by a popular vote, and which sold at par this time; $15,000 of the proceeds were to be set aside for redemption of the Ashland School bonds of 1874, and the balance to be used "in the purchase of sites and the erection of large, convenient and well-designed school buildings;" all of which was done, and which terminated building operations for a few years.

In 1886 District Number 17 became a district of the first class and acquired rank equal to that of Districts Numbers 1 and 2. It had previously been operating under the provisions of the old Territorial dispensation, with a Board of Directors consisting of three members. Under the new arrangement the number was doubled, but the Legislature at the next ensuing session, and for some reason too deep to be understood, reduced the membership to five, as it now stands.

By this time there was another demand for additional school room, and by the close of the 1886-87 school year it became imperative. It was then decided to tear down the old Ashland School and in its place erect a fine High School building of perfect appointments. This was done in 1888, the pupils of the Ashland being quartered in a small temporary building and in rented rooms. The "North Denver" High School is one of the city's exceptionally good school buildings.

It is hardly worth while to repeat all the reasons for making further additions. The growth of the district's population was greatly stimulated by the construction of the cable and electric street-car lines in 1889. In 1890 provisions were made for constructing two more new buildings, the "Edison" and the "New Bryant," and adding largely to the capacity of the old Boulevard School. The premises on which the old Bryant stood were large and afforded ample room for the New Bryant, a fine structure, and it was built there. The Edison was built on Wolf Heights, and both were completed in 1890 in time for use at the opening of the autumn term. The addition to the Boulevard building, which more than doubled its capacity, was constructed early in 1891.

Old Ashland School, "North Denver."

The Directors of District Number 17 had, as we have seen, a rather hard time of it in providing and maintaining schools during the period between the year of its organization and 1892. The demands upon them were always greater than the means at their command could enable them to meet in a way satisfactory to themselves. Their part of the city was then, as it is now, almost exclusively a residence section, occupied, to a great extent, by people of moderate means who owned property of moderate valuations for taxation. The district had a remarkable growth in population which entailed upon the Directors many difficulties. They planned and erected new school buildings as fast as they could provide money to pay for them, believing in each instance that they were building for a few years, at least, in the future, only to find that when the new structures were ready for use they were barely equal to the requirements of their day, notwithstanding that each successive effort was on a far broader basis than the next preceding one. It is not probable that the average citizen had any well-defined conceptions of the trials and troubles of his "School Board" in those days when available means and desirable ends were so far apart. Their school tax was very high in the early "Eighties;" 17½ mills in 1883; but school children and expenses increased far more rapidly than the assessed valuations in those years.

The following is a summary of essential facts relative to the existing school buildings in District Number 17:

"Boulevard"—west side of Boulevard F, between West Twenty-third and West Twenty-fourth Avenues; original building erected in 1883 at cost of $12,350; addition built in 1891 at cost of $13,592; total cost of building, $25,942; area of premises, 2 acres, less 100 feet; cost of land, $4,000.

"Old Bryant"—corner of Arlington street and Thirty-second Avenue; erected in 1882 and enlarged in 1883; area of premises 275 by 150 feet; cost of land, $2,950; cost of building, $12,738. This building is still in use.

"New Bryant"—corner of Murdock street and Thirty-second Avenue; erected in 1890; premises part of Old Bryant's; cost of building, $34,277.

"Columbian" corner of West Forty-first Avenue and Boulevard F; erected in 1892-93; area of premises, one acre; cost of land, $4,500; cost of building, $23,000.

"Edison"—Quitman street, between West Thirtieth and West Thirty-second Avenues; erected in 1890; area of premises, 235 by 125 feet, cost of land $3,840; cost of building, $25,632.

High School—on the site of the old Ashland school at West Twenty-ninth Avenue, northeast corner of Firth Place. The Ashland was torn down to make room for the original High School building which was erected in 1888-89, at a cost of $65,000; in 1894-95 the building was remodelled and enlarged to its present appearance and size at a cost of $65,000 more. As we have said, the High School ground, embracing nearly four acres, was donated to the district in 1873 by the Highland Park Company for the Ashland school.

"Louise M. Alcott"—corner of Maple and Twenty-first streets, Berkley; erected in 1892-93; area of premises, twelve lots; cost of land, $4,400; cost of building, $22,000.

"Webster"—corner of West Thirty-sixth and Justina Avenues; erected in 1892-93; area of premises, eight lots; cost of land, $4,000; cost of building, $22,000.

These buildings having recently proved inadequate, a structure on Platte street now known as the Platte street school was rented and converted to school purposes. In 1899 further provision had to be made, and the old Highlands Town Hall building was leased for five years. $1,500 were expended in changing it into a six-room school building, but the district must soon build at least two large, modern school houses; as the school population was 7,106 in April, 1900. In addition to that of the permanent buildings above-mentioned, the district has had other building expense. The old Grand View house cost $883, with $1,000 for the 1¼ acres of land on which it was built; there was a janitor's home erected on the old Ashland grounds in 1883 at a cost of $1,298; and another on the Bryant grounds in 1885 at a cost of $421, which burned in 1890.

Funds for constructing the later school buildings as were those for the earlier ones, were provided by the issue of bonds, but it is not essential that we encumber these pages with further details of the transactions. At no time has the bonded debt of the district been of any magnitude, and if the aggregate of it were still outstanding it would seem of trifling consequence in comparison with our latter day approved propositions for issuing city bonds by millions for purposes of doubtful expediency. At present the debt of District 17 is only $200,000; its total school expenses during the last school year were $113,000; and the value of its property as assessed for taxation in 1900 was $4,190,240.

The "North Denver" High School was organized in 1883 and the first class began work in September of that year in the old Ashland building. The course of study was then of three years, and of the fifteen pupils who entered in 1883 six were graduated in June, 1886. Since that time classes have been graduated every year excepting in 1889; and in 1899 forty-eight pupils were graduated. The course of study is largely elective, and if the pupil has a specific aim in mind he can so select his work, with the advice of parents and teachers, that it will include those subjects best fitted to his powers and purposes. Though the earlier classes were graduated in three years, the later ones took four, the regulation period. But, the district does not arbitrarily fix the limit. In 1895 the Board of Education established a standard for graduation other than that of time spent in school. Some pupils are now graduated in three and one-half years. With relation to this matter the district Board of Education on April 13, 1899, adopted the following resolution:

> "Resolved, by the Board of Directors of School District No. 17, that, whereas the present course of study of the high school does not prescribe a time limit for graduation, but instead, certain conditions as to conduct, quantity and quality of work; all who have complied with said conditions are equally entitled to consideration in deciding special appointments."

The "North Denver" schools maintain a very high standard, and the High School ranks with the best. James H. Van Sickle, who became Superintendent in September, 1891, and who recently resigned, is an educator whose abilities, and deep interest in school work both at home and abroad, have won for him a National fame.

From the organization of District Number 17 in 1872, until the Board of Education was increased to six members in 1886, the three members filled the offices of President, Secretary and Treasurer—just enough to go around. Under the law of 1886 a

High School, District No. 17, "North Denver."

member was forbidden to be Treasurer; but the President must be and the Secretary might be a member. Therefore, after that change an outsider was elected Treasurer.

In several instances the tenure of office has been quite long; and in two, unusually so. Mr. G. F. Oppenlander, as will be seen, was a member for twenty years; and Dr. William Smedley has been a member and President since 1885. The following is a complete list of all who have served as members of the Board, with their periods of service, since the district's organization, one now being elected annually for a term of five years:

Dexter Soggs	1872-73
H. B. Bearce	1872-73
J. E. Lanphere	1872-73
J. E. Ayres	1873-75
C. W. Wright	1873-75
G. F. Oppenlander	1873-93
W. H. Wightman	1875-85
S. H. Hastings	1875-76
James H. Porter	1876-81
J. M. Clark	1881-84
H. C. King	1884-90
William Smedley	1885-
George Anstee (resigned)	1886-90
R. C. Rice	1886-87
A. S. Whitaker	1886-93
H. R. Foster, (fill vacancy)	1890-91
Frank P. Arbuckle	1890-95
E. S. DeGraff	1891-96
Geo. F. Lewis	1893-98
W. H. Davis	1893-99
O. E. Datesman	1895-00
Ruth E. Foote	1896-
S. S. Kennedy	1898-
G. W. Curfman	1899-
B. F. Hilliard	1900-

There have been but four Presidents of the Board in the twenty-eight years:

Dexter Soggs	1872-73
J. E. Ayres	1873-75
W. H. Wightman	1875-85
William Smedley	1885-

In every instance the Secretary has been a member since the district was organized, namely:

J. E. Lanphere	1872-73
C. W. Wright	1873-75
S. H. Hastings	1875-76
James H. Porter	1876-81
J. M. Clark	1881-84
H. C. King	1884-89
A. S. Whitaker	1889-93
Geo. F. Lewis	1893-97
Ruth E. Foote	1897-99
O. E. Datesman	1899-00
G. W. Curfman	1900-

Of the Treasurers, only the first two in the following list were members:

H. B. Bearce	1872-73
G. F. Oppenlander	1873-86
E. O. Lackner	1886-87
Gilbert Johnson	1887-91
C. I. Hayes	1891-92
S. S. Kennedy	1892-93
A. M. Ferguson	1893-98
W. P. Herrick	1898-

The district got along without a Superintendent until 1876. Since that time it has had seven, whose names and periods of services are here given:

H. F. Wegener	1876-79
F. F. Smeigh	1879-82
A. F. Allen	1882-84
A. C. Courtney	1884-85
Frank Matthews	1885-86
Charles V. Parks	1886-91
J. H. Van-Sickle	1891-00
Charles E. Chadsey	1900-

In April, 1900, Mr. Van Sickle resigned in consequence of having been elected Superintendent of the public schools of Baltimore, Maryland, and was succeeded by Mr. Charles E. Chadsey of Durango, Colorado.

District Number 21, ranking next to District 17, and now including the suburbs of Barnum, Colfax, Villa Park, and Chiltenham Heights, in the western part of the city, was originally a "country district." On September 8, 1873, the County Superintendent of Schools "established a new school on the west side of Platte river, to be known and designated as District No. 21." A meeting of the voters in the district was held on September 17th, at which a School Board of three members was elected, and which consisted of Theodore Nott, President; John Casey, Secretary; and J. W. Weir, Treasurer. Later in that year this Board built the district's first school house, a small frame building. As that section of the city later expanded, the area of the district was enlarged, and in 1896 the district became one of the first-class, its Board of Directors as elected in that year consisting of O. E. Adamson, Samuel J. Young, J. C. McGilivray, C. G. Pitschke, and M. F. Hazen; with Adamson, President; and Young, Secretary. Of the district's present four school buildings, two of which are large and fine structures, some particulars follow:

Villa Park School, at West Eighth Avenue and Hazel street, in Villa Park, erected in 1891 at a cost for land and building of $40,000.

Chiltenham School, on Irving street near West Colfax Avenue, erected in 1891 at a cost for land and building of $38,000.

Barnum School, in the town of Barnum, erected in 1889 at a cost for land and building of $2,125.

Glen Park School, corner of West Colfax Avenue and Stewart street, erected in 1887 at a cost for land and buildings of $2,000.

In 1895 District 21 established its High School in the Villa Park building. By the enumeration of April, 1900, the district had a school population of 1,534, and at the close of 1900 twenty-one teachers were employed; the property valuation in 1900, for taxation, having been $907,435. The present Board of Education consists of S. C. Hinsdale, President; R. Wolfer, Secretary; C. E. Cowell, J. C. McGillivray, and Thomas Tuffield; George Adamson being Treasurer.

District Number 7, the latest advanced to the first-class in Arapahoe county, and which embraces part of the South Denver section of the city, is the outgrowth of what was originally a small "country District" outside the earlier limits of Denver, and dating back to ante-railroad times. No definite record of the date and other particulars of the organization of the original District can now be found, the office of the County Superintendent of Schools and of the Secretary of the present District being alike destitute of recorded facts concerning them; and for these reasons the names of the first Directors can not now be ascertained. However, the original District appears to have been established in 1869; as the first reference to it in the existing records in the County Superintendent's office mentions an enumeration of thirty-five school children in it in October, 1869; a later one, the definition of its boundaries as designated by Superintendent Lothrop in January, 1870; and a third, the payment of a small sum of money from the county school fund, in February, 1870, to Joseph Bennet then "Acting Treasurer."

The District has had a rather slow growth, and did not become one of the first-class until May, 1900; having had a school population of 1,217 by the enumeration made the previous month. This advance increased the membership of its Board of Education to five, consisting since May, 1900, of Thomas Drake, President; Charles H. Peters, Secretary; William Lawson, David R. Benedict, and Robert Lawrence; with Thomas I. Weekes as Treasurer. The District has four school buildings, the names, location and cost of which are stated in the following:

"Fleming"—corner of South Grant and Colorado Avenues; erected for school purposes in 1885, before organization of the present district by which it was purchased in 1894 at a cost of $5,000.

"Grant"—Colorado Avenue, South Pearl street, and Washington Avenue; erected in 1890 at a cost, for land and building, of $30,000.

"Milton"—Myrtle street, between South Fourteenth street and Evans Avenue; erected in 1894 at a cost, for land and building, of $12,000.

"Vassar"—Vassar, South Lincoln and Sherman Avenues; erected in 1892 at a cost, for land and building, of $12,000.

All these buildings are good ones, and the "Grant" is one of the more finely finished school structures in the city. Although now of the first-class, the District is rather in its formative period. It established a High School in 1892, which is quartered in the Grant building; and for several years has had kindergartens in the Fleming, Milton, and Vassar schools. The present property valuation for taxation in the District is $1,014,000, and the value of its school property, which was only $10,000 in 1890, is now estimated to be $120,000.

Some general statistics of our public schools have been presented in Chapter LII dealing with the affairs of Arapahoe county, as the school system pertains to the county organization, though the city of Denver, with its 29,131 pupils enrolled in 1900 within its corporate limits, constitutes almost the whole of it, and is entitled to be regarded as a separate system. Considering the Denver school system as a whole its development is as satisfactory as it is remarkable. It is excelled by that of no city of its size in this country, and by the systems of few that rank among the great municipalities. The buildings in which the schools are housed are, as a rule, well designed, substantially built, and thoroughly equipped. In those of more recent construction, dignity and beauty of exterior aspect are abreast with comfort and convenience of interior arrangement. The old-time courses of instruction in all the grades have been broadened and deepened, and to them have been added branches unknown in public school work a quarter of a century ago. This new work, principally that of the manual training and kindergarten departments, has now well established its right to be a permanent part of public school instruction. But it did not reach this position unopposed. Some citizens held it to be superfluous, and outside the proper domain of the schools; others objected to the expense it entailed; and some of each class of objectors are still with us. Of this great development of instruction in Denver's schools, and of the criticisms upon it, Superintendent Gove, in his annual report for 1899, well said:

> "This addition has come about naturally, by evolution, and is not always fairly represented by those who are not informed as to the conduct of schools; especially in the matter of expense, and in the time occupied, are misrepresentations, unfortunately abundant."

CHAPTER LXIII.

University of Denver—Its Origin, Rise, and Present Magnitude—Denominational Schools—St. Mary's Academy—Loretto Academy—College of the Sacred Heart—Wolfe Hall—Jarvis Hall—Baptist College—"Westminster University"—Private Schools—Old-Time Libraries and Reading Rooms—High School Library—Mercantile Library—Present Public Library—State Historical and Natural History Society—State Museum of War Relics—State Collection of Minerals.

Next to the public school system in educational importance in Denver, stands the University of Denver for higher education. Bearing the city's name, it aims to become what Harvard is to Boston, Columbia to New York, and what the University of Chicago is to that city. It is a Christian institution, established and maintained by the Methodist Episcopal church, but is non-sectarian. It is the great outgrowth of a small beginning inaugurated in 1863 by the Denver Methodists who, in that year and under the leadership of Governor Evans laid the foundations of the first advanced school, the "Colorado Seminary," in the Territory of Colorado. The general character of and the plans for the institution were decided on in 1863, and by an act of the Territorial Legislature, approved March 5, 1864, John Evans, Samuel H. Elbert, William N. Byers, H. Burton, A. B. Case, J. G. Vawter, A. J. Gill, W. D. Pease, Edwin Scudder, J. H. Morrison, Warren Hussey, J. W. Smith, D. H. Moffatt, Jr., R. E. Whitsitt, C. A. Cook, John Cree, Amos Steck, J. M. Chivington, J. B. Doyle, Henry Henson, Amos Widner, John T. Lynch, Milo Lee, J. B. Chaffee, Lewis Jones, O. A. Willard, W. A. H. Loveland and Robert Berry were "constituted a body politic and corporate for the purpose of founding, directing and maintaining an institution of learning to be styled the Colorado Seminary."

The act provided for the division of these twenty-eight Trustees into four groups of seven each, the groups to hold office for one, two, three and four years, respectively, and for their successors to be appointed by that annual Conference of the Methodist Episcopal church within the bounds of which the city of Denver may be included; it provided that no test of religious faith shall ever be applied as a condition of admission to the Seminary; gave authority to confer degrees; and provided that property necessary for carrying out the design of the Seminary in the best manner, while used exclusively for such purposes shall be free from all taxation.

Old Colorado Seminary Building, Fourteenth and Arapahoe streets.

A very creditable building, and a large one for that time, as will be seen from its appearance in the accompanying illustration, was erected on the southwest corner of Arapahoe and Fourteenth streets, in 1864, the money to pay for it having been obtained by subscriptions among the Trustees and other citizens. The school was opened November 16, 1864, and fairly maintained until 1867 when, in consequence of exhausted resources and accumulated indebtedness, and notwithstanding the best efforts of its numerous Trustees to keep it going, it was closed. The property was sold, and bought in by Governor Evans; and after that the Colorado Seminary remained in a state of suspended animation for a dozen years. Late in 1867 the building was put to an use quite different from that for which it was constructed; for, in December of that year the Territorial capital was removed from Golden to Denver, and the lower branch of the Legislature, with the Territorial executive officers, occupied quarters in it during the remainder of the session.

In 1879 steps were taken to revive and reorganize the Colorado Seminary under the original charter. To that end the Methodist Episcopal Conference appointed a new Board of Twenty-eight Trustees, several of those who had been in service twelve years before having died or moved away. This Board organized by electing John Evans, President; J. W. Bailey, Vice President; and Rev. Earl Cranston, Secretary. The first act of Governor Evans was to return, as a gift, the Seminary property he had bought in to save it, twelve years before; to this he added $3,000 for laboratory apparatus. Vice President Bailey gave $10,000 in cash, and to which he soon afterward added $3,000; and the citizens and business men generally contributed liberally in money for rehabilitating the Seminary. It had been decided to provide a new and larger building on the site of the old one, and Rev. Earl Cranston was appointed chairman of the building committee which erected the structure now standing on the southwest corner of Fourteenth and Arapahoe streets, there being but a small indebtedness on it when completed in 1880.

Conservatory of Music at Fourteenth and Arapahoe streets, Denver —University of Denver.

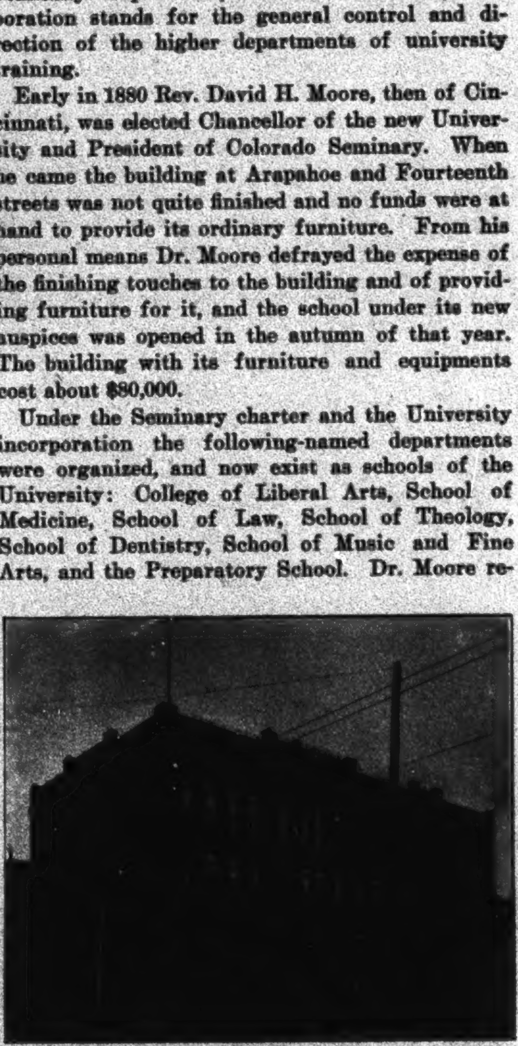
In 1880 it was decided to create a second and coordinate corporation, under the name "University of Denver." The articles of incorporation filed with the Secretary of State in that year provide:

> "The object of this society shall be the advancement of the educational interests of Colorado; the promotion of all the sciences, arts and learned professions; and to form a University which shall have power to establish a system of instruction in any or all the departments of learning; to create fellowships; to appoint a Board of Examiners, and upon examination or satisfactory recommendation, to confer marks of distinction and all degrees, honorary or otherwise, usual to a University, upon all such candidates as shall be found worthy thereof."
>
> "The members of this society shall be the Secretary, for the time being, of the Colorado Annual Conference of the Methodist Episcopal Church, and the secretaries, while in office, of such annual conferences as shall hereafter be organized within the territory now occupied by the said Colorado Annual Conference; the Presiding Elders, for the time being, of the aforesaid annual conference or conferences; the President, for the time being, of the Colorado Seminary; the members of the Board of Trustees, for the time being, of the Colorado Seminary."

The articles also provided for a Board of seven Trustees to be elected annually thereafter, but named those of the first Board, who were John Evans, O. L. Fisher, Jesse Durbin, John W. Bailey, John A. Clough, Earl Cranston, and J. H. Merritt. The two corporations became and now represent and constitute the University of Denver, working side by side and in harmony; or, it may be clearer to say the two are in effect one. All the property is owned and the material affairs managed by the Seminary corporation; while the University corporation stands for the general control and direction of the higher departments of university training.

Early in 1880 Rev. David H. Moore, then of Cincinnati, was elected Chancellor of the new University and President of Colorado Seminary. When he came the building at Arapahoe and Fourteenth streets was not quite finished and no funds were at hand to provide its ordinary furniture. From his personal means Dr. Moore defrayed the expense of the finishing touches to the building and of providing furniture for it, and the school under its new auspices was opened in the autumn of that year. The building with its furniture and equipments cost about $80,000.

Under the Seminary charter and the University incorporation the following-named departments were organized, and now exist as schools of the University: College of Liberal Arts, School of Medicine, School of Law, School of Theology, School of Dentistry, School of Music and Fine Arts, and the Preparatory School. Dr. Moore remained as Chancellor nine years, and no other man did such service for the cause of education in Colorado, as he. The young institution had a trying time in that period. Its resources were limited, and some expected endowments proved disappointments. Dr. Moore served practically without compensation, and his fidelity and winning personality made him a much beloved man in Denver and Col-



Haish Building, Fourteenth and Arapahoe streets, Denver—University of Denver.

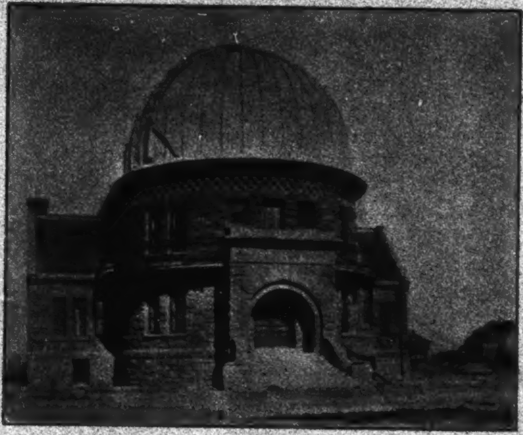
orado. His recent (1900) elevation to the Episcopacy was hailed with enthusiasm by our people.

One year after Dr. Moore retired, Dr. William Fraser McDowell was elected Chancellor. Dr. McDowell served for a like period of nine years, resigning in 1899, having been elected Secretary of the Board of Education of the Methodist Episcopal Church, with headquarters in New York city. Under his administration the courses of study were enlarged and enriched to keep pace with the advancement made during those years in other colleges of the first rank. He will be remembered long in Colorado as a brilliant and scholarly man.

In November, 1899, Dr. Henry A. Buchtel was elected and, on January 1st, 1900, entered upon the duties of Chancellor.

The building at Fourteenth and Arapahoe streets was made to suffice for the needs of the University until 1887 when the Haish Manual Training School building, the gift of Jacob Haish, of De Kalb, Illinois, was erected at a cost of $40,000, on the southeast corner of Fourteenth and Arapahoe—opposite the older structure, and some of the departments were then installed in it.

In 1886 it had been determined to go outside the then limits of the city and obtain a site upon which the University could be more appropriately located and that would afford abundant room for prospective new buildings. A large tract of land was donated by persons interested in real estate in "South Denver," and there, in what we now know as "University Park," the permanent home of the University was soon afterward established. The locality was then far out of the city. Enough ground had been given to enable the University to plat and sell a part of it in town-lots, at $150 each, which produced a considerable revenue. Most people smiled at the proposition to sell them town-lots "away out there," at any price; but University Park has been made one of our attractive suburbs and now contains many beautiful homes, beside several of the fine buildings of the University.



Chamberlin Observatory at University Park—University of Denver.

Preparations for building at University Park were not made until 1890. The first two structures erected there were University Hall, at a cost of $80,000; and Wycliffe Cottage, a home for young women students. The Hall, a large and imposing edifice, of lava, three and one-half stories high, and the Cottage, were built in 1891. In 1892 the Chamberlin Observatory was erected. It was the gift of the late H. B. Chamberlin and is one of the most completely equipped in this country. There are two buildings, of stone, and of the usual type; the smaller one, known as the students' observatory, containing a fine six-inch equatorial refractor and other instruments. The large observatory is crowned by a great dome beneath which is one of the noted telescopes of the world; a twenty-inch refractor made by Alvan G. Clark. In addition to it the observatery is provided with every other instrument and appliance essential to the delicate and exact methods of the advanced astronomical work of modern times. Mr. Chamberlin's munificent gift involved the expenditure on his part of more than $50,000. The remarkable clearness of Colorado atmosphere has enabled the fine equipment of the Chamberlin Observatory to excel in much of the refined work in which astronomers engage. The observatory has long been directed by Professor Herbert A. Howe, a man of great ability in his profession, and author of several standard works on the fascinating subjects with which he deals.

The Great Telescope in Chamberlin Observatory at University Park—University of Denver.

Iliff Hall, which is the home of the Iliff School of Theology, is one of the fine buildings at University Park. This department was endowed in 1889 by Mrs. Elizabeth Iliff Warren with $100,000, in memory of her deceased former husband, John Wesley Iliff; and both Mrs. Warren and her children have contributed liberally to the funds required to meet current expenses of the School. In 1889 William S. Iliff provided funds for erecting the building which was completed in 1892, and cost $50,000.

It is hardly necessary to add that each department of the University is equipped with every essential to efficiency, and that each is directed by

University Hall, University Park—University of Denver.

instructors of the highest ability. There are in the service of the University one hundred and ten professors, lecturers and tutors. The Schools of Medicine, Law, and Dentistry are in the Haish Building at the southeast corner of Fourteenth and Arapahoe streets; the School of Music and Fine Arts, in the original University building on the opposite corner; the others at University Park. Among the six hundred or more students usually in attendance, are representatives of nearly every State in the Union, and of several foreign countries.

Governor Evans remained President of the Board of Trustees of the Seminary corporation until his death; and Mr. Bailey Vice President until 1892 when, on account of continued absence from Denver, he declined re-election. The present members of the Seminary Board of Trustees, which is the controlling body, are Mrs. Margaret P. Evans, Mrs. Elizabeth I. Warren, James B. Grant, Henry W. Warren, George C. Manly, Robert H. Beggs, Charles K. Durbin, E. T. Alling, A. L. Doud, Camden M. Coburn, Frederick W. Ireland, W. D. Phifer, E. E. Shumway, J. W. Springer, Joseph C. Shattuck, F. J. Chamberlin, Mrs. Anna E. Lee, Robert A. Carnine, Earl M. Cranston, M. D. Hornbeck, C. B. Spencer, John H. Merritt, Joseph W. Gilluly, William S. Iliff, William Lennox, A. E. Reynolds, George Richardson and H. E. Warner. Bishop Henry W. Warren is President; Joseph W. Gilluly, Vice President; Joseph C. Shattuck, Secretary; and Robert H. Beggs, Treasurer.

Iliff School of Theology, University Park—University of Denver.

Of the University corporation the present Trustees are Henry W. Warren, Joseph W. Gilluly, Joseph C. Shattuck, Earl M. Cranston, John H. Merritt, W. D. Phifer, and R. A. Carnine.

The great organization of the Catholic church has made exceptionally liberal provisions here for education. It appears to have been its policy in Denver to expend more of its revenues upon schools and hospitals than upon the erection of fine churches; and for the former purposes money has been generously bestowed. There are several large and substantial modern buildings in the city for parochial schools which are conducted with the painstaking care that is characteristic of all the undertakings of that religious denomination, and to which is chiefly due the vast beneficial practical results it has accomplished.

Old residence of William Clayton—Open prairie back of it.

Conspicuous among the Catholic educational establishments is the Loretto Academy, the origin of which takes us back to pioneer times and to the first permanently maintained academy established in Denver. In 1864 the large frame dwelling of William Clayton, on the south side of California street between Fourteenth and Fifteenth streets, and then out of town, was purchased and placed in charge of three Sisters of the Order of Loretto, who came from Kentucky in response to a call from Father Machebeuf to institute an academic school in Denver, which was called St. Mary's Academy, but was better known as the "Sisters' School." It flourished from the beginning, and within a few years the entire half-block was acquired and large additions to the original building were erected. These were three-story brick wings so constructed as to admit the later construction of the present central building forming the unified edifice. The Sisters of Loretto, having received additions to their numbers in the meantime, there conducted their school for many years; but, in 1889 it was decided to remove outside the city, away from its turmoil and noise. A large tract of land was purchased at the base of the foot-hills between six and seven miles southwest of the city, and preparations made for building a large and beautiful new home for the Academy. The location is a commanding one, overlooking the valley of the Platte, the city, and Fort Logan, with the great ranges rising back of it into the clouds. No place in the State affords a more attractive and desirable site than Loretto Heights. In 1890-91 a fine building of red sand-stone was erected there, at a cost approximating $300,000. It is a beautiful and perfect structure, especially designed after modern ideas of what a large school-home should be. From an architectural standpoint, as it is from an educational, it is regarded as one of the most attractive colleges in the west. As the old St. Mary's Academy in the city was to be continued, the new institution was given its present name. There, in that well ordered and inspiring retreat, the Sisters of Loretto conduct their admirable convent school for young women in the gentle and even tenor of their way.

St. Mary's Academy.

The old, St. Mary's Academy, is continued by the Sisters of Loretto as a select day school for all grades of pupils, under the old name. Before Loretto Academy was established the Sisters conducted a day school there as part of their educational work. The present methods at St. Mary's are an adaptation of those followed at Loretto.

The College of the Sacred Heart or, as it is more familiarly known, "the Jesuit College," is located northwest of the city about one mile north of Berkley Lake and overlooking the Clear creek valley. It was incorporated under Colorado law July 23, 1887, and by an act of the Legislature in April, 1889, empowered to confer University and Collegiate honors and diplomas. The College, which is for the advanced instruction of young men, was opened in 1887. Its large and massive building of gray lava stone is a prominent landmark in the section in which it stands.

Wolfe Hall, a seminary for young women, only, is the largest denominational school in Denver or in the State. It is under the care of the Episcopal church organization, and its history dates from early times. In 1866 Rev. George M. Randall, the first Bishop of this Episcopal diocese, determined to establish schools at or near Denver for boys and girls, and brought his intentions to the notice of the Mission Board of his church. The girls' school was first undertaken, and in 1867 the original Wolfe Hall building— a small one—was erected on the southwest corner of Seventeenth and Champa streets, the site of the present Boston Building, and then on the outskirts of the town. Its cost was defrayed by contributions obtained by Bishop Randall in New York city, the larger portion of which came from John D. Wolfe and his daughter Catherine, to whom that great city is indebted for many benefactions. It was because of their generosity to the new school in the far west that Wolfe Hall received its name. In 1873 the original building was enlarged, and again in 1879; the last additions making it a structure of two stories and a "mansard" roof, as shown by the accompanying illustration. In 1888 this property was sold to the projectors of the Boston Building, and in 1889 the building was torn down to make room for the great business structure. A new site for Wolfe Hall was purchased back on Capitol Hill; the entire block bounded by Thirteenth and Fourteenth Avenues, Clarkson and Emerson streets, on which the present large and beautiful building of stone was soon afterward completed. The building contains 350 rooms which include study halls, recitation rooms, studios, gymnasium, laboratories, kindergarten rooms, parlors, reception rooms, dining rooms, and a large number of bright and cheerful sleeping rooms. As a preparatory school for the higher colleges for women, Wolfe Hall occupies a position in which it stands aloft among the schools of the State, and takes rank with the best in the country for thoroughness of work.

College of the Sacred Heart.

The present Jarvis Hall at Montclair, Denver's pleasant eastern suburb, is the outgrowth of the other of good Bishop Randall's pioneer educational institutions. After he had established Wolfe Hall, he decided to locate the school for boys at Golden. A large part of the funds he needed was contributed by George E. Jarvis, of Brooklyn, New York, and on September 23, 1868, the Bishop laid the corner-stone of "Jarvis Hall" at Golden. On the night of November 29, 1869, a storm almost totally wrecked the building which was then nearly completed. Prompt assistance enabled the Bishop to at once rebuild, and the school was opened in October, 1870.

Original Wolfe Hall at Champa and Seventeenth streets.

In the autumn of 1871 the Bishop appealed to his eastern friends for means with which to establish a theological school. In response to this, Nathan Matthews, of Boston, at his own expense, erected a handsome building for the purpose, adjoining Jarvis Hall. The new institution was named for him, and on September 19, 1872, Matthews Hall was formally opened. Matthews also endowed the school with a gift of $10,000 to be invested until it became double that amount, and thereafter the interest, only, to be used for educating young men for the ministry.

In April, 1878, Jarvis and Matthews Halls were totally destroyed by fire, and their work came temporarily to an end. In 1881 the Golden property was sold to the State which established the Industrial School for Boys on the premises. It was then decided to re-establish the two schools in Denver, as a more convenient location, and a building for each were erected near St. John's cathedral, where their work was resumed.

In 1888 a tract of about thirty acres of land in Montclair was purchased as a site for a new Jarvis Hall, and on which a fine building was completed in December of that year. The Jarvis school was removed thither, and on March 1, 1889, its new home was dedicated by Bishop Spalding. In recent years military training has become an important element in Jarvis Hall education. In every respect the school's standard of excellence is a high one, and its methods embrace physical and moral elevation with the same earnestness that they do thorough mental education. Matthews Hall continues in its old home near the cathedral, and the welfare of both institutions is a special charge upon the Trustees of St. John's.

Bishop Randall contemplated that these three Episcopalian schools be founded—Wolfe Hall, Matthews Hall, and Jarvis Hall—should constitute St. John's College, and as a unity they now bear that name.

The Baptist church organization has always manifested a deep interest in education, as proved by their many institutions of learning, from the great Brown University at Providence, R. I., down through many gradations. In 1890 arrangements were begun for founding in or near Denver a College for Women. A tract of thirty acres was purchased at Montclair, and in 1891 a fine building was erected on it, but which did not receive its interior finish. The adverse circumstances arising within a few years thereafter prevented the fulfillment of the purposes of its founders, and the institution was left to await a more favorable opportunity for entering upon the career for which it was designed. In October, 1900, the convention of Colorado Baptists in session at Pueblo unanimously decided in favor of that organization assuming charge of the property and obtaining funds with which to complete the building and open the institution at the earliest practicable date.

Loretto Academy.

In 1890 persons interested in real estate some distance out of the city, to the northward, donated a tract of land about eight miles north of the city's business center as a site for what they proposed should be "Westminster University," a Presbyterian educational institution. In 1892 a large and very fine building of the favorite red sandstone was erected there at a cost of about $75,000. The locality is a mesa beyond Clear creek, lying 350 feet higher than the city, and being the highest elevation in Arapahoe county. The view from it is one of great magnificence. Owing to the association of the proposed University with real estate "booming," the Presbyterian church as an organization, did not take kindly to it. The collapse in 1893 brought the entire enterprise to a standstill, and the unoccupied building has since remained a monument to the disappointed expectations of its projectors.

There are, of course, several excellent schools in Denver of a less public character than those mentioned in the foregoing. First among these stands the Miss Wolcott School at Fourteenth Avenue and Marion street, founded in 1898 by Miss Anna L. Wolcott, the present Principal of the institution. General charge of the School's affairs and welfare is committed to the Miss Wolcott School Association of thirty-three members who act as Trustees, and from among whom an Executive Committee of five and an Advisory Committee of three are chosen. Primarily the School is for girls and young ladies, but boys are received in the lower grades. The course of instruction includes all grades, from the rudimentary to those qualifying the student for entrance to advanced colleges. The School buildings are new, complete in their appointments, and exceedingly attractive in their exterior aspects. One is the School building, proper, occupying the corner part of the site; the other, Miss Wolcott's home fronting on Fourteenth Avenue and in which a limited number of non-resident girls are received and provided for during the School term. A diploma from the Miss Wolcott School opens to its bearer and without further ceremony the doors of several advanced American colleges for young women.

The Miss Wolcott School.

The limitations of this volume forbid further consideration of the semi-private schools in Denver, among which are some devoted to instruction along specialized lines, and all of which are doing well their part in the cause of education. Indeed, it would seem that nothing has been left undone in and around this city in providing for thorough mental training of those who are later to be the men and women of this great Commonwealth.

Our present fine Public Library, now housed at the southeast corner of Fifteenth street and Court Place, ranks as one of our great educational institutions. It was a long time before Denver had a free public library, or one of any kind worthy to be called a library. Before passing to the history of the one we now have, we will consider what was done in pioneer times toward affording reading matter for those then here who desired it. This takes us back to the summer of 1859, when A. E. Pierce, still a citizen of Denver, began a small news-stand and stationery business on a pine table under a cottonwood tree in old Auraria City—"West Denver." He soon afterward established his business in a cabin in that town, and later in that year, having supplied himself with a small number of good books, started a "circulating library" which proved a popular and useful institution in the community. His venture was the beginning of the book trade in Denver, and his "library," though not quite a free one, was the first thing of the kind at Cherry creek.

In the winter of 1859-60 some of the citizens, prompted by O. J. Goldrick, organized an association to establish a library and reading room for the use and benefit of its members. The record book kept by the Secretary of this organization is now the valued possession of our Public Library. The record does not definitely give the date upon which the association was organized, though, for reasons that will presently be stated, it appears to have been February 10, 1860. However, at the first meeting and as a preamble to further proceedings, the following was adopted:

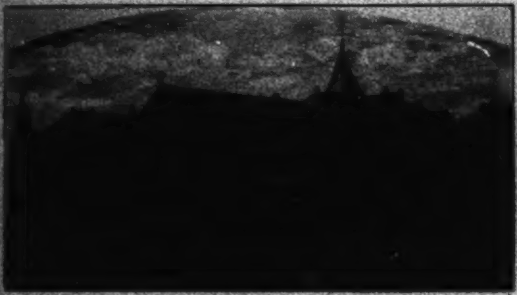
> "Whereas, the want of a place of resort where the citizens of our towns can meet during their leisure hours for the purpose of gaining information, improving their minds and engaging in social conversation and enjoyment, has long been and still is felt in our midst; and, Whereas, experience has proven by the establishment of reading rooms in other cities, that they tend to both mental and moral cultivation—Therefore, We, the undersigned, resolve to form ourselves into an Association, the name and style of which shall be made known in the first article of this Constitution; and for our government we adopt the following Constitution, By-Laws, and Regulations."

The first article of the constitution made known that the name and style of the association should be "The Denver City and Auraria Reading Room and Library Association." The constitution, by-laws, and regulations contain little of especial interest beyond the provisions for a President, Vice

President, Secretary, Treasurer, and Librarian; the first-named three officers to be members of the Board of seven Directors. The organization was intended to be a permanent one, for the constitution provided that the Directors and officers first chosen should serve until the following June, when their successors were to be elected; and that elections should be held in that month annually thereafter. While the record has neither account nor specific date of the election of Directors or officers, their names are entered in the bold handwriting of O. J. Goldrick on a fly-leaf of the book, as follows:

"R. B. Bradford, President; C. P. Marion, Vice President; O. J. Goldrick, Secretary; A. E. Pierce, Treasurer; Jas. Kinna, Librarian; R. B. Bradford, O. J. Goldrick, C. H. Blake, Dr. G. W. Burck, T. H. Marion, W. M. Slaughter, and William Graham, Directors."

The only date in the record is that of "Feb. 10, 1860," appended to a short series of "Regulations pro tem." laid down "by order of the Board;" and it is not improbable that the constitution and so forth were adopted and the Directors and officers chosen on that date. The names of ninety-nine persons who became members of the association, are entered on pages ruled for entries of payment of dues, which were fifty cents per month.



Present Wolfe Hall.

The career of this organization appears to have been meteorically brief, judging from its financial exhibit. Seventy-five of the members paid their dues for February, eleven paid for March, only two for April 1, and none thereafter. One of the members was John Shear, of whose taking off at the end of a rope later in 1860 we have heretofore given some account. Opposite his name in the membership list someone subsequently made this notation: "Lynched and hung for horse-stealing."

While the record presents no narrative of the association's collapse, the appalling shrinkage of treasury receipts vividly tells the story.

For more than a dozen years thereafter there was neither library nor public reading room in Denver. Late in 1873 the great necessity for both, or a combination of the two, became of public interest, and a movement to establish something of the kind was inaugurated. Early in 1874 an organization of citizens, called the "Denver Library Association," was formed and quarters for it rented on the second floor of the building then at Number 1619 Larimer street. With the small but excellent private library of N. C. Bond which was purchased and donated to the association by Cyrus H. McLaughlin, the beginning was made. Magazines and newspapers were supplied for the reading room, and for two or three years the place was much frequented. But through lack of sufficient financial support and in consequence of waning interest the room had to be closed early in the spring of 1878. The library property passed into the possession of Walter S. Cheesman and W. D. Todd who, on April 19th, presented the entire collection of books to the Board of Education of District Number 1. In their gift-letter to the President of the Board they said:

"Having come into possession of the effects of the late Denver Library Association, we desire, through you, to present the collection of books to the Board of Education. We believe that, as a public body, holding in trust the management of the public education of the city, you have superior advantages, not only for preserving the library intact, but also for making it a potent instrument for the public good. We do this with the earnest hope that in your hands, at no distant day, it may become the nucleus of a grand public library for our city. Please accept, with the books, all the papers, magazines, etc., as well as the unexpired subscriptions to periodical literature now belonging to the library."

The reply of Dr. H. K. Steele, the President of the Board, to the donors, was as follows:

"We accept your munificent donation of six hundred volumes for our library. This, with the careful selection of books already in our possession, gives us a superior library of upwards of 1,000 volumes.

In the name of the interests of the people that we represent we thank you. We shall be ever glad to have your counsel as to the most efficient manner in which the library shall be managed for the highest interest of the public good and join with you in the hope that the institution of a public library and lyceum may soon be accomplished. We assure you that the books will not be shelf ornaments, but that they will be read by hundreds of the youth and adults of our community."

At that time the High School was accommodated in the old "Arapahoe School," in which a room was set apart for the books. Mr. K. G. Cooper and Dr. Arnold Stedman were appointed as an advisory board, and prepared rules for the library's regulation; and in this way the gift from W. S. Cheesman and W. D. Todd was made to constitute the nucleus of what later became a fine library. Prior to its receipt the High School of District Number 1 had slowly accumulated a small collection of books, principally those of reference. All the books, about 150 in number, in the general school library, had been placed at the disposal of the High School pupils; but funds were scarce, and the small additions subsequently made were in greater part paid for by proceeds of the annual entertainments of the High School Lyceum, the Board adding such small sums as it could spare. The Cheesman-Todd gift increased the number of books to about 1,000, and they were then classified and labelled under the name of the "Denver Public School Library." The library was thrown open daily to the public as a free reading room, in accordance with the wishes of its benefactors, and entered upon its career of great usefulness. But it had a slow growth in number of volumes year by year until 1885, when books to the value of about $800 were added by the Board. All the books were then re-labelled, stamped and classified as the "Denver High School Library." A new catalogue compiled in April, 1885, listed 601 volumes in the reference department, 1653 in the general library, and upward of 700 pamphlets and so forth. When plans were made for the High School building for District Number 1, the library was prominent in the minds of the members of the Board. One wing, the west, was designed and built for library purposes, and when it was finished the books and furniture were removed from the Arapahoe building, and the library and reading room thrown open to the public on June 8, 1882.

Public Library Building.

At that time, however, the Denver High School Library was not a free, circulating, public library, and did not become such until several years later; nor were either of those of the earlier periods such libraries. The High School Library, like its immediate predecessor, was open and free to public use, but the books might not be taken away for home reading by the general public. Until November, 1886, there was not nor had there ever been in Denver, or in Colorado, a free public library such as the great institution we now have.

The first library of that kind in the city or State was one of the consequences, if not one of the original purposes, of the organization of the Denver Chamber of Commerce; and the fact that a corporation formed to promote the commercial, financial and industrial interests of the city established, and maintained practically from its own resources, the first free public library in a city of more than 50,000 people, is an unusual and interesting one.

Upon the organization of the Chamber in 1884, Roger W. Woodbury its first President, and who continued in that position until 1887, conceived the plan of having attached to that organization of business men a free public library, reading room, and historical museum. On July 17, 1884, soon after the Chamber had been organized, a meeting of its Directors was held at Gen. Woodbury's office at which it was decided to establish the "Mercantile Library of Denver," to be conducted by the Chamber; and that quarters for it, a reading room, and a historical museum should be set apart in the building then designed to be erected for the Chamber.

In February, 1885, when construction of the Chamber of Commerce building had begun, President Woodbury appointed committees to solicit from members of the Chamber subscriptions to the library fund to be exclusively used for the purchase of books. As the library was to be owned by the Chamber, it was decided not to solicit contributions from persons not members, and not to refuse any voluntarily offered by such persons. In this way Gen. Woodbury and his committees soon secured $15,000; Henry C. Brown having started the good work by a gift of $1,000. On December 30, 1885, Mr. Charles R. Dudley was appointed Librarian, and began preparations for organizing the institution. The whole of the fourth floor (48 by 120 feet) of the Chamber's new building had been set apart for the library, reading room, and museum, and was fitted up and furnished at the Chamber's expense. The first list of books was prepared by Dr. Poole, Librarian of the Chicago Public Library, and the first consignment of them received on June 19, 1886. On November 1st, following, the library and reading room were opened to the public with about 3,000 volumes ready for circulation; the State Historical and Natural History Society having previously occupied the museum department. In his address upon that occasion President Woodbury said:

"Thousands of studious and ambitious young minds will have had the pathways of knowledge made free and clear to them; millions of household cares will have been lightened; millions of pleasurable thoughts will have been aroused, and these silent tables will have allured many and many a young man from the siren seductions of idle hours, and attractive but destructive resorts. As the idle and the vicious and the criminal make the business of our criminal courts and fill our jails, and create those great items of public expense which have few, if any, compensating results; and as the well-disposed and the prosperous must meet those expenses it follows that the establishment of an institution like this which shall overcome idleness and arouse ambition, appeals in the strongest manner to the practical support of men composing an institution like the Chamber of Commerce."

Through 1887 and 1888 books were added at the rate of about 400 each month, and at the close of the last-named year, the library contained upward of 15,000 volumes. In 1888 additional subscriptions to the book fund had been received, and to these $2,000 were added by a bequest by F. Z. Salomon an active member of the library committee who died in November of that year. These funds enabled the Librarian to add several thousand volumes early in 1889.

Such, briefly, is the history of the founding of the first free public library in Colorado. The city's need for it had long before been recognized, but ways and means for bringing such an institution into existence were not provided until that first administration of the Denver Chamber of Commerce applied its public spirit and energy to the consummation of a great and lasting service to the people. The library was not fairly settled in its work until 1888, and the avidity with which the opportunities it offered were seized is indicated by the record of more than 80,000 issues of books and magazines in that year.

In the meantime the Denver High School Library had been made a more important department of the school system of District Number 1, and many volumes were added to it. Then, and under a law of 1887, an annual levy of one-tenth of a mill tax was instituted on the property in the district for a fund used exclusively for the purchase of books, and which enabled the Board of Education to largely increase the resources of the Library. In the autumn of 1889 its name was changed to that of "The Public Library," and it was made a free, circulating library upon the same basis as the other, extending its advantages to the people of the entire city, county, and even of the whole State. Mr. John C. Dana was appointed Librarian at that time, and the Library's growth thereafter was steady year by year. When it passed out of existence as a separate institution in 1899 it possessed about 43,000 volumes. Notwithstanding that all expenses, including purchases of books, entailed by the maintenance of this library were borne exclusively by the tax-payers of District Number 1, the benefits were free and equal to all citizens; and, at the library, to non-residents, also. During the last fiscal year of its existence, ending June 30, 1899, these expenses aggregated $17,563.30.

The Mercantile Library had also steadily advanced, from the day of its opening. On September 12, 1893, its name was changed to that of the "City Library." In 1891 the City Council, under an earlier statute authorizing such use of a part of police court and other revenues, had begun extending financial aid to the Library by a moderate annual appropriation, and it was deemed proper in consequence thereof to give the institution the new name; furthermore, the old title had been somewhat misleading as to the character of the Library. Nearly all Mercantile Libraries are owned and maintained by limited associations of business men, making a charge for the use of books by non-members, and receiving annual dues from members. Therefore the old name commonly implied that the Chamber of Commerce Library was not a free one. By the close of 1894 it had outgrown its original quarters on the third floor of the Chamber's building, and in January, 1895, was transferred with the reading room to the main and second floors; the Historical Society removing to the new Capitol building. The City Library ended its career under that name in the Chamber of Commerce building, and at the time of the library consolidation in 1898-99, had an exceptionally choice collection of books aggregating about 35,000 volumes.

Charles R. Dudley.
Librarian of the Public Library of the City of Denver.

The Colorado Library Act of 1893 and as amended in 1899 is, perhaps, the most liberal statutory provision for public libraries now in force in

---

Charles R. Dudley is a native of Connecticut; born in Easton, June 26, 1853. Having had the usual course in the public schools, he entered Yale and was graduated in its Law Department in the class of 1877. After about five years of law practice at Monson, Mass., he removed to Denver in November, 1882. As related elsewhere on these pages, his service as Librarian has been continuous from the inception in 1885 of the first public library in the city and State.

In 1888, Mr. Dudley was elected a Regent of the State University, and in 1894 re-elected; his two terms extending through twelve years to January, 1901. He has, also, long been identified with our State Historical and Natural History Society of which he is Secretary.—J. C. S.

any of the States. Under it any municipality may establish a free public library as one of its municipal departments. The method is very simple. The City Council by appropriate action decides to establish and maintain a free public library, and the Mayor then appoints a Board of six Trustees of which he becomes, ex officio, the seventh member and President. The members of the first Board determine by lot which three shall serve for one year, and which for two years. Thereafter the three members holding over elect successors to the three who annually retire on the first of each succeeding July; thus making the body self-perpetuating, and practically removing it from the domain of politics. The law authorizes an annual library tax at the discretion of the City Council up to but not exceeding one mill on all the property within the municipality.

In recent years the expediency and desirability of consolidating the City and High School Public Libraries into one large institution became apparent. In 1898 it was decided to do so, and to organize a new library under the State law to which we have referred. The City Council promptly took the necessary action. An ordinance introduced by O. B. Scobey, passed by the Board of Supervisors July 29th, by the Board of Aldermen August 8th, and approved by the Mayor August 11th, provided for a public library to be established in accordance with the provisions of the amended act of 1893, and to be known as "The Public Library of the City of Denver." Thereupon Mayor T. S. McMurray appointed, as the first Board of Directors, C. E. Dickinson, James B. Grant, L. E. Lemen, Platt Rogers, A. B. Seaman, and R. W. Woodbury; Dickinson, Lemen, and Seaman becoming the one-year members. Mayor McMurray being, ex officio, President, Mr. Dickinson was elected Vice President, and Mr. Woodbury Secretary. Mr. Charles R. Dudley, who had been Librarian of the City Library from its beginning, was elected to the same position in the new one; and Mr. John Parsons, who had succeeded Mr. Dana on January 1, 1898, as Librarian of the High School Library, was chosen Assistant Librarian under the consolidation.

All the formal routine details of the transfer of the two libraries to the new, municipal library department, are not of importance here. The Directors of the Chamber of Commerce had, by a resolution adopted on June 20, 1898, authorized their President and Secretary to execute a contract for the transfer of the City Library to the new organization. On August 13, 1898, all its books and other library property were turned over, and the City Library as such ceased to exist. The new Public Library remained in the Chamber of Commerce building until November 1, 1899, when, just thirteen years after the Mercantile Library had opened its doors, its successor began work in the building it now occupies and which was purposely erected for it. The transfer of the High School Public Library was delayed nearly a year. It was closed to the public on June 4, 1899, and on the 9th of that month by a unanimous vote of the Board of Education of District Number 1, and a consideration of one dollar, it, also, passed to the new organization.

The Board of Education had reserved several thousand volumes which were distributed for use in the grammar schools of the district, leaving upward of 35,000 volumes to go into the Public Library; a number somewhat greater than had been transferred by the City Library. The additions subsequent to the consolidation had, by the close of 1900, brought the total number of books to approximately 80,000. The only change in Directors or officers of the new Public Library since its organization was that occasioned by Mayor Johnson succeeding Mayor McMurray in the spring of 1899; the retiring Directors having been re-elected, and the Librarian and Assistant continued in their positions. The current tax levy is one-half mill, which produces an income sufficient to provide against any interruption of the Library's carefully nurtured growth.

This most desirable union of the two libraries was largely due to the active instrumentality of General Roger W. Woodbury. He drew the bill which became the present library law of the State and under which the Library was organized and is maintained, arranged the details of the consolidation, and was the guide and counsellor in consummating the union.

Beside our Public Library there are two other excellent libraries available for reference in Denver. These are the State Library, and the Supreme Court Law Library; founded in 1861, and occupying spacious apartments in the Capitol. The former now contains about 16,000 bound volumes and about 15,000 pamphlets; the latter about 13,000 bound volumes, chiefly consisting of legal works, the statutes of this and other States, and the laws and Court decisions of many foreign countries. There are, also, two or three Law Libraries of a semi-private character.

Our Public Library does not possess a home of its own; it is a tenant in the building it occupies at Fifteenth street and Court Place. That edifice, though a new one built especially for its accommodation, is inadequate for the purpose and wholly unfit to be the home of the only public library in the city. It is anticipated that before many years shall have elapsed a library building, commensurate with the size and wealth and dignity of the city will have been provided for this great educational institution.

The State Historical and Natural History Society had its origin in a meeting of a few public-spirited men held in the office of Joseph C. Shattuck, then State Superintendent of Public Instruction, on February 10, 1879. Dr. F. J. Bancroft and Aaron Gove were respectively President and Secretary of the meeting. The Legislature had, in January of that year made some provision for assisting such a society, making it practically a State institution, and had appropriated five hundred dollars toward its maintenance; which was certainly not a very extravagant financial beginning. In consequence of the meeting to which we have referred, the Society was incorporated July 11, 1879; and on July 31, 1879, those interested in it met and organized by electing Dr. Bancroft, President; J. A. Sewell and Richard Sopris, Vice Presidents; W. B. Vickers, Recording and Corresponding Secretary; W. D. Todd, Treasurer; and Dr. H. K. Steele, Aaron Gove, and W. E. Pabor, Curators.

Lack of funds prevented the Society making much progress for several years, and also denied it suitable quarters for its home. However, it immediately began gathering historical data, manuscripts, books, pictures, and objects of historical interest, and when the Mercantile Library was about to open in the Chamber of Commerce building in the autumn of 1886, the Society's growing and valuable collection was, as we have stated, installed in the upper story of that building. In 1895 when the interior finishing of the State Capitol was far advanced, several fine rooms on the lower floor were set apart for the Society's use, and which it now occupies. Its exhibits are of great value and interest and in its archives are many documents, manuscripts, records, and the like, of priceless historical value, for access to which the editor of this work is greatly indebted for many facts stated in this volume and not hitherto published. The Society's collection of objects recovered from the ruined Cliff Dwellings in the southwest is probably the most varied and complete in existence. The rooms are opened free to all, and the annual aggregate of visitors there numbers many thousands.

The present officers are William N. Byers, President; Edward B. Morgan, Nathan A. Baker, and George L. Cannon, Jr., Vice Presidents; Charles R. Dudley, Secretary; William D. Todd, Treasurer, and William C. Ferril, Curator. Notwithstanding that the Society has always been hampered by inadequate funds, it has made remarkable progress, and is rendering a great public service. In recent years a more general interest has been taken in it by the people and it has received many valuable contributions to add to its store. Yet, there must be a vast quantity of manuscripts, letters, documents and other things of historical value and interest in Colorado which have not yet found their way to the Society, but which can not be made to do so any too soon. All its accumulations, and all gifts it receives, immediately become the property of the State of Colorado.

Another, and closely related institution, historical in its general character, and owned and maintained by the State, is the museum of war and kindred relics occupying commodious quarters in the Capitol near those of the Historical Society. The nucleus of the collection was made by Cecil A. Deane in 1885 and included objects brought from many of the great battle-fields of the civil war. In 1895 it was transferred to the State with the provision that it and its additions should be kept in the Capitol and accessible to visitors at reasonable hours. In accepting the trust the State made Mr. Deane the custodian and he still most capably fills that position. A large number of additions to the collection have since been made, and its growth is, as it has been, continuous. In 1879 the United States government made a very important contribution and has since added others; and the war with Spain has been followed by the appearance of many objects associated with that conflict. Aside from the strictly military part of the exhibit are a large number of objects and mementoes of great interest, including many belonging to the pioneer era in the west. Altogether, and for variety and historic importance, it is a collection not surpassed in kind by that of any State in the Union.

The collections of the Historical Society and those in the war relics museum are not all that the State keeps in the Capitol to interest and instruct the visitor to that magnificent building. The mineralogical exhibit occupying three large apartments connected with the Bureau of Mines, is probably as fine and complete as any in the world. It is well arranged and presents an almost endless variety of mineral formations, including many of exquisite beauty, and many others of great intrinsic value.

* * *

CHAPTER LXIV.

Our Charitable and Benevolent Institutions—First Hospital—Early Public Charities—Present Hospitals—"Oakes Home"—Jewish Hospital for Consumptives—Provisions for Helpless Children—Other Helpful Institutions—Secret and Other Fraternal Orders and Societies—First Masonic Organization—Peak Lodge, I. O. O. F.—Outline of Local History of Grand Army of the Republic—History of the Society of Colorado Pioneers.

The history of the charitable and benevolent institutions of Denver begins about a year after the founding of the Cherry creek towns. We elsewhere tell of the organization in January, 1860, of the Ladies Union Aid Society that had been suggested in the summer and autumn of 1859. That was the first movement of the people toward providing assistance for the unfortunate.

In that same autumn Dr. Drake McDowell, who was the son of a noted physician in St. Louis, and who had come to Denver in the spring of that year, undertook to establish a hospital in Denver City. The Directors of the Denver Town Company, who were ready and willing to assist almost anything and everything with a donation of town lots, did not overlook Dr. McDowell's enterprise. At their meeting held on December 26, 1859, they resolved on motion of R. E. Whitsitt, that—

> "A committee of three be appointed, Consisting of Messrs. Steck, Williams, and the Pres. to wait on Doctor McDowell in relation to City Hospital."

The negotiations appear to have progressed favorably for, on January 23, 1860—

> "A committee was appointed to draw up articles of agreement between the Denver City Town Company and Doctor McDowell and submit the Same to the board at their next regular meeting for approval or rejection."

There is no record of the form of the agreement, but it was approved, and Dr. McDowell organized his City Hospital early in the spring of 1860, with Major R. R. Bradford as President; Rev. J. H. Kehler, Vice President; Amos Steck, Secretary; Judge G. W. Purkins, Treasurer; and himself physician in charge. The hospital was established in a small building on the north side of Larimer street between Nineteenth and Twentieth streets. On August 18, 1860, the Denver Town Company's Directors ordered the transfer of lots seven to sixteen, inclusive, in Block 108, to Dr. McDowell on account of his hospital; and with that, entries with relation to this hospital cease in their record.

Dr. McDowell was a young man of unusual energy, and while he was establishing his hospital was also instrumental in bringing the pioneer physicians of Denver and other towns in "Jefferson Territory" into an organization. On June 9, 1860, the "Jefferson Medical Association" was formed, the first in Denver and in what is now Colorado; Dr. McDowell having been chosen its President.

In the summer of 1860 Doctor O. D. Cass and Doctor J. T. Hamilton opened a hospital in a small building on Sixteenth street below Blake street, which they conducted about a year, when its career was ended by Dr. Hamilton's appointment as Surgeon of the First Regiment of Colorado Volunteers. On Nov. 21, 1860, Dr. Hamilton had been appointed by the Legislative Council of the city's then new "Provisional Government," City Physician, "to serve without salary;" and it is of record that he did so serve capably and faithfully for several months and until the war-time of 1861.

In the first year or two of the city's history there were not a great many destitute persons here worthy of aid and attention; but deserving ones in indigence or affliction were cared for by public subscriptions. On November 21, 1860, Lewis N. Tappan offered in the city's Legislative Council a resolution, which was adopted, recommending a course of lyceum lectures to raise funds for charitable purposes; but we did not find record of such a course of lectures having been held. On December 4, 1860, the Legislative Council of the city's "Provisional Government" appointed William N. Byers, Richard Sopris, and William Bell overseers of the poor, and provided a small fund to be expended by them. At that time the "county government" was in such a confused and inefficient condition in consequence of the chaotic political situation that all that was done in public charity had to be done by the city.

Father Machebeuf had no sooner finished his church on Stout street than he began thinking about a hospital and a school. In our historical account of the Denver schools we have quoted in

View in Denver, from Fourteenth and Arapahoe streets looking northward, in 1865.

full the resolution of the Denver Town Company's Directors on March 11, 1861, in compliance with "the petition of Rev. Mr. Machebeuf asking for a Donation for Hospital and also for a Seminary." That donation, as the reader will have seen, was of "one Block and one half Block," to have been selected "West of K [Twentieth] street and north of Welton." That action was taken at the last meeting of the Town Company's Directors of which their old record contains an account, and we have been unable to ascertain the location of the ground thus donated to Father Machebeuf for hospital and seminary purposes. The donation was made about a year after the Court House square and the Stout street property had been given to Bishop Miege, of Leavenworth.

However, Father Machebeuf made a beginning on his hospital building. Its location was near by that of the Omaha & Grant Smelter, and it appears he intended calling the hospital St. Vincent's. He had the foundations put in for a building, and then, for some reasons not now recalled by those who once may have known them, work on the structure ceased, and was never renewed. The foundations may still be seen out there, about as they were when construction was abandoned.

During the greater part of the war-period a military hospital was maintained at Camp Weld, and during the later years of its existence Dr. W. F. McClelland had charge of it.

Throughout the decade, 1860-70, public provisions for caring for the indigent sick were not upon a very broad basis, and there was no such institution as a county hospital, proper. Patients, including sick prisoners for whom the old jail was no fit place, were scattered in different parts of the city and often assigned to the care of special physicians; though Doctors W. F. McClelland and J. M. Clark did much of the public practice in those years. In 1870 Dr. John Elsner was appointed County Physician, and he instituted the movement that resulted in the construction in 1873 of the first of the buildings now constituting the County Hospital on Sixth Avenue between Evans and South Fourteenth streets, and of which we have elsewhere given some account. Prior to that time various buildings in "West Denver" had been used for county hospital purposes, and it was chiefly due to Dr. Elsner's efforts that a permanent and suitable public establishment for county patients was founded.

In that decade, also, and outside the church associations, there were but few provisions made for charity and benevolence; and none like either of the many organizations for such purposes we now have. The necessity for them was by no means even relatively so great, because, in a general way, the population was not of a kind to have very many worthy persons in need of assistance. It was, in the main, a population of young men and women, energetic, self-dependent, fairly thrifty, and very shifty if need be. While it was not entirely without those calling for a helping hand, the number was far less than the average for towns of nearly five thousand people.

Among the present charitable and benevolent institutions in the city the "Ladies' Relief Society" is a pioneer. Its origin is traced to some Christmas entertainments provided for poor people in 1872 by Mrs. B. T. Vincent, wife of the then pastor of what is now the Trinity Methodist Episcopal congregation, and her bible class. Acting upon an idea suggested by these entertainments, Miss Anna E. Figg, assisted by several other young ladies, among whom were Misses Jennie E. Downing, Laura Smith, Lou Robbins, Josephine Shackelton, Mary Henry and Lizzie A. Miller, organized in November, 1873, the "Young Ladies' Relief Society," for the purpose of establishing a home for the homeless and destitute, and also to give temporary relief in instances of sickness, accident, misfortune or death. The society existed without the formality of an incorporated organization nearly a year, when the expediency of including older women in its membership, of somewhat changing its purposes, and of incorporating it became apparent. Therefore on October 28, 1874, "The Ladies Relief Society of Denver"—the organization's present name—was incorporated by Miss Anna E. Figg, Mrs. Fannie Charles, Mrs. Harriet L. Elkins, Miss Alice M. Nichol, Mrs. Caroline O. Robinson, Miss Jennie E. Downing, Mrs. Sarah J. Vosburgh, Miss Lizzie A. Miller, Miss Lutie L. Lemon, Miss Emily P. Belden, Mrs. Ruth Hurd and Mrs. Ione Theresa Hanna. The Society's purposes were declared as follows:

Ladies Relief Society's old building at Logan and Eighth Avenues.

> The purposes of said corporation are and shall be: To establish and maintain a home for the destitute and homeless aged and infirm women (and for the care and cure of the sick, so far as practicable), to give temporary relief, provide suitable employment and to encourage and promote industry, thrift, and good morals among such classes of persons as shall come under our charge, care or influence.

The certificate provided for perpetual duration of the Society, and named Mrs. Charles, Mrs. Vosburgh, and Mrs. Belden as three Trustees to serve until the first election of Trustees and officers on the first Wednesday in November, 1874. Upon that day Miss Anna E. Figg, who served five years in the position, was elected President; Miss Lizzie A. Miller, Vice President; Miss Mary Henry, Secretary; and Miss Jennie E. Downing, Treasurer. In addition to this organization there was an Advisory Board consisting of Mrs. John Evans, W. J. Barker, D. D. Belden, J. Q. Charles, Henry Crow, John R. Hanna, C. B. Kountze, W. H. J. Nichols and R. E. Whitsitt.

In the spring of 1874 Whitsitt had donated the original society several lots at the southwest corner of Eighth and Logan Avenues, then far out of town and then a rather forlorn and barren location. Funds were provided for erecting a building, and on December 6, 1875, its corner stone was laid there by the Masonic fraternity. The building was finished early in 1876, and at once won the unenviable fame of being the ugliest new structure in the city. It was used for sheltering children, as well as women irrespective of age, and was maintained until May, 1897, when the property was sold for $15,000 to a citizen residing near by and who then had the building removed to relieve the neighborhood of its unsightliness.

The old Home, though much good was done in it, had not, under the varied uses to which it had been put, realized the anticipations of the Society. Therefore at the time the property was sold it was concluded that better ends would be served by separating the aged or infirm women who would probably become more permanent residents of a Home, from the younger women and the children. So, the children were removed to the Orphans' Home, and the Society continued to provide for the aged women. A site for an "Old Ladies' Home" was acquired on the north side of West Thirty-eighth Avenue, between Quitman and Raleigh streets, in "North Denver," and plans made for a large modern building. The central, or main, part of the structure was completed in 1898; the east wing in 1899; and the west in 1900; the whole being well furnished and equipped. At the close of 1900 the Home sheltered about forty aged women, otherwise alone in the world, and whose closing years are made comfortable and peaceful by the united efforts of noble women. The present Home is not a charitable institution in the common understanding of that term. For admission, one of its rules prescribes as follows:

Any woman of good character sixty-five years of age or over, who has been a resident of Arapahoe county not less than five years, and who is not a confirmed invalid and has a certificate from the Home physician to that effect, may enter the Home as a life inmate or boarder by paying the sum required by the following schedule:

From 65 to 75 years of age...........	$600.00
From 75 to 80 years of age............	400.00
From 80 years of age onward..........	300.00

The foregoing applying only to those who become life inmates, others, who may sojourn more or less temporarily, are charged at the rate of twelve dollars for each month of their stay.

This Society was the pioneer organization of its general character in Denver, and in the earlier years of its existence its work was not confined to maintenance of the old Home. In 1875 depots for receiving food and clothing for the poor in the city were established at the homes of various members and distributed therefrom. In 1883 this work was centralized at a room fitted up in the Court House and in charge of a paid attendant for greater facility. In 1884 the "Industrial Home for Working Girls" was opened under the Society's auspices; and a day nursery and free kindergarten was also conducted. In 1885 it assumed the work of the Home of the Friendless, and also established a wood-yard where food and shelter were exchanged for work done by needy boys and men; and in 1888 opened a free dispensary. In 1890 this "outside work" was transferred to the Charity Organization, the growth of the city and the increasing needs having made that change necessary. Since then the Ladies' Relief Society has confined its attention to the institution for the maintenance of which it was more especially incorporated in 1874. In later years the number of its Trustees and executive officers was increased to a total of thirteen, and at the close of our record Mrs. Thomas Macon was President of the organization.

In our historical sketch of Arapahoe county we have given some account of the County Hospital. With other hospitals the city is well provided, by means with which the public treasury has naught to do—several noble institutions. Of these, St. Joseph's Hospital, the pioneer among the present ones of its kind, had its origin in the zeal and benevolence of Bishop Machebeuf. In 1873 at his request a few Sisters of Charity came to Denver from Leavenworth, Kansas, to care for the sick. They quietly and unobtrusively began their work in a small dwelling, still standing at number 1421 Arapahoe street, that was given them by Mrs. William Perry, later Mrs. George W. Purkins, both of which names are those of pioneer lawyers. Within a few months the Sisters removed to larger quarters at Market and Twenty-sixth streets where they remained until 1878. In that year a three-story brick building, forty by ninety feet in dimensions, costing $40,000, was erected on ground purchased at Eighteenth Avenue and Humboldt street, and the Sisters then took possession of their new home where they have remained ever since. The original building had accommodations for about ninety sick, and served for a dozen years, at the end of which time the demands made upon it necessitated the erection of a large additional building. This is sixty by one hundred feet, four stories high, and was completed in 1890 at a cost of $60,000, making the total cost of the hospital buildings as they now stand, $100,000. Construction was done in high-priced times and was a burdensome undertaking for those who faced and overcame the task. The hospital has a beautiful location and its immediate surroundings have been made exceedingly pleasant by improvements on the ground. It usually has upward of one hundred patients, part paying and part free. It is open to all races and creeds; and to the prosperous and the pauper. There are no distinctions between rich

Ladies' Relief Home, West Thirty-eighth Avenue—Ladies Relief Society.

St. Joseph's Hospital.

and poor, or between this religion and that, or because of no religion. All receive the same attention. As has been truly said of them, "beyond their bare wants the Sisters in charge have not profited, except before God, in all these years."

St. Luke's Hospital is one of the noted institutions of its kind in this country, and its fame, especially for successful surgical operations of a difficult and delicate character, has gone far abroad. It is an Episcopalian institution and was founded in 1881. For several years it occupied a large frame building in "North Denver" that stood on the highest elevation in that section of the city. With the city's rapid growth came increasing demands upon the hospital that made a new and larger building in a more convenient location imperative. In 1890 the greater part of the block on the west side of Pearl street, between Nineteenth and Twentieth Avenues was acquired, and upon it were erected two large and handsome buildings completely equipped with everything experience has found essential to and that abundant means could provide for a model hospital. The buildings are of pressed brick and Colorado red sandstone, stand in one of the most pleasant parts of the city, and were completed and occupied in 1891. St. Luke's is under the immediate control and direction of a Board of Managers consisting of twenty-four members, and of which the Bishop of this Diocese is President. Its auxiliary, the Ladies' Hospital Aid Society, does much charitable work in connection with the institution and also has in charge many of its internal affairs. The total cost of the property was $100,000; and the hospital accommodates seventy-five patients.

The Homeopathic Hospital at Park Avenue and Humboldt street is a recent addition to the city's homes for invalids. In 1894 the homeopathic physicians of Denver formed an organization known as the Denver Homeopathic Medical College and Hospital Association, to establish and maintain a medical college for instruction in that school of medicine, and a hospital for patients who believe in the methods of treatment laid down by that school. The hospital was first located at 2348 Champa street. In 1898 the present building at Humboldt street and Park Avenue, which is also used for college purposes, was erected, and made ready for use by the close of that year. While not a large establishment, it is an attractive one.

The Steele Memorial Hospital, at Evans street and Seventh Avenues, is a city institution founded in December, 1892, through the instrumentality of the late Dr. H. K. Steele, then city Health Commissioner. Prior to that time the only place available for the treatment of contagious diseases was the Sand Creek Quarantine, or "pest house," as it is commonly called, seven miles northeast of the City Hall, and three beyond the city limits. In 1885 two small buildings were erected there near Sand creek, for the care of small-pox cases. Later it became the practice to send cases of scarlet fever, diphtheria, and measles there for treatment at times when there were no small-pox cases, as the city had no other hospital. In 1892 Dr. Steele undertook to remedy this objectionable state of affairs, and later in that year provided from his personal means sufficient money to purchase four small cottages at the present location of the hospital. These were remodelled, and during Christmas week, 1892, the hospital was opened for the reception of cases of diphtheria, measles, and scarlet fever. Before that time, however, Dr. Steele had been stricken by an illness that terminated fatally on January 20, 1893, and he had no opportunity to see the result of his labors for this special hospital. In recognition of

St. Luke's Hospital.

Dr. Steele's great services to the community, the City Council by resolution soon afterward gave it the name it bears. Since its opening the hospital has done a constant and increasing good work for the children of the poor, for whom it was designed, and has been of special usefulness in limiting the spread of contagion among inmates of the various charitable institutions for the care of children. Since 1892 two other small buildings have been added to the original four, on ground donated by Mrs. H. K. Steele, and the institution now comprises a half-dozen small, detached cottage structures with a maximum capacity, under crowding, of between fifty and sixty. The hospital is maintained by the city under the jurisdiction of the Bureau of Health, at recent annual expenses approximating $8,000.

The great Hospital of St. Anthony in the western part of the city, is the largest institution of its kind in Colorado. It is finely located on West Sixteenth Avenue between Quitman and Raleigh streets, near Sloan Lake. In addition to the entire block upon which the large building stands, two other and adjoining blocks belong to the property; the one immediately in front of the hospital being laid out and improved as a park for the comfort of patients. St. Anthony Hospital, conducted by the Sisters of St. Francis, was founded in 1891, when the erection of the great building was begun, and which was completed and occupied in May, 1892. It has accommodations for 250 patients, and possesses every provision for their successful treatment and their comfort. The building, beside being of modern design and construction, is complete in all its appointments, having cost $175,000. An addition to it is now in progress, and for this and other structures on the ground, the total outlay for improvements will have approximated $225,000. Than this no finer hospital exists in our western country; and it is open to all, regardless of creed, or of condition in life.

St. Anthony's Hospital.

"The Home" or, as it is more familiarly known, "the Oakes Home," on West Thirty-second Avenue between Decatur and Elliott streets, is not a benevolent institution in the common acceptance of that term. It is simply a finely appointed and completely equipped Church Home for invalids ill of consumption, and only for those who have a chance for life; a home where light, airy, cheerful rooms, abundance of sunshine, good food, and general comforts in pleasant surroundings may be had at a cost within the limited means of many, and still not be a charity; to give such men and women the refinements, comforts and conveniences of a home at no more than the bare daily cost of providing them. The institution does not undertake to meet the needs of all classes of people, the majority of its guests being of the moderately well-to-do, but to whom economy is essential when impaired health has caused reduced income.

The Home was the conception of Rev. Frederick W. Oakes some years ago, and his thought of it grew out of his own experience in earlier years during which he had strong personal reasons for realizing the great benefits that would arise from such an institution properly conducted, and on a basis leaving self-respect untouched. It was not until a little more than five years ago that he saw the consummation of his long-cherished plans.

The Home comprises four handsome, modern buildings; the Emily House for women, and the Grace House for mothers and sons or husbands and wives, were opened September 9, 1895; the St. Andrews House for men, opened January 1, 1896; and the Heartsease for the very sick and who require constant attention and nursing, opened in October, 1897. The buildings occupy an entire city block, and are connected by covered, glass-inclosed porches called "the cloisters." The property represents an outlay exceeding $100,000, much the larger part of which was expended in the low-price times immediately following the panic. The institution is not self-supporting. The expenditures directly for its maintenance in the last year were about $42,000, of which about three-fourths were received from guests; the remainder having been of gifts from those interested in its welfare. The Home is under the direct ownership and management of the Episcopal church of the Diocese of Colorado, but it was brought into existence by the united offerings of Christian men and women of various creeds; mostly, however, by Episcopalian people and Presbyterians. It makes no distinctions because of creed, but seeks only to draw lines at unworthiness of character. The property is held in trust by Rt. Rev. John F. Spalding, Rev. Frederick W. Oakes, Samuel A. Fisk, M. D., and David H. Moffat. The Board of Advisers consists of Mr. Oakes, Mr. Moffat, Dr. Fisk and Dr. S. G. Bonney; Mr. Oakes also being Superintendent and having direct personal charge of the institution.

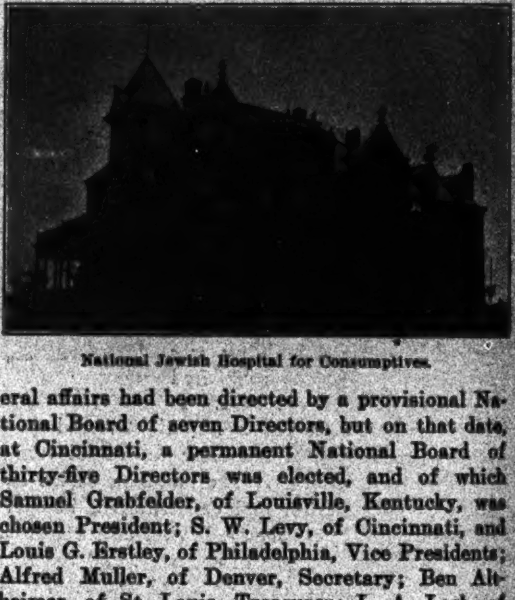
With the exception of one room provided with the income from $4,000, the Home has no endowments; therefore no charity cases may now be received. Still, the Home has not denied quiet assistance to many worthy persons in need. It is anticipated that in the near future a sanitarium will be provided in connection with which opportunities will be afforded consumptive men and women without means, to earn their living while receiving the benefits of a sojourn here under the care of the Home. It is also anticipated that the Home will have a building for the reception of incurable consumptive invalids and in which they will find comfort and have intelligent care while life lingers with them.

The National Jewish Hospital for Consumptives, the last addition to Denver's charitable institutions, was opened December 10, 1899. It was founded in 1890, and was the conception of the Jewish people of Denver. A large site for it was secured on the south side of East Colfax Avenue, between Jackson and Garfield streets, opposite the City Park, and in that year the erection of the building was undertaken. Among the nobly charitable women in Denver at that time was Mrs. Frances Jacobs, the wife of one of the city's pioneer merchants, and who died November 13, 1892. Her friends, desiring to make this hospital a memorial to her, contributed $8,000 to its funds; and it is because of this that the institution is commonly known as the Frances Jacobs Hospital. The building was completed in 1890-91, but owing to lack of funds could not be furnished, opened and maintained at that time. The panic period that soon followed, and its consequences that prevailed for several years, further prevented the fulfillment of the benevolent designs until 1899. At the beginning of that year a committee from Bnai Brith, of which Alfred Muller was Chairman, took up the work and successfully carried it to completion. The property, including furnishing and equipping the hospital, cost $51,000.

This institution stands unique—the first and only one of its kind in the world. It is for consumptives, only, and absolutely a charity. No paying patients are received; only those whose resources are exhausted, who are friendless and destitute, may enter and receive its ministrations. It is non-sectarian, and a patient may come from any part of the United States, receive the best medical attention, and have a home provided with every comfort, for a period limited to six months; the only condition being that some responsible person or persons shall guarantee that such patient shall not become a charge upon the Denver community after leaving the hospital.

The hospital as completed in 1899 had accommodations for sixty-five patients. At the close of our record provisions had been made for erecting, at a cost of $35,000, an addition that would increase its capacity to 135. The cost of maintaining the hospital has been at the rate of $22,000 a year, and it is anticipated that after the enlargement of the building shall have been made the annual maintenance expense will approximate $35,000. Funds for meeting these expenses are obtained exclusively from Jewish people; the lesser part by a tax on members of Bnai Brith, and the greater by contributions.

The management of the hospital is also exclusively Jewish. Until November 11, 1900, its general affairs had been directed by a provisional National Board of seven Directors, but on that date, at Cincinnati, a permanent National Board of thirty-five Directors was elected, and of which Samuel Grabfelder, of Louisville, Kentucky, was chosen President; S. W. Levy, of Cincinnati, and Louis G. Erstley, of Philadelphia, Vice Presidents; Alfred Muller, of Denver, Secretary; Ben Altheimer, of St. Louis, Treasurer; L. A. Loeb, of Chicago, P. Humberger, of Pittsburg, and Ignatius Rice, of New York, with the several officers, constituting the Executive Committee. The management of the hospital's local and internal affairs is entrusted to a Board of eleven Managers, consisting of Alfred Muller, Chairman; L. Anfenger, Vice Chairman; E. Monash, David May, L. H. Guldman, Henry Frankel, Lesser Levy, Meyer Friedman, Mrs. E. Pisko, Mrs. M. S. Appel, and Mrs. A. W. Weil. The hospital has a large medical staff consisting of city physicians of experience and first rate ability, and of which Dr. John Elsner is Chairman; there is also a Medical Advisory Board consisting of Dr. Elsner, Dr. Robert Levy and Dr. S. Simon. The physicians donate



National Jewish Hospital for Consumptives.

their services, and the members of the Board of Managers do likewise; so, there is no expense for medical attention nor for administration.

After various Colorado railroads were organized as the Union Pacific, Denver & Gulf system in 1890, the "Union Pacific hospital" for sick or injured employees of that and the Kansas Pacific road, was built near the Union Pacific shops in the northern part of the city. It was a large, fine building of stone and was maintained by a monthly tax upon all employees of the two roads. It was closed in 1898, and in 1899 all but its walls was destroyed by fire.

Each of the Denver hospitals renders much wholly charitable service both in receiving and treating the indigent sick and in dispensing medicines to many who do not become inmates.

For the helpless, the infirm and the unfortunate, though not invalids, there would seem to be provision for giving temporary or permanent aid to every deserving person. The city is not without victims of poverty and misfortune, though it may be fairly said that she has a smaller number strictly of her own than most cities of equal size; and for any one to actually suffer there is no unavoidable reason. Common begging is seldom practiced, and when it is it is usually by the undeserving or by the wayfarer who passes on tomorrow. There is wretchedness and misery in the city, but so much of it is directly associated with wantonness and other vice.

For helpless children especially generous provisions exist. One of the older, and the most important of the institutions for the care of such children, is the Mount St. Vincent's Orphan Asylum on Homer Boulevard between West Forty-second and West Forty-third Avenues in "North Denver." It, also, had its origin in the zeal of Bishop Machebeuf. In 1880 he determined to establish here an orphan's home. Several Sisters of Charity came from Leavenworth and he and they began the work. The Denver & Rio Grande Railroad Company gave them several lots upon which they succeeded in building the fine brick and stone Asylum which was opened on September 1, 1882, and has been the only home of many children from that day to this; the number cared for in recent times beneath its sheltering roof having averaged near two hundred. The present House of the Good Shepherd, now located on South Evans street between Cedar and Byers streets, was also founded by the old Bishop, and developed under his care. In 1883 he called five Sisters of the Good Shepherd from St. Louis and under their charge, which still continues, this institution for girls was opened September 18, 1883, in small rented quarters which it soon outgrew. In 1885-86 fifty Indian girls from Dakota became inmates and were trained in the ways of civilization.

Other institutions for children, and young girls, are the Denver Orphans' Home at the northeast corner of Race street and Sixteenth Avenue—a noble charity; the St. Clara's Orphan Asylum at 952 Tenth street, the Sisters of St. Francis in charge; the Home League Home for Children at 403 Downing Avenue; the Belle Lennox Nursery at 1018 South Fifteenth street, a home for young children; the Haven at 1146 Broadway, an industrial training school for young girls; the State Home and Industrial School for Girls; and the State Home for Dependent and Neglected Children.

In addition to those already mentioned, there are various other charitable and benevolent institutions and organizations such as the Florence Crittenton Home at 4901 West Colfax Avenue; the Colorado Cottage Home at 635 Pearl street; the Mothers' and Children's Home at 1009 Thirty-second street; the Working Boys' Home at 1129 South Fifteenth street; the Young Women's Friendly Club at 808 Thirteenth street; the Ladies' Aid Society; the Hebrew Ladies' Benevolent Society; the Tabernacle Dispensary; The Denver Flower Mission; the Children's Home Society; the Women's Christian Temperance Union Mission; and the Colorado Humane Society.

A few years ago a number of the charitable and benevolent associations were in one sense merged into the Charity Organization Society; though without surrendering their identity or ceasing active work as individual organizations. Those now forming the Society, which maintains a separate office of its own in the county Court House, are the following-named organizations, and those having in charge the following-named institutions:

Children's Home Society, Colorado Humane Society, Denver Flower Mission, Denver Orphans' Home, Florence Crittenton Home, Hebrew Ladies' Benevolent Society, Home for Mothers and Children, House of the Good Shepherd, Ladies' Relief Society, North Side Charity Organization, St. Vincent's Orphan Asylum, Tabernacle Free Dispensary, Women's Christian Temperance Union Mission, and the Working Boys' Home.

A large number of Denver's charitable people are identified with the Charity Organization Society, the work of which may be described as that of a council of supervision over its various individual institutions and associations; and especially that with relation to apportioning financial aid among them from the funds received by the general treasury. In 1900 funds aggregating upward of $23,000 were thus apportioned, including the sum used directly by the Society at its central office; and through these various agencies 3,700 persons were more or less assisted.

In the summer of 1900 the Haven, the Lennox Nursery, and the Young Women's Friendly Club, with the City Temple Institutional church were incorporated under the laws of the State as the "City Temple Institutional Society," "for the prosecution of religious, educational and benevolent purposes." These four institutions are maintained under the auspices of the Protestant Episcopal church, but in practice are non-sectarian.

Ordinarily we do not realize the extent, variety, and immeasurable usefulness of the charitable and benevolent institutions and organizations in Denver. Their work goes on day after day, quietly and without ostentation; yet they require the unceasing attention and devotion of many people, and call for the expenditure of vast sums of money. It is only when they are considered as constituting one great unity that we appreciate its magnitude and comprehend its far-reaching influences for the good of our fellow-beings upon whom misfortune has laid its hand.

Masonic Temple, Sixteenth and Welton streets.

Secret orders and societies, and fraternal benevolent associations, flourish in Denver to an extent certainly not surpassed, if it be equalled, by that existing in any other city of the same size in the country. They literally abound, and the city directory must devote several of its pages to a mere enumeration of them. The reasons for this are not difficult to see. So many men, and in a large proportion young men, constituted the successive increases of male population by immigration, that membership in some mutually helpful organization was desirable, if not essential, to most of them. Such a relation to thousands of isolated men seeking to establish themselves in a new, distant and hurrying community, was and is important as a means of forming acquaintances and friendships, of giving or receiving needed aid and comfort in misfortune and distress, and in extending a helping hand in many other ways growing out of circumstances that attend the varied phases of human effort in modern life.

It would be out of place in this volume for any attempt at a detailed account of the rise and growth of all these orders and societies to be presented. It is another subject which could only receive full treatment in a volume devoted entirely to it; and such a volume would properly be of no mean proportions.

The Masonic order was the first to organize an identity of this kind in Denver. As we have elsewhere stated, a relatively large number of the pioneers of Denver and Colorado were of that order, and the bonds of union between them were unusually strong and influential. The strength, potency and results of those influences among the men who resolved to suppress lawlessness and to maintain order in our pioneer communities, and who established forms of government of their own devising, would afford material for a most interesting chapter of pioneer history if the story in its entirety might be told.

Early in that first winter here, 1858-59, the Masons in the little hamlets frequently held informal meetings in cabins of the brethren; more frequently, perhaps, in those of Sagendorf and Lehow, Dr. L. J. Russell, Henry Allen, and E. A. Willoughby, than any others. Through the efforts of H. P. A. Smith authority to organize a lodge under the dispensation of the Grand Lodge of Kansas Territory was obtained early in 1859, and on April 21st of that year an organization was effected at the cabin of Sagendorf and Lehow. The following notice, which was the first public Masonic notice published in the Rocky Mountain country, appeared in the first issue of the Rocky Mountain News two days later:

"MASONIC."

"The Arapahoe Lodge of F. & A. Masons meets every Saturday night at their lodge on Cherry street, Auraria, K. T.

H. P. A. Smith, Sec'y. H. Allen, W. M.

N. B.—Visiting brethren are respectfully invited to attend."

The "lodge on Cherry street" was the cabin of Sagendorf and Lehow, where the organization was maintained several months. In the autumn of 1859 the lodge secured a charter by which, on September 24th, it became independent of Kansas jurisdiction and formed the nucleus of the present great organization in Colorado. The stride from the beginning in that humble log cabin to the magnificent Masonic Temple erected in 1889, would seem to sufficiently indicate, without amplifying words, the progress of this great order through the intervening thirty years; and it is, of course, still stronger now, with the accretions of another decade. There are at present, including the Grand Lodge A. F. & A. M. of Colorado, the Grand Royal Arch Chapter of Colorado, and the Grand Commandery Knights Templar of Colorado, a total of twenty-seven Masonic organizations in Denver, aside from the four of Colored Masons.

There were among the early comers many members of the Independent Order of Odd Fellows, a society that has a strong hold upon the affections and good-will of the people, and that has found a broad field for its usefulness here in the west. Its beginning in Denver was by the institution, on Monday, December 24, 1860, of "Peak Lodge," which became extinct about three years later and was succeeded by "Union Lodge No. 1." The new lodge was organized by authority of the Sovereign Grand Lodge, with five charter members; the dispensation bearing date July 6, 1864. From that beginning the order has expanded to its present commanding proportions and influence. The Grand Encampment for Colorado came into existence at Pueblo on March 13, 1873. Here in Denver this order annually disburses for relief and benefits an amount that would make for an individual a comfortable fortune, and in comparison with which the transactions of some quasi-public institutions of a benevolent character shrink to moderate dimensions. Including the Grand Lodge and the Grand Encampment of the State there are thirty-one organizations of Odd Fellows in the city, to which may be added six among the colored people.

Of other and more modern orders, nearly all of which are usually regarded as "secret societies," there are now in Denver 170 organizations. Of these, twenty-four are of the Knights of Pythias; fifteen of the Improved Order of Red Men; fourteen of the Woodmen of the World; thirteen of the Foresters of America; eleven of the Deutscher Orden der Harugari; nine of the Ancient Order of United Workmen; eight of the Patriotic Order of the Sons of America; seven of the Knights of the Golden Eagle; seven of the Knights of St. John; seven of the Junior Order of United American Mechanics; six of the Knights of the Maccabees; five of College Fraternities; five of the Orden der Hermann Soehne; five Catholic Mutual Benefit Associations; four of the Knights of Honor; three, each, of the United Moderns, the Royal Arcanum, the Knights and Ladies of Honor, and the Ancient Order of Hibernians; two, each, of the Guardians of the Home, the Sons of the Revolution, the Veteran Legion of the United States of America, the Modern Woodmen of America, and the Fraternal Union of America; one, each, of the Benevolent and Protective Order of Elks, the National Union, the Bankers' Union of the World, the Improved Order of Heptasophs, the Chosen Friends, the Bnai Brith, the Sons of St. George, and the Independent Order of Foresters. Of other associations, outside of the several clubs, and classified as benevolent, scientific, technical, professional and so forth, there are forty-nine permanent organizations; and to all of these are added sixty trades unions and other associations of workingmen. Not included in this rather long list are two great organizations that stand very close to the hearts of the people of Denver and of Colorado—the Grand Army of the Republic, and the Society of Colorado Pioneers.

The Grand Army of the Republic is now represented in Denver by eight Post organizations, but for a rather long period after the civil war it was not very well represented here in organized form. In addition to the survivors of the Colorado civil war regiments a relatively large number of other men eligible to Grand Army membership located in Colorado within a few years after the close of hostilities, but for some reason they did not effectively get together.

In 1867 there came into existence here an informal association of about three hundred Union Veterans, of which Major Jacob Downing, Richard Sopris and Louis Dugal were the leading spirits, but it was not, properly speaking, a Grand Army organization; having been merely a local association for mutual assistance, co-operation, and protection of members' interests, and that was not long maintained.

In July, 1868, a small number of veterans, anticipating the creation here in the west of a Provisional Department of the Grand Army, organized on their own account a Post which they named "John A. Rawlins Post, G. A. R;" the name having been proposed by Philip Troustine, who had served under General Rawlins. Whatever of records Rawlins Post may have had were long since lost, and the brief account of it given here reflects the reminiscences of Louis Dugal, Philip Troustine and Jacob Downing.

On November 14, 1868, General John A. Logan, then Commander-in-Chief of the Grand Army of the Republic, issued General Order No. 18, creating the Provisional Department of Colorado consisting of the Territories of Colorado and Wyoming, with headquarters at Denver; Dr. F. J. Bancroft having been appointed Commander, and Louis Dugal Assistant Adjutant General. John A. Rawlins Post became Post No. 1 of that Department, and appears to have been its only one; at all events the only one that existed in Colorado in that period. However, the Post did not long survive, nor did the Provisional Department do very much better. Men eligible to Post membership were rather widely scattered and formation of new Posts was thereby made difficult; and furthermore, sentiment was not crystallized as it became in later years. Within three or four years Rawlins Post was forced by circumstances to disband, as many of its members had gone elsewhere, some had died, and sufficient new membership to insure its maintenance did not appear available. This left the Provisional Department in only nominal

View in Denver, from light-tower near Eighteenth and Grant Avenues, looking northeast, in autumn of 1882.

existence and it so continued a couple of years longer.

In 1875 when a general re-organization of Grand Army affairs took place, a general order of the Commander-in-Chief issued in February of that year, created the "Mountain Department," embracing the Territories of Colorado, Utah, Wyoming and Montana, with headquarters at Fort Sanders, Wyoming, and in which six Posts were subsequently organized but none of them in Colorado. Myles W. Keogh Post No. 1 was located at Fort Keogh in Montana; the other five were at Forts Cameron and Douglas in Utah, and Forts Fetterman, Laramie, and Sanders in Wyoming. These Posts included few civilian members, having been in the main composed of soldiers in the regular army who were then stationed at these several forts. But as they were afterward sent to other stations, those who took their places did not sustain the Grand Army organizations, and all of these Posts soon disbanded, surrendered their charters and passed out of existence.

The failure to organize Posts in Denver and elsewhere in Colorado under this new dispensation here in the west had been largely due to dissatisfaction with the apparent domination of the regular army in what was going on, and also because an out-of-the-way military post of the United States had been made Department headquarters. The old Provisional Department had been, as we have mentioned, nominally continued, and Louis Dugal having become its Commander, an effort to put new life in it was afoot at the time the new Department was created. But an early order from Grand Army Commander-in-Chief Devens to immediately ship to the new headquarters, a lot of arms and other Post equipment that had been provided here, chiefly at expense of Denver veterans, added to the irritation and caused a further loss of local interest in Grand Army organization. Therefore there ensued a period of indifference that continued several years.

In 1879 Colorado and Wyoming became a new Department, and the work of rehabilitating the Grand Army here was earnestly begun; but it was a difficult task and the growth of the order was slow. Posts were organized at Laramie, Wyoming; and at Georgetown, Golden, and Denver—our A. Lincoln Post, present No. 4, being the pioneer among the existing Grand Army organizations in Denver; although when it was mustered in in October, 1879, it was Post No. 8 in the new Department. For two or three years the maintenance of these posts was quite difficult. There were enough eligible men to have made it otherwise, but those were the days of excitement over the developments at Leadville and in other silver districts, men were coming and going, running hither and thither, and could give little time or attention to Grand Army matters. Slowly but surely, however, the tide of immigration brought in men who became recruits, and one by one Posts were organized in the Department until, in 1883, seventeen were in existence; of which six were in Denver when the National Encampment of the Grand Army was held here in that year.

Holding the Encampment at Denver gave a great impetus to general interest in the Grand

Army, and before the close of 1883 thirty-two new Posts had been organized in the Department, making in all forty-nine. Thereafter the growth of the order was steady until, in 1893, the Department membership reached 3,068; and then, from natural causes, the tide began to slowly turn the other way.

There are now, as we have said, eight Posts in Denver: the pioneer A. Lincoln, No. 4, organized in 1879; the Reno, No. 39, organized in 1883; the Veteran, No. 42, in 1883; the Farragut, No. 46, in 1883; the George G. Meade, No. 47, in 1883; the M. M. Crocker, No. 81, 1890; the George Washington, No. 85, in 1891; and the J. H. Platt, No. 99, in 1896. The Denver membership has always constituted about one-third of the total in the Department, and at present is about 800. The highest total membership in Denver was 850 in 1897. Each of the Denver Posts, excepting the Lincoln and the Platt, has an auxiliary Relief Corps. In addition to these organizations there is the G. A. R. Memorial and Benevolent Association, and the allied Farragut Camp of the Sons of Veterans. Denver is, as it long has been, the headquarters of the Department of Colorado and Wyoming.

Two Grand Army Posts organized in Denver in comparatively recent years did not long exist. Harney Post, No. 50, was organized in the spring of 1884. Its name was later changed to Broadway Post which disbanded in 1885. Phil. Kearney Post, No. 19, was organized in 1882 and disbanded in 1889.

Recently a proposition was made to consolidate the Denver Posts into one large, resourceful, and compact organization. While some strong reasons for doing so were presented, the proposition as a whole was not received with favor sufficient to secure its adoption. However, the reasons for doing so are fast growing stronger and will probably soon prevail.

Early in 1899 the resident veterans of the Confederate armies organized in Denver Beauregard Camp, No. 1206, United Confederate Veterans, and it now has a membership of about 70. It is somewhat difficult to exactly define in words the sentiments of the people of Denver toward this organization, for they are the result of mingled sincere respect and regardful veneration, with much of the pathetic lying between. This confederate Camp participates with the Grand Army Posts and other city organizations in the observance and ceremonies of Memorial Day.

The Society of Colorado Pioneers is an organization in which great and general interest is manifested, and which inspires the highest public regard. The present organization is, in one sense the third of its kind undertaken; but its predecessors can hardly be said to have existed strong enough and long enough to really take rank with it. In the summer of 1859, before the town of Denver was a year old, Henry Allen, William N. Byers, Richard Sopris, Dr. L. J. Russell, J. H. Dudley, and several others associated as a pioneer society. It was a rather informal organization, yet it was a beginning. However, it did not endure; the thoughts and attention of its members becoming absorbed in the events of the immediately following years.

No attempt to revive it or to form a new association was made until the summer of 1866. On June 22nd in that year a meeting of Colorado pioneers was held in Denver to organize such a society, and so far as providing officers went, they did very well. Those who attended this meeting were Dr. Adams, Joseph L. Bailey, William N. Byers, William Graham, Andrew Hiveley, A. C. Hunt, H. R. Hunt, John S. Jones, S. M. Logan, A. McFadden, J. W. McIntire, W. H. Morgan, Dr. J. H. Morrison, D. C. Oakes, Charles C. Post, John J. Riethmann, A. G. Rhodes, John Robinson, Henry J. Rogers, J. Q. A. Rollins, Andrew Sagendorf, F. Z. Saloman, Nelson Sargent, George C. Schleier, William M. Slaughter, E. B. Sopris, Richard Sopris, L. N. Tappan and E. A. Willoughby.

Permanent officers were chosen as follows: D. C. Oakes, President; Richard Sopris, of Arapahoe county; C. L. Tourtelotte, of Boulder; John S. Jones, of Clear Creek; Lafayette Head, of Conejos; Captain Hendren, of Costillo; George A. Bute, of El Paso; William H. Green, of Fremont; William M. Slaughter, of Gilpin; James S. Gray, of Huerfano; W. A. H. Loveland, of Jefferson; Robert L. Berry, of Lake; Henry R. Chubbuck, of Larimer; H. A. W. Tabor, of Park; R. B. Willis, of Pueblo; W. P. Pollock of Summit; and M. B. Houghton, of Weld, Vice Presidents. Recording Secretary, H. R. Hunt; Corresponding Secretary, William N. Byers; Treasurer, Henry J. Rogers.

The name adopted by this organization was the same as that of the present one—the "Society of Colorado Pioneers." It would seem that with such an array of officers the society should have flourished and lived long. On the Fourth of July, 1866, there was a reunion of pioneers under the auspices of the new organization, in Denver, and a fine banquet at the old Broadwell House. A good beginning appeared to have been made, but there is no record of another meeting or reunion of that society; nor do any of its survivors in Denver recall any subsequent gatherings under its dispensation. Whether the banquet was in any way to blame for this consequence is also not of record.

Thus matters rested until the winter of 1871-72, when a movement was instituted to organize a society on a broad and permanent basis. This resulted in a public meeting of pioneers on January 16th, 1872, at Cutler's Hall on the south side of Market street between Thirteenth and Fourteenth streets. Mr. W. N. Byers made an address urging the formation of a society similar to that of the

California pioneers of 1849, and for the same general purposes. Others heartily indorsed Mr. Byers' suggestions, and the meeting appointed a committee to prepare a constitution, and plan of organization. On January 22nd the second, and larger, meeting was held at the same place, and at which the constitution was adopted and officers elected: Hiram P. Bennet, President; Dr. J. H. Morrison, First Vice President; Richard Sopris, Second Vice President; William N. Byers, Secretary; F. Z. Salomon, Treasurer; John L. Dailey, Marshal.

E. A. Willoughby. Photographed 1888.

"The Society of Colorado Pioneers" was adopted as the name of the association, and the objects and purposes declared to be to preserve the memories of the pioneer days, to be mutually helpful in times of need, to gather and preserve historical records of the settlement of the city and Territory, and to provide for annual reunions of Colorado's pioneers. Eligibility to membership was limited to those who came hither before 1860.

On June 27, 1884, the Society was incorporated under the State laws, the certificate thereof being of record in the office of the County Clerk under date July 14, 1884. At that time provision was made for expanding the limitations and admitting those who came in 1860; but since then no more of the bars have been let down.

Ever since its organization the Society has had an uninterrupted, prosperous and most useful existence; and its annual reunions are events of the deepest and most pleasant interest not only to those constituting the Society, but to the whole community. There are now a few more than five hundred members; but, as the months and years go by, the responses to roll-call are lessened and lessened.

Edmund A. Willoughby who has been Secretary of the Society since 1893, is one of the few surviving pioneers of 1858 still residing in the city. Younger son of General Franklin Willoughby, he was born in Groton, Tompkins county, N. Y., January 6, 1836. Educated at Groton Academy, he subsequently became a carpenter and builder. In 1857, he removed to Omaha, and in 1858 crossed the plains in company with Blake & Williams, arriving at the mouth of Cherry creek on October 27th. Engaging here in his business in partnership with M. A. Avery, another "Fifty-eighter," he erected many of the pioneer and later buildings in Denver, having continued in that business until the close of 1873. In 1870-72 he was a member of the city Board of Aldermen, and in 1873 was elected Sheriff of Arapahoe county. One of the old-time Masons, he is a member of high degree in that ancient brotherhood of men. At one time he was the owner of much real estate in Denver, but was not among those who profited by the later great increase in value of such property. Like not a few of his fellow-pioneers who bore part of the heat and burden of the early days, he helped in building rather more for others than for himself.

CHAPTER LXV.

Pioneer Women—Ladies' Union Aid Society Their First Organization in Denver—Pioneer Ladies' Aid Society—Development of "Club Movement" in Denver—More Prominent Organizations in Denver—Outlines of Their Work—Colorado Federation of Women's Clubs—Club Influence—First Movement for Woman Suffrage and Its Failure—Second Failure—Established by Popular Vote in 1893—Women as Public Officers—General Results of Woman Suffrage.

Few white women and children, as our reader has seen, were reckoned among the inhabitants of the Pike's Peak country in and before 1858. Five white women (but no children) saw the beginnings of Denver. These were in order of their coming, as we have stated in preceding chapters, Mrs. Rooker and her grown-up daughter, from Salt Lake City; Mrs. H. Murat, now (1900) living at Palmer Lake; Mrs. Smoke, who helped her husband keep the first "hotel," and who afterward went to Montana; and Mrs. R. L. Wooton, wife of one of the pioneer merchants who has figured in much of our history of pioneer timers. Besides these there were, to be sure, the half-blood Sioux "wives" of John S. Smith and William McGaa, each of which frontiersmen had participated in the organization of the pioneer town companies at the mouth of Cherry creek. "Mrs." Smith, in her Indian fashion, was the first woman housekeeper here, and "Mrs." McGaa the mother of the first child born here after the settlement had been begun. There were also several other Indian women here at that time, but Mrs. Rooker was the first white woman who presided over a housed domestic establishment on the site of Denver; having begun her reign early in November, 1858. About the first of the new year (1859) the sixth white woman, Mrs. Jack O'Neill, joined the community.

The earliest account of American white women visiting the Rocky Mountain country, dates in 1836. In that year a missionary party consisting of Dr. and Mrs. Marcus Whitman, Rev. and Mrs. H. H. Spalding, and W. H. Gray, convoyed by the yearly outward expedition of the American Fur Company, crossed the mountains by way of the South Pass, bound for the Oregon country. After these people crossed the plains and mountains, there are no available definite accounts of the passage of any American white women until the movement of the Mormons, and the later hegira to California after the gold discoveries there; although it is more than probable some passed to Oregon in the early "Forties." Among the California Argonauts a considerable number of women was included.

The first American white woman who came direct to the Pike's Peak country—and she preceded the pioneer women of Denver whom we have just mentioned—was Mrs. Anna Archibald Holmes, wife of Charles Holmes. They came hither as members of the "Lawrence party" of gold-seekers that put in to the base of Pike's Peak early in July, 1858, and camped in the Garden of the Gods. Mrs. Holmes was in all probability the first woman who set foot on the summit of Pike's Peak, for Indian women were not much given to the extreme exertion required to climb that mountain, for no greater reward than the satisfaction of standing on its top. A few days after the "Lawrence party" went into camp in the Garden of the Gods, several of its members, including Mrs. Holmes, made the ascent of the Peak, though some of the men of the party had, as we have previously related, gone to the top within a day or two after their arrival. The adventurers of whom Mrs. Holmes was one, were three days on the journey, going and coming, and it is of record that she endured the labor and fatigue better than some of her male companions. Mr. and Mrs. Holmes did not come to the mouth of Cherry creek and were not among Denver's pioneers.

When the great tide of immigration came rolling into this region in 1859 it brought a larger number of women with it than would have been expected to come under such circumstances; and from all oral accounts that have been transmitted they bore the fatigue and hardships of the journey as well as their alleged lords; some bringing children, even babes in arms, with them. After the great developments of gold discoveries on the upper branches of Clear creek in the summer of 1859 had assured permanency to the Cherry creek towns, the making of homes, which only women can do, was begun here in earnest. At that time the men constituted probably ninety-five per cent. of the population, and womankind was accorded much distinction. Women were not so few as in some of the pioneer towns in California in 1849, but the appearance of a good one on the streets of Denver in the summer of 1859 inclined men to take off their hats and get off the sidewalks when they met one. It was in the local annals of that year that we found record of the first organization of women for any purpose, in Denver and in what is now Colorado.

The existing conditions in the growing towns at Cherry creek in the summer and autumn of 1859 had suggested to several of the pioneer women the expediency of organizing a charitable and benevolent society among themselves; but nothing effective was done at that time. Later in that year and after the Union Sunday School had demonstrated its usefulness, the matter was taken up in greater earnestness, and early in January, 1860, a meeting of women of Denver and Auraria was held at the home of William N. Byers in Auraria, at which the "Ladies Union Aid Society" was brought into existence; the first organization of women in the two towns. Its purpose was to give aid and comfort to those in need and to engage in any benevolent work consistent with the organization and its motives. The officers chosen were Mrs. W. N. Byers, President; Mrs. F. A. Farwell, Vice President; Miss E. C. Miles (who later became Mrs. R. E. Whitsitt), Secretary; and Miss F. C. Miles (who later became Mrs. Gerrish), Treasurer. Meetings were appointed to be held semimonthly, and membership dues were fixed at ten cents per month. The Society continued in existence until it was supplanted by those for like purposes later organized in the several church congregations that soon afterward came into being.

Mrs. Catharine Murat.

After the pioneer churches became fairly established there were organized among their women members the usual church societies; but nothing of especial historical interest attached to them. So, for twenty years or more affairs went on in the old fashion of the days before the present era of women's clubs. The change came slowly, after 1880, and but few club organizations of women were known in that decade in Denver, though the new dispensation at that time received an intelligent and generous welcome. Its great development belongs to the decade just closed, and in which the city became famed for its host of women club-members. But there is one association of women, though not a club, formed eleven years ago, that is entitled to consideration before passing to some account of the others.

Of unusual interest among the many benevolent organizations in Denver is this Pioneer Ladies' Aid Society, having for its especial object the care of indigent pioneers and those dependent upon them. Relentless Time and the consequences he carries with him, are rapidly contracting the circle in which the Society was formed to distribute its ministrations. The ranks of the pioneers of 1858-59-60—comers in subsequent years not yet being recognized as true pioneers—are becoming sadly decimated. The Society was organized as an auxiliary to the Society of Colorado Pioneers in September, 1889, by the following-named women who were pioneers themselves: Mrs. William N. Byers, Mrs. Birks Cornforth, Mrs. L. W. Cutler, Mrs. J. F. Henderson, Mrs. Alvin McCune, Mrs. C. H. McLaughlin, Mrs. H. W. Michael, Mrs. D. Mitchell, Mrs. R. Moseley, Mrs. A. G. Rhoads, Mrs. Andrew Sagendorf, Mrs. Richard Sopris, Mrs. Augusta Tabor, and Mrs. Justina Trankle. Of these charter members Mrs. Mitchell, Mrs. Sagendorf, Mrs. Cutler and Mrs. Tabor are dead. The first officers were Mrs. Cornforth, President; Mrs. Byers, Mrs. Sagendorf, Mrs. Tabor and Mrs. Moseley respectively first, second, third, and fourth Vice President; Mrs. Cutler, Secretary; and Mrs. Mitchell, Treasurer. The Society was incorporated in 1894, at which time its membership was about one hundred and fifty. The number has diminished since then but the interest and zeal of the survivors have not. The organization has been regularly maintained and no doubt will be so long as any of our pioneers remain with us. No other benevolent association in the city has so much of the regard, sympathy and good-will of all the people. Its expenditures are, of course, relatively not large; but whatever and whenever it needs, the responses are eager and generous. Unless the field of its benevolences be widened in the future there arises the pathetic fact that the Pioneer Ladies' Aid Society will, as an organization, in a few years more follow those for whose assistance in poverty, comfort in despair, attention and aid in sickness, and fitting burial at death it was brought into existence.

Of women's clubs and associations, under what may for convenience be termed the modern dispensation, there has been, as we have heretofore remarked, a surprising and significant development in recent years, in Denver and elsewhere in Colorado. The statistics of "the club movement" reveal the interesting facts that in number of women's organizations and in aggregate membership therein, Colorado, in proportion to population, surpasses every other State in the Union; and that

View in Denver, from Arapahoe and Fourteenth streets, looking northward, in 1865.

Denver, in proportion to population, not only leads in Colorado, but is in advance of every other city in the Union. A recent commentator on this interesting state of affairs thought it worth while to declare that "for a city of its size Denver is club mad." But in this view of the situation he would probably find himself without support among the thousands of Denver women who are members of one or more of these helpful organizations.

To repeat a statement, the great development of "the club movement" in Denver has been accomplished in the last decade, though some of the existing organizations were formed between 1880 and 1890. It is beyond the purposes of this volume to consider the origin and progress of even all the really important clubs and associations of Denver women, but it is thought essential that some account of several that are conspicuous in the great and growing family be given.

The Denver Fortnightly Club is the pioneer among the present women's club organizations in the city. It was formed April 13, 1881, with the following-named twelve charter members: Mrs. John Evans, President; Mrs. George L. Scott, Mrs. W. B. Coy, Mrs. J. V. Hilton, Mrs. A. R. Dyer, Mrs. J. R. Hanna, Mrs. Charles Denison, Mrs. E. M. Ashley, Mrs. D. D. Belden, Mrs. J. F. Spalding, Mrs. J. L. Adams, and Mrs. J. F. Brown. The primary object of the Club is "the union of congenial friends for study and discussion;" and the secondary "for the furtherance of good in such practical ways as may from time to time be presented to the Society." It has no philanthropic committee, as all its members throughout its career have been actively identified with charitable and benevolent work in other organizations. The membership of the Club is divided into four committees: "Art and History," "Science and Philosophy," "Literature," and "Current Topics," designations that indicate the general scope of the Club's work. The Fortnightly has been a most influential organization, and potential in what has been termed "the woman's club movement in Colorado." It was instrumental in forming the State Federation, and the Woman's Club of Denver; and was the only Colorado club represented in the convention at Philadelphia in 1889 that organized the General Federation of Clubs. It now has a membership of thirty, and has included therein since 1881 many of Denver's most intellectual and benevolent women. Its motto is "To the truth add other truth," and its flower the Marechal Neil rose. Its programmes are adorned with an engraving of Mt. Evans, in remembrance of the services of some of its members in persuading the Legislature to formally bestow upon the lofty mountain just west of the city the name of Colorado's Territorial Governor, and foremost citizen in bygone times, whose memory will be revered so long as the State endures.

The Monday Literary Club is also one of the old associations of Denver women, having begun its career in 1881, almost simultaneously with that of the Fortnightly. Aside from its restricted number of honorary members, its membership is limited to thirty, and there are usually several awaiting candidates. The Club was formed "to bring together women interested in intellectual culture," and this purpose has been well accomplished.

Der Deutsche Damen Club, an organization of German-speaking women, ranks as a pioneer among the existing associations. It was organized in 1884 with a membership limited to fifteen, for the study of German literature, history, and music, and for social purposes. This Club's "Spruch" is paraphrased from Schiller, and runs "Wis wollen sein ein einzig volk von Schwestern in keiner noth uns trennen und Gefahr."

The Young Women's Christian Association, a most noble philanthropy, was originally formed in 1887 and incorporated as the Woman's Home Club, by a number of the good women of Denver to befriend other good women. In 1893 the association was re-incorporated, and received its present name; and is now a link in the great chain of similar organizations that may be said to encircle the globe. In 1898 the Association acquired a large building site on the northwest corner of Sherman and Eighteenth Avenues at a cost of $14,000. The accumulation of a building fund had to be awaited until 1899 when the Association erected there its present home at a cost of about $35,000 for the structure; its furnishings having been largely provided for by other subscriptions. Through the hospitable doors of the fine new building may enter and find welcome not only the timid girl unused to city ways, or the woman who needs a kindly word and a helping hand, but the capable, self-reliant and self-supporting young woman who seeks and there finds a comfortable home amid genial surroundings and congenial associations. While the fundamental purpose of the organization is not to dispense charity, it extends temporary relief in shelter and food to many women until something better can be done for them. Other calls are numerous and varied and in response to which the Association becomes counsellor, guide and friend to thousands. Management of the general affairs of this organization is vested in a Board of Directors consisting of twenty-one Denver women who have at their call when needed an Advisory Board of twelve men of activity and prominence in the community.

The Round Table is another of the older organizations. It had its origin in October, 1888, with twelve members, and its purpose was, and is, to thoroughly study American, English, French, German and Greek history and literature. Later the membership was increased and limited to twenty-five, the Rocky Mountain columbine was adopted as the Club flower and color, and many delightful social features were added. "Step by step we gain the heights" reflects the progress of the Round Table.

The Tuesday Musical Club was organized in the autumn of 1891 by twelve women, as the Amateur Musical Club; but in May, 1892, was given its present name. Primarily its purpose is for musical advancement; secondarily, for the study of the literature of music and general literature. The Club within its membership maintains a fine chorus, and gives public concerts during each winter. It has done much for musical culture, and in elevating the musical tastes of our people. Candidates for membership must pass a rather rigid examination in musical theory and practice.

Of Clio Clubs there is a small family; or rather a mother and three descendants. The original Clio Club was organized in 1892, for, as its name suggests, the study of history. In 1895 it established the Monday Evening Clio for the intellectual and social benefit of both men and women members—the first literary organization of that kind in Denver. This branch now stands as one of the representative clubs of the city. In 1895, also, the Junior Clio Club, consisting of daughters of members of the parent organization, came into existence, and was the first girl's club admitted to the General Federation. In 1896 the Young Ladies' Clio was formed for historical and literary study, and for charitable work of which it does much among needy children. These four Clio organizations are closely allied, and are held in very high esteem by all familiar with them.

The Sevigne French Club came into existence in December, 1892, with twenty members, and a limit of membership of twenty-five. It pursues the study of the French language, and of French history and literature. Though but few of the members are French women, all its proceedings are conducted, and its records kept, in French; no English being spoken at its meetings.

The Woman's Club of Denver is the great, potent, and influential organization of women, in the city, with a membership exceeding 1,000 and including several nationalities and almost every creed. It was the conception of Mrs. Charles Denison, one of the charter members of the Fortnightly Club, and among its founders was nearly all the members of that old association. The first meeting to consider the organization of such a Club was held at the home of Mrs. Denison early in the spring of 1894, and soon afterward a general meeting assembled in the basement of Unity church when the organization was effected with nearly two hundred members, upon the general plan of the Woman's Club of Chicago. This provides for dividing club work into many departments, with one or more of which each member may become directly identified and in which she may find her preferable field of action in forwarding the general purposes of the great organization. Some of these purposes are exemplified in the Pingree gardens, the children's park, the School of Domestic Science, the child study classes of the educational department, the free library established in the lower part of the city by the home department, the social union work of the science and philosophy department at the People's Tabernacle, the "travelling libraries" sent out by the same department to the mining towns, and the systematic decoration and adornment of the public school rooms. It is impractical to record in detail here all that has been done by this organization or all that is springing from it as it becomes better and better adjusted to the great work it finds to do; but of its Pingree gardens and its Domestic Science School some particulars will presently be related. This Club has prompted the organization in Denver of many small but helpful literary and other associations of women, and by it strength, earnestness and usefulness has done much toward advancing women's clubs to the position of commanding dignity they now occupy. Of the broad character, the methods, and the influence of the Woman's Club, we quote the following from the pen of Miss Minnie J. Reynolds:

"The strength of the club is that it brings together many women of many minds. When it becomes committed to any one object, however good that may be, it will lose interest for those indifferent to that object. Every earnest worker in any particular line thinks her line the most important of all. She would gladly see the Club committed to it if possible. It is the President's idea that the club should be committed to none of them, but should foster all, and make a common meeting place for all workers. The temperance worker addresses the Club, but the Club is not asked to indorse the Prohibition ticket. The worker along educational lines tells the Club of its duties to the schools, but the Club does not indorse any candidate for the School Board. Work is done, money given and interest aroused for every charitable institution in the city, but the Club does not pledge itself to any one philanthropy."

"It is a great thing for so large a club as the Woman's to even exist so many years without wars and rumors of war, even if it did nothing else. It is a living proof that large bodies of women can work together in harmony. There has never been a quarrel in the Woman's Club. There are constant differences of opinion, but they are settled invariably in a decent, womanly and business-like manner. There have been hotly contested elections in which defeated candidates have accepted defeat gracefully, and won respect and admiration."

"The great benefit of the Club, to my mind, is the acquaintance it has brought about among women. When today there is a movement for any good purpose started, its leaders know exactly where to place their hands upon women who will carry it on. With this has come the breadth of mind which results from acquaintance with women of different beliefs, different cliques, and different social standing. The religious beliefs in the Club vary from the Catholic to the agnostic. The Catholic does not become an agnostic, nor the agnostic a Catholic; but each learns to know the other for a lady and a good woman. The political beliefs vary from those of the most ardent Populist to the most conservative Republican, but there will never be any bitterness over political differences among the representative women of Denver, because they know each other in the Woman's Club. The Club is getting the women out of their old, narrow, bigoted ways of thinking into a broader, more liberal and more charitable atmosphere."

The Colorado Society, Daughters of the Revolution, a division of the National Society, is a State organization composed of members who are residents of Colorado, but the membership is chiefly of Denver women. Any qualified woman above the age of eighteen, and a resident of the State, is eligible to membership. She must be a lineal descendant from an ancestor who, in the army or navy, or in some official position, actually participated in the achievement of American Independence; becoming thereby liable to conviction of treason against the government of Great Britain, but remaining always loyal to the authority of the Colonies or States. Organization was effected in Denver in 1894. An informal meeting was held on July 15th of that year, and on October 29th, the first regular meeting of the Board of Managers occurred. The growth of the society has been greater than was anticipated, considering the difficulties that often arise in substantiating eligibility by records, as under the rules of the Society "allegations of facts based upon tradition can not be considered." The Society's motto is "Liberty, Home and Country," and its membership now exceeds two hundred, exclusive of that of several local Chapters later organized elsewhere in the State.

View in residence section of "East Denver" in 1865.

The panic years of 1893 and 1894 brought very harsh conditions upon many worthy people in Denver. In the spring of 1895 the philanthropic department of the Woman's Club undertook to relieve some of the destitution upon the method first proposed and instituted by Mayor Pingree, of Detroit, Michigan. Unoccupied land was secured in "North Denver," seed and plants were supplied by the Charity Organization Society, water rights by the city, a superintendent detailed and plowing done by the County Commissioners, tools and incidentals furnished by the philanthropic department, and the planting of "Pingree gardens" was begun. Bountiful crops were produced, and the experiment was in every way gratifyingly successful, many families engaging in the work of cultivation, and securing a much-needed food supply. In 1895 and 1896 this helpful benevolence was under the personal direction of Mrs. Fred Butler who was untiring in her labors and attention, and who won the lasting gratitude of the hundreds she was instrumental in assisting to help themselves. The cultivation of "Pingree gardens" is still continued under the direction of the philanthropic department of the Woman's Club.

The City Improvement Society is an active body for the betterment of general practical conditions in the city. Organized early in the spring of 1896, its first meeting thereafter was held on April 8th. The Society is an outgrowth of the reform department of the Woman's Club, and while it is under the general direction of women, its membership includes both sexes; its meetings being usually held every Wednesday. The Society was organized to arouse and stimulate public opinion against existing evils, to create a civic ambition for cleaner, more healthful, and more beautiful environment, to afford an opportunity for complaints to be made and investigated, to prevent lethargy in the discharge of duties by public officers, and to arouse public sentiment against slovenly conditions in the city. The work of the Society is divided among several committees, such as a committee on street ordinances, on trees and weeds, seats, placards, children's societies, literature, home industries, schools, gambling, sidewalks, street cleaning, and so forth. It has public lectures delivered on various subjects associated with its work, and is persistently engaged in the prosecution of its most laudable purposes.

The North Side Woman's Club was organized in the spring of 1896 for "mutual improvement and co-operation in all that pertains to the good of humanity," and under the motto "Charity and Progress." The work of the club is done through departments and auxiliaries, among which are the reform and philanthropy department, the home and educational, the music and art, department of literature, and of social affairs. Committees regularly visit the county and city jails, the Home for Dependent Children, the Industrial Home, County Hospital, Crittenton Home, and the Old People's Relief Home. The North Side Charity Organization is one of the club's auxiliaries, and it also conducts and maintains a kitchen garden where young girls are practically trained in the duties of housekeeping. The home and educational department, through committees, keeps in close touch with the schools in that division of the city, and which are regularly visited. This Club is a strong, important and influential one, and stands socially, intellectually and morally for the best that it can give the individual and the community.

The Athene Musical Club was formed in 1896 by lovers of music whose opportunities did not enable them to meet the exacting qualifications required for membership in the older musical organization. The theory upon which the Club was founded and on which it proceeds is that the dissemination of musical knowledge should be upon broad lines, and that it should be placed within the reach of the greatest possible number. The Club has a large membership and has undertaken to found scholarships for musically educating promising younger members of the organization. In 1898 it added a literary department.

The Domestic Science School originated from papers read and lectures delivered before the Woman's Club in the winter of 1895-96 on the preparation of food for the family. It took definite form early in 1897 as a department of the Woman's Club, and was incorporated in 1898. In the beginning it was a school of instruction for club members; then its work was extended to classes of young girls in the poorer parts of the city and to whom instruction was given in cooking and general housework. In 1898 a permanent and properly equipped cooking and sewing school was established and which is conducted and maintained as one of the auxiliaries of the Woman's club.

The Colorado branch of the General Association of Collegiate Alumnae was formed in Denver in February, 1898, with twenty-seven members, and at the meeting of the General Association at Philadelphia in October of that year was duly admitted. Only women graduated in colleges ranking with Wellesley, Vassar, Smith, and Bryn Mawr are admitted; and the objects of the Society are to cultivate and preserve interest in college education of women, and social intercourse among its members.

The Women's Press Club was organized March 16, 1898, at a meeting called for that purpose by Miss Minnie J. Reynolds, who became its President. There were nineteen active members and one associate in the charter organization. Membership is limited to thirty-five active and fifteen associate members, and new candidates must now await vacancies. The object of the club is "to advance and encourage women in literary work, to cultivate acquaintance and friendship among women of literary tastes, to secure the benefits arising from organized effort, and to drive dull care away." Any woman residing west of Chicago, who has received money for her writings, is eligible to active membership.

The Daughters of the American Revolution is an organization almost identical with that of the Daughters of the Revolution. The Denver Chapter, organized May 26, 1898, with thirteen members, was the second in Colorado; one having been previously formed at Colorado Springs, both being divisions of a National organization. The qualification is descent from an ancestor who, with unfailing loyalty, aided in the Revolutionary struggle; and the Society's insignia: a wheel and distaff, suggestive of the Colonial period. The Denver Chapter has had a steady growth in membership.

The Civic Federation of Denver is an organization of women formed in June, 1895, and incorporated under Colorado law in October, 1898. It is principally a political, non-partisan association, but its work includes philanthropy, and the propagation of municipal economics through unselfish citizenship. Its "Declaration of Principles" says:

> The object for which said Association is organized, is to investigate the condition and needs of the City of Denver and to promote by education and active co-operation, a higher public spirit and a better social order; to separate city and county affairs from State and national politics; to endeavor to secure the nomination and election of competent and trustworthy persons to public office regardless of party and creed, and to see that appointive offices are not used for political purposes; to secure the widest possible application of the principles of civil service reform in all city and county departments; and to this end, to federate the moral forces of the city, and generally, to promote, in all ways, the welfare, order and prosperity of the said City of Denver.

The Federation has taken an active, and an undeniably influential, part in recent county and municipal elections. While it does not aim to be a nominating body it seeks to accomplish its ends by aiding in the nomination of proper candidates for local offices by worthy methods; it "prepares and endeavors to secure the passage of reform ordinances; it co-operates with the official effort for the betterment of the social order through governmental action; it gives philanthropic service by visiting public institutions, studying their conditions and helping to secure needed improvements; it educates public sentiment by the printing and distribution of reform literature and by holding public meetings at which addresses are given by well known authorities in all branches of scientific municipalism and general reform."

The Artists' Club was originally organized December 16, 1893. On October 31, 1896, it was reorganized under a revised constitution, and on November 22, 1897, incorporated under the State law. Its membership embraces both sexes, but of its present list of thirty-one active members, seventeen are women. The constitution provides that members may be active, associate, and sustaining; and that candidates for active membership must submit an example of work upon the approval of which admission depends. There are now thirty sustaining, and upward of 450 associate, members. The Club gives an annual art exhibition each spring, and has made some progress toward acquiring a fund for the erection of an appropriate building for an art gallery and a museum of artistic objects.

Home of the Young Woman's Christian Association.

The Council of Jewish Women is a division of the National association of that name. The Denver Section was organized in 1893 and now has a membership, exclusively of Jewish women, of about 230. "Faith and Humanity" is the motto of the Council, the work of which is largely philanthropic; yet much of its attention is given to the study of history and literature, and to social and economic considerations. It joined the State Federation in 1895.

The Denver Council of the National Association of Woman Stenographers was organized June 28, 1898. In October, 1898, the Council formed with

View in Denver, southwest from roof of Court House, 1884.

the Woman's Club an alliance that is known as the evening extension of the last-named organization, and which may be joined by any business woman. The Council now has a large membership of stenographers and type-writer operators.

The Denver Poets' and Authors' Club organized March 2, 1898, includes both sexes in its present membership of fifty-five; but a majority of its members are women, and several are non-residents. Among the latter are Mrs. Edward Bellamy, of Springfield, Massachusetts; Marion Crawford, of New York; and Bessie Miller, of Indianapolis. The name of this club sufficiently indicates its character and purposes.

The Denver Coal Guild is an association of Denver women organized in December, 1898, to provide fuel for destitute families. It does its work quietly and without any administrative expense, the executive members voluntarily discharging all such duties. Its funds are derived from a tax upon its members, and through other contributions. The organization has done a vast amount of good; in single seasons of past years between 300 and 400 households were assisted by it. In recent winters the demands upon the Guild have been much lessened, but remained, as they will continue, of sufficient extent to make the permanent maintenance of the organization one of the charitable necessities of the city.

In addition to these of which we have given the outlines of their history and purposes, there are scores of other organizations of women, literary, artistic, or social in their character, and graduating into private groups of intimate friends. There are also several associations, of which the Denver Philosophical Society is a prominent example, the membership of which is principally of men, but in the transactions of which women members bear an active part.

The Colorado Federation of Women's Clubs was formed in 1895 and in that year entered the General Federation. Its constitution states its object to be "to bring the women of the State into communication for acquaintance, mutual helpfulness, and the promotion of higher social and moral conditions." The Federation now includes 100 clubs having approximately 4,500 members, and representing about forty Colorado cities and towns.

The General Federation of Women's Clubs,—the National organization—held its biennial convention of 1898, in Denver in June of that year, and its proceedings were characterized by ability and dignity that made it the most interesting assemblage that has yet convened in this city.

That the influences of women's clubs in Denver have had a distinctively broadening result is undeniable. They have been effectively hostile to the narrow spirit of exclusiveness that is the refuge of those who are always in dread of the consequences of intellectual contact with others. The inspiration of the so called department clubs is essentially democratic, and their tendency is toward a still broader catholicity; and with them the smaller organizations are moving into regions of fast widening intellectual horizons.

Much of this club work, as has been indicated in the foregoing, is charitable and benevolent for the relief, assistance and uplifting of women and children in need. The ordinary conception of a woman's club usually does not include consideration of this, nor does it usually fully comprehend the other purposes of a majority of these organizations in Denver. To the women of this city who have leagued themselves in these and other associations in which they are accomplishing so much for the betterment of all; who have established and are maintaining their clubs and guilds and homes and hospitals and missions; and who are so active and earnest in seeking fulfillment of their aims and hopes, unmeasured honor and credit are due.

It is not, necessarily, nor as a matter of fact, a short step from women's clubs to women at the ballot-box and in politics; but it may as conveniently be taken here as at any other time and place.

The first serious discussion of the woman suffrage question in Colorado arose in 1869, and figured in the Territorial campaign of that year. A bill to confer suffrage on women was introduced in the Eighth Legislative Assembly, that convened in Denver on January 3, 1870. The Denver Tribune, then published and edited by General Roger W. Woodbury, warmly supported the measure; and that paper was about the only one, certainly the only daily one, in Colorado that did so. Mrs. McCook, wife of the then Governor, Edward M. McCook, was an enthusiast in favor of the innovation, and at her solicitation Elizabeth Cady Stanton and Susan B. Anthony came to Denver to assist in persuading the Assembly to pass the bill. While Mrs. McCook was the heart and soul of the movement among the women of Denver and of Colorado, she was ardently supported by hundreds of them. A "Suffrage Association" was organized which conducted a campaign of great vigor. But, after a protracted season of much trial to the legislative statesmen and of a great deal of artful dodging and hedging by some of them, the bill was defeated by a close margin, and the woman suffrage question, though not abandoned by its advocates, withdrew to the background where it remained several years.

The foundations of the movement that later resulted in admitting women to suffrage in Colorado were laid by the framers of the State Constitution. The second section of Article VII—"Suffrage and Elections"—provided:

> "The General Assembly shall, at the first session thereof, and may at any subsequent session, enact laws to extend the right of suffrage to women of lawful age, and otherwise qualified according to the provisions of this article. No such enactment shall be of effect until submitted to the vote of the qualified electors at a general election, nor unless the same be approved by a majority of those voting thereon."

Therefore the First General Assembly enacted a law providing for such suffrage, and it was submitted to a vote of the electors of the State at the general election held October 1, 1878. Susan B. Anthony and Elizabeth Cady Stanton returned to the fray, and a rather active campaign for suffrage led by them and prominent Colorado women, had been made throughout the State; but the proposition was defeated by more than two to one. The total vote at that election was 22,047; and of these 6,612 were in favor of women's suffrage and 14,053 against it; the others not voting on the question.

The suffrage movement rested for more than a decade after that disastrous defeat. Then the Legislature of 1893, by an act approved on April 7th of that year, provided for again submitting the proposition to the electors, and at the general election held November 7, 1893, it carried by a not very large majority. The total vote on the question was 65,249, and of these 35,798 were affirmative and 29,451 negative; an affirmative majority of 6,347. After the returns had been canvassed and the result officially made known, Governor Waite issued the following proclamation, and women stood politically on an equality with men in Colorado:

EQUAL SUFFRAGE.

PROCLAMATION BY THE GOVERNOR OF THE STATE OF COLORADO.

Whereas, The Ninth General Assembly of the State of Colorado passed an act, approved April 7, 1893, entitled "An act to submit to the qualified electors of the State the question of extending the right of suffrage to women of lawful age, and otherwise qualified, according to the provisions of Article VII, Section 2, of the Constitution of Colorado," and

Whereas, The said question, as provided in Section 2 of said act, was submitted to the qualified voters of the State of Colorado at the general election held on Tuesday, November 7, 1893, and

Whereas, After canvass of the official returns of said election by the State Canvassing Board, it appeared that of the votes cast,

35,798 votes were cast for "Equal Suffrage Approved" and

29,451 votes were cast for "Equal Suffrage Not Approved," and that the majority for "Equal Suffrage Approved" was 6,347 votes.

Now, therefore, I, Davis H. Waite, Governor of Colorado, do hereby proclaim, as provided in Section 5 of said act, that every female person, a resident of Colorado, shall be entitled to vote at all elections in the same manner in all respects as male persons, and subject to the same qualifications.

"GOD AND LIBERTY."

Done at Denver, December 2, 1893.

DAVIS H. WAITE,
Governor of Colorado.

(Seal)

NELSON O. McCLEES,
Secretary of State.

The bars thus having been thrown down, it was expected that the political field of activity would become an attractive one to many women; but it has not yet proved to be so. Only a few have entered the State political arena and attained positions in the executive and legislative departments. Since 1893 the position of State Superintendent of Public Instruction has somewhat by general consent, been conceded to women. Angenette J. Peavey, elected in November, 1894, was the first woman incumbent, and served two years. She was succeeded by Miss Grace Espy Patton, elected in November, 1896, who, also, served two years. In November, 1898, the present incumbent, Helen L. Grenfell, was elected for the term of two years; and she was re-elected in November, 1900. In the Legislatures elected in 1894, 1896, and 1898, there were three women members in the House, but none in the Senate. In the Tenth General Assembly, elected in November, 1894, Clara Cressingham and Frances S. Klock of Denver, were among the Representatives from Arapahoe county; and Carrie S. Holly, of Pueblo, was a Representative from Pueblo county. Politically each of these was a Republican. In the Eleventh General Assembly, elected in November, 1896, the three women members of the House were from Arapahoe county and were citizens of Denver, namely: Olive C. Butler, Republican; Martha A. R. Conine, non-partisan; and Evangeline Hearst, Populist. In the Twelfth General Assembly, elected in November, 1898, Mrs. F. S. Lee, Democrat; and Mrs. H. G. R. Wright, Populist; both of Denver, were among the Arapahoe county Representatives; and Dr. Mary F. Barry, Silver Republican, of Pueblo, was one of the Representatives from Pueblo county. The Thirteenth General Assembly, elected in November, 1900, has but one woman member—Evangeline Hearst, of Denver, a Populist and one of the Arapahoe county Representatives.

The foregoing includes all who have thus far been placed in elective positions in the State government. Several have very satisfactorily filled appointive positions on various State Boards; Mrs. Sarah S. Platt-Decker having been for several years the conspicuously capable President of the State Board of Charities and Correction.

In the administration of county affairs women have also begun taking some part, but thus far it has been limited in elective office to that of County Superintendent of Schools. Mrs. T. A. Rhoads, elected in November, 1895, was the first woman chosen for that position. She was succeeded by a man, but in November, 1899, the tide turned the other way, and Miss Emma M. Herey, the present incumbent, was elected. For a longer period and to a far greater extent women have participated in public school administration in Colorado as members of Boards of Education. The constitution of the State in its original form (1876) admitted women to suffrage in the election of school directors, and made them eligible to membership in school boards. The second clause of Section 1, Article VII (Suffrage and Elections), provides—

> "That no person shall be denied the right to vote at any school district election, nor to hold any school district office, on account of sex."

Effect was given to this provision of the constitution by an act approved March 8, 1877, and which became operative June 6, 1877. Since that time women have frequently been elected to school administration in Denver. But no woman has yet been chosen a member of any branch of the city government, proper.

It is conceded even by those who take the most conservative view of the innovation, that in all the public positions held by women under the new order of things, the duties thereof have been as intelligently and as efficiently discharged as they ever had been by the former masculine incumbents.

It may not, however, be fairly said that any conspicuous political or economic reform has followed this expansion of suffrage. It is true that the new dispensation has not been long enough on trial to afford a basis for intelligently measuring its general benefits or to warrant judgment upon it. Still, so far as experience with it has gone the visible results and those that may be considered as immediately prospective, bear rather modest proportions to those anticipated and promised by such enthusiasts and advocates as Miss Anthony. There are those who maintain that the only conclusion clearly and definitely warranted by the results and the experience of these few years was concisely expressed in the words of a toast proposed at a Denver banquet not long ago by a jurist of this city: "The women: once our superiors, now our equals." However that may be, one suggestive fact appears to stand out rather plainly: within the last three or four years there has been a relative decrease in the aggregate vote of women. Within that time a disposition to refrain from voting has been manifested by many of those the better qualified to intelligently discriminate; while, upon the other hand and with but few exceptions, those whose absence from the polls on election day could not possibly entail any serious public misfortune, are unified, prompt and persistent in the performance of what is held to be a seriously important public duty.

CHAPTER LXVI.

DENVER'S WATER SUPPLY—PIONEER "FRANCHISES" FOR "WATERWORKS"—DITCHES OF THE PRIMITIVE ERA—FIRST WATERWORKS SYSTEM—DENVER CITY WATER COMPANY—ITS TRYING EXPERIENCES AND UNFORTUNATE CAREER—ORGANIZATION OF THE RIVAL CITIZENS' WATER COMPANY—FIERCE AND DISASTROUS COMPETITION—BANKRUPTCY OF OLD SYSTEM AND CONSOLIDATION OF THE TWO AS THE DENVER UNION WATER COMPANY—HUGE RESERVOIR IN THE MOUNTAINS—OUTLINES OF ONE OF THE WORLD'S GREAT UNDERTAKINGS IN RESERVOIR CONSTRUCTION.

If the old records did not explicitly say so, it would be somewhat difficult to believe that the first Denver water company was organized within four months after the organization of the Cherry creek town companies. In February, 1859, a party of Auraria City men, calling themselves the "Auraria and Cherry Creek Water Company," planned to convey water into that town by a ditch from some point up the creek to a reservoir they expected to bank up as high as the ditch flow would permit, and from it distribute water over the town. Of course, they wanted to be subsidized with town lots; and they got them, or the promise of them, as indicated by the following extract from the minutes of a meeting of the Auraria City Directors held on March 11, 1859:

> "Resolved, That there be and there is hereby Donated to the Auraria & Cherry Creek Water Company one entire Block in the City of Auraria for building a reservoir, and for other purposes of Said Company; And furthermore that the City of Auraria grant a Charter to Said Company for the purpose of supplying said City of Auraria with water."

It does not appear that this water company ever built the reservoir, nor that any great value ever attached to the "charter" which the Auraria Directors "granted" in such an off-hand fashion. But there were a few short water-ditches made in 1859 in Auraria, though combined they were not a very extensive system.

The reader may well feel sure that this was not the only pioneer water-works proposition. After Auraria City had "chartered" a "water company" the Denver City men could not have slept o'nights had they not cast about for some way to match their rivals' municipal enterprise. They were some time in scaring up a water-works "promoter," but they finally did so. At a meeting of the Denver City Directors held January 23, 1860, the action mentioned in the following entry in their record was taken:

> "The petition of Thomas F. Pim & others in reference to water works for the benefit of the city being read, on motion of R. E. Whitsitt
>
> Resolved, That a Committee of three be appointed to Confer with Thos. F. Pim & others in relation to their petition. Carried."

Whatever happened to this water-works project of "Thos. F. Pim & others" is not of record nor of reminiscence. The conference between the committee and Pim must have been final and fatal, for the Denver Town Company was silent about the enterprise ever after. Still, it probably served its intended chief purpose—that of letting the Auraria City people know that there were some other men in this immediate locality who understood the art and mystery of "town-booming." Pim was a rather prominent citizen here in the pioneer times, and remained so for some years after making his proposition "in reference to water works for the benefit of the city."

Of course, whatever there may have been of earnestness in either of these proposed enterprises, nothing beyond small irrigation systems was contemplated. There was no thought of piping potable water anywhere, in orthodox water-works fashion.

In 1860 another and very pretentious undertaking for its time was actually put under way, and eventually resulted in our present "City Ditch." It was not only the first attempt to bring water to Denver in comparatively large quantities, though not designedly for household and personal use, but it was the first artificial water-way outside of mining operations surveyed and begun in Colorado. Early in 1860, A. C. Hunt, Andrew Sagendorf, John M. Clark, Amos Steck, Turner & Hobbs, R. R. Bradford, J. B. Doyle and F. Z. Salomon organized the Capital Hydraulic Company to construct a hydraulic canal from some suitable point up the Platte to the high ground overlooking Denver, and now our Capitol Hill. A. C. Hunt was elected President; Andrew Sagendorf, Secretary;

and U. Turner, of Turner & Hobbs, bankers, Treasurer. The plans included a reservoir up the Platte and near the mouth of the creek now figuring on the county map as Dry creek, a mile or so north of the present town of Littleton; and its embankments, parts of which are still there, were constructed, and a beginning made on the ditch, in 1860. In the autumn of that year the company became discouraged, gave up the enterprise, and abandoned the work and the water right; the Capital Hydraulic Company, as such, ceasing to exist. The surveys were made by John M. Clark, now President of the Chicago Telephone Company; and he had charge of the construction work done by the company, having been educated as a civil engineer, and having assisted in the survey of Auraria City.

View of the Lake Archer pumping station.

In 1861, Amos Steck, Bradford, Doyle, and Saloman, members of the company, together with Daniel Witter, R. S. Little (later the founder of Littleton), and several others, made a new start toward constructing the waterway, which then became known as the Witter Ditch. They abandoned the reservoir plan, went up to Little's ranche and there started the ditch directly from the river. After some vicissitudes, shifting of interests, and delays, the ditch was finally completed to Denver in the spring of 1865, as stated in a preceding chapter. It cost what was for those times a large sum of money, but was never a source of great revenue; nor was it ever a water-power ditch, as the name of the original company might have suggested. Its great service was to planters along its route, and to the people of Denver in enabling them to grow trees and have grass-plots to relieve, if not entirely banish, the verdureless dreariness of pre-existing conditions in the town; for, previous to its completion, and especially in "East Denver," there were few trees anywhere, and no lawns, the door-yards being as destitute of turf as the middle of the streets; it not having been practicable to get water from wells for irrigation purposes. So, Denver was not adorned with greenery and bloom as it is now. But upon completion of the ditch, irrigation became a ready and easy proposition, and at that time began the era of general tree planting, lawn-making and such like matters over nearly all of the city; and in a few years hundreds of young trees were flourishing, for most of the gutters ran with the clear, invigorating water. By means of some small ditches diverting water from the Platte and Cherry creek, the "West Denver" district had previously made a little progress in the same direction, but the Capitol Hill ditch was the main dependence until the completion of the first water-works system in 1872. A later extension of the ditch which, by purchase in 1875, became the property of the city, now supplies the lakes in City Park.

In a preceding chapter we have briefly mentioned the inception and construction of Denver's first water-works system, under the more active management of Colonel James Archer. That company was organized on October 30, 1870, with Colonel Archer as President; David H. Moffat, Treasurer; and R. R. McCormick, Secretary; they, with Jerome B. Chaffee, Wilson Waddingham, E. M. McCook, E. F. Hallack, F. Z. Saloman, Walter S. Cheesman, and Daniel Witter, constituting the Board of Directors. All of them were personally, and from the standpoint of public spirit, also, largely interested in the development and growth of the young city which, at the time the company was organized, had a population increased by the advent of railroads to between 5,000 and 6,000. The capital stock of this original "Denver City Water Company" was $250,000.

The experience, trials and misfortunes that attended efforts in subsequent years to procure and maintain an adequate supply of pure water for the city, together with the circumstances of the conflict between rival water companies, may constitute an interesting chapter, or part of one, in these annals of Denver.

Immediately after the completion of the Denver Pacific and the Kansas Pacific railroads to Denver in 1870, and the beginning of the Denver & Rio Grande road in the same year, the city took on ambitions somewhat disproportioned to actual, immediate conditions, and in which the men who invested their means in a water-works system for it fully shared. As we have heretofore stated, construction work was energetically forwarded in 1871, and on January 10, 1872, the new water-works went into service. Up to that time the town's domestic water supply had been drawn from wells; and for other purposes from the clear flowing streams in the street-gutters that were supplied from the ditches of the pioneer era. These arrangements, however, provided no adequate fire protection for the town, nor was the water from wells in the more closely built-up parts above suspicion as to its uncontaminated character.

In those days the South Platte was a larger and quite different proposition from the Platte of these times. There was but little occupation of the land along its banks above the then rather confined limits of the town, and irrigation was taking only a small quantity of the river's flow, which was then a stream of sparkling mountain water, pure and undefiled. In the beginning, as through the ensuing years of trouble and expense, the company seems to have had in view the one great object of furnishing an abundant and pure supply of water; and the fact that the subsequent remarkable growth of the city compelled frequent enlargements of capacity, and successive removals to new and more distant sources of supply beyond the encroachments of contamination, does not detract from the worthiness of the original plans, nor does it reflect upon the judgment of those who conceived them and carried them into effect. The owners and managers of the original water-works did not anticipate, nor could they foresee, what was destined to happen here within the next ten or fifteen years. So, they built their pumping station at the northeast corner of Fifteenth and Bassett streets, near the clear and sparkling river, from a large well on the bank of which the pumps were to draw the water. The small but substantial brick building is still standing there, dismantled of its machinery, somewhat dilapidated, and now used for warehouse purposes. When it was built, Fifteenth street up to Lawrence, had become rather more of a continuous business thoroughfare than any other, though to make such a showing it had to borrow the four corners at the intersections of the crossing streets.

Rear view of the Lake Archer pumping station.

The pumping capacity of the plant was 2,500,000 gallons daily; or, about 500 gallons per capita of population. Within two years the city's population and consequent water-demands had increased to such an extent that it became necessary to almost double the plant's pumping capacity; and therefore, in 1874, another pump, of 2,000,000 gallons daily capacity was added. This enlarged equipment of the original plant, with its ability to supply 4,500,000 gallons daily, sufficed for public needs until the year 1879.

During the last half of that decade the city had been growing still more rapidly, and greatly extending its area. The demands on the River Platte for water for irrigation purposes above and near the city, as agriculture had developed and expanded, had materially reduced the usual flow in the river's channel, and the drainage from the growing town was contaminating the river water in the vicinity of the Fifteenth street pumping station. Then began the water company's long and costly struggle against contamination, and that continued for years before the victory was finally won.

In 1878 the company had decided to erect a new pumping station at a point near the Platte river and about two miles above the mouth of Cherry creek, and more than a mile beyond the city's limits in that direction at that time. The new location was then surrounded by unoccupied stretches of country, and with no prospective sources of contamination. Littleton was a mere hamlet, and between it and the city there was nothing but the scattered farm-houses; and they did not entail pollution of the river's flow. No anticipation then existed here of the astounding growth of the city that set in with a bound very soon afterward; and the location of the new pumping station was thought to be far beyond the possibility of the city's encroachment.

On November 23, 1878, the Denver City Irrigation & Water Company was organized as an auxiliary to the Denver City Water Company, and as an agency by which to carry through a part of the improvements required for the new station, the location of which afforded opportunity for utilizing the river's water-power for operating pumps, instead of driving them by steam, as was done at the Fifteenth street station. A hydraulic canal some two miles in length and terminating in a reservoir named "Lake Archer" in honor of the water company's President, was constructed along the right bank of the river. A building was erected on West Twelfth Avenue and equipped with water wheels and new pumps, the plant having a daily capacity of 5,000,000 gallons, drawing the water from Lake Archer. The new station began operation in May, 1880, and in co-operation with the old one enabled the company to supply 9,500,000 gallons daily in an emergency, and more than double the previous capacity. The Lake Archer establishment had hardly become well settled in its work before the growth of the city, which may be said to have begun its great strides in 1880, demanded a large increase in water supply. Therefore, in 1881, two more pumps of a combined capacity of 5,000,000 gallons, were added to the Lake Archer equipment. As the available water-power from the river by the hydraulic canal was insufficient at times to operate all this machinery, a 350-horse power steam engine was also added.

Upon completion of the Lake Archer plant—or the "West Denver" pumping station, as it is commonly called—in the spring of 1880, the Fifteenth street station had been practically put out of commission. However, it was used at intervals during the next two or three years, and then dismantled.

In November, 1882, the Denver City Irrigation & Water Company and the Denver City Water Company were consolidated into a new corporation—the Denver Water Company, which was incorporated with $1,500,000 capital stock, on the 6th of that month, and the original water company, as such, passed out of existence. This consolidation was rather an union of the same proprietary interests, than a change of ownership in either of the two participating corporations; Colonel Archer becoming President of the new water company, and its other executive officers being about the same as in the old one.

The history of Denver's water-works corporation is a story of repeated and costly changes in endeavors to secure and maintain an adequate supply of good water. Wherever it pitched its tent it found only a temporary abiding place. The swift growth of the city, and other causes, mostly incident thereto, compelled it, like the "Wandering Jew," to move on. It was not long after the capacity of the Lake Archer plant had been enlarged, until the quality of the water procurable there began gradually deteriorating through the accumulation of silt, vegetable and other matter in the canal and lake. The company had paid dearly for the conviction that merely removing the pumping

---

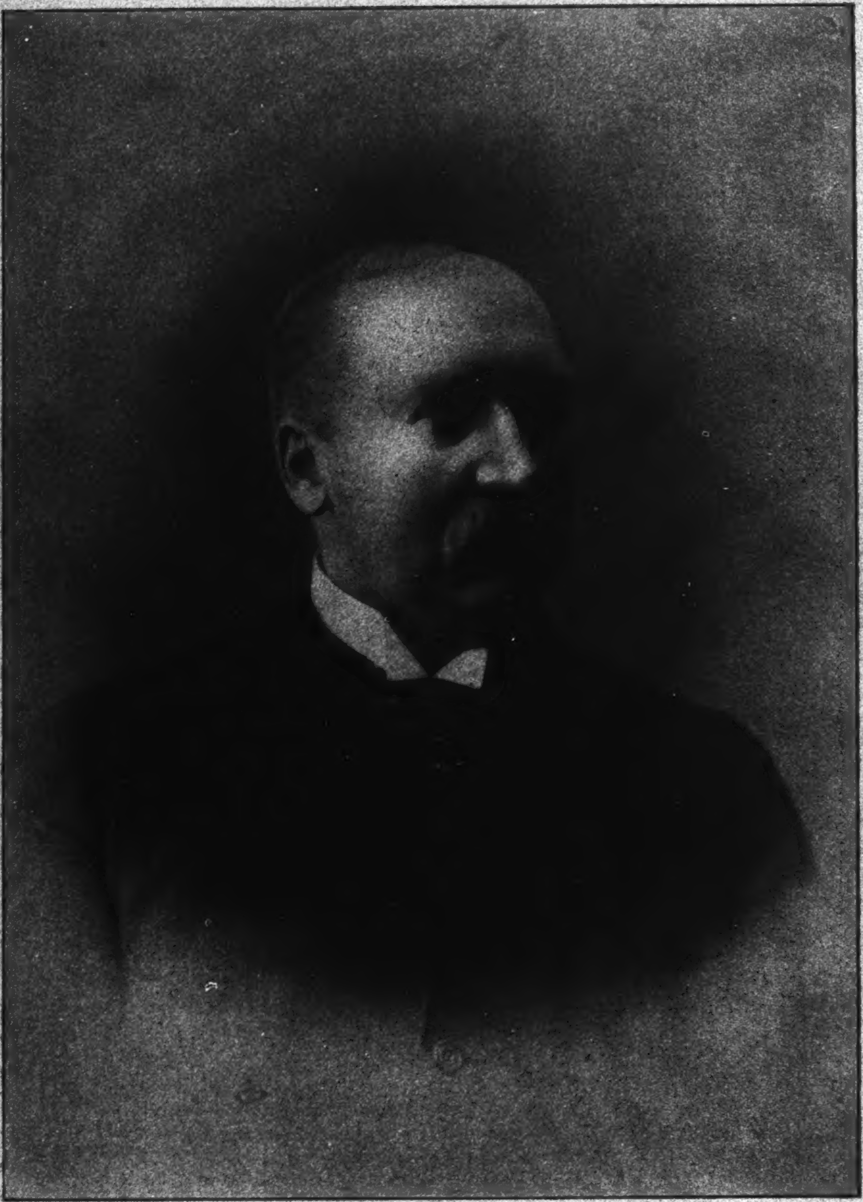
Walter Scott Cheesman, son of Joseph B. and Grace Rowling Cheesman, was born at Hempstead Harbor, Long Island, New York, June 27, 1838. He was educated in the public and High Schools of New York city and under private tutors. His father was a merchant of New York city, and during the war of 1812 with England served as Captain in a New York State regiment. His grandfather, Joseph Cheesman, also of New York city, was an officer in the Army of the Revolution; first serving as a First Lieutenant in Colonel William Malcom's New York regiment, and thereafter and until the close of the war as Captain of Artificers under General Kosciusko at West Point.

Mr. Cheesman lived in New York city until 1854, when he became a resident of Chicago, where he remained until the spring of 1861. In 1860 he had established a drug store in Denver that later developed into one of the prominent business houses of the pioneer era. To give personal attention to this business was the immediate cause of his coming hither from Chicago in the spring of 1861 to enter upon his long and useful citizenship in Denver. He continued in that business until 1874, when he withdrew from it to give his attention to other interests with which he had become associated; as he had, in the meantime, been actively engaged in the organization, direction and consummation of semi-public enterprises of commanding influence in the development and upbuilding of this city and this State.

Mr. Cheesman, as our reader will have learned in this Story of Denver, was a conspicuous member of that remarkable group of men, comparatively few in numbers but of indomitable faith and courage, that undertook in defiance of what to most men seemed insurmountable obstacles, the building of the pioneer railways in the Denver region; and followed with other great undertakings that were also potent in making this city what it is in the opening year of the Twentieth Century. No fact in the history of Denver stands out more clearly, more unmistakable, than that it was chiefly due to that group of sanguine young men that Denver was saved from the fate of remaining a mere village—if it sustained itself at that; and that the way was prepared and opened for the city becoming the metropolis of this great region of the Rocky Mountains. It is for the purpose of plainly setting forth such facts as this that this work enters so far into circumstantial details of Denver's development, of old-time conditions here, and of old-time difficulties and obstacles encountered and overcome by those who laid and made secure the foundations of this city and this Commonwealth.

Mr. Cheesman's active identification with the construction of the Denver Pacific, the Denver & Boulder Valley, the South Park, the Denver & New Orleans, the Denver, Texas & Fort Worth railways; his leadership in the Denver Union Depot & Railway Company; his long-existing official association with the First National Bank; his prominent connection with the water-supply system of the city from its inception; his relations to civic organizations; are fully stated in various chapters of this volume dealing directly and at length with these several subjects, and therefore need not be recounted in this note. His personal history as a citizen here is very largely a part of the history of Denver, as our reader will have seen.

Mr. Cheesman has withdrawn from direct participation in the affairs of several of the great enterprises with which he had been identified. He is now President of the Denver Union Water Company; President of the South Platte Canal & Reservoir Company; a Director of the First National Bank, of which he has long been First Vice-President; President of the State Bank of Aspen; and is largely interested in several companies engaged in mining. An owner of much real estate in and around Denver, his direct identity is with the city and its fortunes, as it always has been since he became a citizen in the pioneer days; and the spirit that led him on as one of that old-time group of State-builders remains with him. No man has a deeper, more sincere, regard for the welfare and advancement of Denver, nor greater honest pride in its history, progress, and in what promises to be its future, than he.—J. C. S.



Walter S. Cheesman.

plant and intake farther up stream would afford only temporary relief. Therefore, in its renewed efforts to procure water which would be permanently pure, the company devised the plan of obtaining it from the underflow through the gravel beds adjacent to the river, at the intersection of Mississippi street, and nearly three miles above the Lake Archer pumping station. At that time Littleton was still a hamlet, incapable of appreciably affecting the river water, Fort Logan had not come into existence, and there did not appear to be any probability that the city's growth would encroach upon the locality of the proposed new source of supply. In 1883 the company completed there a system of wooden galleries deep below the level of the river bed for the purpose of collecting the water which, percolating through the beds of sand and gravel which formed a large and perfect natural filter, entered the galleries clear and pure. This water was conveyed by a 48-inch conduit of 16,000,000 gallons daily capacity down to a new reservoir which had been constructed at the "West Denver" pumping station, and from which it was pumped into the distributing mains. Lake Archer, as a source of water supply, was then abandoned, and since that time the water pumped by the "West Denver" station has been drawn from the galleries at Mississippi street, which remain part of the present supply system. The water-power afforded by Lake Archer is used to some extent in the pumping still done by the station.

View at Marston Lake—Denver Union Water Company.

In 1883 considerable public interest was awakened in artesian wells, and from several sunk by individuals a fair flow of water was obtained. The beginning of the short-lived utility of artesian wells was in the spring of that year, when a good flow of water was struck rather by accident near the old St. Luke's Hospital in Highlands. In 1880 the City Council had been urged to drill an experimental well, but lack of faith and inclination stood in the way. In the summer of 1883, T. G. Anderson, the Alderman who had insisted on the city making a practical investigation, drilled a well on his own property on Colfax avenue, near Cherry creek, and received a moderate flow from a depth of three hundred and forty feet. After that, many wells were drilled in various parts of the city, and the Water Company also tried them. Several were sunk near the "West Denver" pumping station, but, like that of the others, their supply soon failed.

The underground galleries in the bed of the Platte continued to supply large quantities of excellent water, but, notwithstanding their subsequent extension and enlargement, the water company was soon required to again move on. The Platte river gallery supply became inadequate to meet the demands of the marvellously growing city, and on July 9, 1886, the auxiliary Domestic Water Company was incorporated which, in 1886-87 constructed in the bed of Cherry creek, at a point about nine miles above Denver, a new and larger system of water galleries similar to those in the bed of the Platte river. About 7,000,000 gallons daily of exceedingly good water were obtained there, and conveyed by a 37-inch underground conduit direct to the distributing mains in the city. These Cherry creek galleries are still in use and supply a portion of the water distributed by the present water-works system.

In June, 1888, two other auxiliary corporations, the Mountain Water Company and the Beaver Brook Water Company, were incorporated by the proprietary interests of the Denver Water Company to seek further water supplies from the sources indicated by their names. These corporations, together with the Domestic Company, did not long independently survive, as we will presently see.

The repeated and costly changes and enlargements in those days of extravagant prices for labor, and exorbitant freight rates on the vast quantities of pipe and machinery required for them, combined with a revenue at no time proportioned to the total outlay, entailed a great burden upon the stockholders of the several organizations that had made them. The water-works proposition had not at any time been a money-making one for those who had invested their capital in it, notwithstanding the inestimable benefits it had conferred upon the community. The unavoidable great expenditures, especially those entailed by constructing the

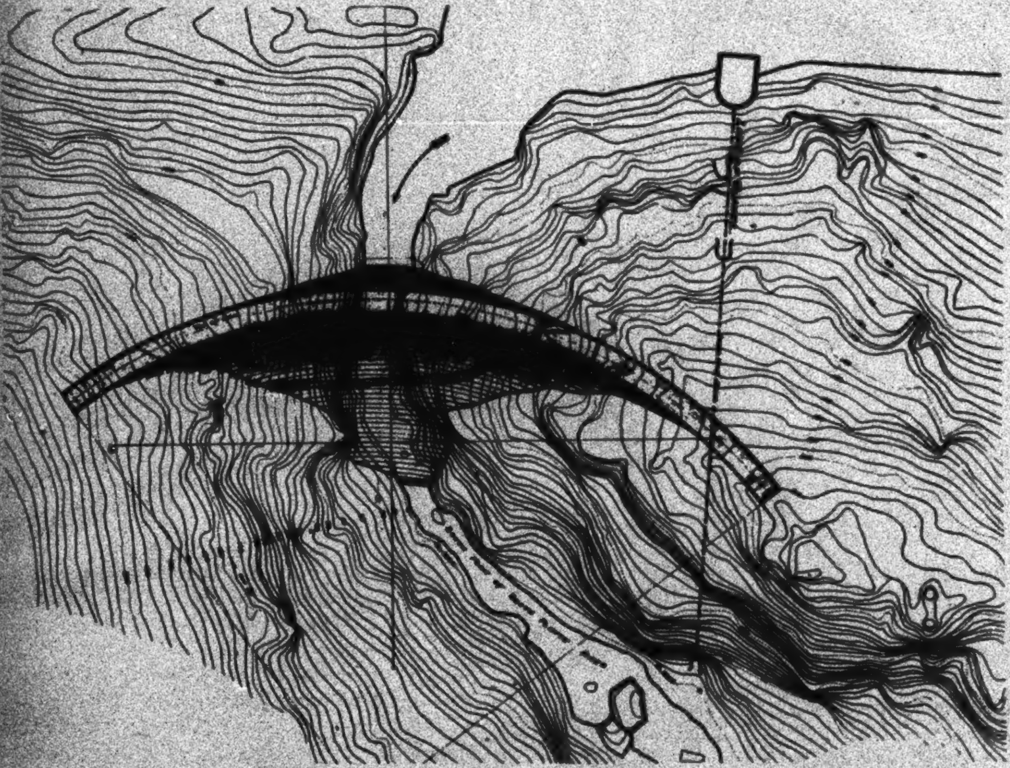


Fig. 1. The Great Dam at Lake Cheesman; canon and buttressing mountains as they would be seen from an overhead point of view.

water galleries far up Cherry creek, had caused much discontent among the stockholders. This finally resulted in open dissension breaking out among them early in that year, and in organizing a new and rival corporation—the Citizens' Water Company, which planned to go direct to the mountains for a water supply that would permanently meet the city's fast-increasing demands for quantity and quality.

The Citizens' Water Company was organized on March 30, 1889, with a capital stock of $3,000,000. Its first Board of Directors consisted of D. H. Moffat, E. F. Hallack, Richard Holme, George W. Clayton, W. S. Cheesman, Charles P. Allen, and W. B. Mills. D. H. Moffat was elected President; E. F. Hallack, Vice President; Richard Holme, Secretary and Manager; Charles P. Allen, Chief Engineer; the First National Bank being the Treasurer of the company.

By Ordinance No. 119, of 1889, approved November 22nd, the new company was authorized to lay its water mains in the streets, but it did not have a fire-hydrant contract with the city.

The Citizens' Company entered upon its career with great vigor, but it soon found plenty of trouble of its own. On every hand it encountered almost insurmountable obstacles of various kinds, legal and otherwise, but in less than two years was ready for its fierce and general competition with the older system. The new system was entirely a gravity one. Its water supply came from underground galleries constructed in the deep gravel beds of the South Platte at the mouth of the Platte canon, twenty-two miles distant from the heart of the city; and it was almost absolutely free from all contamination. From the Platte canon galleries the water was conveyed through a thirty-inch underground pipe having a daily capacity of 8,400,000 gallons, and connected with seventy-five miles of new distributing mains, which pretty thoroughly covered the entire city; the service being inaugurated in October, 1889. The quality of the water proving very fine—above suspicion or criticism, the new company was soon serving a large proportion of the Denver people. But, before the new system was much more than fairly in operation it became evident that with the rapid growth of the city, consumers would be found for a far greater quantity of water than the original thirty-inch conduit could supply; therefore, in 1892-93 a second one, of thirty-four inches diameter, receiving water under greater pressure, and having 16,000,000 gallons daily capacity, was laid from Platte canon. In preparation for this enlargement of capacity the company had discovered that it would be impossible to draw from the underground

galleries at the mouth of the canon sufficient water to supply both conduits. Therefore it was decided to take water for the new and larger pipe directly from the river at a point high up in the canon. This gave the new conduit, proper, a length of nineteen miles, and necessitated construction of a large mechanical filtering plant at the place of inflow. This second line of pipe and its filtering appliances in the mountains went into service in April, 1893, and supplied an abundance of the purest and best water that had been brought to Denver up to that time.

In the meantime the old water company had passed through two more transformations. On November 15, 1890, all the property and other interests of the Denver Water Company (of 1882), and those of the subordinate Domestic, Mountain, and Beaver Brook water companies, passed by deed to the Denver City Water Works Company, a new corporation that had been organized by the proprietary interests of the three that were merged into it. This Denver City Water Works Company had an existence of but five months, for, on April 25, 1891, its entire property passed by deed to the American Water Works Company, which had been incorporated March 31, 1891.

In 1890 the distributing capacity of the Lake Archer station had been augmented by the addition of two more steam-driven pumps capable of discharging, combined, 12,000,000 gallons daily, and increasing the total capacity of the old system to 24,500,000 gallons daily; or nearly ten times that of the original system as built in 1871. However, the city in population and area, had increased in even greater ratio.

The Citizens' Company had also found itself confronted by some of the same trouble that had beset the older one, and had to move on. The demands upon its system had quickly become so great as to require doubling, and then trebling, the capacity of the filtering facilities in Platte canon; and finally, in 1892, necessitated constructing a new filtering establishment and obtaining additional sources of supply. For this purpose the company purchased a large natural basin beyond Fort Logan, transformed it by means of embankments into the immense storage reservoir now known as "Marston Lake," erected there a large filtration plant and connected it by a forty-four-inch conduit with the two mains leading to the city. The combined resources of the two water corporations could then afford the city, if necessary, an available daily maximum water supply exceeding 50,000,000 gallons; or a daily maximum per capita supply of 425 gallons, assuming the population to have then been 120,000. Quite enough, it would seem; but, ever since the first waterworks were constructed the consumption has been extravagantly large, though water is not the only beverage held in esteem by Denver people.

The competition between the two water corporations had become acute immediately upon the en-

Temporary bridge and false-work over the dam-site. Crest of the dam will be 110 feet above the top of the bridge.

trance of the Citizens' Company in the field. This, with all the other adverse circumstances, made the burden of the American Company, which had taken over many of the troubles of its predecessors as well as their property, greater than it could bear; and on February 2, 1892, it passed under the protecting care of a Receiver. However, the conflict between the two systems, which had become practically a war of extermination, still continued. The Citizens' Company had valorously and promptly abolished all charges to consumers, and for about two years supplied them with water absolutely free; its rival making a merely nominal charge in the meantime.

Colonel Archer had remained at the head of the old system until his death, in August, 1882; and his position had been subsequently filled in succession by R. R. McCormick, William B. Mills, W. P. Robinson, and Dennis Sullivan—a frequency of change that would seem to have reflected something of the straits into which the old system had fallen.

The ruinous warfare between the two systems, disastrous to both, though the older was in a condition that could not have been made much worse, was terminated in 1894. On September 5th, of that year, the property of the American Company was sold by the Receiver to a committee representing its creditor interests. Arrangements had been made for the consolidation of the two companies, and on October 18, 1894, a new corporation, the "Denver Union Water Company," was incorporated with $7,500,000 capital, to take over both properties. Its Board of Directors consisted of Walter S. Cheesman, David H. Moffat, George W. Clayton, Moses Hallett, James B. Grant, and Thomas S. Hayden, of Denver; Daniel Heald and George Coppell, of New York; and Theodore C. Woodbury, of Portland, Maine. The executive officers elected were Walter S. Cheesman, President; David H. Moffat, Treasurer; and Walter P. Miller, Secretary. Of the Directors, David Heald soon resigned, and Edward E. Poor, of New York, was chosen to fill his place. The same Board and executive officers have been annually re-elected since that time, saving at the last meeting (1900) of the stockholders Colonel David C. Dodge succeeded to the place made vacant by the death of George W. Clayton. On October 19, 1894, all the property and rights of the Citizens' and the American companies passed to the new organization, and the two theretofore warring corporations ceased to exist.

Immediately upon this reorganization the consolidated company proceeded to unite the two plants into one comprehensive and coherent system, and prepared to make extensive improvements and additions to it with the view of having it become one of the most complete and efficient in the country; though it would seem to have been, in the quality and quantity of water it afforded at that time, entitled to take high rank as it then existed. But this progressive policy received a backset in 1895 when the company became involved in a controversy with the city regarding water rates, which resulted in the company making a voluntary reduction of twenty per cent. in its charges. The margin between receipts and expenditures had already been a narrow one, but this reduction destroyed it and left the company in a seriously hampered condition. The consequent uncertain state of its finances and the hostile spirit which developed in the city government, compelled the company to abandon at that time its large designs and contemplated extensive additions to the system, and required it to limit itself strictly to such work as immediate needs demanded. In the summer of that year the larger of the pair of conduits from Platte canon was carried about one and one-half miles farther up the canon and provided with a new intake; and with this and certain extensions of water mains in the city, that year's improvements rested.

Entrance to the canon in which the dam is situated.

Through 1896 no important work in the direction of extending and enlarging the water-resources of the company was done; but plans were perfected for the large undertakings which were in contemplation the previous year. One of these was to greatly enlarge the storage capacity of Marston Lake, which is about ten miles southwest of the Capitol building. As originally constructed in 1892, that reservoir was about one-third of a mile wide and a half-mile long. In 1897 its embank-

Mountain wall of granite nearby the dam.

ments were raised some twelve feet, which gave the lake an area of about one square mile and made its storage capacity two and one-half billion gallons.

In 1898 the work of raising the Marston Lake embankments an additional sixteen feet was begun, and which is now practically completed. This increases the lake's storage capacity to over eight billion gallons of water; a quantity sufficient to supply the city on the basis of present consumption, over seven months, if every other source of supply were unavailable.

But this work was merely an incident in comparison with the colossal undertaking for which plans were projected in 1896-97—closing great canons in the mountains by giant walls of granite, back of which will be formed a large mountain lake of the purest water obtainable on the face of the earth, and permanently exempt from all probable future sources of contamination. This artificial body of water will much more than restore what once was a geologically ancient lake there in the mountains. The locality is on the South Fork of the South Platte, below the confluence of Goose, or Lost Park, creek, and distant about forty-eight miles from the Capitol building. The general region of the water-shed is in the southwestern part of Douglas county and the southern end of Jefferson, and is one of the more picturesque in Colorado. The projected short line to Cripple Creek of the Colorado & Southern Railway Company, will, if built, pass within view of the larger part of the new lake.

The reservoir will extend backward from the dam nearly seven miles up the South Fork, and about three miles up the rugged canon of Goose creek; the waters of both streams being intercepted. The width of the reservoir, which will be of very irregular contour, will vary from five hundred feet to about one mile; and the depth of water will be two hundred and twenty feet at the dam, one hundred and fifty feet at a distance of three miles, and fifty feet at a distance of six miles. These depths will not prevail over the whole area, but will represent conditions in the middle parts of the basin. Several small lateral canons will also be flooded by long and narrow, but deep, inlets of the sparkling water, of which there will be impounded the enormous maximum of thirty-five billion gallons.

Such quantities as thirty-five billions of units of anything stagger the mind in its efforts to comprehend them; but, as water quantities are always stated in gallons, the figures have to be used. Suppose all that water were put in tin cans six inches square, each holding a gallon, and all stood in a straight row, in contact with each other; 10,560 of them would extend a mile, and the whole thirty-five billion would stretch away 3,314,394 miles. There would be nearly enough to make fourteen rows—a solid belt seven feet wide—from the earth to the moon; almost enough to make 133 rows around the earth at the equator, or a belt of water-cans, each in contact with the other, sixty-six and one-half feet wide—the width of an

View of canon showing river when flowing over the temporary dam which is about thirty feet above bed-rock.

average city street, including the sidewalks. If other comparisons be desired, it may be said that the Capitol building is the only one in the State that approaches what will be the height of the finished dam; yet, the waters of the reservoir would submerge it, dome and all, if the building were set down just inside the dam.

The construction and proprietorship of this great work are committed to the South Platte Canal and Reservoir Company, an organization auxiliary to the Denver Union Water Company and owned and controlled by the proprietary interests of the water company. Of this dependent corporation Walter S. Cheesman is President; Thomas S. Hayden, Vice President; David H. Moffat, Treasurer; Walter P. Miller, Secretary; and Charles L. Harrison, Chief Engineer. Preliminary construction work began in the autumn of 1898, and the dam when completed will be nearly double the height of the Equitable Building. The locality of the reservoir is an irregularly shaped rugged basin through which the South Fork of the South Platte flows, and from which the stream escapes through a narrow, winding gorge about a mile long, its granite walls rising very abruptly to a height of 500 feet. The dam is situated near the upper end of the gorge the sides of which are its buttresses. The bottom of the gorge is quite narrow, the base courses of masonry in the dam being only some thirty to forty feet in length; at the height of fifty feet they faster become elongated, until the top courses of the completed dam have a length of about 600 feet, and a height of 230 from the foundation.

The dam as originally contemplated was to have been of the structural type known as a loose-rock fill, made water-tight by the addition of a plating of steel upon the water-side face. It was finally determined, however, by the company's Chief Engineer, that the advantages of a structure of solid masonry of approved design were sufficient to warrant the greatly increased cost. The new plans show a structure with convex face, 173 feet thick at the base, eighteen feet thick at the crest, built of large granite blocks quarried near the site, and laid in a rich Portland cement mortar; making the structure as solid and enduring as the granite rock on which it is founded, or the granite mountain-walls between which it rises.

The accompanying drawings prepared for this work by Chief Engineer Harrison assist to an understanding of the character of the structure. Figure 1 (page 799) shows the general plan of the dam which is in the form of an arc of a circle with a radius of 400 feet, the convex side being up stream, and the two ends abutting against the solid granite mountains. It will be seen that the water-pressure against the up-stream face of the dam will tend to wedge it tighter into the canon, making it an absolutely safe and stable structure. Figure 2 (page 800) shows a section of the dam, giving its thickness at various heights from its foundation to its crest.*

Charles L. Harrison.

When the reservoir is filled there will be a greater depth of water (220 feet) in front of the dam than is to be found retained by any other in the world. The new Croton dam now in process of construction near New York city is to have about 140 feet; the Wachusett dam near Boston, has about 100 feet; and the Furens dam in France, 164 feet. The Lake Cheesman dam will also, with

---

*After this work had gone to press, the expediency of adding ten feet to the height of the dam was taken under consideration, with probabilities that the addition would be made.

Charles L. Harrison, Chief Engineer for the Denver Union Water Company and the South Platte Canal and Reservoir Company, was born at Auxvasse, Mo., March 5, 1857. Entering the Missouri State University, he was graduated from its Civil Engineering Department in 1880. Soon thereafter he was engaged on the United States' improvement of the lower Mississippi river, and subsequently on the government's reservoir system at the headwaters of that stream in Minnesota. Later he was for seven years District Engineer of the Chicago end of the Chicago Drainage Canal, and was then called to the United States' survey for a ship-canal between the great lakes and the Atlantic seaboard. Upon completion of that service he was sent to participate in the United States survey of the Panama Canal, to report upon the condition of that work, the feasibility of its route as compared with that of the proposed Nicaragua Canal, and to estimate the cost of finishing it. From Panama he came to Denver to take engineering charge of designing and constructing the great dam that will retain the waters of Lake Cheesman. —J. C. S.

HIGH WATER LINE

View of the reservoir when containing about twenty feet of water, looking toward the canon. On the left is shown the intake of the lower tunnel; in the center, the bridge spanning the canon 110 feet below the top of the dam.

the single exception of the new Croton dam, be the highest dam, from the foundation to the top, ever built; but a large portion of the Croton dam is required to be, for foundation purposes, below the normal surface of the valley in which it is built, while practically no excavating was required to find suitable foundations for the Lake Cheesman dam. Therefore, as a visible object this dam will be by far the highest retaining wall structure in the world. The elevation of extreme high water in the reservoir will be about 6,850 feet above sea level, and about 1,600 feet higher than Denver, taking the city's elevation at one mile; thus making it, also, the highest artificial large body of water in the world.

Considering that the bottom and sides of the entire reservoir area, and the water-shed of some 1,600 square miles rising above it to an elevation of 14,000 feet, are composed of granite and granitic sand, and that the lake will be fed by pure mountain streams formed by melting snows, there is nowhere else to be found a large reservoir so admirably adapted to storage of potable waters.

Provision for the quick escape of surplus water, and for withdrawing that intended for consumption, and for maintaining the South Platte river's irrigation supply as required by law, is made, not by conduits through the dam structure nor by allowing the water to overflow its crest, as are common practices, but by great tunnels cut through the solid granite of the mountains adjacent to the dam; and also by way of a depression, or "saddle," forming a natural spillway about 600 feet from the dam and ten feet lower than its crest, which will discharge surplus water through what was probably an ancient outlet. The discharge over the rim of this natural opening between mountains will form a cascade flowing into the canon below, the waters continuing their course down the Platte river. This natural spillway is intended to take only the surplus waters, and is made large enough to discharge five times the greatest volume of water ever known to have passed down the river from that region.

The larger and lower, or main, tunnel is 470 feet long, six feet wide and seven high through the upper half of its length; and eight feet by nine feet, respectively, through the lower half. Connecting with this tunnel are two others, running down at different angles, from the fifty-foot, and the 100-foot, levels. The tunnel from the fifty-foot level is six feet wide and six high, and the other, from the 100-foot level is of the same dimensions, and pitches downward through the mountain granite at an angle of forty-five degrees; the aggregate length of the two minor tunnels being 675 feet. Their arrangement provides for drawing water from what may be the upper level of the reservoir at varying stages of rising or falling between the level of the lowest or main tunnel and that of the natural spill-way. However, it is not probable that the lower valves will often be opened in the course of many years. But, as the water may be lowered in the reservoir, each series of successive valves and the tunnel they supply are of sufficient capacity to discharge water enough for a city of a half-million people.

View of the river immediately above the dam, looking upstream, and showing the character of ground that will form the reservoir benches.

The controlling valves with which the tunnels are fitted will be operated by hydraulic power, and through them the outflow for city consumption and irrigation needs will be regulated, when water ceases to flow over the natural spill-way. The sizes of the valves used may be conjectured from the weight of two of the larger ones, which aggregate twenty-two tons, while the four-way valves weigh eighteen tons. In one series there are eight, thirty-five-inch, balanced valves worked by one stem and which control the inflow to the larger tunnel. The available water-power at and below the dam, estimated to be near twenty thousand horse-power, may be utilized for electrical purposes.

The arrangements for handling and controlling the water without passing it through or over the dam are made available by the peculiarly favorable conditions of the mountain topography; and when completed the entire work will be a great engineering achievement. Its total cost will approximate $1,000,000, and the finished dam, with all its safeguards and devices, will represent the best known engineering practices for impounding and controlling large bodies of water of great depth.

The sources of supply are undoubtedly the best that can be found within practicable distance of Denver; and that the great reservoir will afford the city a water-supply far exceeding in purity and general excellence that of any other city in the United States, also admits of no doubt. One of the means to this end is the clearing of the entire area that will be flooded, of timber, undergrowth, and mountain rubbish that by decay, might adversely affect the quality of the impounded water. Before construction work began the locality was visited by L. E. Cooley, Chief Engineer of the Chicago Drainage Canal, and a man distinguished in his profession of hydraulic engineer, who, in his report to the water company which had requested his presence and judgment, said:

> "It will be seen that the conditions are most ideal. A forest reserve, which avoids any considerable future population, the surface more or less shaded against excessive evaporation, a substantial absence of humus, and soil conditions which de-

liver the majority of the waters to the stream by percolation, or natural filtration, and equalizes the flow.

"Attention has already been called to the remarkable conditions favoring a pure water from the South fork of the South Platte. The character of the collecting ground and of the storage reservoir, and the protection afforded by the forest reserve make it pre-eminently the water supply reservation for the future of Denver. I can hardly conceive of conditions elsewhere any more favorable, or that any other city of the semi-arid West can be more richly endowed."

It is anticipated that before the close of the second year of the new century the great work will have been completed, and a practically unlimited supply of pure water, absolutely secured to the city, that will meet every emergency likely to arise. That such a consummation is entitled to rank as the greatest public benefit a community can possess is beyond discussion.

Toe of the dam, downstream face; construction at ninety-five feet above foundation. Photographed September 1, 1901, while this work was in press.

The landscape effects produced by this fine engineering work will be rarely beautiful. From the surface of the mountain-locked lake will rise the summits of a dozen or more partly submerged elevations and peaks which will make granite islands, with growths of pine trees upon them, here and there in the expanse of crystal water. Rising abruptly from the shores to heights exceeding 11,000 feet above the sea, the lofty mountains will complete the wild, rugged and majestic beauty of the picture. The place will not, however, be permitted to be made a "resort," but will be rigorously kept in its natural seclusion and free from the contamination that would follow its invasion by excursion parties and other crowds of summer visitors. Even fishermen and hunters will be excluded by guards who will keep all intruders from disturbing the solitudes of Lake Cheesman, a name that has by common approval already been bestowed upon the soon-to-be artificial body of water up there in the mountains.

The reader will have seen that from the beginning the problem of providing the fast-growing city with the extraordinarily large quantity of pure water demanded by the people for the extravagant use to which they have become habituated, has been continually one of extreme difficulty, and involving expenditure of vast amounts of money. In the vicinity of the city there are no large natural bodies of water, nor are there any streams of consequence. There are a few small lakes the waters of which rapidly disappear by absorption and evaporation in the summer months, and would frequently be unfit for use if they did not. The South Platte, once a river in fact as well as in name, has, through a variety of causes, chief of which is the drain for irrigation, become ordinarily a mere brook in its channel flow, excepting in times of occasional freshets which soon run out. The only recourse was to go to the mountains, far from sources of contamination, for a sufficient and permanent supply. But that was not all that the circumstances and conditions required. In our warm summers the snow melts rapidly on the mountain slopes, and in the season when demands are greatest Nature's rain-fall contributions are smallest. This left no alternative but to wall up the cañons and create great reservoirs to hold the abundant waters of the spring season as an absolutely sure reserve for use through the summer, autumn, and winter, in any emergency, and that would meet the demands of a city of five times Denver's present population. It was a bold proposition, both from the standpoint of the engineer and from that of the men who provide the money to pay the great cost; but the problem has been met and finally and triumphantly solved upon a scale that is unsurpassed by that of any engineering work for a similar purpose in the world.

In addition to this great new reservoir and to Marston Lake, the Water company has several smaller reserves. Two miles west of Marston Lake are Harriman and three or four other smaller lakes supplied by a conduit extending up Bear creek—the rights to the surplus water of which

Upstream face of the unfinished dam with masonry ninety-five feet above foundation, and retaining seventy feet of water. Photographed September 1, 1901, while this work was in press.

are owned by the company—to a point above Morrison. These lakelets supplement Marston Lake. The Company also owns two large reservoir sites at the mouth of Platte canon; considerable work has been done on reservoirs there, calculated to impound about ten billion gallons of the surplus spring water of the mountain river. The company controls all the surplus water of the Platte, and of Cherry and Plum creeks, together with the underflow of those streams. In the city there are three reservoirs, and three steel storage tanks, with a combined capacity of about sixty million gallons. One reservoir is at the "West Denver" pumping station, another on Columbine street in the eastern part of the city, and the third in the northwestern part of the city. One of the tanks is in the Cottage Hill district and the other two in the northern part of the University Park section.

It would seem that there is no end to the provisions made and precautions taken to guarantee this city a bountiful supply of water. The statistics of the enormous total storage capacity, of water rights aggregating over 250 million gallons daily, of a filtering system capable of taking care of fifty or sixty millions, of trunk conduits able to deliver seventy millions, cause the mind to grow aweary of figures.

While in a general sense the Denver water system is a gravity one, some pumping is done in the city. As we have mentioned, the old "West Denver" station is still in service. To maintain high pressure in the elevated eastern part of the city, a steam pumping-station with two pumps of 6,000,000 gallons combined daily capacity is maintained on Columbine street at one of the city reservoirs. In the "North Denver" district a similar station on Ashland Avenue, with a capacity of 2,000,000 gallons daily, serves the elevated section in that part of Denver. The water pressure throughout the city ranges from 45 to 115 pounds. The distributing equipment in the city now consists of upward of 400 miles of street-mains to which are attached about 2,700 fire hydrants.

Upon completion of additions to the distributing system within the city, as provided for at the close of our record, it will be capable of continuously supplying seventy million gallons of water daily—sufficient for double Denver's present population; and with Lake Cheesman in reserve all that will be required for abundantly meeting the needs of a still greater population will be further additions to the distributing facilities as demand for them arises. As we have mentioned, the usual consumption is still abnormally large; something over 260 gallons daily per capita of the present population. During the summer months of 1900 the total consumption ranged from forty-two to forty-eight million gallons every twenty-four hours, as shown by meters in the several trunk-line conduits.

Comparatively few men realize the commanding influence an ample supply of good water has on the growth and prosperity of a city. No community can expand beyond the limits of its water resources, and all larger cities in this country and elsewhere in the world are within easy reach of abundant fresh water. Denver, situated in what is not improperly termed an arid region, is the largest city in the world so situated; yet it has become the financial, commercial and manufacturing metropolis of the vast empire of arid country. It could not have become such nor could it continue to grow greater with a water supply insufficient for the daily needs of the people and industries within its limits. No other community so large as that of Denver is so peculiarly circumstanced with relation to its water supply. In other cities the great problem is to efficiently distribute to consumers water from sources readily accessible and practically unlimited in quantity; here the problem is—or was—to secure water for distribution.

View of Lake Cheesman with seventy feet of water behind the unfinished dam. The line above the center of the picture marks elevation of the additional 140 feet of water the finished dam will retain. Photographed September 1, 1901, while this work was in press.

The available water supply in this part of the country is being more heavily drawn upon year by year for irrigation, so that the only recourse now available for securing large quantities is to store the flood-waters of the spring and early summer. In pioneer times the South Platte was a year-round stream worthy the name "river;" during the summer of 1900 it was, between Denver and the mouth of its canon, at one time reduced to a succession of mere pools. When this city shall have doubled, trebled, its population, as it certainly will within a few decades, the people will appreciate at somewhere near full value the wisdom and foresight of those who secured for them, before it was too late, the priceless water-rights and resources included in the great work of which we have given some account on these pages.

It is to be said, also, that the water system of no other important city possesses a physical equipment capable of meeting, without burdensome expense to the consumer or taxpayer, so large a per capita consumption as that of Denver; and no such city permits the lavish, almost unrestricted, use of water from street mains that is the common and negatively sanctioned practice in Denver.

Covering all waterworks operations since Colonel James Archer made the beginning thirty years ago, the Denver water-supply system will, after the Lake Cheesman reservoir and its adjuncts shall have been completed, represent an outlay of about $14,000,000; the larger part of which will have been expended in successive and finally successful efforts to secure a great plenty of pure water for present needs, and for future demands of a city population increased to more than a half-million people.

CHAPTER LXVII.

BANKS AND BANKING—PIONEER FINANCIAL INSTITUTIONS—CLARK, GRUBER & COMPANY'S MINT AND ITS COINAGE—PARSON'S COINS—SCRIP ISSUES—HISTORY OF VARIOUS BANKING ORGANIZATIONS—ERLANGER'S "BANK"—WALTER A. STUART—NATIONAL AND SAVINGS BANKS—EFFECT OF PANIC OF 1893—EXISTING NATIONAL AND OTHER BANKS—DENVER CLEARING HOUSE—UNITED STATES MINT—DENVER AS A FINANCIAL CENTER—ENORMOUS PRESENT RESOURCES OF DENVER NATIONAL BANKS.

The comparatively few pioneers who came to the Pike's Peak region in 1858 brought but little money with them. They had little to bring, and there was not much use for it here around the mouth of Cherry creek in that first year, or part of a year, in Denver's history. Those who intended remaining here through the winter of 1858-59 had brought their outfits and supplies with them, and had small need to buy. There was a good deal of swapping among Denver's pioneers that winter, but the two or three merchants here at that time had few cash customers, or any other kind of customers.

The inrush of people in the spring of 1859 brought a relatively large amount of money with it—practically all gold and silver coin. Every man was his own banker, and tried to hold on to his money until he could see from where more might be coming, but did not always succeed. The region was then not producing anything of consequence either in mineral or agricultural value, and until actual values began to be produced in the country, it had no need for banks and bankers. The gold discoveries on Clear creek and its branches in the spring of 1859 were soon followed by the appearance and use of gold dust and small nuggets in business transactions. In paying large amounts there was little difficulty in weighing the gold with sufficient exactness to be fair to both sides; but in small transactions, such as buying a drink or two of whiskey, or making other purchases calling for comparatively small quantities of dust, the weighing was against the customer nearly every time. As an offset to this the dealer pointed out that much of the gold was impure, and carried more or less base stuff in consequence of the crudeness in methods of retorting. Furthermore, and to his grief and loss, some unworthy citizens were adulterating the dust with filings of brass and spelter, which were hard to detect. So, the crude weighing probably made a fair average for both parties in the long run.

The purity of the placer gold depended to some extent upon the locality of its discovery. The Platte river, Cherry creek, and the lower reaches of Clear creek, yielded gold that was almost absolutely pure. That from the other diggings in the general region of Denver was usually attended by foreign matter to the extent of about five per cent. The common, rough and ready, way of determining these values approximately, was by rubbing some of the dust on a piece of native "iron-stone" polished for the purpose. The amount of discoloration left on the stone in the form of marks by the base material in the dust afforded a rough means of determining its proportion, and so of estimating the true gold values.

These circumstances, and the fast increasing quantity of dust in the hands of the population, called for the services of men who would make a special business of buying crude gold at its value as ascertained by more accurate methods, and paying for it in definite money of some kind. It was because of this immediate necessity that the first "bankers" began business in Denver. They were not bankers, in the true sense of that term, but brokers, who bought gold dust, paying for it in money, and shipping the dust to bankers in the towns along the Missouri river, whose agents the brokers in one sense were. The prices paid the miners ranged between twelve and sixteen dollars per ounce, according to the varying quantities of foreign matter carried. Bright yellow gold was almost the pure article; while that of darker hues was debased by copper or some of the other cheap metals. As silver was not produced for several years after, the pioneer "bankers" had no trade in it. The express company's charge for carrying gold dust on its stages from Denver to the Missouri river in 1859-60 was five per cent. of its value. Some parties, to avoid what seemed to them an excessive charge, sometimes bargained with the stage coach passengers to carry the dust in concealment for a smaller compensation. But, as we have seen, the company soon found a remedy for that sort of business.

Notwithstanding that a relatively large amount of gold and silver coin was brought into the country by the hosts of the spring of 1859, by autumn of that year gold dust constituted the principal part of the circulating medium. After midsummer of 1860 the gold coins minted by Clark, Gruber & Co. came into quite general use. In 1862 the United States paper money of the war time made its appearance here in limited quantities, and in 1863 in company with a few of the notes of eastern National banks; but it was not until August, 1865, that National bank notes of local origin—those of the First National—made their appearance here. During the war time Denver and Colorado were practically on a specie basis.

The first buyers of gold dust in Denver, the first "bankers and brokers" to begin such business as a business in a permanent establishment, were the brothers, Samuel and George W. Brown, who came here in 1860, and in June of that year opened their office in a log building on the north side of Larimer street, between Fourteenth and Fifteenth streets, next to the old Apollo Hall. Samuel Brown did not long remain in the business or the country, but George W. Brown, who later became the first collector of Internal Revenue here, continued the business several years and during part of his term as Collector. He was a citizen of Denver until his death which occurred but a few years ago.

Clark, Gruber & Co.'s Bank and Mint, autumn of 1860.

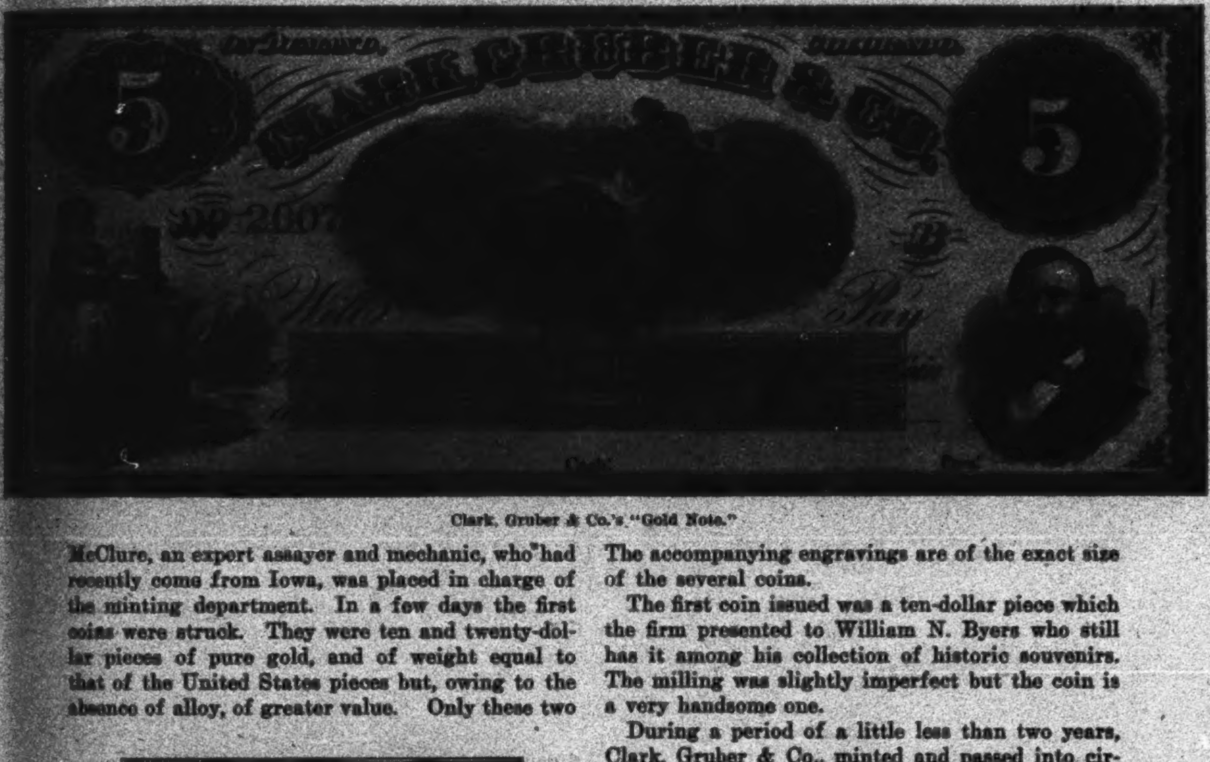
A week or two after the brothers Brown had located themselves, a second establishment opened its doors. This was that of Turner & Hobbs who also arrived in the spring of 1860, and late in June began business as "bankers and brokers," with the late George W. Kassler as Cashier. William H. Russell, of the plains freighting firm of Russell, Majors & Waddell, and of the overland Stage and Express Company, was the financial backer and principal owner of the concern.

U. Turner and Joshua Hobbs who, at least nominally, constituted the firm of Turner & Hobbs, first established themselves in Reed & Hiffner's building on Eleventh (Ferry) street, but later occupied a two-story brick building, which was among the pioneers of its kind in Denver and which is still standing on the southwest corner of Larimer and Tenth streets. Governor Evans afterward used the second floor of that building for the Territorial executive offices. The business of Turner & Hobbs took on banking features at the outset, and it would seem that they were the first bankers in Denver. However, this pioneer banking house did not long endure. In the summer of 1861, after a career of about one year, it was discontinued and the two nominal proprietors went back to the States. If the bank did much business it ought to have made money, for the interest rates charged ranged from ten to twenty-five per cent. per month.

Denver's great financial institution of pioneer times was the bank and mint of Clark, Gruber & Co. This historic establishment was also founded in 1860, and its operations had an extended and beneficial influence in the development of the new country. In 1858 this firm was located at Leavenworth, Kansas, and engaged in banking. Austin M. Clark and Milton E. Clark, brothers, had come to Leavenworth from Ripley, Ohio, in 1857; and E. H. Gruber, a native of Hagerstown, Maryland, had removed thither from St. Louis in the same year. In the spring of 1858 the three young men formed the partnership above mentioned. In the course of events the firm began to receive gold dust from the new gold region at Pike's Peak, and as the quantity rapidly increased, these men conceived the plan of establishing a bank at Denver, and in connection with it a mint to convert the dust into coins of the weight and value of those of the United States. By this means they would save the excessive cost of transporting the dust across the plains with armed guards to protect it; and that saving alone would afford a good profit. Their plans contemplated coining full weight and full value pieces of regular denominations, and which would be above suspicion and deception in every way. It was also believed that the conversion of the dust into such coins by an establishment located within sight of the new gold mines would prove an attractive and popular proposition to the people in the new country. At that time there was no explicit provision of United States law forbidding private coinage, and some similar minting had been done in California ten years previous. Furthermore, the firm intended to transact a general banking business in connection with their production of gold coinage; and it is to be said that all these plans and purposes were well fulfilled.

The new project crystallized at Leavenworth in the winter of 1859-60, and early in the spring of the last-named year Austin M. Clark and E. H. Gruber came to Denver to institute preparations for carrying it into effect, while Milton E. Clark went to Boston to procure dies and presses for minting. The firm bought several lots at the northwest corner of Market and Sixteenth streets, and on the corner lot erected a rather small two-story brick building. The machinery arrived that spring, but owing to delay in completing the building and installing the presses the establishment was not ready for business until midsummer.

On July 20, 1860, Clark, Gruber & Co. opened their bank and coinage mint and began business. The building was an imposing one for its time—the "show-place" of the town—and the interior was handsomely fitted and furnished. George W. McClure, an expert assayer and mechanic, who had recently come from Iowa, was placed in charge of the minting department. In a few days the first coins were struck. They were ten and twenty-dollar pieces of pure gold, and of weight equal to that of the United States pieces but, owing to the absence of alloy, of greater value. Only these two denominations and designs were coined in 1860. In preparation for the next year's work new dies of different designs and of two additional denominations were provided. The coinage of 1861 consisted of \$2.50, \$5, \$10, and \$20 pieces. These were alloyed according to the United States standard, as it had been discovered that the pure-gold coins of 1860 were abrading too much by reason of their softness; but the coins of 1861 were given one per cent more gold than United States coins contained. This was done to protect holders against loss by wear, and to be an absolute guarantee of full value. This increase in weight was really sufficient to cover the reduced later transportation charges on the coins to the Missouri river, if holders chose to treat them as bullion. These issues of 1861 bore a close resemblance to United States coinage. For the figure of Pike's Peak the Liberty cap with the words "Pike's Peak" on it was substituted; and around it were the words "Clark, Gruber & Co." The accompanying engravings are of the exact size of the several coins.



Clark, Gruber & Co.'s "Gold Note."

Clark, Gruber & Co.'s Ten Dollar "Pike's Peak Gold" coin, 1860.

The first coin issued was a ten-dollar piece which the firm presented to William N. Byers who still has it among his collection of historic souvenirs. The milling was slightly imperfect but the coin is a very handsome one.

During a period of a little less than two years, Clark, Gruber & Co., minted and passed into circulation about \$3,000,000 worth of their coinage, which was accepted at par everywhere in Colorado; and also, in common with every form of gold, passed to a premium. For a year or more the propriety of such private coinage was not questioned here, though it did later arise here and elsewhere. The firm's perfect good faith, the honesty and overflowing value of its mintage, and the freedom of everything savoring of deception, forbade any serious questioning of their operations. For a short time they coined dust for brokers and miners at a maximum commission charge of five per cent., but that was soon discontinued and the work confined to their own purchases of bullion over their counter. Late in 1860 they opened a branch bank at Central City, and at both places paid for gold in their own coin, or in drafts or checks available elsewhere, and later in currency as soon as the early war issues began making a straggling appearance out here. They also issued handsome steel-engraved demand notes, of the denomination of five dollars, payable in their coinage, at the Denver house. These readily passed current and were redeemed in money that, toward the close of the firm's minting operations, was at a premium. Indeed, in 1862 the notes commanded a premium in United States currency, thus presenting the extraordinary circumstance of paper promises to pay issued by three private citizens being of greater value than the paper promises issued by the Nation.

Of course, these coinage operations were of immense benefit to the general banking business of the firm, and gave it many advantages over competitors without a minting annex. An enormous and profitable business was transacted, and in all its operations the firm's honor and integrity were never questioned. But in 1861, after the first Territorial administration had fairly settled down to its work, some discussion as to the propriety, if not the legality, of this coinage within the shadow of the new government, began; not by Governor Gilpin, nor any of his officers, but in a general way and, perhaps, as one of the consequences of the presence, at last, of established government by authority of the United States.

In the summer of 1861 a movement was inaugurated to have the government establish a branch mint at Denver. The first Territorial convention of the Republican party was held at Golden on July 2nd, of that year, and among its resolutions was one declaring the necessity for a public mint here, and pledging the party's support in whatever might be necessary to procure it. Clark, Gruber & Co., conscious of some technical impropriety in continuing their mintage, though of no turpitude whatever, heartily favored the proposition and became chiefly instrumental in bringing it to a favorable conclusion, and one that enabled them to bring their minting operations to a termination.

Hiram P. Bennet was elected in the autumn of 1861 as Colorado's first Delegate in Congress. Austin M. Clark accompanied him to Washington before the assembling of Congress that year, and they brought the matter first to the attention of the Secretary of the Treasury, with a statement

---

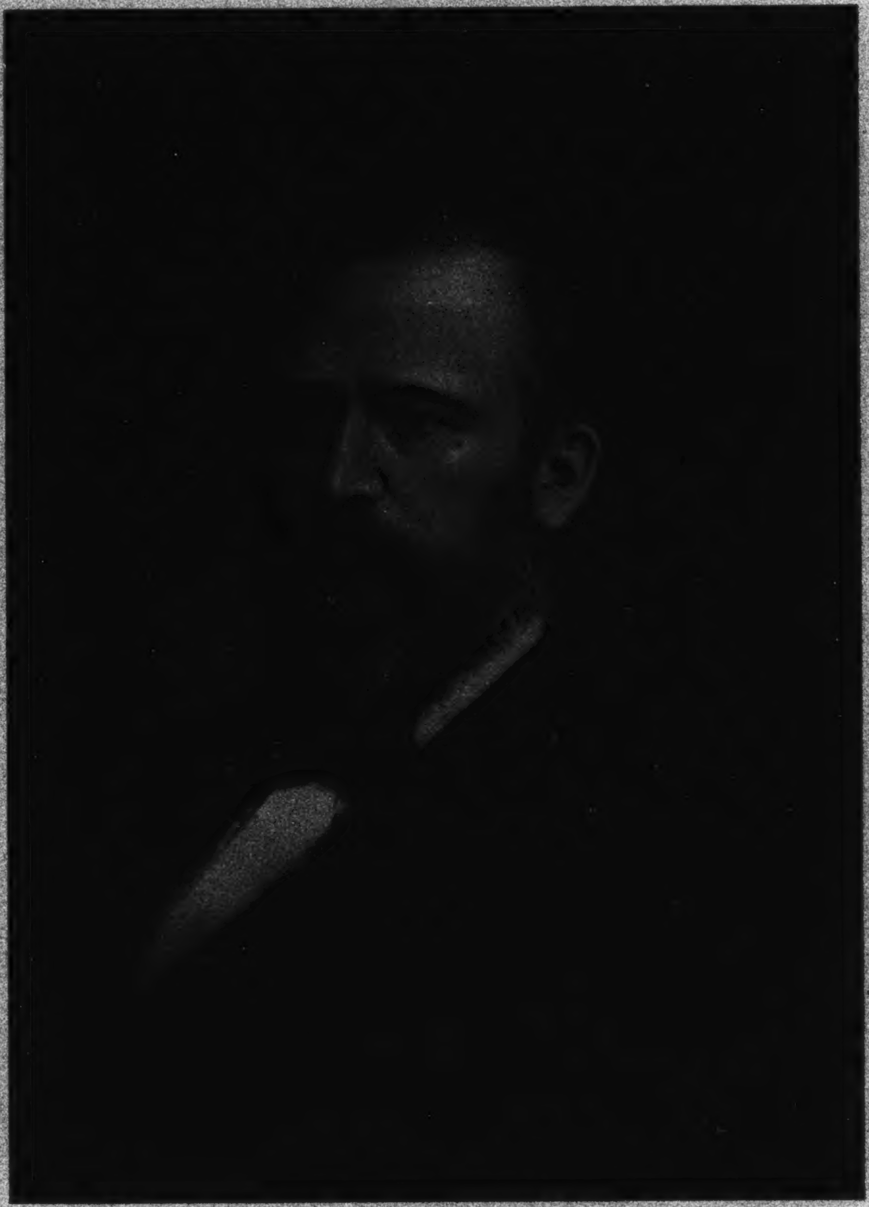
Jerome B. Chaffee, who was chiefly instrumental in organizing the First National Bank of Denver, was born in Niagara county, N. Y., April 17, 1825. After receiving an academic education he located in Michigan, but soon afterward removed to St. Joseph, Mo., where he subsequently engaged in banking. In 1857 he organized the Elmwood, Kan., Town Company, of which he became Secretary and Manager.

Coming to Colorado in the spring of 1860, Mr. Chaffee went to Gilpin county where he engaged in mining and later, in company with Eben Smith, erected a stamp-mill. For many years thereafter he was one of the great mine operators in Colorado, having been a large owner in the famous consolidated "Bob Tail" mines in Gilpin county, the Caribou mine in Boulder, and in scores of lesser note elsewhere in those counties and in Clear Creek county; and when Leadville developed he became one of the owners of the little Pittsburgh and other opulent mines in that district. His mining operations, which he continued until his death, yielded him a large fortune, much of which he lost by the failure of Grant & Ward.

Having previously established his home in this city, he was, as elsewhere related in this chapter, elected President of the First National Bank of Denver when that institution was organized in 1865, and continued at its head until January, 1880. About the time the bank was organized, or soon thereafter, he was appointed one of the United States' representatives in the Board of Directors of the Union Pacific railroad, a position he filled several years.

But it was in his political career that Mr. Chaffee gained his wider fame. This began in 1861 when he was elected Representative from Gilpin county in the first Territorial Legislature of Colorado. In 1863 he was re-elected and became Speaker of the House. We have already told of the efforts between 1864 and 1869 to gain Colorado's admittance as a State and in which he actively and zealously participated, and also during which he was elected United States Senator in the earlier preliminary proceedings. After those several movements had met defeat, he was elected, in 1870, Delegate in Congress from Colorado, and was re-elected in 1872; serving four years in that position. As a delegate he was remarkably successful and influential in securing enactment of laws, several of which were of especial importance and economic value to Colorado. A forceful figure in the movement that made Colorado a State in 1876, he was elected one of Colorado's first two United States Senators, taking his seat in December, 1876, for the shorter term that ended in March, 1879. Several laws favorably affecting miners enacted at that time originated with him, and he also made vigorous and effective war against the abuses practiced by the Union Pacific railroad in that period. He declined a re-election to the Senate, and devoted the remainder of his life to his private affairs. He was one of the founders of the Republican party, always adhered to its principles and policies, and took great pride in the fact that he had been a Delegate in each of its National conventions from its beginning up to and including the convention of 1884. He was a great power in our Territorial and State politics, long a leader of the Republican party in Colorado, and a man of large influence in National affairs.

Senator Chaffee died March 9, 1886, at the home of his son-in-law, U. S. Grant, Jr., at Salem Center, Westchester county, N. Y. In the closing years of his life he had not been so closely identified here as in the preceding periods, but still retained his general interests. While not among the first great host that came to seek fortunes in Colorado, he was by instinct a pioneer, a natural leader of the way and of men; and in Denver's history and in that of Colorado he stands upon an eminence.—J. C. S.



Jerome B. Chaffee.

of what the firm had done in coining gold, and submitting specimens of the coins. The Secretary sent the coins to the Director of the Mint at Philadelphia who reported them as being of full weight, fineness and value. Then the Attorney-General was asked by the Secretary whether any law had been violated in producing the coins; he reported that no law had been violated. In his report to the President, which the latter transmitted to Congress, the Secretary recommended that the existing coinage laws be so amended as to prohibit private coinage in the United States; that a branch mint be established at Denver; and that authority be given for the purchase of the property of Clark, Gruber & Co., and for its conversion and equipment as a branch mint of the United States.

Clark, Gruber & Co.'s Five Dollar "Pike's Peak Gold" coin, 1860.

Mr. Bennet's first service in Congress was the preparation and introduction of a bill to give effect to the recommendation of the Secretary of the Treasury concerning a mint at Denver. In the turmoil of that war-time Mr. Bennet naturally had some difficulty in getting his bill before the House for action. Broker George W. Brown went to Washington with a sack of Colorado gold as tangible evidence of a supply of raw material for a mint; a gold snuff-box was given Thaddeus Stevens, then leader of the House; and so, under the combined influences of the Secretary's recommendation, Mr. Bennet's persistent earnestness, the sight of the sack of gold, and the snuff-box, the bill, which provided for establishing a branch mint at Denver, went through. In the Senate there was less difficulty, and when the bill was reached in turn it was passed on April 16, 1862; becoming a law by the President's approval April 21, 1862.

But this did not consummate the purchase of Clark, Gruber & Co's. property; that transaction having been delayed about a year. By an act approved March 3, 1863, the Secretary of the Treasury was authorized to purchase the property, and $25,000 were appropriated with which to pay for it; that having been the price for which Clark, Gruber & Co. had agreed to sell. The transfer was made in April, 1863, and the government took possession in that month. Enactment of a law forbidding private coinage was delayed until 1864 when, on June 8th, a bill forbidding, under heavy penalties, such coinage of any metal, "intended for the use and purpose of current money," was passed.

It was the purpose of the acts of April, 1862, and March, 1863, to make the Denver establishment one for coinage, but Congress later changed its mind and provided otherwise. Of these circumstances some particulars appear on a later page of this chapter.

Thus ended one of the most interesting episodes in the history of any city in this country. To the isolated, hard-working people of the new country it was of tremendous advantage; it guaranteed them full value for the results of their laborious toil in the mines; it supplied them with a circulating medium of definite, unquestioned worth; it afforded them facilities for exchange with distant places at nominal expense; and through it all honesty and integrity ruled every transaction. No finer business record has been transmitted to us than that of the old-time banking and minting firm of Clark, Gruber & Co.

Soon after the government acquired the property, an addition was built to the original structure on the corner, and which gave the building its present familiar appearance. But the corner part, aside from changes made in its front, is the Clark, Gruber & Co. "Bank & Mint." The firm remained in business about a year longer, the parent house remaining at Leavenworth, with branches at Denver, Central City, and Salt Lake City. On March 10, 1864, E. H. Gruber withdrew, and Austin M. and Milton E. Clark continued the business under the firm name of Clark & Company until May 9, 1865. On that date Clark & Company transferred their Denver business to the First National Bank in the organization of which the two members of the firm had participated.

Austin M. Clark. Photographed 1865.

At the same time, Clark & Company sold their branch bank at Central City to George T. Clark, First Cashier of the First National of Denver, and Eben Smith, who, under the firm name of George T. Clark & Co., continued the business and later established a branch at Georgetown. After George T. Clark resigned as Cashier of the First National in the autumn of 1866 he removed to Central City and took charge of his firm's business which existed several years thereafter.

In the earlier times George T. Clark had been associated with Clark, Gruber & Co., in the management of their Denver house, and had previously acted as their agent for the purchase of gold-dust here before those pioneer coiners had begun business in Denver, but was not related to the members of that firm, of the same name. He was a native of Massachusetts, and came to Denver from Wisconsin early in 1860, to act as agent for the Western Stage Company and of Hinckley & Co.'s Express. During his connection with Clark, Gruber & Co., he was appointed by Governor Gilpin Treasurer of Colorado Territory. In 1863 he became Treasurer of Arapahoe county and of Denver. He was a member of the Constitutional Conventions in 1864 and 1865, and Mayor of Denver in 1865-66. In 1870 he was again appointed Territorial Treasurer, by Governor McCook, and was reappointed in 1872. In November, 1876, he was elected Secretary of the first Colorado State Senate. In February, 1883, he was chosen Secretary of the Board of Capital Managers, a position he held until his death on November 6, 1888. He was a man of great energy, ability, generosity and personal popularity.

Milton E. Clark and wife.
Photographed 1865.

Soon after disposing of their banks in Colorado, Austin M. and Milton E. Clark concentrated their interests at Leavenworth. Austin died there in 1878, but Milton is, as he long has been, still a citizen of that city.

E. H. Gruber remained in Denver until 1864, when he returned to Leavenworth and again engaged in banking there. In 1878 he came back to Colorado, located in Leadville, became interested in mining, and in real estate. Later he again located in Denver, but after the Cripple Creek district developed he removed thither and is now a citizen there.

The firm's old minting machinery remained stored in the cellar of the old Mint building until 1898 when, by direction of the United States Treasury authorities, the several pieces were delivered to our State Historical Society, subject to the order of the government, and are now in the Society's collection of historic relics.

Clark, Gruber & Co., were not the only men who engaged in private coinage in those times. Dr. John Parsons, who came from Quincy, Illinois, in 1859, and went into the South Park country, made a large number of gold coins there—perhaps one-third to one-half as many $2.50 and $5.00 pieces as Clark, Gruber & Co. In 1860 he brought out dies and presses, and set up his mint at Tarryall near the mouth of the canon northwest of Como where the railway now passes up to cross the range to Breckenridge. He coined only the two denominations mentioned, and they circulated freely in Denver in 1860 and 1861. The obverse side was much like that of the United States gold coins; on the reverse was shown a little battery of stamps such as were used in the quartz mills of that time. We were unable to find any of the coins from which to make engravings, and probably few, if any, are now in existence.

Another of what may properly be termed the pioneer banking enterprises in Denver, was that of Warren Hussey, who came here from Des Moines, Iowa, in the spring of 1861, and on April 14th began business as a buyer of gold dust under the firm name of Warren Hussey & Co. He established himself in one corner of William Graham's drug store, on the northwest corner of Larimer and Fifteenth streets, where he was soon doing a thriving business. He engaged the services of Frank Palmer, who had for about a year been buying gold as opportunity afforded, as manager of the Denver office, and then established a branch at Central City of which he took personal charge. In January, 1863, the Denver office was moved to the building of Ford Brothers at the northeast corner of Fifteenth and Market streets, and in the summer of that year Joseph A. Thatcher, now President of the Denver National Bank, was made Cashier and manager of the Central City branch. Prior to this, Hussey's operations in both towns had developed into general banking, and a regular deposit and discount business was transacted. Having both of his establishments in the hands of capable young managers, Hussey now gave much of his time to outside ventures. In 1865 Palmer was admitted as a partner, and Hussey went to Salt Lake City where he opened another branch. In 1867 Palmer sold his interests to Hussey but continued as manager of the Denver house. In 1870 Mr. Thatcher bought the Central City branch, and in connection with Joseph Standley, organized the firm of Thatcher, Standley & Co., with $50,000 capital. On January 1, 1874, this firm was succeeded by the First National Bank of Central City, with Mr. Thatcher as President. The Salt Lake City branch failed dur-

George T. Clark. Photographed 1865.

ing the panic of 1873 and was not revived. Under Palmer's management the parent house in Denver had flourished and prospered, and in 1872 was succeeded by the City National Bank, of which some account will presently be given. After these changes Warren Hussey went to Washington Territory where he later engaged in National banking at Spokane Falls. He is now living in New York city.

In September, 1859, C. A. Cook and Jasper P. Sears who constituted the firm of C. A. Cook & Co., arrived in Denver from Leavenworth with an important stock of general merchandise. They established themselves on the north side of Blake street between Fourteenth and Fifteenth streets and were soon doing a thriving business, principally of a wholesale character. A large part of their receipts were in the form of gold dust, and they gradually drifted into the purchase of gold, as a subordinate part of their general business, devoting one corner of their store-room to their gold-buying department. This feature of their business developed into a bank in 1860-61, and became of considerable importance in the community. The bother of weighing out small quantities of dust and the difficulties in making change created a public demand for some kind of currency of small denominations. To supply this want C. A. Cook & Co. began issuing scrip—"shinplasters," as the little notes were commonly called—engraved on steel, of the denominations of 10, 25, and 50 cents and of $1.00, all redeemable on demand in gold or other lawful money, at their store-bank. This firm issued a large amount of these notes which proved a great and popular convenience to the entire community. They circulated freely in the mining camps, also, and their value was not questioned. All of them were redeemed in 1863, and their issue stopped, under circumstances that will presently be related. C. A. Cook & Co. did a large business in merchandising and banking, and later added overland freight transportation to their transactions. In 1864 they discontinued merchandising and engaged exclusively in banking. Early in 1865 they wound up their business, and when the First National Bank of Denver was organized Mr. Cook became one of its stockholders and a member of its first Board of Directors, both members of the firm remaining citizens of Denver. Mr. Cook died at Hot Springs, Arkansas, in March, 1878, and Mr. Sears in Denver on February 17, 1899.

Interior of C. A. Cook & Co.'s Bank.

In November, 1860, Dr. O. D. Cass, a native of New Hampshire, who had been in California in the golden era in that State, and who came to Denver from Leavenworth, Kansas, in May, 1860, engaged in banking and gold brokerage; chiefly the latter. He practiced medicine here from May to November, but his California experience taught him that handling Rocky Mountain gold-dust would be more profitable. He first located in part of the room occupied by Hinckley & Company's "mountain express" office, on Blake street between Fourteenth and Fifteenth streets. In the spring of 1861 he was joined by G. H. Wilcox, and by his brother, Joseph B. Cass who, also, came from Leavenworth; and the three named their institution "The Exchange Bank." Joseph Cass had been Cashier for Carney & Stevens, Leavenworth bankers, and had arranged for a close business relation between them and the new bank at Denver. The Exchange Bank did a large and profitable business which had soon included deposits, loans and discounts. Later the bank was established in a building erected in the bed of Cherry creek, on the north side of Blake street. The flood of 1864 carried away the building, but the firm managed to save most of the valuables. When Henry C. Brown built his three-story brick building on the southeast corner of Sixteenth and Market streets in 1868, these bankers took the main business room for their bank, and added plains transportation of freight to their operations. As the civil war progressed and gold went to higher and higher premiums their profits on gold purchases added to those derived from interest rates of twenty or twenty-five per cent. a month, became very great—running as high as a thousand dollars a day during some periods when they were handling from $15,000 to $20,000 worth of dust a day. Frequently the advance in the price of gold was so rapid that dust increased in value ten or fifteen per cent., while in transit across the plains to the eastern money markets. The firm opened a branch office in Central City and became the agents there for Holladay's Overland Mail

Clark, Gruber & Co.'s Two and One-half Dollar gold coin, 1861.

Stage Company. In 1865 the business was sold to Holladay, who did not long continue it. Dr. Cass remained a prominent citizen of Denver until his death on December 14, 1894. Joseph B. Cass died in Chicago July 15, 1877.

The first Legislature of the Territory of Colorado by a special law enacted in 1861 provided for the organization by P. P. Wilcox, E. W. Cobb, and E. C. Jacobs, of the "Bank of Colorado." The act fixed its capital stock at $150,000, and required the proposed institution to transact its business in the city of Denver. Shareholders were to pay par for their stock in gold or silver coin, and the bank was authorized to begin business and issue circulating notes whenever one half of the stock subscribed had been paid for in such coin, and payment of the other half guaranteed by good sureties. Before the bank could begin business the Governor of the Territory was to satisfy himself that these requirements of law had been complied with, and was to give public notice to that effect. The bank was also to submit to periodical examinations of its condition. But the "Bank of Colorado" was never organized, notwithstanding the somewhat liberal provisions of the law authorizing it.

However, Wilcox and an associate very soon after the passage of this act, formed a partnership under the names of P. P. Wilcox & Co., and set up in the banking business in Denver, in a small way. The concern had some of the symptoms of "wild-cat" banking on a diminutive scale. It issued a lot of cheap scrip made at Thomas Gibson's printing office, and in denominations of fifty, twenty-five and ten cents. About 3,000 dollars' worth, nominal value, of this trashy "currency" was gradually floated into circulation, but the poor material used in its manufacture kept a large part of it from getting back to its sponsors. About two-thirds of it survived to appear for redemption, and was redeemed; the rest disappearing in the wear and tear of usage and in the fire of 1863.

E. H. Gruber. Photographed 1860.

That fire was the indirect cause of terminating the issue of C. A. Cook & Co.'s scrip to which we have heretofore referred. As stated in a preceding chapter, that disaster swept away all the possessions of many citizens, and seriously embarrassed nearly everybody who had been located in the burnt district. This firm had outstanding a far larger amount of scrip than Wilcox & Co., and were also heavy losers by the fire. But the misfortune caused scrip holders to almost immediately present it for redemption; and redeemed it was as fast as it came in, and thereupon destroyed. Cook & Co. construed this general demand, under the circumstances, as a reflection on their integrity and a lack of confidence in their financial ability to meet their obligations; and so, in their indignation growing out of that view of the matter they discontinued what was, in most respects, a public convenience.

But these scrip issues, as well as the larger and more presentable demand gold-notes of Clark, Gruber & Co., were afloat in disregard of a law of the Territory. In November, 1861, the Territorial Legislature forbade by law all individuals, firms or corporations issuing any form of obligation calculated for or intended to be used as a circulating currency or a substitute for coin or other lawful money, "without special leave from the Legislature." A strict construction of things would probably have placed under the ban the drafts of the Central Overland, California, & Pike's Peak Express company, issued to the order of individuals and by them indorsed payable to bearer, and passed along. Wilcox was indicted for this violation of the law, but that was as far as the case against him ever succeeded in going.

Clark, Gruber & Co.'s Five Dollar gold coin, 1861.

In the old days in Denver the private bank of Kountze Brothers became, within a short time after its modest beginning here, a strong, useful and influential financial institution. In the spring of 1862 Luther Kountze came to Denver from Omaha, and soon after his arrival opened a banking and gold-buying office in one corner of Walter S. Cheesman's drug store, then located on the southeast corner of Fifteenth and Blake streets. Luther Kountze was one of four brothers, all young men, and natives of eastern Ohio, who were conspicuously identified with pioneer banking in the west. At the time of Luther's coming here, two of them, Augustus and Herman, were, as they had been for several years, engaged in banking at Omaha; the fourth brother, Charles B., not then having left his Ohio home. Luther had served an apprenticeship in the Omaha bank, and with his brothers there had united in a partnership under which all of their operations were to be carried on in the name of Kountze Brothers. So, the modest house in Denver was known by that name, and was soon doing a brisk business in buying gold-dust, receiving deposits, making loans and discounts, drawing drafts on the parent house in Omaha, and in the various minor branches of frontier banking in those times. The Cheesman building was destroyed by the serious fire in the spring of 1863, and immediately after that the bank was established in one side of the general store of Tootle & Leach, on the south side of Blake street, between Fifteenth and Sixteenth streets, where it remained with fast-increasing business until the spring of 1864, when Kountze Brothers built the brick building now standing on the northwest corner of Fifteenth and Market streets, and established their bank there in a home of its own. In that spring — 1864 — Charles B. Kountze came from Ohio and joined Luther in the management of the Denver House, though at that time but nineteen years old. In 1866 he became a partner in the firm, and in that year the establishment was reorganized as the Colorado National Bank of Denver, to which we will again refer. The Omaha house had become the First National Bank of that city, with Herman as its President; and the Kountze Brothers also organized the Rocky Mountain National Bank of Central City, but from which they subsequently withdrew their interests. They had, beside, a branch of the Omaha house at Cheyenne, Wyoming, which, also, was later disposed of. After the Colorado National Bank was organized, Luther Kountze went to Europe leaving Charles B. Kountze in full charge of affairs here. In 1868, after Luther's return, the four brothers established the great banking house of Kountze Brothers, of Wall street, New York, with Luther at the head of its management. Thus, within one decade this fraternal organization became principal owner and the controlling influence of a chain of strong banks stretching two-thirds of the way across the country, and every link of it noted for its conservative, prudent and thoroughly sound management. To each of the brothers, from their large financial operations, came princely fortunes. Three of them survive and are still actively engaged in directing the affairs of the great and uniformly successful institutions they founded; Luther in New York, Herman in Omaha, and Charles B. in Denver. Augustus Kountze died in New York in 1893.

Kountze Brothers' Bank at Fifteenth and Market streets.

Between 1865 and 1870 no new banks were added to the rather liberal supply possessed by Denver in those times, considering the amount of business there was for them to do. But in 1871 there appeared in the city a gentlemanly, unobtrusive financial genius from Poland who opened an establishment at (old) number 383 Larimer street, where at first he did a sort of pawnbrokerage business rather than one of banking. He gave his name as Benjamin Erlanger, and succeeded in making a very favorable impression among the many acquaintances he studiously sought. He ambitiously styled his establishment the "Denver Savings Bank," and a "branch" of which he soon afterward opened at "Black Hawk." By advertising freely in the newspapers, and by playing well his part and maintaining an appearance of prosperity, Erlanger, whose true name was Abel Endelman, actually succeeded in accumulating a considerable line of small deposits in his "banks." On Saturday night, November 3, 1873, Abel disappeared, and with him went every dollar that had been placed in his keeping by his dupes, and every readily portable thing of value belonging to himself. The amount of money beguiled from his "depositors" and that he took with him was estimated to have been between $20,000 and $40,000; but the lesser sum was probably nearer the true value. In 1878, Dr. W. H. Williams, of Denver, saw and recognized him in San Francisco. But by that time many of his victims had left here, and those remaining were not willing to provide money to pay the expense of hunting the rascal down and bringing him here for trial and punishment. Since then nothing further was known of him.

In the office of the Secretary of State there is record of the dissolution on March 26, 1872, of the "Denver Dime Savings Bank;" but we found no record of its incorporation. If it ever transacted any business it must soon have found the field unfruitful, for a bank of that kind, and withdrawn, as it appears to have made no history for itself, nor did any one of several old-timers of whom information concerning it was sought recall the establishment.

Clark, Gruber & Co.'s Ten Dollar gold coin, 1861.

The City National Bank was, as we have already mentioned, the outgrowth of and successor to the banking business of Warren Hussey & Co., and it was brought into existence chiefly by the efforts of Frank Palmer, who was at the time the manager of the predecessor establishment. Arrangements for the change were completed in the spring of 1872, and on June 10th, of that year, the City National began business at Hussey's old location on the northeast corner of Fifteenth and Market streets, with a paid-up capital of $200,000. A new building was later built for it on that corner which the bank occupied until January, 1883, when it removed to the building on the northwest corner of Sixteenth and Lawrence streets, where it remained until the close of its career. Its first Board of Directors consisted of William Barth, J. Sidney Brown, Henry Crow, John R. Hanna, and Frank Palmer. The executive officers elected were Henry Crow, President; Frank Palmer, Vice President; John R. Hanna, Cashier; and Hyatt Hussey, Assistant Cashier. On January 12, 1876, J. Sidney Brown became Vice President in place of Palmer, whose health had broken down and who died at Herkimer, New York, in 1877. In January, 1877, Henry Crow was succeeded as President by J. Sidney Brown, and William Barth became Vice President. In January, 1883, Barth became President, and J. F. Brown, Vice President; no further changes occurring during the next eleven years. In January, 1892, John R. Hanna, who had so long been Cashier, was elected President; J. F. Brown, Vice President; and B. N. Freeman, Cashier. In January, 1894, Vice President Brown retired, and was succeeded by William Barth as First Vice President, and W. S. Iliff as Second Vice President; and thereafter there were no changes in the organization while the bank continued in business. The City National had a prosperous career, and was one of the Denver banks that withstood the storm of 1893. On June 21, 1894, its business was bought outright by the American National, and its existence then terminated.

Clark, Gruber & Co.'s Twenty Dollar gold coin, 1861.

On July 20, 1872, a bank for savings, styled "The Colorado Savings Bank" was opened and began business in a room in the American House building, by John W. Smith as "Principal and Manager." This bank appears not to have been incorporated, its responsibility, according to its public announcement, resting upon "the individual liability" of its principal proprietor. W. U. Johnston was Cashier and Secretary; and Charles H. Smith, son of the proprietor, Assistant Cashier; this management remaining unchanged until 1878 when G. R. Hudson became Cashier. In January, 1880, after nearly eight years of varying results the bank paid off its depositors in full and discontinued business.

Late in 1872 Henry C. Brown and C. D. Gurley formed a banking co-partnership and on January 1, 1873, opened the Bank of Denver, an unincorporated institution, in the corner room of Mr. Brown's building, then the "Tribune Building," on the southeast corner of Sixteenth and Market streets; Mr. Brown being President of the bank, and Gurley its Cashier. At the close of 1873 Brown sold his interest to William H., J. H., and F. D. Hager, who, with C. D. Gurley, continued the business as the "Bank of Denver, Hager, Sons & Co., Bankers," until about midsummer of 1876. The bank's affairs were then honorably wound up, and the Hagers soon afterward left Denver.

In 1873 Samuel G. Collins, Frederick J. Ebert, J. H. Jones, Jacob F. L. Schirmer, Jacob Snider, and Hiram Witter formed a co-partnership, with a cash capital of $90,000, to engage in the banking business in Denver, under the firm name of Collins, Snider & Co. The concern began business in June, 1873, on the north side of Larimer street, between Fourteenth and Fifteenth streets. Toward the close of that year it removed to (old) number 370 Market street, in the Fink Building on the southeast corner of Fifteenth and Market streets. Samuel G. Collins was its manager, and it took standing as a very substantial private bank. In May, 1875, Jacob Snider, the heaviest owner in the bank, was assassinated near Georgetown by Jack Bishop, a mining camp desperado who was a partisan of certain mine claimants there with whom Snider, also a silver mine owner in that district, had long been in litigation. Bishop escaped and was seen no more in this part of the country. Late in 1875 the bank was removed to the room at the northeast corner of Fifteenth and Blake streets then recently vacated by the First National Bank, and in January, 1876, was sold to the organizers of the Exchange Bank, in which all of the surviving partners, except Witter, were interested, and which began business in January, 1876.

Another new banking concern established in 1873 was the People's Savings Bank. It appears not to have been incorporated; there being no record of it in the office of the Secretary of State, and its announcements having named "John W. Blackburn, Dr. R. G. Buckingham, Dr. H. K. Steele and H. C. Donnell, proprietors." It began business in the Evans Building on the southwest corner of Fifteenth and Lawrence streets, to "transact a general Banking and Exchange business;" Judge Blackburn being President, and Donnell, Cashier—the amount of its capital not having been made public. In 1877 R. M. Purcells became its Vice President, and in January, 1878, it suspended payments, with its affairs in rather bad shape. A large part of its deposits had come from people in very moderate circumstances, and all depositors suffered practically a total loss of their money; the assets having yielded but little more than enough to pay the expense of winding up the bank's affairs.

In 1874 General John Pierce, who was then prominent and active in railway and financial affairs in Denver, organized the Denver Safe-Deposit & Savings Bank which was incorporated under the laws of Colorado Territory, March 23rd, with an authorized capital of $60,000, one-half of which was paid in. General Pierce was elected President; Daniel Witter, Treasurer; and William D. Todd, Secretary and Cashier. It fitted up deposit vaults and a business room in the McClelland Building on the southeast corner of Fifteenth and Lawrence streets, and was the first concern of the kind in the city. It began business in July, 1874, and remained in that location eight years. At the close of 1878 Daniel Witter retired as Treasurer and was succeeded by David H. Moffat. There were no further changes in management until January, 1881, when Moffat was succeeded by Samuel D. Landon. Soon thereafter the owners of the bank decided to enlarge its facilities, remove it to a new location, and to change its name. They bought the northwest corner of Sixteenth and Arapahoe streets and erected the bank building now standing there, into which the establishment was removed, and where in August, 1882, it began business as the Union Bank of Denver of which some further account appears on a succeeding page.

Early in the spring of 1874, another party of citizens of Denver had decided to organize a banking corporation under the laws of Colorado. They had quickly made the necessary arrangements and on March 3rd incorporated "The German Bank," of Denver, with authority for $500,000 capital and a paid-in capital of $100,000, to do a general banking business of deposits, loans and discounts. The first Board of Directors chosen by the stockholders was as follows: Joseph L. Bailey, L. F. Bartels, M. D. Clifford, J. M. Eckhart, John Good, John J. Riethmann, Walter A. Stuart, George Tritch and Conrad Walbrach. This board organized by electing John J. Riethmann, President; George Tritch, Vice President; and C. F. A. Fisher, Cashier—the latter having been succeeded within a year by Henry Suhr as Cashier. The bank opened for business on May 4, 1874, in a room on the Fifteenth side of the Fink building on the southeast corner

Northeast corner of Fifteenth and Blake streets in autumn of 1865. First National bank occupied corner room.

William Barth was born at Dietz, Nassau, Germany, December 8, 1829. He obtained the rudimentary education then within reach of poor boys in the ill-governed German Principalities of that time, and in 1849, when he was twenty years old, emigrated to America, landing at New Orleans where he soon found employment. Leaving New Orleans in 1850, he located in Belleville, Illinois, remaining there one year, and then removing to Glasgow, Missouri, where his elder brother Charles who had preceded him to the United States, had settled. In 1860 William and his younger brother, Moritz, located in Parkville, Platte county, Missouri, and engaged in business. The fierce political antagonisms immediately preceding the war of the rebellion rendered the position of the Barth brothers at Parkville uncomfortable. They were outspoken Union men and stood almost alone in asserting their sentiments. After hostilities began they found their situation dangerous, and set out for the Rocky Mountains, making their way to California Gulch where they arrived July 5, 1861. They remained there but a short time when they went back east and located in St. Louis where they began the manufacture of miners' boots for the Colorado trade.

Having once been in Colorado they were no longer content away from it. In the summer of 1862 they returned, William locating in the town of Fairplay, and Moritz in Montgomery, then a mining camp at the farther end of the South Park. In May, 1863, the brothers came to Denver and have since continuously resided here. They engaged in the manufacture of boots and shoes, and opened a retail store on the west side of Fifteenth street, between Blake and Market streets, which soon became a large establishment. Their business prospered and they invested their surplus means in real estate which later became of enormous value.

When the City National Bank was organized in 1872 Mr. Barth became one of its principal stockholders, was elected a member of its first Board of Directors, and was long its President. He also became interested in banks at Del Norte, Alamosa, and Durango which added greatly to the business facilities of those towns. When the South Park railway was projected, he immediately joined the movement and aided with his means and influence in the construction of that important member of Denver's railway system. In 1887 he built the fine stone business building, the Barth Block, that is a conspicuous structure on Sixteenth street. He has large property interests elsewhere in the city and is identified with many of Denver's business enterprises.

Mr. Barth is now retired from active business life, and hopes with his good health to attain a ripe old age. In 1867 he married Miss Charlotte Kaemper, of a well-known Chicago family. They have one son, Charles J. Barth, a resident of Denver.—J. C. S.

William Barth.

of Fifteenth and Market streets, and was soon doing well. Early in 1876 Riethmann resigned the Presidency to make an extended visit to Europe, and was succeeded by George Tritch; Job A. Cooper then becoming Vice President, and late in that year Cashier. In the spring of 1877 the institution was converted into a National Bank, as we shall presently relate; its history in the meantime presenting little of noteworthy importance, excepting the personal career of Walter A. Stuart, one of its Directors, to which we will refer later in this narrative.

In the spring of 1874 George Bucklin, as "Proprietor," opened at (old) number 885 Lawrence street, a concern he called "the Mechanics' Bank," with Tallmadge Norwood as Cashier. It was really more of a loan and real estate agency than a bank, and passed out before the close of its birth-year.

View on Fifteenth street northward from Larimer, about 1874.

The Exchange Bank, an incorporated institution, was chartered and organized in January, 1876, as a bank of deposit and discount, to succeed the private bank of Collins, Snider & Company, of which we have made some account. The capital of the new organization was $200,000, of which $125,000 was paid in. Its first Board of Directors consisted of C. A. Brooks, Samuel G. Collins, F. J. Ebert, J. H. Jones, J. F. L. Schirmer, Rufus H. Snider, and A. J. Williams of the pioneer business firm of Blake & Williams. F. J. Ebert was elected President, and Samuel G. Collins, Cashier; and the bank continued to occupy Collins, Snider & Co.'s quarters at the northeast corner of Fifteenth and Blake streets previously used by the First National. In 1877 A. J. Williams became Vice President, and in 1878 President; F. J. Ebert then taking the Vice Presidency. In January, 1879, J. M. Strickler succeeded Collins as Cashier, and about that time the bank was removed to the northeast corner of Seventeenth and Larimer streets. It continued in business there and without further changes in management until, in 1888, adverse circumstances that included more or less bad banking caused it to suspend payments. Its failure entailed total loss of stockholders' interests and a heavy one to its depositors.

In 1877 the stockholders of the German Bank, organized in 1874, decided that they would make a National Bank of their establishment, and in March of that year the new organization was perfected. The new Board of Directors consisted of Joseph L. Bailey, M. D. Clifford, Job A. Cooper, J. M. Eckhart, John Good, P. Gottesleben, John J. Riethmann, G. G. Symes, George Tritch, and Conrad Walbrach, a majority of whom were Directors in the predecessor institution. They elected George Tritch, President; John Good, Vice President; Job A. Cooper, Cashier; and W. L. Jenkins, Assistant Cashier. The bank had a paid-up capital of $100,000, which in later years was increased to $200,000. The former German Bank had been removed to the Good Building on the northwest corner of Sixteenth and Larimer streets, and in April, 1877, the German National began business at the same place, where it remained, except during the interval in which the second Good Building was being erected there in 1888, until it ceased business. After several years, Cooper retired as Cashier and was succeeded by Assistant Cashier Jenkins who served but a short time, when Cooper resumed his former position. In January 1885, James M. Wilson became Vice President, and in 1886 was succeeded by John J. Riethmann. Immediately after Cooper was elected Governor in 1888, he resigned the Cashiership and was succeeded by Charles M. Clinton who had worked his way up from a subordinate position in the bank. Tritch had continued as President, but in January, 1890, was succeeded by John J. Riethmann. Colonel D. C. Dodge was then elected Vice President, and Charles Kunsemiller, Jr., became Assistant Cashier; the bank at that time having about $3,000,000 of deposits. Colonel Dodge retired in 1892 and was succeeded by John J. Riethmann, Jr.; and at that time the bank had, according to its statement, surplus and undivided profits aggregating more than $380,000. The foregoing constitutes the bank's history and that of its management until after the storm of 1893 swept in.

The German National was one of the several banks that suspended on July 19th of that year. On August 29th, following, it re-opened under an arrangement providing for its depositors accepting time certificates. The Riethmanns, father and son, remained respectively as President and Vice President, but Cashier Clinton withdrew and was succeeded by former Assistant Cashier Kunsemiller. The bank continued in business in a more or less crippled condition until June 6, 1894, when it again closed, and passed to a Receiver who is still dealing with the remnants of its dilapidated resources. Owing to its general weak condition at the time of final collapse, and to the insolvency of some of its larger stockholders, the bank's depositors had received up to the close of 1900 only twenty per cent. of their claims, with prospects of possibly getting five or ten per cent. more from the final round-up of what was left. Stockholders lost their investments, and the 100 per cent. additional liability was paid by those who could. So, the German National wreck was almost beyond salvage.

The Walter A. Stuart who figured as a stockholder and as one of the Directors of the German Bank when it was organized in 1874, proved to be a forger and bank thief of international fame and of extensive operations, whose true name was Walter C. Sheridan. He appeared in Denver in 1873, with an alleged wife, bought property on Grant Avenue, near Sixteenth, on which he built a comfortable dwelling, and began the life of a worthy citizen of considerable means. He was about thirty-eight years of age, of fine appearance and good address, and soon made many friendly acquaintances. His "wife" was equally well qualified in appearance, manners and culture to make most favorable impressions; and with a little boy they had with them, the Stuarts organized what seemed to be a most respectable and worthy domestic establishment. They played well their part and were soon prominent in church and social circles, as the man had brought with him letters of introduction to several well-known Denver people, and other documentary credentials—all the products of his own genius and skill—which served good purpose in a social way. Beyond these, he was supplied with a comparatively large amount of ready money.

When the German bank was organized he subscribed for and paid for a few thousand dollars worth of the stock, and his agreeable and ingratiating ways were instrumental in making him one of the Directors of the new bank. His career and that of his household continued quietly and above reproach until the fall of 1875. Among the depositors at the German bank was T. W. Herr, principal owner of the then enormously profitable Pocahontas silver mine at Rosita, in Custer county. Stuart, in his capacity as a Director of the bank, had become intimately acquainted with Herr who suggested the need for a bank at Rosita. Stuart quietly disposed of what interests he had in Denver, and when Herr next came to the city accompanied the mine-owner back to Rosita to see about establishing a bank at that place. At Rosita they met, as by chance, a man named James R. Boyd, a confederate of Stuart's, who professed to be looking for investments and who also gave ocular proof that he had money to invest. So, Stuart and Boyd fitted up a banking room in most attractive fashion at Rosita and began business, Herr's introductions and influence serving them well in getting deposits from the mining population of the district. Their next step was to secure control and possession, by fraud on the unsuspecting Herr, of the Pocahontas mine; and before he realized what had happened and could get the legal machinery for its recovery, in motion, the two "bankers" tore out the ore day and night and sold it as fast as mined. However, Herr finally closed in on them, and their final mining proceedings involved a riot in which one man was killed and a half-dozen others badly hurt, and wound up by Stuart and Boyd leaving one night without paying their miners, or any part of Herr's claims against them, and with every dollar of money deposited in the Bank of Rosita. A short time afterward Stuart was heard of in Kansas City, in consequence of his unsuccessful attempt to get cash from a bank there for a certificate of deposit for $10,000 on the Bank of Rosita, which he had made payable to himself.

It soon transpired that Stuart was one of the most skillful and dangerous forgers, swindlers and robbers of banks in the world, and that in his operations he had caused to be produced counterfeit railway bonds and other securities on which he and his confederates had realized hundreds of thousands of dollars in New York; that he had successfully robbed a half-dozen banks in the eastern States of large sums of currency; and that he had at one time planned in London a huge raid on the Bank of England through the medium of counterfeit American securities. He had served a couple of terms in penitentiaries before coming to Denver.

After the Rosita affair, Stuart made his way back to New York where he was recognized and arrested, charged with his bond forgeries. Notwithstanding his claims that a mistake had been made, that he was a well-known and wealthy citizen of Colorado, President of the Bank of Rosita, and an owner of large interests in Denver, they tried and convicted him and sent him to the Sing Sing prison for ten years. After his sentence expired he came back to Denver, and on December 13, 1888, in company with another noted bank thief, named Hovan, attempted a sneak robbery of the People's Savings Bank then located on Arapahoe street. Stuart did the "outside work" while Hovan, who was a small fellow, slipped into the bank vault where he was captured by the bank people before he could put his hands on any money. Stuart, seeing the fate of his comrade, decamped and was seen no more in Denver. Hovan was kept in jail until the 20th and then released on a worthless bond, and likewise disappeared. Stuart was later heard of as the master hand in several other forgeries and robberies in the eastern States, and finally as having been implicated in an attempted bank robbery at Montreal, Canada, where he was arrested and thrown into jail where he died in January, 1890.

It was the general belief, especially in police circles, that Stuart's Colorado operations were a disappointment to him and his confederates. His long, painstaking and, to him, irksome preparations, indicated that some huge swindle or bank robbery was meditated, but could not be accomplished when the probationary period had gone far enough. For a man of his kind, the quiet, orderly life of a respectable citizen, cultivating his garden and sometimes selling his vegetables in market, rearing chickens, calling on his neighbors, and attending church, were things to be done for a year or two only as part of the preliminaries to some great scheme of plunder; and for one whose robberies and swindles had involved hundreds of thousands of dollars, the results of the Rosita operations must have appeared comparatively meager and unprofitable after so much careful and trying preparation.

In the spring of 1881 a rather bold yet somewhat comical attempt was made to set up in Denver what was evidently intended to be a fraudulent bank. On February 21st of that year, there was filed in the office of the Secretary of State a certificate incorporating the Commercial Bank of Denver by James L. Vanwoert, Pliny S. Rice, Horace W. Cotton, P. T. Smith, and Ellen Vanwoert, with $100,000 capital, in shares of $100 each. Of these, the document said Ellen Vanwoert had taken 600, James L. Vanwoert 250, and the other three fifty shares each; and it also set forth that James was to be President, and Ellen, Cashier, of the new institution. In the initial stage of the proceedings nothing connected with the enterprise aroused so much interest in the city as the fact that the new bank was to have a woman for Cashier; and masculine Cashiers trembled when they thought of the innovation. In March the Vanwoerts and their associates certified to the Secretary of State that the whole amount of capital had been paid in, but did not say the payments had been cash; the document being significantly silent on that point. The next step was to secure quarters for the bank, and from several offered locations the northeast corner of Sixteenth and Curtis streets was chosen, and leased for five years with an option on its purchase at $80,000. Notice was then given that the new bank would open April 1st, and would do business on a very liberal basis, especially in loaning money on mining shares and on the "securities" of other development enterprises. The bank did not open April 1st, the failure having been explained as due to delay in arrival of the safe and other fixtures; though some furniture had been placed in the room. In the meantime the suspicions of the city newspapers had been aroused and they had investigated Vanwoert's career and that of his alleged wife, Ellen; and on April 12th published this result: the Vanwoerts had come to Denver from Massachusetts about the first of the year, and had claimed to have a large amount of capital; James had served seven years in the Massachusetts penitentiary for forgery, and another term for counterfeiting; he had opened a fraudulent bank at Winsted, Connecticut, of which he was "President" and his alleged wife "Cashier," and after getting possession of a considerable sum of money had suddenly disappeared; and several indictments for swindling stood against James at Springfield, Massachusetts. Of course, publication of these interesting reminiscences caused the immediate collapse of the Commercial Bank of Denver. Meanwhile Vanwoert had actually succeeded in having himself entrusted with $500,000 of the Longmont, Middle Park & Pacific Railroad Company's stock which he had engaged to "negotiate in the east" for the company, and had intended starting for New York on the day the newspapers published his record and cut short all his proceedings. Cotton, Smith and Rice were Denver men, and two of them, at least, were evidently mere dupes. Cotton was "a real estate man" of small capital and good reputation; Smith, a dentist who had been in the city less than a year, with little or no capital, and with nothing against his character; Rice was stated to have been "a speculator," with a reputation not altogether free from blemish. The Vanwoerts quickly left Denver and were heard of here no more.

In the summer of 1881 the Denver Bank was organized, with a capital of $50,000, chiefly through the instrumentality of A. E. Pierce, who was its largest stockholder. He had been a Denver pioneer of 1858, but some years later had returned to Lafayette, Indiana, where he became and remained for about ten years the Assistant Cashier of the National State Bank of that city. Coming back to Denver in 1881, the Denver Bank was organized with G. W. Gildersleeve, President; D. C. Wyatt, Vice President; and Mr. Pierce, Cashier. The bank was established at the northeast corner of Larimer and Twelfth streets, where it began business August 1, 1881. In 1883 John L. Dailey succeeded Gildersleeve as President, and late in 1884 the bank's owners decided to discontinue its business. It had been organized to meet seeming demands in the west side, but soon afterward the general drift of improvements and affairs set in strongly toward the east side, to the serious detriment of the other, and made profitable banking in that locality unpromising. Therefore the bank notified its depositors to withdraw their accounts, and in the winter of 1884-85 honorably wound up its affairs, paying all its obligations in full.

The State National Bank was organized in the spring of 1882 with a paid-up capital of $120,000, and with Elias R. Barton, C. E. Billings, J. A. Chain, Charles Hallack, Charles F. Hendrie, Julius C. Lewis, George N. Wheeler, and E. P. Wright as its Board of Directors. George N. Wheeler was elected President; Charles F. Hendrie, Vice President; and E. P. Wright, Cashier; and the bank opened for business May 1, 1882, in the McClintock Building at the northeast corner of Sixteenth and Larimer streets, in a room fronting on Sixteenth; the corner room in the same building being then occupied by the First National bank. In January, 1884, Julius C. Lewis succeeded Hendrie as Vice President; and when the First National in 1885 moved across the street into the Tabor Building, the State National occupied the quarters it had vacated. The organizers of the State National were almost wholly active and well-to-do business men, but the concern for several years did not have satisfactory prosperity. In May, 1888, Cashier Wright resigned on account of failing health, and the management was reorganized by Frederick C. Kilham, John L. McNeil, and Edward L. Raymond. The bank's paid-up capital was increased to $300,000, to which was added a surplus fund of $45,000; a majority of the old stockholders continuing their interests in the concern. Under the new arrangements John L. McNeil became President; Edward L. Raymond, Vice President; and Frederick C. Kilham, Cashier. The only subsequent change in management occurred in January, 1892, when Edward E. Quentin succeeded Kilham. With the increase of its capital and surplus, and with its new administration, the bank had made better headway, and its business had a most encouraging expansion. The State National suspended payments on July 19, 1893, but resumed on August 31st. It managed to continue in business until June 25, 1894, when it transferred its affairs to the Union National and passed out of existence.

The Merchants' National Bank was also organized in the spring of 1882, through the instrumentality of Samuel N. Wood, with a capital of $100,000. Its first Board of Directors consisted of William M. Bliss, D. C. Dodge, A. W. Waters, Henry R. Wolcott, and Samuel N. Wood. The Board organized by electing Henry R. Wolcott, President; D. C. Dodge, Vice President; and Samuel N. Wood, Cashier. The bank opened for business on May 1, 1882, in a room on the Sixteenth side of the McClintock Building at Sixteenth and Larimer streets; and, though its career proved a brief one, it made a good beginning. On December 31, 1882, for economic reasons, its business was transferred to the First National Bank, and as a separate financial identity the Merchants' National ceased to exist.

The Union Bank of Denver came into existence on August 26, 1882, as the successor of the Denver Safe Deposit and Savings Bank; or rather as that bank under a new name and with amplified facilities. On a preceding page we have related the history of the parent concern up to the time of the change. With that change, the capital was increased to $100,000, the savings department discontinued, larger and better safe-deposit vaults provided, and, as the Union Bank, the establishment entered upon a general banking business. Under this new arrangement General Pierce was President; Cyrus W. Fisher, Vice President; S. D. Landon, Treasurer; W. D. Todd, Cashier; and Charles R. Pierce, Assistant Cashier. A few months later, M. Spangler became Treasurer, and so continued about two years when he succeeded Fisher as Vice President. There were no other changes in the original organization until 1887. Late in 1886 General Roger W. Woodbury had purchased a controlling interest in the bank, and on January 1, 1887, was elected President and became its general manager. With Mr. Woodbury, M. Spangler remained Vice President; W. D. Todd, Cashier; and Robert C. Lockwood became Assistant Cashier. Under the new management the business increased very rapidly. At the time Mr. Woodbury bought control, the building and the deposit vaults were sold to J. V. Dexter who organized the Union Safe-Deposit & Trust Company with $50,000 capital, and transferred the building and vaults to it. Thereafter the two branches of business were conducted independently, the Deposit and Trust Company still continuing its part of it. In 1888 the stockholders of the Union Bank added enough to the surplus fund to make it $100,000, thus giving the bank a working capital of $200,000. Mr. Todd retired from the Cashiership in January, 1890, and until the bank became a National one about six months later Assistant Cashier Lockwood served. The Union had prospered well under President Woodbury's general management; and in the summer of 1890 the institution became the Union National Bank of Denver, of which some account is hereinafter given.

In the spring of 1887 arrangements were made for the organization under State law of another savings bank, notwithstanding the adverses and reverses that had theretofore attended some such enterprises in Denver. Accordingly, "The Colorado Savings Bank,"—the second of that name—with an authorized capital of $250,000, and a paid-up capital of $50,000, was incorporated under the laws of Colorado, June 8, 1887. The stockholders selected F. K. Atkins, E. M. Battis, J. G. Benkelman, John A. Clough, William G. Evans, C. S. Howard, B. Lombard, Jr., James L. Lombard, W. B. Mills, Jacob Scherrer, and Walter J. Wildman as Directors, who elected John A. Clough, President; F. K. Atkins, Vice President; and Walter J. Wildman, Cashier; (the latter being succeeded about a year later by C. O. Atkins.) The bank found quarters in the old and historic brick building on the southeast corner of Fifteenth and Larimer streets, in the second story of which Governor Gilpin established the first Territorial Executive offices. The concern opened July 2, 1887, and was soon doing a flourishing business. In May, 1889, it removed across Larimer street to the Railroad Building, and at that time had $425,000 of deposits, and $25,000 of a surplus fund. James L. Lombard, who was a leader in its organization, was President of the First National Bank of Kansas City, and of the Lombard Investment Company of Boston; the later failure of the last-named concern having been a disastrous one. Early in 1892 Charles West succeeded Clough as President, and Alfred Butters became Vice President; C. O. Atkins continuing as Cashier. In January, 1893, F. K. Atkins was elected President, which was the last change in the concern's management. The Colorado Savings Bank had apparently prospered, but on July 17, 1893, in company with the People's Savings, and the Rocky Mountain Savings, it closed its doors and made an assignment; these banks, with liabilities aggregating about $3,500,000, having been the first three of Denver's financial institutions that suspended in that summer of trouble. Prior to that time, management of the Colorado's business had been largely in the hands of F. K. Atkins, long its Vice President (and its President in 1893); and C. O. Atkins, its Cashier. The bank did not resume, as its failure proved a bad one; and its affairs have not yet been closed by the Assignee.

The histories of the People's Savings and Deposit, the People's National, and the People's Savings banks constitute one story, as one group of men and one series of intermingled transactions were identified with all of them. In the spring of 1888 Mortimer J. Lawrence, who had previously come hither from Cleveland, Ohio, bringing with him some business prestige and a fair amount of capital, was instrumental in organising the "People's Savings and Deposit Bank." Its certificate of incorporation filed June 4, 1888, named M. J. Lawrence, W. W. Porter, Scott J. Anthony, J. Jay Joslin and F. A. Knight as incorporators, and listed a total of forty-four stockholders; the capital stock having been $150,000, all of which was paid in, and one-fifth of which was taken by Lawrence. Edward F. Bishop, James H. Clemes, J. R. Hicks, J. Jay Joslin, Frank A. Knight, M. J. Lawrence, Thomas M. Patterson, William W. Porter, Charles A. Raymond, F. L. Rohlfing, E. L. Scholtz, George W. Skinner, and Charles S. Thomas were chosen Directors, and they elected M. J. Lawrence, President; Charles A. Raymond, Vice President; and Charles Y. McClure, Cashier. The bank was established at 1644 Arapa-

---

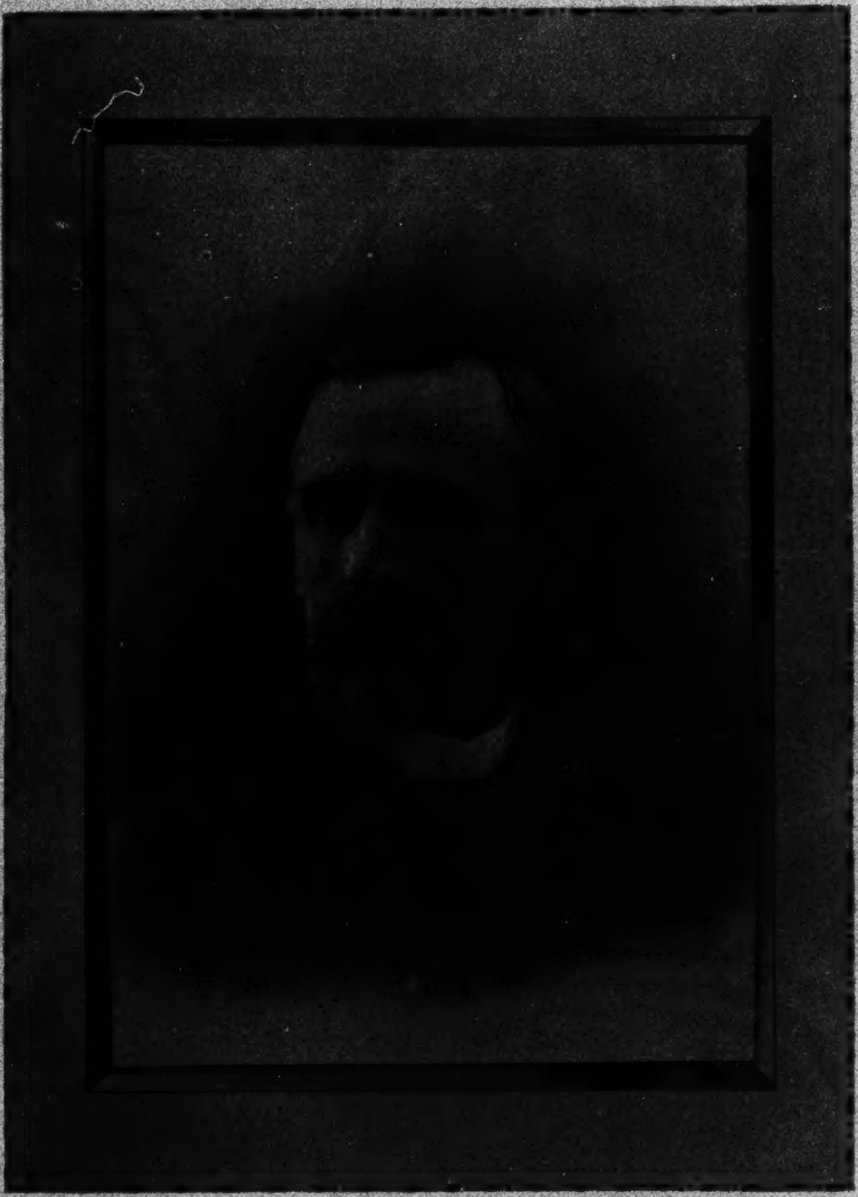
The late George W. Kassler was for thirty years actively and honorably identified with the business life of the city of Denver. He was a native of New York State, having been born in Canajoharie, September 12, 1836; an old town in the east-central part of that State. During his early boyhood he attended the public schools in his native town, but at the age of eleven as a clerk in a general store he began his business career in which he acquired his broad, practical education, and knowledge of the affairs of life. When he was fifteen he obtained a situation in a store at Cooperstown, New York, and soon afterward was appointed clerk in the post-office of that city, a position he retained until 1857, when he decided to locate in the west. Going to Omaha in that year he entered the banking house of L. R. Tuttle and A. U. Wyman, each of whom in later years became Treasurer of the United States.

Mr. Kassler remained in Omaha until the spring of 1860, when he crossed the plains to Denver, reaching here in April of that year. Soon after his arrival he entered the old-time banking house of Turner & Hobbs as its cashier, where he remained until the firm discontinued business in 1861. He then became assistant to Major John S. Fillmore who was paymaster in the United States army in this department. Mr. Kassler was associated with Major Fillmore until 1862, when he received the appointment as assistant cashier at the Denver Mint, in which position he continued until 1864 when he resigned to engage in business on his own account. He established a book and stationery store on the southwest corner of Blake and Fifteenth streets, a business to which he subsequently added that of fire and life insurance and in which he continued for ten years. He also served as President of the Denver Board of Fire underwriters, a position he resigned when he entered the First National Bank.

In 1873 Mr. Kassler was elected City Treasurer and served the term of two years. He was always an ardent friend of the public schools and for six years ending in 1883 most capably served as a member of the Board of Education from District No. 1. The Hyde Park, Emerson and Whittier school buildings were erected during his term.

In 1874 Mr. Kassler entered the First National Bank as Assistant Cashier, his friend David H. Moffat then being its Cashier. In 1880 when Jerome B. Chaffee retired from the Presidency of the bank, Mr. Moffat was chosen to succeed him, and Mr. Kassler was elected Cashier. In 1882 the Merchant's National Bank was absorbed by the First National, and Mr. Kassler availed himself of the opportunity afforded by the consolidation to resign and retire for rest and recuperation, having accumulated a comfortable fortune.

In 1883 Mr. Kassler was appointed one of the State Board of Capitol Managers and continued to serve until 1889 when he resigned on account of ill health. After his retirement from active business Mr. Kassler did not fully regain his health. Later it broke down and a protracted illness ensued which ended in his death on July 30, 1890. Few men have been more sincerely beloved by their associates and more profoundly respected and esteemed by their fellow-citizens than he.—J. C. S.



George W. Kassler.

hoe street, in the Londoner Block, and opened its doors on July 9, 1888. It rapidly picked up business, and within a year had become a flourishing institution.

Encouraged by the success of the savings bank, the same group of men in the summer of 1889, organized the "People's National Bank," with a capital of $300,000, all of which was paid in. Its Board of Directors consisted of M. J. Lawrence, C. Y. McClure, T. M. Patterson, F. A. Knight, C. A. Raymond, J. H. Clemes, C. S. Thomas, F. L. Rohlfing, J. R. Hicks, W. W. Porter, J. J. Joslin, George W. Skinner, and E. F. Bishop. M. J. Lawrence was elected President; D. D. Muir, Vice President; and Charles Y. McClure, Cashier. The bank began business on August 20, 1889, at 1644 Arapahoe street, and like all the others in those days of inflated and seemingly limitless prosperity, the new concern flourished apace.

In preparation for this expansion the name of the original savings bank had been on July 31, 1889, changed to the "People's Savings Bank," and its capital reduced to $50,000, with authority to subsequently increase it to $250,000; Lawrence, Raymond, Skinner, Porter, Joslin, Clemes, Knight, Rohlfing, and Patterson then constituting its Board of Directors. The President, Vice President, and Cashier of the People's National had been elected to the same offices in the People's Savings, with F. C. Schroeder as Assistant Cashier of the latter.

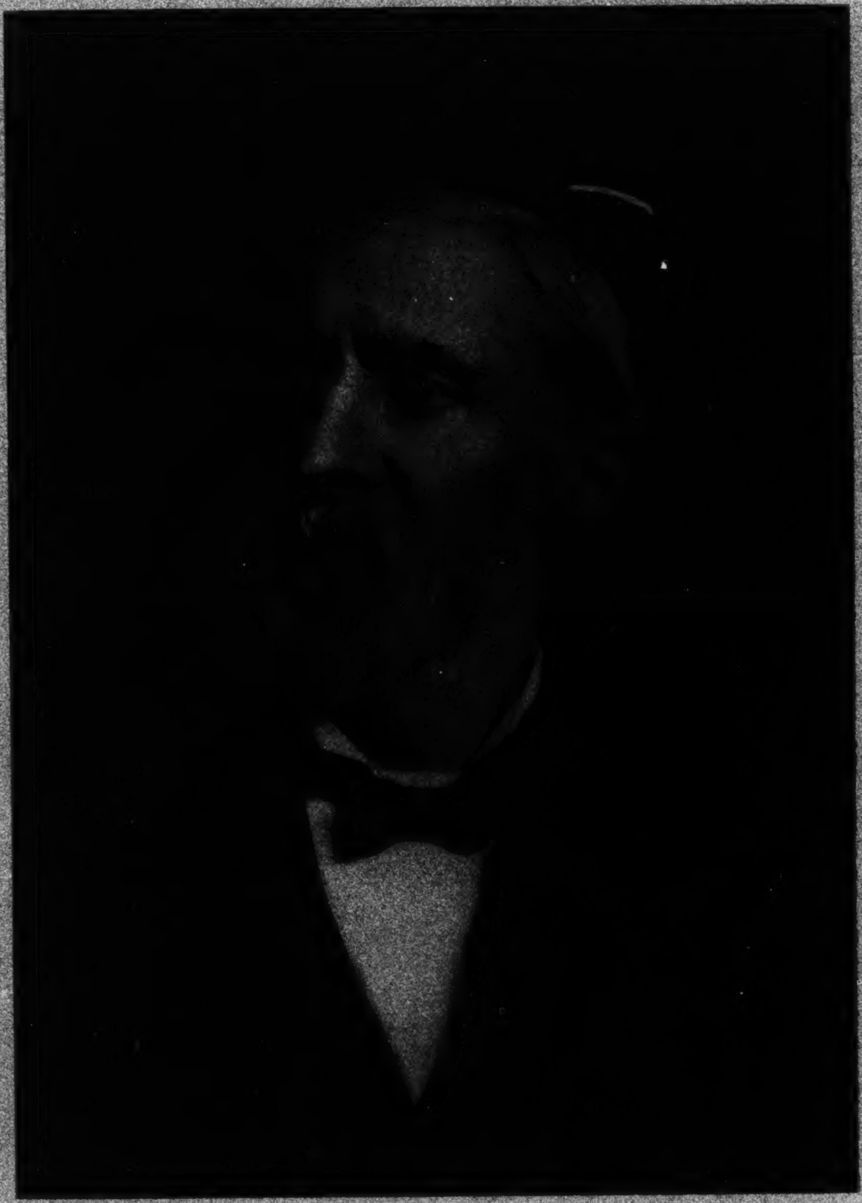
The People's Savings Bank was thus made merely an adjunct of the People's National Bank, and the two set out together on prosperity's highway. The capital of the National was soon increased to $600,000, and the fine office building at the southwest corner of Sixteenth and Lawrence streets was built by this bank, and completed in 1890; and in it the two institutions were installed in attractive and commodious quarters. At that time the National had surplus and undivided profits figured at nearly $100,000. Cashier McClure had retired on February 1, 1890, and had been succeeded by John C. Mitchell. When the latter resigned to become Cashier of the Denver National Bank in 1891, F. C. Schroeder became Cashier of both banks, with M. L. Lawrence as Assistant Cashier of the National Bank, and C. W. Keith as Assistant Cashier of the People's Savings Bank; which positions they occupied when the banks closed in 1893.

These allied institutions were among the financial concerns that were early prostrated by the blast of that year. The Savings closed its doors on July 17th, and the National followed on the 19th; the two having liabilities aggregating upward of $2,000,000. The Savings Bank at once made an assignment and went into a state of suspended animation. An adjustment of its affairs enabled it to resume business June 1, 1894, which was continued in a half-hearted way, under Vice President Muir, and with S. E. Darby as Cashier, until June 29, 1895, when it gave up and passed to a Receiver appointed by our District Court. At first its condition and assets seemed unpromising, but upon the later claim, which was a subject of much litigation, that a large amount of its resources had been diverted to the use of the National prior to the panic of 1893, a judgment for $475,000, the largest ever rendered in a Colorado Court in general litigation, was given the Receiver against the stockholders of the National. This, joined to proceeds of other assets and after the judgment had gone the round of the Courts and had been finally confirmed, enabled the Receiver, in 1900, to pay the Savings Bank's de-

---

General Roger Williams Woodbury, descendant of an old English family the history of which covers several centuries, was born in Francestown, New Hampshire, March 3, 1841; his father having been a farmer. In 1846 his parents removed to Manchester, New Hampshire, where, during his boyhood, Gen. Woodbury attended the public schools and at intervals was employed in a cotton mill. At the age of seventeen he entered a printing office where he learned the trade of a compositor, and was so employed at the outbreak of the civil war.

In the summer of 1861, in response to the call for men for three years' service, Gen. Woodbury, at the age of twenty, enlisted as a private in the Third Regiment, New Hampshire Volunteers. His regiment did much hard service. It was part of the land forces operating during the earlier years of the war around Port Royal and Charleston, South Carolina, and later in Florida. By successive promotions Gen. Woodbury became Second Lieutenant, First Lieutenant, and at the age of twenty-three, a Captain in his regiment. In 1864 his regiment formed an original part of General Butler's Army of the James, and was engaged in many of the battles around Richmond and Petersburgh. He was wounded by a case-shot in the right thigh, in the fearful struggle in front of Petersburgh, known as "the battle of the Mine," but remained on duty. He participated in both of the expeditions to capture Fort Fisher at the mouth of the Cape Fear River in North Carolina; and in the second was the chief ordnance officer of the expedition, on the staff of General Terry. He continued in that position on the re-establishment of the Tenth Army Corps, until the end of the war, and was mustered out with his regiment on the second of August, 1865, a little over four years from the day of his enlistment. Almost immediately on being mustered out, he resumed his trade, as a compositor, but soon became the local reporter of the paper, as which he remained until he emigrated to Colorado in the early spring of 1866. That summer he worked in the placer mines of Summit County, and then worked as a compositor on the initial number of the Golden Transcript. Later, in February, 1867, he worked on the initial number of the paper which became the Denver Tribune, of which he became local



Roger W. Woodbury.

positors in full, and also to have within sight at the close of our record enough to raise the value of the bank's stock to par or above par. Results with the National were quite different. About a month after its suspension in 1893 it reopened its doors, and for two or three years thereafter did some business; Lawrence, Muir and Schroeder continuing, respectively, as President, Vice President, and Cashier. Finally its managers decided to go into liquidation and to terminate its crippled existence; and at one stroke half its capital was charged off. Operations in liquidation on its own account continued until the autumn of 1896 when the suit against it and its stockholders was instituted on behalf of the Savings Bank. Under this new trouble it collapsed, and a Receiver for it was appointed by our District Court. Later it was placed in the hands of a United States Receiver who is still dealing with what is left of its affairs. Its depositors have been paid in full, but the stockholders lost their entire investments and the solvent ones have had to pay 100 per cent. upon their additional liability. Settlement of the affairs of these two banks involved adjusting new difficulties, defined responsibilities on lines broader than were formerly measured and revealed much of interest to bankers and to lawyers. M. J. Lawrence, projector of the two institutions, returned to Cleveland after the final collapse and is now a resident there.

The "North Denver Bank" was incorporated to do general banking business in that section of the city, on August 15, 1889, with a capital of $50,000 invested by sixteen stockholders. Its certificate named as Directors, Caleb F. Ray, of Pueblo; Albert E. Gipson, of Greeley; Hiram G. Wolff, Silas S. Kennedy, Edwin W. Ray, Adolph J. Zang, and Amos H. Root, of Denver. C. F. Ray became President; Gipson, Vice President; and E. W. Ray, Cashier. The bank was established at the northwest corner of Fifteenth and Central streets. In January, 1891, S. S. Kennedy became its President; W. H. Yankee, Vice President; and A. H. Root, Cashier; and so remained until July 18, 1893, on which day the bank made an assignment to Cashier Root, having been one of six city banks that closed on that day. It did not resume, but its depositors were paid in full; all the losses falling on the stockholders.

Preparations for organizing the Commercial National Bank were completed late in the summer of 1889. Its capital stock of $250,000 was all paid in at the start, and on September 12, 1889, it opened for business at 906-08 Sixteenth street. Its first Board of Directors consisted of E. F. Bishop, C. L. Burpee, W. F. Callaway, C. D. Cobb, C. H. Dow, S. H. Hastings, H. W. Hobson, C. M. Kittredge, Frank Latcham, E. W. Merritt, Jacob Scherrer, G. W. Sheldon, A. B. Sullivan, T. D. Wayne, and Alfred Wolff. The executive organization was C. H. Dow, President; C. D. Cobb, Vice President; and F. H. Dunleavy, Assistant Cashier. The position of Cashier was left vacant until January, 1891, when Mr. Dunleavy was advanced to it. In January, 1892, J. B. Sibley became Assistant Cashier, and in January, 1893, E. F. Bishop succeeded Mr. Cobb as Vice President. The organization as indicated in the foregoing continued until the bank went down in the storm of 1893. It could not resume. Its failure was a bad one for the stockholders, who lost their total investments and had the additional liability to pay in full. Preferred depositors have been paid in full and the others about seventy per cent. of their

---

editor in a couple of weeks, and later manager and part owner.

Of General Woodbury's subsequent career as one of the conspicuously useful and honorable citizens of Denver, as one always ready and influential and forceful in undertakings for the city's advancement and welfare, we need not in this note enter into details. They appear in many of these chapters having to do with that part of our Story of Denver covering the period since he became identified with the city thirty-five years ago. Proprietor and editor of the old Denver Tribune, and subsequently proprietor and editor of the present Denver Times; a leader in the organization of the Chamber of Commerce, and long its President; one of the founders of the library of which our present Public Library is the outgrowth, and a member of the latter's present Board of Directors; President of the old Union Bank and of its successor, the Union National Bank; and a participant in many other business and civic undertakings associated with the development of Denver. As we have said, the prominent part he has borne in various activities is set forth in the course of the story told in this volume.

In 1881 Governor Frederick W. Pitkin appointed Gen Woodbury a Brigadier General in the Colorado National Guard, with duty on the executive staff; a service which continued until the expiration in 1883 of the Governor's second term. Averse to the conditions attaching to political life, General Woodbury has never sought public office. However, in 1884 he was elected Regent of the State University a position in which his qualifications and inclinations enabled him to render the State a great service. A member of the Masonic fraternity since his early manhood, he has earnestly and faithfully served that brotherhood through many years. In this service he rose to Grand Master of the Grand Lodge, Grand High Priest of the Grand Royal Arch Chapter, and Grand Commander of the Grand Commandery of Knights Templar; and was long Chairman of the Committees on Jurisprudence of all those bodies. As organizer and President of the Masonic Temple Association, he was a leader in the movement resulting in the erection of that fine edifice, the financial foundations of which he laid. He long ago became a member of the Military Order of the Loyal Legion, and of the Grand Army of soldiers who fought in the cause of an united country.—J. C. S.

claims; the remnants of the bank's assets still being in the hands of a Receiver. This bank was badly managed by its President, one of whose performances was the loan to a hernia-truss company in which he was by some people believed to have been interested, of $130,000—more than half the bank's capital—on collateral "security" that proved to be worthless and left the loan to become a total loss.

Late in the autumn of 1889 another member was added to the Denver family of National Banks by the organization of the American National. Its capital stock of $250,000 was quickly subscribed and fully paid. The stockholders selected as Directors F. J. Bancroft, Frank Church, J. J. Hagus, S. P. Haines, L. F. Liebhardt, N. B. McCrary, J. W. Nesmith, T. J. O'Donnell, C. S. Owens, I. B. Porter, W. C. Walker, A. D. Wilson, and Phillip Zang. These Directors organized by electing I. B. Porter, who was the leader in the enterprise, President; J. M. Armstrong, Vice President, and Howard Evans, Cashier. The bank opened for business on December 2, 1889, in the Granite Building on the southwest corner of Larimer and Fifteenth streets. It flourished from the start, and within a few months its capital was increased to $1,000,000; the management remaining the same. In January, 1891, Frank Church was elected First Vice President; W. C. Walker, Second Vice President; and M. G. Hawley, Assistant Cashier. In September, 1891, I. B. Porter retired from the Presidency and was succeeded by F. P. Ernest; the bank having been earlier in that year removed to the Ernest & Cranmer Building on the southwest corner of Seventeenth and Curtis streets.

The American National successfully withstood the trying times of 1893, and in January, 1894, Charles M. Clinton, formerly of the German National Bank, became its Vice President; the second Vice Presidency having been dropped. On June 21, 1894, the American National absorbed the old City National Bank. There were no further important changes of management in the American until January, 1896, when John R. Hanna became President. On April 22, 1896, the bank was compelled by stress of adverse circumstances to close its doors, and beyond subsequent transactions in liquidation it did no more business. At the time of its suspension its liabilities to depositors aggregated $865,000. The bank did not pass to a Receiver, but under an agreement of its depositors, approved by the Comptroller of the Currency, it began, in January, 1897, the liquidation of its affairs. This it did successfully, and early in January, 1900, the last installment due depositors was paid. The bank had maintained its organization, and its liquidation was conducted under Julius A. Myers, President; Thomas E. Poole, Vice President; and John R. Hanna, Cashier. Its affairs are not yet closed, and it is anticipated that remaining assets will yield enough to return to stockholders a large proportion of their investment.

Much of the history of the Union National Bank is involved in that of the Union Bank, which has already been outlined. The older institution had prospered so well in its later years under General R. W. Woodbury's management that, early in 1890, it was decided to incorporate it under the National banking laws with a largely increased capital. It was chartered June 19, 1890, with a capital of $1,000,000, three times the entire amount having been subscribed within one week. But few changes were made in the directory from that of the Union Bank. Mr. Woodbury was made President of the new organization; M. Spangler, First Vice President; William N. Byers, Second Vice President; W. H. Trask, Cashier; and Robert G. Lockwood, Assistant Cashier. The new bank remained at the old stand at Sixteenth and Arapahoe streets, and within two years accumulated a surplus and undivided profits amounting to nearly $100,000. Those were the days of unbounded prosperity, and no contingency seemed more remote and improbable than that misfortune would come to this fine, well-equipped, well managed and most prosperous financial institution. The Union was one of the banks that was compelled to temporarily suspend on July 18, 1893. It resumed business on August 21, 1893, and soon afterward reduced its capital to $500,000; Spangler then retiring as First Vice President, and leaving Mr. Byers as Vice President. For two years thereafter its career was one of much promise. On June 21, 1894, it had taken over the business, assets and liabilities of the State National Bank and removed to the quarters of that retiring institution in the McClintock Building at Sixteenth and Larimer streets. In consequence of that transaction, John L. McNeil, President of the State National, became Vice President of the Union National; General Woodbury continuing as President, and Trask as Cashier. All went well until the summer of 1895. At that time a stockholder who alleged dissatisfaction with the management certain affairs of the State National had received at the hands of its former President, instituted proceedings to have a Receiver appointed to independently close the remaining business of the State National. This dissatisfaction had no bearing upon the Union National's connection with the State National's affairs, and the Receivership proceedings were in no sense directed toward the Union National. But the general public did not understand the situation. The result was that the Union was compelled to close on July 29, 1895, and did not again re-open. Since that time its Receiver has paid all depositors in full, and has remaining assets sufficient to realize for the stockholders a considerable part of their original investments; the affairs of the Union not yet having been closed. Thus it was that a perfectly solvent bank doing an increasing business was forced out of business by the reflex action of peculiar circumstances with which it had nothing to do and over which it had no control.

The Rocky Mountain Dime and Dollar Savings Bank was incorporated under Colorado law May 7, 1891, with a capital of $50,000 and with authority to increase it to $250,000. Its certificate named as Directors, Frank S. Woodbury, R. W. Wooubury, K. G. Cooper, S. P. Rose, R. W. Steele, R. W. Worcester, W. H. Montgomery, F. O. Vickers, and George W. Brooks. F. W. Woodbury became President; K. G. Cooper, Vice President; and E. S. Thompson, Cashier. The bank was located at 1515 Arapahoe street, and had acquired a good line of business when the strain came in 1893. It was one of the three savings banks that closed on July 17th, of that year. It re-opened about six weeks later and continued business until April 20, 1894, when it was re-organized and reincorporated as the Rocky Mountain Savings Bank, capital $50,000, with F. W. Woodbury, President; K. G. Cooper, Vice President; G. F. Clark, Cashier; and practically the same Directors and stockholders. The bank's career was terminated August 6, 1895, when unavoidable circumstances caused it to make an assignment. Its depositors suffered some loss, but its affairs are not yet closed.

In the summer of 1891 Joseph N. Stephens, Frederick H. Hanchet and others established the "Capital Bank" of deposit and discount, which appears not to have been incorporated, as we found no record of it in the office of the Secretary of State. The bank was located at 1634 Curtis street, with Stephens as President, R. D. Hobart, Vice President, and W. J. Robinson, Cashier—the latter having been succeeded within a year by Frederick H. Hanchet. The bank did not acquire very large proportions, but continued with a growing business until July 18, 1893, when it made an assignment to its Cashier. Its affairs have been closed, and it is now but a memory; though perhaps not a satisfactory one to everybody who was concerned in its misfortunes.

The East Denver Savings Bank was incorporated November 16, 1891, with a capital of $25,000; its certificate naming as its Directors George W. Williams, H. E. Pack, Frank P. Miller, F. Hornung, Andrew Halligan, Charles G. Youngstrom, G. T. Spriggs, M. M. Phelps, and M. Spangler. With Williams as President, and Pack as Cashier it began business at 4026 Market street—out near the Union Pacific shops. Its officers remained the same until in 1893 the little bank fell a victim to the panic. A few months later it was re-opened at 1017 Fifteenth street with W. W. Brasie, President; and William N. Byers, Vice President; Pack continuing as Cashier. But the shock had been too great, and it ended its career in 1894; though without much, if any, loss to its depositors.

The "Mercantile Bank" was incorporated February 14, 1893, with $100,000 paid-up capital. Its certificate named as its stockholders, William N. Byers, Christopher C. Gird, William F. McClelland, John A. Hall, James H. Nichols, George W. Currier, Robert C. Lockwood, J. W. Jones, Jr., Samuel H. Elbert, W. G. Evans, C. E. Herrington, and F. Herrington. Gird became President, Byers Vice President, and Lockwood, previously Assist-

---

David H. Moffat, whose name and personality are so conspicuously identified with the upgrowth of this city and the development of this State, is a native of the State of New York. Born in Orange county, July 22, 1839, he lived the life of a country boy with the meager educational advantages afforded at that time in country places, until he was twelve years old. He then went to New York city, and though but little more than a child in years, found employment as messenger in the New York Exchange Bank. With that employment, he entered upon a practical education for the career for which he would seem to have been predestined. He remained with the New York bank about four years, having in the meantime risen by successive promotions to the position of Assistant Teller, the duties of which in banks of that period were much like those of present-day assistant cashiers.

In 1855, in response to a request and the advice of a brother who had located in Des Moines, Iowa, Mr. Moffat left New York and went to that then far-western town and immediately entered the banking house of A. J. Stevens & Co., as Teller. While filling that position, in 1856, Benjamin F. Allen then and for many years afterward a prominent capitalist of Des Moines, asked young Moffat to become Cashier of a new bank about to be established by him in the then very new town of Omaha. Accepting the proposition, Mr. Moffat took another long step farther westward, and in the autumn of 1856 was in charge of Allen's Omaha bank as Cashier, when he was but a few months past seventeen years of age. He remained as Cashier of that bank until, in 1859, it went out of business.

In that year, as we have elsewhere related, an enormous tide of emigration set out for the Pike's Peak country, and after the Omaha bank's business had been closed, Mr. Moffat determined to do as so many others were doing—cross the plains to Denver. Forming late in that year a partnership with C. C. Woolworth, of St. Joseph, Mo., as dealers in books, stationery and the various other belongings of that business, under the firm name of Woolworth & Moffat, a stock was loaded in a prairie schooner in charge of which Mr. Moffat set out across the plains early in 1860, and arrived here on the 17th of March; his partner remaining in St. Joseph and subsequently forwarding new supplies as the demands of the business required them.

Mr. Moffat began business in a two-story building on Eleventh street, below Larimer, on the Auraria side of Cherry creek. Subsequently the store was removed to the Denver City side, and occupied a building, shown in one of our illustrations, on the northward side of Larimer street, between Fourteenth and Fifteenth streets. Some

David H. Moffat.

ant Cashier of the Union National, Cashier. The bank was established in the corner business room in the Mining Exchange Building, but its career was brief. It closed on July 18, 1893, and made an assignment to W. F. Robinson. A month later, under an arrangement by which its depositors were given time certificates, it re-opened for business. But under the existing conditions there appeared to be no satisfactory future for it, and therefore in January, 1894, the stockholders provided means for liquidating its obligations, and the bank discontinued business. The losses, which were serious, fell wholly upon the stockholders.

With two or three exceptions that figure in the history of still existing banks, the foregoing accounts in this chapter include something of the history of all of Denver's pioneer banking establishments, and of those that constituted the rather long list of her later ones that were but now are not. Of the latter, only the foregoing outline sketches are now worth while. The downfall of those that went out in adversity in consequence of 1893, entailed a world of trouble upon many men; and something further of the conditions and circumstances that laid them low, and of the results thereof, may be left to appear in a subsequent chapter, while we pass to consideration of financial institutions associated with the present and more fortuitous times.

The First National Bank is the pioneer among Denver's present financial institutions, having had an uninterrupted career without change of name since the spring of 1865. As its name indicates, it was the first bank organized in Denver under the National banking law; and was, furthermore, the first, of the National banks in Colorado. It was the successor of the private banking house of Clark & Company (Austin M. and Milton E. Clark) that had succeeded the older and locally famous firm of Clark, Gruber & Co.; the available assets and general business of Clark & Company having been merged in the new institution. Arrangements for organizing the First National were completed early in the spring of 1865, and its certificate of authority from the Treasury Department at Washington to begin business was dated April 17, 1865.

The original stockholders of the First National were Bela S. Buell and Jerome B. Chaffee; Austin M. and Milton E. Clark, of the firm of Clark & Company; Charles A. Cook, of the old firm of C. A. Cook & Company; Henry J. Rogers, George T. Clark, and Eben Smith; the original amount of capital stock having been $50,000. These stockholders also constituted the bank's first Board of Directors; and they organized by electing Jerome B. Chaffee, President; Henry J. Rogers, Vice President; and George T. Clark, Cashier.

On May 9, 1865, Clark & Company transferred their business to the new organization, and on May 10, 1865, the First National opened for business in Clark & Company's small room in the "O. K." building still standing on Fifteenth street and now bearing numbers 1405 and 1407. Later in 1865, upon completion of the building still standing on the northeast corner of Fifteenth and Blake streets, the bank moved into what were for those days very handsome quarters in the new structure; that locality then having been in the center of the business district of the city.

---

pioneer incidents associated with this business enterprise have appeared in an earlier chapter that includes part of the reminiscences Colonel S. S. Curtis, now of Omaha, prepared for incorporation in this work. Colonel Curtis was appointed Postmaster at Denver in March, 1861, and for a while his Post Office and Moffat's book store shared the same room, and Mr. Moffat served as Assistant Postmaster. The book and stationery business proved very profitable, and developed into one of the prominent mercantile establishments of the pioneer times in Denver. Mr. Moffat's interest in it continued after he became Cashier of the First National Bank in 1867, and in 1868 Clarence J. Clark entered it as a partner, Mr. Moffat's connection with it terminating in 1870.

It would be a needless repetition of much that appears elsewhere in this volume to enter in this note upon a further review in detail of Mr. Moffat's career as a citizen and business man of Denver and Colorado. Of his appointment and services as Adjutant General of Colorado militia during the Indian troubles in 1864, something is told in our accounts of the Indian wars; of his long connection with the First National Bank, of which he is now and has been for many years President, the facts are stated in the history of that institution; of his great usefulness as one of the builders of our pioneer railways, and his identification with later railway construction and management, the particulars are given in our historical accounts of our railway system from its beginning; of the part he has borne in the creation of our great system of water-supply, in mining, and in various other enterprises in city and State, the outlines also appear elsewhere.

Politically a Republican and with many opportunities for winning political positions, he has steadfastly held aloof from candidacy for them; preferring to serve as a private in the ranks. In 1874 at the request of Governor Elbert and by his appointment, Mr. Moffat became Treasurer of Colorado Territory. This is, we believe, aside from serving as a delegate in conventions, the only position with which politics have had to do, that he has ever consented to occupy.

Until his father's death, Mr. Moffat appended "Jr." to his name and which appears in connection therewith in various chapters of this work. He was not quite "of age" when he began his long, useful and successful career as a conspicuous one of those who rank as builders of this city and State. The great extent to which he has made his career a notable part of the history of the rise and advance of Denver and the development of Colorado will have become clearly defined in the mind of the reader who shall have followed our narrative through to its close.—J. C. S.

The bank started under favorable auspices and with considerable prestige but, after a year had elapsed, its affairs through causes chiefly attributed to its management, appeared to be falling into a rut. This somewhat unsatisfactory condition of its business continued until the following autumn when its Directors decided on a change. On September 4, 1866, George T. Clark resigned as Cashier and was succeeded by David H. Moffat, Jr., who then began his long and remarkably successful career as a banker and financier; and from that time, it may be said, also, that the equally successful and equally remarkable part of the First National Bank's career began, and which has continued without interruption or misfortune until the institution has become the impregnable financial fortress that it is to-day.

The currency of the First National was the first of the National banking currency issued in Denver or in Colorado. It was put into circulation on August 22, 1865, and its first note, one of the denomination of $5.00, was presented, as a souvenir, to Mr. W. N. Byers, at that time the editor and one of the proprietors of the Rocky Mountain News.

The First National remained at Fifteenth and Blake streets until late in 1875, when it removed to the McClintock Building on the northeast corner of Larimer and Sixteenth streets, then considered as being rather on the outer edge of the business district. In 1885 it removed across the street into the large corner-room of the Tabor building on the southeast corner of Larimer and Sixteenth, where it remained until early in the spring of 1896, when it was domiciled in its present fine quarters in the great Equitable Building at the southwest corner of Seventeenth and Stout streets.

During its long career the First National has had but two Presidents. Jerome B. Chaffee served nearly fifteen years, when he retired and was succeeded by David H. Moffat, present incumbent, on January 13, 1880.

Henry J. Rogers, the first Vice President, resigned December 31, 1868, and was succeeded by George W. Clayton who continued until January 13, 1874. Then, successively, came George W. Kassler who temporarily served from January 13, 1874, to April 17, 1874; Walter S. Cheesman, April 17, 1874, to January, 1880; H. A. W. Tabor, January, 1880, to January 8, 1884; Henry R. Wolcott, January 8, 1884, to September 26, 1891; Walter S. Cheesman, present incumbent, since September 26, 1891. In January, 1900, the position of an additional Vice President was created and on the 9th of that month George E. Ross-Lewin, present incumbent, was elected to fill it.

The names and terms of the First National's Cashiers have been as follows: George T. Clark, May 10, 1865, to September 4, 1866; David H. Moffat (elected President in January, 1880,) September 4, 1866, to January 13, 1880; George W. Kassler, (promoted from Assistant Cashier) from January 13, 1880, to January 10, 1882; Samuel N. Wood, January 10, 1882, until his resignation September 26, 1891; George E. Ross-Lewin (elected Vice President in January, 1900) September 26, 1891, to January 9, 1900; Thomas Keely, present incumbent, (promoted from Assistant Cashier) since January 9, 1900.

The position of Assistant Cashier was created soon after David H. Moffat became Cashier in 1866, and George W. Wells, who served until his death in April, 1874, was appointed to the position. He was succeeded by George W. Kassler, (then temporary Vice President, and later Cashier,) who had been Cashier for the old-time banking firm of Turner & Hobbs, and who served until January 13, 1880. Then, after a year's vacancy, in succession came T. G. Lyster, January 11, 1881, until resignation April 29, 1886; George E. Ross-Lewin (later Cashier, and present Vice President,) April 29, 1866, to September 26, 1891; Thomas Keely, September 26, 1891, to January 9, 1900, when he was promoted Cashier. In January, 1901, provision was made for two Assistant Cashiers, and on the 8th of that month W. C. Thomas and Frederick G. Moffat, present incumbents, were appointed to these positions.

The position of Second Assistant Cashier was created in 1889, and since then the incumbents have been as follows: H. N. Otis, March 26, 1889, to resignation October 1, 1890; C. H. Rose, October 1, 1890, until his death on December 27, 1890; Jerome A. Vickers, January 28, 1891, until his death on March 27, 1897; W. C. Thomas, March 27, 1897, until his promotion to Assistant Cashier on January 8, 1901, when the position was abolished.

On December 31, 1882, the First National absorbed the Merchants' National Bank that had been organized and had begun business in the spring of that year. The capital of the First National, originally $50,000, was by additions at various times since 1865 increased to $500,000, at which it now stands; and to this a surplus fund of $100,000 and undivided profits of $400,000 have been added; making capital, surplus, and undivided profits, $1,000,000. The statement of its condition, December 13, 1900, gave as the aggregate of its deposits the enormous sum of $19,382,955.67; and at the close of our record that sum had been increased to one exceeding $21,000,000. It hardly need be said in conclusion, that the times of 1893 caused no interruption to the business of this great banking institution.

The Colorado National Bank was the second of the financial organizations in Denver under the national law. It was the direct outgrowth of and successor to the private banking house of Kountze

Brothers, of which pioneer establishment we have outlined the history on a preceding page. Arrangements for organizing the Colorado National, with a capital of $100,000, were made in the spring of 1866, and on August 1st, of that year, the bank began business in Kountze Brothers' building on the northwest corner of Fifteenth and Market streets. Luther Kountze, Charles B. Kountze, Joseph H. Goodspeed, Joshua S. Raynolds, and Edward Creighton constituted its first Board of Directors. This Board organized by electing Luther Kountze, President; Joseph H. Goodspeed, Vice President; and Charles B. Kountze, Cashier. In 1869 Luther Kountze, then as now at the head of the banking house of Kountze Brothers in New York, retired from the Presidency of the Colorado National, a change which was followed by the election of Augustus Kountze to the Presidency. In 1874 upon the resignation of Augustus, Charles B. Kountze became President—a position he has since filled without interruption; Augustus Kountze was elected Vice President; William B. Berger, Cashier; S. N. Wood having previously been elected Assistant Cashier. In 1879 Augustus Kountze retired from the Vice Presidency and was succeeded by A. B. Daniels, who died April 9, 1881; after which time the position remained vacant several years. On January 12, 1886, Dennis Sheedy was elected Vice President, and the organization then remained unchanged until the death of Mr. Berger in April, 1890, after which Thomas H. Woodleton, who had been Assistant Cashier, was advanced to the vacant place. At that time Charles B. Berger and George B. Berger, sons of the deceased Cashier, were made First Assistant Cashier, and Second Assistant Cashier, respectively. In consequence of ill health Mr. Woodleton retired in the autumn of 1890, and was succeeded by Charles B. Berger, who died in January, 1891. George B. Berger, the present Cashier, was then elected to succeed his deceased brother, and J. C. Heinz became First Assistant Cashier. Later, William B. Berger, the third son of the late William B. Berger, was elected Second Assistant Cashier. In July, 1899, Mr. Heins resigned, and William B. Berger was advanced to the position of First Assistant; that of Second being then abolished.

The Colorado National remained at the old stand at Fifteenth and Market streets until 1881, and has made but one change of location in its career of a third of a century. The growth of the city, and the advance of the business section eastward made the change desirable. The bank acquired the premises on the northeast corner of Seventeenth and Larimer streets, which were occupied by an old wagon-shop, and in 1881 erected the handsome, four-story, cut stone building now standing there, for its permanent home. On October 1st, of that year, the establishment was installed in its present fine counting-room upon its own soil and under its own roof-tree.

In 1885 the Colorado National's original capital stock of $100,000 was increased to $200,000; in 1889 to $300,000; and in 1890 to $500,000, the present amount. It is one of the Denver banks that did not close its doors in consequence of the events of 1893. By its last official statement of condition available for this work—that of December 13, 1900, its capital was $500,000; its surplus, $200,000; and its deposits, $8,912,938.41. It is a United States Depository, but its government deposits are but a small fraction of the total. These figures tell their own substantial story with sufficient eloquence. The bank's management is now vested in Charles B. Kountze, Herman Kountze, Dennis Sheedy, George B. Berger, F. F. Struby, and William B. Berger as Directors; and in Charles B. Kountze, President; Dennis Sheedy, Vice President; George B. Berger, Cashier; and William B. Berger, Assistant Cashier.

The Denver National Bank is not the successor nor the outgrowth of any preceding banking enterprise. It came into being full-fledged and generously equipped with both capital and experienced management for its substantial and successful career. Its organization was decided on and provided for in the autumn of 1884, and on December 8th, of that year, it began business in the Barclay Building on the northwest corner of Larimer and Eighteenth streets, with an authorized capital of $500,000, one-half of which had been paid in; the other half being added soon afterward. Its first Board of Directors consisted of James Duff, Edward Eddy, James B. Grant, W. S. Jackson, Otto Sauer, Joseph Standley, Dennis Sullivan, Joseph A. Thatcher, and George W. Trimble. Joseph A. Thatcher was elected President; James B. Grant, Vice President; and A. A. Denman, who had been Assistant Cashier of the City National Bank,

---

George E. Ross-Lewin, Vice President of the First National Bank, is a native of New York State, having been born in the city of Rochester March 28, 1857. Educated in the Rochester schools, he began an apprenticeship in banking in 1875 and continued it until 1881. In June of that year he came to Denver, and soon thereafter began his service with the First National and which has been continuous to this time.

On April 29, 1886, Mr. Ross-Lewin was elected Assistant Cashier of the Bank and so remained until September 26, 1891, when he succeeded Samuel N. Wood as Cashier. Filling that position until January 9, 1900, he was then elected one of the bank's two Vice Presidents; his daily duties being those of the more active of those two officers. In duration of identification with the executive management of the First National, Mr. Ross-Lewin now stands next to President Moffat and Vice President Cheesman. He is also a Director and the Treasurer of the Tramway Company, and is similarly associated with various other corporate organizations in the city and the State.—J. C. S.

George E. Ross-Lewin.

Cashier. No changes have since been made in the Presidency and the Vice Presidency of this steady-going institution; and its President, who had previously been engaged in banking at Central City for more than twenty years, is now the oldest banker in continued active service in the city of Denver.

In March, 1891, Cashier Denman resigned and was succeeded by John C. Mitchell who had been Cashier of the Carbonate National Bank of Leadville. With Mr. Mitchell as Cashier, Edward S. Irish became Assistant Cashier; and in 1893 J. W. Hudston was elected Second Assistant Cashier; which officers still fill these respective positions. The bank remained in the Barclay Building until October, 1893, when it was established in its present spacious and finely appointed quarters in the Cooper Building on the northeast corner of Seventeenth and Curtis streets. These are the only changes of place and of executive officers that have occurred in the sedate career of this well-built institution through the sixteen years of its existence.

This bank has been a successful one from the day it first opened its doors. At the close of the first year's business its deposits amounted to $1,100,000; the end of the second year found them more than doubled; and they kept on increasing with each succeeding year until that memorable period of 1893-94 changed a rising tide into a falling one; but it caused no interruption of the daily business of the Denver National. Then came a reaction, and as the people have recovered from the disasters of that time its deposits have grown and grown until, on December 13, 1900, they aggregated $6,416,242.99. In the meantime the bank had reinforced its capital of a half-million by a surplus of $150,000. It is and long has been a United States Depository. Its present Board of Trustees consists of James B. Grant, Henry Gebhard, Thomas S. Hayden, William S. Jackson, William H. James, John C. Mitchell, Henry M. Porter, Otto Sauer, Joseph Standley, Dennis Sullivan, and Joseph A. Thatcher.

The National Bank of Commerce is the younger of the four existent financial institutions in Denver organized under the National banking law, and is the successor to a private banking establishment. On July 1, 1887, Charles L. McIntosh and William R. Mygatt, as the firm of McIntosh & Mygatt, opened a bank of deposit and discount at No. 1615 Curtis street, with a cash capital of $100,000. Soon afterward, they occupied the southeast corner of Sixteenth and Curtis streets. Their business had quietly but rapidly expanded, and after three years of successful operation on a private basis, it was decided to incorporate the bank under the National law.

Therefore, in the summer of 1890, the National Bank of Commerce was organized as successor to the business of McIntosh & Mygatt, with a capital of $500,000. The first Board of Directors con-

---

Joseph A. Thatcher, President of the Denver National Bank, was born in Shelby county, Kentucky, July 31, 1838. His father was John Pemberton Thatcher, a veteran of the war of 1812 between the United States and England. Joseph A. Thatcher was a country boy and was educated in the country schools of Shelby county. In 1849 his parents removed to Missouri and located in the historic frontier town of Independence. There Mr. Thatcher entered the general store of his uncle where he remained until the autumn of 1858, when he went to Jefferson City and was elected Assistant Secretary of the Missouri State Senate and served through two terms.

In the spring of 1860 Mr. Thatcher came to Colorado with a stock of miners' supplies and general merchandise which he freighted across the plains. He went into the mountains and successfully engaged in business in Central City, in which he continued until January, 1863, when he became Manager of the Central City branch of Warren Hussey & Company's Denver banking house, of which the history is given in these pages. In the responsible position of manager Mr. Thatcher continued until 1870 when he purchased the business and good will of the Central City branch, and in association with Joseph Standley, a prosperous mining operator, organized the banking firm of Thatcher, Standley & Company, as successor to Hussey & Company. The house of Thatcher, Standley & Company had a most prosperous career, and on January 1, 1874, became the First National Bank of Central City, with Mr. Thatcher as President, and F. C. Young, Cashier. This bank is still in successful existence.

In 1882 Mr. Thatcher resigned as President of the Central City bank and took a brief respite from financial work, devoting the ensuing two years principally to travel through the United States and Europe. Upon his return he organized the Denver National Bank, the details of which are elsewhere given, and of which he at once became President, a position he has filled from that date to this.

Mr. Thatcher is now the oldest banker in service in Denver, and the span of his long active business career may be said to cover the whole period of the wonderful development of this State. While his attention has been more directly given to financial affairs, his means and services have been useful in many other undertakings that have greatly contributed to the upbuilding of Denver. He participated in organizing and establishing the Denver Union Stock Yards, the Denver Electric Company, and the Colorado Packing Company; and was connected with the water and gas companies, served as a Director in the Omaha & Grant Smelting Company during its existence, and has been identified with several local commercial enterprises. But it has been in the management of the great banking institution of which he is the head, that he has found the broader opportunities for the exercise of his well-trained financial genius and thorough business abilities.—J. C. S.

Joseph A. Thatcher.

sisted of L. Anfenger, P. L. Bockfinger, Charles Boettcher, Benn Brewer, Job A. Cooper, Phillip Feldhouser, F. C. Goudy, J. W. Graham, W. L. Graham, L. L. Higgins, Frank B. Hill, J. F. Hopkins, Charles L. McIntosh, William R. Mygatt and D. D. Streeter. The Directors elected Job A. Cooper, who was then Governor of Colorado and who had formerly been identified with the German National, President of the new bank; William R. Mygatt, Vice President; Charles L. McIntosh, Cashier; and W. B. Morrison, Assistant Cashier. The new bank was quartered in the Ernest & Cranmer Building, southwest corner of Seventeenth and Curtis streets, and there opened for business on July 16, 1890. In January, 1892, Vice President Mygatt was succeeded by Henry R. Wolcott, the other officers remaining the same; and no further changes occurred for several years. Early in 1893, upon completion of the fine Bank Building on the southwest corner of Seventeenth and Arapahoe streets, the bank occupied its present handsome home in that structure. The troubles of 1893 caused a brief interruption to its business (from July 18th to August 17th), after which its capital was reduced to $200,000, at which it now stands. In January, 1897, there was a rather general change of management. Charles Boettcher was then elected President; Colonel D. C. Dodge, Vice President; and Dr. D. H. Dougan, Cashier; W. B. Morrison continuing as Assistant Cashier; and since then no changes have occurred. The bank's deposits on December 13, 1900, were $2,224,091.65.

The Denver Savings Bank was incorporated and organized January 2, 1890, a large number of the officers of other banks in the city becoming stockholders. Thirteen members constituted its first elected Board of Directors, as follows: Dr. F. J. Bancroft, Isaac E. Blake, A. W. Chamberlin, H. B. Chamberlin, D. H. Ferguson, J. A. Ferguson, Joseph W. Gilluly, S. H. Hastings, C. Y. McClure, John L. McNeil, I. B. Porter, Charles H. Smith, and S. N. Wood. The Directors elected H. B. Chamberlin, President; D. H. Ferguson, Vice President and manager; I. E. Blake, Second Vice President, and C. Y. McClure, Cashier. The bank's authorized capital was $1,000,000, of which $250,000 was subscribed and paid in. It began business at 1227 Sixteenth street, on February 9, 1890. In January, 1891, D. H. Ferguson became President; H. B. Chamberlin, First Vice President; and C. H. Smith, Second Vice President; McClure continuing as Cashier. In 1892 S. N. Wood succeeded Chamberlin as First Vice President, and there were no further changes until 1894. All through the summer of 1893, and unlike some of the other savings institutions, this bank withstood a "run" upon it, but was forced to suspend on September 1st; though no loss to depositors ensued. It was then re-organised with a capital of $250,000, and resumed business in March, 1894, with Charles H. Smith, President; George R. Swallow, First Vice President; D. H. Ferguson, Second Vice President; and C. Y. McClure, Cashier. Later in that year, after the Union National Bank had removed to Sixteenth and Larimer streets, this bank occupied the Union's former and its own present quarters on the northwest corner of Sixteenth and Arapahoe streets. In January, 1896, George R. Swallow became President, and Carlos Wood, Cashier; and in 1897 F. O. Vaille was elected Vice President—the Second Vice Presidency having been abolished. These officers are still in charge of the bank's business, which has reached large proportions; its deposits on December 31, 1900, having been $1,253,695.

The Western Bank (and Safe Deposit Company)

William H. James is one of the forceful men who have long been identified with Colorado. Born in Monmouthshire, England, February 5, 1838, of Welsh parents, he came, when ten years of age, to America, with his parents, who located in Brooklyn, N. Y. After a course in the public schools of that city, he learned the business of a watchmaker. In 1855, while still a mere boy, he went to Iowa City, Iowa, where he worked at his trade about five years.

Coming to Colorado in June, 1860, with his young wife, he pitched his tent in Nevada Gulch, Gilpin County, where he set up a stamp-mill that proved fully as unsuccessful as most of its neighbors. In 1861, he moved the mill to Empire, in Clear Creek County, where it did no better. Impoverished by these reverses, he returned to Nevada Gulch and there opened a watchmaker's shop, which a fire soon wiped out of existence. He then turned his attention to mining, and afterward became Superintendent of several large mining properties in the Clear Creek region. In 1873, he went to Park County as Superintendent of a placer property at Fairplay, and in 1875 to Lake County as Superintendent of the Printer Boy mine.

In that year Mr. James was elected the representative of Lake and Park counties in the convention that framed, in the winter of 1875-1876, the Constitution of the State of Colorado and of which body he was an able member. In that period the mining interests of Colorado required special consideration, and the clause in the Constitution exempting mines from taxation for a period of ten years, was his proposition, and its adoption the direct result of his personal work and influence against much opposition.

He continued mine supervision in Lake County until February 1878, when, in partnership with the late Edward Eddy, he engaged in buying and handling ores, and the erection of sampling works at Leadville, under the firm name of Eddy & James. On January 1st, 1880, Messrs. Eddy & James formed a copartnership (in the consolidation of their sampling works) in the smelting business with James B. Grant, and the firm name was changed to the Grant Smelting Company.

In February, 1879, Leadville became a city of the first-class, and on April 1st Mr. James was elected its first Mayor, a position requiring unusual strength of character in the man called to fill

William H. James.

was incorporated November 13, 1891, by Frederick C. Kilham, John L. McNeil, Robert D. Thompson, Charles Hallack, Edward L. Raymond, E. S. Kassler, William R. Thompson, and W. A. Hover, with a capital of $100,000, and began business a short time thereafter, at 1640 Arapahoe street, with Kilham as President, and George W. Collins, Cashier. About a year later W. G. Brown became Vice President, and early in 1895 George A. Stahl was chosen Cashier. The bank was removed to its present location, northwest corner of Seventeenth and Arapahoe streets, in 1896, and early in 1897 Brown became President, and W. A. Hover, Vice President; Stahl continuing as Cashier. Since then no change in officers has occurred. On December 31, 1900, the bank reported $321,677 of deposits.

The Central Savings Bank now located in the Mining Exchange Building, is the old "North Side Savings Bank" under a new name and in a new place of business. The North Side bank was incorporated April 11, 1892, with $25,000 capital, and a Board of Directors consisting of John A. Clough, William Light, David Brothers, Henri R. Foster, Samuel E. Marshall, Henry H. Mills, William E. Wilson, Adelia E. Clough, Roland D. Smith, Willis M. Marshall, and S. E. Howard. The bank was established at the intersection of Dunkeld and Gallup Avenues, near the old cable-railway "loop" in "North Denver," with John A. Clough as President, and Willis M. Marshall, Cashier. The bank weathered the storm of 1893, and in 1894 was removed to 1032 Fifteenth street. John A. Clough, its President, died in July, 1895, and was succeeded by George Richardson, with Dr. W. E. Wilson as Vice President; and at that time there were also some changes in its directory. On January 15, 1896, it became by change of name the present Central Savings Bank with a capital of $25,000. Its present officers are George Richardson, President; Dr. W. E. Wilson, Vice President; Willis M. Marshall, Cashier. According to its statement in December, 1900, the Central then had $547,986 of deposits.

The present Citizens' Trust and Savings Bank at 721 Sixteenth street, is the descendant of the Citizens' Savings Bank organized under the laws of Colorado in May, 1892, and began business at 937 Seventeenth street with G. C. Reed, President; F. W. Graves, Vice President; and J. E. Yerkes, Cashier. In the second year of its existence it had to face the turmoil of 1893 which it did well, and paid all demands of its depositors without exacting the legal notice. At that time it was located at 1011 Seventeenth street, and Carlton Ellis had become its Vice President. In 1895 it removed to its present location and was re-named the Citizens' Savings and Commercial Bank; and in 1896 J. R. Thurston succeeded Ellis as Vice President. In 1897, Elbert Besley, who came to Denver from Chicago in 1885 and who owns a controlling interest in the bank, was elected President, and Lou Gipson, Vice President; Yerkes continuing as Cashier. The bank was then given its present name, and in 1899 Yerkes was succeeded by J. R. Kershaw who, early in 1900 was succeeded by C. A. Root the present Cashier. At the close of 1900 the bank, which is conservative in its methods and exacts real estate security for its loans, carried the accounts of about 500 depositors with deposits aggregating $141,876.

The Union Stockyards Bank, the younger of the Denver banks, was incorporated October 27, 1898, by Samuel G. Gill, William J. Fine and Frank C. Goudy, with a capital of $30,000, and immediately began business. The certificate named as officers and Directors David H. Moffat, President; S. G. Gill, Vice President; William J. Fine, Cashier; Goudy and C. F. Morse, among whom there have since been no changes. As its name indicates, its place of business is at the Denver Union Stock-

---

it. Leaving his business to the care of his partner, he gave the mining-camp city an administration that has been a standard for those that have followed. During the great strike in that camp in 1880, when State troops were sent there to protect life and property under the rule of martial law, he was appointed Brigadier General of militia and rendered most efficient service in restoring order and obedience to law.

Gen. James remained a citizen of Leadville until 1882, having continued his connection with the mining industry.

In 1882, after the Grant Smelter at Leadville had been wrecked by fire, Gen. James removed to Denver and directed the construction of the new Grant establishment here, and in which he was an owner. In 1883, there was a consolidation of the Grant Smelter of Denver with the Omaha Smelting & Refining Company of Omaha, Neb., and thereafter it became known as the great Omaha & Grant Smelting and Refining Company. From the time it started its fires until the union of smelter interests in the spring of 1900, he was continuously identified with its management. He then retired from his long period of active work. He was one of the organizers and is a director of the Denver National Bank, and is largely interested in several other business enterprises among which are the Colorado Portland Cement Co., of which he is President, and the Yak Tunnel Co., of Leadville, of which he is Vice President, and which has in hand one of the great mining-tunnel undertakings in this country. He was also one of the organizers of the Colorado Fuel & Iron Company, in which he became a Director; a position he still fills.

While not one of the first army of "Pike's Peakers" that trooped across the plains in 1859, Gen. James was in the ranks of the second one that made the year 1860 almost equally memorable; and is an excellent representative of the Colorado pioneers who possessed the "staying qualities," and who were steadfast in what they believed the future held in store for the Colorado country.—J. C. S.

yards, and by its statement December 31, 1900, it had $134,925 deposits.

There are now in Denver a large number of Building Associations which constitute rather important factors as economic and financial institutions, but the limitations of this chapter forbid including accounts of them in it. There are, however, two that embrace some banking features in their business. The Columbia Savings and Loan Association at the southwest corner of Sixteenth and Welton streets is developing banking features in connection with its larger business of making loans to shareholders on the building association plan. It was organized as the Columbia Building and Loan Association in January, 1890, and in January, 1899, its name was changed to the one it now bears, and its methods broadened to include those of savings banking; and in this department at the close of 1900 about $100,000 of deposits were carried. Its management is vested in T. J. Zollars, President; Jabez Norman, Vice President; and Orrin McNutt, Secretary and Actuary; with the First National Bank as Treasurer. The other of these institutions above referred to is the Fidelity Savings Association at 825 Sixteenth street, and of which E. M. Johnson is now President and manager. It is the successor by change of name in March, 1896, of the Fidelity Building and Loan Association organized in 1889, and of which James S. Wolfe was President when the change was made. The general business of the Fidelity partakes of building association methods. At the close of 1900 the statistics of its banking department were about the same as those of the Columbia.

The International Trust Company, an important member of Denver's present family of financial institutions, and that is handsomely quartered in the Equitable Building, is in one sense the successor to two preceding organizations of similar general character. On June 24, 1885, David H. Moffat, Henry R. Wolcott, and S. N. Wood incorporated the Security Safety Deposit and Trust Company with a capital of $50,000, and which became an auxiliary of the First National Bank. Its vaults and place of business were located in that bank, the Cashier of which acted as its Treasurer, and its existence was continued until the close of 1897. On October 22, 1891, the National Trust Company was incorporated by David H. Moffat, Henry W. Hobson, Moses Hallett, Walter S. Cheesman, and thirty-four others, most of them well known citizens of Denver. Its capital was $500,000, and the certificate named as the company's first officers, D. H. Moffat, President; C. H. Dow, First Vice President; Henry W. Hobson, Second Vice President; and John F. Bell, Secretary; the first Directors having been D. H. Moffat, Edward L. Raymond, Walter S. Cheesman, W. S. Jackson, Moses Hallett, M. D. Thatcher, C. H. Dow, C. S. Morey, Anthony Sweeney, M. E. Smith, H. W. Hobson, and O. H. P. Baxter. On January 29, 1892, the name of the company was changed to that of the "International Trust Company," under the same directory and management; and at the close of 1897 the old Security company was merged into it. In addition to its general trust business, the International company has a banking department, a savings department, and a safe deposit department. According to its last statement, it had in its banking and savings departments deposits aggregating $2,197,799. Its original capital was reduced when the name was changed, to the present amount, $250,000; to which a surplus fund of $150,000 has been added. The panic of 1893 caused no interruption to its business. Its present Board of Directors consists of Alva Adams, Walter S. Cheesman, Joseph Davis, Frank B. Gibson, J. A. Hayes, E. T. Jeffery, D. H. Moffat, W. B. Page, and M. D. Thatcher; with Moffat as President; Gibson, Vice President; and C. E. Dickinson, Secretary.

New Mint of the United States, at Denver. From architect's drawing.

There are at present in Denver several partnerships the business of which includes some banking. The more prominent of these are E. H. Rollins & Sons, R. H. McMann & Company, and Joralomon & Company. The first-named dates its origin back to the autumn of 1876, and has, under several unimportant changes, been in continuous existence since that time. The second was founded in January, 1886, under the name of McMann & Kittredge, and has had an uninterrupted career. The third is of more recent origin, having been established in March, 1894.

In preparing these historical accounts of banks and banking in Denver, it was not thought worth while to give consideration to various persons and partnerships that, in frequent instances by self-assertion, figured more or less transiently as "bankers" in the past since pioneer times; nor to sundry vanished and relatively unimportant establishments that really had some little color of title to stand as financial institutions. Of the former there were many, especially during the ten or twelve years preceding 1893, but in no instance did the business of any of them extend much beyond that of the agent or broker, though a few were entrusted with deposits; and mingled in the throng were numerous masquerading exploiters. Among the others, those that had some claim to be considered as financial establishments, there were several small trust companies and, as at present, some rather substantial "investment companies;" but in none of these did there appear to be anything of sufficient historical interest to warrant making record of them on these pages.

View from dome of Capitol, overlooking part of the city's business section. From a recent photograph by James H. Brown, Jr.

The four existent National Banks now form the Denver Clearing House Association—the Colorado National, Denver National, First National, and National Bank of Commerce. The Association was organized in the autumn of 1885, the initiative toward it having then been taken by General R. W. Woodbury who was at that time President of the Denver Chamber of Commerce. Appreciating the importance of such an institution, he requested each of the National banks in the city to have representatives meet him in the room of the Directors of the Chamber on the afternoon of October 25th. In response to this came John R. Hanna, of the City National; William B. Berger, of the Colorado National; J. A. Thatcher and A. A. Denman, of the Denver National; David H. Moffat and S. N. Wood, of the First National; George Tritch, of the German National; E. P. Wright, of the State National; and Willliam D. Todd, of the Union Bank. Mr. Woodbury, who had theretofore unavailingly urged the organization of a Clearing House, again presented the advantages and importance of such an association with much earnestness. The bank representatives thereupon organised their meeting by calling J. A. Thatcher to the chair and placing the duties of Secretary upon A. A. Denman. The decision of the meeting was to proceed with the organization, and to that end a committee consisting of S. N. Wood, William B. Berger, and William D. Todd was appointed to prepare rules and regulations and a plan of organization for the association. As soon as this committee completed their work a meeting was held which approved and adopted it as the basis for the organization. The Clearing House began operations on November 16, 1885, the report of the first day's work having been delivered to the Chamber of Commerce and posted there on that day.

While Denver for so many years has had "the Mint," and the United States has so long owned a building here over the entrance door of which has been kept the legend, "The Mint of the United States," no coining has been done in the city since Clark, Gruber & Co., went out of the business. It was the intention of the laws of 1862 and 1863, as already stated, as it was of those who recommended and procured their enactment, that the Denver establishment should be a mint in fact as well as in name. The act of 1862 provided that it should be a branch under the control and direction of the Director of the Mint at Philadelphia. But effect was not immediately given to the provisions of the law, and in the meantime circumstances and influences growing out of the astounding silver production from the Comstock Lode in Nevada brought about legislation by Congress establishing a mint at Carson City and depriving the Denver institution of authority to coin money. It became the depository for public funds, and the accounts of the United States disbursing officers in this part of the country were kept there until after the First National Bank was organized and became a United States depository. Since that time "the Mint" has been nothing more than an assay office, though the volume of its business in that capacity is recorded in terms of millions. Of the inception, authorization by Congress, and progress in construction, of the new Mint, which is to be one of coinage, and which, it is anticipated, will be in operation in 1903, some further account has been given in connection with mining and smelting affairs.

Though Denver was one of the great financial centers of the country before panic times, it has become a much greater one since, as the reader will learn from the comparative statement of bank conditions presented on a succeeding page. In April, 1900, the city's importance as a financial metropolis was recognized by the United States Treasury in making Denver a "reserve" city. Under the provisions of the National banking law the National Banks of a city so designated become authorized depositories for the reserve funds of "country" National Banks, and the Denver National Banks are now the reserve agents for other Colorado National Banks, and for those of Wyoming and New Mexico. A movement was made in 1899 to this end, but for some reason was not pressed. Until the change was made in the spring of 1900, reserve funds from this part of the country went to eastern banks, and the Denver National Banks ranked as "country" institutions.

Banking is a very pleasant and comfortable kind of business so long as things run smooth and even; but no human occupation is better calculated to make men sweat blood, than it in times of adverse financial excitement and panicky demands of apprehensive depositors. At the beginning of 1893 there were, as we have stated, eleven National banks in Denver—the American, City, Colorado, Commercial, Denver, First, German, Bank of Commerce, People's, State, and Union; beside several others existing under State law or as private establishments. Each was doing a prosperous business, judging from the statements made in their reports of their condition in that period, and from the general condition of affairs in the city and State.

The group of National Banks had, as we have seen, received several additions within a few years. The aggregate capital of the eleven was $5,550,000, to which had been added surplus funds aggregating $1,860,000. Their combined deposits were above $20,000,000, and the annual transactions of the clearing house during the year just closed had footed up nearly $266,000,000. The growth of National bank business, and increase of National bank capital and surplus, during several years prior to and ending with 1892, are indicated in the following figures.

View from dome of Capitol, overlooking part of the city's business section. From a recent photograph by James E. Brown, Jr.

Year.	Capital and Surplus.	Deposits.
1884	$2,070,076.00	$ 7,290,470.00
1885	2,139,649.00	9,089,324.00
1886	2,296,575.00	10,889,715.00
1887	2,357,250.00	12,542,693.00
1888	2,735,966.00	14,307,196.00
1889	3,537,805.00	18,408,078.00
1890	6,474,765.00	17,150,534.00
1891	6,395,000.00	17,818,208.00
1892	7,410,000.00	20,585,766.00

The disasters of 1893 came with but little warning. A few banking men in Denver saw the cloud rising above the horizon before the close of 1892, but most of them did not; and to the mass of the sanguine people it was invisible. In the spring of 1893 the mutterings became audible to many, and their effect was seen in May and June in the depletion of deposits in the savings banks; yet, the majority of the people hoped, and believed, too, that the threatened storm would "blow over." Of the circumstances attending its outburst in July, and of the conditions and consequences that followed, some account appears in a subsequent chapter.

The recovery since that time has been a remarkable one that strikingly demonstrates the recuperative powers of our people. The failure and disappearance of several of the former eleven National Banks, and the consolidation of two others, left but four in Denver. These four, however, though having combined less than one-third the capital and surplus, now have larger combined resources and are doing a business greater than the eleven that were flourishing in 1892. This may be more clearly shown by a few comparative figures. As the reader has seen, the combined capital and surplus of the eleven at the close of 1892 was $7,410,000; their combined deposits $20,585,766; and their combined resources $29,217,536. At the close of business on December 13, 1900, the combined capital and surplus of the four existent National Banks was $2,150,000; their combined deposits $36,936,169; or about eighty-one per cent. more than those of 1892; and their combined resources $41,421,791; fractions being omitted. These figures rather eloquently tell the story of recovery.

CHAPTER LXVIII.

DENVER'S FIRST TELEGRAPH LINE—HISTORY OF ITS CONSTRUCTION—EARLY DIFFICULTIES IN OPERATION—OTHER LOCAL TELEGRAPHS—COMING OF THE TELEPHONE—EXTRAORDINARY DEVELOPMENT OF THE SYSTEM—STREET RAILWAYS—PIONEER DENVER HORSE RAILWAY COMPANY—DENVER ELECTRIC AND CABLE RAILWAY COMPANY AND ITS SUCCESSORS—DENVER CITY CABLE RAILWAY COMPANY—HISTORY OF THE DEVELOPMENT OF THE CABLE AND ELECTRIC SYSTEMS—ACQUISITION OF ALL LINES BY DENVER CITY TRAMWAY COMPANY—PRESENT EXTENT OF THE SYSTEM—INFLUENCE IN UPBUILDING THE CITY.

In no city in the United States has the application of electricity to the needs and conveniences of the people reached a more advanced stage than here in Denver where, in addition to its primary service by wires across the plains which have become a net-work over all the country, and its use for lighting and power elsewhere mentioned, its development has resulted in two other great public utilities of unusual extent and excellence—the telephone and the street railway systems.

The coming of the telegraph to Denver in the autumn of 1863 was an event of the utmost importance to the young city. We have hitherto briefly referred to it, but its historic interest suggests that some details of overland telegraph construction be presented. The first movement toward erecting a telegraph line to Denver was made in the spring of 1860. Prior to that time a corporation had been organized at St. Joseph under the name of the Missouri & Western Telegraph Company, of which Charles M. Stebbins was President. This company had built some short local lines in the vicinity of and west from St. Joseph, and contemplated pushing across the plains to Denver; an enterprise that was soon afterward abandoned. However, in the summer of 1860, President Stebbins came to Denver and obtained for his company a conditional subsidy of town lots from the Denver Town Company's Directors, who met on August 18th and adopted the following:

> "Resolved, that the Missouri & Western Telegraph Company be donated fifty lots in Denver City with the Express Condition and understanding that they locate their office in East Denver City, their principal office, and that the Secretary select said lots and to Issue one half of them When the poles are all up, the balance to Issue When the line is completed to Denver City."

Although the two towns had previously been united as one city, the Directors of the Denver Town Company were as eager as ever to have all the "principal" things located on their side of Cherry creek, and about that time they and the Stage Company had influenced the location of the Post Office on the east side.

In 1860 Congress by law provided some aid for the construction of an overland telegraph line to the Pacific coast to be completed within two years from July 31, 1860, with priority of use by the government at an expense of such use not to exceed $40,000 per annum. The Pacific Overland Telegraph Company had been organized, with Edward Creighton as President. Creighton had already built a local line between Nebraska City and Omaha, and late in 1860 this line and the few short ones built by Stebbins' company were bought by the new overland company, the Missouri & Western passing out of existence. Construction of the overland line was begun in the winter of 1860-61. Its route was from Omaha to Fort Kearney, thence to Julesburg and Fort Laramie, thence over the Wind River Mountains to Fort Bridger and on to Salt Lake City. Construction on the Pacific coast end was begun simultaneously at Sacramento, a line from San Francisco to that point having previously been built; and the Pacific coast work was continued to Salt Lake where the junction was made with the eastern builders.

Construction proceeded with great energy, the division between Omaha and Fort Kearney, which was built by Henry M. Porter, now and for many years a citizen of Denver, being completed and opened for business early in April, 1861. The Pony Express which had been established a year before then made Fort Kearney its eastern terminus and, as we have elsewhere stated, continued its operations over the successively diminished gaps until the union of the wires at Salt Lake, ended its career.

In the spring of 1861, the President of the Pacific Telegraph Company came to Denver to interest the citizens in the construction of a branch line from Julesburg. He asked for cash subscriptions to an amount which, as later developed, was about equal to the cost of the projected line; but proposed that the subscriptions should be repaid in telegraph service. This proposition being declined, the negotiations terminated and Mr. Creighton went his way.

The wire reached Julesburg in May, 1861, bringing the line within about two hundred miles of stage route from Denver. Previous to that time messages to and from the advancing line had been transmitted by Pony Express or stage; but now the company opened an office in Denver for handling this business by an agent of its own, still using the Express or stages to cover the gap to Julesburg. David H. Moffat was appointed the first agent, and daily sent out and received a comparatively large number of messages.

The overland line was completed far within the limits assigned for its construction by Congress, and was ready for business on October 22, 1861, affording the Pacific coast its first telegraphic communication with the east. The line remained in use until 1869 when those along the Central and Union Pacific railroads supplanted it. The first message from San Francisco to New York was—

> "The Pacific to the Atlantic sends greeting; and may both oceans be dry before a foot of all the land that lies between them shall belong to any other than one united country."

The telegraph business to and from Denver, handicapped as it was by the gap of about two hundred miles to Julesburg, grew to relatively large proportions, and in the spring of 1863 President Creighton came back here to see about making the connection a direct one. The inconvenience of the old way, the increasing business need for a wire to the city, and the great anxiety of everybody to hear quickly of the progress of the war, combined to effect an arrangement. Citizens here subscribed liberally, and in this were joined by those in the Clear creek mining towns on condition that the wire be extended to Central City; the total subscriptions amounting to about $35,000 which the company later cancelled by telegraph service. The line was built from Julesburg to Denver in that summer and early autumn by B. F. Woodward, who is still a citizen of Denver, but instead of following the old stage route around by the great bend of the South Platte, it cut across the country from the point where Fort Morgan is now located, by way of Living Springs, to Denver, along the route of the old "cut-off road."

The wire was strung into Denver on October 1st to the office over Warren Hussey & Company's bank on the northeast corner of Fifteenth and Market streets, and messages were expected to be immediately transmitted. Judge Amos Steck was then Mayor, and Mr. Woodward decided that he should send the first message, which was to be one to Mrs. Steck then in the east. But, in consequence of defective construction, and damage by storm, the line would not work. Repairs were made, and on October 10th Mayor Steck exchanged congratulatory messages with the Mayor of Omaha.

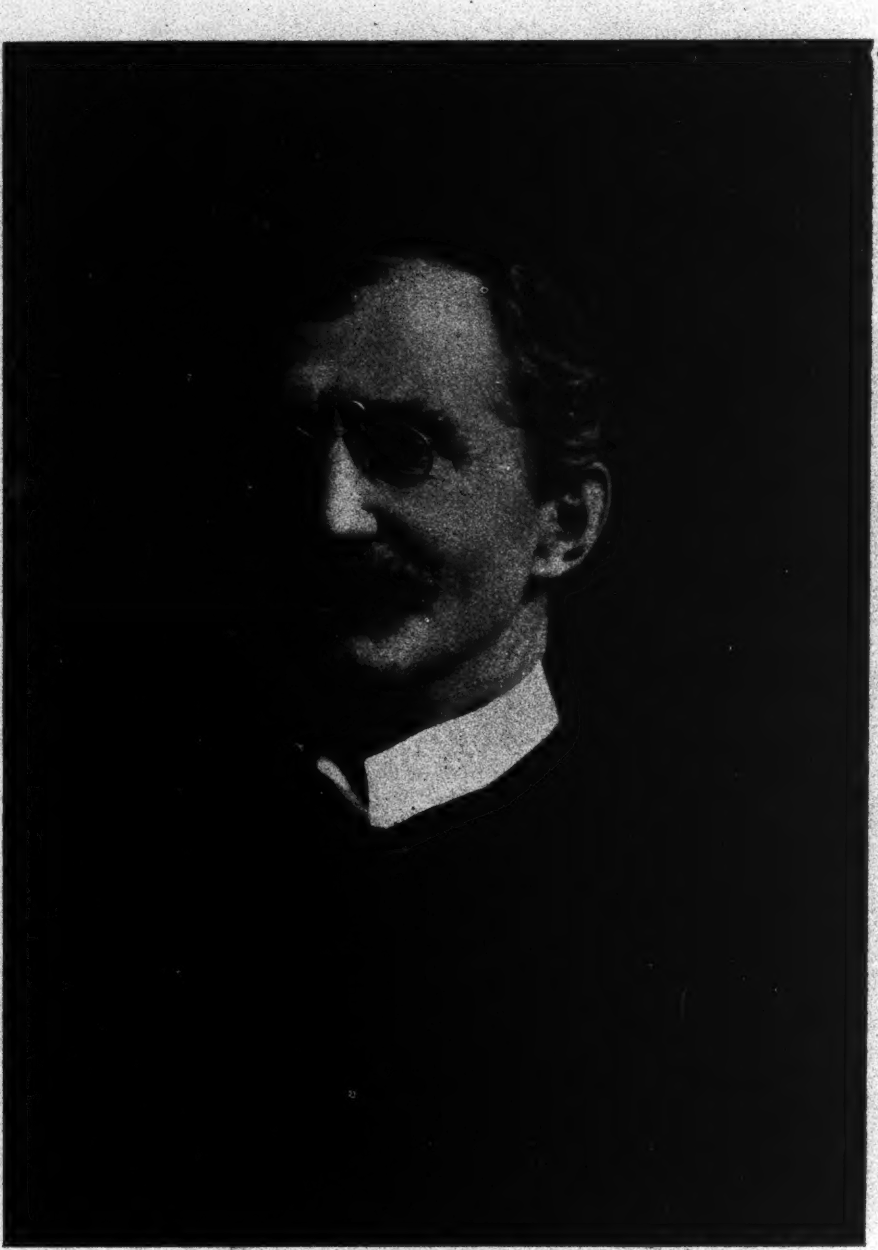
The line was extended to Central City in November, and its business became large. B. F. Woodward was its manager, at Denver, and continued so for several years. The net receipts during the first twelve months were $36,000—about the total cost of construction. Rates, as we have already stated, were high, but they were for a long-distance service. Maintenance was, comparatively, unusually expensive over the plains on account of the distances to be travelled to make repairs; fur-

---

Benjamin F. Woodward was born in Newark, Ohio, June 25, 1834, his father having been of an old and prominent New England family. Early in his childhood his parents removed to Rochester, N. Y., where he was later educated in the schools of that city. In 1852 he went to Pittsburgh and soon became manager of the office of the Atlantic & Ohio Telegraph Company, one of the pioneer telegraph organizations in the United States. In 1856 he removed to Fulton, Ills., and in partnership with William McCutcheon, engaged in a general merchandise business in which he continued until 1862, when he joined the Telegraph Corps of the Union army, and was assigned to service as a cipher-operator with the army in Virginia. In this service his health broke down, and in 1863 he was compelled to resign his position and seek a friendlier climate.

Mr. Woodward had intended going to California, but was advised to first try Colorado; and it was in consequence of following that advice, that he took charge of the construction of the Pacific Overland Telegraph Company's extension to Denver, and of its business here after it was completed; thus beginning his long citizenship in this city. Of the building of that pioneer telegraph line to Denver and of Mr. Woodward's other operations in telegraph construction out of Denver, the particulars have been given. In 1875, after the Western Union Company had absorbed all the local telegraph lines, Mr. Woodward resigned as manager at Denver, and became Superintendent of the telegraph system of the Denver & Rio Grande railroad, a position he filled until the spring of 1884, when he terminated his connection with telegraph lines. Having acquired considerable real estate in the city, he engaged in developing and improving it and in dealing in city property; and also became identified with various other business enterprises in Denver.

Mr. Woodward was one of the organizers and a Director of the first Young Men's Christian Association in this city; one of the founders of Riverside Cemetery and the first President of its corporate organization; long a Director in the City National Bank; has for many years been a Trustee of the Central Presbyterian church; and with various other undertakings that have contributed to the development of Denver the name and services of this builder and manager of Colorado's pioneer telegraph lines are intimately associated.—J. C. S.



B. F. Woodward.

thermore the permanency of the line as located was menaced by the prospective building of others along the route of the projected trans-continental railroad.

Contrary to what might have been expected, the Indians did not often meddle with the overland telegraph. The white man's "talking string," as they called it, was a thing so mysterious that it aroused their superstitions and made them wary of having much to do with it. But after they went on the warpath during the civil war they occasionally interrupted communications by breaking down the lines and carrying off great lengths of wire; for they were in their way, good strategists. However, they were at no time responsible for the worst of the bother. The buffalo were most exasperating offenders, and their depredations were far greater in the aggregate than those of the Indians. They made scratching posts of the poles, and a few surges against one of them by a big bull as he gratefully rubbed his side against it, would bring it to the ground. When a herd in its movements came to the line its individuals accepted the poles as conveniences placed there for their benefit and use, and in a short time several miles of telegraph line would be down. This kind of work made a great deal of trouble for the telegraph people.

Interior old Telephone Exchange in Tabor building.

The wind and the lightning also caused much and frequent damage to the pioneer lines in Colorado. Construction was light and inefficient if compared with present practices. A stroke of lightning would occasionally shatter the poles and melt the wires along a distance of a half-mile or more. President Creighton attributed this to the fact that the poles were set in sand that, in the dry seasons, insulated them about as well as if it had been ground glass; and refused the electric fluid ready access to the earth. He attributed many of the other troubles that perplexed him, to natural causes peculiar to the region and that would permanently prevent satisfactorily successful telegraphing in this part of the country.

In 1865 the pioneer overland line was absorbed by the Western Union Telegraph Company to become part of a great line to Asia and Europe by way of British North America, Alaska, and Bering's Strait. This line was located and partly constructed through British America, when its progress was terminated by the successful laying of the Atlantic cable. After it purchased the overland line the Western Union Company constructed a new line westward from Denver by way of Virginia Dale to Fort Bridger, and that part of the old line from Julesburg to Bridger by way of Fort Laramie was then abandoned.

In 1866, B. F. Woodward resigned his position with the Western Union Company and became instrumental in organizing a company of Denver men to construct a telegraph line to the southward. Its title was the United States and Mexico Telegraph Company, of which the Directors were William N. Byers, S. H. Elbert, General George P. Ihrie, George W. Kassler, D. H. Moffat, H. M. Porter, F. Z. Salomon, and B. F. Woodward, of Denver; John Dold, of Las Vegas; and Emanuel Spiegelburg, of Santa Fe. Mr. Porter was President, Mr. Byers Vice President, Mr. Kassler Treasurer, and Mr. Woodward Secretary and Superintendent. The object, was to build a telegraph line by way of Pueblo, Las Vegas, and Santa Fe to the City of Mexico by way of El Paso and Chihuahua. On January 21, 1868, these projectors were re-incorporated as the Denver & Santa Fe Railway & Telegraph company, and began constructing their telegraph line at Denver on March 8, 1868; completing it to Santa Fe on July 8, 1868. The construction work was done under the supervision of Mr. Woodward, Mr. Porter and Mr. Byers.

Later in 1868 practically the same party of men organized the United States & Mexico Railway Company for the ambitious undertaking of building a railroad from Denver to the City of Mexico along the same route as that projected for their international telegraph line, the two to constitute a joint enterprise. Of this corporation Mr. Porter became President, Mr. Byers Vice President, Mr. Moffat Treasurer; and Mr. Woodward Superintendent. Some negotiations with the then President of Mexico, Juarez, were set on foot in the interest of the undertaking, but Mexico was not then in condition to engage in building railroads and telegraph lines; and that international railway and telegraph undertaking was not consummated. However, the railroad company maintained its organization, and its intentions, also, by a little nominal work occasionally on its proposed right of way in the outskirts of Denver; laying a few ties and shoveling a little dirt, for several years, and until the Denver & Rio Grande Company was organized and really began building a railroad on part of the projected route of the United States and Mexico Railway. In 1870, the telegraph line between Denver and Santa Fe passed to the Western Union Company.

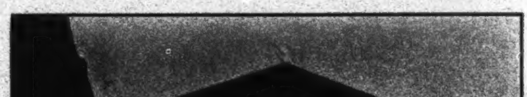
Old Telephone Apparatus in Tabor building.

In the spring of 1868 the Rocky Mountain Railway and Telegraph Company was organized, principally by Denver men, in anticipation of building a railway from Denver to Boulder by way of the Marshall coal fields; and a telegraph line along the same route and which was to be extended from Boulder by way of Ralston creek canon, to Black Hawk, and thence to both Central City and Georgetown; but neither the railroad nor the telegraph line was built.

In the autumn of 1868 the United States & Mexico company by agreement with the Denver Pacific Railway Company, built a telegraph line from Denver to Cheyenne, along the located route of the later completed road, and opened it for business on January 1, 1869. In 1870 this line also passed to the Western Union Company.

The Western Union thereafter enjoyed a monopoly of telegraph business in Colorado until midsummer of 1890. In that year the Postal Telegraph-Cable Company extended its lines westward to Denver, and on July 1 opened in this city the first competitive telegraph office west of the Missouri river; and since which time, due to this company, Denver has had much cheaper rates, and a telegraph service equal to that of any city in the world. The Postal was the first telegraph company to use dynamo-motors, in place of gravity battery; and copper wires instead of iron wires, making long distance telegraphy possible. The arrival of the Postal in Denver resulted in the immediate reduction of about twenty per cent. in message and newspaper rates, and the reduction of fifty cents per word in cable rates to all parts of the world. From Denver the Postal's lines, like those of the other company, extend to every important point in the United States. This company has done much for the commercial interests of Denver and Colorado, and to its presence here the existing comparatively low telegraph rates are due.

It is but a step from the telegraph to the telephone, the second of the great public electrical utilities in Denver, and one that extends its operations over the larger portion of the State of Colorado, and the Territory of New Mexico. The telephone service of The Colorado Telephone Company now represents a development of twenty-one years. The Bell telephone was the pioneer and was introduced here by F. O. Vaille, who arrived in Denver in the autumn of 1878, and at once began preparations for the opening of the first exchange. His exhibition of the instruments working over a few short lines was followed by the usual epidemic of amateur telephones contrived with toy drums or tin cans, and strings. Henry R. Wolcott became interested in the enterprise with Vaille in 1879. Notwithstanding the incredulity of some citizens as to the practical utility of Vaille's queer apparatus he soon secured about two hundred subscribers. He established his exchange in the second story of the building No. 380 Larimer street, and over Conrad Frick's boot and shoe store, where he instituted the service on February 20, 1879. About six months later the Western Union Telegraph Company introduced the Edison telephone



Main station of Colorado Telephone Company, 1447 Lawrence street, Denver.

system, and for a short period there was a rival service offered the people of Denver. This exchange was located in the old Broadwell Hotel building, then standing on the south-east corner of Sixteenth and Larimer streets, with a fair but smaller clientage than that of the other. It turned out, as it always must from the nature of the telephone business, that instead of several rival exchanges in a community being an advantage, they are a positive disadvantage and an additional expense to the telephone user. Instead of two or more telephone systems being for the better, they are quite plainly for the worse. The telephone business, like that of the Post Office, must be conducted as a unity to produce the most satisfactory results for the people. The two rival systems in Denver in 1879, and their customers, too, soon discovered this. In 1880 there was a union of interests by which the Edison system was absorbed by the older one, and the Western Union's enterprise passed out of existence.

Interior of operating room, showing local switch-board—Denver main station, Colorado Telephone Company.

Until the close of 1880 the telephone service in Denver and of its extended lines was controlled by the American Bell Telephone Company; but on January 1, 1881, the Colorado Telephone Company came into existence, with Henry R. Wolcott, as President; and Vaille as General Manager. The property and business of the old system passed to its ownership, and in that year, upon the completion of the Tabor Building at Sixteenth and Larimer streets, the Telephone headquarters were moved into it from the old location, and were then thought to be permanently settled.

Mr. Vaille continued as General Manager until March 1, 1884, when he was succeeded by E. B. Field. Field came to Denver from Boston in November, 1879, and in January, 1880, became assistant to Vaille; a year later he was made the company's Superintendent. In 1884, in addition to his duties as General Manager, Field was elected Vice President of the company, and continued as the executive head of its affairs. Wolcott's connection as President of the company has been uninterrupted from the beginning. The American District Telegraph Company is a subordinate, but separate, organization, owned and controlled by the telephone interests.

The exchange remained in the Tabor Building about nine years. But its business had outgrown the available room there and a site for a building for the exclusive use of the company was purchased on the north side of Lawrence street, between Fourteenth and Fifteenth streets, and the present handsome building there was erected and occupied in 1890. In 1898 another building was erected and occupied at 1463 York street. From this station the large residence district on Capitol Hill is served directly and by way of the Lawrence street main station. In 1900 another subordinate exchange was established at Broadway and First Avenue to better serve the general "South Denver" district.

Out-of-town extensions of the service were undertaken soon after the pioneer exchange was fairly in working order. The first of these was the line to Golden, Idaho Springs, Black Hawk, Central City, and other Clear creek points, constructed in 1879. Next was a connection with Boulder, made in 1881. In 1884 the third extension brought Colorado Springs, Manitou, and Pueblo within speaking distance of Denver. By 1884 the company had about 2,000 miles of wire in use. In 1889 a line was run to Leadville and connected with the Leadville exchange established and owned by the late H. A. W. Tabor. Since then the business has had an enormous expansion. Beside the earlier outside lines mentioned above, the wires now extend from Denver to Greeley, to Fort Collins, and to various intermediate and adjacent places on the plains and in the mountains, and on to Cheyenne and Laramie, Wyoming, whence connections are made to Salt Lake City and other points in Utah; to Livermore, to Georgetown, and across the range to Breckenridge and other places in that district; to Leadville and adjacent places; to Aspen and its district; and to Glenwood Springs. From Glenwood Springs, by way of Montrose to Ouray, Silverton and many other towns and camps in the far southwestern districts of the State. South from Denver along the foothills to the whole of the Colorado Springs district; to the entire Cripple Creek district; on south to Pueblo, Canon City, Trinidad and intermediate places, and on into New Mexico. Southeast to Sugar City, La Junta, Las Animas and other places in that section of the State. Eastward from Greeley, by way of Fort Morgan and Brush, to Sterling, Akron, and other points in that corner of the State. Within the vast area of territory reached from Denver by the company's lines at the close of 1900 were about 150 points.

The total pole mileage operated by the company is now about 2,000 miles; the total wire mileage is approximately 18,000, of which about 3,000 miles are underground; principally in Denver, the remainder in Colorado Springs. About fifty per cent. of the wire in use, including that in the cables, is of copper. The foregoing data indicate not only the extraordinary expansion of the service but the vast expenditures of money involved in construction and maintenance.

Interior of operating room showing "long-distance switch-board," Denver main station—Colorado Telephone Company.

From the 200 subscribers who began using the telephone in Denver in 1879, the number has increased to upward of 4,500 instruments now in use. The company calculates that its present average of about 45,000 daily calls represents a daily saving of more than 25,000 miles of travel that would be necessary if the parties to the conversations footed it to colloquial meeting. On all the lines of the company, in and out of Denver, there are about 10,000 telephones employed, and the company now carries regularly upon its pay-rolls the names of more than 200 young women and of about the same number of men. The executive officers of the great organization are Henry R. Wolcott, President; E. B. Field, Vice President and General Manager; Robert D. Hall, Secretary and Auditor; Edward B. Field, Jr., Treasurer; and Edward M. Burgess, Superintendent.

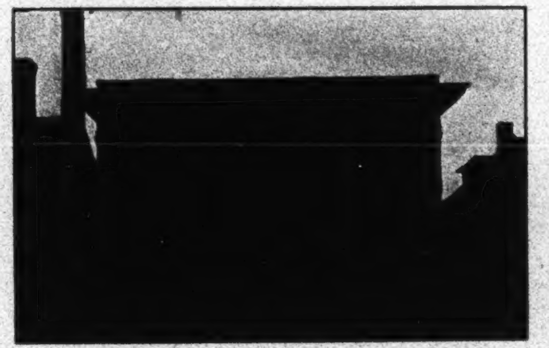
The telephone service has entered so far and so intimately into the daily business and social life of the community that it is difficult to understand how the preceding generation got along without it. It has made its advances so quietly, so unostentatiously, that we do not realize the vast development it has attained unless we make it the subject of special inquiry. When we do that we find that present high efficiency has been reached along ways that are strewn with methods discarded for better ones, with appliances thrown out to be replaced by new devices, and with many other evidences of the costly evolution of the most remarkable utility ever conceived by the mind of man.

While the wires of the Colorado Telephone Company now cover so large a portion of the State, the limit of its service has by no means been reached. Further new construction waits only upon opportunity and occasion, and the development of the system will proceed with the development of the State, just as the lines of the Denver street railway system are pushed out farther and farther as the prosperity and expansion of the city call upon them to lead the way. Recently before the close of our record the capital stock of the company was increased from $1,500,000 to $3,000,000, principally for the purpose of creating treasury stock to be applicable from time to time to such extensions of the company's network of lines; plans for several of which had been perfected when the increase was authorized.

The nominal beginning of Denver's present great system of street railways was away back in 1867, when the town was small and still rather unpromising. Yet, it was ambitious and hopeful, and so were many of its citizens; and on January 10th in that year a company of the latter received a charter from the Territorial Legislature for the "Denver Horse Railroad Company." The incorporators of this pioneer street railway enterprise were Robert M. Clark, Freeman B. Crocker, M. M. DeLano, Moses Hallett, Luther Kountze, D. J. Martin, C. H. McLaughlin, A. H. Miles, Amos Steck, William Stinson, E. C. Strode, Lewis N. Tappan, and J. L. Waters.

The Legislature granted a liberal charter, as it could well afford to do, that was to continue thirty-five years. It gave the company "the sole and exclusive right and privilege of building, constructing and operating a horse railroad in the said city of Denver and in all later additions thereto;" the capital stock was required to be $100,000, with privilege of increasing it; car fares were not to exceed ten cents; and the company was required to commence work on the road within one year, and to build and put in operation two miles of it within five years, from the passage of the act, on penalty of forfeiting the exclusive privileges of the charter. There was no legislation by the city, as the Territorial Legislature possessed power to authorize the company to enter upon the city streets and lay its tracks thereon, and to clothe it with full authority to transact the business for which it was formed.

The company at once organized by electing Amos Steck, President; and D. A. Chever, Secretary. In 1868 Moses Hallett succeeded Steck as President, and served until 1870. The company under this organization, however, did not build the first street railway in Denver. It did a little merely nominal work to comply with its charter, but otherwise held its affairs in abeyance awaiting the certain result of steam-railroad building into the city. So, in the meantime nothing practical was done further than to maintain the organization.



York street station, Denver—Colorado Telephone Company.

In 1871, after the steam-railroad era had been inaugurated in Denver, Lewis C. Ellsworth came here from Chicago, and on his own account and in behalf of several Chicago associates, the party having considerable capital, bought the franchise for a street railway from the Denver men, and in that year began the construction of the pioneer line. It started at the corner of Seventh and Larimer streets in "West Denver," and extended thence on Larimer to Sixteenth, thence on Sixteenth to Champa, and thence on Champa to Twenty-seventh street, a distance of about two miles and terminating in the vicinity of "Shaffenburg Park." The first car started on December 17, 1871, the return trip being made over the same route, the few cars in use passing each other by means of "turn-outs."

By an act of the Territorial Legislature, approved January 19, 1872, this "Denver Horse Railroad Company" was authorized to change its corporate name to that of "The Denver City Railway Company." The primitive line as completed in December, 1871, constituted the entire system until 1873, when a line was built from the corner of Larimer and Fifteenth streets, down Fifteenth across the Platte, and out through "North Denver" to the old "Grand View House," a distance of about two and one-half miles, over a very bad road most of the way. It was expected that the construction of this line would greatly stimulate the development and peopling of "North Denver;" but in that the company was grievously disappointed; so much so that after a few years the last mile of road out that way was not regularly operated.

In 1874 the original line on Sixteenth street was extended from the corner of Champa out to Broadway, and thence south on that street to Cherry creek, a distance of about one and one-quarter miles. In the autumn of that year another extension was made; leaving the Champa street line at Twenty-third street and extending out that street to Park Avenue, a distance of one mile. In 1876 the Larimer street line was extended from Sixteenth street, eastward a distance of a mile and one-quarter, to the vicinity of the old fair-grounds. With this addition the system embraced eight miles of road, all of the cars on which, except those of the "North Denver" line "passed the Post Office." They were two-horse cars, and very good ones for their time.

During this period Lewis C. Ellsworth, still a well-known Denver citizen, was President and Manager of the road; and W. D. Todd its Secretary and Treasurer. Construction and disappointing business brought the company into financial deep-water after it built the Larimer street extension, but it managed to pull through and get squarely on its feet. It built a combined shop, car-house and stable on the east side of Sixteenth street opposite the entrance to the present Tabor Opera House. The building was an L-shaped two-story brick structure fronting twenty-five feet on Sixteenth, running back one hundred and seventy-five feet, and then extending to Curtis street on which it fronted seventy-five feet. The walls of the old building are incorporated in the business structures now standing there.

Interior of operating room at York street station, Denver—Colorado Telephone Company.

The Denver City Railway Company made no more extensions in that decade, but in the meantime appears to have been on pretty good terms with the public, as a writer of that period thus testifies:

> "The street railway is a potent factor in the prosperity of the city. It has given value to outside property, and has enabled men of small means to locate themselves in homes of their own on the outskirts of the town. Nor should its moral influence be overlooked. Strangers coming here with very vague impressions of Denver's status as a metropolitan city, are always favorably impressed by the sight of a well-loaded street car rattling along past them, and are ready to admit that the Queen City of the Plains has some genuine and undisputed claims to a place among cities of the first class, East or West. Thanks to the enterprise and liberality of the management, the cars are always neat and clean and comfortable, and only the best 'motive power' and the most gentlemanly drivers are employed. As a consequence, no complaints are heard from the patrons of the line, and it is a pleasure instead of a discomfort to ride in the cars of the Denver City Railway Company."

The present managers of Denver's great street-railway system, unsurpassed in its relative extent by that of any city in the world, must occasionally look back with feelings of sadness and longing to the good old times when slow-gaited, rattling horse-cars brought forth "thanks to the enterprise and liberality of the management," and with the aid of the "gentlemanly drivers" inspired only expressions of pleasure from the passengers they carried; to say nothing of the "moral influence" of the proceedings.

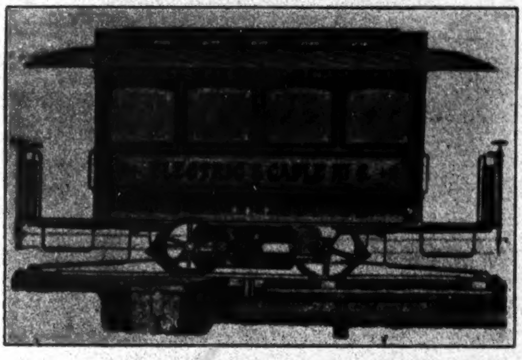
The great "boom" at Leadville had, as we have had occasion elsewhere to remark, a tremendous effect on Denver, and the Denver City Railway Company got a full share of the local benefits thereof. In 1880 and within two years thereafter it made several extensions of its lines until, by 1883, it was operating about ten miles of road. In that year the entire outfit, including its rights and franchises, was sold to a "syndicate" most of the parties to which were citizens of Providence, Rhode Island. The new owners put the lines under the general management of George E. Randolph, who immediately made many changes and improvements. Much of the old track was re-laid with heavy steel rails, the original lines extended, new ones constructed, and by the close of 1883 the system embraced fifteen and one-half miles of track, using forty-five cars and upward of two hundred horses, and employing about one hundred men. One of the new lines was built on Seventeenth street to the then new Union Passenger Station, and at the foot of that street Manager Randolph erected a large building for a car-house and stables, abandoning the old headquarters on Sixteenth and Curtis streets, and concentrating the company's operations at the new location. The company prospered and its system was farther extended during the next four years, which also brought in an era of extraordinary activity in street railway development and construction in other directions, and the beginning of rapid street-railway transit in the city. Leaving futher consideration of the development of this first street railway system in Denver to be later resumed, we will turn to the history of the second.

By the close of 1884 the lines of the old company, though they had been considerably extended, were still serving only the older sections of the city; and not doing that very well. At that time Rodney Curtis, John Evans, Frederick A. Keener, John J. Riethmann and other owners of property on Fifteenth street, believing that their property was suffering from lack of sufficient street railway service, and being unable to induce the Denver City Railway Company to build and operate a line on that street, determined to incorporate a company to build thereon and elsewhere lines of either electric or cable railways; though there was not at that time anything beyond a few experimental electric railways anywhere in the world. Another consideration in reaching this determination was that there was then an active interest manifesting itself in outlying real estate—the preliminary rumblings of the great, unparalleled "boom" that came soon afterward.

Therefore, on February 5, 1885, "The Denver Electric and Cable Railway Company" was incorporated by Scott J. Anthony, B. P. Brasher, J. F. Brown, W. N. Byers, Rodney Curtis, John Evans, C. W. Fisher, F. A. Keener, Dr. W. F. McClelland, M. J. McNamara, J. J. Riethmann, W. B. Rundle, and R. W. Woodbury, to exist fifty years, and with a capital of $500,000; the thirteen incorporators, all of whom were resident business men, to constitute the first Board of Directors. The Executive officers elected were Rodney Curtis, President; John J. Riethmann, Vice President; William G. Evans, Secretary; and Frederick A. Keener, Treasurer.

By an ordinance approved February 6, 1885, and later amended, the city granted the company the right to build and operate lines of electric or cable railways "in, along and across the streets of the city of Denver," without any time limit being mentioned, the fare not to exceed five cents. We may remark in passing that under the terms of that ordinance the company has always since then and apparently with correctness claimed the right to build railways upon any street in the city and in its additions, provided another street railway is not occupying such street; and even on such street if a majority interest of the property-owners on it shall consent. This ordinance so far as it applied to unoccupied streets, was repealed by an ordinance approved July 15, 1899. This was followed by litigation between the company and city over the city's right to repeal, which was undetermined at the close of our record.

It was because the Electric and Cable Company's incorporators believed they were debarred from using horses by the exclusive right to operate horse-cars granted by the Territorial Legislature to the old Denver Horse Railway Company, which right in 1885 was owned by the Denver City Railway Company, that they provided only for building and operating electric and cable roads by their company. Uncertain of the practical outcome of the then embryotic systems of electrical propulsion of street-cars, the company asked the city to grant the privilege of using horses in the event of electric failure. This the City Council did by an ordinance approved March 7, 1885, permitting the road to be operated "by use of electricity or by cable or by horse power."



Short's Electric Tram Car—showing motor and conduit.

As the Electric and Cable Company had provided by its incorporation for using only electricity and cables, a second corporation, "The Denver Railway Association," was incorporated January 21, 1886, by Rodney Curtis, William F. McClelland, John J. Riethmann, Frederick A. Keener, and John Evans, with $50,000 capital, to build, and to operate, street railways by any kind of motive power. It was intended that this corporation should act under the "horse-power" ordinance of March 7, 1885, which was assigned to it by its parent, the Electric and Cable Company. On May 4, 1886, this Denver Railway Association and the Denver Electric and Cable Railway Company were consolidated into a new corporation, "The Denver Tramway Company," with a capital of $500,000, and to exist fifty years from February 5, 1885; the birthday of the older of the two. The Board of Directors of the new corporation consisted of Rodney Curtis, John J. Riethmann, John Evans, Henry C. Brown, C. W. Fisher, Scott J. Anthony, M. J. McNamara, William N. Byers, James H. Nichols, G. C. Schleier, W. F. McClelland, F. A. Keener, and J. F. Brown. The executive officers of the Electric and Cable Company were continued under the consolidation.

Although having guarded against electric failure, and having, as they thought, acquired the right to use any kind of power in moving their cars, the projectors of the Denver Electric & Cable Railway had had from the start a preference for the use of electricity. Prior to the company's organization, Professor Sidney H. Short, then Professor of Physics in the University of Denver, and as events proved, a pioneer in electric propulsion of street railway cars, had devised an underground system to operate through a mid-track slot something like that used by cable lines; the general principles of which system have, in recent times, developed elsewhere into a very satisfactory method. As an experiment, in the spring of 1885, a short piece of track, between 300 and 400 feet in length, was laid in a circle on the premises of the University. A small car named "Joseph Henry" was built for the track and carried many hundreds of novelty-seeking people. The Denver Electric & Cable Company had favorably investigated Short's system, and the success of this little road encouraged the company to make more extended experiments with the invention. In perfecting its mechanical appliances Professor Short called to his aid Mr. John W. Nesmith then and since at the head of the Colorado Iron Works in this city: and in July, 1885, the car with its improved ap-

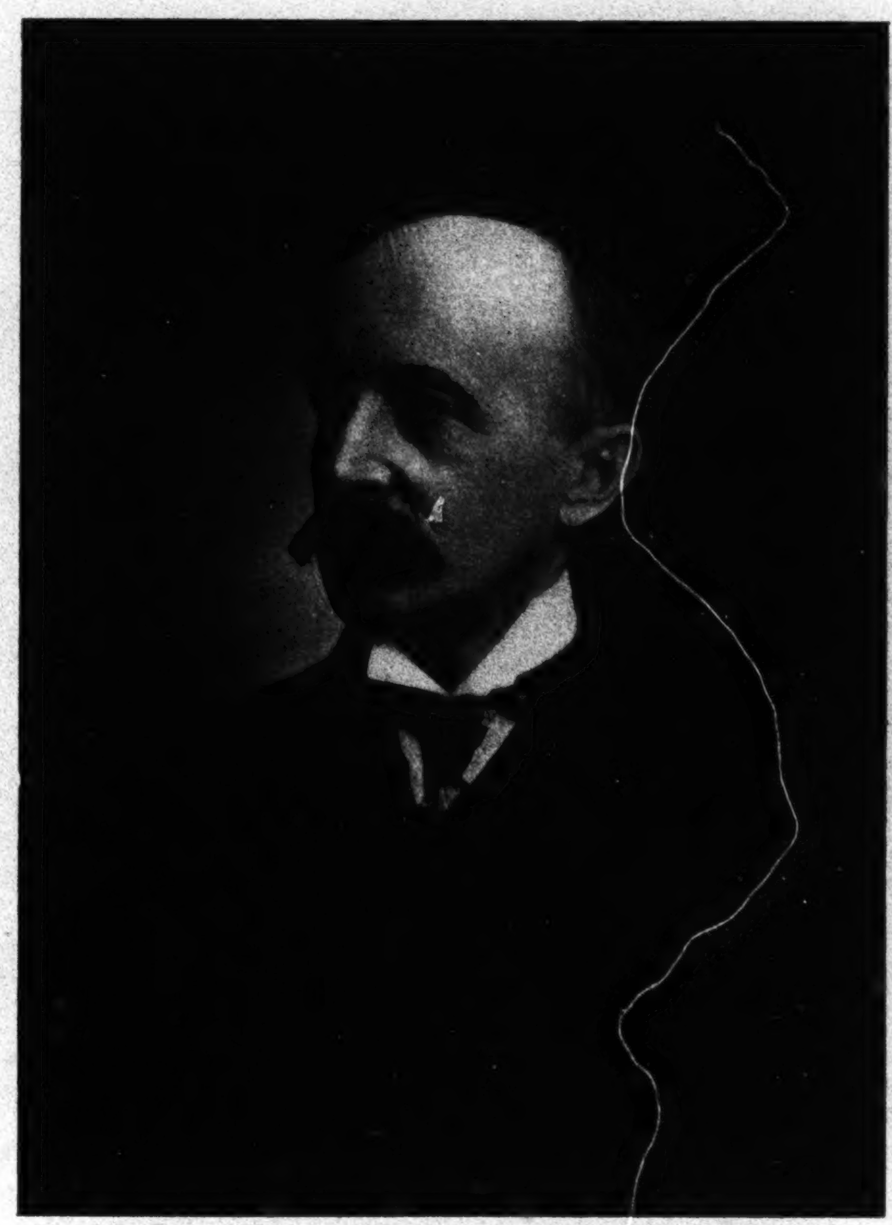
Edward B. Field, Vice President and General Manager of The Colorado Telephone Company, is a native of Massachusetts, having been born in Chelsea, September 4th, 1850. He received a common school education in his native town. At the age of sixteen he entered the employ of a wholesale woolen firm, receiving a thorough business education, and eventually becoming a traveling representative of the firm in the New England States. Prior to 1879 a pulmonary affection brought him failing health, and he decided to locate in Colorado. He came to Denver in November of that year, and from that period has been actively identified with the development in Denver and Colorado of the great public utility with which his name is so intimately associated. He entered into the employ of the Colorado Telephone Company in January, 1880, then under the management of Mr. F. O. Vaille. Previous to that time Mr. Field had not had experience with telephone or electrical apparatus, but he entered into his new calling with such zeal and earnestness that his advancement in both theoretical and practical telephone work was very rapid. Upon Mr. Vaille's retirement in January, 1884, Mr. Field succeeded him as General Manager. The business has been practically extended and worked up under his direction, and he is now Vice President and executive head of the great organization, the history of which appears on these pages. It has been under Mr. Field's administration that the business of The Colorado Telephone Company has expanded from the local domain it occupied in 1880 to one now extending over the entire State of Colorado, and into New Mexico and Wyoming.—J. C. S.



E. B. Field.

pliances was tried on about 300 feet of new track, and in its operation was highly successful in overcoming certain previous defects. In consequence of this, the Electric & Cable Company ordered one-half mile of track laid on Fifteenth street and electrically equipped for operation. In October of that year this track was completed and two new cars, especially built for it, began running. New difficulties were then encountered but were overcome by Mr. Nesmith's ingenuity, and through the winter of 1885-86 this short line was worked in all kinds of weather; in snow, rain and mud.

For the purpose of developing the system, the United States Electric Company had been organized in August, 1885, by Short, Nesmith, and members of the Electric & Cable Company, with William N. Byers, President; E. Grace, Secretary; Sidney H. Short, Electrician; and John W. Nesmith, Mechanician. Under contract with the street railway company, which had in the meantime become the Denver Tramway Company, the United States Electric Company put down in June and July, 1886, 3,100 feet of electric railway on Fifteenth street upon a further improved plan. These tracks were laid from the Court House to Larimer street, and on July 31st the first electric cars operated for business in Denver, began running on that road. The Denver Tramway Construction Company was then organized by the parties in interest, with which the Tramway Company contracted for the Short-Nesmith equipment of sufficient additional track to make in all three and one-half miles of electric road. Work was expeditious, and on November 30th the new mileage was completed and put in operation, with seven cars for its equipment. The cars, as will be seen in the accompanying illustrations, were of the "horse-car" size and type, and quite small in comparison with the fine and huge ones now in service. The main line of this pioneer electric road, part of which was of double track, extended from a little east of Grant Avenue on Capitol Hill on Colfax Avenue, to Fifteenth street, thence on Fifteenth across the Platte to Central street in "North Denver;" a branch extended from Fifteenth on Tremont and by way of Eighteenth Avenue to Grant Avenue. The power house, which was of rather temporary character was built at Fifteenth and Tremont streets.

View at Fifteenth and Lawrence streets in 1887, showing Short's Electric Cars in service.

The Tramway Company operated its electric cars more or less regularly for about a year when, after an expenditure of nearly $200,000 on the experiment, it abandoned the system and began using horses. It had no sooner introduced equine power than the Denver City Railway Company, under its inherited exclusive right to operate horse-cars, obtained an injunction restraining the Tramway Company from using such power. The latter thought it saw an easy way to get around that injunction, and substituted mules for horses. But the Court was of the opinion that while that shift was a very clever one, it would hardly fit the circumstances of the case, and therefore made the injunction include mules, also. This brought the

Tramway Company's operations to a standstill and they so remained for some time afterward.

The Tramway Company's experiment with electric cars is of especial interest, because its use of them antedates by two years, the Richmond, Virginia, street railway, which has long been reputed, and celebrated, too, as the first railway in the United States electrically operated for passenger traffic. But that distinction belongs to a road that was put in operation in Kansas City in 1884—an overhead trolley line; and it appears that the Denver system was the second one to be commercially used. The latter was in principle that of the present trolley system; but instead of the electrical connection being made from the roof of the car to an overhead wire, it was made from beneath the car through a mid-track slot to a sub-surface wire. A few years later in the litigation over the patents on the overhead trolley system, at Cleveland, Ohio, Short's little experimental car which was taken there as an "exhibit" in the case, was conclusive proof in the proceedings that invalidated the trolley patents. In 1885-86 electrical propulsion of street-cars was in the experimental stage everywhere, and while the Short-Nesmith system was in many respects in advance of others and was put in practical operation, it had defects; but probably none that further experience would not have found a way to overcome. One public objection to it was that simultaneous contact with the mid-track slot-way and one of the rails by pedestrians and animals resulted in electric shocks. The cars were easily operated on a schedule of six miles an hour, and for trial purposes were run over the line at night when the streets were clear at the rate of twenty-five miles an hour. Short and Nesmith received many patents on their methods and appliances, but these have, we believe, lost their identity in the later great development of electrical operation of street-cars.

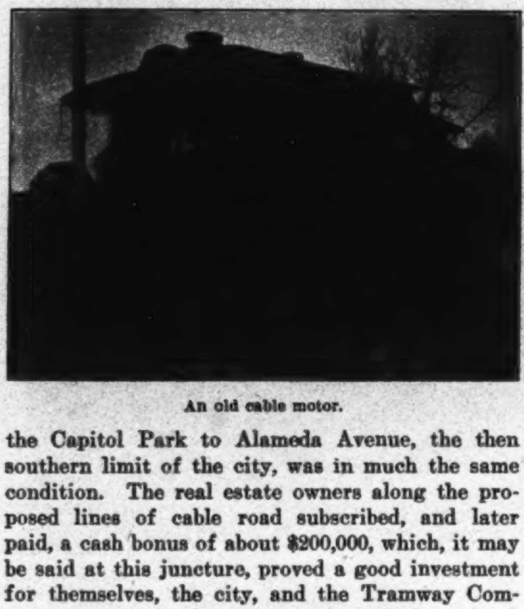
However, the defects of the Short-Nesmith system were not the only causes that led the Tramway Company to discard it. In 1887 Denver's great "boom" was booming, and preparing to boom on a still vaster scale. The city's expansion along Broadway, and Colfax Avenue, had begun, and the people and property-owners along and adjacent to those streets were anxious for better transportation facilities than horse-car lines could afford, and were urging the building of cable roads. Cable roads were then at the height of their fame and were supposed to be of imperishable utility; with never a suspicion that they would soon degenerate, in public esteem, into common nuisances.

In its construction operations also the Tramway Company had come into conflict with the older and rival corporation. The latter company had double-tracked its line on Fifteenth street northward from Larimer for several blocks, and to get its electric road on that street the Tramway Company had to crowd in on one side of the street, in some places having its tracks almost in the gutter. Later, when the Tramway Company began building a cable road on Broadway its rival's old horse-car line on that street from Sixteenth to Cherry creek had also been double-tracked. The latter at once extended its road south to Alameda Avenue, and at the same time the Tramway put in its two tracks, one on each side of its rival's pair, giving Broadway the appearance of a huge grid-iron. After a brief experience with these arrangements on Broadway and Fifteenth street, the older company by agreement removed its tracks from those streets and left the Tramway Company in full possession of them. The circumstance of the Tramway Company's tracks

Old cable "balloon loop" at Alameda Avenue and Broadway, and showing sparsely built condition of that district in 1889.

on parts of Broadway being on each side instead of in the middle of the way was due to that rival grid-ironing of that street.

About the time the Tramway Company abandoned its electric system, owners of real estate on, and in the vicinity of, Fifteenth street, on Colfax Avenue, and along Broadway south from Colfax, proposed that if it would substitute a cable, operating trains of cars, for the old system, and extend its lines east on Colfax to the vicinity of the City Park, and south on Broadway as far as Alameda Avenue, two miles south of Colfax Avenue, they would give a large cash bonus to the company. The company accepted the proposition and at once began preparations for the change. At that time there was not much of Colfax Avenue east of Logan, except the located Avenue and a great plenty of open country; and Broadway from the Capitol Park to Alameda Avenue, the then southern limit of the city, was in much the same condition. The real estate owners along the proposed lines of cable road subscribed, and later paid, a cash bonus of about $200,000, which, it may be said at this juncture, proved a good investment for themselves, the city, and the Tramway Company; for, with the construction of those lines of cable road came an unprecedented era of activity in real estate, and in building operations all over the districts they were to serve.



An old cable motor.

The company adopted the Cincinnati cable system instead of that of San Francisco, and pushed its construction work with extraordinary energy. By December, 1888, it had a double-track road on the full length of Fifteenth street, on Broadway to Alameda Avenue, and out Colfax to the City Park; the great power-house at Broadway and Colfax Avenue was built and the giant machinery installed there; and on the 22nd of that month started its cable cars over the new system that aggregated upward of twelve miles of road. In the spring and summer of 1889 the Tramway Company built a cable line on Tremont street from Fifteenth, and out on Eighteenth Avenue, more than five miles in length; making in all about seventeen and one-half miles of cable road built and operated by that company.

It was an expensive piece of work. Much of the heavy machinery was shipped here from Cincinnati at excessive freight charges, and most of the other material entailed the same expense. Added to these was the abnormally high price of both skilled and unskilled labor. It seems passing strange that, before the huge machinery had worn itself fairly smooth, circumstances became such that preparations were begun to discard it and abandon the costly system it operated. But, it was so.

During that period of great activity by the Denver Tramway Company, the old Denver City Railway Company was not idle. On March 10, 1883, there had been incorporated in its interest the "Denver Cable Railroad Company," but that organization appears to have awaited developments. On May 29, 1888, the interests of the old company were re-organized and incorporated as the "Denver City Cable Railway Company," with a capital of $100,000, but which was later largely increased. The new corporation took over the lines and other property of the older company, and retaining the exclusive horse-car privilege of the pioneer corporation. The officers of the new corporation were George H. Holt, President; H. M. Gilligan, Secretary; G. L. L'Huiler, Treasurer; and George E. Randolph, General Manager. It had little difficulty in getting a franchise from the city to change the old lines from horse motive-power to that of cable, and to build new ones, though it was a corporation composed chiefly of outsiders with its main office at Number 11 Wall street, New York. The ordinance was approved June 4, 1888, and granted road-building privileges "along and across all the streets, avenues, viaducts and bridges of the City of Denver, save and excepting Fifteenth street for its entire length, Colfax Avenue from and including its intersection with Fifteenth street eastward to the eastern corporate limits of the city, and Broadway from and including the intersection of Colfax Avenue to the southern city limits;" these excepted streets being occupied, or about to be, by the Tramway Company's cable lines. A liberal franchise was also obtained from the then independent town of Highlands; the fare under each grant being limited to five cents. The company went extensively into cable roads. Late in 1888 contracts for twelve miles of double-track road were let; and work began in February, 1889, on what eventually proved to be the most extensive cable system constructed in Denver.

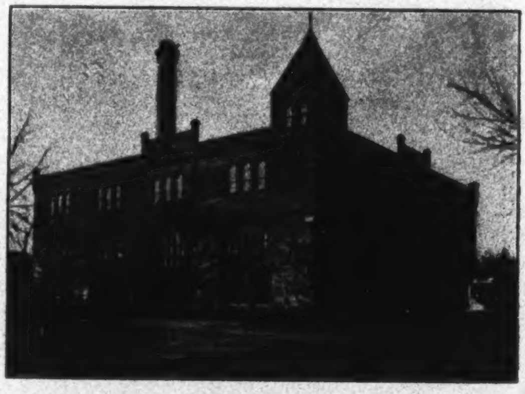
In that year this company built the Larimer street line and the West Larimer street line, extending from Maple street northwest of the Platte river, to Fortieth Avenue in the then northeastern limits of the city, requiring for the two tracks 65,600 feet of cable; the Sixteenth street line from Humphrey street far out in "North Denver," by way of North Sixteenth to Sixteenth, and across the Platte, through the business center to Court Place, thence by that street to Seventeenth Avenue, and by Seventeenth Avenue to York street near the City Park, requiring 51,800 feet of cable for the two tracks; and the Welton street double-track line, from Sixteenth on Welton to Downing Avenue at Twenty-eighth Avenue, and thence to Columbine street, with a branch on Gaylord street up to Thirty-eighth Avenue, requiring 38,000 feet of cable; a total for the three lines of 155,400 feet of cable. The Larimer street and the Sixteenth street lines were each in two sections so far as cable arrangements went; but the Welton was operated by one cable, the longest car-cable in the world at that time.

This company built the large, two-story brick power house, 125 by 150 feet at the northeast corner of Lawrence and Eighteenth streets, which housed the ponderous operating machinery. It was at that time the largest single street-car cable plant in the world, and was the central point from which all this company's lines were operated. The company also built an additional power house in "North Denver," at Sixteenth and Platte streets, but it was never used for much more than a storage building and car-house. The two great viaducts—the Sixteenth street and the Larimer street—were also the work of this corporation. The Larimer street viaduct, beginning at Seventh street and by a sharp grade rising to the level of the tops of three-story buildings, crossing streets, door-yards, railroad tracks and the Platte river, to Tracy street, is 3,600 feet long; constructed of steel by the Canton, Ohio, Wrought Iron Bridge Company, at a cost of about $125,000. It is for car purposes only, but could be adapted to vehicle traffic and for foot-travel. The Sixteenth street viaduct, from Wazee street, near by the Union Passenger Station, crosses railway tracks and the Platte river to Platte street, in "North Denver," is 3,600 feet long, was built by the same bridge company, and cost about $180,000. It has a wide roadway with foot-walks, and is a public thoroughfare between the two sections of the city which it connects.

The Sixteenth street viaduct was partly paid for by the city, and is the property of the city. The ordinance of June 4, 1888, authorized the company to cross steam-railway tracks upon elevated structures. By a supplemental ordinance approved October 1, 1888, the company was authorized to make the Sixteenth street structure a highway viaduct for public use, to cross not only the railway tracks, but the Platte river, also. The cost to the city was not to exceed fifteen per cent. of the total cost of the structure, and in no event to exceed $25,000; the cable company to have the exclusive right upon it for a double-track road, and the viaduct to become the city's property; this being its present status.

On November 1, 1889, such was the tremendous energy of construction, the three cable lines above mentioned were opened for business. In 1891 the line on Seventeenth street from the Union Passenger station to Broadway, was built and began operations on December 1st. Early in 1892 work on the Curtis street and "West Denver" line was begun, and the road was opened for business June 6th, of that year. It extended on Curtis from Seventeenth westward to Eleventh street, thence by that street and Colfax avenue to South Eleventh, and by South Eleventh out to West Fourth Avenue.

In the meantime, this cable railway company had also engaged in electrical street-railway construction. On March 26, 1890, a subordinate corporation, "The West End Street Railway Company," which was stocked and bonded for $500,000, was incorporated. Under an ordinance of the town of Highlands, adopted April 15, 1890, for an electric railway, and under grants from the County Commissioners about the same time for a railway operated by any power except steam, the West End Company was authorized to construct roads on various highways in what is now the general northwestern section of the city. It built an electric line from the westward terminus of the Larimer street cable, making a circuit around by Manhattan Beach and Elitch's Garden to Prospect street, and by that street eastward to Fairview Avenue where it connected with the Sixteenth street cable line; and which was opened for business September 29, 1890.



Disused cable-power building at Broadway and Colfax Avenue.

Another subordinate corporation, "The Denver City Electric Railway Company" was incorporated March 26, 1890. Under a Denver ordinance approved November 25, 1890, it was granted the right to construct and operate electric roads on several streets, but it never built any. In June, 1891, after various streets had been set apart as boulevards by the Board of Public Works, and upon which railroad tracks were not desired, this company joined the others in releasing to the city their rights of way on the boulevards; and this is about all the record left by the Denver City Electric Railway Company.

In 1887 the old Denver City Railway Company had built a horse-car line from its Larimer street route, by way of the Twenty-third street viaduct, to Argo. In 1890 the successor company abandoned that route to Argo and laid down a new one on the northward side of the river in to the intersection of Platte and Sixteenth streets, a distance of about two miles, where a transfer of passengers was made to the new cable line on Sixteenth. So, when this company finally rested from its construction labors in 1892, it had twenty-nine miles of cable road, ten of electric, and two of the Argo horse-car line.

View on Colfax Avenue, west from Lafayette street after completion of cable line. Emerson School, at Fourteenth Avenue and Ogden street, on left. Photographed in January, 1889. Fine homes now occupy all this area, and extend much farther to the east.

The total cost of the company's outfit was rather near $4,000,000; and unlike the other cable enterprise, the corporation received no subsidies from any one or from any source for its cable construction. The company did a good business but, after the fashion of the time, was heavily overloaded, financially, and figures as one of the victims of the panic of 1893.

We will now briefly give further consideration to the operations of the Denver Tramway Company. By the close of 1889, as we have stated, that company was operating several cable lines: a double-track the full length of Fifteenth street, a distance of about two miles; about two miles of double track on Colfax Avenue east of Broadway, including a short loop at the City Park; two miles of double track on Broadway south from Colfax; a double-track line, built in the autumn of 1889, on Tremont street from Fifteenth street to Eighteenth Avenue, thence on that Avenue to Humboldt street, thence on Humboldt to Twenty-sixth Avenue, thence on that Avenue to LaFayette street, and thence to Eighteenth Avenue, a distance exceeding five miles; a double-track line on Washington street from Eighteenth Avenue to Twenty-second Avenue, to Marion street, to Twenty-fourth Avenue, to Downing Avenue, to Washington street, to Eighteenth Avenue, a distance of about two miles; and a loop at the "North Denver" end of Fifteenth street, around three blocks, to the then limits of the city in that direction; making in all the equivalent of about thirty miles of single-track cable railway.

To attract travel to its roads the Denver Tramway Company established in 1889 the present "Base Ball Park" at the Broadway crossing of Cherry creek. On February 1st it leased for twenty-four years two blocks of land there, and later expended about $11,000 for grading and other improvements.

In 1889 the Tramway Company had again turned its attention to electrical operation of street cars, as the present trolley system had then become practically developed. On January 2, 1889, "The South Denver Cable Railway Company" was incorporated by members of the Tramway Company, with the intention of extending the Tramway Company's Broadway cable line south through the then independent town of South Denver. But this subordinate corporation was authorized by its charter, by an ordinance of the South Denver Board of Trustees approved June 20, 1889, and by a grant by the County Commissioners made in the same month, to build either a cable or an electric road on South Broadway. Making use of this subordinate company and its franchises, the Tramway Company built four miles of electric (trolley) road from the termination of its cable lines, south, and which was put in operation December 25, 1889; a small power house having been built for it in South Denver.

An additional cable line had been constructed on Lawrence street, from Fifteenth to Nineteenth street, in 1888, under unusual and rather interesting circumstances. Considerable rivalry had arisen between the two street railway companies, and a sharp difference of opinion arose as to which should occupy Lawrence street. This the Tramway Company effectively settled on the night of December 18, 1889. A force of 1,600 men, with teams hauling ties, rails, and mid-track cable fittings and appliances, went into that part of the street after nightfall, and before daybreak next morning the cable road the length of four blocks was completed. However, that line was never operated by cable. The Tramway Company, encouraged by the economical and regular operation elsewhere of electric lines, determined to construct in addition to its South Broadway line a similar one on South Water, Lawrence and other streets, across the city, under its franchise ordinance of 1885, authorizing the use of electricity. After work began in December, 1889, there was a violent clamor of opposition to the trolley from some of the newspapers and many of the people. The system was then new and its alleged dangers grossly exaggerated. The opposition finally induced the city officers to refuse to allow the work to proceed. An appeal by the company to the District Court of Arapahoe county resulted in a decision that the ordinance of 1885 was invalid. Pending an appeal to the State Supreme Court by the company, the City Council by an ordinance approved February 12, 1890, and by a subsequent one, the electrical operation of the Lawrence street and several other lines was explicitly authorized. The company hastened the work, and put the long Lawrence street line, the first trolley road within the then limits of the city, in operation June 3, 1890, with its power station on Grand Avenue in "West Denver." On December 18, 1894, the Supreme Court reversed the decision of the District Court and decided that the ordinance of 1885 was valid.

While the construction of the Lawrence street line was in progress, members of the Tramway Company incorporated, on April 7, 1890, another subordinate organization, "The Denver Tramway Extension Company," with $500,000 capital, and owned entirely in the interest of the parent organization. Under an ordinance of the Board of Trustees of the town of Highlands, passed April 15, 1890, and amended July 29, 1890; and under a grant by the County Commissioners made April 15, 1890, the Extension Company built electric lines on Agate and Ashland Avenues in "North Denver;" opening the former for business on June 18th, and the latter on July 7th, in that year. A separate corporation was required for these lines because it was proposed to extend them into suburban towns, and into Jefferson county, authority for which the Denver Tramway Company did not have under its charter.

On July 28, 1890, the South Denver Cable Railway Company, the Denver Tramway Extension Company, and the Denver Tramway Company were consolidated under the name of "The Denver Tramway Company" (Junior), with a capital of $1,000,000, and which took over all the lines of the constituent companies, and was authorized to operate in the city of Denver, and in Arapahoe and Jefferson counties.

South Broadway Passenger Station—Denver Consolidated Tramway Company.

For more than a year prior to that time two independent companies had been operating steam ("dummy") railroad lines in part of what is now the "North Denver" division, but then outside the boundaries of the city. The Denver and Berkeley Park Rapid Transit Company was incorporated May 15, 1888, and the Highlands Street Railroad Company on July 18, 1888; both enterprises having been promoted principally by men directly interested in the development of real estate in that section. Under ordinances of the town of Highlands passed later in 1888, and under grants made by the County Commissioners, these companies built lines extending from the terminus in "North Denver" of the Tramway Company's cable line, to Elitch's Garden, and to Berkeley and Rocky Mountain Lakes, and that were operated by steam. Late in 1890 the Denver Tramway Company bought those two "dummy" lines for $100,000 in cash, and later converted them into electric roads; the Berkeley Lake route being first operated by electricity on June 10, and the Highlands on July 2, 1891.

There were three other outside, independent, roads in the suburbs of Denver in that general period. "The University Park Railway and Electric Company" was incorporated February 12, 1889. This company was principally composed of men interested in real estate in the University Park district, and under a South Denver town ordinance adopted March 5, 1889, built an electric road extending from and connecting with the Broadway cable line of the Tramway Company, to University Park, a distance by the route followed, of about four and one-half miles. Late in 1890 the Tramway Company by purchase acquired all the property of this company and began operating it on January 1, 1891; but its separate corporate existence continued until January 13, 1892, when it terminated under circumstances that will presently be stated. "The Denver and Park Hill Railway Company," incorporated August 20, 1888, and which was largely a real estate "booming" enterprise, later built and operated a steam ("dummy") road extending along what was then the south and east sides of the city limits, and easterly from the City Park, connecting with the Tramway Company's Colfax Avenue cable line. This road was built under privileges granted by the city, the independent suburban towns, and the County Commissioners. On April 29, 1893, the Tramway Company acquired all the property of the Park Hill Company and the latter passed out of existence; the greater part of the route having since been abandoned. That part of it beyond the Park—the present "Park Hill line" of the Tramway Company —was electrically equipped late in the spring of 1893. The third of these suburban companies, not eleswhere mentioned, was the Colfax Avenue Railway Company, incorporated September 20, 1889, the projectors of which had received a franchise from the city of Denver to build an electric line on Colfax Avenue from York street to the eastern limits of the city, by an ordinance approved February 19, 1889; and one from the town of Montclair about the same time to extend the line to that town. The road was built and opened in 1890, but on May 4, 1891, the company was re-organized and re-incorporated as "The Colfax Electric Railway Company." This new company under ordinances of the towns of Montclair and Fletcher, passed in June, 1898, and one of the city of Denver adopted July 31, 1898, built the extension to Fletcher and the connecting line to Fairmount Cemetery. The Denver ordinance required the company to pay $100 for the privileges granted, and this was the first instance in which the city exacted a price for a street railway franchise. On January 26, 1899, the Colfax Electric Railway Company conveyed all its franchises and roads to the Denver Consolidated Tramway Company, and ceased to exist.

Exterior of new type of 40-foot combination car, from open end —Denver Consolidated Tramway Company.

On November 21, 1889, an independent street railway organization, "The Denver and Suburban Railway Company," of which Thomas J. O'Donnell became President, and Charles F. Musgrove, Secretary, was incorporated by citizens of Denver who had not theretofore figured in the local railway field. By an ordinance approved March 18, 1890, the City Council granted this company right of way for electric lines upon several streets in "East Denver" and "West Denver." The company bought material for about seventeen miles of road, and ground for a power house; and began work on Champa street, east of Cherry creek. The Tramway Company refused it permission to put in a crossing on Fifteenth street, on the ground that it was improperly chartered and could not exercise the right of eminent domain. The Courts sustained this view, and the defeated company attempted to reorganize and to have its franchises renewed, but was unsuccessful. After the contest had been carried on for several months, the Denver and Suburban Company, discouraged by its experience, offered to sell at cost all its property and material to the Tramway interests, and the offer was accepted.

The Tramway Company as a corporation not being in a position to accept the offer, its officers and Directors on July 6, 1891, incorporated "The Metropolitan Railway Company," in the interest of the Tramway Company, and with a capital of $1,000,000. This company took over the property of the Denver and Suburban, and with the material constructed the South Thirteenth street, the Eleventh Avenue, the South Tremont street, and several other lines in 1891-92. The Metropolitan Company did a large amount of other construction work in that general period under franchises granted by the city of Denver, the city of Highlands, and the towns of Harman, South Denver and Elyria. On the day the Metropolitan Company was incorporated, the Denver and Suburban Company re-conveyed to the city the rights of way it had received, and soon afterward wound up its affairs and ended its career.

The years 1888 to 1892, inclusive, were times of amazing activity in Denver in every direction, but there seemed to be no limit to the energy and money that were being applied to street railway construction in the city and far into the outlying districts in that period. With the making of railroads and the erection of buildings the streets presented apparently hopeless aspects of crowded confusion that are not often seen in a lifetime. We have already mentioned the dates of opening many of the electric roads of the Tramway Company and its subordinate corporations. Others of their lines were the Twenty-second Avenue opened October 11, 1890; the Eighth Avenue line, from Broadway to Arlington Park; and the Eleventh Avenue, were opened December 19, 1891. The Stout street and the South Tremont lines, January 1, 1892; the Harman extension of the Eighth Avenue, March 17th; the Platte street, November 24th; and the Riverside, December 12th. The Twenty-fifth Avenue, April 15th; and the Pearl street, June 1, 1893. By this time, including what the other company had done, the city and its suburbs were pretty well grid-ironed with street railroads.

Interior of closed part of new 40-foot combination car—Denver Consolidated Tramway Company.

During this new construction work various minor changes in the earlier-built routes were made by both companies, and from some streets tracks were removed; among the latter having been those of the old horse-car line on Champa street eastward from Sixteenth, and of another on Arapahoe street in the business section.

We have heretofore stated that the Denver Tramway Company's cable machinery had barely begun to run smoothly before its displacement was inaugurated. The Tremont street-Eighteenth Avenue cable line that had been started November 3, 1889, was operated about two years when, under an agreement with the Denver City Cable Railway Company, the Eighteenth Avenue part of it was abandoned on November 27, 1891, and its tracks were afterward removed. New tracks had been laid on Nineteenth Avenue, and the entire route thus changed had been put under electrical operation on November 28, 1891. Early in 1893 the company decided to convert its remaining cable lines into electric lines and the change was soon accomplished. The Broadway line was deprived of its cable in May, 1893, and two weeks later the trolley drove the cable cars off Fifteenth street and Colfax Avenue.

Conditions precipitated by the panic of 1893 ended further street railway construction by any of the then existent companies in Denver. They also made it expedient, for economic reasons, to consolidate the Denver Tramway Company and the Metropolitan Railway Company, notwithstanding that the two were of practically the same ownership and under one management. Therefore, on September 6, 1893, "The Denver Consolidated Tramway Company" was incorporated with a capital of $3,000,000, under a very broad charter. Its term of existence was fixed at fifty years from July 1, 1891; it could use any power then in use or thereafter applied or discovered; could build, buy, or lease, and operate railways in the city of Denver, in adjoining and adjacent towns, in Arapahoe and Jefferson counties, and could exercise the power of eminent domain. It took over all the property, rights and privileges of the two constituent companies, and the latter passed off the stage. This union involved no change of ownership or of management.

Interior of closed part of a Colfax Avenue car—Denver Consolidated Tramway Company.

The panic of 1893 entailed many vicissitudes upon the old overladen Denver City Cable Railway

Company and its subordinate corporations, and on November 10th of that year their affairs were placed in the hands of two Receivers; their indebtedness having then aggregated about $4,300,000. The Denver City Cable Railway Company was subsequently re-organized as the Denver City Railroad Company, and the West End Street Railway Company as the West End Street Railroad Company. But these changes did not ward off the inevitable. On December 16, 1898, the properties of these two re-organized companies were sold under foreclosure and purchased on behalf of their bondholders pursuant to a plan for another reorganization. The properties were then transferred to the Denver City Traction Company that had been organized at that time for the purpose of acquiring them. Arrangements for the union of practically all street railroads in the city in one corporation having been made, The Denver City Tramway Company, the present organization, was incorporated on March 3, 1899, with a capital of $5,000,000. This was a consolidation of what had formerly been the Denver Consolidated Tramway Company, the old Denver City Cable Railway Company, and the West End Street Railway Company; or rather an absorption by the old Tramway Company of all the lines that had been directly or indirectly owned or controlled by its one-time rival. Thus the new corporation, composed almost wholly of the old Tramway Company stockholders, and with the latter's old executive officers, became as it is at the close of our record, owner of all the street railways in the city except the line of the Denver, Lakewood & Golden Railroad Company. Some further account of this Golden road appears in our historical sketches of the steam railroads. Within the city limits it is operated by electricity, and beyond to Golden, by steam. A part of its electric line is built under franchises granted by city ordinances passed by the City Council in 1891, and a part is operated over the tracks of the Denver City Tramway Company under an agreement made May 6, 1892, with the old Denver Tramway Company and the Metropolitan Railway Company.

The Denver City Tramway Company at once applied to the City Council for permission to electrically equip the cable roads it had purchased, but encountered much unreasonable opposition, in and out of the Council, to the proposed great improvement. The matter dragged along throughout the year 1899, and it was not until March 21, 1900, that the ordinance became a city law; the company having voluntarily proposed to pay the city $76,000 for the privilege, and which proposition became one of the conditions of the ordinance.

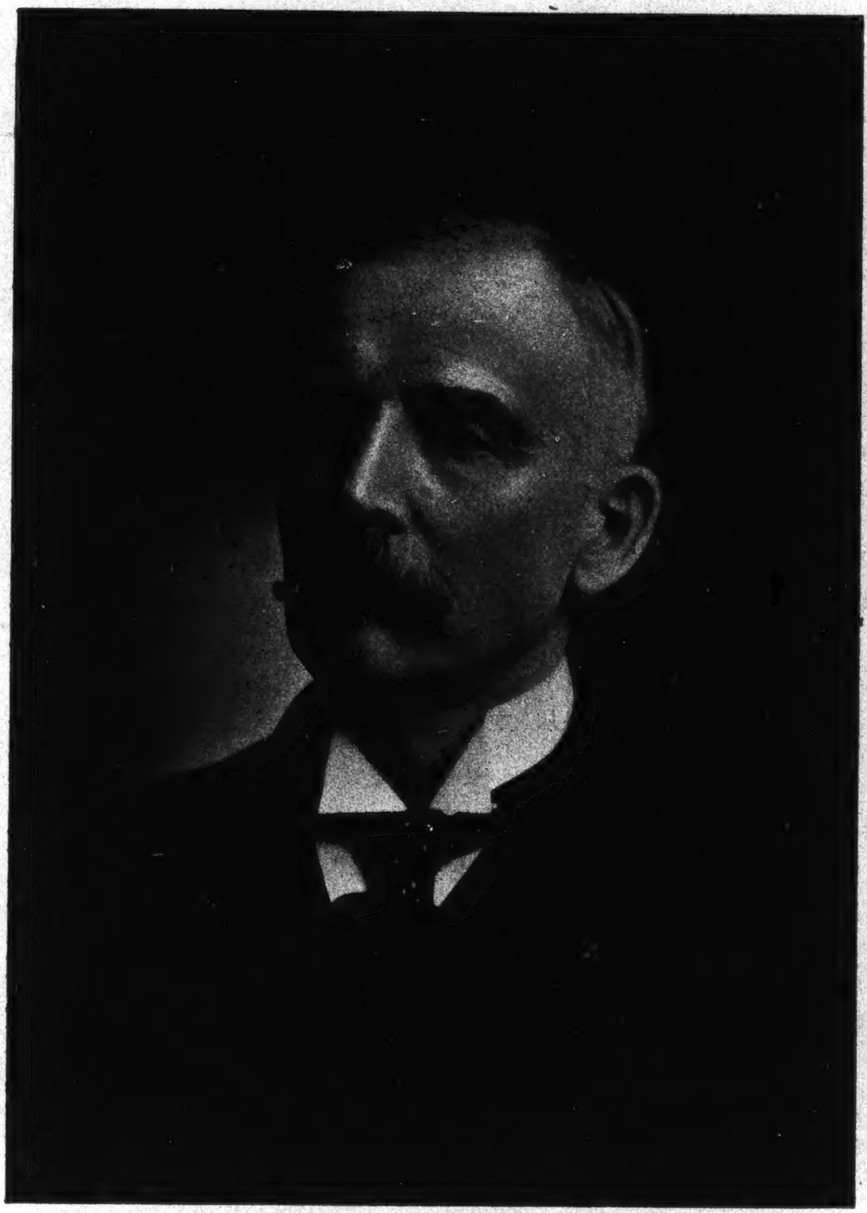
No time was lost in making the change from cable to trolley, and construction work of extraordinary celerity was done; everything being at hand and in readiness for it. The Board of Aldermen having met on the night of March 20th and passed the bill as it came from the Board of Supervisors, the Mayor signed it on the afternoon of the 21st. On the morning of the 22nd the company's bond was approved, and work began. On Sunday morning, March 25th, the first electric car was run over the line of the Curtis street and "West Denver" cable. Before the end of that

---

Rodney Curtis, President of the great company owning and operating Denver's fine system of street railways, is a native of Broome county, N. Y., where he was born January 17, 1839. Educated in the local schools and at Susquehanna Seminary at Binghamton, N. Y., and in a commercial school at Chicago, he located in Cedar Rapids, Iowa, in 1859, where he began his business career as a dealer in grain. In that year he, like so many other young men along what was then the frontier, became interested in the reports from the Pike's Peak region, and decided that he would go to the new country in the farther west. In the spring of 1860 he and his brother, C. M. Curtis, arrived in Denver, but instead of turning to mining or trading as nearly every new-comer immediately did, they purchased a ranche near Denver. Subsequently Mr. Curtis engaged in the grocery business and still later in the drug business in the pioneer city. In the spring of 1864 he was appointed Pay Clerk or Cashier of the old Mint, a position he filled until 1869 when he became the Mint's Chief Clerk. In January, 1876, after nearly twelve years of service in the Mint, President Grant appointed him Melter and Refiner as which he served until his resignation in 1883 terminated a continuous connection with the old Mint that had extended through a period of about nineteen years.

Mr. Curtis had acquired interests in the city which had expanded with the growth of Denver, and it was to give these affairs personal attention that he resigned from the Mint. In 1867 he and C. J. Clark had platted the Curtis & Clark addition to Denver, and in 1874 they had built the present business block at numbers 1632-38 Larimer street, and which was then one of the conspicuous structures on that thoroughfare. It later became the temporary "Capitol" of the State, having been converted into offices for the Governor and other Executive officers of Colorado.

In 1885 Mr. Curtis became one of the organizers of the Denver Tramway Company and, as related upon these pages, has been the executive head of the corporation from that time to this, through all the various changes, expansions and acquisitions, from its modest inception to its ownership and operation of one of the most efficient and intelligently planned street railway systems in the country; a result largely due to his able, untiring and far-sighted executive management. One of Denver's pioneers, he is still an active, energetic man in the prime of his mental vigor, and, as the reader will have seen, one who has long been closely identified with the development of the city. —J. C. S.



Rodney Curtis.

week the entire thirty miles of cable trackage had been electrically equipped in seven days and four hours of working-time; and on Saturday, March 31st, the last cable car left the streets of Denver, and the huge machinery in the power-house at Lawrence and Eighteenth streets stopped turning its wheels and became obsolete.

As our reader will have seen, an enormous amount of capital has been absolutely sunk, out of sight and beyond salvage, in the construction of various lines of horse, experimental electric, and cable railway in Denver. It appears to have been one of the unavoidable things due to quick development of scientific and mechanical discoveries and inventions. The cable system had a rapid development but it was slow compared with that of the trolley; and the scrap-heap became the inevitable destination of all its mechanical equipment. The large and fine building erected for a power-house at Broadway and Colfax Avenue, empty of machinery and practically idle, is a silent monument to misplaced confidence in the permanent utility of cable lines; and nothing kept the larger one at Eighteenth and Lawrence streets from a similar fate, but its adaptability for use as an electric power station, as which it has been temporarily and partially equipped.

Exterior of new 38-foot combination car—Denver Consolidated Tramway Company.

The present Board of Directors and officers of the Denver City Tramway Company are Rodney Curtis, William N. Byers, William G. Evans, George E. Ross-Lewin, William F. McClelland, James H. Blood, Samuel M. Peary, Thomas Keely, and George H. Holt, Directors; Rodney Curtis, President; William N. Byers, Vice President; George E. Ross-Lewin, Treasurer; and William G. Evans, Secretary. As will be seen, and notwithstanding that the present corporation has absorbed all the street railways in the city, including those of the former powerful Denver City Cable Railway Company, the executive management is practically the same as that of the old Denver Electric and Cable Railway Company; and which has been continuous throughout the intervening years. It is due to this continuity of policy and direction that there has been matured and carried out a comprehensive plan for establishing a great and convenient system of transportation throughout the city.

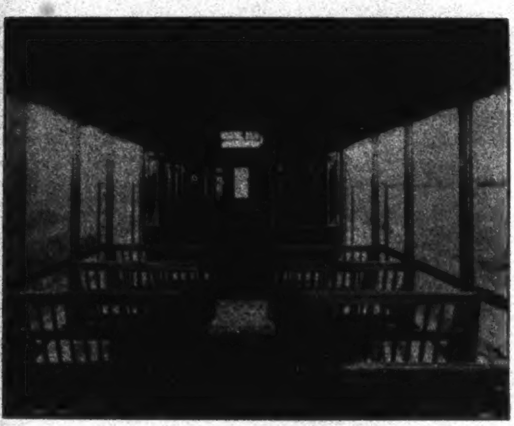
It is to be said, furthermore, that the relations between the company and its many employees are and have been exceedingly harmonious, and have developed a mutual loyalty of feeling that is unusual in these times of frequent discord between those who employ and those who serve. For the use of the men there are two well-appointed club rooms, one on Gallup Avenue near West Thirtieth Avenue, and one at the Tramway Passenger Station at Broadway and Alaska street; the maintenance expense of both being shared by the men and the company.

Since 1894 there has been but little new street railway mileage constructed within the city limits; energies having been directed toward unification and rehabilitation. To this end a vast amount of reconstruction work has been done, resulting in many miles of new and heavy track renewals, and almost an entire new equipment of rolling stock. Part of one line, the West End Electric, acquired by the present company in the purchase of the Denver City Cable Railway Company's property, has been abandoned. When the Larimer street line was electrically equipped in March, 1900, it was extended west to Sheridan Avenue, and that part of the West End Electric on that Avenue and in some other places was removed. In the summer of 1900 the Argo line, which had the distinction of being the last horse-car line within the city limits, was rebuilt on a somewhat changed route, electrically equipped, and directly connected with the general system. In the autumn of 1900 the track on South Pearl street was extended south to Evans Avenue and on that street eastward, increasing the facilities to and from University Park and adding one and one-quarter miles of route. This was nominally done by the University Park Extension Railway Company, incorporated November 18, 1899, by W. C. Johnston, W. S. Iliff, A. L. Doud and A. J. Fowler, with a capital of $10,000; but the line was made practically a part of the Tramway Company's system. The route mileage operated by the consolidated company at the beginning of 1901 is stated in the following, according to the common designation of each line, in miles and hundredths of miles:

Broadway	6.78
Colfax Avenue	3.25
Lawrence street	5.55
Stout street and Riverside	4.09
Twenty-second avenue	2.53
Nineteenth Avenue	2.37

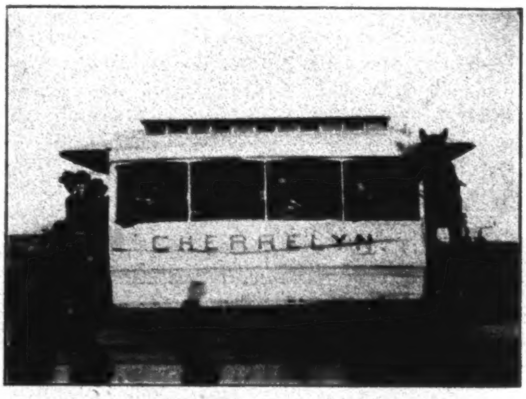
So. Tremont, South Pearl, and University Park	8.46
Larimer street	5.43
Welton street	2.67
Seventeenth street	1.00
West Curtis street	2.45
Seventeenth Avenue	2.40
Goss street	2.72
Argo	2.65
Eleventh Avenue	2.80
Harman	3.79
West Twenty-third Avenue	3.65
Berkeley	4.68
West Twenty-ninth Avenue	4.14
Rocky Mountain Lake	4.76
Park Hill	2.50
Montclair	5.20
Aurora	4.19
West End	2.70

These various routes, allowing for duplication of trackage, aggregate the equivalent of about 144 miles of single track, as nearly all of them are double track lines throughout. In 1900 about 35,260,000 passengers were carried, and the total car-mileage was nearly 6,300,000 miles; or say considerably more than thirteen round trips between the earth and the moon. The company has, of all kinds, about 250 cars, of which an average of 150 are required for handling the ordinary daily traffic. The number of men employed in all departments ranges between 800 and 1,000; the average being about 900. All the lines are so connected that a car may start on a journey from the Fifteenth street "loop" and traverse every one of them, and into every section of the city and its suburbs. The "loop" arrangement is an admirable one. One-half of an entire city block in the heart of the city—west side of Fifteenth street between Lawrence and Arapahoe streets—is surrounded by tracks. Nearly all cars begin and end their round trip there, where passengers going farther are given transfers and may change cars under a handsome train-shed. One may now ride nearly fifteen miles for five cents, in what are probably the largest, handsomest and most comfortable street railway cars in the world; and over tracks the greater portion of which are equal in construction and smoothness to those of the best steam railways.



Interior of open part of new 40-foot combination car—Denver Consolidated Tramway Company.

To operate this great system five electrical-power stations are maintained; one on Grand Avenue in Baker's Villa, one on Blake street between Thirty-second and Thirty-third streets, one at Broadway and Alaska street, one at West Thirty-eighth Avenue and Twenty-second street (Berkeley), and one on East Colfax Avenue in Montclair. However, at the close of our record the Tramway Company had purchased about a half-block of land on the northward bank of the Platte river, between Fourteenth and Fifteenth streets, on which to build a large central power station that will ordinarily be capable of operating its entire system.



Rolling stock of the Cherrelyn Street railway.

Two short suburban lines alone remain as reminiscences of the horse-car era, but both operate outside the city limits. One extends from Orchard Place on the south line of the city boundary, south on Broadway-in-the-country to "Cherrelyn," a distance of a half-mile or so, its equipment consisting of one horse and a small car. In operation it presents an unique feature in transportation. Beyond Orchard Place the road ascends a sharp grade for a quarter of a mile or more, and on the return trip the horse mounts one of the car-platforms at the top of the hill and contentedly comes in as a passenger. This line was built a few years since by persons interested in suburban property just south of Orchard Place, and is now operated as an extension of the South Broadway line of the Tramway Company to Orchard Place. The other horse-car line is the "Fort Logan Street Railway," extending westward from Orchard Place through Petersburg, across the Platte, through the rather sparsely settled town of Sheridan, past Loretto Heights to Fort

Logan, a distance of 3.6 miles. It was built in 1898 by Rev. Thomas H. Malone and associates, primarily for the convenience of Loretto Academy, and otherwise as a transportation enterprise. Its trains run at intervals of forty minutes, and it is independent of all entangling alliances with other railway organizations.

At various times in the past other street railway enterprises that have not been mentioned in the preceding pages, have appeared on the surface in and around Denver. Some of them to which rights of way were granted in the names of individuals were in the interests of the two corporations that have figured most prominently in our accounts, and had no independent existence. Others were undertakings that never passed the embryotic stage. The records of the Secretary of State contain the whole of the brief histories of dozens of such contemplated enterprises—of companies incorporated to build steam "dummy," cable, or electric roads, but which ended their proceedings in the office of the Territorial or State Secretary. In the middle "Seventies" Jerome B. Chaffee, H. G. Bond and their associates were granted by the city rights of way over various streets for a horse railway. About the same time H. G. Bond, Miers Fisher and Charles Ruter were granted similar privileges for a steam ("dummy") road to Swansea. These proposed roads were not built, and their grants were repealed by the City Council in 1881. The Arapahoe Railway Company figured in the town of Harman in 1892-93; the Citizens' Railway Company of 1895 was a Tramway Company subordinate that received from the city in August of that year rights of way for an electric road over certain streets, but did not use them; the Denver, Globeville and Golden Rapid Transit Company of 1896 was projected to build a line to Golden, connecting with the West End Street Railroad. Several years ago, John Cook, who was largely interested in real estate in the northeastern part of the city, built a horse-car line on Thirty-fourth Avenue from a connection with the Tramway Company's line on Williams street, east to Colorado Boulevard, in the district north of City Park. The line was about one and one-quarter miles long, and in recent times this road has been disused. But at the close of our record the Tramway Company was preparing to rebuild it for electrical operation.

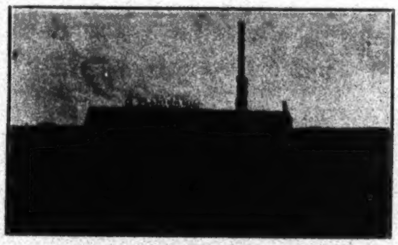
Fifteenth street Loop Station—Denver Consolidated Tramway Company.

The development of our street railway system is a remarkable one to have been accomplished practically within a dozen years, several of which were times of extreme depression. No city has a more comprehensive and efficient transportation system. In proportion to population the mileage is greater than that of any other city in the world; there being more than a mile of track for each thousand people.

With the exception of the steam railways, it would seem that no institution has done so much for the upbuilding of Denver as the street railway system. While it is true that the roads were not built and are not operated as philanthropic enterprises, or as public benefactions, it is equally true that they have been chiefly instrumental in distributing Denver's population over the unusually large territory it occupies, and are to a great degree responsible for the absence from the city of anything approaching a "tenement house district." Denver has nothing like that blight common to so many large cities. The system has enabled men of moderate means to acquire homes for themselves in pleasant places away from the business center, instead of being housed tier upon tier in congested localities as so many have to be in so many other cities. The thousands of pretty dwellings and of suburban cottages that line streets far away from the commercial districts, would not be there under less favorable conditions for going and coming; neither would the suburban towns be there. These adequate means of transportation in every direction have enabled men to build their castles where trees and grass and flowers may grow, and where they are not crowded for ground-room; to the great good of each and the common benefit and pleasure of all. Much has been said of the economic results springing from the operations of this great institution; of the increased value they have given to what were outlying areas of the plains; of the vast increases of tax revenues for the public treasuries; and of the dollars and cents aspects of all the consequences. But these things are of the lesser importance. The great, outstanding, wealful fact is that prudent citizens even of limited means and income may own and occupy homes of their own. In trying to gauge the far-reaching influences of home-owning upon men and women and children, the measure of mere dollars and cents is an utterly useless thing.

CHAPTER LXIX.

COMMERCIAL AND MANUFACTURING INTERESTS—PIONEER MERCANTILE ESTABLISHMENTS—VOLUME OF THEIR BUSINESS—BEGINNING OF MANUFACTURING IN DENVER—EXTENT AND CHARACTER OF THE BUSINESS—INFLUENCE OF RAILROAD COMMUNICATIONS—DEVELOPMENT OF COMMERCIAL AND MANUFACTURING BUSINESS AT PRESENT TIME—EARLY ORGANIZATIONS OF BUSINESS MEN—HISTORY OF THE CHAMBER OF COMMERCE AND BOARD OF TRADE—DENVER'S FUTURE AS A COMMERCIAL AND MANUFACTURING METROPOLIS.



One of the pioneers—Moyne Brothers' planing mill.

Denver may not fairly be represented as a great commercial city in the sense of being a wholesaling metropolis, nor as a great manufacturing city; though both these lines of business are now healthfully expanding their spheres of influence and trade. Denver has been said, even in recent times, to have relatively the largest retail and the smallest wholesale commercial business of any city of its size in this country. But, if the present ratio of increase in the wholesale branch of the city's business be maintained a few years, these conditions will be changed; assuming that the statement mentioned be true. The recent erection of large structures, some of which are subjects of illustration here, exclusively for wholesaling purposes, indicates more clearly than mere figures the increasing volume of the city's commercial trade.

But, considering all the circumstances of location, and taking a broad view of the obstacles that have had to be overcome, Denver's commerce throughout her history has been of creditable proportions. It was relatively large in the pioneer times, for a town of less than five thousand people. While Denver's first mercantile house, that of Blake & Williams who came at the close of October, 1858, had but a small stock, and while "Uncle Dick" Wooton's merchandise that was unloaded on Christmas day, 1858, was mostly of Taos manufacture, and packed in barrels, the town, before a year had passed, harbored some stocks of general merchandise large in variety and in value. As we have heretofore mentioned, Jones & Cartwright alone had $150,000 worth of goods in Denver in 1859-60; the old-time firm of J. B. Doyle & Company—Doyle and F. Z. Salomon—had nearly as much; St. Vrain & St. James also carried a large stock; and in 1860 there was a dozen more establishments representing heavy investments. The firm of J. S. & J. F. Brown, that has had a continuous existence through all the intervening years, though recently given a corporate name, dates from that period and has always ranked among the establishments transacting a heavy annual business. It is true that a large part of merchandise values in the early days stood for the cost of transportation, the freightage on many articles exceeding their cost at the Missouri river; and on some several times their cost. Still, in actual quantity there were large stocks of goods in Denver in the pioneer times, and the town's commercial business was, in proportion to population, far greater than it is now, for it was then the only place of any im-

Another pioneer establishment—north side of Blake street, between Fifteenth and Sixteenth streets.

portance in all the region around it—it was the metropolis and without competitors worthy serious consideration. But the application of the per capita proposition signifies no decadence of commercial enterprise; it merely emphasizes the unusual conditions surrounding the city in those years. As we have, in preceding chapters, narrated the circumstances attending the coming and business of the pioneer merchants, we need not further dwell upon them here.

Throughout the decade of 1860-70 Denver's commerce, notwithstanding the many disadvantages, the depressions, the discouraging situations that so often presented themselves, continued to be in proportion to population, abnormally large; aggregating several millions of dollars annually. It received a tremendous stimulation by the advent of the railroads in the summer of 1870, and in 1871 the sales of merchandise in Denver exceeded eleven and one-half million of dollars; figures, however, that indicate high prices as well as large business, and in which there was doubtless some duplication of values of goods both wholesaled and retailed in the city.

Under the influence of railway connections in several directions, and of that of the developing Colorado country and comparatively rapid growing city, the mercantile interests of Denver had a vigorous expansion, and by 1875 the volume of business aggregated double that of 1871. Between 1875 and 1880 it did not increase in so great a ratio, if the figures for those years may be accepted as trustworthy; yet, the aggregate was most encouragingly large, the average annual value having been about thirty-five million dollars. In comparison with these figures those of the manufacturing industries of those times were of very modest proportions; probably not exceeding an average of $1,500,000 per annum.

To go back to the actual beginning of manufacturing in Denver we must recall the firm, or the old-time "partners," of Moyne and Rice. They first figured as wagon-makers and, as stated in a preceding chapter, built a double log-cabin at the southeast corner of Larimer and Fifteenth streets in the latter part of November, 1858; and in one end of which they had their shop. Later they became the pioneer "cabinet makers," and in August, 1860, bought a boiler and engine from a man who had brought them across the plains and did not know what to do with them when he got here. Under steam, the business expanded and subsequently under the ownership of Moyne Brothers developed into that of a planing mill and lumber yard.

Then, there was John Kinna who came even earlier—November 3rd—and located in Auraria City. If a tinner and worker in sheet iron can be considered a manufacturer, he would take precedence

---

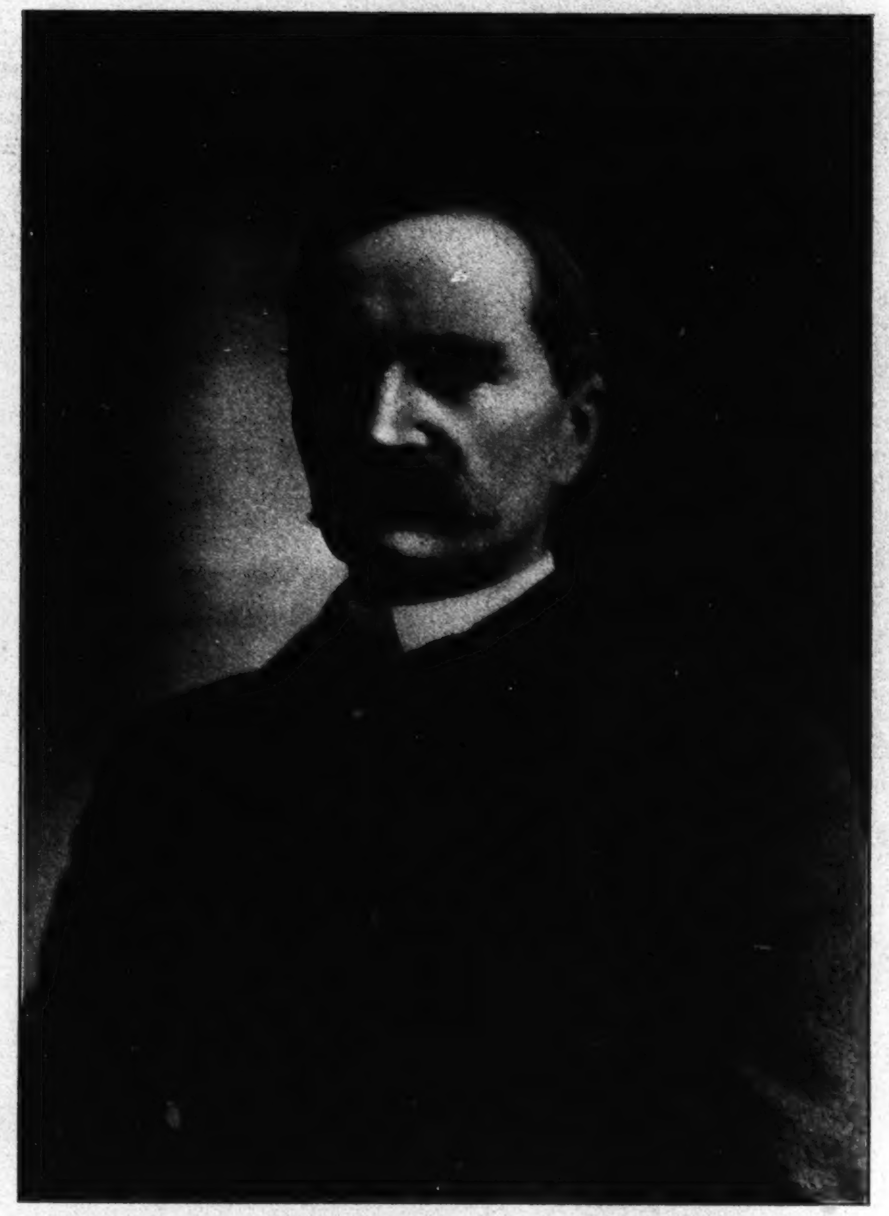
Henry M. Porter is another of the forceful men who have witnessed the wonderful development of this great central region west of the Missouri river, and who helped to accomplish a large part of it. He was born at Lancaster, Pennsylvania, November 2, 1840. Soon after his birth his parents left Lancaster and settled in Jefferson City, Missouri, where they resided until 1847, when they located on a farm near that place. In 1855, they removed to Adair county, Missouri, continuing at farming.

As a boy and youth Mr. Porter was engaged in farm work and attending the country schools. When he was eighteen years old he found new employment with the Missouri Telegraph Company which was then constructing a telegraph line from St. Louis along the Missouri river to the then newly located town of Omaha. Late in 1860 he began building the Overland Telegraph line which was constructed by him as far west as Julesburg, being completed to Fort Kearney in the spring of 1861, and to Julesburg in the autumn of that year. Subsequently in that decade he constructed the Denver-Santa Fe telegraph and other local lines, as we have elsewhere stated. Late in 1861, and when he had barely attained his majority, he undertook the construction of a telegraph line for the government from St. Louis to Fort Smith, Arkansas; and another from St. Louis down the Mississippi to Cape Girardeau and New Madrid. While engaged in this later work Mr. Porter and his party were captured by the Confederate General Jeff Thompson. After a brief detention the telegraph builders were released, and later returned to and completed their work.

In the autumn of 1862 Mr. Porter established in Denver the wholesale grocery house of Stebbins & Porter, which was one of the prominent mercantile firms here in those times. He later became extensively engaged in banking, and the forwarding and commission business; with banks at Atchison, Kansas, and Kirksville, Missouri. Branch banking and mercantile houses were established at Santa Fe, Cimarron, Elizabethtown, Springer and Silver City, New Mexico, and at Del Norte, Colorado, the combined business assuming large proportions.

In 1882, Mr. Porter took up permanently his residence in Denver where he had continued to hold large interests. In the upbuilding of the city he became closely and actively identified with many of the great operations that made Denver what it is today, including interests in the Denver National Bank, the American Water Works Company, the Gas Company, the Consolidated Electric Company, the Colorado Fuel and Iron Company, the Denver Paper Mills Company, the Denver Stock Yards Company, the Denver Packing and Provision Company and several other local industrial enterprises. He also engaged in the live-stock business on an extensive basis, in the Pawnee, Red River, Gila, Cimarron, Texas, and Urak Cattle Companies, a business in which he is still very largely interested.

In 1874 Mr. Porter married Miss Laura, daughter of John W. Smith who was, as our readers will have learned, during his long business career in Denver one of the leaders in many great enterprises for the development of the city and State.
—J. C. S.



Henry M. Porter.

over Moyne and Rice. At the close of December, 1858, came Thomas Pollock, a blacksmith, who opened a shop in Auraria on the 10th of January, 1859—and a good man he was. So we might assume that Kinna, and Moyne and Rice, and Pollock were the pioneer manufacturers in business at the mouth of Cherry creek.

But, considering the application of machinery to the conversion of raw material into marketable products, as constituting manufacturing, in the true sense, we must pass these hand-workmen, and give attention to the first conception of using machinery here where Denver stands; though it was never carried into effect. It was an idea of the indefatigable General William Larimer, and is explained in the following proposition which he submitted to the Directors of the Denver Town Company at a meeting they held on January 22, 1859:

Original premises of the Denver Wire & Iron Works Company, 1420 Market street.

"To the Board of Directors of the Denver City Town Company: Gent'n—I hereby ask your board to grant me the privilege of building a toll-bridge across the South Platte river at some suitable point at or near the mouth of Cherry creek, and the further grant of the privilege of using the water power at or near the mouth of Cherry creek, with sufficient grant of land for both; it may be possible that I will so construct the abutments for the bridge that I can make sufficient dam in the Platte river for the water power and mill privilege; if so, less land will be required, and not over four hundred feet square be necessary for toll-house and buildings, along the margin of the street running along the Platte river and Cherry creek. The bridge to be put under contract as soon as practicable and to be completed by the first of January, next. The dam not to be so high as to obstruct the present crossing or to overflow the land on either side of the river."

The fact that General Larimer contemplated building a grist-mill proves that he then realized that wheat and corn would soon be growing here along the South Platte river; an opinion that the other pioneers did not share. The Denver Town Company's Directors agreed to his proposition and made the grant he requested, but other affairs almost immediately engaged General Larimer's attention, and the proposed bridge, dam and grist-mill were not built. At that time the South Platte flowed a far greater quantity of water than it does now and would have afforded abundant water power for a mill of considerable capacity.

The Bennett and Wyatt, and the Oakes, saw mills which were brought out in April, 1859, were the first establishments operating machinery in the Pike's Peak country, but they were set up near their raw material some twenty-five or thirty miles south of Denver, and, therefore, can not fairly be classed as Denver establishments, although their owners were Denver men. There does not appear to have been any machinery operated by mechanical power in Denver, in 1859; although a number of stamp mills were so operated in the Clear creek mining districts in the autumn of that year.

Early in 1860 A. G. Langford & Company established a small foundry and machine-shop in Denver—the first of its kind. In April of that year they made a small amount of pig-iron, the first produced from Colorado ores. The ore used in the experiment was from a deposit found on Coal creek, about sixteen miles northwest of Denver, and it yielded nearly sixty per cent of good iron. This concern which appears to have been the first to employ steam power in Denver, was subsequently removed to Black Hawk where it was continued until late in 1874.

Later in 1860 Fraser & Scoville set up a small foundry and machine-shop on east Larimer street, using scrap-iron for castings. In that year the cost of hauling pig-iron across the plains was almost prohibitive, hence the early attempts to produce Colorado pig. In December, 1860, Joseph M. Marshall bought this establishment, and in the autumn of 1861 made there a little pig-iron from

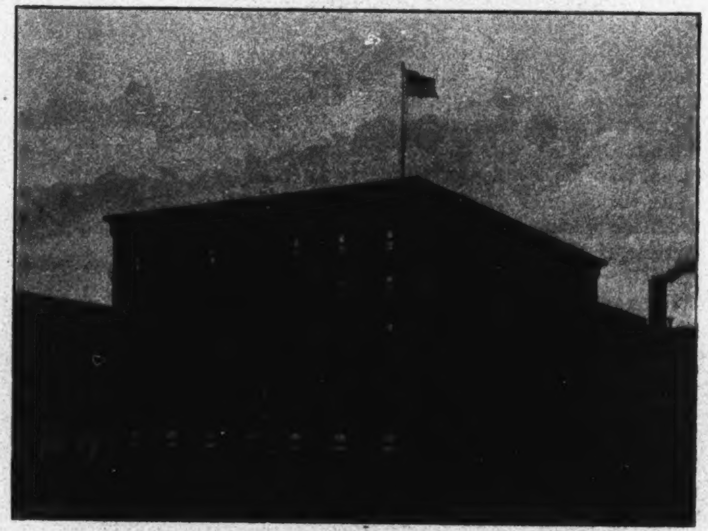
Original plant of the Western Chemical Company.

hematite ore found at Erie. In 1863 he built a small furnace at Erie which failed to work well. Early in 1865 it was rebuilt and that year produced about 250 tons of pig. Then the production of pig-iron ceased at Erie. The principal reason for the discontinuance grew out of the abundance of scrap-iron then available here. Literally hundreds of tons of inefficient or worthless mining and stamp-mill machinery had been brought into the country, and discarded or abandoned; the freight on it across the plains having ranged from ten to twenty-five cents per pound. But in the meantime smelting of iron ore had been resumed in this city. In the winter of 1862-63 Tarr & Cushman, owners of the "Denver Foundry," were producing a good quality of gray pig-iron for fine castings, from Colorado ore, which yielded in their little furnace about thirty-three per cent. of iron. They were also making in considerable quantities a harder and coarser quality for stamp-mill castings.

Before the close of 1860 there were a score of small establishments in Denver that could be classed as manufacturing, the more important of them being the few iron-working concerns; the others were of blacksmiths, wagon-makers, "cabinet-makers," carpenters, saddlers, and so on through a category that will readily suggest itself to the reader. With but few exceptions only hand-labor was employed, and the bulk of the business was of repair work; as attempts to produce new articles were confined to about half of the occupations. The foundries and machine shops depended almost wholly on the mining towns for their livelihood.

Brewing was another business ranking as manufacturing that had an early beginning in Denver. The first brewery was built early in 1860, by James Endlich, on the east side of Tenth street, between Lawrence and Curtis. It was a small concern, but survivors of that period still recall with pleasant reflections the quality of its beer. The present large "Milwaukee Brewery" was an outgrowth of Endlich's little pioneer establishment, which later passed to Salomon, Tascher & Company, who continued the business.

The miller was also among Denver's pioneer manufacturers, and from his beginning produced an excellent quality of flour, though the early mills were quite different affairs from the two huge establishments now engaged in that business. John W. Smith brought Denver's first flour-making machine (and also the first in Colorado) when he came here in 1860. It was a small portable buhr grist mill with which he made in that year the first flour and corn meal produced in Colorado. In 1865 Smith erected in "West Denver" a rather large steam flour mill the fuel for which was wood at twenty-five dollars a cord. Disposing of this a year or so later, he built another and much larger mill which he operated by water power obtained from the Union Ditch Company's hydraulic canal that had been constructed in "West Denver" in 1864, and taking water from the Platte river some distance above the town. In 1874 Smith built still another and still larger mill—the Excelsior Mill—still in operation at Eighth and Lawrence streets and which in 1879 he sold to J. K. Mullen who later built the present great Hungarian Mills. Another pioneer milling firm was that of Whittemore & Company which, in the autumn of 1864, had built a mill on the "West Denver" hydraulic, and began grinding flour from Colorado wheat about as soon as water was turned into the ditch. That season's crop was not a large one, and harvesting had been rather late.



The J. S. Brown & Bro. Mercantile Company's building at Eighteenth and Wynkoop streets.

The pioneer conditions in Denver and Colorado were discouraging to the early efforts of manufacturers. Every movement was attended by extraordinary expense, the heaviest of which was the cost of transportation—getting materials into Denver, or into the Territory, and then getting the finished products out to the customers, most of whom were located in places rather difficult of access. These circumstances naturally and necessarily circumscribed the pioneer manufacturers.

The coming of railroads in 1870 greatly relieved the transportation situation, but there was no marked expansion of manufacturing in Denver until later in that decade. In 1870 John W. Smith and John Winterbottom built and began operating a rather large woolen mill making rough flannels, blankets and yarns; their building having been on the south side of Larimer street, near the "mill ditch" in "West Denver." But the business did not permanently prove profitable. Conditions of 1873 embarrassed it, and in 1877 it was discontinued. This was, we believe, the first and only woolen mill in Colorado. The machine shops and flour mills at that time were the more important manufacturing interests. In January, 1871, Baxter B. Stiles sent a few sacks of "Rocky Mountain Flour" to the Southern Hotel at St. Louis. The hotel turned it over to the St. Louis Board of Trade; the Board sold it at auction for $460 and passed the money to charities. The price it brought was probably the highest for which any equal quantity of breadstuffs was ever sold.

The value of manufactures in Denver in 1871 was about $800,000; and they consisted of foundry and machine work, flour, carriages and wagons, boots and shoes, saddlery and harness, lumber and planing mill products, blacksmith's work, beer, soap, cigars, native jewelry, and so forth.

In the autumn of 1874 an important and notable addition was made to the city's manufacturing interests, in the removal hither from Black Hawk of A. G. Langford & Company's Colorado Iron Works; citizens of Denver having subscribed money sufficient to pay for ample ground for the establishment. Langford & Company, whom we have already mentioned as having been the pioneer founders and machinists here in 1860, had later removed their shop to Black Hawk and named it "Colorado Iron Works." Since then the establishment has had a remarkable development, though it long since passed to its present ownership in which John W. Nesmith is principal.

In 1878 another important addition was made, but was unfortunately permitted three years later to withdraw from the city. Some years previous to that time William Faux had established a rolling mill at Pueblo, but had become dissatisfied with the situation, facilities and prospects there. Through the instrumentality of F. J. Ebert, W. G. Sprague and other citizens of Denver he was induced to remove his mill to this city, a substantial subsidy having been raised for him by subscription. The mill was located near the tracks of the Kansas Pacific railroad, in the northern part of the city and near the old fair grounds. It was a very good mill and did a good business while here, rolling a large part of the rails used in constructing the Denver & South Park railroad. After the iron and steel works were established near Pueblo, the company owning them bought Faux's plant and moved the machinery down there, which, so far as Denver was concerned, ended the career of her first and only rolling mill.

The opening of the railroad era in Denver's history had brought, of course, great relief to every

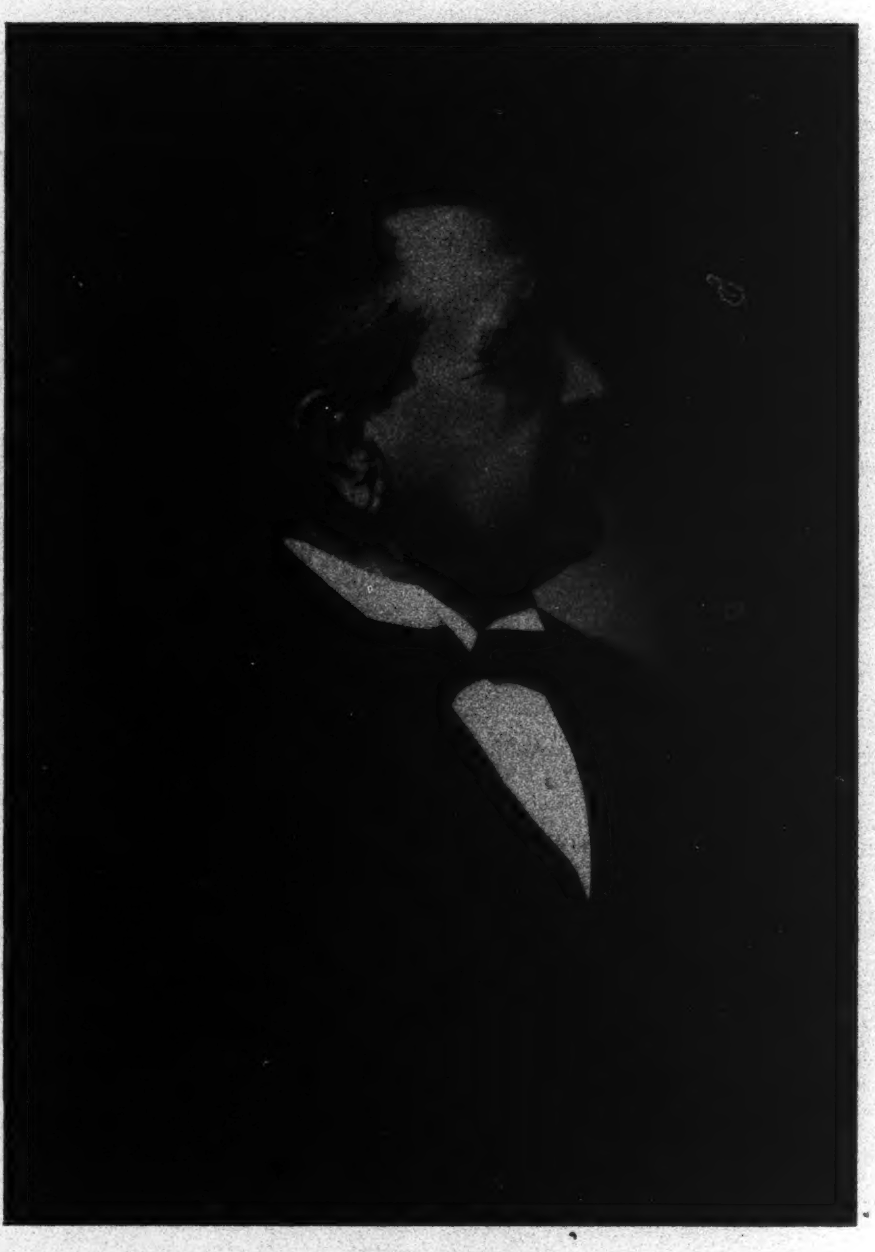
---

John W. Nesmith, descendant of an old Scotch family that traces its lineage back to the Thirteenth Century, was born near Chillicothe, O., in 1834. Endowed with a strong preference for mechanics, he qualified himself in youth and early manhood as a machinist of the first rank. He came to Colorado in the spring of 1860 for the purpose of erecting and superintending for a St. Louis company a stamp mill at the Gregory Diggings, where he was later engaged in mining and milling for several years, and where he also later became interested in the foundry and machine shop of Langford & Co., which had been established at Denver in 1860 and subsequently removed to Black Hawk; having then been named the Colorado Iron Works.

Mr. Nesmith was elected to represent Gilpin county in the upper house of the Territorial Legislature and served during the sessions of 1868 and 1870. In 1874 he became identified with the Denver & South Park railroad, and when part of its lines had been built was appointed its General Superintendent, as which he most efficiently served several years. In the meantime the Colorado Iron Works had been removed back to Denver, and in 1876 incorporated. In 1879 Mr. Nesmith resigned from the South Park railroad, bought an interest in the Iron Works, and became superintendent and general manager of the concern which was then a comparatively small one. Since that time his connection with it has been continuous, and since that time its growth has also been continuous until it has become one of the most important manufactories of mining machinery in the country. The company, of which he has been President since 1885, has built most of the large smelters between Helena, Mont., and the city of Mexico, and many in foreign countries; and its great development and success with its products have been chiefly due to his sagacity, judicious management, and to his knowledge and skill as an inventor, a designer, and a metallurgist.

Mr. Nesmith, as the reader will have learned from this note and other contents of this volume, has long been intimately associated with the progress of Colorado and of Denver, and they have profited in large degree by his indomitable will and never-ceasing energy, and by the fame the products of his great establishment have given both. All his interests are here, and here he has attained the success so justly due men possessing his sterling integrity and with a career so honorable as his.

An expert in the chemistry and metallurgy, as well as in mechanical processes, of smelting and otherwise dealing with precious metal ores, Mr. Nesmith is a recognized authority on blast furnace and other construction and practices as applied to the reduction of such minerals. From his youth he has been an untiring student. His education, began in public schools, was supplemented by a term or two at the Illinois Wesleyan University, but has chiefly been self-acquired. In his later chosen profession of civil and mining engineer, he practiced in Gilpin county and vicinity from 1868 to 1874; and in this profession he has few, if any, superiors. He is a member of the National Association of Mining Engineers, of the Denver Society of Civil Engineers, and of the Colorado Scientific Society of Denver.—J. C. S.



John W. Nesmith.

kind and manner of business; and the railways are to be credited with having stimulated many new or enlarged enterprises. But both manufacturing and commercial undertakings received a serious check between 1875 and 1885 from the railroad practices of that period. Those were the years of the pooling system the abuses of which eventuated in the Congressional legislation known as the Inter-State Commerce law. In those times railroad influences were against the development of manufacturing in Colorado, because the direct tendency of home production would have been adverse to the interests of the railways making the long haul of goods manufactured east of the Missouri river. These interests were unquestionably serious hindrances to the rapid development of manufacturing in Denver, and made it a slow process. Yet, in the larger sense, it may be said to date from 1880, notwithstanding the difficulties it encountered. Down to that time, and aside from milling, the majority of the manufacturing establishments, none of them very large, had continued to find much the greater part of their employment in restoring the worn or disabled products of distant makers. The local practice in the later of those years of including smelter out-put in the statistics of manufacturing rendered the figures uncertain as to manufacturing, proper. But it is certain that the aggregate value of Denver-made manufactures in 1880-85 was between five and six million dollars annually.

Present plant of the Western Chemical Company at Bayaud and South Seventh streets.

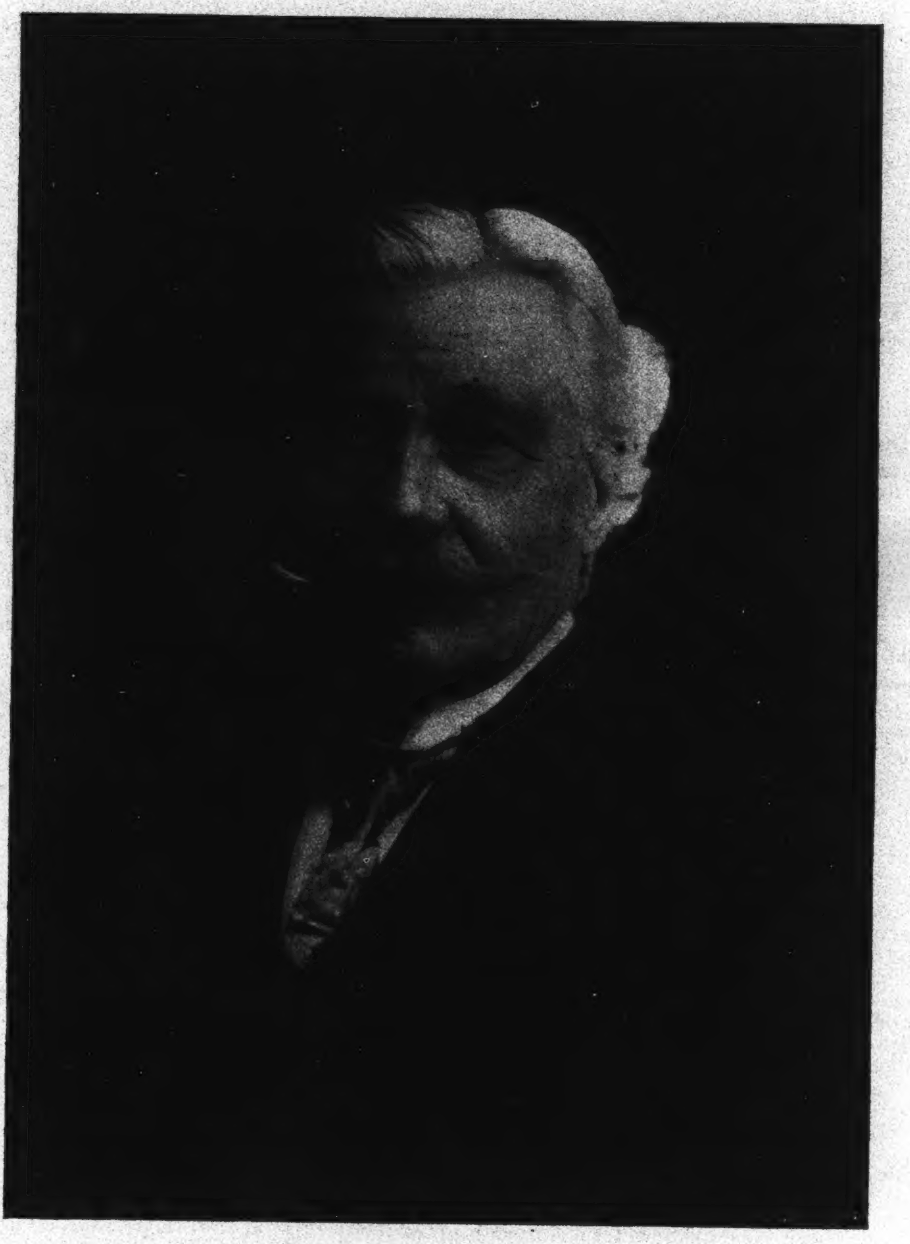
The commercial interests were less hampered by the railroad practices to which we have referred, though the tendency was to restrict trade to the local field. The products of distant places constituted much the larger part of stocks carried, and freight charges figured as part of original cost however high they may have been. But this forbade extended competition with markets more favorably circumstanced in freight rates. However, we find that in 1886 Denver's mercantile trade had risen to more than $14,000,000, and the value of

---

Max Kuner, President of the Kuner Pickle Co., one of the important industrial establishments in Denver, was born in Lindau, Bavaria, December 4, 1824. Educated in the public schools of Lindau, he learned the business of a watchmaker; completing his training therein in Switzerland. At the age of twenty-one he was for a short time in military service, but "drawing lucky number," he was released. Going to Nimes in Southern France, he worked at his business, and in October, 1847, in company with three brothers, emigrated to America; landing at New Orleans.

Proceeding to Vicksburg, Miss., Mr. Kuner found employment as a watchmaker, and in 1852 became a partner in the business, which was a successful one until 1861 when the outbreak of the civil war interrupted everything. After the surrender of Vicksburg he found his store plundered and burned, and himself financially ruined. Energy and good fortune later placed him on his feet, but in 1872 he sold his business in Vicksburg and removed to St. Louis; the conditions in Mississippi having been made intolerable by the evils of "carpet-bagger" and negro rule.

At St. Louis Mr. Kuner engaged in the manufacture of vinegar, but with limited success. In 1878 the Globe Pickle Co., of St. Louis and Chicago, was organized with him as Vice President, and manager of the Chicago branch. In 1886 he sold his interest in that company and removed to Denver and assumed the management of what is now the Kuner Pickle Co., but at that time a very small concern. By thorough knowledge of the business and close attention to it he has made the Kuner Pickle Co. the largest and best-known concern of the kind west of the Missouri river, and one of the very important industries of Denver. For several years a Director of the Chamber of Commerce, he established the manufacturers' exhibit now maintained in the Chamber Building.—J. C. S.



Max Kuner.

her manufactures, including smelter out-put, to more than $20,000,000. But, in these commercial figures there was considerable duplication between wholesaling and retailing, and in those of manufacturing the out-put of the smelters was improperly included.

In 1889-90 there were several important additions to Denver's manufacturing industries. A large cotton-mill which has had a very successful career, an extensive paper mill capable of supplying printing stock for all the newspapers in this region, a fiber mill, a boot and shoe factory, together with several small concerns were established at that time. There was a rapid expansion in the business of all manufactories in Denver up to the panic period, when it suffered in common with every other interest. The revival was slow but steady, and within the last two or three years has been of a very substantial character that has placed the general business far in advance of any position it had previously occupied.

In common with others who have endeavored in recent times to properly present a summary of the latter-day extent of manufacturing in Denver, the writer was handicapped by the lack of reports, statistics, and so forth, bearing on the subject, and of known accuracy. Such information is not within reach, nor does it yet exist in any aggregated form, nor in any other capable of being reduced to an approximately exact presentation. The details of the census of 1900 had not been worked out at the time our record closed, but we had received a preliminary bulletin giving some general results in manufacturing in the State of Colorado in the census year that ended June 1st. Our local Superintendent of that census alleged that he had reason for complaining about the reluctance of Denver manufacturers to respond to his canvassers' inquiries, and therefore there will be some doubt about the accuracy of census returns when they shall have been finally analyzed.

The statistics of the bulletin referred to above are of little value for our purposes, and the small value they might have possessed is impaired by the smelters having been included among manufacturing establishments. In the census of 1890 they were treated separately. They stand as the conspicuous labor-employing industries in the city, but their relation to mining warranted our accounts of them appearing in a preceding chapter dealing with various matters associated with mining.

Chester Stephen Morey, President of the C. S. Morey Mercantile Company, was born in Dane county, Wis., March 3, 1847. His parents owned a primitive farm in that then new country and lived in a small log cabin; and there, in a region prodigal in little but hard work and a great deal of it, he lived until he was fifteen years old, attending the country district school in winter and working on the farm the remainder of the year. In 1862 a grave financial misfortune befell the family. The father, enthusiastic for the construction of a railway, had earlier mortgaged his farm and invested the money in stock of a proposed road, the Company had become bankrupt, and in that year the farm was sold to pay the debt. The family then removed to Modena, Buffalo county, Wis., where another farm was entered and the life of labor resumed.

Soon thereafter came what appeared to be the culmination of the struggling family's misfortunes. In January, 1864, under calls for volunteers, the Modena settlement's quota was four men. To avoid the impending draft that probably would take heads of families, young Morey and three of his schoolmates, all under eighteen years of age, enlisted in Company I, Thirty-sixth Regiment Wisconsin Volunteers. In camp at Madison he was prostrated by camp disease, but after his recovery he joined his regiment in June. It was then engaged in the bloody work around Petersburg, Virginia, and young Morey found that two of his schoolmates had already been killed, and the third wounded. On the second day after his arrival his regiment engaged the enemy in a fierce battle and was repulsed with heavy loss, the young recruit having his knapsack shot from his back, and his belt severed by a bullet which lodged in his bayonet scabbard. He took part in several of the ensuing engagements in front of Petersburg and then was again the victim of camp illness. He was sent to City Point and from there to Emory hospital in Washington, where he remained until November. In the meantime, in filling Wisconsin's quota under another call for troops, his father had been drafted and had been assigned to a regiment in Sherman's army. The father was in "the march to the sea," and soon afterward died at Savannah. Upon his recovery and discharge from the Washington hospital, young Morey re-joined his regiment and participated in the tremendous battles that followed in Virginia during the closing months of the war; was on the field of Appomattox when General Lee surrendered, and in the final grand review at Washington. He had been promoted to be a corporal, and subsequently received the brevet rank of Lieutenant for gallantry in action, though still a mere boy in age.

When mustered out of service Mr. Morey's personal resources consisted of about $200 saved from his pay as a soldier, and his father's death required him to assume management of the neglected farm and the care and support of the family. Through the winter of 1865-66 he attended school at Waterloo, Wis., and the next winter and spring at the High School of Portage, in that State, paying for his board by sawing wood mornings and evenings for a relative who kept a hotel in that town. During the winter of 1867-68 he attended a business college in Chicago at which he received training for the business career he had resolved upon following. This he began at the foot of the ladder in the spring of 1868, first as a porter and a few weeks later at clerical work, in a retail grocery in Chicago. In July of that year he engaged as a commercial traveller for the Chicago wholesale

C. S. Morey.

The returns for Denver are embodied in the report for the State, but as they include smelter statistics they are of small value even for comparative purposes. However, they follow here and are given for what they may prove to be worth:

ITEMS.	1900.	1890.	Per Ct. of Inc.
Number of establishments	1,474	762	93
Capital	$30,883,046	$16,811,868	83
Wage earners, average number	10,926	9,283	17
Total wages	$6,799,476	$6,653,585	2
Miscellaneous expenses	$2,409,785	$1,340,868	79
Cost of materials used	$24,572,199	$14,216,549	72
Value of products, including custom work and repairing	$41,368,698	$29,240,747	41

The census reports with which we are here dealing, show that a very large proportion of manufacturing in the State is centered in Denver and Pueblo; the Arkansas valley metropolis having three large smelters and the great steel works of the Colorado Fuel & Iron Company. The figures for Pueblo, corresponding to those above for Denver and including smelters are as follows:

ITEMS.	1900.	1890.	Per. Ct. of Inc.
Number of establishments	241	102	136
Capital	$12,374,248	$1,278,792	867
Wage earners, average number	4,911	937	424
Total wages	$3,044,280	$629,759	383
Miscellaneous expenses	$577,501	$92,792	522
Cost of materials used	$22,589,669	$999,966	2,159
Value of products, including custom work and repairing	$30,795,481	$2,374,631	1,196

The relation that manufacturing in Denver and Pueblo bears to all that is done in the State is shown by these census returns to be as follows:

	Denver.	Pueblo.	The State.
No. works	1,474	241	3,570
Capital	$30,883,046	$12,374,248	$62,825,472
Employes	10,926	4,911	24,725
Wages	$6,799,476	$3,044,280	$15,146,667
Cost material	$24,572,199	$22,589,669	$66,886,016
Value product	$41,368,698	$30,795,481	$102,830,137

These figures credit Denver with about forty per cent. of the manufacturing establishments, more than forty per cent. of workmen engaged, nearly fifty per cent. of the capital invested, and upward

---

grocery firm of Sprague, Warner & Co., and then entered upon his very successful business career. He remained with that firm until his health became seriously impaired in the autumn of 1871; and for its benefit he came to Colorado in May, 1872.

Having accumulated a considerable cash capital, he formed a partnership with W. L. Beardsley in the cattle business in southern Colorado, and rode the range in supervision of their enterprise, which proved a profitable one. In 1875, his health having been restored, he resumed his relations with Sprague, Warner & Co. and established his headquarters in Denver; his very successful operations extending over a large territory. On January 1, 1881, he became a member of the firm; his accumulating resources having been augmented by fortunate investments in Leadville real estate in 1878. Sprague, Warner & Co. then established a branch house in Denver under the direction and management of Mr. Morey which continued until 1884, when it was incorporated as the C. S. Morey Mercantile Company, of which he became, as he now is, President, manager and controlling owner; and which, also, is now one of the large mercantile establishments in the west.

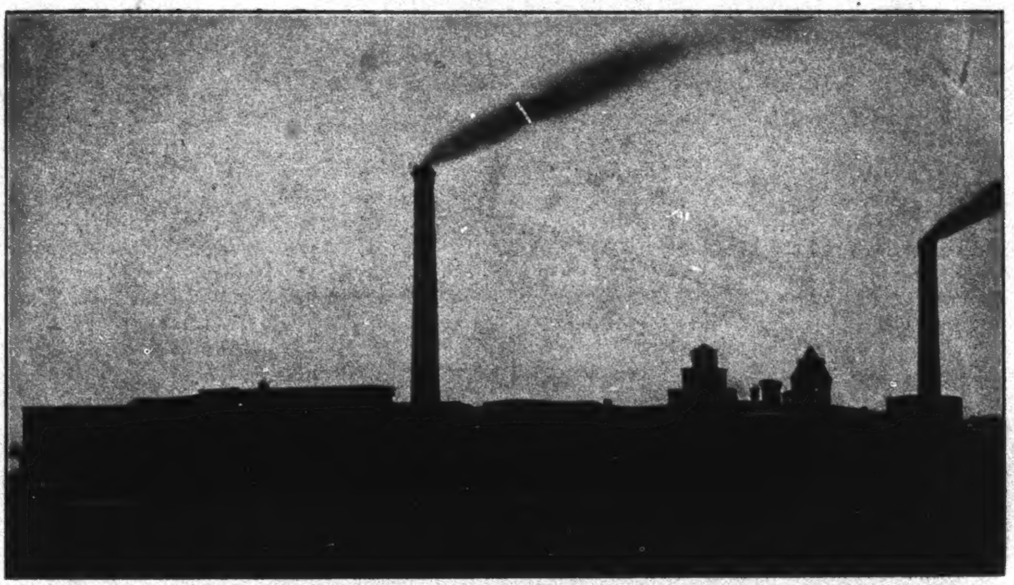
In 1891 Mr. Morey was elected a member of the Board of Education of District No. 1 and served three years. He had long been considering the expediency of adding a manual training school to the Denver public school system, and brought the matter before the Board in January, 1892, by the following resolution which was unanimously adopted:

"Ordered, That a special committee be appointed to investigate and consider the subject of a Manual Training High School, with a view of adding a department of that kind to the schools of this district, and report to the Board, if desirable, a plan for the establishment of such school."

As members of this committee the Board appointed Mr. Morey and James B. Grant, and the former instituted a thorough investigation of the practical side of the proposition. At his personal expense he visited several eastern States in which such schools were conducted, and carefully observed their methods of instruction and the mechanical appliances with which they were equipped. These investigations enabled him on behalf of his committee to make a report that was so satisfactory and conclusive, that the Board of Education accepted it unanimously on May 27, 1892; and as a direct result of that well-considered report, the Manual Training High School became a part of Denver's public school system.

Mr. Morey has long been an active and generous friend of the charitable and benevolent institutions in the city, and for several years until 1899 was President of the Charity Organization Society, an association comprising about sixteen organizations. During the same period he also served as President of the Society's Board of Trustees, a position he still fills and in which he is, to a great extent, the leader in providing and obtaining the funds annually disbursed by the Society, amounting to $35,000 or $40,000. His services in this and kindred directions for good constitute an important part of the history of the charitable and benevolent organizations of Denver. Of his personal benevolences to victims of life's misfortunes, quietly bestowed in ways and at times known only to the recipients and himself, the limitations would be hard to define.

On December 12, 1877, Mr. Morey married Miss Anna L. Clough, daughter of Mr. John A. Clough who removed from Chicago and located in Denver in 1870. Two children, John W., and Mary L., were born to them, and are living. Mrs. Morey died February 27, 1890.—J. C. S.



Rocky Mountain Paper Company's Paper Mill.

of forty per cent. of value of the total products. They accord Pueblo twenty per cent., each, of capital invested and workmen engaged, and thirty per cent. of product value; smelter figures being involved in the reports for each city, and, as we have said, rendering them of little value as statistics of manufacturing, proper.

However, they do in a general way, indicate a rapid growth in manufacturing in both cities. In Denver no smelters have been added since 1890; yet the number of manufacturing establishments has been increased ninety-three per cent. since that time. But exact deductions from the other data are barred by the presence of smelter statistics for 1900 and their exclusion from the figures used for 1890.

In reviews of the year's business published by our daily newspapers at the close of 1900, after their established annual custom, statistics of Denver manufacturing were given but, having been from necessity largely estimates, in which wide disagreements of figures appear, we deemed it inexpedient to incorporate them here. However, while this work was not intended to be statistical in character, and while it has not in its other departments entered far into figures or tabulated statements in detail, a comprehensive summary of the city's manufacturing and commercial business at the close of the Nineteenth Century might well have been made of record in a convenient form, had definite information of known accuracy been available for that purpose.

The preliminary statistics of the census of 1900 indicate a growth of manufacturing in the State at large so gratifying that a summary of results is included here. In 1890 there were, exclusive of smelters, 1,518 manufacturing establishments in Colorado; in 1900 there were 3,570, including smelters; an increase of 135 per cent. Invested capital, 1890, $26,651,840; 1900, $62,825,472. Wage-earners employed, 1890, 15,016; 1900, 24,725; a gain of sixty-four per cent. Total of wages paid, 1890, $9,872,405; in 1900, $15,146,667. Value of products, 1890, $42,480,205; in 1900, $102,830,137; an increase of 142 per cent.

In the foregoing figures for the State, the smelters are included in all that pertain to the year 1900, but not in those for the year 1890; and therefore made apparent results in 1900 misleading. But deducting smelter totals from the various totals given for the State, we derive the following: number of manufacturing establishments in 1890, 1,518; in 1900, 3,559; increase 2,041, or 130 per cent. Invested capital, 1890, $26,661,840; in 1900, $37,947,448; increase $11,285,608, or more than forty per cent. Wage-earners employed, 1890, 15,016; in 1900, 20,999; increase, 5,983, or nearly forty per cent. Wages paid, 1890, $9,872,405; in 1900, $12,440,326; increase, $2,567,921, or more than twenty-five per cent. Total value of manufactured products, 1890, $42,480,205; in 1900, 58,204,832; increase, $15,724,627, or nearly forty per cent.

Next to the smelters among the industries of Denver stand the iron-working establishments, several of which, such as the Colorado Iron Works, are chiefly engaged in the production of mining machinery, appliances and tools. About 1,200 men are engaged in these several shops, some half-dozen of which are large concerns that have originated and developed most of the many ingenious devices they produce. Denver-made mining machinery predominates in all the mines of the west and is exported to foreign countries in large quantities. Boilers, engines, and machinery for other purposes are among the out-put, but the demands of the mines afford the greater volume of business. Next in importance to these, in iron-working, are the shops of the Denver & Rio Grande, and the Colorado & Southern railroads, and those of the Pullman Company, of each of which some account is given in our history of the railroads. Employing a relatively large proportion of high-priced labor, such establishments are very important manufacturing concerns, though they are not usually considered in that sense. In the lighter manufactures of iron, the Denver Wire and Iron Works company, producing various kinds of architectural and ornamental iron work and a great variety of "wire goods," has grown from a small beginning to one of the important manufacturing organizations in the city.

Denver Fire Clay Company's manufactory at Blake and Thirty-first streets.

Of flour mills there are several, but the two conspicuous ones are the "Hungarian" and the "Crescent." These with their attendant elevators would rank as large concerns anywhere in the country outside of Minneapolis. They consume much Colorado-grown wheat and draw further supplies from Kansas and Nebraska. The value of flour made in Denver in 1900 is stated to have exceeded $2,000,000.

Perhaps the most suggestive, and being one of the more important, of the city's manufactories, is the Overland Cotton Mill producing unprinted cotton cloth. It is a large mill built, as we have already mentioned, about ten years ago. In recent times it has enjoyed great prosperity, and its suggestiveness lies in the fact that it has proved the expediency of manufacturing cotton goods at Denver, and has firmly established itself as the pioneer in that industry in Colorado.

The paper mills and sulphite fiber mill, not fardistant neighbors of the cotton mill, have had rather trying times in the past, but their acquisition by a new and strong company, of which something is told in the course of this review, promises to raise them to a very important position among our industries and to extend their market far beyond the limits of Colorado.

Manufacture of fire-clay products, of pottery, and of brick has become of large proportions, yet is capable of a much greater development, because of the excellence of the almost unlimited quantities of raw materials. The fire-clays are of superior quality, and the market for products thereof is already extended far beyond Colorado. In this the Denver Fire Clay Company has been the principal agency, and the out-put at its large factory constitutes a surprising variety of fire-clay products.

As we have stated, brewing began in Denver within less than two years after the first cabin had been built. The business is now represented by several breweries; two of them, the Zang Company's and the "Milwaukee," ranking as establishments of the first class in size and capacity.

A glass factory producing flint-glass merchandise was built in the Valverde suburb in ante-panic times, but subsequently had to put out its fires.

Recently this establishment resumed business under favorable circumstances and conditions. Opportunities for large operations in glass-making would seem to be unusually favorable in Denver and its immediate neighborhood.

Interior of machine room, Rocky Mountain Paper Company's mill.

Continuing these references to separate lines of manufacturing would unduly encroach upon our pages, and also be foreign to our purpose. There are, as we have seen in the census report, nearly 1,500 separate concerns in Denver that are classified as manufacturing establishments, but under the census rules these figures included many small shops of one kind and another that would not in the common understanding be regarded as manufactories. Aside from these, the Denver manufactories range in size and importance from those we have specifically mentioned in the foregoing, down to small shops employing three or four persons. Their products are also widely varied.

Francis T. M. McEnery.
General Manager Rocky Mountain Paper Company.

Production of acids and other chemicals is a large and growing business, the great establishment engaged in it being that of the Western Chemical Company which, like most of Denver's manufactories, has grown from a small beginning. Preparation of condiments, pickles, and canned goods is another line of business that has largely developed, the Kuner Pickle Company being the more prominent of the concerns engaged in it. Adding to the list would include carriage and wagon-making, operations of planing mills, manufacture of cigars, clothing, overalls, furniture, harness and saddles, soap and many other industries that are making substantial progress.

To operate Denver's various manufacturing establishments, all told, in 1900, (including the smelters), as the reader has seen by the census report, required the services of an average of 10,928 persons classified as wage-earners. Furthermore, business in all branches of manufacturing is healthfully increasing, and is accompanied by feelings of confidence and a marked disposition to enlarge productive facilities and extend the fields of operations.

During the year 1900 several new establishments were added to Denver's group of manufactories, or provisions made for their appearance early in 1901. Among these are a manufactory of fuses and explosives, and others for producing, respectively, electric drills, pneumatic tools, steel chains, and steel-tired car-wheels. But the most important transaction of the year, and which was consummated about the time our record closed, was the consolidation of the Denver Paper Company's two mills with the mill of the Denver Sulphite Fiber Company and merging the properties in a new corporation, the "Rocky Mountain Paper Company," representing entirely new interests in the local manufacturing field. Of this new and strong organization, Thomas H. Savery, of Wilmington, Delaware, is President; W. W. Pusey, of the Pusey & Jones Shipbuilding Company of Wilmington, Vice President; Newell Martin, of New York,

Rocky Mountain Paper Company's Sulphite Fiber Mill.

Treasurer, and Francis T. M. McEnery, of Denver, General Manager. The other Directors and stockholders are principally Philadelphia and New York men, but several Denver capitalists are associated with them. The company's capital stock is fixed at $750,000 common, and $600,000 preferred; with $100,000 of the latter in reserve. The properties it acquired had been in the hands of Mr. McEnery as Receiver for several years in consequence of 1893. They were built about ten years ago in the era of high prices, and represented an outlay equal in amount to the preferred stock of the new company. They have been in continuous operation, but their complete rehabilitation, reequipment and doubling of capacity are to immediately follow, to make them the largest producers of papers between the Mississippi and the Pacific. This transaction in Denver's manufacturing circles is not only the most important in recent times, but for several years.

As we remarked at the beginning of this chapter, Denver may not properly be regarded as a great commercial city, yet the volume of trade grows larger year by year. The field of operations by its wholesaling establishments embraces Colorado, much of New Mexico, and Utah and Wyoming. We shall not encumber these pages with an enumeration of the kinds of goods sold, because as a jobbing center the city provides for all the ordinary wants of mankind. In doing so the facilities, experience and capital of many large establishments are employed. Such houses as that of the Morey Mercantile Company, the Brown Mercantile Company and several others, dealing in the varied merchandise collectively known as "groceries," and as that of W. A. Hoover & Company wholesaling drugs, would be conspicuous in cities much larger than Denver. In hardware, and drygoods, and footwear, and so on, the aggregate annual business requires ten figures for numerical expression. Yet, there is a consciousness that it is not so large as it should be, and that Denver has not yet become the distributing center for these classes of merchandise that she should be. An example of what is possible to be done toward making this city such a distributing center, is presented in the operations of the Continental Oil Company, which is a merchandising and not a manufacturing corporation. From its headquarters in this city it directs the distribution of a large proportion of all petroleum products consumed in Arizona, New Mexico, Colorado, Utah, Wyoming, Idaho and Mon-

---

William A. Hover, senior member of the firm of W. A. Hover & Co., wholesale druggists, was born at Mazomanie, Wis., March 9, 1856, and there led the quiet and uneventful life of a village lad. Having been graduated in the local High School when he was about seventeen, he entered the University of Wisconsin as a freshman in 1873, and was there graduated with honors, taking the degree of Bachelor of Mining Engineering. The succeeding year was spent in the Columbia College School of Mines, whence he came directly to Colorado, locating at Lake City where he engaged in assaying. Removing to Denver in 1878, he here became associated with J. O. Bosworth, a retail druggist, under the firm name of Bosworth & Hover. A year later he purchased Bosworth's interest and established the firm of W. A. Hover & Co., which later discontinued retailing and entered upon its present business of exclusive wholesaling. —J. C. S.

William A. Hover.

tana. Some of Denver's manufacturers, especially the makers of mining machinery, cover the same field and a great deal more. While it is not probable that other commercial operations may be extended so far from this point, yet it would seem, considering Denver's geographical situation, that she should and will become the commercial metropolis of the larger part of the great region embraced in those States and Territories.

The wholesale commercial interests have had much with which to contend in reaching their present magnitude, the greater obstacle having been presented by unfavorable freight-rates—a long-existing bone of contention. But notwithstanding this obstacle, the jobbing business of the city has significantly increased in recent years, and in 1899 and 1900 several large structures were erected to accommodate this increasing business. It is to be remembered that in the earlier years and even to within five or six last past, the attention and energies of our people as a whole were, it may be said, concentrated upon one occupation—that of mining. This unquestionably and naturally led to a lop-sided development of resources, opportunities and possibilities. There has been a change in this, and the results are seen in the increasing interest in manufacturing, in commercial affairs, and in agriculture. An indication of the ratio of increase of commercial business in Denver is found in the fact that the total value of goods imported from foreign countries and brought here in bond for payment of duties was thirty per cent. greater in 1900 than in 1899.

DENVER WIRE & IRON WORKS CO

Present premises of the Denver Wire & Iron Works Company, northeast corner Fourteenth and Market streets.

The general retail business of the city is unusually large and, as we have already said, has given Denver the reputation of being, in proportion to population, an abnormally great retail market. Such establishments as that of the Denver Dry Goods Company—a name, by the way, not especially well adapted to a huge "department store"—of Daniels & Fisher, and others on Sixteenth street would be notable for their magnitude, and for quantity, quality and variety of stocks, in most places of double Denver's population. About all the needs and most of the fancies of men and women may readily be satisfied in the emporiums in the retailing district, and it is doubtful if there is in any city of corresponding size in this country a shopping thoroughfare more attractive, more animated, or thronged by greater numbers of people than our Sixteenth street on a pleasant day in the busy seasons.

It would not be worth while to attempt statistics of Denver's wholesale and retail commercial business, as data approximating accuracy are lacking. Even if that were not so, there would be much confusing duplication in reports of sales by wholesale of goods much of which was in turn handled and reported by those who retailed them. Of the value of mere estimates, the reader may judge from those that have been made of the volume of wholesale and retail trade in 1900. They range from $25,000,000 to $40,000,000.

The live-stock business and the packing-house industry have in recent years taken on large proportions in Denver, yet both are comparatively in their infancy. The Denver Union Stock Yards were established in a small way in 1886 in the northern part of the city at a point accessible by all the railroads entering the city. The yards now cover 105 acres and are demanding additional room. They now have capacity to daily handle about 40,000 head of cattle, horses, swine and sheep. In the yard an Exchange building, a bank, and other facilities for the transaction of business are maintained, and in 1899 a new and commodious hotel was erected. At the Denver Stock Yards in 1899 there were received 283,430 head of cattle, 120,654 of hogs, 221,698 of sheep, and 10,286 of horses and mules, of an aggregate value of $10,349,351. In 1900 the figures were, for cattle, 239,500; hogs, 115,700; sheep, 306,019; horses and mules, 22,700; of a stated aggregate value of $10,047,894. Much of this stock was really in transit, the Denver yards having been the trading point between breeders and feeders, and purchasers for shipment to eastern markets. In cattle there was a decrease in 1900 from the business of 1899, chiefly due to the abnormal war demand for beef cattle in 1898 and 1899 that reduced stocks on the ranges. The increase in number of sheep handled reflects the remarkable expansion of the business of rearing and fattening young sheep in Colorado, for eastern markets; though but a part of such stock comes to the Denver yards.

The cause mentioned above also had an effect in packing house operations in 1900, slightly reducing the number of cattle and hogs slaughtered here. In 1899 the figures were, for cattle, 33,505; for hogs, 115,345; for sheep, 69,209. In 1900 for cattle, 27,783; hogs, 112,567; and for sheep, 72,634, with a stated market value of $3,146,000. Corn not being extensively grown in Colorado, the rearing of swine has not reached great proportions in the State. But the discovery that hogs eagerly devour the offal of the beet-sugar factories with which a little barley and alfalfa are mixed may lead to a large increase in pork products; barley being a grain to which the soil and climate of Colorado are very friendly, and alfalfa growing abundantly on irrigated land.

The consequences of the panic of 1893 have wholly disappeared from commercial circles, both of wholesaling and retailing. Many merchants were prostrated by that storm, and for several years the evidence was seen in numerous vacant business rooms. But now the numbers, extent and solidity of commercial business houses exceed anything previously known in the city's history.

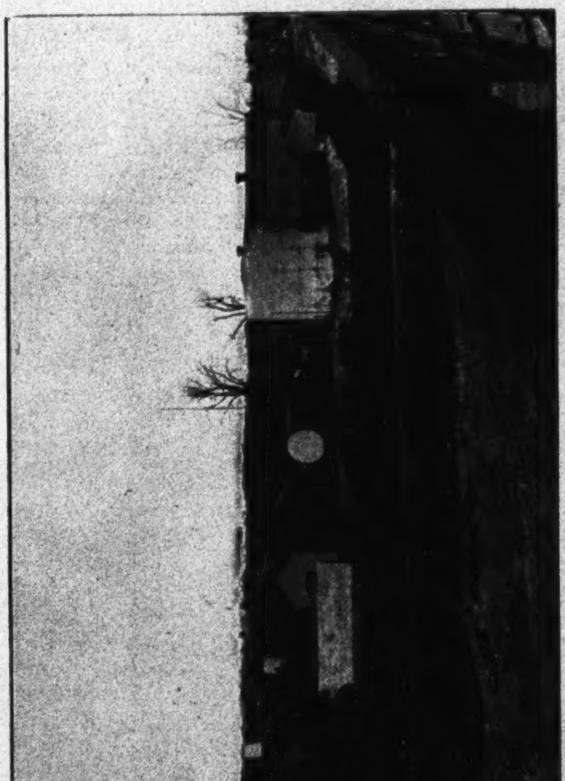
The great organization of business men in Denver is the Chamber of Commerce and Board of Trade; great in its influences and great in what it has accomplished for the progress and welfare of the city and State. The present organization is not the first one of the kind undertaken, but may be said to be the fourth. It is hard to realize that within two years after W. Green Russell and his party first made camp at the mouth of Cherry creek, a "chamber of commerce" was organized here; but the history of the city includes in its records the organization of a "Denver Chamber of Commerce" in the summer of 1860, by the business men of the town, who elected General F. J. Marshall President of the association. There was little for it to do, and in the next year it passed away through inanition. But the mere fact that such an organization was formed at that time and under the circumstances of that time is a significant incident in the Story of Denver.

C. S. Morey Mercantile Company's building, northwest corner Sixteenth and Wynkoop streets.

After that pioneer beginning and ending of commercial organization, there was no successor for several years. In the autumn of 1867, when the construction of the pioneer Denver Pacific Railway was undertaken by Denver men, one of the agencies called into existence to assist in what was a most difficult undertaking, was the "Denver Board of Trade," which was organized November 13, 1867, with the following-named officers: John W. Smith, President; John Pierce, First Vice President; Isaac Brinker, Second Vice President; Frank Palmer, Treasurer; Henry C. Leach, Secretary; who, with William M. Clayton, J. H. Morrison, F. Z. Salomon, J. M. Strickler, George Tritch, D. H. Moffat, Jr., R. E. Whitsitt and J. S. Brown constituted the Board of Directors. It was an useful means in accomplishing an important end, but after its specific purpose had been consummated its organization was not long perpetuated.

The next movement came thirteen years later when, on November 12, 1880, the "Merchants' Board of Trade" was organized by representative business men of the city. Joseph T. Cornforth was President; N. B. McCrary, Vice President; Lewis Matthews, Secretary; and A. W. Jones, Treasurer. It established and opened its headquarters in Henry C. Brown's building at the southeast corner of Sixteenth and Market streets, where it attempted to inaugurate a system of "board trading." Market reports were received and posted, but through lack of interest in business of that kind, and greater lack of vitality in the organization, it did not have a sturdy growth. It was not an enterprise in which the general public was very much interested, and it lacked breadth of purpose. But its organization was continued until early in 1884 when it was merged in the new and now existing Chamber of Commerce.

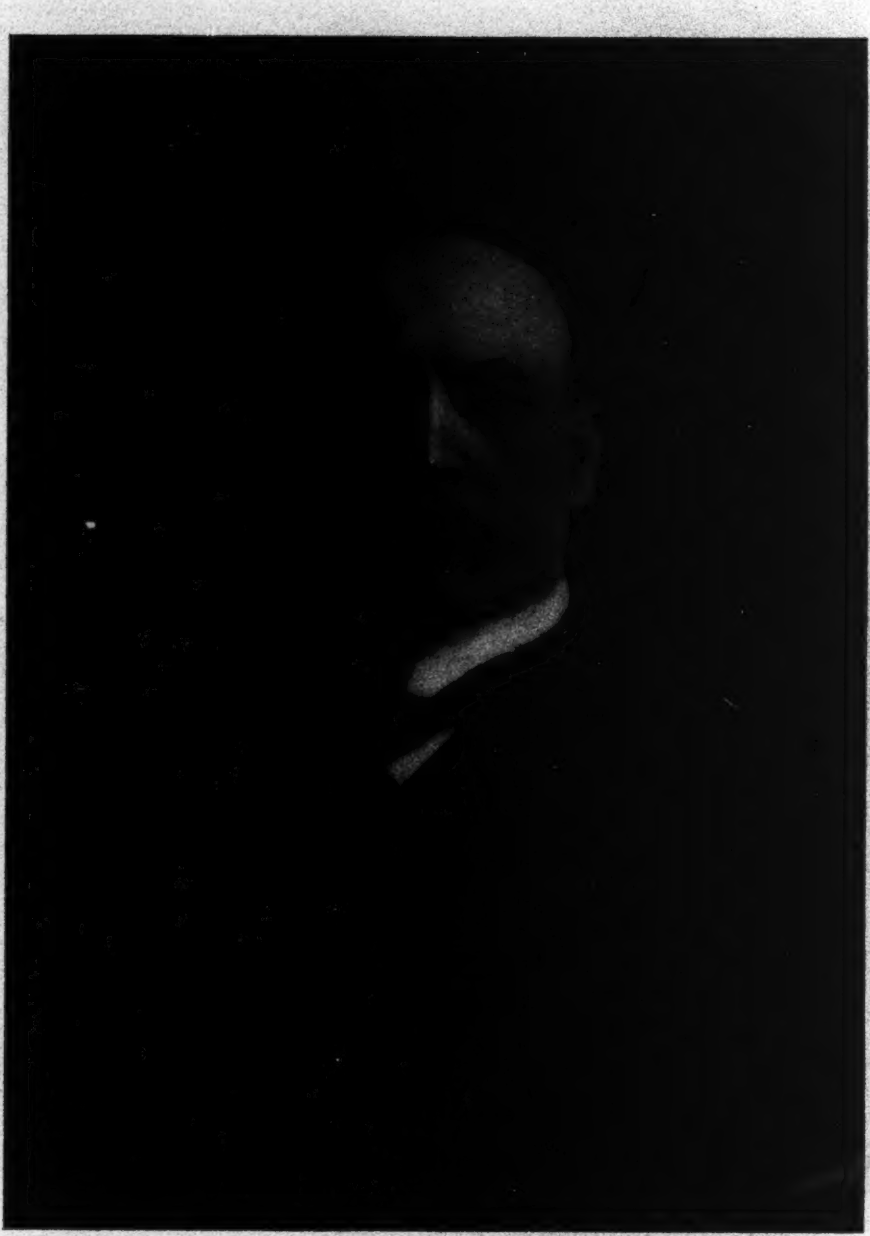
In 1880 the building of the Denver & New Orleans Railway, now incorporated in the Colorado & Southern road, had been determined on by Governor Evans and his associates. To give local encouragement to the great project the Governor made an effort to organize a new Board of Trade, with the further intention that it should become a permanent institution of the city. A meeting of citizens was held on January 29, 1881, at which some good and forceful speeches were made, and committees appointed to formulate plans upon which to found the proposed new body. But nothing effective came out of that movement and the railroad was built without the special co-operation of a Board of Trade.



Continental Oil Company's Tank Station and Storage Yard, Twenty-third street and South Platte river.

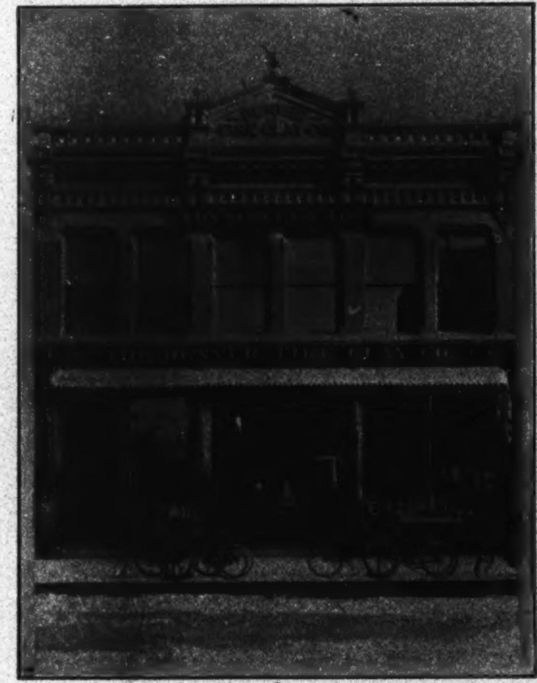
Three years later the present and permanent Chamber of Commerce was organized. A preliminary meeting called for that purpose was held on January 15, 1884, at the City Hall, at which committees were appointed to perfect the details of organization. This new movement was heartily supported by not only the commercial and manufacturing interests, but by the citizens generally. On March 24, 1884, the Chamber was incorporated by R. W. Woodbury, J. T. Cornforth, M. J. McNamara, J. F. Mathews, and C. F. Wilson, as the "Denver Chamber of Commerce and Board of Trade." The objects for which the body was created are thus stated in the articles of incorporation:

William R. Owen, General Manager of the Denver Dry Goods Company, was born in the town of Columbus, Wisconsin, January 3, 1852. Having attended the public school at Columbus until he was thirteen, he then set out to make his way in the business world, and was engaged as a clerk in stores at Racine, Portage and Fox Lake, Wisconsin, until 1875. In that year he came to Denver and entered the establishment of Daniels & Fisher where he remained three years, when he went to Leadville and began business on his own account, having been one of the pioneer merchants in the great carbonate camp, and also becoming a member of the Board of Aldermen in the first city government of Leadville. After five years of successful business there he sold his store to Daniels, Fisher & Co., and returning to Denver, again engaged in merchandising here for a short time. He then became connected with the M. J. McNamara Dry Goods Company and with which he continued until its business passed to Dennis Sheedy and Charles B. Kountze in the summer of 1893; becoming General Manager under the new ownership. In May, 1894, he joined in the organization and capitalization of the Denver Dry Goods Company that was practically the successor of the McNamara Company. Since then Mr. Owen has been the General Manager of the Denver Company's great establishment at Sixteenth and California streets.—J. C. S.



William R. Owen.

The objects for which the said corporation is formed are to promote the general prosperity of all the varied interests of the State of Colorado and especially those of the city of Denver and vicinity thereof; to procure, preserve and disseminate information in relation to commercial, financial and industrial affairs that may be of general interest and value; to secure uniformity in commercial laws and customs; to facilitate business intercourse, and to promote equitable principles, as well as the adjustment of contests and disputes in trade; to lease, erect or acquire, by purchase or otherwise, a suitable building or buildings, and all necessary real estate for the same, for the uses of the association.



Denver Fire Clay Company's retail store, 1742-46 Champa street.

The articles also named those who were to constitute the first Board of Directors: R. W. Woodbury, John Evans, J. T. Cornforth, Jacob Scherrer, Rodney Curtis, J. F. Brown, J. F. Mathews, M. J. McNamara, H. A. W. Tabor, C. B. Kountze, Nelson Hallock, Edward B. Light, and Charles F. Wilson. These Directors met on March 27th and organized by electing Roger W. Woodbury, President; M. J. McNamara and J. F. Mathews respectively First and Second Vice Presidents; Frank Hall, Secretary; and W. D. Todd, Treasurer. At that time the old "Merchants' Board of Trade" passed out of existence, its membership being merged into that of the new organization.

Much of the work of the Chamber is apportioned among its large number of efficient committees; there being at the present time Committees on Architecture and Arts, Agriculture and Horticulture, Beet Sugar, Coal and Iron, Commerce, Conventions and Excursions, Education, Entertainment, Irrigation, Law and Legislation, Live Stock and Packing and Wool and Wool-growing, Manufactures, Membership, Mines and Mining, Immigration and Statistics, Public Institutions and Improvements, Railroad Building, Streets and Parks and Boulevards, Stone and Marble, Auditing, House, and on Ways and Means.

The Chamber was also provided with several subordinate organizations or "exchanges," composed of members directly interested in the branches of business which these auxiliary bodies represented; and which were Real Estate, Produce, Live Stock, Lumber, Manufacturing, and Mining. After an experience of a year or two with these sub-organizations it was found that they did not accomplish the results anticipated, and were discontinued.

The Chamber had immediately prepared to place itself on a firm and lasting foundation by providing an appropriate home of its own, that would to some extent indicate the character and importance of the organization, and give strength and significance to membership in it. It was intended that the Chamber of Commerce should mean and be something more than a name. The city owned the then vacant building site on the northeast corner of Fourteenth and Lawrence streets, on which the

---

Charles D. Cobb was born in the town of Columbus, Johnston county, Missouri, June 15, 1844. Educated in the public schools of his native place and in the Irving Institute at Tarrytown, N. Y., he came to Denver in 1863, and for several years thereafter was employed as a clerk in Denver jobbing houses. In 1867 he became associated with Col. Robert Wilson in the post-tradership and in government contracting at Fort Fetterman, Wyoming, in which he continued until 1870 when he returned to Denver and organized a general fire insurance business covering Colorado, Wyoming, Utah and New Mexico. Since that time the management of this extended business has engaged the greater part of his attention, although he has been and continues interested in various other enterprises in Denver.

In 1880-84 Mr. Cobb was a member of the Board of Education for School District No. 1, and in 1885 when the Board of Supervisors was added to the city's legislative department, he was elected one of its members, and after two years of service in that position was nominated by the Democratic party as its candidate for Mayor of Denver, but was defeated by a small majority by William Scott Lee. Mr. Cobb participated in the organization of the Commercial National Bank and became its Vice President; also a participant in the organization of the Chamber of Commerce, he became a Director and Vice President of that body; one of the projectors of the Riverside Cemetery, he long served as its Secretary; and as a leader in the affairs of the Independent Order of Odd Fellows he has filled its various official positions including that of Grand Master of the State and that of representative of the Sovereign Grand Lodge.—J. C. S.

Charles D. Cobb.

Interior Denver Fire Clay Company's store, 1742-46 Champa street.

Chamber took a lease for ninety-nine years. Plans for the fine building now standing there were prepared in the summer of 1884, and on October 1st a contract for its construction was made with Peter Gumry, who later became Construction Superintendent of the State Capitol, and who perished in the destruction of his hotel in 1895. Gumry completed the edifice, which is three and one-half stories in height and built of lava and granite, in August of the next year; and on September 1, 1885, it was occupied by the Chamber, the meetings of which had theretofore been held in the City Hall police court room, in which, as we have earlier stated, the initial organization meeting was also held. On September 22nd the building was formally dedicated with somewhat elaborate ceremonies, and it may be truly said the career of influence and usefulness for the Chamber as outlined by the orators upon that occasion has been such as to justify all that was anticipated for it.

It is due Roger W. Woodbury to record here that it was largely through his instrumentality, energy, and enthusiasm that the Chamber was placed on a substantial and enduring basis; and, indeed it is not too much to say that he is its founder. It is an organization in which the true interests of the city receive more thorough and thoughtful consideration, and through which the desires of the people of Denver respecting important economic affairs are given more intelligent expression, than appear to be available by any other existing agency. It sometimes happens that those clothed with authority and over whom the Chamber has no control depart from its recommendations and advice; but the welfare of the community is not often well-served when that course is pursued. Since its organization the Chamber has been directly instrumental in originating and developing many local industries; in expanding the commercial trade of the city; in inducing, without misleading, immigration to the State; in successfully dealing with problems and abuses involved in rail transportation; in preventing imprudent, and in directing wise, management of municipal affairs; and in efficiently dealing with other important matters quite too many to be recounted here. Our Capitol building would not have been the magnificent edifice it is without the attention and influence of the Denver Chamber of Commerce; it founded our first free, public library; and it is questionable whether the great military post of the United States—Fort Logan—would have been located here, or anywhere in Colorado, had Denver been without this active and influential organization. Its last public service that has rank among its conspicuous achievements was the introduction of sugar-beet cultivation in the State, bringing with it the erection of several large sugar refineries in Colorado, and opening the way for a vast development of agricultural resources.

This innovation in Colorado agriculture followed the labors, instituted in 1897, of a committee of members of the Chamber consisting of Earl B. Coe, Chairman; Charles F. Wilson, W. A. Hover, I. N. Stevens, and J. F. Callbreath. In co-

W. A. Hover & Company's building, southwest corner of Fourteenth and Lawrence streets.

Office building of the Denver Gas & Electric Company, northeast corner Seventeenth and Tremont streets.

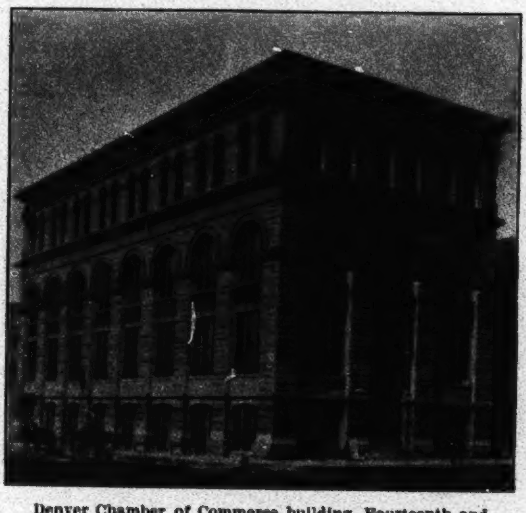
operation with the Colorado Agricultural College at Fort Collins, this committee introduced experimental cultivation of the sugar beet in several Colorado counties in 1898. These experiments proved that the acreage yield of beets from Colorado soil was about double the usual crop elsewhere; and practical tests made at the Grand Island, Nebraska, sugar refinery proved that Colorado beets carried an unusually large percentage of sugar. These results were followed in 1899 by the beginning of what promises to be a great agricultural industry in our State; and in the autumn of 1899 the first Colorado sugar was placed on the market by the pioneer refinery at Grand Junction.

Of the rapid development of the beet sugar industry in the State within two years, the facts have been presented in Chapter LI. Mr. Coe in an address recently delivered to one of the minor organizations of Denver business men thus related some of the initial circumstances that led to the introduction of sugar beet culture in Colorado:

"One day in the autumn of 1894 when the effects of the panic were still upon us, I was passing along Arapahoe street thinking of possible ways and means of reviving the hope and spirit of the city, when I saw hanging in the meat display of the Denver Packing Company the carcass of a prize steer. Upon inquiry I learned that the animal had been fattened near Denver entirely upon sugar beets. It then occurred to me that perhaps the sugar beet might become a substitute for Colorado's lost silver, and I immediately set to work upon my own account to investigate the question. I spent considerable time and a few dollars in my investigations—time was plenty and money scarce in those days—and soon became convinced that Colorado soil would abundantly produce the sugar beet, and that definite experimental work was the next step to be taken. This I undertook to do. I visited the beet-growing district and sugar factory of Grand Island, Nebraska; thence went to New York in furtherance of my purpose; and employed a man to go to Mexico to gather data there. Having assembled considerable practical information, I published a paper, the "Sugar Beet Industry," which was distributed free among the farmers of Colorado and in which offers of a few prizes for growing sugar beets were made. In this way some interest was created. Subsequently I sought and at once obtained the active co-operation of the Chamber of Commerce which appropriated $1,000 to be distributed in premiums to encourage further experimental planting of beets. The Chamber created a Sugar Beet Committee of which I was appointed Chairman, and which instituted a campaign of education in the possibilities of beet sugar production in Colorado. With the results of these preliminary proceedings all of you are familiar."

There are several special organizations among Denver's business men, the more prominent of which are associations with memberships confined to those engaged in certain common fields of effort—special trade organizations. An important one that had been dormant for several years, is the Denver Real Estate Exchange, incorporated and organized in 1879 for the purpose of encouraging and maintaining sound and uniform business principles and usages in real estate transactions, to properly disseminate trustworthy information about Denver real estate, to influence and direct legislation in reference to laws bearing on titles and transfers of real estate, to discourage wild speculations and fictitious booms, to encourage and direct as far as possible the safe investment of capital, and to elevate and dignify the real estate business. It had a useful career which was interrupted by the extraordinary depression following the fateful year 1893; but under the stimulation of reviving activity in real estate in 1899 and 1900, the organization was revived in the last-named year, or rather a new one was effected, with good prospects of succeeding to the usefulness of the earlier association.

But the great association, the one that includes all the others and more, too, is the Chamber of



Denver Chamber of Commerce building, Fourteenth and Lawrence streets.

Commerce. In its membership are found the manufacturer, the merchant, miner, professional man, the owner of and dealer in real estate and, indeed, those of almost every honorable calling. The Chamber may be said to have the general business and economic welfare of this great community in its keeping. Every question affecting the city's interests promptly receives intelligent consideration from its membership of thoroughly representative men, and it is always quick to respond to necessity for its action. It has become one of the conspicuously active commercial organizations in the west, and throughout its career has been a commanding force in Denver and in Colorado. Its officers for 1900 were William N. Byers, President; L. Anfenger and G. F. Dunklee, respectively First and Second Vice Presidents; O. P. Baur, Treasurer; and Arthur Williams, Secretary.

In December, 1900, a movement was set on foot to organize on a broad basis and as an adjunct to the Chamber of Commerce, a "Mercantile Club," largely of a social character, but to be representative in the best sense, of the city's business community, and to co-operate with the Chamber. At the close of our record the plans for this proposed organization had not been perfected.

Denver's situation in the center of a vast empire of country in which she has no competitor, no rival, and which is steadily increasing its population, should eventually, and undoubtedly will, make her truly metropolitan in commerce and manufacturing as well as in population. Both her commercial and manufacturing interests are now fairly expanding, and with the growth of each are opportunities for additions to each to the advantage of all. Denver may fairly lay claim to the manufacturing and commercial business of the great region within a radius of three hundred miles; and in certain directions she ought to go farther and enter upon possession. Her movements are steadily toward that end, but they should be accelerated by additions to her active forces.

In the natural course of things the strictly commercial lines of business expand with greater readiness than the manufacturing. The possibilities of the latter require some special attention and encouragement. With the enormous deposits of both coal and iron in Colorado, in proximity to each other, to which we have referred at some length in the geological history of this region, not only Denver but other places in the State should become producers of iron and steel in vast quantities; and the time is coming when they will do so. While it will be at least a decade or two before our flourishing steel-making neighbor, Pueblo, will have been fully justified in proclaiming herself "the Pittsburgh of the West," there are no natural causes to prevent that city, or some other place in Colorado, becoming a great center of iron and steel production. The one corporation now engaged in that business in the State is represented to have made an out-put of iron and steel to the

---

Henry L. Doherty, President of the Denver Gas & Electric Co., was born May 15, 1870, and reared in Columbus, Ohio. Leaving school at the age of twelve years he found employment in the office of the Columbus Gas Co. where he worked his way upward until, in 1894, he became Chief Engineer and Assistant Manager of that company.

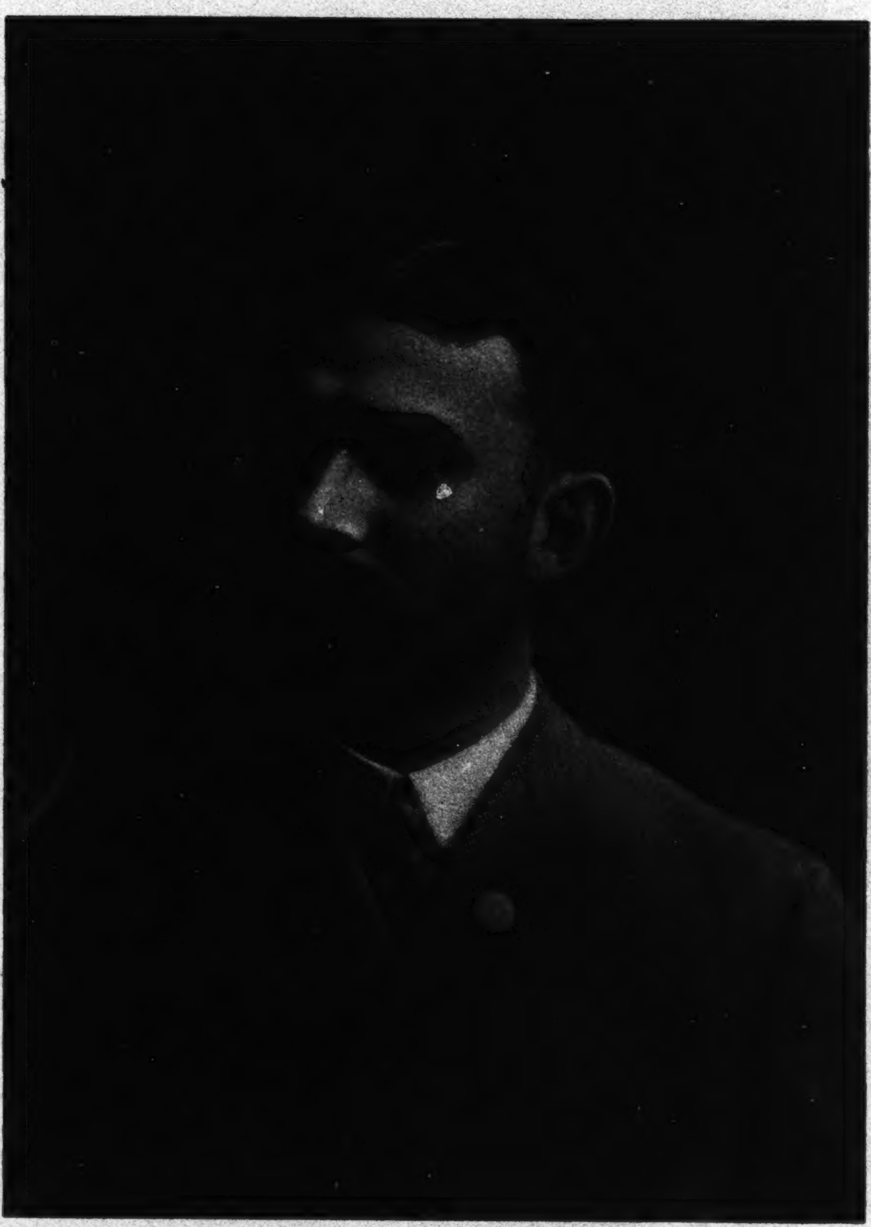
Since that time he has held, either successively or simultaneously, the following-named positions: General Manager of the Madison Gas & Electric Co. of Madison, Wis.; Manager of the St. Paul Edison Co. of St. Paul, Minn.; General Manager of the St. Paul Gas Light Co. of St. Paul, Minn.; Engineer of the St. Croix Water Power Co. of Hudson, Wis.; Engineer of the Jacques Cartier Water Power Co. of Quebec, P. G., Canada; Engineer and Manager of the Columbus Electric Co. of Columbus, O., and General Manager of the Denver Gas & Electric Co.

He is now President of the Denver Gas & Electric Co.; of the Madison, Wis., Gas & Electric Co.; and of the Lincoln, Neb., Gas & Electric Co.; General Manager of the Jacques Cartier Water Power Co. of Quebec; and General Manager and Chief Engineer of the American Light and Traction Co. that controls the Milwaukee, Wis., Gas Light Co.; the Grand Rapids, Ind., Gas Light Co.; the St. Paul, Minn., Edison Co.; the St. Paul, Minn., Gas Light Co.; the St. Croix Water Power Co. of Hudson, Wis.; the Binghamton, N. Y., Gas Works; the San Antonio, Tex., Gas & Electric Co.; the San Antonio, Tex., Traction Co.; and the St. Joseph, Mo., Gas Light Co.

He is also President of the National Electric Light Association and of the Ohio Gas Light Association; and was formerly President of the Northwestern Electrical Association. He is also a member of several engineering and scientific societies, including the American Institute of Electrical Engineers and the American Association for the Advancement of Science. A member of the American Gas Light Association, he won the 1898 gold medal for the best paper on subjects of special interest to that organization.

Furthermore, he is a member of the Lotos, Engineers', and Democratic Clubs, of New York City; the Columbus Club, and the Engineers' Club, of Columbus, O.; the Minnesota Club, of St. Paul, Minn.; and of the Denver Club, and the Denver Athletic Club, of Denver.

Mr. Doherty takes great interest in everything pertaining to the production and use of gas and electricity, and in hydraulic and steam engineering; and is a frequent contributor to the current literature dealing with them. He is also the inventor of many mechanical appliances now used in connection with lighting and power; and as shown by his record has proved successful as manager of large industrial enterprises. While his headquarters are in New York city, and his legal residence in Madison, Wis., he spends much the larger part of his time here in Denver, and devotes whatever of leisure he can find in his hard-working life to further study of the technical problems arising in the great industrial undertakings with which he is identified.—J. C. S.



Henry L. Doherty.

value of $5,684,000 in 1900, notwithstanding that a large part of its capital ($25,000,000) and energies are devoted to coal-mining; it having produced in 1900, 3,783,383 tons of coal. An iron and steel producing center in Colorado would have natural advantages not possessed even by Pittsburgh. There the coal, and most of the iron used are naturally a thousand miles apart; here in our own State they are often within rifle-shot of each other; and not infrequently lie together. A greater development of iron production would carry with it a development of a large variety of manufacturing more or less allied with it. Colorado is the only State in the Union in which all the materials for steel-making are found near each other in quantities sufficient for large operations.

It is not to be expected that manufacturing involving the consumption of much timber and lumber would be expedient here for obvious reasons. But aside from the various industries already in operation, and from the possibilities that lie in our deposits of iron and coal, the production of textile fabrics of cotton and of wool and, as a logical consequence, that of clothing; of footwear; of glass and queensware, for which excellent natural materials exist; and of the many other things that are suggested by the presence of raw materials or by various products of the State that are further manipulated elsewhere, would seem to promise most favorable results. The great Overland Cotton mills have already demonstrated what can be done here with cotton. One of the largest and most prosperous woolen mills in the country is in operation in Utah.

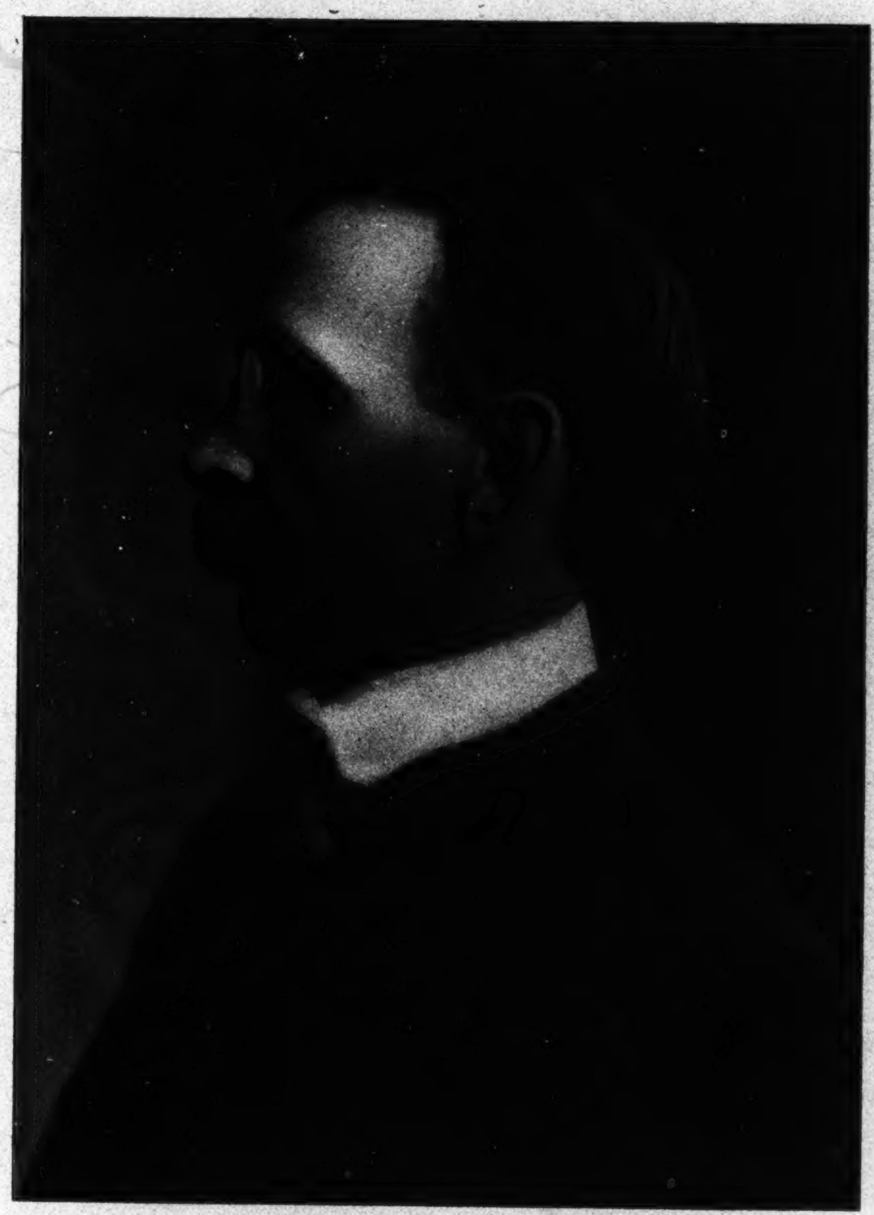
It now appears as one of the certainties of the future that the commerce of the United States with Oriental countries is to become of vast proportions. From the character and habits of the peoples of those countries, a large part of the trade will be in fabrics of cotton. Than Denver, there is not in the United States a locality more favorable for the manufacture of raw cotton into marketable commodities. The one element of climate alone would give her a distinct advantage in the employment of cotton spinners, weavers and printers, and an army of them could find room for homes of their own instead of being swarming tenants in crowded tenement houses as in the older manufacturing cities. Moreover, Denver has the cotton fields of Texas at her back-door, and three or four railways to Pacific tide-water.

Something of Denver's railways, that radiate from her like the spokes from the hub of a wheel, has been said elsewhere; and if there had not been, the city's shipping facilities are too much in evidence to need recounting here. But in one direction it would seem that the greater relative utilization is yet to come; and that is by freighting on salt water between the Atlantic coast cities and Galveston, and by rail in connection therewith to and from Denver, over the direct line existing between the two cities. The distance from Denver to tide-water at Galveston is about the same as from Denver to Chicago. It is not improbable that the advantages naturally belonging to that route for freight will, if they be not arbitrarily throttled, constitute a very important factor in Denver's commercial and manufacturing future.

Francis W. Loveland, son of W. A. H. Loveland, was born at Brighton, Ills., July 24, 1859. With his father's family he came to Colorado in 1860, has resided in the State since that time, and for ten or twelve years has been a citizen and business man of Denver. Educated at Michigan University, he entered the law department of the University of Denver in which he was graduated. He was then admitted to the Colorado Bar but has never engaged in practice; having studied law for the advantages it would give him in his business affairs.

Mr. Loveland was for seven years Secretary and Treasurer of the Rocky Mountain News, and for four years Secretary and Treasurer of the Denver Circle Railroad Company and of the Denver Circle Real Estate Company. He was also Receiver for the Grand River Ditch Company at Grand Junction, and for six years was Treasurer and a Director of the Denver, Lakewood & Golden Railroad Company. In more recent times he has been engaged in coal mining and is now General Manager of the Louisville Coal Mining Company and of the Rex Coal Mining Company. He is also interested in ranching at Berthoud, and in the San Luis Park near Alamosa.

Mr. Loveland is a member of the Colorado Bar Association, the University Club, and the Overland Park Club. He has never sought nor held any public office nor has he ever desired to do so.—J. C. S.



Frank W. Loveland.

CHAPTER LXX.

A CHAPTER OF MISCELLANY—OLD CITY CEMETERY—MASONIC AND ODD FELLOWS' CEMETERY—RIVERSIDE CEMETERY—FAIRMOUNT CEMETERY—MT. OLIVET CEMETERY—FORT LOGAN AND ITS ORIGIN—MILITARY DEPARTMENT OF THE COLORADO—PLACES OF AMUSEMENT—CHARACTER OF PIONEER THEATERS—"JACK LANGRISHE"—HOME THEATRICAL TALENT—GUARD HALL—TABOR OPERA HOUSE—BROADWAY THEATER—LYCEUM AND DENVER THEATERS—SUMMER AMUSEMENT PLACES—THEATERS THAT ARE NOT—PROMINENT DENVER CLUBS.

The first place of burial in or near Denver was then far out of the pioneer towns, to the eastward, and is included in what later became known as the City Cemetery, and what is now the tract of land at the eastern end of Eleventh Avenue that figures on the city map as "Congress Park;" a name given it in consequence of its later reservation to the city by the United States government. The place was selected for burial purposes in the winter of 1858-59 by General Larimer, of the Denver Town Company, and in the early days was as forlorn and desolate as any spot well could be—treeless, shrubless, waterless, utterly forsaken and neglected except by prairie dogs. Jack O'Neill, one of the rather conspicuous pioneers of 1858, who was killed by John Rooker, was early buried there; and for several years thereafter the place was called "Jack O'Neill's Ranche." Steele, who was killed at the time of the attack on the News office; the men who were hung by the People's Courts in 1860; and others who were killed in various affrays in the early times, were put under the ground out there, where their bones still lie; and with them were the bodies of citizens who went out of the world in ordinary ways. The spot could not be dignified by the name of "Cemetery;" it was merely a burial place of the dreariest kind imaginable. Title to the land was conveyed to the city by an act of Congress in 1872.

In the later "Sixties" the Masonic and Odd Fellows societies established a little cemetery at the northward end of Fifteenth street, beyond the limits of what there then was of "North Denver," and which became commonly known as the "Masonic Cemetery." It was used until late in the "Seventies," when it began to be abandoned; and the remains of many buried there were then and later removed to the new Riverside Cemetery.

In 1876, a company of citizens, determined to provide a better place of sepulture, in a locality affording opportunities for improvements, embellishments and adornments, organized the Riverside Cemetery Association as a private corporation, but upon a broad and liberal basis that enabled any one to obtain a burial plot at very small expense. The Association was incorporated April 1, 1876, with Benjamin F. Woodward, Ira S. Elkins, Herman Beckurts, John F. Spalding, Henri R. Foster, Alonzo M. Morrison, John H. Morrison, Albert R. Brown, Edward B. Light, Frank P. Swindler, Daniel Hurd, John R. Hanna, Isaac N. Rogers, Mitchell Benedict, Frederick Dreyer, Job A. Cooper, Wilbur C. Lothrop, Richard E. Whitsitt, Francis M. Case and Roger W. Woodbury as incorporators.

Riverside was the first cemetery in the State to introduce the landscape or park system of cemetery culture. It originally comprised one hundred and sixty acres of land beautifully situated on the right bank of the South Platte river four miles northward of the State Capitol, and which is intersected by the city's general northern boundary line. The tract was the Dr. J. H. Morrison farm, or ranche as it was then called. About fifty acres were added subsequently by purchase of adjacent property, so that the cemetery now comprises two hundred and fifteen acres. Improvement and adornment of the land were at once put under way, and with the abundant supply of water available there, it soon was made an appropriate resting place for those for whom life's fitful fever was ended. Irrigation is effected by means of iron pipes under the surface throughout the grounds, with hydrants for hose attachments at convenient points, water being supplied by the cemetery's own pumping plant located on the river bank within its grounds, so that an abundance of water economically obtained is assured at all times.

The establishment of Riverside marked the passing of the "grave-yard" era in Colorado, and was the introduction of modern ideals here. The cemetery has made fair returns upon the capital invested, and a midsummer stroll through its shady avenues will convince the visitor that it has also fulfilled its mission as a conservator of public interests and refined tastes.

View in Riverside Cemetery.

There is a popular tradition that Dr. Morrison, the original owner of the tract of land, and the original projector of the cemetery, was the first person to be interred therein; but, as a matter of fact, Dr. Morrison's was the fifth burial in the grounds, it having occurred on July 22, 1876. The first burial was that of Henry H. Walton, on June 1, 1876. There are now about 18,000 interments within the cemetery's hallowed bounds. There were many removals from the old City Cemetery to Riverside, and burial was discontinued in the former, which is now nominally classed as a park, and which will be made one in reality before many years pass. Riverside Cemetery was intelligently planned, and has been attractively embellished until, quoting the language of a recent writer, it is now "a most beautiful city of the dead, adorned with shrubbery and lawns and costly monuments, so that one feels in the midst of it all, that rivers of human love and devotion flow up and down all its walks and drives."

Fairmount Cemetery, one of the exceedingly beautiful burial places in the western country, lies outside the southeastern limits of the city, at a distance of five and one-half miles from the State Capitol. The Fairmount Cemetery Association was incorporated February 20, 1890; and its first Board of Directors consisted of Donald Fletcher, William H. Bush, E. W. Rollins, Charles F. Wilson, Willard Teller, Thomas H. Potter, and Frank C. Young. Donald Fletcher was elected President; Willard Teller, Vice President; James H. Morris, Treasurer; and William D. Peirce, Secretary.

Fairmount was one of the results of the extraordinary growth in population and great expansion of the city's area in that period, and was located beyond any probable danger of encroachment upon it by future increases of the city's population or extensions of city boundaries. Two of the earlier cemeteries, the old one on Capitol Hill to which we have already referred, and the one in "North Denver," having previously been abandoned, the projectors of Fairmount wisely profited by these preceding errors of location. A tract of 560 acres of rolling and fertile land was acquired by the Association and platted upon the modern "park" plan of cemetery landscaping. Through the intervening years the work of beautifying the cemetery has gone forward without interruption, and the place is now one of winding roads and pathways, beautiful lawns, and groves of shade-trees. The Gate Lodge, of French Gothic style, is one of the finest examples of that kind of architecture in the west. Built of a light-colored sandstone, it is eighty feet long on the main front with a depth of twenty-six. The road passes under a massive arch sixteen feet wide and rising to a height of twenty feet. Within the cemetery, upon the summit of a low hill, stands another beautiful structure—the Mortuary Chapel, with its receiving vaults. It is of stone, in the Ecclesiastical French Gothic of the thirteenth century, and is twenty-six feet in width by sixty-four in depth, surmounted by a tower ninety feet in height. All the details of this edifice were carefully worked out and completed in harmony with the purposes for which it was erected. The cemetery receives an abundant supply of water from the high-line canal and reservoir system, and can also obtain it from an extension of the Denver Union Water Company's supply pipes. Its location is a most favorable one and its view of the great ranges is of magnificent grandeur. The first interment was that of the body of Sadie Shafer, on November 19, 1890; and at the close of the year 1900, about 9,000 persons had found their last resting-places there.

View in Fairmount Cemetery.

Early in January, 1900, there was a union of interests of the Riverside and Fairmount Associations, and on the 10th of that month the two passed under one control and management, though each retains its separate identity and is conducted as a separate institution. The new Board of Directors elected at that time and now having control and direction of both cemeteries consists of H. M. Orahood, President; Thomas H. Potter, Vice President; R. H. McMann, Treasurer; H. K. Brown, E. W. Rollins, Willard Teller, Charles D. Cobb, and Frank C. Young; with William D. Peirce as Secretary. At the close of our record arrangements were in progress for the erection of a crematory at Fairmount, to be ready for use in 1902; and which will be the first one in the vast empire between St. Louis and San Francisco.

Mt. Olivet Cemetery is eight miles northwest of the city, within the borders of Jefferson county, and is often referred to as "the new Catholic cemetery." On May 23, 1891, Bishop Matz and the pastors of the Catholic churches in Denver met at the Cathedral residence to organize a cemetery association under the laws of the State. The Mt. Olivet Cemetery Association was incorporated October 24, 1891, as a result of that meeting. It was the desire of the projectors to locate the cemetery beyond probable encroachments by the city's growth, and therefore two hundred acres of land, well adapted for appropriate improvement were bought in the valley of Clear creek, just inside Jefferson county, where it is readily accessible by good roads and by rail. The land is rolling and willingly lends itself to the excellent effects in platting and embellishment now present there. The Association was not organized for profit, and its influence in every way favors reduction of the expense of sepulture. Any surplus remaining above its expenses the Association is pledged to devote to charitable purposes in Denver. The first interment was made July 5, 1892, and there are now about eighteen hundred persons sleeping there. The management of the Association's affairs is vested in a Board of Directors consisting of Bishop Matz, and seven pastors of Denver Catholic churches, the Bishop being President.

In 1880 after the reservation system had been applied to all the Indian tribes in the west, and the probability of further Indian wars had been reduced to a minimum, the United States government adopted the policy of abandoning the small military posts scattered over the country west of the Missouri river, and concentrating the troops of its small army in new and large establishments in proximity to the centers of population. The disorder growing out of the labor troubles in 1877 which soldiers of the regular army were called upon to suppress, was one of the causes which suggested the new policy; while others were the greater economy and convenience of handling and providing for the little army in such establishments located

Gate and Lodge, Fairmount Cemetery.

in the neighborhood of the great railroad centers and within easy reach of the more probable scenes of future need for the services of soldiers.

Under this new policy it was decided to abandon Forts Crawford, Garland, Lewis, Lyon, and Uncompagre, in Colorado, which was done within a few years and the reservations turned over to the Interior Department for sale to settlers. In place of these and other abandoned small posts, the War Department decided to establish one of the large new ones here in the central west, but no definite action was taken for several years.

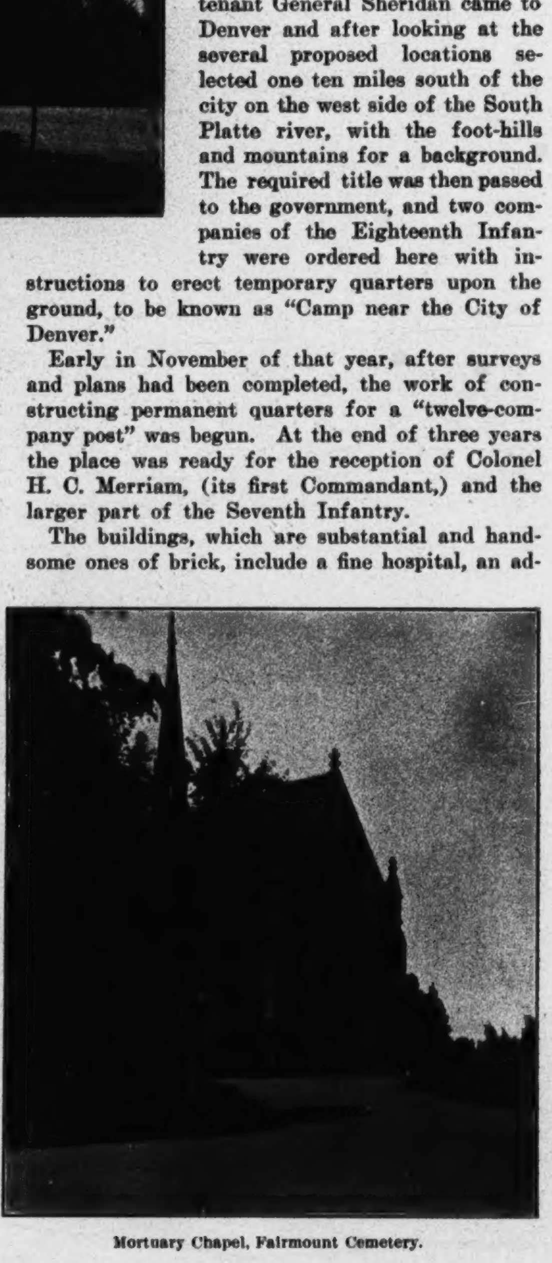
After considerable preliminary work by the Denver Chamber of Commerce, in the winter of 1886-87, Nathaniel P. Hill, Henry R. Wolcott and several other wealthy and influential citizens of Denver instituted a movement to secure the location of the proposed new military establishment, near Denver. The result of this was a proposal to the government to donate sufficient land for the post, near the city and well-located, the choice of several suitable sites being offered. In consequence of this liberal proposition Congress, on February 28, 1887, enacted as follows:

> "That the Secretary of War be and is hereby authorized and directed to establish a Military post near the City of Denver, in the State of Colorado, at some suitable site to be selected by the Lieutenant-General of the Army and approved by him: Provided, That a good and sufficient title, to be approved by the Attorney-General of the United States be first made to the United States, free of cost, of not less than six hundred and forty acres of land in a compact body, including the site so selected.
>
> "Section 2. There is hereby appropriated out of any money in the Treasury not otherwise appropriated, the sum of $100,000, to be expended under the direction of the Secretary of War, in the commencement of the work of constructing the necessary buildings, quarters, barracks and stables for the post to be established under the provisions of this act: Provided, That no part of such money shall be expended until the State of Colorado shall have ceded to the United States jurisdiction over the tract of land which may be selected under the provisions of this act."

In the summer of 1887, Lieutenant General Sheridan came to Denver and after looking at the several proposed locations selected one ten miles south of the city on the west side of the South Platte river, with the foot-hills and mountains for a background. The required title was then passed to the government, and two companies of the Eighteenth Infantry were ordered here with instructions to erect temporary quarters upon the ground, to be known as "Camp near the City of Denver."

Early in November of that year, after surveys and plans had been completed, the work of constructing permanent quarters for a "twelve-company post" was begun. At the end of three years the place was ready for the reception of Colonel H. C. Merriam, (its first Commandant,) and the larger part of the Seventh Infantry.

The buildings, which are substantial and handsome ones of brick, include a fine hospital, an ad-



Mortuary Chapel, Fairmount Cemetery.

ministration building, many good dwellings for the officers and their families, barracks for the men and all the various structures required for an important military establishment. The location is a fine one, affording room for quartering a small army if required to do so, and is accessible by several lines of rail communication. Destitute of almost every aspect usually associated with a "Fort," Logan in these times of peace seems more like a restful retreat than an abiding place of the forces of grim-visaged War.

When the new post began to assume its presentable proportions the choice of an appropriate name for it became a subject of discussion. As General Sheridan had selected the site, the people of Denver by common consent called the place "Fort Sheridan." A new post was then being built near Chicago, and when it was decided to call it Fort Sheridan, the name of Fort Logan was chosen for the Denver establishment. The choice was not a particularly happy one, inasmuch as it might well have been one of the many historic names directly associated with the settlement and development of the Colorado country.

In 1893 the United States Military Department of the Colorado was established with headquarters at Denver. Brigadier General Alexander McD. McCook was the first Commander of the Department, serving from July 1, 1893, to the close of April, 1895. He was succeeded by Brigadier General Frank Wheaton who served until June 30, 1897. Then Colonel Henry C. Merriam was in temporary command until Brigadier General E. S. Otis took charge of the Department May 16, 1898. He was temporarily succeeded by Colonel E. V. Sumner who served until January 30, 1899, when Brigadier General Henry C. Merriam, in charge at the close of our record, was again placed in command.

Passing from the domain of the sons of Mars to consideration of provisions for amusing our people might seem to be asking the reader to turn a rather sharp corner; but perhaps there will be no serious objections. What is called "the amusement season" continues with us throughout the year, the theaters having the field from the beginning of October to the close of May, leaving the summer months to yield a harvest to several places of amusement in the suburbs of the city.

The pioneer theaters of Denver were pretty rough establishments and the proceedings on their stages were usually in keeping with the tastes of the average person in the exceedingly varied assortment of men that constituted the audiences. The critics were not severe so long as the stage doings included plenty of action, with especial efforts on the part of the "lady performers" in the direction of singing and dancing, accompanied by an "orchestra" sometimes consisting of a few discordant violins, and sometimes of only a little old piano that had had all the musical qualities jolted out of it while crossing the plains in a freight wagon. The buildings were neither better nor

---

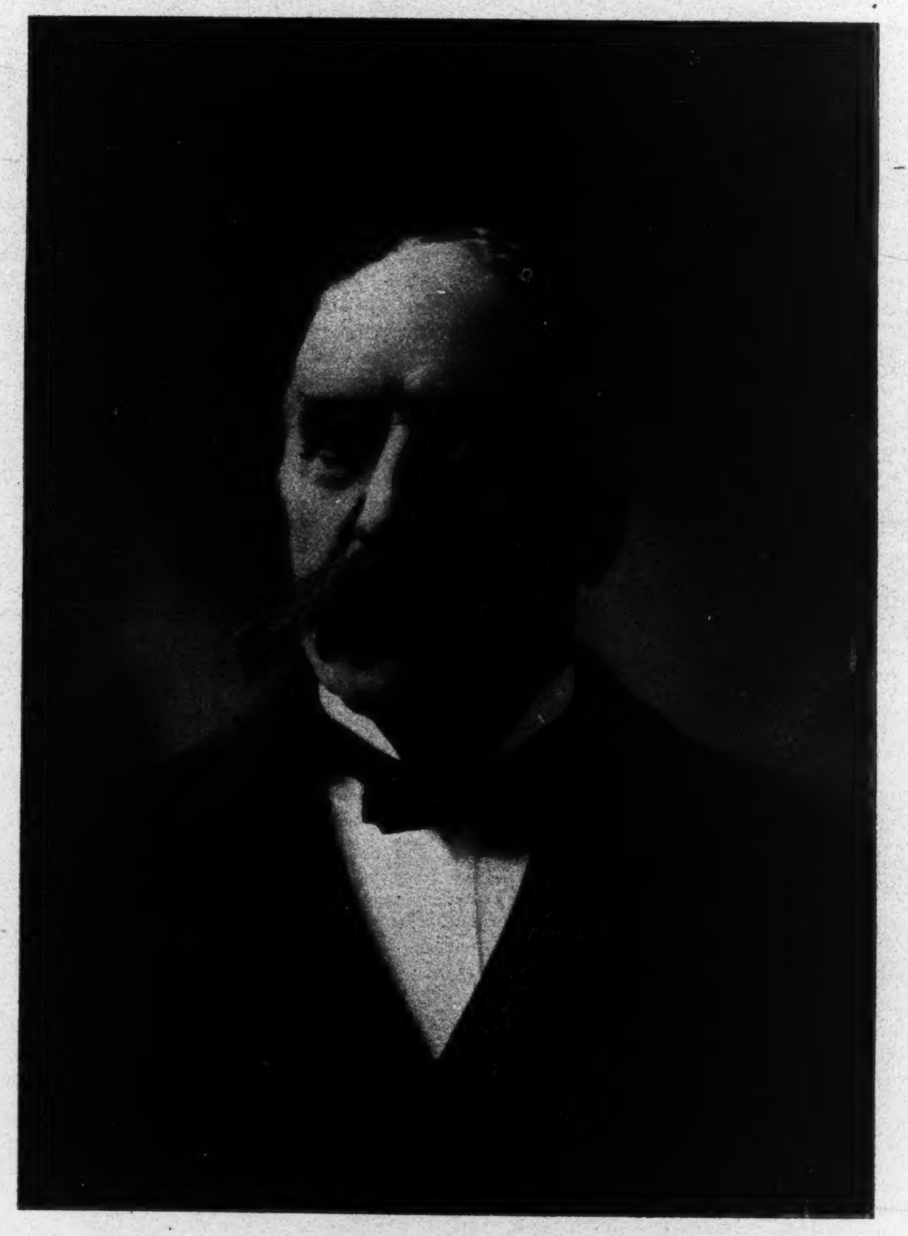
Horace Austin Warner Tabor was born in Orleans county, Vt., November 26, 1830. Having acquired such education as a rural school then afforded, he learned the trade of a stone-cutter and followed it until he was twenty-five years old. In 1855 he located in Riley county, Kas., pre-empted land and engaged in farming. An ardent anti-slavery man, he was elected a member of the Kansas Free Soil Provisional Territorial Legislature of 1857 which was dispersed by Federal troops, and of which he was one of the prominently brave and radical members.

Coming to Colorado in the spring of 1859, very poor, Mr. Tabor reached Denver in June when the excitement over discoveries of gold in the mountains was at a high pitch. Remaining here until the spring of 1860 he then went with the throng to California Gulch. His claim there proved more enduring than nearly all the others, and he worked it profitably until 1865, and in the meantime established there a miners' supply store. In that year he sold his interests in the Gulch, removed to Buckskin Joe, where he opened a large store, became Postmaster, and a prominent and influential man in the camp. Buckskin having waned, he moved his store back to the Gulch in 1868, and located it in "Oro City," where he remained until 1877.

The placer deposits in that general district had been exhausted, the population had dwindled, and prospects had sunk low. Then came the famous discovery of values in carbonates of lead, and the birth of Leadville to which place Mr. Tabor at once removed his store. Having frequently assisted needy miners, he was soon appealed to for help by two poor shoemakers who wanted to go prospecting. He staked them and they discovered the famous Little Pittsburgh mine that yielded enormous wealth. Mr. Tabor sold his interest in it for one million of dollars. He invested in other mines and money poured into his coffers. He acquired mining interests in New Mexico, Arizona and Mexico, each of which contributed to his large and fast-growing fortune. Everything he touched seemed to turn into money. It is an oft-told story, that of this man's unexampled success, and further details are not needed here. In ten years the miner-storekeeper of California Gulch with his modest accumulations, had acquired a fortune of ten millions of dollars in the values of those times.

In Leadville's early years he was that city's most conspicuous figure, was elected its Mayor, and so served two terms. He later built a fine opera house there, established the Bank of Leadville, built a system of water works, a telephone exchange, and was engaged in many other enterprises.

Tabor next turned his attention to Denver, and in 1879 made large purchases of real estate here. Of these, and of his construction of the Tabor Block and the fine Tabor Opera House, the particulars have elsewhere been related. His investments in that period tremendously stimulated improvements in Denver. Continuing these investments, he also became identified with financial and



Horace A. W. Tabor.

worse than their neighbors, usually of two stories, with the theatrical department on the second floor; the ground floor being given over to drinking and gambling accommodations. Not infrequently a highly pleased admirer in the audience would invite the entire stage company downstairs to the bar, at the end of an act; a hospitable manifestation of approval and good will that was rarely rebuffed, but which often resulted in lowering the standard of artistic effects in the closing scenes of the drama. However, the ability of the audience to discriminate was usually somewhat befuddled, itself, after ten o'clock in the evening, by between-acts adjournments to the regions below. A noted pioneer of such establishments was, as mentioned in a preceding chapter, the "Cibola Hall" in Auraria. It was a long, one-story building, with the drinking and gambling departments in front and the theatrical in the rear. As a place of iniquity it had few equals at any time and anywhere in the west.

Officers' Dwellings, Fort Logan.

In fact, the pioneer "theaters" were mere adjuncts, "attractions," to the more important lines of business conducted in connection with them. Drinking and gambling in the crowded rooms went on continuously, day and night; and Sunday was recognized only as a day that brought a largely increased amount of business. Almost every kind of gambling and swindling device was kept in operation, and the miners who came in with their hard-earned dust were the principal victims; though many of the new arrivals who had not yet seen the mining districts lost every penny they possessed. But, when one victim arose and left the scene of his financial discomfiture there were two or three fresh ones standing ready to drop into his place; and so the miserable business went on day after day, night after night. In preceding chapters some details have been given of several of these pioneer "amusement" establishments, and the subject is not of sufficient importance to be much further followed.

The old "People's Theater," a frame building that stood on the north side of Larimer street near the corner of Fourteenth street, and which appears in one of our street-view illustrations, was a locally famous place in the early "Sixties." As we have stated, it was the old Apollo Hall building which

---

other Denver institutions. His influence, example, and assistance inspired everyone with energy and enthusiasm. He was investing all of his great wealth in the development and improvement of the city and State, and he spread faith and confidence in both wherever he went and in all that he did.

A Republican of deep-seated convictions, he entered the political arena. He was elected Lieutenant-Governor in 1880, and in 1882, when Senator Teller was called to President Arthur's cabinet, Governor Pitkin was strongly urged to appoint Tabor to the vacancy; but the choice fell upon Chilcott to serve until the next session of the Legislature. In January, 1883, the Legislature elected Tabor to serve the unexpired part of the Teller term that ended March 4, 1883. He was a candidate for the succeeding full term but was defeated by Bowen by only one vote. Senator Tabor faithfully served his party in other capacities; as chairman of its State central committee; as chairman or member of its State executive committee; and as a counsellor, guide and friend in many seasons of political strife. To his party's welfare he was generous with his means in the days of his prosperity, and after adversity came upon him he freely continued to give it his services and influence.

When the devastating financial hurricane of 1893 came and wrecked so many Colorado fortunes, Tabor's went down with the rest. He manfully braved the blast as he saw his accumulations swept away, and heroically faced the consequences in his endeavors to repair the wreckage. But the millions were scattered far by the storm, and the old pioneer of the pick and pan was again beset by hardship, as he was when he first came to Denver. But through it all he was the same Tabor. The people of Denver will long remember his rugged figure bent by years of toil, that hearty handshake, the friendly greetings and sterling sentiments that always fell from his lips in his intercourse with his fellow-men.

In 1898 President McKinley in response to the unanimous desire of the people of Denver and to that of thousands of other citizens of Colorado, appointed Senator Tabor Postmaster for this city, the position he held at the time of his unexpected death which occurred April 10, 1899, after a few days' illness, and that caused a painful shock to this community. There was an imposing public funeral, but that manifestation of respect for him was as nothing compared with the feelings of profound regret in the hearts of all his fellow-citizens when they had learned that the end had come to this valorous old Captain in Colorado's army of pioneers. He was a frank, honest, open-hearted man—an unusual combination of gentleness and ruggedness. No more generous man, none truer to his friends nor more responsive to their wants in times of need, is known in the annals of Colorado; and in his charity and benevolence he gave with both hands as long as he had aught to give. But in all of this he was often sadly imposed upon.—J. C. S.

Jack Langrishe, who came here from Fort Laramie in August, 1860, leased, refitted, renamed, and opened on October 3rd of that year. It was conducted by him on a little better basis than it had theretofore been operated, but was still a rather boisterous place in the early "Sixties." Another, of that same period, was the "Palace Theater," a brick building erected by Chase and Heatley on the north side of Blake street, between Fourteenth and Fifteenth streets. The building is still there and now glories in the name, "Palace Lodging House." Chase, one of its builders, is still a resident of Denver. These concerns were improvements over their pioneer predecessors, but were bad enough, if measured by present standards. The first theater intended to be conducted on a respectable level was the one built in 1860 on the northeast corner of Sixteenth and Lawrence streets, and which Jack Langrishe bought and improved in 1861, renaming it the "Denver Theater." Some account of its construction, career, and destruction by fire has already been given. Langrishe's beginning here was, as we have stated, in connection with a less reputable establishment, but his subsequent theatrical management was quite in accord with the radically changed social conditions in Denver in later years, and his old "Denver Theater" was a fairly creditable place of amusement for its time and circumstances. He died at Wardner, Idaho, a few years ago, where he had been engaged in publishing a local newspaper after he left Denver. He was an Irishman and had been employed on the New York Tribune before he came west. His true name was unknown; "Langrishe" having been an assumed one.

Soldiers' Quarters, Fort Logan.

Denver had many theatrical favorites of local origin or, at least, of local habitation, in the earlier times—a greater number than she has now; but their fame and popularity, according to the common fate of the "profession," were evanescent. Mentioning them now would be merely recalling names nearly all of which are forgotten and from which nearly all interest long since passed away. However, there were two who won considerable fame and distinction. One was C. W. Couldock, an actor of unusual versatility and ability who was a favorite throughout the country. He has, we believe, been dead for several years. The other is Samuel Christy, a one-time popular negro impersonator and comedian. It has been years since he achieved his burnt-cork triumphs, but he is still a resident of Denver.

Denver really had no theater worthy of the name and creditable to the city until H. A. W. Tabor built the Grand Opera House which was opened in September, 1881. Mr. W. B. Vickers, writing in 1879, thus lamented the city's poverty in this respect:

> "Denver, it must be confessed, is sadly deficient in places of legitimate amusement, though concert halls are unhappily only too plenty in the lower part of the city. Since the destruction of the old Denver Theater by fire—which was not much loss to be sure—Guard Hall, now the Denver Opera House, has been the only regular theater in the city. It is small and uncomfortable, being poorly ventilated. No regular stock company is maintained by the manager, but it is often occupied by traveling troupes, and occasionally an excellent performance is given upon which occasions the little theater is crowded from cellar to garret, there being no pit or dome about it. To the shame of Denver it must be written, that Leadville, Central and several other towns in the State, are provided with better theaters than the capital. Walhalla Hall, corner of Curtis and Sixteenth streets, is now the only hall for concerts, lectures, public meetings, etc., in the city. It is a comfortable, not to say handsome, hall. Turner Hall on Holladay street, is the German Temple of Art, and is the most commodious hall in Denver, though inconveniently located."

"Guard Hall," referred to by Mr. Vickers, was in the building on the northwest corner of Curtis and Fifteenth streets, built by the old military company, the "Governor's Guards," in 1873. The original structure was later raised to one of three stories, and converted into a business block. The ground floor is now occupied by store-rooms, while the upper ones are used for apartment purposes. In its time Guard Hall stood for the best in theatricals in Denver, but it passed out of commission when the Tabor Opera House was completed and opened. Of Walhalla Hall some account is given elsewhere.

The erection of the Tabor Grand Opera House was a conspicuous event in Denver's history, and when the building was completed it ranked as one of the few places of amusement in the United States widely noted for their size and elegance, and its fame went far over the country. The house was "opened" September 5, 1881, by Emma Abbott and her opera company, with a brilliant audience present. Since that time its stage has been trodden by every actor and singer who have attained distinction in their respective professions. The house has a seating capacity of 1,550, but the character of its entertainments in recent years has not been up to the former high standard. On January 4, 1884, the building was damaged by fire to the extent of some twenty thousand dollars; the only mishap that has occurred to it in its career of nearly twenty years.

Old Guard Hall—Governor's Guards on parade.

The Broadway Theater which, with the Hotel Metropole, constitute one building on the east side of Broadway, between Seventeenth and Eighteenth Avenues, was a consequence of the development of the new residence district on Capitol Hill. It was erected by a company organized by the late William H. Bush and associates. Work was begun on the structure in 1889 and completed in the summer of 1890. The theater was "opened" on August 28, 1890, by the Emma Juch opera company, and the occasion was one of much social distinction. The Broadway, which seats 1,620 persons, has outranked the Tabor Opera House in public esteem in late times, and in some respects is its superior. The hotel, front, part of the structure is of pressed brick and red sandstone, lofty, and of some architectural attractiveness; the rear, theater, part is merely a plain brick box, but well safeguarded against fire.

The Lyceum Theater on the north side of Curtis street between Seventeenth and Eighteenth streets, and the Denver Theater just across the street from it, complete the present list of theaters. They are small and not especially noteworthy establishments. The Lyceum occupies a building that was long used as a kind of concert hall. In 1893 the interior was completely reconstructed, and in January, 1894, was opened as a theater under its present name. The other occupies a small brick structure in the rear of a business block.

Elitch's Garden, a worthily popular place of summer amusements, on West Thirty-eighth Avenue between Twenty-first and Twenty-fourth streets in the far northwestern part of the city, was established by the late John Elitch in 1890. The handsomely improved enclosure embraces about seventeen acres of land, well set with trees, shrubbery and flowers. A small zoölogical collection is maintained, but the chief attraction is the summer theater which is conducted upon a high plane.

"Manhattan Beach" strains a point to be entitled to its name, though it is located on the "beach" of Sloan Lake in the extreme western limits of the city, its premises bordering on the line of Jefferson county, at the intersection of Byron Place and Sheridan Boulevard. The "Beach" was established about ten years ago by George G. Darrow and associates. Summer theatricals go on

---

George Tritch, who was one of the successful pioneer business men of Denver who saw the city grow from the small, rough, mining town of 1860, to its present magnificent proportions, was born in Baden, Germany, April 23, 1829. In his second year his parents came to America bringing their infant son with them. They settled in Chillicothe, Ohio, the first capital of that State, where the subject of this sketch spent his boyhood years. He attended the Chillicothe schools in which he acquired the substantial foundations of his broad practical education.

In 1844 he decided to learn the trade of a tinner and coppersmith, and for that purpose went to Cincinnati where he served an apprenticeship of five years. In 1847 Mr. Tritch, now a master of his trade, located in Pittsburgh, Pa., into which the first railroad across the Alleghanies was then preparing to make its way, and where he engaged in the hardware business. Soon after he established himself in Pittsburgh he met Miss Eliza Hammond, who became his wife on March 25, 1849.

In 1852 Mr. and Mrs. Tritch concluded to remove to the then far west and locate in St. Paul, Minn. They travelled by steamboat down the Ohio river and up the Mississippi, the river routes then affording about the only practical means of reaching the central west. On their voyage they changed their plans, and in doing so changed the whole subsequent course of their lives. Disembarking at Davenport, Iowa, they located there where Mr. Tritch resumed the hardware business and remained until the autumn of 1860 when he disposed of his business and with his wife crossed Iowa in a wagon, reaching Council Bluffs in the following March. After a short stay there he decided to push on west to the mountains, and one wagon conveyed all his belongings across the plains. Accompanying him was his wife with their three children, and the little party arrived here late in May, 1860. Of the circumstances of his coming, Mr. Tritch, a short time before his death, said:

"We came to Denver because the tide of immigration was this way; the people heard of the Pike's Peak country and fabulous stories of gold. When we started out we had no idea where we were going, but I thought that towns had to spring up, and possibly I could make a living for my family. There is only one reason why we stopped in Denver. There was nothing here that was promising, but when we got this far our money had run out, and knowing that we could go no farther we were content to remain."

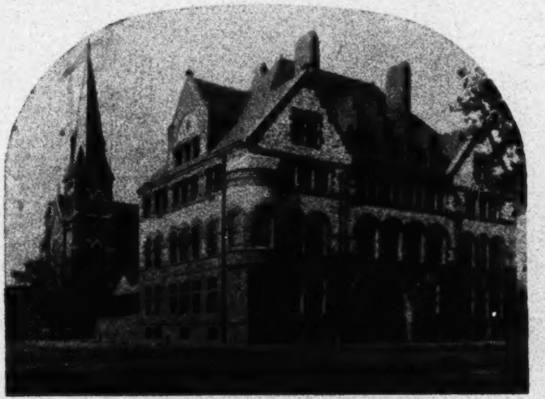
Having brought with him his tools and a little stock of goods, Mr. Tritch at once began business in a cabin on Blake street near Cherry creek, and

George Tritch.

there, and Sloan Lake does what it can toward justifying the name its associate bears.

The "Chutes Park," on the bank of Cherry creek, at the intersection of Corona street and Fourth avenue in the southeastern section of the city, is a recent addition to these summer places of amusement, and is designed for those who enjoy spectacular things, and have a fondness for "roller coasters;" a playground for grown-up boys and girls.

In what has been said in the foregoing pages mention has not been made of all of Denver's places of amusement in comparatively recent times. In the spring of 1883 the then new building on the southwest corner of Sixteenth and Market streets, directly opposite the old Mint, and owned by P. T. Hughes, was interiorly fitted up by Parker & Killen as a theater, and "opened" on the evening of April 23rd, of that year. It was named the "Academy of Music," and was a very handsome auditorium with a seating capacity of about 1,000. Parker & Killen did not long conduct it, because of pecuniary embarrassment, and the owner of the property then became the "Academy's" conductor. On July 6, 1886, fire destroyed the theater, causing the loss of one life, and the building was thereafter reconstructed for the business purposes for which it is now used. Upon one of her visits to Denver, Madame Adelina Patti sang in that now well-nigh forgotten "Academy of Music."



Denver Club Building.

The walls of another one-time rather popular theater stand on the northeast corner of Fifteenth street and Cleveland Place. It was the Metropolitan Theater built in 1889 by W. Lockhardt Smith, of Philadelphia, and cost something like $60,000. A handsome theater, with a seating capacity of about 1,000, its location there was intended as an accommodation to the then rapidly developing Capitol Hill residence district. It was built of granite masonry to the height of an ordinary three-story building, with a wooden superstructure on the stone-work. During its construction it became an object of suspicion to the city authorities, but managed to pass inspection, notwithstanding the relatively large amount of lumber that went into it. During its brief existence its name was twice changed, but that did not save it from misfortune nor from justification of the doubts entertained concerning it while in construction. On June 10, 1892, just before midnight, fire broke out in the building and the flames left nothing but its granite walls as they now stand. Its destruction was a far more brilliant spectacle than anything ever presented on its stage. When it burned, the theater was owned by the late H. A. W. Tabor.

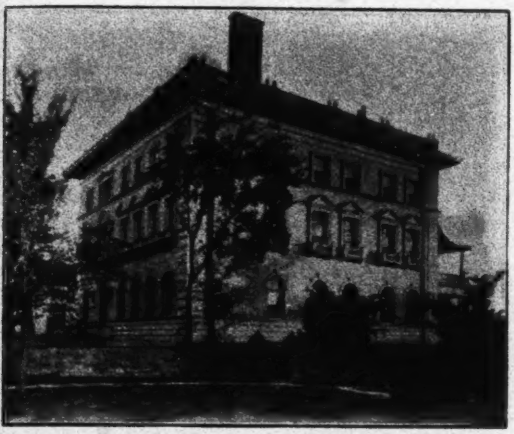
---

in which he and his family lived. Soon afterward he removed his shop and stock to a small business room on the west side of Fifteenth near Wazee street—the little one-story building appearing in one of our illustrations. In the early times the greater part of his business was in making and repairing tinware, but it fast grew, and early in the "Seventies" called for the creation of a two-story brick store-room and warehouse at Fifteenth and Blake streets in which he housed what was for those times an unusually large stock of hardware and its kindred belongings. In 1884 his business having again outgrown its quarters, he built the fine block on the south side of Arapahoe street near Seventeenth in which he established the present George Tritch Hardware company, one of Denver's great commercial establishments.

Mr. Tritch's activities were not confined to his own personal business. He was one of the association of Denver men who, in conjunction with John Evans, built the Denver Pacific railroad, the Denver and South Park railroad, and the Denver, Texas & Gulf railroad; he assisted in establishing the smelters in Denver, was long identified with banking and with many other important enterprises in the city, as we have elsewhere related. While he faithfully performed all the duties of a good citizen, he was never an office-seeker nor an eager office-holder. He was Captain of a company of volunteer scouts in the Indian-wartime, an Alderman in 1863-65, and later an unsuccessful candidate for Mayor. For several years prior to his death he was a most efficient member of the Board of Capitol Managers.

An extremely conservative man in his business, he engaged in no speculative enterprises. All his interests were centered here in Denver, and the great fortune he amassed by persistent industry, good judgment, and immovable faith in the city, was largely represented by real estate and its improvements. Among these holdings was his fine residence at 1373 Grant Avenue, which he built in 1891.

Mr. Tritch, who was a Mason of the highest degree, died at his home on October 8, 1899, after a lingering illness, leaving a widow and eight children. While not a type of the Colorado pioneer of 1858-59, he was distinctly so of that class of equally resolute men who in succeeding years took up the work of upbuilding the city and State, and never faltered in it, even when prospects and situations were most discouraging.—J. C. S.



University Club Building.

The Denver Club was one of the many consequences of the great forward movement that began in 1880, and it was called into existence by the need for a social organization among the business and professional men of the city. The association was incorporated as "The Denver Club," July 28, 1880, by James Duff, David H. Moffat, Jr., Moses Hallet, A. H. Jones, Walter S. Cheesman, and H. R. Wolcott. The articles of incorporation named as Directors for the first year of the Club's existence, Walter S. Cheesman, James Archer, Hugh Butler, A. H. Jones, J. W. Savin, G. W. Clayton, Richard Pierce, John L. Routt, Moses Hallet, James Duff, E. W. Rollins, David H. Moffat, Jr., and H. R. Wolcott—thirteen in all. The purposes for which the Denver Club was organized are thus stated in the articles of incorporation:

> The particular business and object for which our said association is formed shall be to promote social intercourse among ourselves and associates therein, and to have and maintain in the city of Denver, in the County of Arapahoe, and State of Colorado, for the use of ourselves and associates, for the purpose aforesaid, a club-house with all the appurtenances, and belongings, matters and things of a club and club-house as usual thereto.

The Club's first Board of Directors, as already named, elected from their number the first executive officers; who were Henry R. Wolcott, President; James Duff, Vice President; David H. Moffat, Jr., Treasurer; and E. W. Rollins, Secretary.

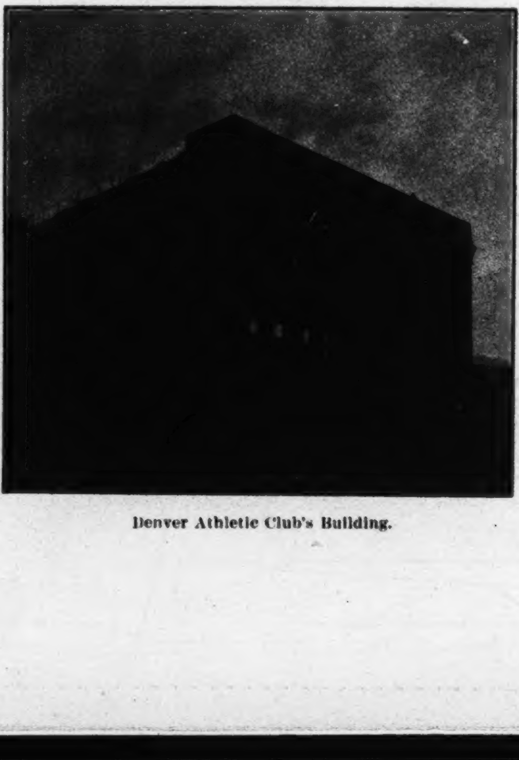
Membership in the Denver Club is limited to 300 resident and 200 non-resident members, with not exceeding fifteen life members; the qualifications being those usual to such organizations. The hospitalities of the Club are extended to visiting strangers and to guests of members in the customary manner. The fine Club House on the northwest corner of Seventeenth and Glenarm streets was erected in 1887-88, and opened October 20, 1888. Built of granite and Colorado red-sandstone, its architecture, size, elegance and completeness of appointments, make it one of the notable establishments of its kind west of New York. The property represents an expenditure of $45,000 for the site and $120,000 for the building.

The University Club was incorporated January 29, 1891, by John L. Jerome, William R. Barbour, George Z. Dimmitt, Henry F. May, Henry T. Rogers, R. Heber Smith, Lambert Sternbergh, Allen M. Culver, Charles H. Toll, Charles R. Dudley, and Edwin N. Hawkins; who, with Herman C. Joy and Oscar J. Pfeiffer, were then named to constitute the first Board of Directors. Of these Henry T. Rogers was elected President; John L. Jerome, Vice President; Edwin N. Hawkins, Secretary; and Allen M. Culver, Treasurer. The corporate name is "The University Club," and its declared objects are the same as those of the Denver Club with the addition of "encouragement of literature and art."

The University Club is more exclusive than the other in qualifications for membership, its constitution prescribing—

> "Any man shall be eligible to membership in this Club, who has received from a University or College a degree, to obtain which, in regular course, at least two years' residence and study are required, or who shall have received an honorary degree from such University or College, or who shall have graduated at the United States Military Academy, or at the United States Naval Academy; provided that a candidate who holds an honorary degree only shall be distinguished in art, literature, science, or public service; and provided that professional degrees shall entitle to membership only when given by such University or College as shall be designated by the Board of Directors, and the list of such Universities and Colleges shall be posted in the rooms of the Club."

Resident membership is limited to 200, and provision is made for receiving a small number of life



Denver Athletic Club's Building.

members; the privileges of the Club being extended to strangers and guests of members under customary rules. The fine home of the Club on the southwest corner of Grant and Seventeenth Avenues, on Capitol Hill, was built in 1895 and opened on January 1, 1896. Its site cost $20,500, and the House about $25,000. The pleasant, retired location of this Club House is in harmony with the purposes it serves.

The Denver Athletic Club came into existence in 1884. It was incorporated on April 4th of that year by Frank H. Wright, John Elitch, Jr., Harry C. Gray, George F. Higgins and Charles Wheeler who were named in the certificate to constitute its first Board of Directors; the first complement of officers having been Frank H. Wright, President; William R. Rathvon, Vice President; John T. Bourke, Secretary; and Donald Robertson, Treasurer. The corporate name is "The Denver Athletic Club," and the organization's objects were stated as follows:

"That the particular business and objects for which said corporation is formed are to purchase or build and to hold, maintain and operate a gymnasium in the city of Denver, County of Arapahoe and State of Colorado, for the amusement, recreation and physical culture of all those who may at any time become members thereof; and also for the purpose of encouraging all proper athletic sports and pastimes of every kind and nature whatsoever."

Membership is limited to 1,000, including non-resident and excluding life and junior members; the latter being young men over seventeen and under twenty-one years of age whose privileges are confined solely to the Club's athletic departments. Life membership is limited to 200, but the junior is not limited. The Club occupied leased quarters until the erection of its large and fine building on the north side of Glenarm street between Thirteenth and Fourteenth streets in 1890, at a cost of $205,000 for land and building, and which was opened in December of that year. In addition to its athletic departments which are very complete, the establishment possesses the features of other club-houses, is the home of many of its members, and receives visitor-guests under the usual regulations.

The Denver Wheel Club, organized eight years ago, is an association the name of which suggests in a general way the causes and purposes of its existence. It was in one sense an outgrowth of the Ramblers' (bicycle) Club that dated its origin in the times when the awkward and rather dangerous high wheel riding-machine was in vogue. The Club's constitution says—

"The object of this Club shall be to promote cycling; to use its influence in securing good roads; to encourage all manly and athletic sports and social intercourse among its members."

The Club is associated with the League of American Wheelmen, and has active, non-resident, and life members; the qualifications for membership requiring the applicant to be a "white male person over eighteen years of age, not engaged as a bartender or professional gambler, and an amateur within the definition of the League of American Wheelmen." Management is vested in a Board of nine Directors from which a President, Vice President, a Secretary and Treasurer, and Assistant Secretary are elected. In 1900 there were nearly 600 active members, and about forty non-resident and honorary members. The Club occupies a large and well-appointed building (which, however, it does not own) on the north side of California street between Fourteenth and Fifteenth streets, where its members and their friends are provided with all the usual accessories of a well-ordered establishment of its kind.

CHAPTER LXXI.

HIGH-TIDE YEAR—CONDITIONS JUST PRIOR TO 1893—GREAT FINANCIAL CRISIS—SEASON OF DISASTER—EXODUS FROM THE CITY—EXPERIENCE WITH COMMONWEALERS—CONDITIONS IN 1893-94—WITHERED BANK ASSETS—GOVEERNMENT BY FOLLY—WAITE'S ADMINISTRATION AND ITS EVILS—SPECIAL SESSION OF LEGISLATURE—WAITE'S "WAR ON THE CITY HALL"—DISGRACEFUL EPISODE IN CITY'S HISTORY—DENVER ON VERGE OF CIVIL WAR—HISTORY OF THE AFFAIR, AND ITS FINAL SETTLEMENT—EVILS OF POLITICAL INIQUITIES.

The year 1890, as heretofore stated and as some of our readers may recall, was the period of greatest exaltation in the work of developing the city—the time of high tide in the affairs of the metropolis of the mountains and plains. Late in that year, however, the effect of the Baring failure in London that was somewhat seriously felt throughout the United States, disturbed conditions here and sensibly checked building operations in Denver. The supply of capital from outside sources for investment here was lessened, and the spirit of conservatism began to manifest itself. But this was only in a relative degree, for the scale upon which building improvements and transactions in real estate continued would have amazed the people of any other city, of equal size, in the country.

But through 1891 and 1892 the great host of building mechanics and laborers that theretofore had been attracted hither from almost everywhere became reduced, though still constituting an army of working men. Yet it was several thousand less in numbers than it had been in 1890. The developments in the Cripple Creek district caused an outflow to that locality which was accompanied by a fair-sized contingent of the rather large "floating" population here at that time. So it was that by midsummer of 1893 there had been much contraction of the building "boom" and a considerable shifting of that part of the population without definite anchorage. Still, the changes in the general aspects of affairs in the city were not so conspicuous as the construction statistics for that interval might imply, and Denver still remained the busiest city of its dimensions in the United States.

The extraordinary activity in building operations in 1890 is indicated by the city's record of 2,338 dwellings of various types and sizes having been erected in that year. The record also shows that an aggregate of something like $10,000,000 was invested in Denver dwellings in 1890. The contraction of building operations in the following two years is indicated by the record of 844 new dwellings constructed in 1891, and 851 in 1892. The number for 1893 was 391, but practically all of these were built before midsummer of that year; little or nothing new having been undertaken in its last half. The building of dwellings did not, of course, include all that was going on in construction work between 1890 and the panic time of 1893, for many of the large structures in the business district were erected in that period, which was one not marked by any notable events from a historical standpoint other than those associated with the almost magical building of a large city here at the base of the Rocky Mountains, and that had become everyday occurrences.

The closing of the mints of India to further coinage of silver, in June, 1893, precipitated a financial crisis the effect of which was disastrous in every civilized country on the earth. Whether it were the natural consequence of accumulated disorders and unsound methods and practices in financial systems, or a result that might have been avoided through the agencies of wisely directed statesmanship, are questions with which we have naught to do in this narrative. The coinage laws of the United States had stimulated silver production to the highest pitch in Colorado, and silver mining at that time afforded the broad basis upon which the prosperity of our city and State chiefly rested; all other natural resources of the State having been subordinated in development to that great and wide-spread industry.

The action in India was almost instantly followed by public clamor in the eastern part of the United States for the immediate repeal of the coinage law of July 14, 1890, under which the United States had been buying and coining into standard dollars 4,500,000 ounces of silver each month, and which provided an outlet at high value for practically the total silver product of the entire country, much the larger part of which came from the mines of Colorado. This demand foreshadowed what was soon to come, and that did come later in that year from the special session of Congress, in the repeal of the so-called "Sherman law." Anticipating this, the people of Denver and Colorado saw that silver mining was to receive an almost fatal blow; that the foundations of Colorado prosperity as they then existed were to be disrupted.

While the memorable panic of 1893 was bad enough throughout the United States, the conditions here made Colorado peculiarly susceptible to the most violent manifestations of its fury. In Denver the banks were about the first business establishments to directly encounter the effect of public apprehension, and drafts upon their resources had quietly grown to large proportions before the close of June. But it was past the middle of July before the strain reached the breaking point, and then the savings banks were first to succumb. On July 17th three of these, the People's, Colorado, and Rocky Mountain, closed their doors and made assignments, with aggregate liabilities of about three and one-half million dollars. The next day, July 18th, six more city banks closed: the Union National, Commercial National, and National Bank of Commerce, and the Mercantile, Capital, and North Denver banks; the last-named three having been organized under State law. On July 19th the German, State, and People's National banks closed their doors. Thus within three days a majority of the city banks had found themselves unable to further meet the demands for cash made upon them, and the funds of thousands of depositors were for the time being utterly beyond reach. By September 1st two or three additional savings banks had succumbed, but in the meantime several of the suspended banks had resumed, as already related in our historical accounts of banks and banking in Denver.

There had been, as we have seen, comparatively little warning of the tempest's approach, and in this the situation may in some degree be likened to that of Galveston just prior to the awful visitation by the elements recently made upon that city. The direct financial effect upon depositors, and the general demoralizing effect upon the community, of these bank suspensions, taken in connection with the impending downfall of Colorado's principal and very profitable industry, produced conditions in this city that may be imagined; they can not be adequately described, nor would it serve any useful purpose now to enter upon a lengthened review of them here if words could be made to do justice to the subject. The surviving banks were able to provide for the immediate needs of their own people, but could not undertake to meet the wants of thousands of others. Men begged and pleaded for means with which to save themselves, offering as security improved real estate that had been worth several times the sums desired. Money was above all other things in value, and even United States bonds could not be exchanged for it, though offered on a basis far less than their par value.

Hundreds of men in Denver and elsewhere in Colorado were impoverished, bankrupted, ruined. In vain had they offered unheard-of sacrifices that they might save something from the wreck for themselves; for nearly all were seriously menaced by the common misfortune, and in those days of

---

Among the men conspicuously identified with the development of Denver was Samuel B. Morgan who, after a citizenship beginning in 1873, died in this city on December 11, 1897. Born in the town of Wethersfield, Conn., February 9, 1835, he was graduated from the High School at Hartford at the age of sixteen, and then went to sea on a whaling vessel. Following the sea about ten years, he rose to be next in command to the Captain with whom he sailed in all his voyages. His seafaring life terminated at San Francisco in December, 1861, when he returned to his Connecticut home by way of the isthmus. Early in 1862 he there married Miss Ellen Theresa Blinn, and having accepted command of new whaling vessel, prepared to again go to sea. At that juncture, at request of a relative who had mining interests at Black Hawk, he changed all his plans, and decided to accept the proffered position of Superintendent of his relative's mining property.

Therefore early in the autumn of 1862 he came to Colorado; his wife and infant son following him late in 1864. During the ensuing eleven years he resided at Black Hawk and Central City, but in the autumn of 1873 removed to Denver. Here he became a member of the old-time firm of Day, Morgan & Co., and later of Morgan, French & Co., dealers in real estate. In that business he acquired large property-interests in the young city and which he retained until his death. When Leadville developed in the late Seventies he went there and became an owner in several very productive mining properties. Disposing of these interests in 1883, he returned to Denver to give attention to his extensive possessions here, the later enormously increased values of which, notwithstanding their great shrinkage and his severe losses in 1893-94, yielded him a large fortune. While more or less interested in various enterprises in the city, his property-holdings continued to receive the major portion of his attention until his death.

Mr. Morgan was one of those who steadfastly adhered to the belief that Denver was destined to become a great city, proved his faith in it by concentrating here the more important of his interests, and by making himself during his twenty-five years of good citizenship that was ended by his death one of the leaders in upbuilding it. Having early foreseen the city's future eastward growth, he was one of the pioneers in acquiring and improving Capitol Hill property, though at the same time improving his holdings in the downtown district. The period of his activities here was that in which Denver was changed from a straggling frontier town to a city of metropolitan character, and the part he bore in the transformation placed him in the front rank of those who made it so—J. C. S.

Samuel B. Morgan.

apprehension and fear no one knew what another day might bring forth. Self-preservation became the first law of conduct; not through selfishness, but from necessity. Scores of good and honorable men conspicuous in the social and business life of the city were forced into the valley of desolation. Names need not be mentioned here, for these events are not so old that the many worthy citizens to whom they brought ruin need have been forgotten. Not a few were impoverished by the financial downfall of their near friends and associates, and lost all.

The withering effects were felt along every avenue of human endeavor and activity in the city and through the Colorado country. The wage-worker suddenly found himself without employment and without prospects of soon regaining it; nearly all the silver mines closed or prepared to do so; the merchant could neither sell his goods nor collect his dues; and the manufacturer found himself in the same situation. In a general way those who had regarded their more or less encumbered real estate holdings as representing fortunes suffered worst, and the host of speculators stood aghast in the presence of the ruin strewed around them, for all values crumbled and the shadow of adversity darkened each passing day. Many of these real estate men who had walked with prosperity became bankrupts before they realized what had happened. Rigid economy was forced upon hundreds of households which had long forgotten its meaning. In thousands of other homes economy became a refinement of domestic ingenuity, and in still many others it was reduced to deprivation.

Late in August when some of the suspended banks re-opened, and in September when others of them also did so, the cloud that had hung low through the summer rifted a little; but only a little. The good influence of these resumptions was to some extent neutralized by reports, some exaggerated and others wholly unfounded, that wrongful acts had been committed by certain bank officers in that emergency in banking affairs. The only instances in that time of such reports being reduced to definite charges were those affecting the President and the Cashier of the People's National Bank, and the Vice President and the Cashier of the Colorado Savings Bank. But these were followed by no proofs of criminal wrongdoing. Nearly two years later, it may be remarked in passing, similar charges were made against the President of the Commercial National Bank, and the President and Assistant Cashier of the German National Bank. However, with this brief reference to these circumstances, they may as well be left to be covered by the oblivion now closing upon them. The line of demarcation between criminal intent and misguided zeal at such times and under such circumstances is not always well-defined.

As a rule the Denver banks of that time had been fairly well managed and most of them had grown to be the pride of those in whose keeping they were placed and to whom their prosperity was first in thought. The misfortunes of banks that have ceased to exist in consequence of the events of 1893 came largely through causes utterly beyond the power of their managers to avoid or control; and it would be a long story in which an attempt were made to express in words the mental anguish, the feeling bordering on despair, the woe and wretchedness that came to honest bank officers as they saw not only their own fortunes go down with their banks, but their friends and neighbors brought to ruin by the calamity that had befallen all.

It was not long after the crash occurred until the daily needs of unemployed and moneyless men became a serious matter, and as the summer wore into the autumn the number thus conditioned became greater. To the troubles and perplexities of those who were not impoverished the burden of temporarily caring for the destitute was added. It was taken up manfully. Food and shelter were provided, and no person physically suffered from want of either. To accommodate a part of those needing assistance tents were set up and camps established in which food and shelter were afforded during a short period in which numbers and needs were greater.

An army of people left Denver in that summer and autumn for the eastern States where conditions were less severe. The movement started in August, and soon afterward those who were footloose, without family responsibilities, began leaving in droves; yet, many others joined in the hegira. Estimates of the number of those who left the city within a few months vary from 15,000 to 25,000; the lesser sum probably being nearer accuracy. Lodging houses were emptied of lodgers, and hundreds of dwellings became tenantless. Opportunities for gaining a livelihood by manual labor or other personal service had sunk to the lowest ebb ever known in Denver. The prairie railroads were forced, through sheer inability to do otherwise, to carry hundreds on their trains without payment of fare. In some instances freight trains were seized by crowds of not unworthy men determined to at once ride away from the scenes of their discomfiture. The places of many who had thus departed were filled by others who came into Denver from the idle mining camps and interior towns. A small proportion of these lingered here through that winter living chiefly by chance or charity to become early in March members of a division of Coxey's famous army of Commonwealers that moved across the country from west to east in the spring of 1894. The exodus from Denver continued in lessening extent throughout 1894, but may be said to have practically ceased with the close of that year.

The recruits that congregated at Denver for Coxey's "army" came from all points of the compass in Colorado, and they had increased in numbers until their presence became a menace to the city. A camp of tents was established for them in the "River Front Park" and provisions supplied, and it was not long until between 1,500 and 2,000 men had assembled. It was then determined that some means for getting them away must be provided. At a meeting of the Chamber of Commerce a large fund for that purpose was subscribed and representatives of the prairie railroads made a very low rate for transporting the men to the Missouri river. A considerable number of the unwelcome guests refused to leave by rail, and insisted on voyaging down the Platte. Therefore lumber was purchased for building small flat-boats, and when these were completed several hundred of the men embarked in them with a supply of provisions. Other provisions for them were sent by rail, to two or three points down the Platte, for it was feared that if all the rations were given them here they would not leave, but go into camp again in or near the city. Some of the boats were wrecked, and it was reported that several of their passengers were drowned. The other members of the "army" were shipped east by different roads, so as to scatter them and break up whatever of organization there was among them. Their departure brought great relief to our citizens, and it ended Denver's experience with the "Commonwealers" of 1894.

The more sanguine members of our community had hoped and believed that with 1894 would come a revival of confidence and, to some extent, a renewal of activity in the stagnated channels of business. But these anticipations proved almost vain. The spring of 1894 had brought but little improvement in general conditions; and on the other hand it brought bankruptcy to many business men who, by almost superhuman efforts, had managed to keep their heads above the tide of destruction that had all but submerged city and State the previous year, and was then slowly receding. The failures of individuals and the collapse of business enterprises were many in 1894. The shores of business channels had been littered and strewn with wreckage in 1893, and with the additions made in 1894 they presented aspects of most discouraging desolation. Within eighteen months scores of the mercantile and other business establishments had succumbed; some of the banks were still in the hands of receivers or assignees; the manufacturing interests were almost prostrated; and the army of speculators, (many members of which had counted themselves as men of wealth,) its occupation gone, had been broken and scattered. Building had practically ceased and those of the former multitude of workingmen, who had still remained here, could find little for their skillful hands to do. Toward the close of 1894 a slight change for the better became apparent, but upon the whole that year was one of demoralization and stagnation in Denver. One striking illustration of the ruinous consequences of those times of disaster was seen in the "Delinquent Tax List" published in 1895. This advertisement of lands and city lots, chiefly the latter, to be sold for taxes, filled seventy-three of the large pages of the Rocky Mountain News; the equivalent of about 584 columns of solid small type, each line thereof, as a rule, pertaining to a separate piece of property. There were literally thousands of city lots specified in that advertisement. Owners of many of them had acquired title by making a small first payment with the view of soon selling at an advance. The panic had struck down their value, and for all immediate purposes of realization utterly destroyed it. Nothing could then be done with thousands of the outlying, unimproved, city lots, and hundreds of them were abandoned by their nominal owners, many of whom had left the city not to return.

It is perhaps, not essential to much further dwell upon the circumstances and conditions of those dark days in the city's history. In the elasticity of Colorado life they now seem to be happenings of long ago; and it is difficult, in the presence of all that has since been accomplished, and of all that is going on around us now, to realize that the events we have here been considering are those of years so recent as 1893 and 1894. But notwithstanding that they were so well calculated to impair faith in the future, if not to cause general despair, at no time was the spirit of Denver's enterprise sunk out of sight in the depths, nor were the ambitions of her citizens who passed through the ordeal ever seriously shaken by the thought of surrender.

The wreckage made in that time of trouble is not yet all cleared away. Receivers of several of the broken and ruined banks are still prodding and poking around in the rubbish seeking the final vestiges of values possibly remaining in the litter. An incident, which occurred in October, 1899, may serve to indicate the extent and almost completeness of the destruction of some bank assets wrought by the financial tornado. The Receiver of the Commercial National Bank offered for sale at public auction, at the door of the County Court House, a large lot of notes, judgments and the like, aggregating within a fraction of a half million dollars of nominal value. All that he could get for them in cash was $516. Yet, they represented their face value in money that had been passed out over the bank's counter in the booming days of yore. This unhappy fate of that mass of "assets" does not necessarily imply reckless or dishonest banking. Generally speaking, the circumstances and conditions of the times prior to 1893, when more or less of the resources of all the banks were converted into assets that became such Dead Sea apples, excused if they did not justify the fallible human judgment that had consented to exchanging cash for promises that men became helplessly unable to fulfill. This incident reflected conditions that had been found to exist in varying extent in the assets of all the banks, in consequence of that tempestuous storm.

The extent of the collapse in building operations in Denver in the three years following the panic is revealed in the records of the Building Inspector's office. From 2,338 new dwellings erected in 1890, the number for 1894 had sunk to 124; for 1895 to 164; and for 1896 to 134. The revival since 1896 is strikingly indicated by the building of 267 new dwellings in 1897; 343 in 1898 and 582 in 1899. In 1900 771 new buildings were erected, of which 593 were dwellings; the total cost of all, according to the Building Inspector's records, having been $2,197,816.

The annual receipts of the Denver Post Office during the last eleven years constitute another object lesson showing the rising tide of business affairs in the early years, its reversal after the panic, and its return to a far higher point than it had ever reached before. The figures are for the calendar years, and run as follows: 1890, $282,849.31; 1891, $289,120.59; 1892, $325,993.28; 1893, $301,913.87; 1894, $274,009.62; 1895, $294,196.45; 1896, $330,235.59; 1897, $333,090.29; 1898, $364,475.87; 1899, $400,526.52; 1900, $510,258.88.

It would seem that the people of Denver and of Colorado had enough to bear in 1893 and 1894 without having had their burdens and perplexities increased by the calamitous consequences of Government by Folly. But they were to learn by sore experience the possibilities for evil of which Government by Folly was and is capable. The administration of Governor Davis H. Waite was in power during those two unhappy years, having been inaugurated in January, 1893. After the collapse in the summer of 1893, Governor Waite was eager to put into operation some of his many impossible remedies for all the ills to which the body politic is heir, and was also eager to call his Legislature in special session to give the force of law to some of his numerous and preposterous vagaries. By dint of strenuous effort he was prevented calling the special session immediately, but it came later and constituted a grievous burden to the distressed people. To it we will briefly give some consideration before passing to accounts of the most disgraceful political episode in the history of the city and State, and which, also, was another legitimate consequence of Government by Folly.

Pursuant to a proclamation by Governor Waite, the Ninth General Assembly met in special session in Denver at noon on January 10, 1894. From such a body as it had previously shown itself to be, little of good was reasonably to be expected in a crisis; and there existed few sound reasons for it remaining in session after assembling, as its subse-

---

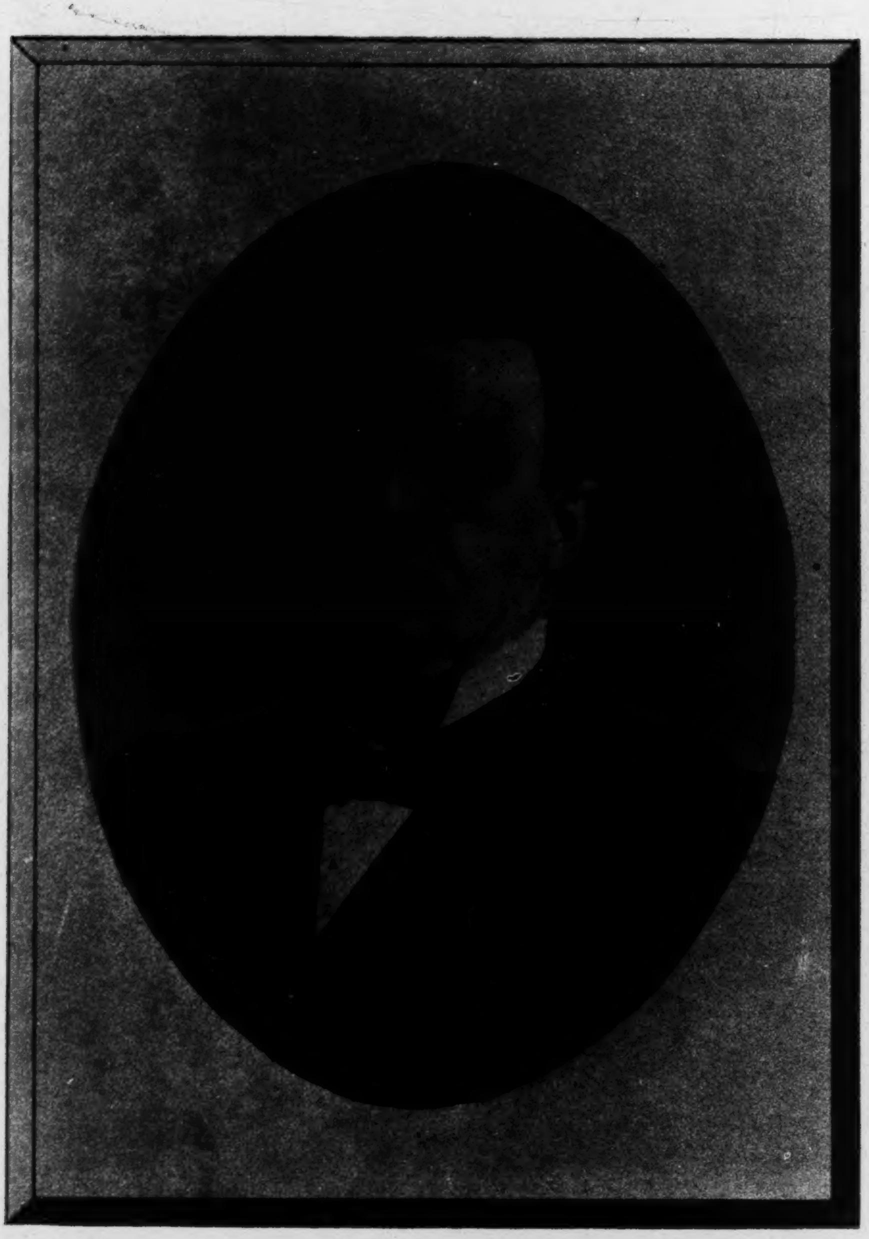
In his long and active life Gen. Bela M. Hughes probably has seen more of the development of our country west of the Mississippi river than any other man now living. Born in Carlisle, Ky., in 1817, he was educated at Augusta, Ky., College, and studied law under his father, Gen. Andrew Hughes, a distinguished Kentucky jurist. His service as a young soldier in the Black Hawk war brings to our minds a rather plainer understanding of the long span of his life. In his early manhood he removed with his father to Missouri where during twenty years thereafter he stood one of the lawyers of recognized great ability in that State. In the earlier period of his Missouri career he served in the Missouri State Senate, and was subsequently appointed by President John Quincy Adams Receiver of Public Money in Missouri. He was long the law partner of Governor Woodson, and for several years preceding the outbreak of the "Pike's Peak excitement" was engaged in banking at St. Joseph.

We have elsewhere told of Gen. Hughes' connection with the great overland mail stage company of which he was President, and of his participation in the organization of the Denver Pacific railroad company of which he was the first President. It was chiefly in consequence of his connection with the stage company that he removed to Denver in 1862; and ever since that time he has been identified with the history and fortunes of the city.

He was elected a member of the last Territorial Legislature of Colorado, and was the Democratic candidate for first Governor of the State of Colorado in 1876. The plurality for John L. Routt, his Republican opponent, was about 800, and the accuracy of the returns were challenged by Gen. Hughes' party which thought they should be contested; but Gen. Hughes refused to request a recount of the votes or to sanction a demand for it by others. In 1888 he formed a law partnership with Charles J. Hughes, Jr., and the firm continued in very successful practice for five years when Gen. Hughes retired from active work; having long before acquired a fortune. His present residence at Fourteenth Avenue and Evans street has for many years been his home.

General Hughes has been twice married. Upon attaining his majority he wedded Miss Katharine Neal who died a few years later, leaving two children who survive. At the age of thirty-one he married Miss Laura Allen; and of this union four children survive.

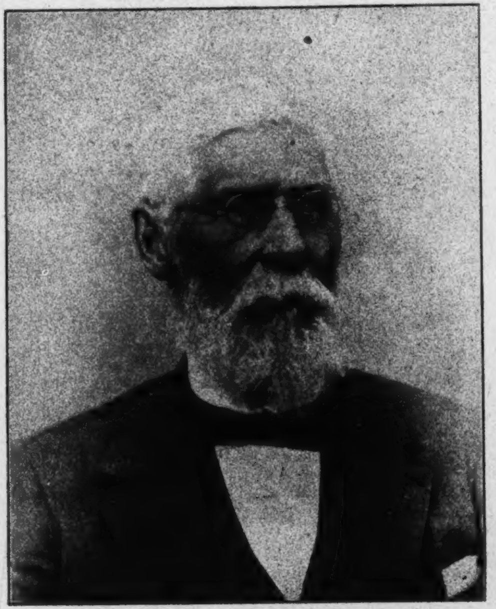
As mentioned at the beginning of this note, Gen. Hughes has seen practically the entire occupation and development of this vast western country on the sunset side of the Mississippi river, and has personally participated in much of it. A man of scholarly tastes and attainments, of studious habits, and a close observer of events, his reminiscences of what he has seen and what he has done in his long life that spans a most wonderful era, cover circumstances and achievements more remarkable than those set forth in any product of the imagination.—J. C. S.



Bela M. Hughes.

quent impotency proved, if proof were needed, Governor Waite's message to it was the most extraordinary haranguing tirade that ever emanated from a Governor of an American State. An effort was made by some members, for the sake of the State's credit and good name, to suppress it by avoiding having it printed, but they were overruled and it went abroad.

The extra session had been much opposed by the people and the rational press of all parties, but with Folly in the saddle, the opposition had availed little. It would be absurd to speak of the "deliberations" of that body. They were merely endless wranglings by day and almost endless janglings by night, and a free-for-all pandemonium ruled most of the meetings. The bedeviled people were kept in daily agitation through fear of some collossal iniquity being given the form and authority of law; and some of the propositions submitted would have been monuments to a frenzied political eruption had they been reduced to statutory form. Each demented member had a panacea for every economic ill, and each held to it that his was better than those of all the others; and so, they got into such a situation that they could do nothing with any of them. This fortunate circumstance, while it prevented the wild-cat variety, rendered the session practically unproductive of wise legislation bearing on some questions that might well have received attention from a conservative, prudent, law-making body.



Davis H. Waite

One of Waite's ridiculous schemes was to have the State of Colorado surreptitiously engage in the coinage of silver dollars. His plan was to purchase Colorado silver, ship it to Mexico and there have it coined into Colorado dollars which were to be brought back here and put into circulation; the object in having the coinage done in Mexico having been to evade conflict with the coinage provision of the United States constitution and the laws enacted thereunder. Fortunately there were enough politically sane men in the Legislature to prevent consideration of a proposition of such stupendous folly, and the "Fandango Dollars," as they were soon termed, failed to make their appearance.

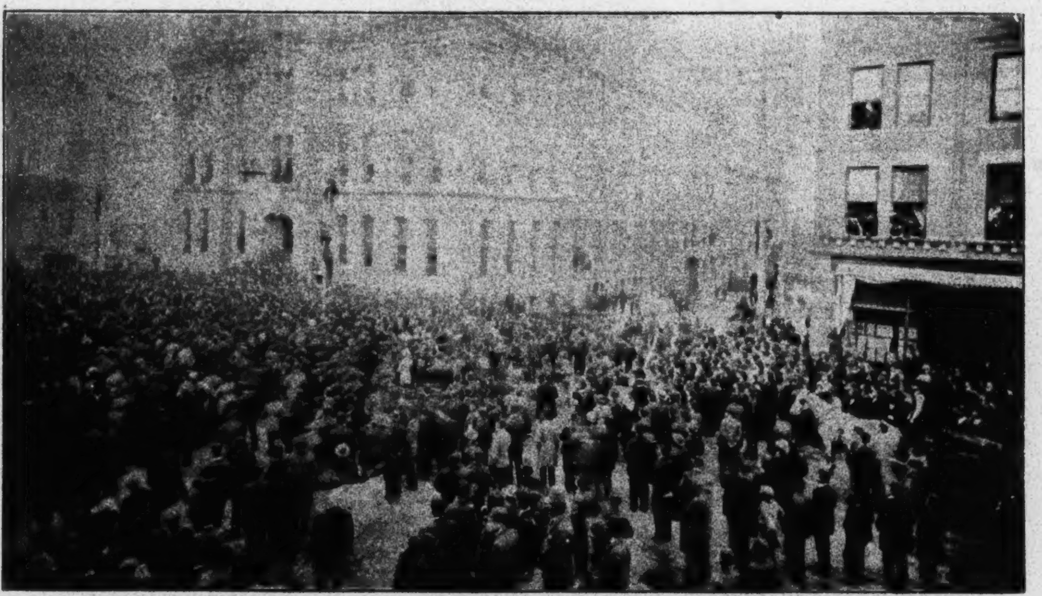
When the special session assembled the declaration was made that it would finish its "business" and adjourn on the fourth day thereafter—that four days should be the limit. Some of the members had proposed that it should meet, receive the Governor's message, and adjourn, on the same day, but this proposition would not be entertained by the great majority. Instead of a session of four days, the miserable farce dragged along through January, through February, and was not ended until late on March 2nd.

A few practical members who realized the necessities of the situation had succeeded in securing amendments to existing laws, granting longer time for redemption from trust-deed foreclosures and reducing the expense of such foreclosures; reducing the legal rate of interest, and the penalties upon delinquent taxes; and exempting from levy and attachment for debt certain wages and earnings of debtors, and otherwise modifying the attachment laws.

A measure—over which there was much self-exploitation by certain members—enacted at that session appropriated $15,000 for the construction of "public works"—a canal of some sort somewhere. It was given out that this was to relieve the distress of the unemployed; but later, when the money had been expended, it was discovered that the larger part of it had gone into the pockets of rabble politicians who had "supervised" the expenditure of the remainder in relieving the distressed unemployed

Standing beside these "relief" measures were the appropriation bills for the pay of the members of the Legislature and for the many incidental expenses of the long session. These aggregated $130,000 of the impoverished people's money, for which they received little consideration. So, about the only tangible result that came to anyone from that special session was the per diem pay of seven dollars to the members, and which amounted to $364 to each.

The wretched condition of financial affairs in Colorado that then had existed for six months had reduced the State's resources to a low ebb. It had no funds properly available with which to meet the heavy daily expense of the special session. The



Assemblage of people at the City Hall, March 15, 1894, prior to arrival of State troops.

Legislature in its regular session, held a year before, had appropriated everything in sight and much that had not come into view; therefore the only recourse was to attack the unexpended balances of the funds that had been set apart for the support of several State institutions. The fund for the School for the Deaf and Blind was first depleted, then that for the support of the Soldiers' and Sailors' Home, then the Agricultural College fund was ransacked, and finally the fund for the maintenance of the Asylum for Insane was exhausted to pay the expenses of that special session: thus leaving those institutions in a badly crippled financial condition the remainder of the year.

There was something like the irony of fate in this use of money that had been set apart for the support and benefit of insane persons. While the funds did not, exactly, go to those for whom they were originally intended, it seemed that the general purposes for which they had been appropriated had not miscarried.

While the Legislature was in that special session, and even before it met, trouble had been brewing between Governor Waite and two of his appointees at the City Hall—members of the Fire and Police Board. The mere fact that there was trouble, or that it was impending, between the Governor and some of his people at the City Hall, was no novelty to our citizens. The Waite administration was a series of miserable contentions, wretched wrangling, and scandalous strifes over the various offices subject, directly or indirectly, to the personal will of the State's Chief Executive; and one disgraceful brawl after another followed at the City Hall. Even the meanest of the places in the city's service became the cause of an affray of snarling and yowling.

But this particular trouble to which we have referred was destined to become the most disgraceful affair in the history of the government of our city or in that of the government of any other American city, for it brought Denver to the verge of actual civil war in consequence of a quarrel between the Governor of the State and two of his appointees to important positions in the city government. It was not a political quarrel between officials identified with hostile political parties, but practically a family affair in the political organization of which Governor Waite was nominally the head in the State.

After a great deal of uproar over Fire and Police Board affairs, Waite had previously appointed, under the provisions of the "city charter" law, Jackson Orr, D. J. Martin, and A. J. Rogers to that Board. Martin was the Democratic member, and Orr and Rogers were Populists. Orr and Martin were old citizens of considerable experience in public affairs and, while determined men, claimed to be inclined toward conservatism. Events proved them to be quite enough determined, but their valor and steadfastness were worthy a far better cause. Rogers, a man of ability, had but recently become a citizen of Denver; and his appointment had been followed by complaints from disappointed place-hunters who declared that he was barely eligible to the position, under the required period of residence. But that was of no importance, one way or another. Some of the city newspapers alleged that Rogers had been active in the councils of Tammany Hall in New York city in preceding years, and that he, upon receiving his appointment to the Fire and Police Board, had publicly announced his intention to "Tammanyize" the politics of the city; and furthermore, that the beginning was to be made by reorganizing the police force in the absolute interest of Governor Waite and his party. This alleged purpose, however, and in itself, even if given effect, would not have widely diverged from some practices known in our "city politics" both before and since that time.

It was further alleged that this plan, as presented by the advisors of the Chief Executive had captivated the old Governor, and that upon the refusal of Orr and Martin to indorse it or co-operate in it, Waite began casting about for some means by which to get rid of the two obstinate members who were also much inclined to act with some independence in various other directions. This is a brief outline of the alleged state of affairs at the close of 1893 when the Governor had determined upon the removal of the two members of the Fire and Police Board who he declared persisted in acting contrary to his will.

There is no doubt about Waite having been, throughout his administration, more or less a dupe of trickster politicians who cunningly played upon his overweening vanity and highly excited ambitions. But to his credit it is to be recorded that he was personally hostile to gambling and gamblers; and he and his partisans declared that he had instructed his Fire and Police Board that gaming should and must be suppressed in Denver. Alleged indifference to or neglect of the Governor's instructions was, or was pretended to be, the basis upon which the Executive rested his determination to summarily remove Orr and Martin.

Therefore a charge of malfeasance in office was preferred against them, founded upon member Rogers' alleged knowledge of a wrongful act of the accused men. The substance of this specific charge was that Orr and Martin had officially provided police protection for a certain gambling den. On January 15, 1894, Waite notified Orr and Martin in writing of the charge against them, and recommended that they at once resign rather than face an investigation; in fact, the notification was practically a demand for their resignations. The two men responded in writing, denying the charge, inviting the fullest investigation, and peremptorily refusing to resign. On January 19th in response to a summons from the Governor, the two men appeared before him and had a "trial" on the charge and, of course, were found guilty, in his judgment. Still they refused to resign, and demanded a thorough investigation.

State Infantry on Lawrence street near Fifteenth, en route to the City Hall, March 15, 1894.

The special session of the Legislature and other matters growing out of his Government by Folly, demanded the Governor's attention at that juncture, and therefore his conflict with Orr and Martin had to await a later day for its active renewal. But the bickering went on through February and until early in March when Waite precipitated events and brought on the culmination of the shameful affair. He had decided to at once dispose of not only the two members of the Fire and Police Board, but the two Populist members of the City Board of Public Works, and three members of the State Penitentiary Board. He also decided to begin with Orr and Martin by summarily removing them and forcibly ejecting them from the City Hall. The special session of the Legislature had adjourned, and the Senate which, perhaps, might refuse to confirm new appointments, was out of the way, and the Governor thought he had a free field for action.

Having learned of the Governor's intentions, the City Hall people prepared to resist by force of arms, and to stand a siege if necessary. The order of removal for Orr and Martin was expected on March 6th, but there was some delay and it did not come until the 7th. By that time the City Hall had been made an arsenal, and a barrack of armed men—regular and special policemen, and Deputy Sheriffs; for the Sheriff of the county was in sympathy with the threatened Board members. On March 8th Governor Waite appointed Dennis Mullins Fire Commissioner to succeed Orr, and Samuel D. Barnes Excise Commissioner to succeed Martin; A. J. Rogers continuing as Police Commissioner. In the evening of that day, Orr and Martin, claiming that an attempt was being made to remove them for the single reason that they had refused to join in what was alleged to be the political prostitution of the police force, and that for that reason the attempt was an illegal one, went into Court with their case. Upon their application, in which their attempted removal was alleged to have been unlawful, Judge Graham, in the District Court, issued a restraining order preventing Mullins and Barnes interfering with Orr and Martin in the discharge of official duties by the latter two; the writ to remain in force ten days. The order also extended to Governor Waite and Mayor Van Horn, restraining them from using force to eject Orr and Martin from the Board. This was in consequence of Waite's threats to call out the militia and eject the two men from the City Hall at the point of the bayonet, and of Van Horn's action in mustering a large force of special police to assist the militia. The injunction served to suspend active hostilities for a few days, and on the 10th the Governor announced his willingness to abide by Judge Graham's order.

However, on March 13th, the Governor sought to have Judge Graham modify his order of the 8th, which he refused to do. Learning, in advance, of the Governor's movements, the City Hall people had increased their stock of arms and ammunition, and reinforced their policemen and Deputy Sheriffs. Incensed by Judge Graham's refusal, Governor Waite determined upon actual war upon the City Hall, and declared his intention to at once call out the militia. Orr and Martin refused to budge, and next morning (Wednesday, the 14th) were sustained in their position by the physical assistance of the entire police force, reinforced by an increased number of armed Deputy Sheriffs. In the evening of that day Waite ordered out the First Regiment of Colorado Infantry, and the Chaffee Light Artillery with two Gatling guns and two field-pieces. These troops invested the City Hall on Thursday morning and Waite declared that with them he would force an entrance to the building and physically eject the bodies of the two Board members, in defiance of Judge Graham's injunction.

State Artillery on Lawrence street near Fifteenth, en route to the City Hall, March 15, 1894.

With the city thus brought to the verge of actual civil war in its streets, there was, of course, a great turmoil and wild excitement among the people. Business was almost suspended, and battle was momentarily expected to begin. Nothing like such conditions had ever before been seen in the city, and it is to be hoped that nothing like them will ever be seen again. In the City Hall were more than 200 policemen and Deputy Sheriffs armed with Winchester rifles, and revolvers, abundantly supplied with ammunition, and having in reserve a quantity of dynamite. The troops surrounded the building and stood with loaded arms, the artillerymen with their guns shotted, awaiting the order to open fire, which Waite hesitated about giving. Instead of doing that he appealed to the commandant at Fort Logan for more troops "to aid in preserving the peace." In response to what was supposed to be a grave emergency, 300 regulars were hastened in from Logan and stationed in reserve at the Union Passenger Station. Although the excitement among the people was at fever heat, the presence of United States troops was reassuring, for it was known that if they were used at the City Hall or elsewhere it would be to keep peace and not to participate in an attack on that building or in any other way to assist Governor Waite in his madman's work.

Not content with what he had already done in making the city a war-camp, Governor Waite, in the evening of Thursday, the 15th, declared he would call out the entire military force of the State to carry out his purposes at the City Hall, and issued the following:

"PROCLAMATION."

"All companies of the National Guard of the State are hereby notified to be in readiness at their respective armories, to respond to call to come to Denver, which will be issued on Friday of this week.

Davis H. Waite,
Denver, Thursday, 9 p. m. Governor."

That night, by direction of Governor Waite, Adjutant General Tarsney telegraphed all commanding officers of the National Guard to assemble their companies in their armories and await further orders. On Friday morning Waite ordered the Adjutant General to immediately collect all arms belonging to the State that had been loaned to the public school cadet companies, to the Grand Army Posts and other organizations, and declared his intention to call out every able-bodied male citizen to assist with arms in enforcing at the City Hall obedience to his orders. The guns were collected that day, but the citizens were not called upon to use them.

These proceedings added to the Governor's previous inflammatory talk and reckless acts greatly increased the excitement among the people, and produced a feeling of grave alarm among even the most conservative citizens. A meeting of the Chamber of Commerce was immediately called at which a committee consisting of William N. Byers, Chairman; David H. Moffat, Walter S. Cheesman, F. P. Ernest, Job A. Cooper, George Tritch, Charles M. Clinton, R. W. Woodbury, Samuel Lesem, J. S. Appel, Alfred Butters, E. Monash, John D. McGilvray, J. J. Joslin, Donald Fletcher, William G. Evans, Scott J. Anthony, and Charles B. Kountze was appointed to wait upon the Governor and endeavor to induce him to stay his perilous course. So, there was the extraordinary spectacle of a committee of citizens appointed to appeal to the Governor of the State to refrain from precipitating civil war in the State's capital city; and it became chiefly instrumental in turning the tide of danger, though in its first attempt, made during the day, its efforts appeared futile.

On Friday evening a meeting of about sixty prominent citizens was held and, going back to the effective pioneer remedy for anarchy, organized a Committee of Safety.

It was believed by many that Waite had power to summarily remove members of the city Boards, but it was known by nearly everyone that his call upon the militia was utterly unwarranted by law—that he had no authority to order out the militia until asked to do so by the Sheriff of the county who must first have exhausted all the means at his command to preserve the peace. The denial by

---

William K. Burchinell, who was Sheriff of Arapahoe county at the time of Gov. Waite's memorable "War on the City Hall," is a native of Pennsylvania, having been born in Huntingdon county October 12, 1846. After passing through the usual course in the public schools of his native county, he entered the Hollidaysburg, Pa., Academy where he remained until July, 1862, when he enlisted in the Fifteenth Regiment Pennsylvania Volunteer Cavalry and served with it through the war. He was then attached to the Quartermaster's department at Nashville, Tenn., where he remained until 1866, when he returned to Pennsylvania and engaged in business. In 1873 he was elected a Representative in the Pennsylvania Legislature from Huntingdon county, and after the expiration of his term was appointed Receiver of the Public Land Office at Fairplay, Colorado, by President Grant in February, 1875, a circumstance that transferred him to Colorado, where he has since been a prominent figure in affairs. In 1879 President Hayes re-appointed him Receiver, a position in which he capably served a total of eight years. In 1879 the Land Office was removed from Fairplay to Leadville, where Mr. Burchinell soon became largely interested in mining. Late in 1883, after the expiration of his second term as Receiver, he located in Denver where he has since resided. Continuing his mining operations he became, in 1886, President of the Denver Machinery Company, and in 1891 was elected by the Republican party Sheriff of Arapahoe county; and in 1893 was re-nominated and re-elected to that office. In 1898 he was appointed by the County Commissioners to fill, until the next county election, the vacancy caused by the death of Sheriff Webb. During his terms as Sheriff, in one of which, as indicated on these pages, he had the stormiest experience known by any incumbent of the office, Mr. Burchinell continued his interests in mining, to which he now devotes his whole time and attention, being an owner in several highly productive mining properties in Colorado.—J. C. S.

William K. Burchinell.

Scene on Fourteenth street between Larimer and Lawrence streets March 15, 1894. State troops awaiting orders to open fire on the City Hall.

Orr and Martin of Waite's authority to summarily oust them was a matter for the Courts to decide. The Constitution of the State provided a peaceful and ready remedy that was immediately available, in Section 3, of Article VI:

"The Supreme Court shall give its opinion upon important questions upon solemn occasions when required by the Governor, the Senate, or the House of Representatives."

On Friday evening Chairman Byers and several members of the Chamber of Commerce committee again visited the Governor and after long discussion induced him to submit his case to the Supreme Court under the provision of the Constitution we have quoted. His private legal counsel had also been urging him to do so. On Saturday, March 17th, the Governor, by his attorneys, asked the Supreme Court to pass upon the questions at issue.

The United States troops had been returned to Fort Logan when the nature of the conflict in Denver became known to the War Department, and the Bull Hill strike trouble that had in the meantime broken out at Cripple Creek called for the presence of militia in that town. Therefore, on Saturday, the militia was sent from Denver, and over Sunday the city had less of a war-like aspect; also in the meantime Chief of Police Kellogg had resigned on the 13th and the "old Board" had appointed J. F. Stone to succeed him; and the "new Board" had appointed John F. Farley to the same position, thus giving the city a double-headed police supervision. The militia returned from Cripple Creek on the 20th but was not again stationed at the City Hall.

On March 25th the Supreme Court decided that the Governor had authority under the "city charter" act to remove Orr and Martin and to appoint their successors, but not to call out the military forces of the State to enforce his order of removal; and that if Orr and Martin refused to vacate their positions the remedy was to oust them by action through the Courts. The heart of the decision was embraced in the following lines:

"His duty and responsibility cease upon the making of the order of appointment, and any attempt on his part to personally enforce such order or install his appointee is beyond any express or implied duty or power imposed or conferred by constitution or statute."

This left Orr and Martin in possession of their places and they continued holding the municipal fort, with the intention of doing so until the processes of litigation should compel them to yield. On the 28th the Governor, notwithstanding the decision of the Supreme Court, threatened to declare martial law in the city on account of what he called the insurrection at the City Hall but, instead of doing that he obtained next day an order from Judge Glynn, who was temporarily sitting in Judge Graham's stead, restraining the "old Board" and its Chief of Police from acting in their official capacities. Then on March 30th the Governor ordered Adjutant General Tarsney to at once recruit the two infantry regiments of the State militia up to full war-strength in preparation for concentrating the State's entire military force at the City Hall for an active military campaign.

But all these proceedings were terminated by an order from the Supreme Court that Orr and Martin should surrender their offices to Mullins and Barnes at noon on April 18th, the opinion of the Court having been that there was practically no check, under the law, to the use or misuse of power of removal by a reckless and arbitrary Governor.

The change occurred quietly on the appointed day, and Waite's War on the City Hall became part of local history. The entire affair was a most disgraceful episode and was among the legitimate fruits of frenzied politics and correlated follies. However, the alleged proposition to "Tammanyize" the city government was not put into effect.

Davis H. Waite was elected Governor of Colorado in 1892 by a plurality of 5,436 in a total vote of 93,756, there having been four candidates for the office that year. In 1894, when there were again four candidates, one of whom was Waite for re-election, he was defeated by Albert W. McIntire by a plurality of 18,608 in a total vote of 180,983; the great increase in the aggregate vote having been due to women first voting at general elections, in that year. Their vote was heavily against Waite, and in Arapahoe county McIntire's plurality exceeded 17,000.

Waite is a native of Jamestown, N. Y., (April 9, 1825,) where he taught school, and later studied law in his father's office, but did not practice until comparatively late in life. He lived in western Pennsylvania from 1846 until 1850, when he removed to Wisconsin and in 1856 was elected the Marquette county member of the Legislature of that State. In 1859 he removed to Missouri and engaged in school-teaching until late in 1860, when he returned east and at intervals until 1876 taught school, published newspapers, and practiced law in western Pennsylvania and New York State. Locating at Larned, Kan., in 1876, he farmed, practiced law, and became the member of the Kansas Legislature from Pawnee county. In 1879 he removed to Leadville, Col., and continued law practice; and in 1881 located at Aspen which has since been his home. He was a Republican until 1891, and in each of the places in which he has lived mixed more or less in rather stormy politics, but is now quiescent. His personal honesty has never been questioned—he having that good quality common to nearly all men of fanatical opinions and purposes. His "blood to the bridles" speech, delivered in July, 1893, at Coliseum Hall in Denver, gave him a wider, notoriety than any other act or utterance of his; and this in connection with the general character of his administration, worked great harm to Colorado.

An impartial historian dealing at length with the political affairs of Colorado, revealing the iniquities that have frequently attended them, would make clear to the dullest understanding the afflictions and burdens they have more than once imposed upon the people. Both Colorado and Denver have more than once been grievously wounded by those engaged in political affrays; the good repute of each has suffered and the garments of both have been stained. It was so in the earlier times, and has been so in times between; but in no instance was Territory, or State, or city, brought to such humiliation and shame as were imposed by the Waite administration of State affairs. Through some perversity of fate, it would seem, this most injurious visitation, of all our political evils, came at a time when the people were bowed down by other troubles that were far more than a sufficiency for the day.

CHAPTER LXXII.

PERIOD OF RECOVERY—INSTITUTION OF FESTIVALS OF MOUNTAIN AND PLAIN—GUMRY HOTEL HORROR—MINING DISASTER NEAR CENTRAL CITY—STORM-BOUND RAILROADS—PROPOSED AUDITORIUM—FAILURE OF THE PROJECT—PROPOSED MUNICIPAL WATERWORKS—BONDS AUTHORIZED AND SOLD—LEGAL INTERRUPTION OF PROCEEDINGS—CENSUS OF 1900—DISAPPOINTING RESULT—ANALYSIS OF CAUSES—TIDES IN THE AFFAIRS OF DENVER.

The line of division between an old and a new year is one of man's wholly artificial arrangements, and was not so intelligently laid down as it would have been had it been made to coincide with the winter solstice. As it is, it is wholly arbitrary, and has no more definiteness in the sense of marking changed conditions than is to be found along the lines of demarcation between the city of Denver, proper, and several of the independent towns that flourish within her corporate boundaries. Still, through a custom of ages we have come to something like a conviction that the ending of an old and the beginning of a new year are separated by a distinctive line over which we step when the midnight bells ring out the old and ring in the new. With a simple faith that goes far toward justifying the old conclusion that, after all, men and women are but grown-up children, we always believe that the new year will be different from the one just closed; that it will be fairer, and better in every way, more helpful to us, and that if the ambition of our little lives be not attained within the twelve-months, it will be brought so near that its possession can not much longer be delayed.

Denver bade farewell to 1894 without regret, and welcomed its successor with the courage and hopefulness that would seem to be indigenous to our western country, and with a determination to resume the forward movement; leaving the past to bury its dead. There had been eighteen months of the most trying and destructive conditions that any community was ever called upon to meet and overcome; and our people were glad to step over the line that, it was hoped, and expected, too, would finally separate that long season of trouble and sorrow from an era of renewed endeavor and returning prosperity.

The year 1895 proved these anticipations not to have been ill-founded, although it was not a year of great activity, but rather one of preparation. In the mining districts general attention, that had been in ante-panic times almost exclusively bestowed upon silver production, had been turned to the development of the lode gold-mines which since that time have placed Colorado first among the gold-producing States of the Union, and made it the equal of any part of the world as a producer of precious metals. The extent and richness of the Cripple Creek district had then become well understood, and the agricultural and pastoral interests of the State had made great advances. Nevertheless, 1895 was a year of comparatively "dull times" in Denver. There was some building done, and the advance made in other directions was upon a substantial basis.

Throughout 1896 conditions steadily improved, and confirmed beliefs that the city and State would not and could not be denied renewed prosperity. The revival of progress got fairly under way in 1897, and since that time its momentum has been greater and greater every month and has wrought changes and made developments as remarkable as they are gratifying. The past had buried its dead.

Out of the circumstances and conditions in Denver and elsewhere in Colorado in 1895 arose our autumn Festival of the Mountain and Plain at Denver; an institution that has annually afforded since that time—excepting in 1900—diversion and entertainment for several days to many thousands of Colorado people. The causes leading to the inauguration of a festival season so soon after the rack and wreck of 1893-94, are outlined in the following extract from a recent article by Mr. John McNamara, Secretary of the Festival Association:

> "The season of 1895 seemed at last to offer some basis of at least partial hope. Although general business still stood inactive and was slow to recover from the shock it had received, nevertheless a ripening harvest promised abundance to farmers, and live stock interests were accordingly prosperous and advancing. These hopes were most pleasantly realized in ripening grains and marketable cattle, and these two foundation elements of the community were smiling in plenteous abundance. A feeling of renewed security, a desire to be up and doing, a tendency to take advantage of the new impetus to prosperity pervaded all classes. Above and beyond all was an innate and deep-seated sense of gratitude for the blessings bountifully showered by nature upon a disheartened peo-

ple, and the general and spontaneous impulse was to publicly testify in some fitting manner the glad alacrity with which all business interests grasped at the new lease of prosperity. Out of this public sentiment of universal gratitude grew the idea of the Festival of Mountain and Plain. The name seemed most appropriate, and none other has since been able to replace its apt fitness. It was designed to form a union of the common interests, the common aspirations, the common gratitude, and the common new upspringing of the hopes and expectations of all localities of the state, whether situated in the miner's home among the rugged mountains, or the level lowlands of the husbandman of the plains."

The decision to provide in Denver a brief holiday season for the people of the city and State was reached so late in the summer of 1895 that there was but little time left for preparations. It was quickly decided that the event should be known by the appropriate name, "Festival of the Mountain and Plain," and all arrangements for it, and its general management, were committed to a Board of Direction consisting of the following-named Denver citizens:

Amphitheatre (or "Grand Stand") at Broadway and Colfax Avenue, Festival of 1899.

Platt Rogers, President; J. S. Appel, Vice President; Wolfe Londoner, Treasurer; F. E. Smith, Secretary; Frank E. Hartman, Corresponding Secretary; John McNamara, Assistant Secretary; R. W. Speer, Director-General; George Ady, A. A. Blow, Seth B. Bradley, W. N. Byers, Earl B. Coe, Rodney Curtis, Carlton Ellis, C. M. Hill, S. K. Hooper, R. F. Hunter, W. F. Hynes, W. H. James, J. H. Jordan, J. G. Kirkpatrick, H. J. Mayham, T. S. McMurray, M. J. McNamara, E. Monash, T. J. O'Donnell, W. B. Redmond, Charles H. Reynolds, W. B. Root, J. R. Schermerhorn, M. Spangler, I. N. Stevens, B. F. Winchell and Adolph Zang.

A similar organization, it may be stated here, omitting the Director-General, had charge of each subsequent Festival.

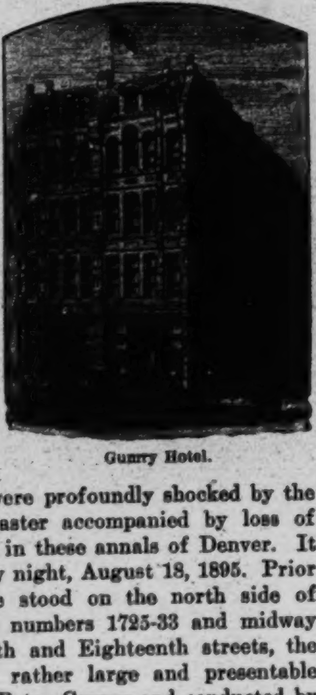
Notwithstanding the brevity of preparatory time, that first Festival drew such crowds to the city, proved so popular with the people, and so well accomplished the purposes for which it had been held, that a determination to make it an annual autumn event was a logical consequence.

The first festival was held in the second week of October, and the next three during the first week of October, but because of the coolness of October evenings, it was deemed better to have that of 1899 in the last week of September. To the earlier ones three days were allotted, but in 1899 the festivities extended over four days. While these festivals are to a very great extent play-times for men, women and children, some of their features reflect the advancement in material progress of the State and city. On each day a distinctive procession passes through the central part of the city, and in that in which the industries of Colorado are represented the magnitude of the mining, agricultural, pastoral, manufacturing and mercantile interests appears in a moving object-lesson. In this, and also in other street pageants, United States troops from Fort Logan, the State militia, the city departments and many civic societies participate.

But it is in the spectacular and masquerading demonstrations that the average spectator or participant is amused and entertained, if not instructed. On maskers' day Nonsense and Tomfoolery are in command, and everybody has a more or less good time; and when that day turns to night there is a public, out-door masquerade ball, free to all, and participated in by thousands. The culminating spectacle of the Festival has been the illuminated pageant, on the last night, under the management of the organized Slaves of the Silver Serpent. In this demonstration allegorical, fabulous, mythological, and various other representations of things dear to the memories and hearts of children of both sexes and all ages appear on wheels and in bewildering gorgeousness; and as a reward for well-doing, the Serpent's Slaves clad in heroic costumes glittering with alleged silver and gold spangles, later in the evening go to a fine ball that constitutes the less public but more brilliant social event of the Festival. The "grand stand," which for past Festivals was built on part of the block bounded by Broadway, and Colfax, Lincoln, and Sixteenth Avenues, was made the objective of the street pageants which passed in review before the multitudes assembled there, and was also the scene of the out-door masquerade ball. The structure erected there in 1899 afforded seats, without crowding, for 10,000 people. As will be seen, the more general character of these festivals has been similar to that of the Mardi-Gras Festivals that have so long been annual events in the city of New Orleans, and that are so familiar in details to thousands that further accounting here of our own would quickly degenerate into tediousness—a condition from which part of what has already been said may not in the reader's judgment be entitled to exclusion.

In the spring of 1900 it was decided that the year should pass without a Festival in order that energies and resources might be husbanded for an effort in 1901 that should make the Festival of the first year of the new century far surpass in novelty, interest and importance everything of the kind that has heretofore occurred in Denver.

A long-continued annual recurrence of the Festival is, of course, not probable; that is to say, not upon the basis of the five that have been held. The spirit and characteristics of the Anglo-Saxon race dominate in Colorado, and to people of that race the general features of past festivals do not present sufficient vitality nor utility to become permanently attractive or desirable. However, it is more than probable that from the beginning made in these festivals, and retaining some of their characteristics, will arise a larger, broader, and more dignified annual expression of the purposes for which they were inaugurated.



Gumry Hotel.

About the time it had been decided to hold the first Festival of the Mountain and Plain, our people were profoundly shocked by the most appalling disaster accompanied by loss of life, to be recorded in these annals of Denver. It occurred on Sunday night, August 18, 1895. Prior to that time there stood on the north side of Lawrence street at numbers 1725-33 and midway between Seventeenth and Eighteenth streets, the "Gumry Hotel," a rather large and presentable building owned by Peter Gumry and conducted by him and Robert C. Greiner as a public house. A few minutes before that Sunday midnight the steam boiler in the rear part of the building's cellar exploded with a deafening roar and crash. At that hour nearly all the inmates of the house were in their beds. The explosion wrecked the building, and caused floors, partitions, furniture and people to fall inward and downward in one confused, inextricable mass. To add to the horrors of the situation, fire broke out in the great heap of debris within a few minutes after the explosion; which had been so violent as to shatter the glass in all buildings in the immediate neighborhood, and to cause great clouds of dust to arise from the wrecked hotel.

The fire and police departments quickly had all their resources at the scene of disaster, but could do nothing toward rescuing those imprisoned in the mass of wreckage; and twenty-two persons gave up their lives. A few of the inmates of the hotel had escaped, some unhurt, and others more or less seriously injured. It is probable that many of those who went down in the wreckage were killed outright; yet, many others died from suffocation or burning.

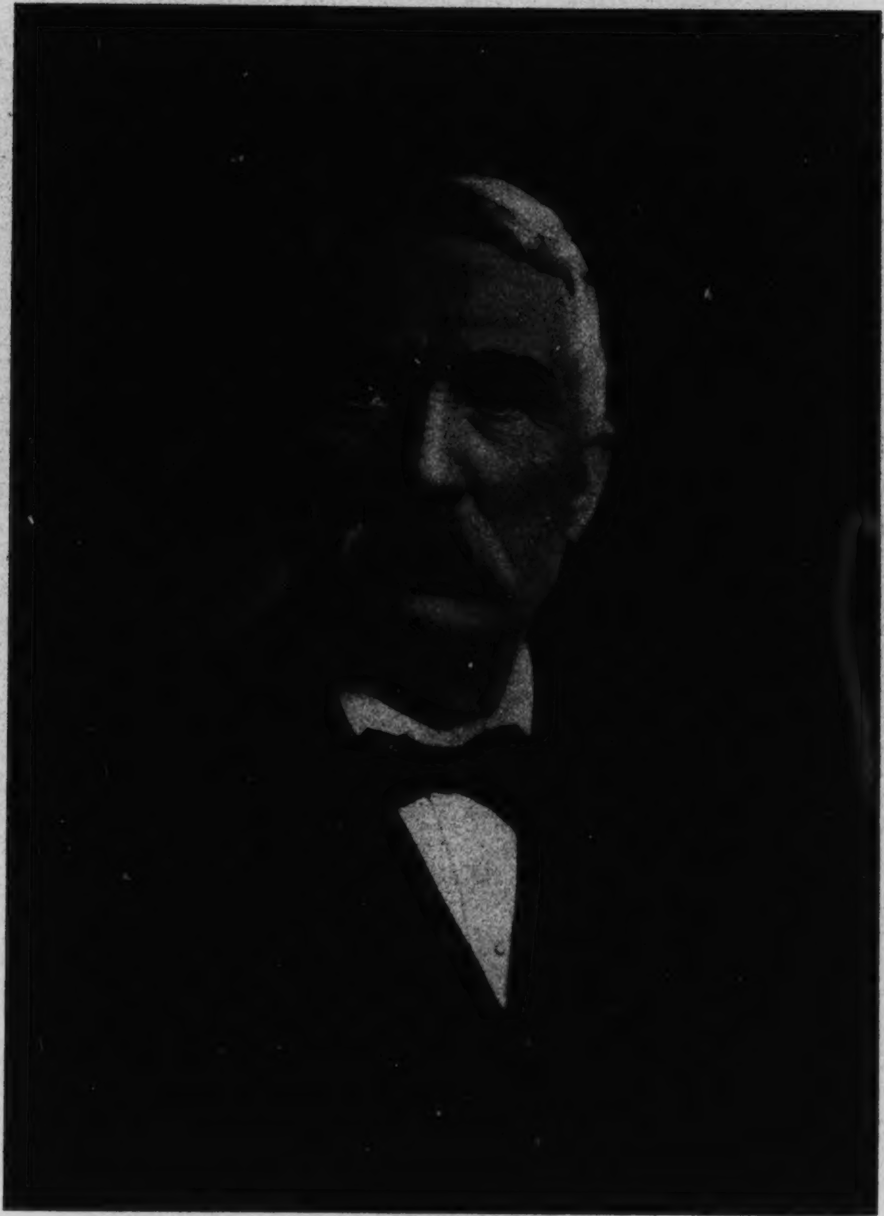
Notwithstanding the efforts of the firemen to subdue the flames, they persisted in the mass of rubbish, and greatly retarded the work of the large force of men employed by Mayor McMurray to remove the debris and rescue any of the unfortunate people buried in it and who might still be living. But, on Monday morning it became apparent that all were dead. It was several days before all the wreckage was cleared away and the exact extent of the disaster known.

Steam-power was used for running the elevator and for other work of the house. The "engineer" was an inexperienced young man of twenty years, named Helmuth Loescher; and of habits not exemplary. A few minutes before the explosion, he had gone to a neighboring saloon, got a drink, and according to the saloon-keeper's story, started back to the hotel. For several days he was supposed to have been one of the victims. But before he entered the house, the boiler let go. Loescher immediately fled the city, but within the week was recognized and arrested at Antonita in the southern part of the State, and brought back to Denver.

The disaster and the peculiarly frightful circumstances attending it, horrified the city; and as the burned, broken, and in some cases almost unrecognizable, bodies of the victims were brought forth, one after another, the tension of public feeling became greater and greater in anticipation of the ca-

---

Dennis Sullivan, long a citizen of Denver, and who has in many ways been identified with the city's development since the pioneer era, was born in Renssalaer county, N. Y., in 1837. When a young man, he engaged in railroading in that State and was for several years, a conductor of passenger trains on the New York Central road. Coming to Colorado in 1866, he soon thereafter became interested in mining, and almost continuously since that time has been as a mine operator successfully associated with that great industry of the State. His identification with various undertakings here in the city appears elsewhere in this volume; the more prominent of them being the water company, and the Denver National Bank of which he has long been a Director. Politically a Democrat, he received in January, 1885, the complimentary nomination of his party as its candidate for United States Senator; and in the joint ballot by the General Assembly at that time was given the unanimous vote (twenty) of the Democratic members of that body.—J. C. S.



Dennis Sullivan.

Fifteenth street southward from near Lawrence street, in 1901.

lamity having involved even more loss of life than was later proved to have ensued.

The hotel's register, which was found the morning after the explosion, bore the names of several strangers who were supposed to have lost their lives, but who were later accounted for. The number of victims, as finally determined, and certified in the Coroner's report, was twenty-two, as stated in the following:

Adams, Gen. Charles, Manitou.
Blake, Albert S., Pueblo.
Burt, George, Colorado Springs.
Corson, W. J., Denver.
Dodds, W. D., Albany, N. Y.
French, Ferd, Central City.
Greiner, Robert C., Denver.
Greiner, Mrs. Robt. C., Denver.
Gumry, Peter, Denver.
Hawley, M. E., Denver.
Hubbold, Fred., Lisbon, Iowa.
Laager, Lizzie, Denver.
Lorah, Bela I., Central City.
McCloskey, E. F., Cripple Creek.
Monroe, A. M., Denver.
Muhlethaler, Emma, Denver.
Murphy, James, Denver.
Reinehuber, Louise, Denver.
Richards, Evan W., Denver.
Richards, William, Denver.
Wolfe, Hannah, Lincoln, Neb.
Wolfe, Margaret, Lincoln, Neb.

General Charles Adams was a man of prominence in Colorado and her affairs, and his untimely death was sincerely mourned by many people. Gumry had been a citizen of Denver for about twenty years. He was a contractor and builder, had been one of the contractors for the construction of the Court House, and had later been made superintendent of construction of the Capitol, a work on which he had been engaged from the beginning of operations on that great edifice. After his death a popular story concerning him was to the effect that he had no relatives; that his parents had sailed from Europe with him as an infant; that their ship was lost at sea and they with it; that the child was rescued by some of the crew who escaped in an open boat and were afterward picked up; that his name being unknown, the Captain of the rescuing vessel gave him that of the lost Captain of the lost ship—Peter Gumry. The fact was that he came to America from Sweden in 1860 in company with a brother, the two locating in Minnesota. Peter later moved west and settled in Denver early in the "Seventies." He acquired a considerable estate, and after his death various fraudulent claimants demanded it. Several years of litigation followed, and recently the Minnesota brother, and a brother and two sisters in Sweden received what was left after many claims growing out of the hotel disaster had been adjusted.

The Coroner's inquest had continued several days and until the bodies of all the victims had been taken from the smouldering, steaming ruins. The verdict, after stating that the several persons came to their deaths from injuries received in consequence of the explosion of the steam boiler, followed by fire and the destruction of the building, went on to say:

> "From the testimony submitted, which was conflicting, we are unable to fix the responsibility for the disaster upon any one person, but we believe the owners and managers, Peter Gumry and Robert C. Greiner, were blamable for requiring of the engineer sixteen hours work out of twenty-four, a requirement far beyond the ability of any man to endure and perform good work. Also for employing an engineer whose habits were dissipated and unreliable, and whose experience did not justify them in placing him in such responsible position, all of which were well known to them.
>
> "We find that the engineer, Helmuth Loescher, had been drinking on the night of the disaster, and further that he had not examined the safety-valve to the boiler for two months; proving him to be unfit to occupy any position where security to life and property depends upon the faithful performance of duty."

Loescher, the "engineer," could give no intelligible account of the boiler's condition when he left it to go to the saloon. His ignorance of the duties of an engineer and his total unfitness for his place were clearly brought out in his testimony before the Coroner's jury. It did not appear that he could be held criminally responsible, and as the men who were responsible for the old boiler and for his employment as "engineer" were among the dead, the Coroner's verdict could not have well been other than it was.

It appeared that the city Boiler Inspector had examined the boiler on the previous May 16th, and had ordered some repairs made to it, but had certified it without having known the repairs to have been made. After the disaster the City Council created a licensing Board of Examining Engineers, the Loescher type of "engineer" was eradicated, and a wholesale examination of steam-boilers was made throughout the city. But, a fearful penalty had been paid for the previous lax and inefficient methods out of which the cause of this calamity had arisen.

The Gumry Hotel was not a hotel in the full sense of the term, but a lodging or "rooming" house of the better class. It was a five-story brick structure with a cut-stone front, the fifth story having been of the "mansard" type. The building would seem to have been an ill-fated one from the beginning. It was built in 1887 for commercial purposes, most of its stone front having been that of the Clifford building that stood on the south side of Lawrence street, near Sixteenth, and that was burned out in 1886; its site now being occupied by part of the Daniels & Fisher building. The Gumry building was first occupied by the "Eden Musee," and was burned out in February, 1889; the fire having been a bad and costly one. The building was repaired and next occupied by a furniture establishment; and within a short time burned out again. It was then reconstructed for hotel purposes, and was conducted as a hotel two or three years, when it became a "rooming-house" and continued as such until the great calamity of August 18, 1895, befell it.

The building remained in its ruined condition, most of the front wall and parts of the others still standing, until late in the autumn of 1900, when the premises were sold by order of the Court having charge of the estate, and the purchaser began removing the wreck preparatory to building anew on its site.

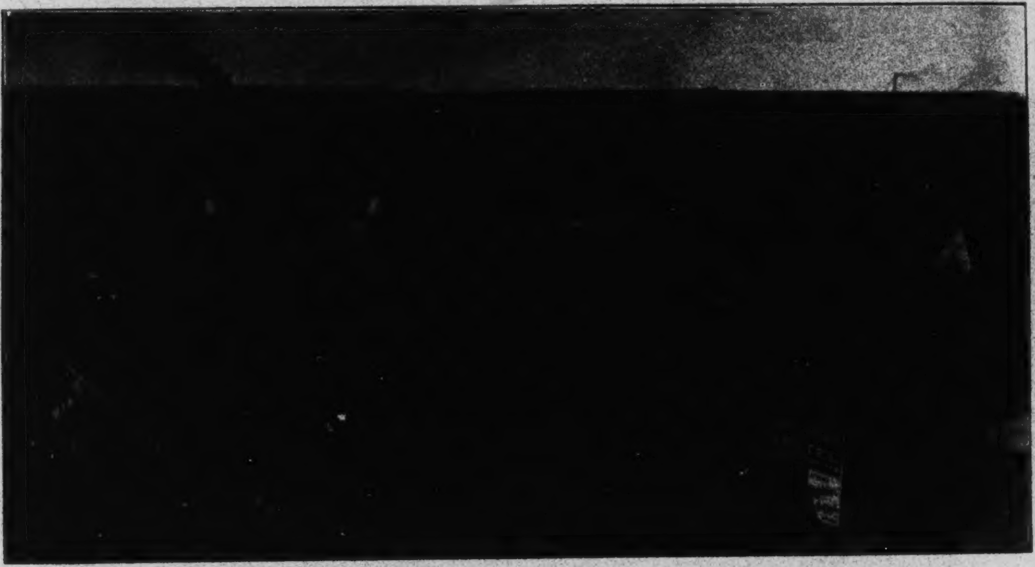
Within a few days after this shocking disaster occurred in Denver, another one happened near Central City in which fourteen men lost their lives by the flooding of the Americus and Sleepy Hollow mines on the old Gregory Lode near Central City. This was the most serious mining accident in the history of mining in the Clear creek districts. The Americus and Sleepy Hollow were adjacent to the Gregory and Fisk workings which were two-thirds filled with water. The Americus and Sleepy Hollow workings were deeper than those of their flooded neighbors and separated from them by a thin wall of rock, the Americus shaft being 700 feet deep and that of the Sleepy Hollow about 600 feet. On the afternoon of August 29th the dividing wall gave way and the water from the others, which had stood 300 feet deep in them, rushed into the Americus and Sleepy Hollow, and in an instant overwhelmed the miners there. But one, Henry Prisk, out of the fifteen men in the two mines, escaped, the others being drowned like rats in a trap. The "accident" was due to bad mining engineering and reckless carelessness.

Of the fourteen victims of this disaster two met death in the Americus mine, and the others in the Sleepy Hollow. Their names were:

Avansinni, Acilo,
Brocklebank, Benjamin,
Carbis, Thomas,
Giovanni, Perger,
Harris, James,
Marietta, Mazirino,
Polernoster, Lui,
Prisk, William,
Prouse, Obed,
Ricona, Martino,
Thomas, William,
Valero, Stephen,
Vigas, Nicholas,
Williams, Thomas.

One-half of these victims were Italians; and the disaster made seven widows, and deprived eighteen children of their fathers.

Our Colorado climate, usually amiable and equable, sometimes loads certain sections of the State with great burdens of snow that become a weariness to the flesh of railroad men. Probably the most extraordinary winter experience of any Colorado railroad was that which befell the Colorado Midland in the snowy winter of 1898-99. An unusually large quantity of snow fell that winter, and accumulated to great depths in the mountains. The Midland's mountain division was blockaded early in February, 1899, and remained so continuously until the latter part of the following May. In vain did they open the cuts; the wind drove the dry snow in and filled them again in a few hours. The snow-plows with three or four engines coupled to them could not even take care of themselves, and upon several occasions had to be abandoned. The prolonged blockade was confined to the mountain division. The other mountain lines also suffered severely, and many of the mountain towns were shut off from communications for from one to three weeks. There were apprehensions that their people would suffer for food and from lack of fuel, but there were no serious consequences from such causes. However, the snow made bad work at Silver Plume on the morning of Sunday, February 12th. A great avalanche swept down the mountain side; a cabin occupied by Italian laborers stood in its path, was overwhelmed and crushed, and the lives of seven or eight of its crowded inmates went out. It was not until the spring thaws set in that the bodies of all of them were revealed. During the mountain blockade some hardy people moved from town to town on snow-shoes; and one party, including a young lady, crossed the Divide on them, from Breckenridge, reaching Denver by rail from Georgetown. We have records of few winters in which there was a greater snow-fall than in that of 1898-99, but the season was not an unpleasant one in Denver.

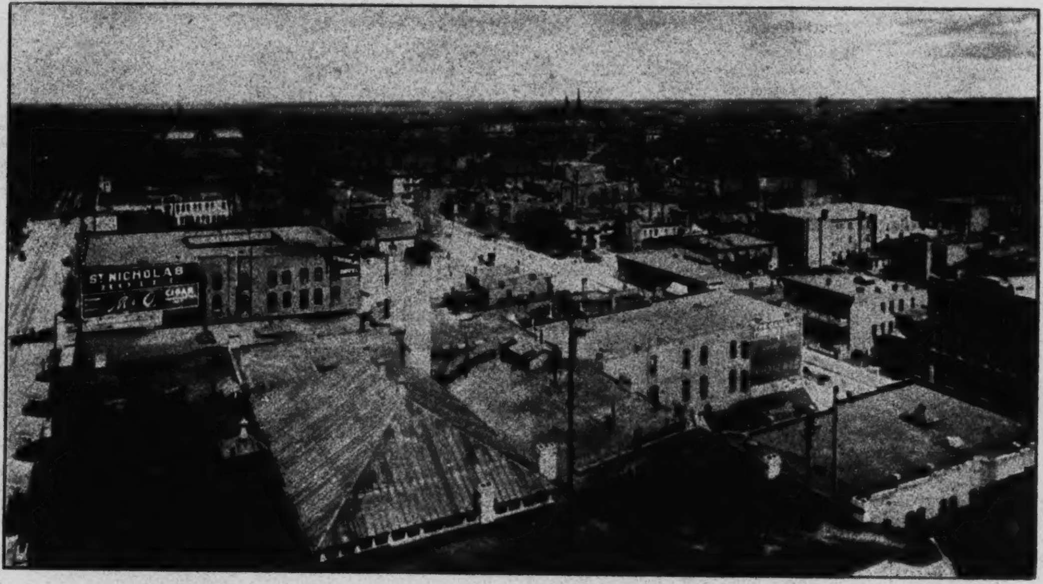


View northward from roof of Equitable Building. One of a series of views embracing Denver's horizon, from photographs, by H. C. Converse in 1901.

Rather late in the spring of 1900 there was another unusual experience with snow; and this time it was not in the mountain recesses, but here along the foot-hills. On Saturday night, April 14th, a furious snowstorm swept in from the northwest and took possession of the country hereabouts. The snow-fall continued without cessation until the following Monday night, reaching its climax on the Arkansas-South Platte divide in the region of Palmer Lake. By Sunday morning the railroads between Denver and Colorado Springs were blockaded, and several passenger trains on the Denver & Rio Grande, the Colorado & Southern, and the Atchison, Topeka & Santa Fe railroads were caught midway on their journeys, and could not be released until the following Tuesday evening; no trains being able to pass between Denver and Colorado Springs in the meantime. The stalled trains in the Palmer Lake district were buried to the roofs of the cars by the drifting snow. Traffic on the Midland, the South Park, and the Clear Creek division of the Colorado & Southern, was also blockaded. The equivalent of three feet of snow fell in about forty-eight hours, and the wind blew it into enormous drifts. The visitation was wholly unexpected, as the weather had previously been exceptionally fine. Hereafter all snow blockades along the foot-hills will be compared with that of April 15th, 16th and 17th, 1900.

During several years last past the desirability of having in Denver a large public building for political conventions and other assemblages had been discussed by our people and in the city newspapers. In compliance with what appeared to have become an almost unanimous public sentiment in favor of the municipality erecting and owning such a structure, the City Council submitted at the city election held April 4, 1899, a proposition to authorize the issue of $400,000 worth of municipal bonds, the proceeds of which to be used in building a large public Auditorium. At that election the aggregate vote for Mayor was nearly 33,000, but on the Auditorium bond question a total of only 5,328 votes was cast. Of these, 3,690 were affirmative and 1,638 negative; the latter being almost one-third of the small total. Regarding the matter as having been affirmatively settled, the city authorities without delay prepared to issue the bonds, and invited proposals from property-owners for a site for the Auditorium. Many offers at varying prices were made, but the choice finally rested upon the triangular block bounded by Fifteenth street, Colfax Avenue, and Cleveland Place, for which a conditional purchase agreement was made and of which much public disapproval was manifested. The bonds having in the meantime been advertised, were awarded to W. J. Hayes & Company, of Cleveland, Ohio. After the award the successful bidders raised the question, upon various technical points immaterial here, of the validity of the issue, and refused to accept the bonds until their validity had been passed upon by the courts. To bring the question to a judicial determination they instituted suit against the city to recover a certified check for upward of $8,000 payable to the order of the City Treasurer, that had accompanied their bid as a guarantee of good faith and according to conditions upon which bids for the bonds were invited by the city. Late in November, 1900, the State Supreme Court decided that the bonds were invalid because of irregularities in submitting the question of their issue to the people and in the form of ballot used.

Another proposed public enterprise, and one that would involve a vast expenditure of money, also came before the people of Denver in 1899. Under what was, and still is, alleged to be a popular demand for "municipal ownership of public utilities," there had been for some years a persistent agitation, by those favoring "municipal ownership," of the expediency and propriety of the city owning the system of water supply. This crystallized in the autumn of 1899 in legislation by the City Council declaring the city's intention to either acquire by purchase the existing system, or to construct on its own account an entirely new one; and also providing for submitting to a vote on the day of the county election, held November 7, 1899, a proposition to authorize the issue of $4,700,000 worth of city bonds for the purpose of buying or building a waterworks system to be owned and maintained by the city. The vote was not to be a popular one, but restricted to taxpayers; and the election was a special one, held not at the time of a general municipal, but at that of a county, election—as warranted, however, by the constitution. Judging from the small number of votes cast, and considering the magnitude of the proposed enterprise and the unknown extent of expenditure it might entail, the people were rather singularly indifferent. At that November election the city vote and that of the county outside the city were merged in the total; so, for comparative purposes it is better to turn to the vote at the



Eastward view from roof of Equitable Building in 1901; Stout and California streets extending through the picture.

municipal election in the preceding April which, as we have already stated, had a total of nearly 33,000. The total vote on the water-bond proposition was only 8,396, of which 5,420 were affirmative, and 2,976 negative; or, about in the proportion of three-fifths for, to two-fifths against, the issue. However, the city authorities accepted the result as conclusively affirmative, and proceeded to invite proposals for the purchase of an issue of $200,000 worth of the bonds, bearing interest at the rate of three and one-half per cent. Upon the day appointed for opening bids, February 23, 1900, but one bid was at hand, and that was an informal one, conditioned upon a subsequent judicial determination of the bonds' validity. This bid was not considered, and in the following June the entire amount of $4,700,000 was offered for sale with the interest rate increased to four per cent. In response to this invitation the results were no better than those of the previous February; but in September, 1900, the entire proposed issue, to bear interest at four per cent, was sold at par to Denison, Prior & Company, of Boston and Cleveland, deliverable in varying amounts at intervals prior to May 1, 1901. During the discussion of the proposition the extreme difficulty in the way of obtaining an adequate supply of water outside of existing corporate and private ownership of water-rights, and the enormous prospective cost of a duplicate waterworks system were clearly brought to public attention. The city has the privilege of purchasing the existing waterworks system at the expiration of its franchise term, at a valuation to be fixed by appraisers. The water company, during the discussion prior to the vote on the bond issue, and waiving the unexpired part of its franchise term, expressed a willingness to sell its entire property to the city for $9,000,000; or at a price to be fixed by three competent appraisers. In October, 1900, some preliminary negotiations to that end were set on foot, but late in November further proceedings with relation to the bond issue and also with relation to the general proposition, were enjoined by the United States Court upon the petition of a Denver tax-payer resident in southern California. Therefore the ultimate result of this initial movement toward "municipal ownership of public utilities" in Denver will have to be left for some later local historian to record.

The result of the census of 1900, crediting the city with a population of 133,859, an increase of but 27,146, and a percentage gain of but 25.44, was a grievous disappointment to our people. It had been with much confidence anticipated that the enumeration would reach figures somewhere between 160,000 and 175,000; with 160,000 representing the preponderance of opinion. For several days after the result was announced late in August, there were many protests against accepting it, and a vigorous demand for a recounting. It was shown that Denver's per cent. of gain in the school census had been 48.3; that Post Office receipts revealed a gain of 48 per cent; that 6,488 dwellings had been built within the last ten and one-half years—sufficient to house more than 30,000 people, taking the average family as a basis; the city's vote was cited as proof of a far larger population; the scarcity of unoccupied dwellings and the great demand for new ones were pointed out; and the fact that suburban towns annexed since 1890 had by the census of that year an aggregate of about 8,000 people, was held to be additional evidence that the figures for 1900 were seriously deficient. The City Directory for 1900, issued about the first of June, contained 71,196 names; an increase of 3,199 over the number in the Directory for 1899. But these figures included the people of the independent towns and some of the suburban ones. The Directory for 1890, covering the same general area, and when the population within the city, proper, was 106,713 by the census of that year, contained 54,548 names. Misleading estimates based on Directory figures for 1900 placed the population of the city above 160,000. These estimates having been generally accepted, the public was quite unprepared for the census reduction of 25,000 or 30,000.

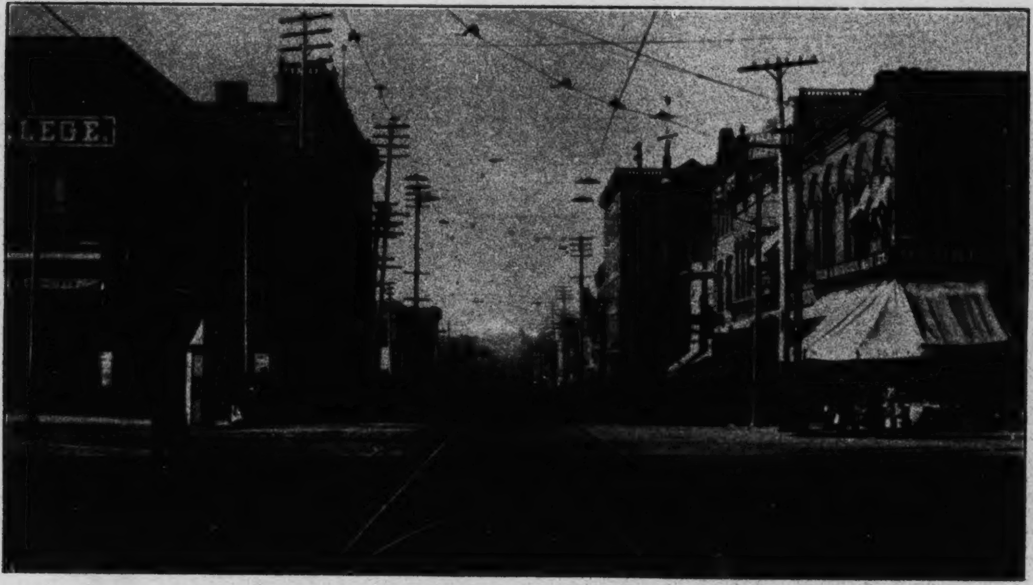
All these circumstances appeared to justify the demand for a recounting, but upon further consideration and an analysis of some of them, public opinion reluctantly adjusted itself to the disappointing result. The increase of 25.44 per cent. was shown to be greater than that in many other cities in the general class to which Denver belongs, and very much greater when considered in connection with the peculiarly adverse conditions that beset Denver from 1893 to 1895. Furthermore, and it is no cause for regret, the ratio of population increase in almost every American city, and especially in the cities of the west, has been materially lessened in the last ten years from that of the decade 1880-1890.

In a preceding chapter we have outlined the conditions existing in Denver from 1890 to the panic time, and also those existing from that time to the summer of 1895. There can be no question about Denver having lost population heavily in 1893 and 1894. It is doubtful if the number of people in Denver at the beginning of 1895 exceeded 90,000. Assuming this to have been the case, the increase since then has been about 44,000, or more than 48 per cent. One proof of reduced population in 1894 is established by the Post Office receipts of that year having been about $9,000 less than in 1890, and about $52,000 less than in 1892. Furthermore the character of the population has changed since then, and this makes the increase of 48 per cent. in the school census misleading. Children now form a much larger proportion of the population than in the period between 1890 and

1893, when the city was crowded with adults who had no families, or did not have them here; people who had only themselves to move, and who did move when the disasters came. The number of children has increased, and will continue to do so, in larger proportion than that of the adults as compared with ante-panic conditions.

The remarkable increase in Denver's population between 1880 and 1890—199.51 per cent.—was due to the extraordinary "boom" that flourished not only in Colorado, but all over the western country. To a very large extent Denver was developed in that decade, and it is to be said that the census of 1890 undoubtedly included a large floating population. The city swarmed with newcomers, thousands of whom were birds of passage making their way to the mountain mining camps. In that year there was a great rivalry among western cities to present large percentages of gain, and many subterfuges were employed to accomplish that purpose. There are no sound reasons for believing Denver's census-men were laggards in that contest.

So long as several independent towns, the people of which are separately enumerated, exist within the city's corporate limits, Denver will be deprived of a considerable population, that practically belongs to her, in every census. Elyria, Globeville and the others are distinct communities only in name; so it is with the fringe of suburban towns hanging to parts of the outer side of the city's boundary line. In the case of most of them there is no line of demarcation, yet the street railway system is fast-increasing their populations. The people here constitute one city in fact, and so long as larger and larger urban population is held to be highly desirable, they should constitute one city in name. The reports of the census of 1900 accord to the still independent suburban towns of Argo, Berkley, Elyria, Fletcher, Globeville, Montclair, Petersburg, Sheridan and Valverde an aggregate population of about 7,000; and to this perhaps 500 should be added to represent the fringing population not included in those towns. Therefore if these various separate communities had been counted with Denver the total would have exceeded 141,000. But even without them the result of Denver's last census compares most favorably with that in many other American cities, not one of which encountered such misfortunes as those that befell Denver seven years ago.



Fifteenth street northward from Lawrence street, in 1901.

Considering the violence of the blow received at that time, and the far-reaching disastrous consequences it entailed not only directly upon the city, but upon the State at large, the regaining of what Denver had lost would have been, alone, a notable achievement. But to have done that and added to it a population gain of more than 25 per cent. over her somewhat uncertain enumeration in the "boom" times of 1890, presents reasons for extreme satisfaction with the present and for the most confident anticipations for the future.

Denver is now fast rising on the fifth tide of prosperity and advancement that has definitely marked her career since the unpromising beginning made in 1858. The first was that of 1859-60 when thousands crossed the plains to the new land of promise, stayed a season or two, after which the vast majority went away again. Ten years of slow headway ensued, and then came the second wave of immigration, following the railroads completed from the Missouri river. It was at this juncture that Denver began to discard some of her pioneer aspects. Through the middle of the eighth decade of that century there was, as we have seen, if not a reaction, a distinct check to the expansion. But in 1880 came the third forward impulse, due largely, as we have stated, to the remarkable developments in silver mining at Leadville and elsewhere in that section of the State. This era of prosperity continued on a substantial basis for three or four years. The slight check it received in 1884-85 had been overcome in the autumn of 1886, when the fourth and most prodigious movement was inaugurated—the greatest, relatively and actually, that the city has yet known, but probably not the greatest she is destined to know. From 1894 to 1897, clearing away the wreckage engaged a large portion of Denver's energies, and the work was one calling for unflinching fortitude and unbounded hope. 1897 brought the beginning of the fifth and present era of development and growth, which has been of sure though deliberate progress, but which bids fair to exceed all previous forward impulses, and to carry the city into an era of fairer prospects, broader and sounder foundations, and relatively a far greater expansion than any she has hitherto known.

CHAPTER LXXIII.

WAR WITH SPAIN—INTEREST EXCITED IN DENVER—CALL TO ARMS—FIRST COLORADO INFANTRY—ITS ORGANIZATION—CAMP ALVA ADAMS—DEPARTURE OF REGIMENT FOR THE ORIENT—ITS SERVICES IN THE PHILIPPINES—REGIMENT ORDERED HOME—ARRIVAL AT SAN FRANCISCO—RECEPTION AT DENVER—REGIMENT'S MORTALITIES—COLORADO CAVALRY ORGANIZATIONS—COLORADO BATTERY—SOCIETY OF THE ARMY OF THE PHILIPPINES—NAVAL VESSELS "DENVER" AND "COLORADO."

In no part of the United States were the international events of the winter of 1897-98 that foreshadowed war between our country and Spain, that made armed conflict between them in consequence of Cuba's condition seem almost inevitable,watched with keener and more absorbing interest than by the people of Denver and of Colorado. As the situation became more acute public interest became more intense, and when tidings came of the frightful and treacherous tragedy in the harbor of Havana on the night of February 15, 1898, causing the destruction of the United States battleship Maine, and the death of 266 American sailors, the war-spirit instantly flamed here, as elsewhere all over this land of ours.

It is not within our province to enter upon any account of the then long-existing friction between the United States and Spain, nor of the immediate events that precipitated that remarkable war. All that properly lies within our domain is to record what was done here in response to the Nation's call to arms.

The people waited patiently, and impatiently, too, for the report of the commission appointed by the President to investigate the Havana harbor tragedy. But the temper of the people everywhere was reflected in the ominous and unanimous action of Congress on March 8th appropriating for the National defense $50,000,000 from the cash in the treasury—a financial transaction that would have staggered any other nation in the world. The report on the destruction of the Maine was sent to Congress by the President on March 28th, and it meant only one thing—that Spain was to be instantly driven out of the western hemisphere; and the determination that she should be, was as strong in Colorado as in New York, or Georgia, or Oregon, or Texas, or Massachusetts. The awe-inspiring spectacle of the most powerful yet the most peaceful Nation in the world drawing the sword unselfishly in behalf of a cruelly oppressed people was one that marked an epoch in the history of the nations of the earth.

War was practically declared by the Joint Resolution of Congress of April 13th recognizing the independence of Cuba, and directing the President to use if necessary the land and the naval forces of the United States to compel Spain to relinquish her authority over the island; it was made inevitable by the ultimatum of the United States on April 20th giving Spain three days within which to comply with the demand for such relinquishment; and on April 25th it was formally declared by Congress.

Under authority given and as directed by an act of Congress approved April 22nd, the day before the formal declaration, the President at noon on the 23rd, at the expiration of the three days of time given Spain, issued his proclamation calling for 125,000 volunteers to serve two years unless sooner discharged. The response was an amazing one. The men of the Nation rushed to arms. The quotas of the several States were relatively small, and there was almost fierce competition among gallant spirits to get into the ranks. Within three weeks the 125,000 were enlisted, and an army of a million others was disappointed, dejected, because its services could not be accepted. On May 25th the President called for 75,000 more volunteers, and it was only a physical matter of mustering them in to comply with that call. With the authorized increase of the regular army that had been made, the Nation, within two months from the first call, had under arms 278,500 of what were probably the best fighting men on the face of the earth.

At the time war was declared the Philippine archipelago constituted a part of the world almost unknown to Americans, and Manila was an oriental city but little more familiar to our people. That city's commercial fame rested chiefly on its large exports of hemp from which a superior quality of heavy cordage is made; but beyond that its name was associated with nothing definite by the vast majority of Americans; and especially so by those of the west. Even after war was declared few thought of the Philippines or of Manila in connection with the conflict. It was supposed by almost everyone that whatever there would be of warfare would occur in the West India archipelago. Yet, it was to that far-off quarter of the globe, half-way around it, that the Colorado organization that saw fighting service, departed from Denver, trained, armed and completely equipped, on the twenty-fourth day after the President issued his first call for volunteers.

The events in Manila Bay on May 1, 1898, and their consequences, had been as profound a surprise to the people of our country, though of a quite different kind, as they were to the Spanish nation; and to the rest of the world, for that matter.

Here in our own city and State, as elsewhere, there was but one sentiment—an enthusiastic desire for a vigorous prosecution of the war, not only against Spain, but also against any power that might have the temerity to attempt to interfere in her behalf. Party lines vanished, partisanship disappeared, in the presence of the patriotic spirit that ruled the thoughts of every man. Poor, misguided Spain had aroused and angered the American giant, and under his few but terrific blows that so quickly followed, she was soon prostrate, with the other nations of the earth beholding in amazement her swift, complete undoing.

Colorado's apportionment under the President's calls for volunteers was one regiment of infantry, two troops of cavalry, and a battery of artillery; a total of about 1,600 men—a mere handful compared with the military ardor and possibilities of the State. Prior to 1898 the State's military establishment had consisted of two half-strength regiments of infantry, three incomplete troops of cavalry, and the Chaffee Light Artillery; but early in 1898, in anticipation of war with Spain many recruits eagerly enrolled themselves in these organizations in order that they might be in line for service. Governor Alva Adams promptly mobilized the entire force, and on April 29th, the sixth day after the President's call for volunteers, and in less than forty-eight hours after receipt of telegram from Washington announcing Colorado's quota, the Colorado organizations went into camp near our City Park—"Camp Adams," in honor of the Governor. Within one week thereafter a full regiment of infantry, two troops of cavalry, and a battery of artillery—Colorado's full allotment—were practically ready for service.

This rapid and efficient work had been done under the immediate direction of Cassius M. Moses, then Adjutant-General of the State; Irving Hale, then Brigadier-General in command of the National Guard of the State; Henry B. McCoy, then Colonel of the Second Regiment Colorado National Guard; and Charles H. Anderson, then Colonel of the First Regiment Colorado National Guard.

The field and staff officers, appointed by Governor Adams for the First Regiment Colorado Infantry, United States Volunteers, and mustered into the service of the United States on May 1st, were Irving Hale, of Denver, Colonel; Henry B. McCoy, of Pueblo, Lieutenant Colonel; Cassius M. Moses (former Adjutant-General), of Pueblo, and Charles H. Anderson, of Denver, Majors; Dr. Clayton Parkhill, of Denver, Surgeon with rank of Major; Louis H. Kemble, of Denver, Surgeon with rank of Captain; Charles E. Locke, of Denver, Assistant Surgeon with rank of First Lieutenant; Alexander McD. Brooks, of Denver, First Lieutenant and Adjutant; Willian B. Sawyer, of Denver, First Lieutenant and Adjutant; and David L. Fleming, of Leadville, Chaplain with rank of Captain.

The twelve company organizations were designed to be so far as practicable, representative of different sections of the State. As a general rule the National Guardsmen were residents of the cities and towns, and the National Guard companies had been identified with the several town communities. In the organization of the new regiment it was the aim to have this identity continued; although in adding recruits to fill the Guard companies to the war standard the new men were assigned without much regard to their individual local identity. However, when the regimental organization was complete its several companies were in a general way representative of the several cities and towns and their immediate neighborhoods; that is to say, Companies A and C were from Pueblo; Companies B, E, I, and K were from Denver; Company D, from Greeley; Companies F and L from Leadville;

View at Camp Adams early in May, 1898.

Company G from Cripple Creek; Company H from Boulder; and Company M from Colorado Springs. The company officers were as follows:

Company A—John S. Stewart, Captain; William F. Dortenbach, First Lieutenant; Samuel E. Thomas, Second Lieutenant.

Company B—Frank W. Carroll, Captain; Charles B. Lewis, First Lieutenant; Charles E. Hooper, Second Lieutenant.

Company C—Ewing E. Booth, Captain; William H. Sweeney, First Lieutenant; Willard P. Bidwell, Second Lieutenant.

Company D—John A. Taylor, Captain; George Borstadt, First Lieutenant; Albert J. Luther, Second Lieutenant.

Company E—Kyle Rucker, Captain; Clarence W. Lothrop, First Lieutenant; Rice W. Means, Second Lieutenant.

Company F—G. Ralph Cummings, Captain; Charles S. Haughwout, First Lieutenant; Willard G. Riggs, Second Lieutenant.

Company G—David P. Howard, Captain; Thomas C. Brown, First Lieutenant; Walter P. Burke, Second Lieutenant.

Company H—Charles B. Eastman, Captain; Charles H. Wilcox, First Lieutenant; Fred L. Perry, Second Lieutenant.

Company I—William R. Grove, Captain; Charles H. Hilton, Jr., First Lieutenant; Charles O. Zollars, Second Lieutenant.

Company K—William A. Cornell, Captain; William J. Vannice, First Lieutenant; Ralph B. Lister, Second Lieutenant.

Company L—David P. LaSalle, Captain; Cornelius F. O'Keefe, First Lieutenant; Franklin Ballou, Jr., Second Lieutenant.

Company M—Clyde C. Spicer, Captain; Charles H. Sleeper, First Lieutenant; James H. Gowdy, Second Lieutenant.

The First Colorado was a superb regiment; even above the high standard of American volunteer organizations. Men from every walk of western life were in its ranks, and a majority of them had been made familiar with military duties by their training in the National Guard. Every man had passed an unusually rigid physical examination under which many others had failed to be accepted. A considerable number of the men of the two National Guard infantry regiments were rejected under that exacting examination, and hundreds of others also failed to meet its requirements. The result of this was that the regiment included none but picked men, as nearly perfect, physically, as men may be; and a further result of this was seen in the organization's later small loss by disease in a country and under conditions peculiarly favorable to large losses by such cause.

The regiment had hoped to be, as events quickly made it, among the pioneers in foreign service, but the general expectation was that the service would be in Cuba. This soon appeared to be confirmed by orders including it among the regiments that were directed to move to Chickamauga. Within a few days thereafter the Philippine situation caused a change in the programme, and on May 13th the First Colorado was ordered to proceed to San Francisco and thence by sea to Manila. On the 14th the regiment marched into the city in the pride of its strength and was presented by the Sons of the Revolution with a fine national flag; and on the 15th a regimental flag, the gift of Mrs. William Cooke Daniels, was added to the stand of colors. It is hardly necessary to state that those flags never went down.

On the morning of May 17th the splendid regiment of 1,086 officers and men left Camp Adams, and headed by its fine band and escorted by the cavalry troops, marched into Denver, and down Sixteenth street to the Union Passenger Station, whence four trains bore it away to the Pacific coast. That day in Denver will long be remembered. Sixteenth street and the vicinity of the railroad station were packed with people, and the regiment received a patriotic ovation the like of which had never before been witnessed in Denver. The regiment reached San Francisco without mishap, on May 21st, where it received another ovation and where its creature comforts were most lavishly provided for by the patriotic people of that city. No member of the First Colorado will ever forget that reception in San Francisco. The regiment went into camp at Camp Merritt, its own particular part of it being popularly called Camp Hale, in honor of its commander. The period of about three weeks in camp was utilized in thorough training of the regiment in guard duty, drill, parades, target practice, and especially extended order and battle formations on Presidio Hill. On June 4th the first death in the regiment occurred —that of Sergeant Neil Sullivan. About one week afterward preparations were begun for leaving camp and embarking on the long sea voyage to the farther side of the world.

Soon after the regiment arrived at San Francisco the War Department ordered that all volunteer regiments should immediately be recruited up to the new war standard of 104 men to each company. Three officers and a small detail of men were at once sent back to Colorado to obtain about 200 recruits, which was quickly done. These men arrived at San Francisco on June 24th, more than a week after the regiment had sailed for Manila. About one-half of them sailed August 1st and arrived at Manila on September 1st; the remainder did not get started until August 21st, and owing to a prolonged stop at Honolulu, where unassigned private Benoni W. Dawson was left fatally ill, did not reach Manila until November 23rd. The addition of these recruits raised the strength of the regiment to about 1,300 men including its Hospital Corps of twenty-five men beside the officers, and a fine band of about twenty musicians.

The regiment had boarded the steamer China on the afternoon of June 14th and the vessel moved that evening from her dock to an over-night anchorage. Three men, privates Daniels, Hegewer, and Loosa, were left behind in hospital, and all of them subsequently died. On the afternoon of the 15th, in company with three other transports, the Colon, Senator, and Zealandia, the China put out to sea on her long voyage, the expedition being under command of Brigadier General Francis V. Greene. The fleet proceeded to Honolulu where it put in on June 23rd for a three days' stay; thence to Wakes Island where General Greene, Colonel Hale and other officers landed and raised the American flag on July 4th; thence by way of Guam (July 9th) to Manila Bay in which it arrived on July 16th. The voyage was uneventful from a military standpoint, but was one of great novelty and interest to the Colorado boys. The death and burial at sea on July 5th of private Walter W. Wise, had been the only serious happening to the First Colorado during the voyage. The regiment was landed near Paranaque on the 18th and went into camp, with a tropical rain falling, in Camp Dewey. It was the first full regiment in that camp, and its first night on Luzon soil was one of extreme discomfort from the continued down-pour of rain, with only shelter-tents available at that time. After a stay of a week in Camp Dewey the regiment entered, with others, upon the active work of the campaign.

First Colorado Regiment at inspection in Manila.

The officers and men of the regiment took an active and enthusiastic part in landing stores, repairing roads, making reconnoissances and maps of the country and Spanish lines, building and guarding entrenchments and defending them against the night attacks of the enemy. Private Sterling of Company K, was the first American soldier to be wounded in the Manila campaign. While returning from fatigue work on entrenchments in front of the regiment, on July 30th, he received a bullet in one of his arms. During the interval in which the American forces were preparing for the assault on the city of Manila there were frequent skirmishes with Spanish troops, and in one of these, on the night of August 1st, the regiment had one man killed and another wounded. Private Frederick E. Springstead the first Coloradoan killed in that campaign, was shot through the head; and private Zachary, of Company G, was wounded in the right thigh.

About noon of August 12th, Colonel Hale, being notified by General Greene that the Colorado Regiment would have the left of the line, next to the bay, in the attack on Manila next day, took a party of 120 picked men (ten from each company) under Captain John S. Stewart and Lieutenant R. W. Means to the trenches to clear the ground in front, and with Captain Stewart and Lieut. Means carefully reconnoitered the ground to within 200 yards of the Spanish entrenchments, making a sketch showing the location of the paths, obstacles, and the Cingalon river which must be forded in the advance on Fort San Antonio, and which had been explored by Lieutenant Means and Sergeant Clotworthy a few days before. At dark the detail began work and during the night cut passages through the bamboo thickets and fallen brushwood and dug a trench half-way between the American and Spanish lines to be used as cover during the advance. This work greatly facilitated and in part rendered possible the operations of the following day.

The assault upon and the capture of the city of Manila occurred on August 13th, and in that affair the First Colorado, which was assigned to the most important position, bore a brilliant part. About 10:30 A. M., after a short bombardment by the navy and the Utah Battery, General Greene directed Colonel Hale to lead his regiment against the Spanish works and capture Fort San Antonio, giving a flag to Lieutenant Brooks, the Regimental Adjutant, with instructions to raise it in place of the Spanish flag as soon as the fort was taken. Half of the attacking party was thrown forward in extended firing line through the field to cover the advance through the bamboo thicket along the beach of the other half, which forded the Cingalon river neck deep, advanced by alternate rushes up the beach and through the surf, firing to keep the enemy down, swarmed over and around the flank of the parapet between Fort San Antonio and the bay, and captured the fort. While Colonel Hale, assisted by Majors Moses and Anderson, disposed the men in the trenches abandoned by the Spaniards to repel the latter's counter-attack from the buildings and woods of Malate where they had made another temporary stand, at the same time sending Captain Grove with his Company I to take possession of a trench in the south end of Malate, Adjutant Brooks with his flag, accompanied by Lieutenant Colonel McCoy and Lieutenant Lister, ran to the top of the stone fort where they hauled down the Spanish flag and raised the stars and stripes—the first American flag that floated over the defenses of Manila. This was about eleven o'clock in the forenoon. A few minutes later, Color Sergeant Richard Holmes and the Color-guard, who accompanied Company I to the trench in the edge of Malate (a suburb of Manila), flung the National and regimental colors from the upper story of the most prominent building in the vicinity—the first American flag raised within the city limits of Manila. It was here that private Charles Phoenix of Company I, was fatally wounded which, excepting a slight wound received by private Frank Smith of Company H, was the regiment's only casualty in the capture of Manila. The band had accompanied the regiment, playing "A Hot Time in the Old Town To-night," and later in the day when possession of the city was formally taken, it played the "Star Spangled Banner" as the flag was hoisted in the central part of Manila.

Based on the cabled recommendations of General Merritt and General Greene, immediately after the capture of Manila, Colonel Irving Hale was promoted to Brigadier General by the President. Governor Adams filled the vacancy by advancing Lieutenant Colonel Henry B. McCoy to Colonel, and Major Cassius M. Moses to Lieutenant Colonel, with corresponding promotions all along the line as more fully stated on a subsequent page.

After Manila was taken there ensued a period of nearly six months of garrison, outpost, and camp duty that became extremely irksome, and during a considerable part of which the regiment furnished the guard for Bilibid prison. About the middle of December, 1898, when some of the natives began to be troublesome, it was among the organizations that were placed on outpost duty around the city.

On the night of February 4, 1899, the organized outbreak of the Filipino insurgents under Aguinaldo was inaugurated. At that time the First Colorado was stationed near what were known as block-houses numbers five and six. In repelling the attack on the American troops that night several companies of the regiment were engaged, and it was at the capture of block-house number five on the morning of February 5th (the first insurgent position taken by American troops), that private Carlson was mortally wounded and died within an hour; the two block-houses having been taken with heavy losses to the Filipinos. Part of the Colorado regiment participated in the capture of the Manila water reservoir, on the 5th, and of the pumping station, on the 6th, of which the insurgents had held possession. In these encounters with the Filipinos the regiment lost three men killed, and had five wounded. The dead were privates Charles Carlson, Elmer F. Doran and Cass White; all the wounded speedily recovered. After the capture of the pumping station a detachment of the Colorado men found parts of the pumping machinery that had been removed and buried by the insurgents, put them back in place, and thus enabled the city's water supply to be resumed.

Through February and until late in March the regiment was on guard duty at the waterworks pumping station, and on the firing line, and in frequent brushes with the natives in their guerrilla warfare in the Mariquina valley. In one of these engagements, at the village of Mariquina, on March 6th, private Edward Pynchon was mortally wounded, his death ensuing on the 20th; and Major Charles H. Anderson was shot through the left ankle, and Corporal Charles W. Haskell through the thigh. On March 20th two privates were wounded by Filipino sharpshooters; one of them, A. A. Aldrich, of Company E, dying of blood-poisoning on April 18th.

Companies A, M, and part of E, under Lieutenant Colonel Moses, participated in the advance of the American lines toward Malolos, began on March 25th, and very early in that day was engaged in an ugly fight in the brush. It was while gallantly leading Company A in a charge in that engagement that Captain John Stewart, of Pueblo, was instantly killed. Two men of Company A and one of Company M were severely wounded at the same time. The insurgents paid dearly for the death of Captain Stewart that day, for the spirit of revenge took possession of the Colorado men. After this engagement the companies returned to their station near the waterworks.

On March 31st, Companies C, D, E, and G of the Colorado regiment, which had remained on duty at or near the waterworks, in "Camp Alva," (so named in honor of Governor Adams), took part in a movement against Mariquina and San Mateo. The insurgents were preparing for an attack on the waterworks, and had intrenched themselves near Mariquina. Early in the morning of March 31st the four companies, under command of Colonel McCoy, and acting in co-operation with other troops, set out from Camp Alva to drive the insurgents from their rifle-pits. It was on that march that our men made their famous river-crossing, wading waist-deep in the face of a volley from the Filipinos who then immediately took to their heels. Our troops pushed on up the valley and when within a mile of San Mateo encountered a long line of intrenchments swarming with insurgents. In the assault upon these and the routing of the Filipinos, Corporal Leonard Phillippi was shot through the head, death ensuing the next day; and six men were wounded, two, H. E. Redmond of Company C, and John Dennis, of Company G, very severely.

Through April and May the re-united companies of the First Colorado remained at Camp Alva on guard duty, the tedium of which was broken by frequent expeditions by detachments into the surrounding country after bands of insurgents. Sometimes the latter were encountered and sometimes they were not. On May 1st Sergeant Clifford H. Bowser, of Company K, walked into a nest of them. With six men of his company he had gone on a reconnoissance in the direction of San Mateo. About five miles out he halted and ambushed his men, and went ahead alone to see what he could find. He found five Filipinos, all of whom shot at him, one sending a bullet through his left arm and shoulder. The Sergeant retreated with the five Filipinos after him. They followed to within close range of his concealed men who fired on them, killing three, and wounding the other two who made off. The squad then returned to Camp Alva and the wounded Sergeant was sent to hospital. He did not survive the later amputation of his arm, his death occurring on June 9th.

Another squad which went scouting toward Mariquina on May 23rd was equally unfortunate. Sergeant C. B. Clark and four men of Company C, constituted the force. In his zeal, private Harry L. Doxsee pushed ahead of the others, was fired upon by some insurgents and mortally wounded. The others were driven back and forced to leave Doxsee behind. The next day Companies A, B, C, and D attacked the band of Filipinos which numbered about fifty, dispersed them, and recovered Doxsee's body which was buried in the National Cemetery at Manila on the 24th.

Late in May General Lawton had decided upon a movement in considerable force against Antipolo, a Filipino fastness and refuge in the mountains to the northward of Pasig City. An effort in that direction by General Wheaton's troops had been made about the middle of March, but it had not accomplished all that had been desired. In the morning of June 3rd a force of 2,500 men under command of General Robert H. Hall started across the Mariquina valley toward the mountains. In this expedition, the Colorado regiment was represented by Companies A, C, F, G, K, and L. The mountains were reached after noon, and the advance into them was resisted by swarms of insurgents hidden in the undergrowth upon their slopes. Great difficulty was experienced in moving the battery of small guns and the wagons after the mountains were reached, and the toil and heat and guerrilla fighting made the day a hard one on the men.

The force was about three miles from Antipolo when it went into camp for the night. The Colorado men were placed on the skirmish line next morning, and while on that duty Charles T. Hickman, of Company A, was wounded. Another column, under General Lawton, had moved upon Antipolo by a different route, the plan having been to attack the place by front and rear. General Hall's force advanced early on the morning of June 4th, and the Colorado men surrounded Anti-

---

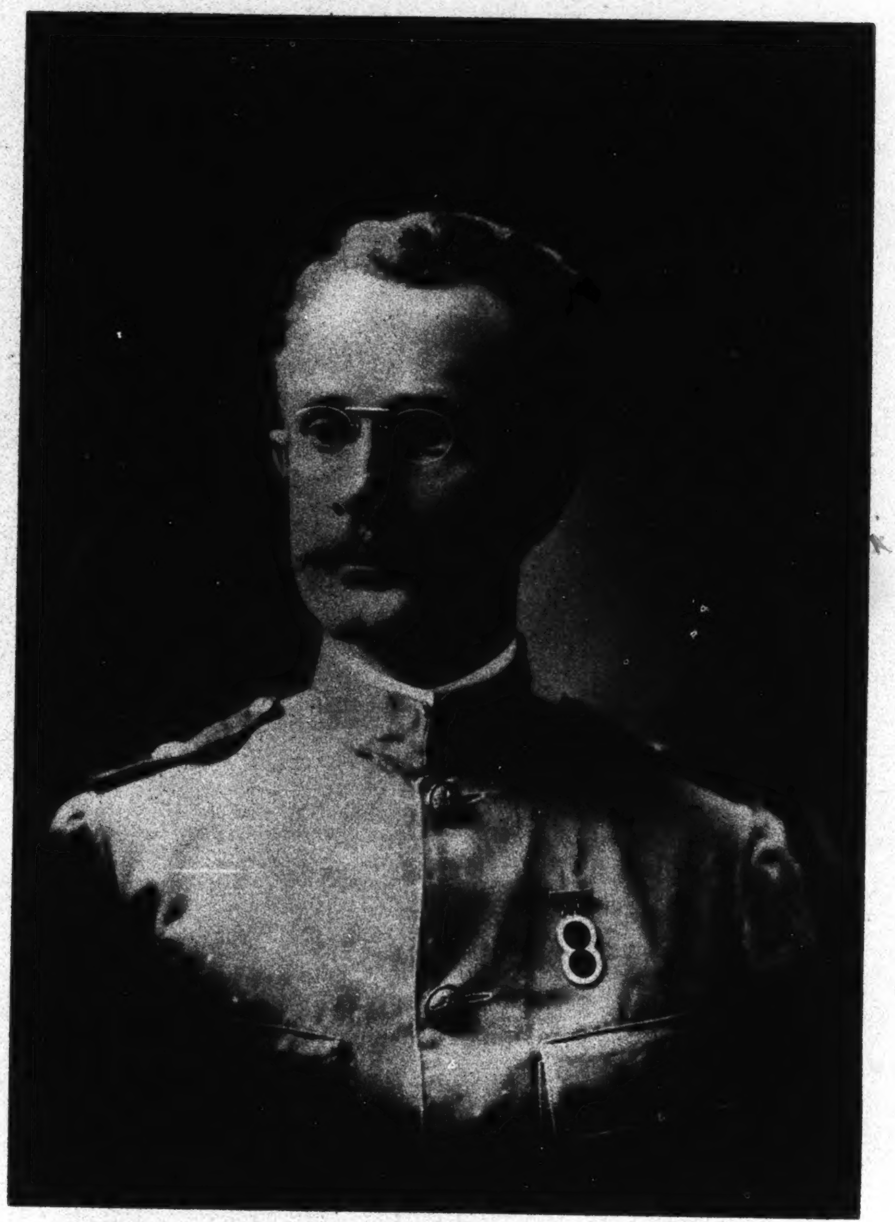
Irving Hale, son of Horace Morrison and Eliza (Huntington) Hale, was born at North Bloomfield, N. Y., August 28, 1861. His great-great-grandfather, Col. John Hale, was a surgeon on the staff of Gen. Prescott in the Revolutionary army; his great-grandfather, David Hale, while still a boy, was a patriot soldier in the battle of Bunker Hill; and his father, whose life has been devoted to educational work, was long and until recently President of the State University of Colorado.

Irving Hale removed with his parents to Colorado in 1865, the "prairie schooner" in which they traveled having been forty days on the voyage across the plains from St. Joseph, Mo., to Denver. The family proceeded to Central City where the father became Principal of the public school. In 1873 the family removed to Denver, and after five years' residence here returned to Central City in 1878.

General Hale's earlier schooling was under his father at Central City. In Denver he entered the "East Denver" High School in the old Arapahoe street building, and in 1877 was graduated at the head of the first class which left that institution.

His experience in the summer of 1878, which was spent in Middle Park, hunting, fishing, and "roughing it," suggested the idea of operating an express and passenger wagon between Central City and Grand Lake, a distance of seventy-five miles. In 1878 he provided himself with a covered wagon and a mule team, and started his express; and through the summer and autumn of that year made regular trips between the two places, frequently alone, through what was then an almost uninhabited country, and traveling one of the roughest of mountain roads, or trails. On those trips he studied, when he could as he drove along, in preparation for the competitive examination for appointment to the United States Military Academy at West Point. This examination he was almost prevented from attending by forest fires which made the regular Berthoud Pass road impassable, and necessitated a difficult and dangerous trip over the abandoned and practically destroyed Boulder Pass road. He won in the examination and received the appointment.

Entering the Academy June 14, 1880, he was graduated at the head of his class in 1884; his total standing having been 2070.4 out of a possible 2075—the highest record made in the history of the Academy to the present time. He was commissioned Second Lieutenant of Engineers June 15, 1884, and was stationed at Willets Point, Long Island, N. Y., taking the post graduate course in engineering and torpedo service. He was promoted to be First Lieutenant of Engineers Sep-



Irving Hale.

polo about nine o'clock and found the town deserted; the inhabitants having fled with the insurgents to Morong, when it was discovered that the Americans were coming from both directions. Lawton's force had captured a couple of other villages, and late in the evening of June 4th part of it reached Morong by water and was soon in possession of the town, though most of the insurgents had again fled. Hall's column moving down the mountains reached Morong, on the shore of Laguna de Bay, in the morning of the 5th. In the afternoon of the 6th Hall's force took up the march along the shore of the Laguna back to the Manila waterworks, arriving there on June 7th after a very rough and toilsome footing of about fifty miles under most exhausting climatic conditions. The only casualty in the Colorado companies on that expedition was the one already mentioned.

The next expedition against the insurgents in which the Colorado men took part, was that of General Lawton to capture or disperse a large force, supposed to number between 7,000 and 8,000 Filipinos at and near Paranaque and Las Pinas, where they had been assembling for several months. The American force consisted of 5,000 men, all of whom were regulars except one Troop of Nevada Cavalry and Companies B, D, E, F, I, and M, of the First Colorado under Colonel McCoy and divided into two battalions, one of which was commanded by Lieutenant Colonel Moses and the other by Major W. R. Grove. The force rendezvoused at San Pedro Macati, and before dawn in the morning of June 10th it moved out, with the Colorado companies at the head of General Wheaton's brigade which led the way into a hilly, rocky and jungle-grown district. Soon after daybreak the insurgents were encountered and the fighting began, with the Colorado men on the skirmish line. A large body of insurgents were intrenched on a thicket-covered hill, and in the advance upon them Lieutenant Colonel Moses was shot in the left forearm, an artery being severed; Corporal Frederick Reed and private W. J. Currier, both of Company E, were severely wounded by one bullet; private Hegewer was struck in the neck, private Macklem in the temple, private Morrill through the neck, private Henry in the right arm, Sergeant LaShell in the left arm, private Young in the knee, and private Duval had one of his legs broken. The latter died of his injury a few weeks later.

But the hill was taken all right enough, and its defenders scattered over the adjacent country, hiding in thickets and in the high grass and bamboo-brakes. Their pursuit was continued throughout the day which was fearfully hot, and the troops actually suffered from lack of water. The Filipinos hid with the cunning of foxes and the search for them became an aimless wandering. Late in the day a small body of troops of which Company E was a part, came upon a nest of them in some timber, and was soon so warmly engaged that help was needed, as the insurgents had managed to get around on the flank and were threatening serious trouble. The other Colorado companies with a regiment of regulars, after fording several streams waist-deep, came up and the band of Filipinos numbering several hundred were soon scattered. It was in this affair that Joseph Kearns, of Company M, was shot through one of his legs. The little army moved on until darkness overtook it, and

---

tember 16, 1886, and was appointed Instructor in electricity, and torpedo service. In 1887 he served as Quartermaster and Commissary of the Battalion of Engineers and as a member of several Boards, including those dealing with the Patrick Automobile Torpedo and the Washington Aqueduct Bridge. While stationed at Willets Point he married in June, 1887, Mary Virginia King, daughter of Lieutenant Colonel William R. King, United States Engineers. In 1888 he represented the Battalion of Engineers in the Division of the Atlantic rifle competition at Fort Niagara, winning first skirmish medal and first gold medal for the highest total in known distance and skirmish firing. In September, 1888, he was ordered to West Point to be Instructor in Civil and Military Engineering.

Having looked forward to a return to Colorado, and having made a special study of electricity, Lieutenant Hale obtained leave of absence in 1889, came to Denver, and superintended the construction of the South Broadway line of electric street railway which was completed and started on Christmas day of that year. In April, 1890, he resigned from the army and became associated with the Edison General Electric Company (later merged into the General Electric Company), of which he is Manager of the Rocky Mountain District comprising Colorado, Wyoming, Utah, and New Mexico; a position he was filling when war with Spain was declared, and which he resumed upon his return from the Philippines.

On May 4, 1897, he was appointed Lieutenant Colonel of the First Regiment Infantry, Colorado National Guard; on October 23, 1897, was promoted Colonel of that regiment; on December 18, 1897, was made Brigadier General, Colorado National Guard; and at the outbreak of the war with Spain was commissioned Colonel of the First Regiment, Colorado Infantry, United States Volunteers, May 1, 1898. The record of his brilliant services in that war that resulted in his promotion to Brigadier General of United States Volunteers is outlined in this chapter of our History of Denver. He was honorably discharged from the volunteer service at Denver October 1, 1899.

General Hale received from the University of Colorado the Degree of LL. D., and from the Colorado State School of Mines the Honorary Degree of Electrical Engineer. He is a member of the University Club, Colorado Scientific Society, American Institute of Mining Engineers, Denver Athletic and Artists' Clubs, Civil Service Reform Association, President of the Colorado Society Sons of the American Revolution and of the National Society Army of the Philippines.—J. C. S.

then put in the night without shelter and in dribbling rain as best it could. The next day the American forces occupied the town of Las Pinas without resistance, the fighting Filipinos having disappeared.

This was the last field service in which the Colorado regiment or any part of it was engaged. Late in the afternoon of June 11th the Colorado companies started from Las Pinas on their march of ten miles back to Manila, going by the way of Paranaque. They went into quarters in Manila that night, and on the 12th resumed their station at the waterworks, where the greater part of the regiment remained until it embarked for home. On June 12th, while lying in his tent, private Edgar Pate, of Company H, was wounded in one of his knees by a Filipino bullet; the last casualty that befell any member of the regiment.

General Hale's services in the Philippines were exceptionally brilliant. After his promotion he succeeded General Greene September 7, 1898, in command of the Second Brigade, Second Division, Eighth Army Corps, which was quartered in and guarded the northwestern part of Manila. At the outbreak of the Filipino insurrection, February 4, 1899, this brigade consisted of the First Colorado, First Nebraska, and First South Dakota Volunteers, and maintained a line of outposts from Blockhouse No. 4 near La Loma church, southeasterly past Blockhouses Nos. 5, 6, and 7, Santa Mesa and San Juan bridge, to the junction of the San Juan and Pasig rivers.

It was on the Nebraska front opposite Blockhouse No. 7 that the attack occurred. After weeks of encroachment on our lines by the Filipinos, and frequent insults and threats to our outposts, a party of armed insurgents advanced on a Nebraska outpost about 8:30 p. m. on February 4th and, refusing to halt when repeatedly challenged, the sentinel was obliged to fire. The insurgents returned the fire which, in accordance with their prearranged plan, was taken up by their lines all around the city—and the Filipino war was on.

The American troops were rushed out to their assigned positions on the line which was held during the night, returning the enemy's fire at intervals. The next morning the Utah Battery stationed with the Colorados at the Sampaloc Cemetery in the center of the brigade, opened fire on Blockhouse No. 5 and trenches. After a lively bombardment General Hale having decided that the Filipinos were sufficiently shaken to justify an assault, ordered Colonel McCoy to send Major Anderson's battalion of the First Colorado against Blockhouse No. 5 and to take it; which was immediately done—the first assault and capture in the Filipino war. Orders were then sent to Colonel Frost, of the South Dakotas, to take Blockhouse No. 4 on the left; to Colonel Moses, commanding the right wing of the Colorado regiment, to charge Blockhouse No. 6; and to Colonel Stotzenburg, of the Nebraskas, on the extreme right (reinforced by Colorado Companies D and E under Major Grove) to capture Blockhouse No. 7, the San Juan bridge, and the Deposito (reservoir). All of these positions were gallantly taken, and before noon the Second Brigade was in possession of the entire insurgent line in its front, and the Filipinos were in wild retreat.

Captain John S. Stewart.

On February 6th General Hale with part of his brigade (the Nebraskas; Major Grove's two companies D and I; a battalion of Tennesseeans; and a battalion of the Twenty-third United States Infantry) moved against the waterworks pumping station seven miles east of Manila, and after a cross-country fight routed the insurgents and took possession of the pumping station and pipe line; thus assuring the safety of the city of Manila's water supply. The Colorado companies then returned to their regiment which occupied an intrenched line from near Blockhouse No. 4 to Blockhouse No. 7 near San Juan bridge. The Nebraska regiment guarded the water pipe line and reservoir until March 14th, when it changed places with the Colorado regiment more or less companies of which held the waterworks station from that time until the regiment's departure for home.

When General MacArthur's northern campaign began, March 25th, the Colorado regiment was taken from General Hale's brigade, to his and the men's great regret, as General Otis deemed it unwise to put a new regiment in the important position at the waterworks. After this change the brigade consisted of the First Nebraska, First South Dakota, and Tenth Pennsylvania; the latter having been substituted for the Colorado regiment.

The campaign against Malolos, the Filipino capital, began on March 25th, and after seven days of marching and fighting, driving the insurgents from intrenchment after intrenchment, ended with the capture of Malolos on March 31st. The

Second Brigade had been engaged on March 25th at San Francisco del Morte, Banlae, and Tuliahan river; on the 26th at Meycauayan (near Polo) where General Hale was slightly wounded but remained in action, and his Aide, Captain Krayenbuhl, was killed; on the 27th at Tigogon Arroya, Bocave river, Santa Maria, and Guiginto where Lieutenant F. L. Perry of the First Colorado and Aide to General Hale was slightly wounded; on the 29th at Marilas where private H. B. Kerr of Company H, First Colorado, serving as Perry's orderly, was dangerously wounded in the chest; on the 30th north of Guiginto; and on the 31st in the capture of Malolos. The brigade remained at Malolos about three weeks, during which time the Tenth Pennsylvania was relieved by the Fifty-first Iowa Volunteers.

On April 23rd General MacArthur's Division began the campaign against Calumpit, the new Filipino capital which the insurgents considered impregnable. The Second Brigade executed a turning movement to the north and then to the west, and was heavily engaged on April 23rd at Quingua where Colonel Stotzenburg of the First Nebraska was killed in a charge in which the killed and wounded of his firing line aggregated twenty per cent. of those engaged; on April 24th at the crossing of the Quingua river, Pulilan, and again west of Pulilan; and on April 25th at the Calumpit river where, after a hot fight across the river which was not more than fifty yards wide, General Hale and Major Mulford who then commanded the First Nebraska, took a party across the junction of the Calumpit and Baglag rivers just above the broken Baglag bridge where the water was up to their necks, flanked the insurgents from their trenches and captured the town of Calumpit; the Filipinos retreating across the Rio Grande Paupauga, from which position they were driven two days later by General Wheaton's brigade.

On May 2nd General Hale took part of his brigade back to Pulilan to support General Lawton's movement against Baliuag, returning to Calumpit on May 3rd.

Aguinaldo having set up his movable capital at San Fernando, General MacArthur's Division moved against that place on May 4th; General Wheaton's brigade marching up the railroad and General Hale's along the wagon road farther east. The insurgents were encountered south of Santo Towas, and after an advance of two miles through waist-deep swamp and wading eleven streams, the American troops drove them from their trenches and back to San Fernando. Next day, under orders from General MacArthur, General Hale took the Fifty-first Iowa and by a turning movement forded the San Fernando river and captured the town. MacArthur's Division established headquarters at San Fernando, and during the next two months had numerous engagements with the Filipinos in that vicinity.

General Hale was relieved from command of the Second Brigade, Second Division, Eighth Army

Corps, on July 5, 1899, to return to the United States with his former regiment, and sailed from Manila on the transport Warren accompanied by Mrs. Hale who had been in Manila since February 9th.

Orders for the First Colorado to prepare for embarkation were issued on July 4th, and camp at the waterworks was broken next day. On July 6th the regiment marched into Manila where final preparations for its homeward voyage were made. After a stay of a little more than a week in Manila the regiment boarded the transport Warren on July 15th, and on the 18th she sailed away—exactly one year from the day the First Colorado had first set foot on Luzon soil. Within that year and aside from the fighting it had done, the regiment had had experience with all the varied and trying phases of climatic conditions and consequences of which the tropical Philippines are capable.

The Warren proceeded to Nagasaki, Japan, where she arrived on July 25th. After replenishing fuel and stores, the transport put out for Yokohama, arriving there July 30th. After a stop of three days, the Warren sailed from Yokohama for San Francisco, and entered the home port on August 16th. On the homeward voyage two deaths occurred—privates Frank B. Lindsey, of Company L, and Ivan Tinnerholm, of Company H. Frank Neptune, of Company H, died soon after reaching San Francisco.

About ten per cent. of the regiment had asked and received discharges at Manila, having decided to remain in the Philippines. At that time the Thirty-sixth Regiment of United States Volunteers was being formed there, and thirty of the discharged Colorado men at once enlisted in it. Several officers of the First Colorado resigned at Manila to take commissions in the Thirty-sixth. These were Major W. R. Grove, who became Lieutenant Colonel, and later Colonel, of the Thirty-sixth; Captain E. E. Booth, and Lieutenants C. H. Sleeper, C. F. O'Keefe, and Benjamin Lear.

During the sixteen months of the regiment's service to the United States many promotions and changes had been made among the officers, as has been indicated in the foregoing accounts, and several men from the ranks had received well-earned commissions. The first of these occurred in the Hospital Corps. Soon after the regiment reached San Francisco in May, 1898, Surgeon Clayton Parkhill was called from it and attached to the Department of the Pacific. Later he was transferred to service in Cuba. His position was filled by the advancement of Captain Louis H. Kemble. Lieutenant C. E. Locke moved into Captain Kemble's place, and private David D. Thornton became Lieutenant Surgeon.

Colonel Hale, as the reader has seen, was not long at the head of the regiment in the Philippines. On September 3rd he received information that he had been appointed Brigadier General of United States Volunteers, to date from the capture of Manila, and on the 7th he relinquished command of the First Colorado. Lieutenant Colonel Henry B. McCoy then became Colonel, Major Cassius M. Moses Lieutenant Colonel, Major Charles H. Anderson Senior Major, and Captain W. R. Grove Major. Lieutenant Alexander McD. Brooks was advanced to Captain and later attached to General Hale's staff as Adjutant General of the Second Brigade, together with Second Lieutenant Fred L. Perry as Aide. Second Lieutenant R. W. Means was promoted First Lieutenant, and Sergeant Henry L. Clotworthy Second Lieutenant for gallantry in daring reconnoissance work. Later promotions made Lieutenant Hilton a Captain, Second Lieutenant Fred. L. Perry a First Lieutenant, and First Sergeant Benjamin Lear a Second Lieutenant. Still later Sergeant Major Tingley C. Wood was appointed Second Lieutenant to succeed Charles E. Hooper, resigned; and First Sergeant Cecil B. West to be Second Lieutenant, succeeding Franklin Ballou, Jr., resigned.

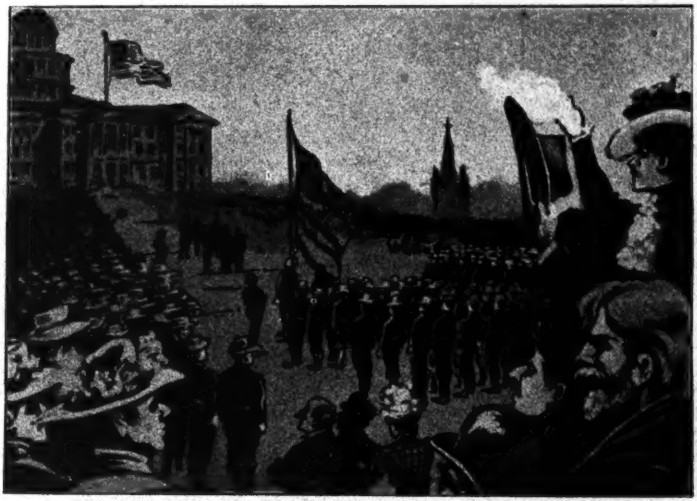
About the time the regiment was engaged in its last field service (June, 1899,) there were several promotions and changes. Second Lieutenant Albert J. Luther, of Company D, succeeded First Lieutenant W. J. Vannice, of Company K, who had resigned on account of broken health; Sergeant Frank DeVotie, of Company D, and Sergeant Jud Palmer, of Company G, were made Second Lieutenants. Lieutenant Borstadt was transferred to Company K, and Lieutenant West to Company E in place of Charles O. Zollars who had resigned.

In consequence of the resignation of several officers at Manila just before the regiment sailed for home, as we have already stated, there were several vacancies to be filled, and occupied until the regiment should be mustered out of service. The appointments to these, which were cabled to Manila and received the day the regiment went on board the Warren, made Captain David P. LaSalle a Major; Lieutenants W. T. Dortenbach and George Borstadt, Captains; Second Lieutenants James A. Gowdy, Walter P. Burke, Ralph B. Lister, and Samuel E. Thomas, First Lieutenants. The vacancies caused by these advancements of Second Lieutenants were filled from the ranks by the promotion of Sergeant-Major Frederick Gross, First Sergeants A. B. Teal and Russell H. Ingersoll, and Sergeants A. L. Bing, Alexander Shaw and H. I. Lawrence.

In addition to the promotions and changes stated in the foregoing, various other officers had been transferred from one company to another, the details of which are not essential here.

The regiment was one of the Second Brigade—at first under General Francis V. Greene and later under General Irving Hale—Second Division, Eighth Army Corps. In March, 1899, it was transferred to the Third Brigade, under General Robert H. Hall, Second Division.

The other volunteer organizations that served in the Philippines contemporaneously with the First Colorado were the First California, First Idaho, Fifty-first Iowa, Twentieth Kansas, Thirteenth Minnesota, First Montana, First Nebraska, First North Dakota, Second Oregon, Tenth Pennsylvania, First South Dakota, First Tennessee, First Washington, First Wyoming, and the Utah Light Artillery. Not one of these organizations proved itself superior to the First Colorado. After the capture of Manila General Greene declared that the latter had been the back-bone of his brigade.



Scene at the Capitol upon return of the First Colorado—Delivering the Regiment's Battle Flag to the Governor. From a sketch in the Denver Times.

The regiment was met at San Francisco by Governor Charles S. Thomas, Adjutant General J. C. Overmeyer and a party of Denver citizens including representatives of the Denver newspapers. On the march from the Warren's dock to the Presidio it received its second ovation from the people of San Francisco that was not less enthusiastic than the first when it arrived there on its way to the Orient. The regiment was mustered out at the Presidio on September 8th, and arrived at Denver in the morning of September 14th.

Under army regulations the men were entitled to receive from the government transportation to the place of their enlistment, or "travel pay" in lieu thereof. In order that they might receive and keep their travel pay a fund of about $35,000 was raised in Denver by popular subscriptions to pay for transporting the men home by special trains. The day of their arrival was a holiday in Denver, and the town had on its most patriotic attire. The homeward route of travel had been by way of the Rio Grande Western, and the Denver & Rio Grande railways, and several of the companies were left at their home towns before the trains reached Denver. However, a majority of the men came through to this city and received a royal welcome.

The regiment marched up Sixteenth street on the way to the Capitol through a mass of cheering humanity. The Capitol Park was occupied by an immense congregation of men, women and children—probably 25,000 of them. There, at the west front of the Capitol, with appropriate addresses and ceremonies, the stained and torn colors of the regiment were delivered to the Governor of the State, while an artillery salute was fired by the Chaffee Light Artillery. When the returning men had reached the line between Colorado and Utah they had been presented with a fine new silk flag, which was included in the standards delivered to Governor Thomas. The Color Sergeant of the regiment, Richard Holmes, was a young giant standing about six and one-half feet in height.

Upon the conclusion of these ceremonies the men were called to a feast spread for them in the Tramway Company's building at Colfax Avenue and Broadway. When the feasting was over the men of that regiment of superb citizen-soldiers, after the American way quietly returned to the walks of civil life, and within a few days were blended in the ranks of the great army engaged in the pursuits of peace.

By popular subscriptions a fund was easily raised to provide a suitable certificate of service and a bronze medal commemorative of patriotism and gallantry for each man who enlisted from the State of Colorado in the service of the United States during the war with Spain, which were presented to the men soon after the organizations were mustered out.

During its term of service the First Colorado lost forty men, of whom one was a commissioned officer, one a musician, and the others non-commissioned officers and privates. The battle-losses were comparatively light. Six men, including the commissioned officer, were killed in action; six died of wounds—in one or two cases very soon after being struck; one committed suicide; one was drowned; and twenty-six died of disease. In a few instances the type of disease is not stated. In making up the record of the regiment each man was taken into account, but in the few instances referred to the particulars of disease are not available. Considering that the regiment numbered about 1,300 officers and men, and that it served more than a year in a tropical country under climatic conditions to which the men were strangers, the small number of deaths by disease proves not only the remarkable physical excellence of the men, but also indicates careful attention to sanitary precautions and an unusually efficient hospital corps and service. The following is the mortality list between muster-in and muster-out.

Aldrich, Archie A., Company E, died of wound, at Manila, April 18, 1899.

Bell, William H., Company C, small-pox, January 11, 1899.

Bowser, Clifford H., Company K, of wounds, June 9, 1899.

Bryant, R. M., Company K., variola, February 25, 1899.

Bush, W. H., Company I, dysentery, March 24, 1899.

Carlson, Charles, Company L, killed in action, February 5, 1899.

Daniel, Elmer E., unassigned, septicaemia, at San Francisco, August 1, 1898.

Dawson, B. W., unassigned, remittent malarial fever, October 24, 1898, at Honolulu.

Donahue, W. J., Company F, variola, February 26, 1899.

Doran, Elmer F., Company I, killed in action, February 5, 1899.

Downing, Walter, Company L, acute dysentery, November 22, 1898.

Doxsee, Harry L., Company C, killed in action, May 23, 1899.

Duval, Frank A., Company F, died of wound, June 28, 1899.

Falkenburg, Harry C., musician, small-pox, January 20, 1899.

Haviland, Albert, Company F, variola, February 24, 1899.

Hegewer, Bert C., unassigned, spinal meningitis, at San Francisco, August 15, 1898.

Jefferson, W. S., Company G, typhoid fever, at San Francisco, November 20, 1898.

Lillie, Charles, Company I, acute diarrhoea, February 10, 1899.

Lindsey, Frank B., Company L, died at sea on homeward voyage, August 8, 1899.

Loosa, August H., unassigned, septicaemia, at San Francisco, August 5, 1898.

McDowell, Harry A., Company M, suicide, December 4, 1898.

McMurray, William S., Company C., accidentally drowned, November 2, 1898.

Neptune, Frank D., Company H, died in San Francisco upon return, August 22, 1899.

Phillippi, Leonard E., Company G., died of wound, April 1, 1899.

Phoenix, Charles, Company I, died of wound, August 18, 1898.

Pynchon, Edward R., Company K, died of wound, March 20, 1899.

Ramsay, Arthur, Company F, spinal meningitis, February 20, 1899.

Reisig, Harry J., Company M, July 14, 1899, of disease.

Sarazin, Norbert, Company B, typhoid fever, October 4, 1898.

Saunders, David I., Company I, small-pox, December 20, 1898.

Scroggs, John A., Company A, acute malaria, October 4, 1898.

Smith, Bernard J., Company B, variola, March 18, 1899.

Springstead, F. E., killed in action, August 1, 1898.

Stewart, Captain John S., Company A, killed in action, March 25, 1899.

Sullivan, Neil C., Company H, spinal meningitis, June 4, 1898.

Tinnerholm, Ivan, Company H, died at sea on homeward voyage, August 2, 1899, of consumption.

Warrington, George W., Company F, July 8, 1899, of dysentery.

White, Cass, Company D, killed in action, February 5, 1899.

Whiteside, Thomas F., Company M, died at Manila, March 23, 1899, of disease.

Wise, Walter W., Company I, spinal meningitis, at sea, July 5, 1898.

The statement has been officially made that the percentage of mortality by disease in the First Colorado was less than in any other regiment of equal numerical strength engaged in the foreign service of the United States during the war with Spain; a fact that tells its own eloquent story of the character and quality of its officers and men.

The two Troops of Cavalry and the Battery of Artillery which constituted the remainder of Colorado's apportionment of soldiers for the Spanish war had, as we have mentioned, been promptly organized. At that time Colorado had three skeleton Troops of Cavalry in her National Guard—A at Leadville, and B and C at Denver. As A and B were the ranking Troops, C had to withdraw from the contest for a place in the army, although it was among the organizations rendezvoused at Camp Adams. Troops A and B were actually mustered into United States service on May 6th, but the date was, for reasons not important here, officially made as of May 1st; and they were the only cavalry organizations Colorado could get into the service during that war, because of the clamor for recognition that was heard in every State of the Union. The three cavalry Troops had arrived at Camp Adams on April 29th, and Troop B was first of any branch of the service to be mustered in, and was actually the first Colorado organization placed in the service of the United States for the Spanish war; although in being so it was ahead of the First Colorado Infantry only a small part of a day. As Leadville was the headquarters of Troop A, and Denver of Troop B, the two were generally regarded as representing, respectively, the two cities; but the facts were that in raising the two Troops from their skeleton form to the full strength of eighty-four enlisted men, recruits were received from various places in the State; yet probably a majority in each command was from the city represented by it, or from the immediate vicinity thereof. The Leadville company had come to Camp Adams with its complement nearly filled, but the Denver company was of less than half-strength. Both were quickly brought to full-strength, for there was a great scramble to get in.

The officers of Troop A, as mustered into United States service, were Charles A. McNutt, Captain; John Harvey, Jr., First Lieutenant; Frederick A. Follett, Second Lieutenant. Of Troop B, William G. Wheeler, Captain; Arthur L. B. Davies, First Lieutenant; Francis A. Perry, Second Lieutenant. All of these had been the respective officers of the two companies as organizations in the National Guard. The two Troops were assigned to the Second Regiment United States Volunteer Cavalry, under command of Colonel Jay L. Torrey, who was the originator of the "Rough Rider" idea of cavalry organizations for the Spanish war, and who was chiefly instrumental in having it approved at Washington. The two Troops left Denver May 30th and proceeded to Fort D. A. Russell, near Cheyenne, Wyoming, where the regiment was organized, and where, retaining their letter designations, they became the ranking Troops of "Torrey's Rough Riders." Of the remainder of the regiment, seven Troops were from Wyoming, and one each from Nevada, Utah, and Idaho; its strength having been 1,028 picked men, finely equipped and superbly mounted. Many men from northern Colorado joined the Wyoming Troop organizations, but they had no identity as soldiers from our State.

The regiment left Fort Russell June 22nd under orders to join the Seventh Army Corps, under Fitzhugh Lee, at Jacksonville, Florida, where it arrived June 28th, and went into camp at Panama Park, seven miles from that city. On the way, a Trooper was killed at St. Louis by falling under the wheels of his train; and in a collision between two sections of the train at Tupelo, Mississippi, six more were killed, and many injured; among the latter having been the Colonel, whose feet were crushed. But none of the Colorado men were among the victims of that disaster, though two were slightly hurt.

The regiment had been organized in anticipation of immediate service in Cuba, and the Seventh Corps was selected as the one to lead in the contemplated attack on Havana. But the course of events was so swift that the Corps did not get away from Florida, and the Second Regiment, which physically and morally and in equipment, was probably the finest body of cavalry ever organized in any country, saw no fighting service, but remained in camp near Jacksonville until mustered out October 24, 1898.

Before the regiment left Fort Russell, Captain Wheeler of Troop B, had been promoted to be Major; Lieutenant Davies had been advanced to the Captaincy; and Sergeant Cyrus E. Mead had been made Second Lieutenant. While in camp near Jacksonville five of the Colorado men fell victims to fever; four of them having been members of Troop B. Ralph S. Johnson died September 10th; William J. O'Brien, September 13th;

Seventeenth street northward from Arapahoe street, in 1901.

Peter E. Moss and George G. Nellis, September 15th. The fifth man was Sergeant Thomas A. Woodhall, of Denver, serving on Colonel Torrey's staff, and who died October 2nd. No deaths occurred in Troop A.

As one of the Denver men who served in the regiment remarked to the writer, "if its career was not a glorious one from a military standpoint, it was for the simple reason that the regiment had no opportunities. Certainly, however, the deaths of thirty of its men in the short period of six months were just as heroic as those of the forty or forty-two of the First Colorado in about eighteen months and in actual hostilities."

The Chaffee Light Artillery was in one sense the basis upon which the Colorado Battery was organized, though the latter was made up almost wholly of new men nearly all of whom were from Denver and immediate vicinity. The Battery was not mustered into United States service until July 1, 1898. On July 2nd it was transferred to Fort Logan where it remained in camp until August 12th when it proceeded by rail to Fort Hancock, New Jersey, where it arrived August 16th. Its officers were Harry J. Parks, Captain; John G. Locke, First Lieutenant; John C. Exline, Second Lieutenant; all of Denver. The organization was designated as Battery A, First Colorado Volunteer Artillery, but as the regimental organization had no existence, and as the Battery was not attached to any other, it was really an independent battery during its term of service. It remained at Fort Hancock until mustered out November 7, 1898, and without having had a death among its members. It saw no fighting service and, as in the case of the two Troops of Cavalry, made no war record for the sole reason that it was given no opportunity to do so.

Two young men of Denver, Herbert A. Lafferty and Thomas R. Sullivan, who received commissions in the United States service early in 1898, died in service before the close of that year. After having completed the course in the "East Denver" High School, Lafferty had entered the West Point Military Academy where he was graduated in February, 1898, and immediately assigned to the Seventh Regiment United States Infantry (regular) as a Second Lieutenant. He served in Cuba with his regiment, and died at Montauk Point, New York, September 17, 1898, in consequence of a wound received at Santiago. Sullivan, who was a son of Dennis Sullivan, an old citizen of Denver, had been a member of Cavalry Troop B, National Guard of Colorado, from which he was honorably discharged by a special order from the State Adjutant General, on March 9, 1898, to enable him to accept a commission as First Lieutenant in one of the United States volunteer organizations. Assigned to Company I, First Regiment United States Volunteer Engineers, he served with it in Porto Rico where he contracted fever which caused his death in hospital at New York on November 3, 1898.

During the rather brief period of the war with Spain and for several months after the fall of Santiago had practically ended it, Fort Logan was the scene of much military activity. In the spring and summer of 1898 the scattered companies of several of the regular regiments rendezvoused there, and thence proceeded to their new fields of activity. After Spain asked for peace, troops were returning to Fort Logan; and then, again, after the Filipino insurrection of February, 1899, they were going forth on their way to the Orient to sustain the authority of the Nation. So it was, that with the going and coming of volunteers and of regulars, through that period of about eighteen months, at least one phase of War was brought very near to all our Denver people.

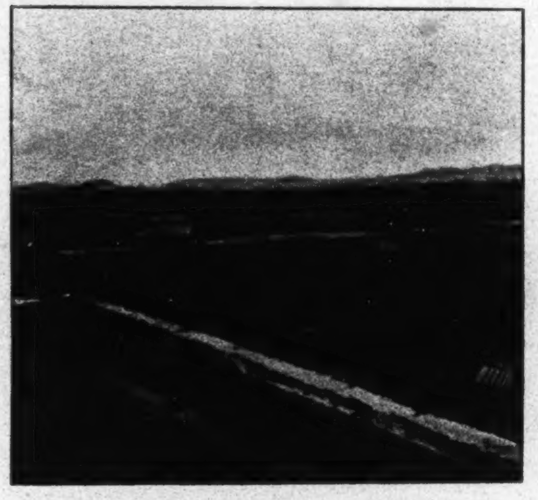
On August 13th, 14th and 15th, 1900, a reunion of the troops who had served in Luzon in the Eighth Army Corps, was held in Denver, representatives of the regular army and of nearly all the volunteer regiments mentioned on a preceding page having been present. The first day of the meeting was the anniversary of the assault upon and capture of Manila. The reunion was held at the instance of General Hale, the principal object having been to form a permanent organization. The "Society of the Army of the Philippines" was organized with the intention of having annual reunions hereafter, and it is hoped that the years will be many before the last one shall have been held.

This brief story of Denver and Colorado in the war with Spain may fittingly close with a reference to two fine war-ships now building for the United States navy. One of them, approaching completion, is to be a great cruiser of high speed, ranking next to battleships and armored cruisers in naval classification. Its construction was begun during the year of the Spanish war, and before its keel-plates were laid, the name selected for it was that of "Denver." The other, a huge battleship of the latest type, recently authorized by Congress and upon which construction has begun, is to bear the name "Colorado."

CHAPTER LXXIV.

DENVER'S PROMINENT BUILDINGS—DATES AND CIRCUMSTANCES OF THEIR ERECTION—PIONEER STRUCTURES PREVIOUSLY OCCUPYING THEIR SITES—CHANGES WITHIN FORTY YEARS—COST OF CONSPICUOUS PRESENT EDIFICES—SURVIVING OLD-TIME BUILDINGS.

Although Denver is but little more than forty years old, nearly all the buildings that constituted the pioneer town have disappeared; and a large proportion of those erected between 1860 and 1870 in what is now the general business section of "East Denver," are likewise things of the past. In the "West Denver" business section the later changes have not been so great. In 1870 the business district on both sides of the creek was practically confined to the area bounded by Seventeenth, Lawrence, and Ninth streets and the Platte river; but within that area were many dwellings and much vacant ground.



An unidentified view from an old photograph indorsed "View in Denver, 1871."

In the "East Denver" part of the district thus defined, many of the present buildings are the third structures erected on their sites; and in some instances present buildings are of the fourth series. Between Lawrence street and Broadway, Fourteenth and Eighteenth streets, a locality that was part of the favorite residence district between 1870 and 1885, the dwellings were, as a rule, the first structures on the ground; but nearly all of them have now given way to the encroachments of business buildings.

In "West Denver," outside the old business district to which we have referred, business structures have not, to any great extent, succeeded dwellings of the period between 1870 and 1885; but many of the domiciles now there are second constructions on the ground, and in not a few instances, the third. In "North Denver" the changes have been comparatively unimportant, as that division of the city is almost wholly a development of the last twenty years.

The American Hotel on the northeast corner of Sixteenth and Blake streets was one of the early large brick buildings, and the first hotel in Denver constructed on what may be termed "modern" lines. On September 18, 1867, the late John W. Smith, one of Denver's progressive and public-spirited citizens in those times, began removing the old buildings of the pioneer era that stood on the site, which had at an earlier time belonged to Thomas J. Bayaud. The house was finished and opened in 1868, and was the leading hotel until the Windsor was erected. In a later year an addition to it was built on Blake street.

The Albany Hotel, on the southeast corner of Seventeenth and Stout streets, was built in 1884-85 by C. H. Nix & Co., on land which theretofore had been unoccupied. The house was opened in July, 1885, by the builders and owners, and was then regarded as one of the finest hotels in the west. It was remodelled in 1893.

The Appel Building on the southwest corner of Sixteenth and Larimer streets, stands on ground that was unoccupied until the spring of 1860, and which has been used for business purposes since that time. In April of that year a small frame building which had stood at the southwest corner of Fifteenth and Lawrence streets was moved to this location where it later served as the office of the Clerk and Recorder of Arapahoe county, and incidentally of the Denver Town Company. Several years afterward the ground was leased by George E. Roper who built a two-story brick building on it. In 1892 M. S. Appel bought the site and erected the present building.

The Arapahoe Building on the south side of Arapahoe street, between Sixteenth and Seventeenth, the present numbers 1616 to 1622, was built in 1891, by Charles G. Chever. The original building on the site was the dwelling of Mr. Chever who was Clerk of Arapahoe county six years from 1861 to 1868.

The Bancroft Building on the northwest corner of Sixteenth and Stout streets, and the one adjoining it—808 to 818 Sixteenth, succeeded a handsome one-story brick residence built and first occupied by D. Tom Smith. It had a fine large yard around it and fronted on Stout street. Later it became the home of Dr. F. J. Bancroft whose wife received it as a wedding gift from her father. Dr. Bancroft built the corner building in 1881, and the other was erected several years later.

Dr. F. J. Bancroft's residence on site of Bancroft building.

The Bank Building on the southwest corner of Seventeenth and Arapahoe streets, constructed of Colorado red sandstone, and red pressed brick, five stories in height, was built in 1892 by George Tritch. On its site formerly stood the residence of Julius Mitchell, a well-known citizen of Denver for many years. The Tritch Building on Arapahoe street, next to the Bank Building was erected by Tritch in 1884, on the site of a cabin he owned and in which he lived in early times.

The Barclay Building, the fine structure on the northwest corner of Eighteenth and Larimer streets, was erected by the late James Duff, of London, in 1884. That corner had previously been occupied by several small buildings of the ante-railroad era. The State Executive offices were for several years in the Barclay Building, and it was the last of the private buildings occupied by the State Legislature; and therefore was one of the several temporary "Capitols" prior to the completion of the State Capitol.

The Barth Building on the northeast corner of Sixteenth and Stout streets was built by William Barth in 1887. It is a fine, four-story structure of dressed sandstone, and occupied the premises on which its builder's residence was built in 1869.

The Boston Building, a fine one of Colorado red sandstone, nine stories high, on the southwest corner of Seventeenth and Champa streets, was built by the "Boston Building Company," in 1889, and was the first of the strictly modern office buildings. The ground was originally occupied by the first Wolfe Hall, a seminary for young women, and was on the outskirts of town when that building was erected.

The Brown Building on the southeast corner of Sixteenth and Market streets, now known as the Metropolitan Hotel was, when its owner built it in 1868, the first brick building fronting on Sixteenth street. Its site was previously a vacant lot owned by the Bayaud estate, from which Mr. Brown bought it. But in early times a group of one-story log and frame structures stood on and adjacent to that corner.

The Brown Palace Hotel covering the triangular block bounded by Broadway, Seventeenth and Tremont streets is, aside from the State Capitol and, possibly, the Equitable Building, the finest and costliest structure in Colorado or elsewhere in the central region between the Missouri river and San Francisco. Its site had previously been unimproved; a strip along the Broadway side, twenty feet wide, was part of Henry C. Brown's land entry; the remainder consisted of fractional lots bought by him at various times until he had acquired the entire block which, before the hotel building was begun, was valued at three hundred and fifty thousand dollars. Mr. Brown, builder and owner of the magnificent hotel; did not acquire those relations to it by first intention. In the late "Eighties" the enterprise was conceived by the late William H. Bush, of Denver; and the late James Duff, of London, England. They sought and were promised English capital for it, a small portion of which they received. With this for a start they procured from Mr. Brown a provisional contract for the transfer of the land, and then made the great excavation

Night view of the Brown Palace Hotel.

for the structure's foundations. The English support then failed to further sustain the undertaking, and work stopped. After some delay, and in anticipation of the original projectors arranging for the hotel's erection and completion, Mr. Brown was induced to put in the foundations and erect the first three stories of the building, when operations were again suspended. It was at that juncture that Mr. Brown decided to take the enterprise off the hands of its projectors and complete the building himself. Extensive and costly alterations were made in what had already been built; chiefly in the interior arrangement which gives its great rotunda the present unique and commanding aspect. The house is a magnificent monument to the broad views and lavish enterprise of its builder. It stands in the geographical center of the city, is constructed of granite, and Flagstaff, Arizona, sandstone of a rich, dark reddish-brown color unusually pleasing to the eye. Its three fronts are almost alike, there being a slight exception in favor of the Broadway side. Architecturally it is a splendid example of dignified simplicity and exquisite taste. It is fittingly named, for it is, exteriorly and interiorly, a magnificent palace in the erection of which fifteen hundred thousand dollars were expended; adding to this the value of the land, and the cost of furnishing, the hotel represents an investment of nearly two millions of dollars. Its interior arrangement is most admirable, and in its finish presents a wealth of Mexican onyx, and bronze. The building contains no wood except that used for doors and window-frames, all the floors and partitions being of tile and cement supported by steel beams. Aside from its furniture and the doors and window-frames, the house contains nothing that will burn. It was begun in 1888, and completed and opened August 1, 1892.

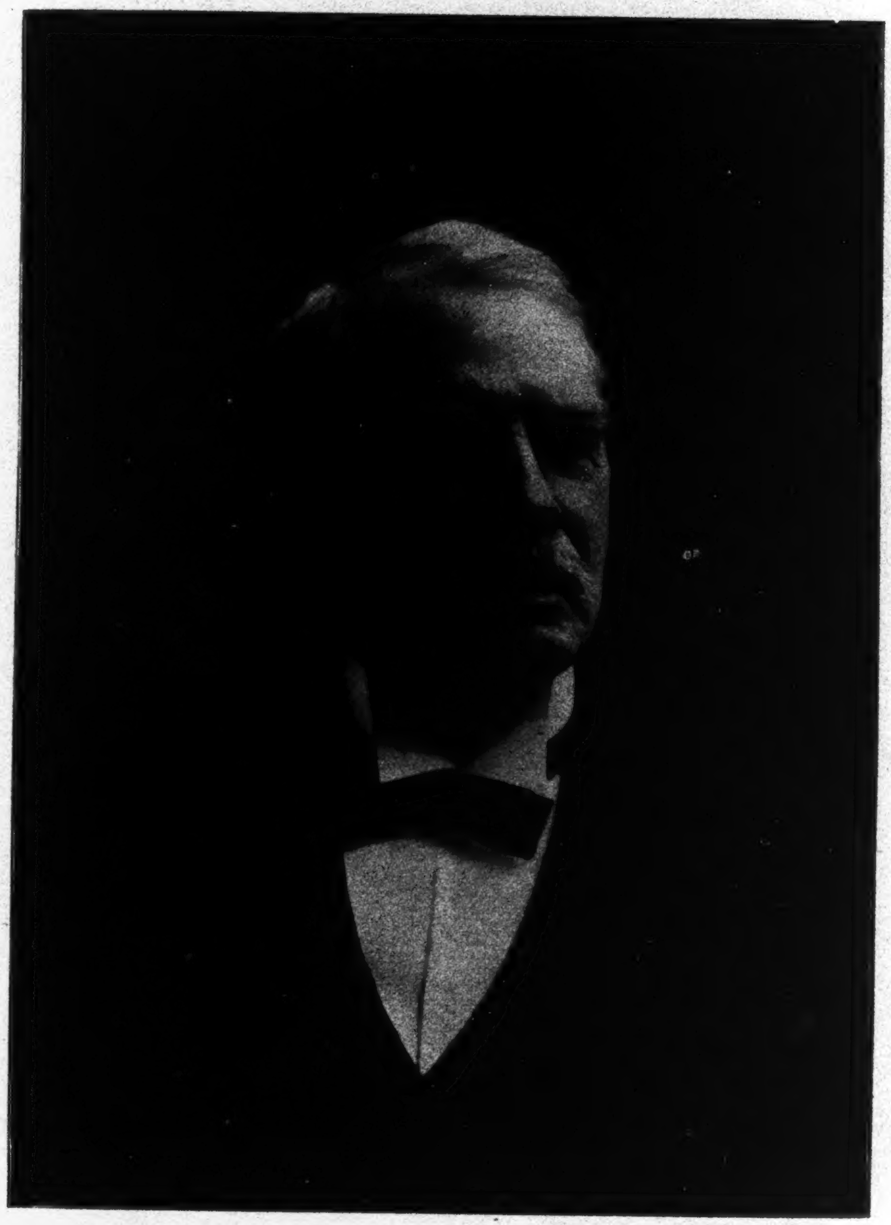
The Byers Building on the south side of Arapahoe street between Fifteenth and Sixteenth streets, stands on ground that was first occupied by a frame dwelling built in 1860 by Cooper & Wyatt, the pioneer saw-mill men. It was purchased by Joseph B. Cass who lived in it until 1864, when it was bought by Mr. W. N. Byers who made it his residence until 1879, when he removed to a new one "out in the country" at the northeast corner of Colfax and Sherman Avenues. Mr. Byers removed the old dwelling in 1882 to make place for the present business block. Nearly opposite the Byers Building, in 1868, was the brick residence of Mayor M. M. Delano, where Generals Grant, Sherman and Sheridan were entertained when they visited Denver in 1868. Mayor DeLano subsequently became United States Consul at Foo Chow, China, and served there several years. The DeLano residence was later owned by W. H. Pierce. Between it and the Sixteenth street corner was the dwelling of Mrs. J. H. Fillmore which in 1866 was occupied by Governor Alexander Cummings.

The California Building on the northwest corner of Seventeenth and California streets was built in 1892 by Dr. J. C. Blickensderfer. It is of granite and red pressed brick, seven stories high, and cost $100,000. On that corner formerly stood the residence of James W. Hanna, and the remainder of the present building's site is of the old residence premises of E. P. Jacobson whose dwelling still stands wedged in between the Cali-

---

Henry C. Brown, who has so long been identified with the development of the city, was born near St. Clairsville, Belmont county, Ohio, November 12, 1820. When he was two years old his mother died, and when he was seven his father followed her. The orphan boy was "bound out" to a Belmont county farmer, his apprenticeship to continue until he was sixteen. During those years he attended the country district schools when they were in session, and toward the close of his service he for a short time attended the Brooks Academy, at St. Clairsville. After his farm service ended he went to Wheeling, W. Va., and learned the trade of a carpenter, and in 1844 located in St. Louis where he worked until 1852. In the spring of that year he joined a party to go to California, and drove an ox-team from the Missouri river, the journey occupying 110 days. After a short stay in San Francisco, he went to Portland, Ore., then a mere hamlet, and from there to Olympia, now in the State of Washington, where he formed a partnership with two other pioneers, and the three built a large saw-mill at the mouth of Whatcom river. After a sojourn there of eight months he traded his interest in the saw-mill for a ranche near Forbestown, California, which he at once sold and again went to San Francisco. There he engaged in contracting and building and was soon doing an extensive business in which he continued until the autumn of 1856 when he removed to the interior of the State where he remained until the spring of 1857, and then sailed for Callao, Peru. After a stay of several months in Callao he set out for the United States in a sailing vessel bound, by way of Cape Horn, for Hampton Roads, Virginia, where he arrived early in the spring of 1858. From Hampton he immediately proceeded to St. Louis, which he reached in May, 1858, after six years of varied and picturesque experience. In St. Louis he worked at his trade a few months, and then moved on to Sioux City, Iowa, where he fell in with a party which was organizing the Decatur, Neb., Town Company. The men were inexperienced, and Mr. Brown entered the land for them on which they located their town, acted as their counsellor and guardian, and accepted their proposition to build for them a hotel in their embryo city. The Decatur Town Company failed, the hotel was left unfinished, and its builder much lighter in pocket, located in St. Joseph, Mo., where he resumed work as a contracting carpenter.

Early in 1860 Mr. Brown resolved to cast his fortunes with Denver, and in the spring of that year left St. Joseph with his belongings loaded in



Henry C. Brown.

fornia and an adjacent business structure on California street.

The Cass & Graham Building on the southeast corner of Sixteenth and Curtis streets was built in 1881 by Dr. O. D. Cass and William Graham. The corner portion of the site was occupied by a frame residence built by Richard E. Whitsitt in 1860, and which was his home for several years. Dr. Cass bought it from Whitsitt and resided in it for a time, when it was rented by Warren Hussey. The adjacent ground on the Curtis street side was owned by Jonas Deitsch and F. A. Clark, and next to it stood the frame dwelling of Redwood Fisher.

William Barth's residence on site of Barth Building.

The Charles Building on the southwest corner of Fifteenth and Curtis streets was built in 1889 by John Q. Charles, a pioneer citizen and prominent lawyer. It is of Colorado sandstone, six stories high. The ground was previously occupied by the builder's frame residence.

The Cheesman Building on the southwest corner of Seventeenth and Larimer streets was built in 1881 by Walter S. Cheesman. Several small buildings were the original occupants of the ground, and in one of them fronting on Larimer street Major Jacob Downing, the well-known old-time soldier, lawyer and real estate operator, had his office.

The City Building erected in 1883 on the northwest corner of Fourteenth and Larimer streets, stands on land built on in the beginning of things here. On the corner part of it E. P. Stout, President of the Denver Town Company, built a log cabin, with canvas roof and floor of earth, in December, 1858. The cabin was afterwards occupied by Charles Page, and still later by J. P. Sears. Between the Stout house and the bank of Cherry creek, D. C. Collier and William Clancy built in 1859 a small two-story frame building in the lower part of which those pioneer lawyers of Colorado had their office.

The Clayton Building on the southeast corner of Seventeenth and Lawrence streets was built by George W. Clayton in 1885-86 on ground on which his residence had stood.

The Cooper Building on the northeast corner of Seventeenth and Curtis streets, one of the fine modern office buildings, was erected by the late Governor Job A. Cooper in 1892-93. It is eight stories in height, the first two being of granite and the others of pressed red brick, the building being one of the more prominent structures in the city. Governor Cooper had long owned the two lots of the corner part of the site, on which he had built a small two-story brick business house; the remainder of those lots were occupied by small boxes of buildings. On the third lot stood the

---

a heavy wagon drawn by two yoke of oxen, and set out across the plains. At that time his worldly possessions, including his resources in cash, aggregated about $2,500. After a journey of forty-five days he arrived here on June 9th. He lost no time in getting work at his trade, and soon became known as one of the most industrious men in the town; and also as a most excellent, painstaking, and reliable man in his business. In those early days in Denver this quiet, persevering pioneer was often seen carrying on his shoulders odds and ends of material for his work, and later trundling his provisions out from town in a wheelbarrow and up the side of Capitol Hill to his little pre-emption house near the present intersection of Twelfth and Sherman Avenues.

Outlines of his subsequent career as one of the builders of Denver appear elsewhere in this volume. His faith in the city was always strong; and was not shaken by any of the ups and downs through which it has passed. We have told of his pre-emption of land which became his familiarly known addition to the town; of his donation of two-thirds of the magnificent site of the State's splendid Capitol; of his improvements elsewhere in the city made at times when less courageous men hesitated, and timid ones took flight; and of his crowning achievement in the construction of the palatial hotel which bears his name and will be a monument to his enterprises and liberality while the city of Denver exists.

Mr. Brown's long and interesting career has been an unusual one, and one in which industry at hard work occupied most of its years. From the beginning, he believed that his pre-emption quarter-section of land was destined to become what it has become—the choice part of Denver, and nothing could shake that belief. In many other years he had to sacrifice groups of lots here and there to get money enough to pay taxes on the remainder. In one year and for that purpose he sold twenty of them lying side by side for seventeen hundred dollars; and that twenty are now worth five times seventeen thousand. Eventually the increase in value of the remainder and of other holdings, and results of various business undertakings, represented a large fortune. But the consequences of 1893 entailed upon him most severe reverses, though they have not disturbed his belief that it is Denver's destiny to become a great mid-continent city of the United States.—J. C. S.

Site of the Equitable Building. Removing old structures in preparation for the present edifice.

dwelling of Dr. L. E. Lemen, fronting on Curtis street, which was moved off the ground to make way for the present structure. In earlier times that corner was occupied by the one-story frame cottage home of Dr. S. W. Treat, a physician who is most pleasantly remembered by many of our older citizens.

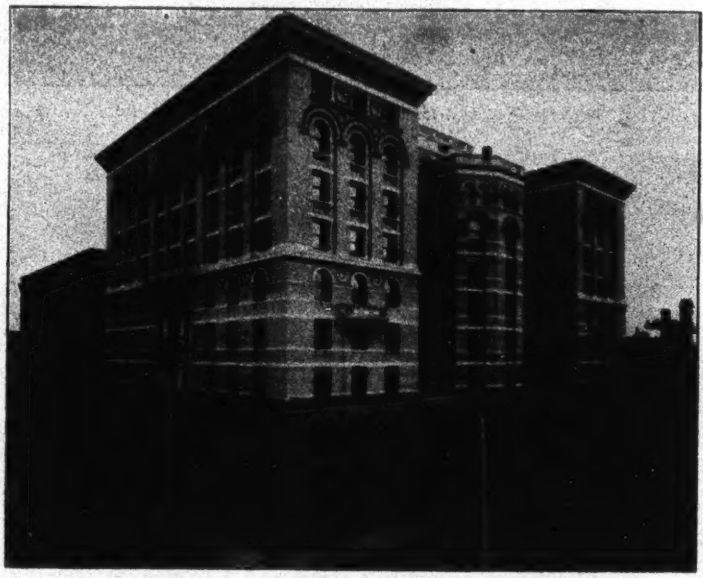
The Crandall Building on the northeast corner of Sixteenth and Welton streets was built in 1881 by Mrs. L. A. Crandall whose residence had occupied the site. The Crandall Building was one of the pioneers among business structures on upper Sixteenth street.

The Daniels Building on the southeast corner of Sixteenth and Lawrence streets was built in 1879 by the late W. B. Daniels, but not then of its present large proportions, as the upper story and an extension on Lawrence street were subsequently added. In 1876 Mr. Daniels built a two-story brick building on the corner, but this was removed when work on the larger building began in 1879. The corner part of the present large building's site was vacant prior to 1876, but an old and eccentric negro, "Old Lije," then a well-known town character, occupied a little box of a house which stood on part of the ground and fronted on Lawrence street. "Old Lije" was long since gathered to his fathers.

The Denver Dry Goods Company's Building on the northeast corner of Sixteenth and California streets was erected in 1888-89 by John J. Riethmann, who had owned the ground for several years. The site was first occupied by a florist, and later by a skating rink which, during the short career of that kind of amusement, was a popular establishment. In 1898 the addition of another story, and a large extension in the rear gave the building its present dimensions. The lots originally belonged to L. F. Bartels.

The Equitable Building on the southwest corner of Seventeenth and Stout streets is the largest and most stately business structure in the city. It was built in 1890-92 by the life insurance association whose name it bears, at a cost of one and one-half million dollars, exclusive of the amount paid for the land. It is nine stories high and constructed of native granite and light-colored pressed brick. The corner part of its site was occupied by a one story building that was removed to a new location. On the Stout street side stood the brick residence which in 1881 was the scene of the locally famous tragedy in which Charles F. Stickney killed a young man named Montgomery T. Campau, and a young woman named Devereaux. That house was afterward occupied by the old Union League Club. On the Seventeenth street side stood the small brick church building of the "Seventeenth street Presbyterian" congregation, the remainder of the site having been occupied by structures to which no special interest attached. In 1893-94 the State Executive offices were in the Equitable, and were removed thence to the new State Capitol in the autumn of 1894.

The Ernest and Cranmer Building on the south-



Equitable Building.

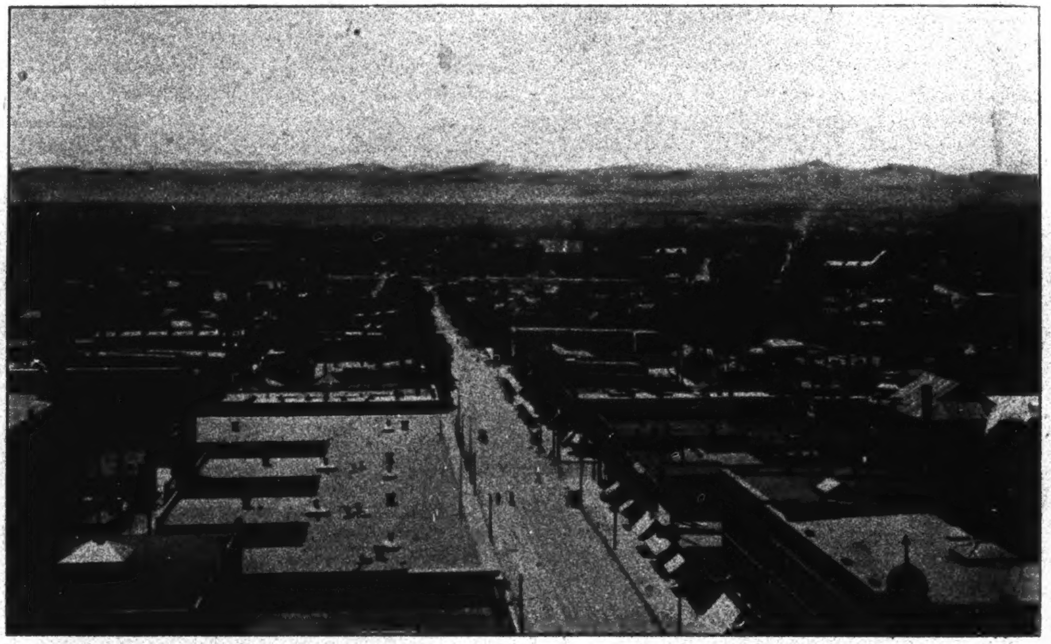
west corner of Seventeenth and Curtis streets stands on the site of Judge Amos Steck's old homestead, one of the handsome dwellings of its time. The present building, which is a conspicuous one, was built in 1890-91 by Finis P. Ernest and William H. H. Cranmer. The first two of its eight stories are of Colorado red sandstone; the other five of pressed brown brick.

The Essex Building on the north side of Lawrence street between Sixteenth and Seventeenth streets—street numbers 1617 to 1623, inclusive, was built by Charles G. Chever in 1887. On the rear of the site stood the little frame building long used in early times as the office of the Clerk and Recorder of Arapahoe county, and which was removed thither in the "Sixties" from the site of the Appel Building.

The Evans Building on the southwest corner of Fifteenth and Lawrence streets was built by Governor John Evans in 1872. It was one of the early Denver buildings of more than two stories, and was pointed to with much pride by all the citizens. The ground had been used from 1864 as a lumber yard by M. M. Delano who had a little office building on the corner; and in its rear on the Lawrence street side E. A. Willoughby then had his carpenter shop there.

The Fink Building on the southeast corner of Fifteenth and Market streets was built by J. P. Fink in 1873 and was considered an extravagantly fine building at that time, as it was three stories high and had a dressed sandstone front on Fifteenth street. In 1860 the French trader, G. Guiraud, put up a small frame building there which afterward was occupied by Fred Charpiot as a restaurant. After the Fink building was finished the Masonic order leased the upper floor and occupied it for lodge room purposes for many years.

The Gallup and Stansbury Building on the north side of Larimer street, between Fourteenth and Fifteenth streets—numbers 1445 to 1451—was built by Avery Gallup and A. M. Stansbury. It stands on the site of Stansbury's old "Tambien" saloon, one of the most noted drinking resorts of the "Sixties," and a place in which much of the seamy side of frontier life was exhibited.



View southwest from roof of Equitable Building, in 1901; Stout street in middle part of picture.

The Good Building on the northwest corner of Sixteenth and Larimer streets is the second of that name and by the same builder that has stood on that corner. The first was a small brick structure built by John Good in the middle "Sixties" on the corner part of the site of the present building. The ground had theretofore been owned by Henry Fuerstein and was vacant. Next to the original Good Building, on the west, stood the two-story brick building put up in 1866 by Byers & Dailey, and in which for many years thereafter was published the Rocky Mountain News. Next to the News' office lot Wallingford & Murphy's log store-building had been built in 1859, and was the first building on the east side of the creek to have a plank floor. It was over this Wallingford & Murphy building that a Confederate flag floated for a few hours one day in the spring of 1861. The Wallingford & Murphy site was subsequently occupied by a building in which Major John S. Fillmore kept the Post Office. The present Good Building covering most of the ground designated in the foregoing, was erected in 1888.

The Granite Building on the southwest corner of Fifteenth and Larimer streets, was built by W. M. and G. W. Clayton in 1881-82. The ground on which it stands was first built on late in the autumn of 1858, by General William Larimer, who put up his cabin near the alley on the Fifteenth street side, which he occupied, and in which A. O. McGrew, who brought his belongings across the plains in a wheelbarrow, was later a tenant. Directly on the corner a frame building was subsequently built by P. G. Lowe & Co., from Leavenworth, for their dry goods store. These buildings gave way to a two-story brick built by G. W. and W. M. Clayton who opened a general merchandise store in it. The brick structure was succeeded by the present building.

The Haish Manual Training School of the Denver University, on the southeast corner of Arapahoe and Fourteenth streets, built in 1887, occupies the site of St. John's Church in the Wilderness (Episcopalian), which was incorporated under that name by the Territorial Legislature in 1865. The original church building was a small brick structure standing on the corner, and with its later addition occupied the site until removed to make place for the Training School.

The "H. D. and F. Building" on the northeast corner of Sixteenth and California streets was built in 1893 by Hayden, Dickinson and Feldhauser. It is of five stories, of red sandstone, pressed brick, and steel, and cost $150,000. Before this building's erection the home of General W. H. Lessig was on that corner—a handsome residence standing in a large yard well shaded and beautifully adorned.

The Hughes & Bissell building on the northwest corner of Fifteenth and Lawrence streets was built in 1873 by John Hughes and Amos Bissell, the site having earlier been occupied by the barn and sheds of the Overland Stage and Express Company. The upper floors of the present building were rented by the county for the District Court, and county offices, thus making the building the county Court House for a time. The corner room on the ground floor was for several years occupied by the Post Office.

The Jacobson Building on the southeast corner of Sixteenth and Arapahoe streets was built in 1888 by the estate of Colonel E. P. Jacobson who died in April, 1881. The two-story brick residence of Luke Dubois, and his livery stable, previously occupied the premises. The stable stood next the alley, on the Sixteenth street side, and was bought from Dubois by George H. Estabrook who kept it a while, and then disposed of it to B. D. Spencer some time before the new building was erected.

The King Building on the north side of Lawrence street between Sixteenth and Seventeenth—the present numbers 1625 to 1645—was built in 1880 by Henry King, of Pittsburg, on the site of the dwelling of John Hughes, which first occupied the ground.

The Kistler Building on the north side of Lawrence street between Fifteenth and Sixteenth, was built by Jerome Riche in 1880. On its site was the white frame cottage residence of R. R. McCormick and his father-in-law, Major W. F. Johnson. Miss Emma Abbott, the opera singer, afterward bought the present property and the building was known by her name until it recently received the one it now bears. The street numbers are 1537-1543, inclusive.

The Kittredge Building on the northeast corner of Sixteenth and Glenarm streets shoulders the Masonic Temple, to which it is a becoming companion structure. Its site was occupied by the residence of Judge D. B. Graham, and by two or three smaller dwellings. The building rises seven stories and is built of granite and lava rock. It was erected by C. M. Kittredge in 1890.

Residence of John Evans at Fourteenth and Arapahoe streets as it appeared in 1880.

The Lothrop Building on the northwest corner of Eighteenth and Lawrence streets, was built in 1883 by Wilbur C. Lothrop, long County Superintendent of Schools, whose residence stood on the ground and which was torn down to make place for the present structure.

The Mack Block on the southeast corner of Sixteenth and California streets, is one of the fine modern structures on Sixteenth. It was built in 1890 by Louis Mack, its material being granite and red sandstone. The former residence of John J. Riethmann, a fine one, built in 1874, stood there before Mr. Mack acquired the property for the present building.

The Markham Hotel on the southwest corner of Seventeenth and Lawrence streets, in the corner of which is located the business office of the Rocky Mountain News, was built in 1872 by J. W. Munger, and for ten years thereafter was called the

Grand Central Hotel. In 1882 or 1883 it was acquired by V. D. Markham, Thomas M. Patterson and Charles S. Thomas who made extensive additions and alterations to and in it, practically rebuilding it, and gave it the name it now bears. Its site was originally occupied by the dwellings of Charles Lerchen and J. H. Eames. When General Denver made his first and only visit to the city, in 1882, he was a guest at that house.

The Masonic Building—the Masonic Temple—a conspicuously fine structure, six stories high, of granite and native red sandstone, on the southeast corner of Sixteenth and Welton streets,was built in 1890 by the secret order the name of which it bears, and was dedicated on July 3rd of that year. It is one of the architectural ornaments of the city, and is built on land that previously was occupied by the attractive residence of A. Jacobs, which was built by Henry Fuerstein in the "Seventies."

The McClelland Building on the southeast corner of Fifteenth and Lawrence streets was originally built by Dr. W. F. McClelland about 1873, and in 1881 by remodelling and additions was given its present size and appearance. In early times its site was occupied by a couple of small frame cottages and a brick dwelling; the latter, standing on the corner, having been built by William Graham, and long used as a boarding house. In the pioneer days that corner lot was traded for a wagon-load of bacon brought out from the Missouri river.

The McClintock Building on the northeast corner of Sixteenth and Larimer streets, stands on two lots that early in the spring of 1859 were refused by the owner of a yoke of sturdy oxen, in a proposed even trade. In 1860 a frame building was built there and long used as a saloon and billiard room. Later in the "Sixties" Richard E. Whitsitt built directly on the corner a one-story frame building in which for several years he transacted his real estate business. The present building was erected in 1875 by Washington McClintock who, in 1886, erected the other McClintock Building now occupying the southwest corner of Sixteenth and California streets.

The McMurtrie (unfinished) Building, one of the conspicuously fine edifices in the city, at Sixteenth street, Cleveland Place and Broadway, was erected in 1896-97 by the late John A. McMurtrie, on ground theretofore unoccupied. In the spring of 1900 the property was acquired by the Majestic Improvement Company, which also purchased the premises of the Central Christian church adjoining, on the Broadway side. The church has been torn down, and the intention, of the Majestic Company,

---

Charles G. Chever, who was, through so many years, identified with the history and with the growth of Denver, came of an old Massachusetts sea-faring family; his father, James W. Chever, having been a ship Captain and who commanded the American privateer "America" in the war of 1812 with England.

Charles G. Chever was born in Salem, Mass., September 17, 1827, and was educated in the schools of that city. During his boyhood he voyaged around the world on a ship commanded by his father. In 1849 he went to the then newly discovered gold-fields of California and remained there ten years, engaging in mining during the greater part of that period. Late in the spring of 1859, having learned of the discoveries of gold in the Pike's Peak country, he decided to leave that State; and doing so soon afterward, he reached Denver from Oroville, Cal., August 18, 1859.

Thereafter, his life was one of identification with the fortunes and development of Denver. In December, 1861, as related in our historical account of Arapahoe county, he was elected the first Clerk and Recorder of the county when the government of the Territory of Colorado was instituted. Serving, by successive re-elections, six years in that office, he inaugurated and continued systematic records of real estate, and was efficient in bringing order out of the previously chaotic conditions into which land-titles had fallen, and of which we have given full accounts elsewhere in this volume. After his retirement from that office he engaged in real estate operations, acting on his own account and also for others, and in subsequent years acquired much valuable property in the city. In these transactions he laid the foundations of his fortune. He was a leader in improving city property. In 1887 he built the fine Essex Building at numbers 1617 to 1623 Lawrence street, and which was rather in advance of then existing conditions; and in 1891 erected the equally fine Arapahoe Building at numbers 1616 to 1622 Arapahoe street. Notwithstanding the many later constructions, these two edifices still remain conspicuous among the city's fine buildings.

Few men in Denver in the earlier periods were better known than Charles G. Chever. His long service as the county's first Recorder, and his later extended transactions in city property, made him an authority upon almost everything pertaining to real estate. He was, also, one of the men who steadfastly held to their faith in the city's future through the earlier times of more or less uncertainty, and in much of what was done by those steadfast men to remove the uncertainties, he bore a brave and useful leader's part in union of action to that end. One of the Old Guard, the services and influence of this pioneer were closely identified with many things that stood for the rise and progress of Denver as recounted and pictured upon the broad pages of this volume.

In late years it had been Mr. Chever's custom to spend a good portion of his time at his old home in Massachusetts, usually returning to Denver to remain through part of the summer and autumn. His last return to the city was in the autumn of 1900, and he prolonged his stay through the following winter. While here during that time he gave the writer much important information that is embodied in this History, and aided in making clear many theretofore confused details. In February, 1901, falling a victim to "la grippe" which was later complicated by other disorders, he died here on March 13, 1901, and was buried at Salem, Mass. —J. C. S.

Charles G. Chever.

as announced, is to extend the McMurtrie building over the church site and to finish it for the purposes of a fine, uptown, office building. At the close of our record work to that end was in progress.

Charles McEwen's residence on site of McPhee building.

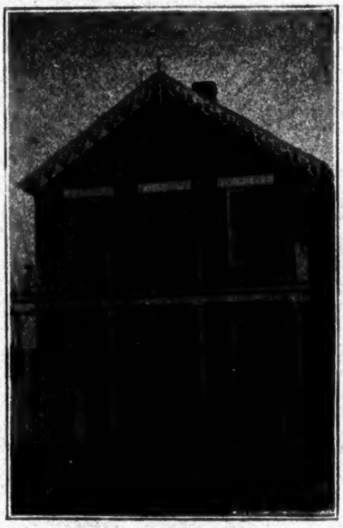
The McPhee Building on the northeast corner of Seventeenth and Glenarm streets, six stories high, of light-colored dressed sandstone, was built by C. D. McPhee in 1890. At that time the building was on the outskirts of the business section, and its site had been occupied by dwellings fronting on Glenarm street. On the corner stood the handsome brick residence of Charles McEwen who was extensively engaged in stock-raising in Colorado.

The Moffat and Kassler Building on the north side of Lawrence street between Fifteenth and Sixteenth streets, covering numbers 1525 to 1533, inclusive, was built in 1880, by D. H. Moffat and George W. Kassler. The westward part of the site was occupied by a two-story brick dwelling in which Mr. Moffat lived for several years after his marriage.

The People's Bank Building on the southwest corner of Sixteenth and Lawrence streets was begun and completed in the year 1890. It is a massive structure of Colorado red sandstone and dark red pressed brick, nine stories high, and stands on ground leased from George C. Schleier for ninety-nine years with the privilege of re-leasing for fifty years longer. It was built by the People's National Bank as an investment for part of that extinct corporation's capital, and its site was cleared of a motley collection of small frame structures of little historical interest and less value.

The Pioneer Building on the northeast corner of Fifteenth and Larimer streets, a fine five-story stone structure, was built in 1887-88 by C. B. Patterson. The pioneer cabin of Folsom Dorsett and Charles A. Lawrence first occupied the site. In 1859 Lawrence built several small, one-story frame buildings there. Most of them were occupied by drinking and gambling saloons for several years. In one of them Julius Mitchell had a grocery which was succeeded in 1866 by that of Rodney Curtis and C. C. Davis. Later and until the frame buildings were torn away, the old grocery stand was occupied by J. G. Hoffer's meat market.

The Quincy Building, formerly the Patterson & Thomas Building, on the northwest corner of Seventeenth and Curtis streets was built in 1887 by Thomas M. Patterson and Charles S. Thomas. It is of stone, pressed brick, and steel, and five stories high. The site was formerly owned by Edward Shapter whose residence stood there, and who was long connected with the management of Jack Langrishe's theaters.



David H. Moffat's residence on site of Moffat and Kassler building.

The Railroad Building on the north side of Larimer streets near Fifteenth and next east of the Pioneer Building, of Colorado granite, eight stories high, was built by the late Governor John Evans in 1888. It stands on the site of the notorious Criterion Hall, from which in the summer of 1860 went forth the would-be assassins of W. N. Byers. The old den, which was the worst of its or any other time in Denver, was afterward enlarged for a theater and known as "Mozart Hall;" and under that name its character was not much better. Still later, the old building became the grocery house of E. H. Kellogg & Co. When the Railroad Building was about completed, a boy named Ivers fell from its roof (about 100 feet above street grade,) struck upon strands of telephone wires below, and bounded off to the street. He was but little injured, and is still a resident here none the worse in consequence of his remarkable adventure.

The Riche Building on the northeast corner of Sixteenth and Curtis streets was built in 1880, and occupies the site of the old "Baptist Dug-out," of which some account has been given in Chapter LX. About 1874 the ground had been bought by Charles Leischenring who built the famous old

Walhalla Hall on it, which was used for public meetings, concerts, theatricals and the like. The State Legislature held its second session in Walhalla Hall, and in it Governor Frederick W. Pitkin was inaugurated, and Nathaniel P. Hill elected United States Senator. Walhalla Hall gave way to the present building. Adjoining Walhalla Hall, on Sixteenth street, Charles Leischenring opened a summer garden in 1877 which, in 1880, was converted into a theater by Jack Langrishe. Next to the garden were the barn and stables of the old horse railway company, extending L-shaped around to Curtis street.

H. Burton's residence formerly on northwest corner Fifteenth and Arapahoe streets.

The "Riethmann Building" on the northwest corner of Fifteenth and Larimer streets, a plain old-fashioned structure, is one of the pioneers, and was among the early brick buildings. It was erected by William Graham, the pioneer druggist, in the early "Sixties," and from almost the beginning of Denver its site has been occupied by a drug-store. In December, 1858, Hickory Rogers, one of the Denver Town Company, built his cabin on that corner, and in the summer of 1859 Graham had followed it with a two-story frame structure into which he removed his drug-store.

The Skinner Brothers & Wright Building on the northeast corner of Sixteenth and Lawrence streets, occupies historic ground. In 1880 the above-named firm was formed and erected on the corner a brick building for its business and which it occupied many years. In the progress of events the original building was enlarged and changed—practically rebuilt—and given its present dimensions; and in 1894 the "annex" on the Sixteenth street side was erected by the May Clothing Company, successor to Skinner Brothers & Wright. That corner of Sixteenth and Lawrence was originally occupied by the old Platte Valley Theater built in the fall of 1860, and re-christened the Denver Theater in 1861. Elsewhere we have given some account of this pioneer place of amusement, which was destroyed by fire March 19, 1877; the site remained vacant until its improvement in 1880. On part of the site of the "annex"—that next to the alley, and which is as large as, and uniform in appearance with, the corner structure, originally stood the carpenter shop, thirty-two by fifty feet, of E. A. Willoughby. Later, the Brunswick Hotel was built there, and it gave way to the present structure, into which it was remodelled.

The St. James Hotel on the south side of Curtis street, between Fifteenth and Sixteenth streets, was given its present size and name in 1881, when a large addition was built on the west side of the old Wentworth House and the two structures united. That part of the St. James having the open galleries is the old Wentworth House erected in 1871-72 by Charles Wentworth who was its first landlord and who was succeeded in proprietorship by A. H. Estes.

The Steele Building on the southeast corner of Sixteenth and Stout streets, was built in 1882 by Dr. H. K. Steele, the premises having previously been occupied by his residence.

The Symes Building on the southeast corner of Sixteenth and Champa streets was built in 1880 by George G. Symes. The corner part of its site had been occupied by a two-story frame dwelling owned by Symes, and the new building was one of the early large business structures on Sixteenth street. Several terms of the United States District Court were held in the Symes Building before the erection of the Federal Building.

The Tabor Building on the southeast corner of Sixteenth and Larimer streets was built by the late Senator H. A. W. Tabor in 1879. It was the first building of dressed stone in the city, and the first to rise above four stories in height. The stone was quarried, and cut to architect's drawings, at Amherst, near Cleveland, Ohio, and shipped here by rail ready to be placed in position. This made the building extremely expensive, but at that time its builder did not care for expenses. It was the first really fine building planned in the city, and its erection marked the beginning of a new era in Denver. While it has since been surpassed by

The Daniels residence on site of Tabor Opera House.

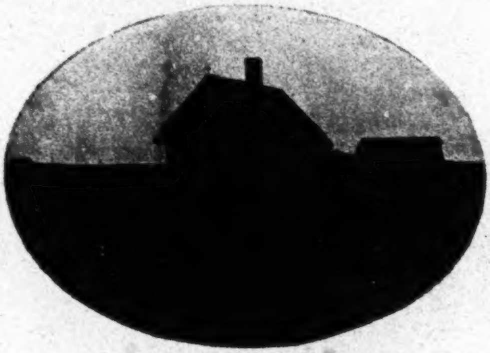
many others, it is still a conspicuous architectural landmark. Its site was that of the old Broadwell House, some account of which has heretofore been given.

The Tabor Grand Opera House on the northwest corner of Sixteenth and Curtis streets was built by the late Senator H. A. W. Tabor in 1880-81. The building, which cost $750,000, is of red pressed-brick with light-colored sandstone trimmings, and while it is not as lofty as many others, the area of ground it covers is greater than that of any other commercial structure in the city—a large part of the building being used for business and office purposes. It was originally of four stories and a "mansard" fifth story, but in the winter of 1899-1900 the fifth story was squared up and the exterior appearance of the building considerably changed. The corner part of the Opera House site was occupied by the handsone two-story brick residence of the late A. B. Daniels from whom it was purchased by Mr. Tabor, and the large yard in which it stood was embellished by many trees, shrubs and flowers. The dwelling was built and first occupied by Samuel Howe, the first Sheriff of Arapahoe county under the jurisdiction of Colorado Territory. On the Curtis street side in the rear stood a small two-story frame dwelling, and adjoining this on the west was the residence of F. Z. Saloman.

George T. Clark's residence formerly on southwest corner of Sixteenth and Welton streets.

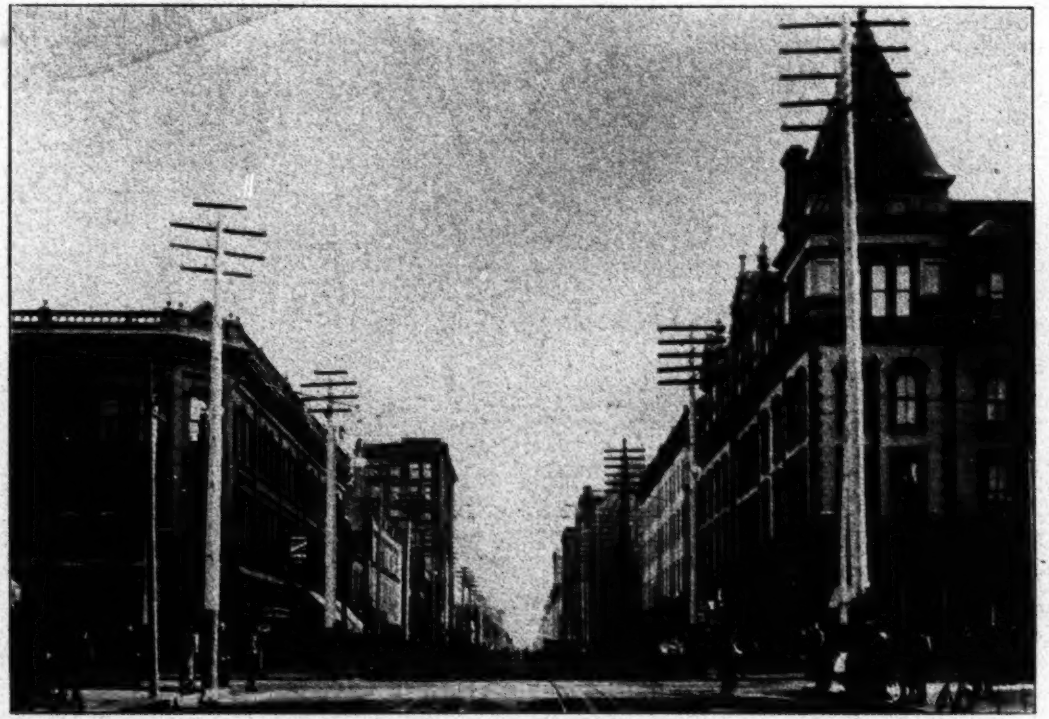
The Tappan Building on the west side of Fifteenth street next to the southwest corner of Fifteenth and Market streets was one of the early three-story buildings in the city and was, also, one of the Territory's numerous Capitols. It was built by Lewis N. Tappan in 1867, and in it were located the offices of Territorial Governor A. C. Hunt, Territorial Secretary Frank Hall, and those of the other Territorial officers, in 1868, after the Capital had been moved back to Denver from Golden in December, 1867. The upper floor was used as a Masonic lodge-room for several years. Immediately on the corner stood the two-story brick building of the Holladay Overland Mail Stage and Express. In later years this corner building was raised to three stories and its appearance made to conform with that of the Tappan Building. The consolidated structure later became the "Condon House;" and now the ground floor is used for business purposes, and the others as a rooming house, the "Hotel Royale." In its time the Tappan Building was one of the architectural ornaments of the town.

The Times Building on the north side of Lawrence street between Fifteenth and Sixteenth streets, numbers 1547 to 1551, was built by R. W. Woodbury in 1881—a handsome cut stone front, three stories and office sub-basement in height. The light colored stone in this building was from quarries at Trinidad, Colorado, which had never been before used in Denver. It was the first business building in Denver to be finished throughout in hard wood—solid oak. It was also the first to have a sub-basement suitable for offices, and it was in one of those that all the earlier meetings of the Directors of the Chamber of Commerce were held. In 1890 the building was damaged by fire and afterwards reconstructed in its present five-story form. When Mr. Woodbury bought the eastern lot from L. S. Gutelius in 1874, it was occupied by a two-story brick building of the unpretentious architecture of its era, and which became the temporary home of the Times. The old building was built about 1866, and was the birthplace of the Denver Tribune, in February, 1867. The Tribune continued to occupy it until 1871. The adjoining lot to the west was bought in 1881 by Mr. Woodbury from William and Moritz Barth, and the Times Building was immediately erected. It was in the old building that Geo. Francis Train spent the entire afternoon and early evening with Mr. Woodbury preparing for his famous railroad speech later in the evening, and which roused the citizens of Denver to organize the company that built the Denver Pacific railroad.



George W. McClure's residence on site of Post Office building.

The Toltec Building on the northwest corner of Seventeenth and Stout streets was built by E. F. Bishop and W. M. Cranston in 1891, and occupies the ground on which the residence of F. A. Keener formerly stood. It recently became the property



Seventeenth street southward from Lawrence street, in 1901.

of W. S. Stratton, of the noted Independence Mine at Cripple Creek.

The Tritch Building on the southwest corner of Sixteenth and Curtis streets, was built by George Tritch in 1887. The site was previously occupied by the City Market with its barnacles of stands and booths, and by T. G. Anderson's skating rink which was a popular establishment for the brief period of the skating rink craze.

The United States Building on the southwest corner of Sixteenth and Arapahoe streets was begun in the winter of 1884-85, and nearly eight years elapsed before it was entirely finished; the contractors having been McGilvray & Hayes. Its site was the residence property of George W. McClure, and in earlier times a log cabin built and occupied by Isidor Badolet stood on the ground. It has heretofore been stated that the site of the Federal Building was purchased by Horace A. W. Tabor and other citizens and donated to the government; but that was an error, the United States having paid $65,000 for the ground. The following "official history" of the building was provided us by the Supervising Architect, Treasury Department, Washington.

An Act of Congress approved May 8, 1882, authorized this building and limited the cost of same with site at $300,000. By an Act of February 24, 1887, this limit was extended to $575,000. The appropriations were made by Acts of May 8, 1882, March 3, 1883, July 7, 1884, March 3, 1885, March 3, 1887, March 30, 1888 (for extension in excess of limit, $60,000), October 2, 1888, March 2, 1889, March 3, 1891. An Act of June 8, 1896, appropriated $1,235.69 for payment of allowance on account of interior finish. October 15, 1883, a site was purchased for $65,000, fronting northwest 200 feet on Arapahoe Street and northeast 125 feet on Sixteenth Street. On the southeast side is an alley 16 feet wide. A contract was awarded January 23, 1885, for erection of the building, and the structure was completed and occupied in the latter part of 1892, the total cost of construction being $570,500.52.

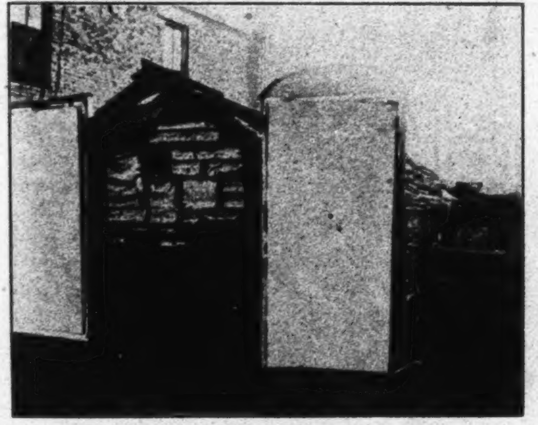
The building is constructed of gray sandstone. It contains a cubic area of 1,138,500 feet, is heated by steam, and is provided with passenger and freight elevator service. The number of rooms occupied are thirty-five, they being assigned principally to the postal, customs, internal revenue, and secret services, United States courts, land office, and weather bureau.

This Federal Building, or, as more commonly called, the Post Office Building, is one of the conspicuously inconvenient, ill-arranged, cramped, dark, and inadequate public structures evolved by "bureau architecture," and is wholly unfitted for present requirements.

The Union Block on the northwest corner of Arapahoe and Sixteenth streets was erected in 1882, by the Denver Safe Deposit & Savings Bank, P. Gottesleben, and John J. Riethmann, who owned the land in severalty, but united in building the block—hence its name. Its site was occupied by small buildings to which no especial interest attached.

The Walbrach Building on the northeast corner of Sixteenth and Champa streets, one of the older of the buildings in that quarter, was built in 1882 by C. Walbrach. The ground on which it stands was occupied by the residence of its builder and that of Mark A. Shaffenburg.

The Windsor Hotel, on the northeast corner of Eighteenth and Larimer streets, was built in 1879-80 by the "Denver Mansions Company," the stockholders of which were chiefly English people, and of which James Duff, who died in London in April, 1900, was manager. Its site had been occupied by the residence of J. H. Kehler, pioneer Sheriff of Arapahoe county. This building was the second brick building erected in "Denver City." The house afterward became the home of Major John S. Fillmore. Subsequent to Fillmore's death in 1864 it was used as a school house; it was finally converted into a carriage shop and so used until it was removed to make way for the hotel building. The Windsor was opened June 23, 1880.



Relic of 1859, Number 1426 Market street.

The Witter Building on the southeast corner of Sixteenth and Blake streets, built in 1875 by Daniel Witter, stands on the site of the old Planter's House, one of the old-time hotels. That hotel building was originally a large frame structure with a one-story annex built in 1860 by the Central Overland, California & Pike's Peak Express Company for a warehouse, stage and postoffice, and afterwards converted to hotel purposes. The hotel, which was kept by James McNassar, was almost wholly destroyed by fire in the spring of 1875, and was succeeded by the Witter building, which was the first apartment house erected in Denver.

The block of one-story business rooms on the southwest corner of Sixteenth and Welton streets, was built by W. S. Cheesman in 1897. It occupies the old residence premises of George T. Clark who lived there many years in the dwelling, built in 1873, which was removed when the present block was built.

On the north side of Lawrence street next to the corner building on Fifteenth, remains one of the log cabins built in 1859, which is now occupied by the "Old Log Cabin" saloon. With the exception of a new front made by modern carpenters and glaziers, the log walls of the old cabin remain. The building is number 1509, and is owned by Jacob Gregory.

On the southeast corner of Fifteenth and Larimer streets stands one of the pioneer brick buildings erected on the east side of Cherry creek, and which for a time was the Territorial Capitol. It is a two-story brick structure erected in 1860 by Stettauer Brothers, from Leavenworth, and occupied by their dry goods store. Later the Deitsch Brothers had their general store there. In 1861 Governor Gilpin installed the first executive offices of the Territory of Colorado on the second floor—an appropriate location, as the building occupies one of the lots on which stood the pioneer cabin of Moyne and Rice.

The building on the south side of Larimer street between Fourteenth and Fifteenth streets—numbers 1430 and 1434, stands on the site of one of the original log cabins, with the native earth for a floor, in which the first drug store in Denver was opened and kept. In the summer of 1859 William Graham established himself there with a small stock of drugs and medicines. Subsequently this pioneer drug store was removed to the "Riethmann corner," at Fifteenth and Larimer streets.

On the north side of Market street between Thirteenth and Fourteenth streets there stood until November, 1900, one of the old Auraria City hewed-log buildings that was of unusual historical interest. It was about twenty feet of front by forty feet in length, one story high, and was the peer of its neighbors when built. Byers and Dailey put it up in 1859 as a home for the Rocky Mountain News. The printing office was installed in the front part December 27, 1859, while Mr. Byers and his family lived in the rear portion, and Mr. Dailey found a sleeping place in the low attic. At the outbreak of the war it became a recruiting office, and many members of the First Regiment Colorado Volunteers enlisted there. Subsequently it became a military prison, the News having removed to its new location from which it was washed away by the Cherry creek flood of 1864. Then the old house was used as the town "lock-up," and later for a variety of purposes, that of a blacksmith's shop having been the last. It remained the property of Mr. Dailey until torn down in November, 1900.

On the south side of Market street between Fourteenth and Fifteenth streets stands another of the log relics of 1859; a little, one-story hewed-log cabin built in that year by Henry Sweigart, and afterward the store of Morton C. Fisher. About one-third of its height is below the present grade of the street. The building, now disused and nearly hidden by bill-poster's boards, is numbered 1426.

On the south side of Larimer street between Fifteenth and Sixteenth streets stands an old two-story brick building with a plain old-fashioned front, that was an important edifice in by-gone years. It is the Cole Building built by General Luther A. Cole early in the "Sixties." The second story was a large well-lighted hall in which dancing parties and other social festivities of that decade were given. Beside being the scene of many "society events" of those times, it was a favorite place for holding public meetings, and the old Board of Trade frequently assembled there. The ground floor is still used for business purposes, but the old hall has been converted into lodging rooms. The building embraces present street numbers 1528 to 1536, inclusive.

Until the spring of 1899 there stood on the north side of Larimer Street between Fifteenth and Sixteenth streets, and just east of the Railroad Building, a couple of old buildings that dated from pioneer times. The one nearer the Railroad Building and which bore numbers 1523 to 1529, was built in 1860 or 1861 by George W. McClure. It was of concrete, two stories high, with a later substituted brick front, and the ground floor was occupied by stores and saloons at different times. This building was also one of the Territorial Capitols. In 1865-66 the second floor was used by the District and Probate courts; and Territorial Governor Alexander Cummings, and Territorial Secretary S. H. Elbert, also had their offices there. It was from that building that Governor Cummings removed the Territorial archives from Denver to Golden in the winter of 1866-67, and in it the sessions of the Territorial Legislature of 1865-66 were held. The new two-story business structure covering its site, erected in the spring of 1899, embraces street numbers 1521 to 1537, inclusive.

In other chapters of this volume there are many references similar to those recorded in the foregoing, to other pioneer and later buildings concerning which there is no need of repetition of statement. The accounts given here and elsewhere of what we may for convenience term modern structures, in the "East Denver" business section and having distinctive names, cover, we believe, all the conspicuous ones, and about all the others to which noteworthy interest or association attaches, either to present edifices or to their predecessors. To further extend the accounts would, perhaps, be tedious and, furthermore, serve no important historical purpose.

CHAPTER LXXV.

DENVER'S BRIGHT PROSPECTS—OLD-TIME VIEWS OF ITS DESTINY—ORTON'S PREDICTION—THE CITY'S HISTORICAL PERSPECTIVE—ITS PRESENT SUBSTANTIAL ADVANCEMENT—NOBLE SITE FOR A GREAT CITY—MASSES AND PEAKS OF COLORADO MOUNTAINS—THEIR VIEW FROM DENVER—NAMES AND ALTITUDES OF CONSPICUOUS ELEVATIONS—CITY'S ALTITUDE—INSPIRATION TO MUNICIPAL IDEALS—NEEDED MUNICIPAL IMPROVEMENTS—DENVER ARCHITECTURE AND DENVER HOMES—CLIMATE AND INVALIDS—CONCLUSION.

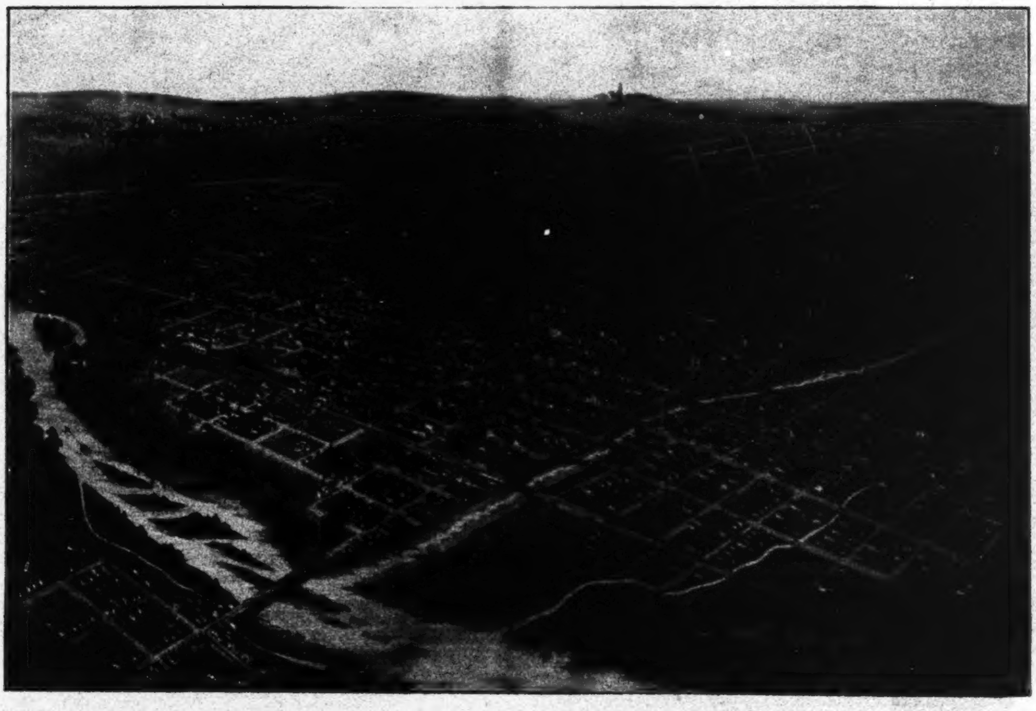
With the close of the Nineteenth Century but forty-two years had passed since the ragged and unpromising beginning of Denver was made here at the base of the Rocky Mountains; and not twenty-five had swept by since the struggling Territory of Colorado was admitted to the great Sisterhood of States. State and city entered upon the Twentieth Century with prospects fairer for their future than any that had beckoned them onward in the past. While, as they stand at the apex of the continent, they may look backward upon a record of development that, considering all the circumstances and conditions, the world has never seen surpassed, they may, from their lofty vantage point, with confidence turn their eyes forward and gaze upon the broad fields of boundless opportunity the coming years hold out to them. It is no indulgence in extravagant use of words to say that all that has been done here within the manhood life of still living men represents but little more than preparation for State and city entering upon possession of the great heritage the future holds for each. Remarkable as developments and progress here have been in the past, it would seem that they are to be overshadowed in relative magnitude by those that are yet to come.

Where Denver's beginning was made. Circle marks site of the Russell-Smith cabin. From a recent photograph from Fourteenth street viaduct.

Still, the victories already won, the things already done—how wonderful they appear in the short vista of forty-two years! Only a few of the men who came here in 1858 and 1859 ever gave thought to the possibility of a city, such as that upon which these majestic mountain peaks now look down, springing from the humble beginning made by Denver's stout-hearted pioneers; and those who did so and made known their thoughts were not seriously credited among their associates with having the gift of prophecy. After a year or two had passed, the feeling of isolation had begun to make way for one of fixed identity with the fortunes of the town, and the charms of the region had determined many theretofore wavering ones to make it their permanent home. After that there crept into the minds of others a conviction that Denver was destined in some way and at some time to become a great city. Yet, all these views were far more of faith in things unseen than a belief justified by then existing conditions; and were limited to a minority of the citizens. To those of Denver's pioneers who still survive, the developments they have witnessed in city and country must at times seem like visions that appear in dreams.

The situation and prospects here in 1859 were such as to make that experienced and unbiased observer of frontier life and ambitions, the Rev. William H. Goode, who figures in our narrative of pioneer church work here, rather cautious in his predictions of what the future would bring to Denver and its tributary country. In his report from the Auraria and Denver City Mission to the Corresponding Secretary of the Missionary Society of the Methodist Episcopal church, under date August 3, 1859, he said:

"I have nothing to say about the mining operations in this district. One thing is certain: the enterprise will not be abandoned till pushed to its farthest practical test. This may require a term of years. Should the mines prove permanently remunerative, and should other discoveries be made,



"Bird's-eye view" of Denver in 1874. From a lithographed sketch. (Note the small areas of "North Denver" and "West Denver.")

a large mining community will be located here, and probably a State Government formed at no remote period."

In preceding chapters we have referred to the more sanguine anticipations of others in the early periods, and have quoted the seemingly prophetic utterances of Mr. William N. Byers in the Rocky Mountain News, and those of Governor William Gilpin at a later time. To what has been said on this subject we desire to record one more prediction; one that was made soon after Denver had achieved railway communication with the rest of the country. It is embodied in the following quotation from an address delivered to the Denver Chamber of Commerce by General Roger W. Woodbury on February 9, 1888:

"This address has already exceeded the limits I expected when I consented the first of the week to prepare one, and yet there are a number of subjects I have been obliged to omit, and which should be presented in a paper covering the whole ground. You will observe that I have not indulged in prophecy, but have been obliged to confine myself to hard facts. Had I designed merely to please you I would have said that the opportunities for making fortunes without capital are greater in Denver than in any other city in the world. I would have said that Denver in five years would possess nearer two hundred thousand than one hundred thousand people. I would have said in the year 1900 the cities of the United States exceeding Denver in population may be counted upon one hand. But I can do better than give you the testimony of an interested party like myself, and will call a witness from the grave who during life possessed a national reputation as a wise, sagacious and far-seeing man—Hon. William Orton—long president of the Western Union Telegraph company. Nearly a half generation ago he visited Colorado in company with the president of the Kansas Pacific Railway company, and inspected every point in the state which was accessible by their special car. Mr. Orton was a member of the governing committee of the New York stock exchange, and was inspecting the Kansas Pacific line preparatory to reporting to that exchange for or against the listing of Kansas Pacific stock. Hence he traveled only by day. The Kansas Pacific branch from Kit Carson to Pueblo was then in process of construction, and Mr. Orton's attention was particularly directed to the branch and to the importance of Pueblo, which was to be its terminus. It was asserted that the proximity of Pueblo to coal and iron, and its being on the Arkansas valley route across the continent would make it the metropolis of the State soon after the advent of the railroad. Circumstances prevented the completion of the road, and the rails were finally taken up; but the Atchison did build there, while the Rio Grande completed the Continental line. You know the result—how, after quite a number of years, the Atchison has thought it necessary to extend its line and make Denver its terminus. My witness, President Orton, returned to New York and shortly thereafter delivered an address in which he took occasion to state that in his opinion the four great cities of this continent were to be New York, Chicago, Denver and San Francisco."

The present Denver to a great extent represents things done since General Woodbury delivered that address; and to an extent difficult to realize, it stands as the embodiment of achievements since the advent of 1880. Only a comparatively small part of the city of 1875 remains, and but little of the Denver of 1870. Building and rebuilding in the later years have, as indicated in the preceding chapter, wrought radical changes in the older areas of the city. The great majority of those who have continuously lived here since 1870 ordinarily find it hard to appreciate the magnitude of these changes and that of other developments. They have been too close to the scenes and too much absorbed in the activities to comprehend at full value the significance of all that was going on around them and all that has been done. From their point of view the picture had no perspective; and without perspective a picture is deprived of the greater worth. They who came to Denver in the later or in very recent years are at far greater disadvantage in gaining understanding of the transformation that has been wrought. Indeed, to a very large portion of our people such an understanding is denied with the perspective of Denver's earlier years excluded from their view. It is one of the purposes of this work, aided by its many illustrations, to present a truthful picture of Denver's development in the preparation of which much attention has been given to perspective; to enable the reader who is of these times to see and understand the conditions and circumstances that lie off there in the background of remoter years; to compare conditions in the pioneer era with those of the present day; to show, also, the radical difference between Denver at the close in 1870 of the pioneer era and the city in the dawn of the Twentieth Century; and to preserve in enduring form for the dwellers in the Greater Denver of the future a record of the truly great Denver of the present.

However, it is not at all improbable that some writer in later years will compare the city of his day and generation with the Denver of these times, in much the same way that the present city is held forth in this volume as an object lesson of what faith, courage and energy have done in converting a remote frontier town, that had to fight for its right to live, into a great and growing metropolis of a wide domain the resources of which are yet but partly developed; and if our reader consents we will here ask the future historian to kindly take some notice of this prediction. For proof of Denver's present great renewal of vigor and activity we have only to look around us. It is not being proclaimed by bespangled heralds with blaring trumpets as of yore, and for that reason its advances are, perhaps, more truly significant. In 1900 the aggregate of considerations in real estate transactions exceeded $11,100,000, and in that year about $3,300,000 were expended upon new buildings—a large part of which went into new dwellings. While these figures do not match those of either of several earlier years, they stand for a sounder condition in that they represent outlays for existing needs instead of for more or less prospective requirements; and preparations for further improvements upon the same basis unmistakably promise much larger results in 1901.

The site of Denver, notwithstanding that its choice was due as much to trivial incidents as to design, is a noble one for a great city. The magnificent scene, the middle foreground of which it occupies, is one of the majestically beautiful panoramas of nature's great work on this earth. In the care and hurry of every-day life we sometimes forget the city's noble setting, or familiarity with it leads us toward neglectfulness of its exquisite grandeur. Years ago it impressed Bayard Taylor, than whom no better qualified observer ever lived, as being one of the great scenic pictures of the world. We quote from him:

> "The view of the Rocky Mountains from the divide near Kiowa Creek is considered one of the finest in Colorado. From the breezy ridge, between scattered groups of pine, you look upon one hundred and fifty miles of the Snowy Range, from the Sangre de Christo to the spurs away toward Laramie. In variety and harmony of form, in effect against the dark-blue sky, in breadth and grandeur, I know no external picture of the Alps, which can be placed beside it. If you could take away the valley of the Rhone, and unite the Alps of Savoy with the Burnese Overland, you might obtain a tolerable idea of this view of the Rocky Mountains. Pike's Peak would then represent the Jungfrau; a nameless snowy giant in front of you, Monte Rosa; and Long's Peak, Mount Blanc. The altitudes very nearly correspond, and there is a certain similiarity in the forms. The average height of the Rocky Mountains, however, surpasses that of the Alps."

The finest view of the peaks and masses of Colorado's mountains, and not far distant from Denver, is from the crest of Mt. Lincoln in Park county; elevation 14,297 feet. From its summit, the mountains seem a wilderness of peaks; and with a good map and glass a week would scarce suffice to satisfy the feelings of pleasure to be derived from a landscape and pastime so sublime.

From the city by far the better attainable view is from the dome of the Capitol. There the eyes may follow the great snowy ranges, as they stretch away to the north and the south, for a distance exceeding one hundred and fifty miles, with here and there lofty peaks rising into the cloud-bearing regions of the air. Including mountains and plains the beholder sees one of the most magnificent landscape views in the world.

The higher of the Colorado peaks are not visible from Denver, even with optical assistance, some of them being hidden by intervening elevations, while

the distance of others places them below the angle of the observer's view. There are seven that are higher that Mt. Evans, which is the loftiest elevation visible from the city. These are the Sierra Blanca in Costilla county, 14,483 feet; Mt. Elbert in Lake county, 14,436 feet; Mt. Massive in Lake county, 14,424 feet; Uncompahgre Peak in Gunnison county, 14,419 feet; Gray's Peak in Clear Creek county, 14,411 feet; Mt. Harvard in Chaffee county, 14,375 feet; and Torrey's Peak in Clear Creek county, 14,336 feet. The La Plata Peak in Chaffee county, 14,311 feet; Mt. Wilson in Dolores county, 14,309; and Buckskin Peak in Park county, 14,290 feet, are higher than either Pike's or Long's.

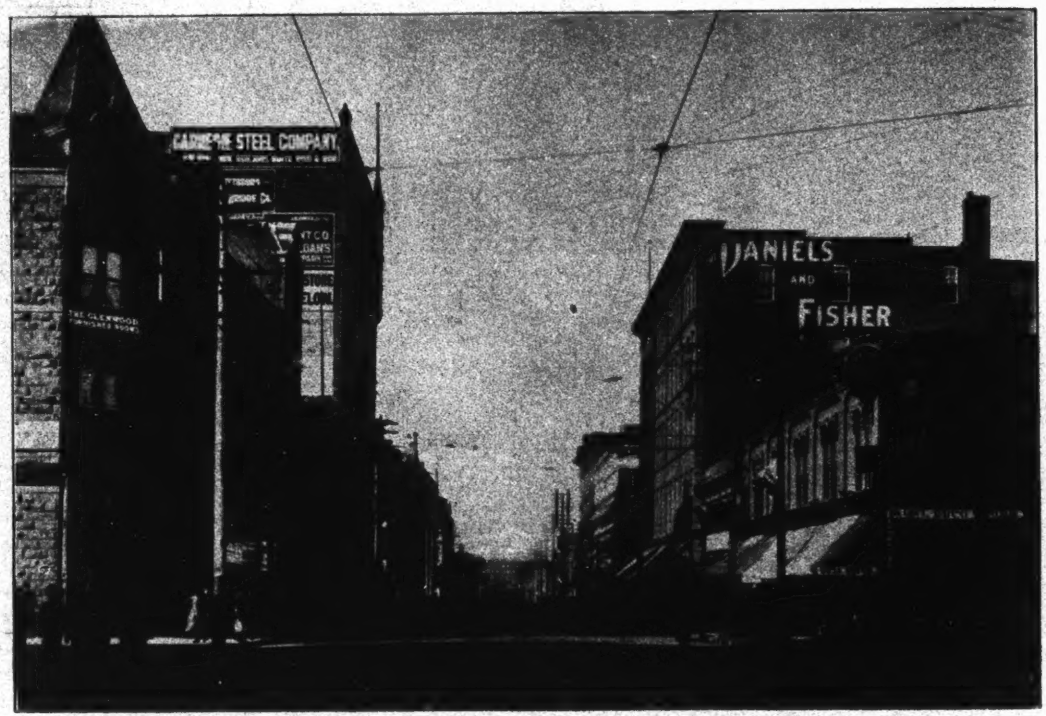
In the array of magnificence seen from the Capitol dome Pike's Peak, reminding us of so many historic associations, rises, seventy-five miles to the southward, to the height of 14,172 feet. While its altitude is less than that of twenty-five other Colorado mountains, its name and fame are more familiar to the people than those of all the rest. It is the historic and familiar land-mark for the entire region.

About eight miles south of due west from Denver, and thirty-five miles distant, stands Mt. Evans with its summit 14,321 feet above the sea. Much of its massiveness is hidden by what stands between. As heretofore mentioned, Bierstadt, the artist, gave it in 1864 the first name it bore, "Mt. Rosa;" but the name of Colorado's honored citizen, Governor John Evans, was bestowed upon it at a public meeting in Greeley at which the completion of Denver's first railroad—the Denver Pacific—was celebrated; an action that was later confirmed by a joint resolution of the Territorial Legislature. It was on this peak that Bierstadt received inspiration for his world-famous picture: "Storm in the Rocky Mountains."

Two miles southeast of Mt. Evans is Mt. Rosalie, 14,000 feet high; and in that general group are several unnamed peaks between 13,600 and 14,200 feet of elevation, two of which are visible from Denver.

Next in height among those nearly due west of the city is James' Peak, named for the botanist and historian of Long's exploring expedition after that of Pike was bestowed on the "Grand Peak" which Long named for James. The summit of James' Peak rises 13,283 feet, and appears about eight degrees north of the line of Colfax Avenue. It is about sixty miles distant.

Turning to the northward the majestic mass of Long's Peak stands out with impressive dignity. Its altitude of 14,271 feet gives it the twelfth place in Colorado elevations, but its proximity to the plains and its precipitous ruggedness make it appear to the eye the loftiest of all. By air-ship its summit's distance would be about fifty-five miles, but the route of travel to it is much longer. If Sixteenth street and its parallels were extended far enough they would strike the peak's base near the center, the mountain being in plain view through their vistas. It is extremely difficult of ascent. Mr. W. N. Byers, in 1868, was the first man who reached its summit, the view from which is magnificent beyond the power of words to describe.



Sixteenth street northward from Arapahoe street, in 1901. Long's Peak in distance.

Sixteen miles south of Long's is Arapahoe Peak, 13,200 feet high. It has a long horizontal summit with piled-up masses of rocks at each end that resemble old ruined castles, which make the mountain conspicuous as seen from Denver.

Midway between Long's and Arapahoe stands Audubon Peak with its altitude of 13,173 feet, plainly visible from the city, with its grandeur somewhat over-shadowed by its towering neighbor a thousand feet higher.

North of Long's Peak and prominent in the view from Denver is Mummy Mountain, its highest point being 13,832 feet. Its name was derived from an alleged resemblance requiring an active imagination to perceive.

The view from the Capitol dome embraces a domain larger than either of several eastern States. From the west where snow on the mountain summits is visible the whole year around, the eye may sweep away to the north over a fertile and beautiful agricultural region along the foothills; to the northeast where the South Platte winds its way, appearing like a ribbon of silver in its fringing of greenery; far to the east where the billowy plains roll to hazy distances until the sky bends down to meet them; to the south fifty miles away where the "divide" between the Platte and the Arkansas rivers stretches from the mountains far out on the plains, looking like one side of a flatly sloping roof. The city is spread out at the feet of the beholder who now appreciates its beauty,its extent, and the charm of its location as he never did, never could, before.

In the earlier years the immediate situation of Denver often caused newcomers and passing visitors from the east a feeling of surprise somewhat tinged with disappointment. Instead of finding the city built in the mountains as many had supposed, they saw it standing in the broad shallow valley of the South Platte river, and upon the gentle elevations at each side that were the ancient confines of that stream. The site of the city differs little, topographically, from other sections of the plains, and is far enough from being level to afford perfect drainage; but its departure from a plane is not enough to make any of the elevations within its bounds very conspicuous. From its westerly limits the foot-hills are twelve miles distant, the intervening country having a gentle slope from the hills to the river with a fall of about 400 feet. The city's elevation above sea-level ranges around one mile. In the business part —say the street grade at the Equitable Building, it is somewhere near forty feet under a mile; the azimuth monument of the United States Geological Survey in the southeast corner of the State Capitol park marking an elevation of 5,275 feet. The main floor of the Capitol Building is very near an even mile above the sea. In the farther eastern, and in the "North Denver," districts the

altitude rises to a considerably greater elevation—probably two hundred feet more.

Denver's noble surroundings should inspire a high exaltation of municipal life. The Greater Denver of the Twentieth Century should also strive for something beyond mere greatness in size. Occupying one of Nature's most favored situations, in a region of untold resources and opportunities, and endowed with a climate of rare gentleness, the city should be made, in the administration of its affairs and in the attainment of urban ideals, an example, a standard, for other American municipalities. It is within the limits of reasonable expenditure of available means by honest and intelligent public administration, to have here where so much has already been done so well by individual effort, the most beautiful, most winsome, and most delightful city on the American continent.

It is not to be expected that approach to such municipal ideals may be swiftly made, nor that they could be attained within a few years. Denver is yet a very young city—it was but little more than one among other western towns twenty years ago. In the last half of the intervening period it braved an economic crisis such as few communities have had to meet; and the conditions entailed by that ordeal were such as to meanwhile forbid municipal undertakings beyond the line of actual needs. But those conditions are now things of the past and, with proper administration arising from the will of the people, there would be no economic difficulties in the way of the municipality entering in the near future upon the beginning of municipal works that would vastly contribute toward making Denver the City Beautiful.

Consider what could be accomplished within two decades if the municipality would, acting upon the principle of an ancient practice, devote the tithe of its income to such improvements, intelligently planned, and that would alike adorn the city and add to the welfare, convenience, and pleasure of all its people. Upon the present basis the tithe would be about $100,000 annually. Not a large sum for such purposes, it is true; yet, with its annual increase and with accumulated results of its intelligent application, great changes could be wrought within the first quarter of the new century.

The avoidable and blighting blemish—to use a mild term—caused by the presence of the wretched Cherry creek that cuts into the very heart of the city should be removed. In the way of doing so there are no serious engineering difficulties. By excavating, at a point a few miles eastward, a new channel a comparatively short distance, the stream may readily be diverted to Sand creek and its water passed around the city to discharge into the Platte river several miles below. With a trunk sewer in the creek's bed, that sandy and miserable waste could be succeeded by a fine avenue extending from the Fourteenth street viaduct to the southeastern limits of the corporation. The consequent value of reclaimed property and the enormously increased value of that now more or less blighted by the creek's presence probably would equal the entire cost of such an improvement.

Delay in the development of the park system as a whole ought not be longer continued; and to have the system well balanced, land for a large park in the "North Denver" division, and for another in the southern section of the city east of the river, should early be acquired. Then there should be formulated on an intelligent basis a circumferential system of boulevards connecting park with park, and so planned that construction at any time of any part of such a system would be a step toward completion of a coherent and harmonious whole. Such a system could be admirably amplified by a driveway along the Platte river in the whole of its course through the city. It is even now a reflection upon the city that the course of our only stream that may be regarded as a living one should, within the corporate limits, be so neglected, unsightly and forlorn; and its permanent surrender to such conditions and aspects as now attend it and that will become worse under continued neglect, would be an equally permanent reproach to the municipality, and a blemish that would always seriously impair the effect of other works designed to add to the city's beauty and to the convenience, comfort and happiness of its people.

Sherman Avenue Vista, south from near Eighteenth Avenue, in 1901.

It is not urged that the city at once plunge into municipal improvements on the scale suggested in the foregoing. Such works would properly require a rather long term of years for their consummation. But it would be expedient for the municipality to seriously consider something beyond the mere routine expenditure of income upon the transitory needs of the passing days. It would be expedient to formulate general plans for a system of permanent improvements that would also embellish the city, and to prepare for making a beginnig upon such a system. Aside from what has been done in park-making, the municipal organization, as such, in the past has borne an almost insignificant part in the upbuilding of this city. The present Denver is almost wholly the result of private enterprise and individual effort; and as a rule these have been admirably directed toward standards that included some consideration of ideals.

This has been well exemplified in the character of much of Denver architecture. It is of an order far higher than the modern city average, and makes a most favorable impression upon all who observe it. The Capitol, and the great structures in the business quarter, such as the Brown Palace Hotel, the Equitable, Cooper, Boston, Ernest & Cranmer, and other great buildings, are fine examples of modern ideas in design and construction; and scores of their smaller neighbors present equally pleasing aspects. But it is in the residence districts that Denver architecture shows at its best.

Denver is a city of many beautiful homes, and in their appearance they are charmingly impressive to the stranger, and potent incentives to the citizen who sees them every day. There are hundreds that exhibit striking, tasteful, harmonious designs in their every outline. The variety and beauty of dwelling architecture here are unusual, and to this result the fine, native, building material has contributed in no limited degree. Residences are not crowded together; they do not shoulder each other, but are surrounded by lawns set with shrubbery and flowers. This pleasing effect is heightened by the many luxuriant shade trees with which the residence streets are lined, making the city an exceptionally well shaded one and placing it in sharp and delightful contrast with the treeless plains coming up to it in the east. There are very few frame dwellings, as the city's building regulations forbid their erection; the few existent ones being of an earlier era. In all that men have done in the upbuilding of this city, the beautiful homes they have erected constitute the glory of their work. While the mere expenditure of money upon an edifice does not always assure it architectural beauty or elegance of interior aspects, large outlays and good taste have not been strangers in the production of Denver homes. There are hundreds of dwellings upon which from $10,000 to $25,000 were expended in their construction; scores that represent outlays of between $25,000 and $50,000 for the finished building, alone; and a large num- that required between $50,000 and $100,000.

So much has been, and is every day being, said and written about the beneficial and recuperative powers of Colorado climate, in everything implied by that term, that little more need be added here. Of its restorative effects upon invalids, thousands of robust people now living in Denver and elsewhere in the State afford living proof; for many of these came in health so impaired that it was questionable when they started whether their remaining vitality would sustain them through the journey. Of all who regain perfect health in Colorado a large portion reluctantly return to their former homes; but another large portion, though coming here for a temporary purpose, become so enamored of the country and its climatic conditions, that what was expected to be a limited sojourn turns out to be a permanent residence.

However, many exaggerations of the curative qualities of Colorado's climate and other possessions, have been sent broadcast over the world. For these, certain selfish interests engaged in tranportation and inn-keeping are largely responsible. Many of the ills to which flesh is heir defy the climate as they continue their encroachments, and the grim reaper does not regard our State as being outside his jurisdiction. Physicians find work for their hands and pills to do, here as elsewhere, and cemeteries do not remain tenantless; although we do not mean to imply direct connection between the two propositions stated in this sentence. But, for all the ailments catalogued under the general classification of pulmonary affections, the beneficial results of sojourn here are remarkable, to say of them the least.

Charles Building. Mining Exchange. Tabor Opera House.

View west from roof of Equitable Building, in 1901.

Within the last year or two a small cloud has appeared upon the horizon of public opinion, and more portentously upon that of the judgment of Boards of Health and of the medical profession, which casts a shadow upon the indiscriminate encouragement of the policy of making Colorado a vast sanitarium for the pulmonarily afflicted of the world. The vital point involved is whether the disease we call consumption is either contagious or infectious. Advanced beliefs hold that it is, as a disease, transmissible from person to person, not directly by contact, but by germs discarded in the expectorations of those in the extreme stages of the malady. In California these beliefs have been given the force and effect of quarantine against what are regarded as dangerous cases; but in our State the matter has at this time gone no further than serious and thorough consideration by those charged with the professional and the official duty of safe-guarding the vital welfare of their fellow-citizens. At first thought, the exclusion of invalids battling with disease for their lives, would seem to be an act of heartlessness; but it means something quite different from that—more than anything of sentiment. It involves the question as to whether the natural right of the healthy to retain health and be protected so far as may be against its impairment, is or is not one that should receive preference.

Our Story of Denver is ended. It has been brought forward to the limit had in view when it was undertaken—that it should round out with the close of the Nineteenth Century; and, also, with at least a sincere desire that it should be accurate and comprehensive. Whatever may have been the merits or otherwise of our manner of telling it, the Story of Denver is a romance among annals of American cities, and one in which lights and shadows more sharply defined than those which usually attend the lives and the works of men, are repeatedly in turn thrown upon the scenes; and in such shadows many of our pioneers walked through their later and their declining years.

It would have been gratifying to record that all of those who participated in the work of laying broad and deep the foundations of our city and of our Commonwealth of Colorado had prospered in their bounty and in their store; but it was not so. Comparatively few accumulated fortunes from the extraordinary development they were instrumental in beginning and carrying forward. Some, it is true, acquired riches in abundance; but later lost them, to the last dollar. In certain instances among these the frowns of Fortune were attended by circumstances even stranger, more remarkable, than those which had followed her smiles. Some others who gained wealth, retained it, and passed it to their descendants when the sun went down. In Denver, and elsewhere in the State, some members of the Old Guard survive in affluence—a group that probably could be represented by the fingers of the two hands.

But to the great majority of our pioneer founders and builders fortunes were denied. Many of them gained a modest competence sufficient to carry them through until their life-"claims" should be "worked out;" a greater number, a majority of that majority, failed of accomplishing so much as that, and the lives of some of these were beset by the trials of actual poverty and ended in the gloom of fruitless striving and disappointed hopes. It might be thought that where opportunities were so many and developments so great, that most of those who came here in the early years and stayed here, should have fared well in getting a share of the enormous increment. But the fickleness of Fortune is always hard to understand.

In a magazine article published several years ago, Mr. James McCarthy ("Fitz-Mac"), of Denver, an author whose charming tales of western life have made his a familiar name, said:

> "The history of Denver is a record of glory, but as in all glory, there are undertones of sadness, undiscernible to the young, the inexperienced, the unsympathetic."

The reader who has followed our narrative as it has outlined, step by step, the origin, rise and remarkable progress of Denver, will probably have been conscious of the presence of such undertones. In annals of the later times the notes were fainter, but through those of the earlier periods they were like a refrain of the gentle melody that follows an autumn breeze in a forest of pines; and akin to the whispering memories that come stealing in when thoughts at a winter evening fireside go drifting away across the years to the morningtime of life's endeavors.
